Fisheries & Aquatic Resources	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Table 6-2: some lakes in the study area (Mesomikenda Lake, Three Duck Lakes, Weeduck Lake, Schist Lake) seem to be absent from the fish sampling. Also, please clarify if the 'Unnamed Lake' in Table 6-2 is Unnamed Lake #1 or Unnamed Lake #2 in Figure 2. At any rate, this would suggest that the other Unnamed Lake was also absent from the fish sampling program. Why were fish species not captured in these water bodies?	Baseline studies are currently being carried out for the lakes mentioned. Effects on these lakes will also be assessed as part of the EA.
Fisheries & Aquatic Resources	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) Has consideration been given to any potential loss of habitat associated with raising lake water levels in Chester Lake?	Given the morphometry of Chester Lake it is unlikely that existing littoral habitat would be lost but rather the littoral habitat would be increased.
Fisheries & Aquatic Resources	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) Suggested that IAMGOLD consider the use of habitat units in the assessment of habitat loss and compensation provided for the proposed water realignments. Compensation ratio may be low considering the long timeframe for pit lake establishment.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Fisheries & Aquatic Resources	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) Have all Harmful Alteration, Disruption or Destruction of fish habitat been identified in this presentation?	There may be other, smaller HADD of fish habitat identified (i.e. discharge for sewage, water taking), however the majority was presented and discussed within the presentations given.
Noise & Vibration	239	Letter	06/03/2013	The Ministry of the Environment (MOE) Senior Noise Engineer provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of the Environment	1) Section 6.3.3 of the ToR identified the class environment of the proposed Project to be Class 3 as per MOE Publication NPC-232. However, there are other guidelines and documents that also need to be used to assess the noise impacts from the proposed Project, as applicable: a. Construction Noise: i. MOE Publication NPC-115, "Construction Equipment"; and ii. MOE Publiction NPC-118, "Motorized Conveyances"; b. Construction/Operations Vibration: i. MOE Publication NPC-207, "Impulse Vibration in Residential Buildings", November 1983, as amended; c. Construction/Operations Blasting: i. MOE Publication NPC-119, "blasting", Model Municipal Noise Control By-Law, Final Report, August 1978; and d. Noise Report shall be prepared in accordance with the following documents: i. MOE Publication NPC-233, "Information to be Submitted for Approval of Stationay Sources of Sound", October 1995, as amended; and ii. Supporting Information for the Preparation of an Acoustic Assessment Report, Prepared by the Air and Noise Unit, Environmental Assessment and Approvals Branch, November 2003.	The proposed ToR will incorporate the guidelines identified. We wil consider NPC-115 and NPC-118 in the construction noise assessment for the Project. We will consider NPC-207 for any vibration-generating operations for the Project. Note that blasting activities are exempt from NPC-207 as they are covered under NPC-119. We will consider NPC-119 for blasting activities for the Project. The NPC-233 and "Supporting Information for the Preparation of an Acoustic Assessment Report" will be considered in the preparation of the Noise and Vibration Impact documentation.
Noise & Vibration	226	Letter	06/06/2013	The Sudbury District Health Unit (SDHU) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Sudbury and District Health Unit, IAMGOLD Corporation	1) Has consideration been given to the effects of air pollution such as particulates (PM10, PM2.5) and noise on local permanent and seasonal residents and workers at the camp accommodations? On and off site monitoring may wish to be considered.	The EA report will include information on the effect of the Project on the air quality in the vicinity of the Project site. The aspects considered include noise, vibration, dust, total particulate, fine particulate matter (PM2.5), sulphur oxides, nitrogen oxides, key metals and hydrogen cyanide.
Noise & Vibration	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Has consideration been given to the effects of air pollution such as particulates (PM10, PM2.5) and noise on local permanent and seasonal residents and workers at the camp accommodations? On and off site monitoring may wish to be considered.	Thank you for your comment. The EA report will include information on the effect of the Project on the air quality and noise in the vicinity of the Project site. The aspects considered include noise, vibration, dust, total particulate, fine particulate matter (PM2.5), sulphur oxides, nitrogen oxides, key metals and hydrogen cyanide.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Other	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to the Vegetation Communities (Page 6-13), the MNR would recommend ecosystem classification be done using the Provincial Ecological Land Classification, instead of the Forest Ecosystem Classification. This is the provincial standard for land classification.	The Proposed ToR will be revised to address this comment.
Terrain / Soils / Geology	218	E-mail	06/05/2013	The Ministry of the Environment (MOE) sent surface water related comments on Côté Gold Project's Draft Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The argument that natural background levels may exceed Lowest Effect Level (LEL) is not reason enough to exclude consideration of LEL values from the evaluation. Reference area sediment will be used to characterize natural background levels. The background may or may not be greater than LEL. Therefore, sediment evaluation should include comparison to both LEL and Severe Effect Level (SEL) values and to reference area values.	The Proposed ToR will be revised to include a statement regarding the comparison of baseline data against LEL, SEL and reference area values.
Vegetation & Plant Communities	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) How much time will be given for vegetation to establish prior to flooding and what will be done to prevent erosion? How will the timing of the channel construction be dealt with?	Construction will occur during winter months with the intent that a minimum of one growing season would be provided for vegetation growth. In addition, other methods will potentially be used to assist in the stabilization of the constructed channel and minimize erosion (i.e. core matting and use of coffer dams to control flow).
Vegetation & Plant Communities	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) DFO has an Operation Statement for Maintenance of Riparian Vegetation in Existing Rights-of-Way which includes one event (over and back).	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Water Resources / Quality	7	Meeting	05/03/2012	IAMGOLD met with a local MP to discuss the Côté Gold Project, local employment, skilled labour issues and specific numbers for potential jobs. IAMGOLD indicated that local employment would be in the hundreds, and likely higher during construction, but would be confirmed later. MP discussed local milling and local refining and raised questions on the potential impact on Côté Lake.	Government of Canada, IAMGOLD Corporation	1) MP raised questions on the potential impact on Côté Lake and wanted to know if there would be an open pit.	IAMGOLD indicated that the impact on Côté Lake would be determined by the Feasibility Study and the Environmental Impact Assessment and cited Niobec as example of how things could go. Niobec is a niobium mine in Quebec; niobium is used in the production of high-grade steel (to strengthen it).

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Water Resources / Quality	32	Meeting	10/25/2012	IAMGOLD met with Ministry of the Environment (MOE) to provide Project update.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) MOE commented that there is a lot of water the site location.	IAMGOLD recognized this and believes it is manageable.
Water Resources / Quality	32	Meeting	10/25/2012	IAMGOLD met with Ministry of the Environment (MOE) to provide Project update.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) MOE inquired if there were any anomalies in surface water quality.	IAMGOLD identified that there is nothing out of the ordinary. Low flow and some elevated metals numbers but overall very good water quality found around site during the baseline studies over the last 2 years.
Water Resources / Quality	53	Site Visit	10/30/2012	IAMGOLD conducted a site meeting with the Ministry of Natural Resources (MNR) and the Ministry of the Environment (MOE) to review all water bodies.	Ontario Ministry of Natural Resources, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Looked at pit area and potential realignments. MOE pleased with data collection to date and stated the more data collected in a baseline water quality the better. Also recommended flow stations that are established with continual flow monitoring (i.e. level logs). It provides better information to make decisions from a permitting perspective.	Data collection was started 2 years ago. Continual flow monitoring stations were already installed.
Water Resources / Quality	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Mattagami Region Conservation Authority (MRCA) requests that IAMGOLD include Upper Mattagami River Water Management Committee to provide an overview of the Project. MRCA also provides contact of the Ministry of the Environment (MOE) that IAMGOLD should contact concerning a "Source Water Protection Plan".	IAMGOLD will contact the Upper Mattagami River Water Management Committee and follow up with the contact of the MOE.
Water Resources / Quality	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) For discharging into a water body (i.e., Mesomikenda Lake), IAMGOLD will need to consider mixing zone(s) and what (biota) could be impacted. Environment Canada will be interested in the water bodies being overprinted. Are alternative tailings disposal methods being considered (i.e., paste, thickened, conventional, stacked)?	IAMGOLD states that to date, only potential tailings areas have been identified. Alternative tailings disposal methods will be considered as the Project is develops. Discharge locations will be analyzed in a few proposed locations not just Mesomikenda, this decision will depend on the data results.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Water Resources / Quality	83	Open House	02/26/2013	IAMGOLD held an open house in Timmins, Ontario to present an overview of the IAMGOLD draft Project Description (PD). Approximately 64 attendees participated in the open house.	Individual - GP, Individual - Moonbeam, Individual - Timmins, Lafleur Gardens, Mattagami Lake Camp, Mattagami Region Conservation Authority, Mesomikenda Lake Cottage Owner, Ontario Power Generation Inc., Prospector, Unknown Individual, Westburne, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual has questions regarding effluent discharge into Mesomikenda Lake, an Ontario Power Generation managed reservoir, and the impact, if any, it may have on the Mattagami River System Water Management Plan (other mining projects have required minimum flow regimes from control dams for effluent dilution). 2) Individual identified concerns regarding water discharge into Mesomikenda Lake; acid levels (10%, 20% uncertain) and water (Timmins drinking water) as Mesomikenda Lake is the head waters. 3) Individual from the local conservation authority identified that all of their Technical Reports, the Assessment Report and the Proposed Source Water Protection Plan are posted on the Drinking Water Source Protection website at www.dwsp.ca. 4) Individual identified that they would be very interested in seeing more information on aquatic inventories for the proposed project area. 5) Individual identified that they have a good understanding of the aquatic productivity of lakes, rivers and streams in the Timmins area, and suggested that the initial focus should be on preserving catchment areas of existing watersheds.	Effects of the project on water resources will be fully assessed in the EA report.
Water Resources / Quality	82	Open House	02/27/2013	IAMGOLD held an open house in Gogama, Ontario to present an overview of the IAMGOLD draft Project Description (PD). Approximately 56 attendees participated in the open house.	Gogama Fire Department, Individual - Gogama, Individual - GP, Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual would like to see a map showing drainage system and flow directions in the Project area.	
Water Resources / Quality	252	Letter	05/21/2013	The Ministry of Transportation (MTO) Environmental Assistant provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Transportation	1) The MTO would like to learn more about the potential impacts to Hwy 144 related to drainage issues associated with the realignment of the Mollie River, which flows beneath the highway (17 T 436449 E, 5260701 N) to ensure there are no impacts on the integrity of the highway and its foundations.	IAMGOLD does not anticipate that the proposed channel realignments of the Mollie River will directly impact the integrity of the highway. IAMGOLD is assessing the potential hydrological changes that may occur within the Mollie River system and will consult with MTO to determine if mitigation is required to maintain highway infrastructure.
Water Resources / Quality	199	Open House	05/23/2013	IAMGOLD held an Open House in Timmins 2013-05-23 to present the Draft Terms of Reference. There were 43 people in attendance. A Project Manager from the Mattagami Region Conservation Authority sent in a comment form on 2013-05-24 to IAMGOLD.	ABB, Canadian Trade-Ex, City of Timmins, College Boreal, Individual - Sudbury, Individual - Timmins, Mattagami First Nation, Mattagami Region Conservation Authority, Mesomikenda Lake Cottage Owner, Mining Life and Exploration News Magazine, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, ReadyQuip, Stratum Group, Unknown Individual, Westburne, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) I'm concerned about water quality. The headwaters of the Mattagami River which is the source of drinking water for the City of Timmins.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Water Resources / Quality	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The discharge is into the Mattagami River watershed which is the drinking water source for the City of Timmins. The Project is within the intake zone 3 which is the broadest of the three intake protection zones. The Source Water Protection Plan (SWPP) is in draft and under review. IAMGOLD is encouraged to review the draft plan as it may have implications for site design and management. There are policies for mining operations related to fuel and tailings storage.	Yes, our discharge is into the Mattagami River watershed 130 km upstream of the City of Timmins. Thank you for the suggestion to review the draft SWPP.
Water Resources / Quality	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the difference between a water re-alignment and a water diversion?	A ‘re-alignment’ uses natural water channels where as a ‘diversion’ refers to a less natural, industrialized design to change the course of water body. We are using ‘re-alignment’.
Water Resources / Quality	240	Letter	06/04/2013	The Ministry of the Environment (MOE) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of the Environment	1) This proposed Project is within the Mattagami Region Source Protection Area. The Mattagami River provides drinking water to the City of Timmins. We recommend that you circulate information and materials about the proposal to the Mattagami Region Conservation Authority and provide them with the opportunity to comment, if you have not done so already. Assessment report and delineation of vulnerable areas: The Mattagami region local assessment report indicates that the proposed mine and associated infrastructure is in the Mattagami river watershed upstream of the City of Timmins water supply, in the following vulnerable areas: intake protection zone-3 (IPZ-3) with a vulnerability score of 2 and in the highly vulnerable aquifer (HVA) with a vulnerability score of 6. The potential impact of this proposal on the Timmins drinking water system would be considered low risk. The potential impact of this development on Timmins drinking water system is therefore minimal.	IAMGOLD will continue to involve the Source Protection Programs Branch in the subsequent submission of the Proposed ToR and the Environmental Assessment. No response or action required.
Water Resources / Quality	240	Letter	06/04/2013	The Ministry of the Environment (MOE) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of the Environment	1) Proposed Source Protection Plan Policies: The proposed Mattagami Region Source Protection Plan (draft, currently under MOE review) contains policies to address threats related to mining operations in the IPZ-3 and the HVA. We recommend that you review the plan (http://www.dwsp.ca/en/proposed-source-protection-plan-for-the-city-of-timmins-municipal-drinking-water/) with particular note to the policies that address threats to drinking water related to mining operations (policy 4.1 on page 48 and policy 5.5 on page 58).	IAMGOLD will continue to involve the Source Protection Programs Branch in the subsequent submission of the Proposed ToR and the Environmental Assessment. No response or action required.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Water Resources / Quality	218	E-mail	06/05/2013	The Ministry of the Environment (MOE) sent surface water related comments on Côté Gold Project's Draft Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The criterion "Effect on local residents" should be expanded to "Effect on local residents and recreational users". 2) Surface waters in the area of the mine could potentially be drinking water sources for local residents and recreational users (e.g. campers, canoe trippers), therefore include additional Indicator of "Non-interference with surface water drinking supply."	Agreed, the indicator will be changed as requested.
Water Resources / Quality	218	E-mail	06/05/2013	The Ministry of the Environment (MOE) sent surface water related comments on Côté Gold Project's Draft Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) A dam operated by Ontario Power Generation controls the water level of Mesomikenda Lake. The environmental assessment (EA) should consider if there is potential for surface water needed for mine operations (e.g. effluent discharge, water taking) to be affected by lake level management at the dam.	Agreed, EA will consider the relationship of surface water intake (and discharge) with lake levels. No change in the ToR required.
Water Resources / Quality	226	Letter	06/06/2013	The Sudbury District Health Unit (SDHU) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Sudbury and District Health Unit, IAMGOLD Corporation	1) SDHU wishes to reinforce that protection of water sources for human consumption should be highlighted. Among many factors, changes in flow magnitude, effects of climate change (ie. flooding, rain, and drought), run-off, seepage/leaching, and accidental spills can negatively impact the amount of water available and the safety of that water for human consumption. If water quantity or quality is impacted, how will this be handled?	The EA report will include information on the effect of the Project on the water sources, which will include changes in flow, run-off and seepage management, effect on climate change on the Project as well as malfunctions and accidents.
Water Resources / Quality	226	Letter	06/06/2013	The Sudbury District Health Unit (SDHU) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Sudbury and District Health Unit, IAMGOLD Corporation	1) Although plans for the protection of surface waters are included, the SDHU suggests that potential impacts and protective measures for groundwater be included.	The EA report will include an assessment of the potential impact of the Project on groundwater. It will also include mitigation and management practices to prevent effects to the groundwater system.
Water Resources / Quality	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) It should be noted in this section that Mesomikenda Lake is a water-level controlled lake.	The Proposed ToR will be revised to address this comment.
Water Resources / Quality	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) MNR disagrees that Bagsverd Creek is being realigned. This entire section is being removed (along with its tributaries). As previous comment, we need to be carful with terminology. Under the LRIA these are watercourse channelizations that are diverting water; they are not simply realignments. With the construction of the new stream and subsequent flooding of it what measures are proposed to limit the initial sedimentation? Will these new streams be monitored? What will be the plan if the stream realigns itself or there is excessive/ unacceptable erosion?	No change in the Proposed ToR is necessary. Permitting under LRIA will use terminology consistent with the legislation. IAMGOLD is proposing to apply natural channel design principles that have been used throughout Ontario to remediate or realign natural corridor systems. As a result, the realigned system will both convey flows in a natural manner and mimic or where possible, enhance the ecological function of the watershed. Preliminary construction details reported in the EA will address sedimentation and outline monitoring plans.
Water Resources / Quality	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) In Section 7 (Page 2-2), it identifies "… most waters will be realigned and not diverted". Terminology here is inconsistent with the Lakes and Rivers Improvement Act (LRIA); under the LRIA what IAMGOLD is proposing is considered a diversion. Permitting under LRIA will need to use terms consistent with that legislation.	No change in the Proposed ToR is necessary. Permitting under LRIA will use technology consistent with the legislation.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Water Resources / Quality	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) It should be noted in Section 5.3.1.7 that Mesomikenda Lake is a water-level controlled lake.	The Proposed ToR will be revised to address this comment.
Water Resources / Quality	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With respect to Section 5.3.1.9, the MNR disagrees that Bagsverd Creek is being realigned. This entire creek section is being removed (along with its tributaries). Under the Lakes and Rivers Improvement Act (LRIA), these are watercourse channelizations that are diverting water; they are not simply realignments. With the construction of the new stream, and subsequent flooding of it, what measures are proposed to limit the initial sedimentation? Will these new streams be monitored? What will be the plan if the stream realigns itself or there is excessive/unacceptable erosion?	No change in the Proposed ToR is necessary. Permitting under LRIA will use terminology consistent with the legislation. IAMGOLD is proposing to apply natural channel design priniciples that have been used throughout Ontario to remediate or realign natural corridor systems. As a result, the realigned system will both convey flows in a natural manner and mimic or where possible, enhance the ecological function of the watershed. Preliminary construction details reported in the EA will address sedimentation and outline monitoring plans.
Water Resources / Quality	248	Letter	06/07/2013	The Ministry of the Environment's (MOE) hydrogeologist provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Collect whatever information will be later required to identify groundwater impacts that may occur as a result of the undertaking, assess contaminant attenuation capacities, and ensure that the proposed mine and associated facility designs incorporates appropriate mitigation measures. Groundwater monitoring and groundwater quality data should be collected up-gradient, cross-gradient, and down-gradient from all relevant facilities which have been sited at the time of the baseline survey. This includes potential groundwater seepage locations, rates and quality into or from facilities such as: open pits, underground developments, tailings, stockpiles, collection ponds, processing facilities, and loading areas.	Thank you for the comment. Groundwater information has been collected up-gradient, cross-gradient and down-gradient of the Project. No changes in the ToR required. Comments will be considered in the EA preparation.
Water Resources / Quality	248	Letter	06/07/2013	The Ministry of the Environment's (MOE) hydrogeologist provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Identify potential compliance points and compliance criteria (e.g. Reasonable Use, Provincial Water Quality Objectives, etc.) and ensure that sufficient information is available in the future to produce statistically sound assessments of potential mining and associated facility impacts. The baseline survey should include installation of monitoring wells at potential compliance points and within the footprint of the planned operation works with an aim of having most wells remain in-place during all phases of the project to provide consistent temporal analysis points.	Thank you for the comment. IAMGOLD I committed to continue monitoring groundwater wells during all Project phases. No changes in the ToR required. Comments will be considered in the EA preparation.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Water Resources / Quality	248	Letter	06/07/2013	The Ministry of the Environment's (MOE) hydrogeologist provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The output of the hydrogeology baseline survey should include the following: (a) conceptual hydrogeologic model with a written expert opinion summarizing groundwater flow paths, identification of potential receptors, travel times, and water quality; (b) hydrogeologic maps and cross-sections showing: 1) the location of relevant features, including surface water features, water supply wells, and other potential receptors; 2) location of groundwater monitoring wells with respect to proposed facilities/works, stockpiles, potential seeps of contaminated groundwater, surface water features and other potential receptors; 3) the extent of overburden and bedrock aquifers, including bedrock contact/fracture zones; 4) groundwater contours (potentiometric surfaces); and 5) groundwater flow directions including location of all groundwater divides; (c) groundwater analytical results provided in tabular format with ion balances and also presented with ion plots; Laboratory Certificates of Analysis should be available upon request; and (d) identify the need for additional monitoring and assessment to address potential facility development impacts that had not been defined at the time of the baseline survey.	Thank you for the comment. Information relevant to this comment will be provided in the hydrogeological baseline report. No changes in the ToR required.
Water Resources / Quality	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Although plans for the protection of surface waters are included, the SDHU would suggest that potential impacts and protective measures for ground waters be included.	Thank you for your comment. The EA report will include an assessment of the potential impact of the Project on surface and ground water. It will also include, as required, mitigation and management plans.
Wetlands	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Correct this paragraph to; "There are no known, Areas of Natural and Scientific Interest, or Provincially Significant Wetlands within or near to the general Project site area." All the wetlands in this area are considered Ontario Ministry of Natural Resources Timmins District June 7, 2013 unevaluated wetlands. Their significance at this time is not known, these wetlands should be evaluated in order to determine their significance.	The Proposed ToR will be revised as per the comment provided.
Wetlands	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) Paragraph 7 (Page 6-4), should be corrected to; "There are no known, Areas of Natural and Scientific Interest, or Provincially Significant Wetlands within or near to the general Project site area." All the wetlands in this area are considered unevaluated wetlands. Their significance at this time is not known, these wetlands should be evaluated in order to determine their significance.	The Proposed ToR wil be revised as per the comment provided.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Wetlands	287	Meeting	07/16/2013	On behalf of IAMGOLD, Minnow Environmental Inc. had a conversation with a representative from the Ministry of Natural Resources (MNR) around issues related to the protocol for assessing the impact of the Project on wetland areas on 2013-07-16. Discussion related to the MNR requirements for assessing the potential impact on wetlands in the area.	Ontario Ministry of Natural Resources, Minnow Environmental Inc.	1) Primary concern is that wetlands are being well documented and that there is an understanding of what is being lost or modified through the Project. Agrees that if any wetlands have the potential to be a Provincially Significant Wetland then a full wetland classification should be conducted. Would prefer to see complete OWES evaluation conducted, as this is standard for wetlands - recognizing that this can be impracticable or not feasible given the size of wetlands and the landscape in Northern Ontario. The protocol being proposed by Minnow will require further discussion with the Ministry.	If there are any wetlands that have the potential to be a Provincially Significant Wetland we will conduct a full wetland classification on these. The information we are collecting should provide sufficient information on the form and functioning of each wetland, the vegetation and wildlife use. This should allow us to identify any potential areas of concern through the EA which could be further assessed as we move ahead with permitting.
Wildlife	30	Meeting	10/25/2012	IAMGOLD provided Project update to Ministry of Natural Resources (MNR) by way of a PowerPoint presentation and resource video.	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) MNR noted that bat studies may be required in future due to White Nose Syndrome and population decline. MNR will inquire with biologist.	IAMGOLD will follow up with face-to-face meeting.
Wildlife	19	Open House	11/08/2012	IAMGOLD conducted an open house in Gogama on 2012-10-08 to introduce themselves and the Project to the community. Poster boards included updates on the status of the Project. There were 73 community members in attendance. Attendees were provided opportunities to ask questions of the Project team, offered comment forms and asked if they would like to be added to the Project mailing list.	Aboriginal Women in Mining, Gogama Chamber of Commerce, Individual - GP, Mattagami First Nation, Ontario Ministry of Natural Resources, S+ G Development, Unknown Individual, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual wanted to know if IAMGOLD had any species at risk (SAR) on site, like Blanding's Turtle.	IAMGOLD said they have completed a number of terrestrial and aquatic field surveys/studies to identify any SARs and to characterize the area flora and fauna, and found no SARs have identified to date. Numerous rounds of turtle-specific surveys have been completed and none have been found.
Wildlife	150	Meeting	04/30/2013	IAMGOLD met with Ministry of Natural Resources (MNR) and Ministry of Northern Development and Mines (MNDM) representatives to provide an update on the Côté Gold Project. A follow-up email was sent to the MNR on 2013-06-01 and recorded in ROC213.	Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, AMEC Environment & Infrastructure, Golder Associates, IAMGOLD Corporation, Minnow Environmental Inc.	1) Asked about General Protocol for surveys (turtle). 2) MNR will send the guidelines for basking turtle surveys and whip-poor-whils to Golder representative; the guidelines are still in draft form. 3) MNR mentioned that turtle surveys require a minimum of 5 survey visits per site per survey season. Also, MNR would like to see 8 rounds but 5 is a minimum. 4) MNR asked for survey protocols from Golder for the work completed to date and the criteria used to select locations for basking turtle surveys.	Golder will follow-up with the MNR (see ROC213).
Wildlife	150	Meeting	04/30/2013	IAMGOLD met with Ministry of Natural Resources (MNR) and Ministry of Northern Development and Mines (MNDM) representatives to provide an update on the Côté Gold Project. A follow-up email was sent to the MNR on 2013-06-01 and recorded in ROC213.	Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, AMEC Environment & Infrastructure, Golder Associates, IAMGOLD Corporation, Minnow Environmental Inc.	1) MNR mentioned that Bat Assessment is a new requirement due to the White Nose Syndrome. 2) Golder asked if he could discuss guidance with MNR on a protocol for baseline studies on bats prior to attempting field work so that it will be accepted as an appropriate approach since there is no MNR guidelines established yet. 3) MNR will provide Golder with the location of a bat hibernaculum in Chester Township.	Golder to follow-up with the MNR.
Wildlife	150	Meeting	04/30/2013	IAMGOLD met with Ministry of Natural Resources (MNR) and Ministry of Northern Development and Mines (MNDM) representatives to provide an update on the Côté Gold Project. A follow-up email was sent to the MNR on 2013-06-01 and recorded in ROC213.	Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, AMEC Environment & Infrastructure, Golder Associates, IAMGOLD Corporation, Minnow Environmental Inc.	1) MNR mentioned that permits may be required if construction is planned for bird breeding season in certain areas.	IAMGOLD will take the bird breeding season into consideration when planning construction activities.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Wildlife	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) 3rd paragraph: What criteria were used to identify potential bat hibernacula during the winter aerial survey? 2) There is no mention of potential hibernacula in the area (abandoned mine).	The criteria to identify potential bat hibernacula will be provided in the EA. Baseline studies are being carried out to identify bat hibernacula in the area.
Wildlife	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) 5th paragraph: Canada Warbler is provincially a Special Concern species not Threatened. 2) Page 6-15: MNR also notes that Bank Swallow has recently been listed as Threatened by COSEWIC and a review by COSSARO (provincially could potentially list this species as Threatened or Endangered in the near future.	The Proposed ToR will be revised to address this comment. Thank you for the comment. This will be addressed in the EA.
Wildlife	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Mine Closure (Page 5-23), the MNR identifies that the assessment should included consideration for Species at Risk (SAR) during mine closure as some species may be using the area and mine closure operations may impact that habitat (eg. Bank swallows in aggregate pits).	The Proposed ToR will be revised to include consideration for SAR species during mine closure.
Wildlife	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) Regarding Page 6-15, what criteria were used to identify potential bat hibernacula during the winter aerial survey? There is no mention of potential hibernacula in the area (abandoned mine).	The criteria to identify potential bat hibernacula will be provided in the EA. Baseline studies are being carried out to identify bat hibernacula in the area. The Proposed ToR will be revised to address this comment. This will be addressed in the EA.
Wildlife	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) Canada Warbler is provincially a Special Concern species not Threatened. The MNR also notes that Bank Swallow has recently been listed as Threatened by Committee on the Status of Endangered Wildlife in Canada and a review by Committee on the Status of Species at Risk in Ontario could potentially list this species as Threatened or Endangered in the near future.	The Proposed ToR will be revised to address this comment. Thank you for the comment. This will be addressed in the EA.
Wildlife	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 4.2.1 states that the sequencing of construction activities “will also consider” fish spawning and bird nesting seasons. Depending on input from government agencies, IAMGOLD may be required to not simply “consider” spawning and nesting seasons, but to limit/cease construction (for all or some of the Project components, in all or some of the study area) during these spawning/nesting windows.	Thank you for the comment. Text will be revised to reflect that activities will be staged with input from government agencies.Text will be revised as suggested for clarity.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Document Reviews							
Project Description	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Discussions with Fisheries and Oceans Canada (DFO) to date have only been by phone. DFO will want a draft of the Project Description (PD) before going into detailed discussions. A draft of the Project Description (PD) should be forwarded to Environment Canada. IAMGOLD should contact Environment Canada (only the biologists are available now).	IAMGOLD will contact Environment Canada.
Technical Comments	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) On page 7-1 there is discussion of AMEC's (consultant) methodology for determining the significance of effects. It states that this methodology has been "accepted." By whom? The Ministry of the Environment (MOE)?	This methodology has been accepted by both the Canadian Environmental Assessment Agency and the MOE for various other Federal and Provincial mining EAs.
Technical Comments	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) What definition will be used for intermittent streams?	A definition for an intermittent stream will be provided and consistently applied throughout the EA.
Technical Comments	346	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Surface Water Specialist from the Ministry of the Environment related to the Indicators for the Assessment of Alternatives.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) My review identified a shortcoming in Table 5-4 (Effects to the Physical and Biological Environments Evaluation Criteria and Indicators); the Indicators for Assessment of Alternatives do not adequately identify the potential ecosystem effects of changes in the quantity of surface water. Specifically, the criterion "Effect on Fish and Aquatic Habitat" includes proposed indicators ('Maintenance or provision of fish habitat" and "Maintenance of water flows or conditions suitable for fish passage") that do not represent the entirety of ecosystem services provided by natural water flow and water level in streams and lakes. This could be remedied by including a more holistic indicator such as "Maintenance of natural water flow and water level in streams and lakes to protect the habitat of aquatic biota, including fish".	Thank you for your comment. The assessment of alternatives in the EA will consider the indicator "Maintenance of flows and water levels in streams and lakes suitable to support aquatic species and habitat" rather than the two indicators included in the ToR ("Maintenance or provision of fish habitat" and "Maintenance of water flows or conditions suitable for fish passage").

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Technical Comments	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) I have reviewed the proposed ToR for the Côté Gold Project and have no additional comments from those I provided on the Draft TOR. In my comments on the Draft ToR, I provided an outline for our minimum expectations for the baseline studies to support the approval and permitting phase of the project. I have included them again in this email for your reference. Please let me know if you have any questions or require additional information.The purpose of baseline groundwater monitoring programs for proposed new mines is to define pre-development hydrogeological conditions. This information will be subsequently used by the proponent to develop numerical groundwater models and to predict potential impacts of the mine if the Project progresses towards environmental assessment and permitting. This assessment also provides the framework for on-going groundwater monitoring during site development, operation, and closure. Lack of comprehensive baseline information may cause significant site development delays.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.
Technical Comments	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) To effectively address these uses, the baseline groundwater monitoring program must meet the following requirements: 1) Determine groundwater flow paths, identify potential receptors (e.g. surface water, wetlands, wells, etc.), estimate subsurface travel times (including potential seasonal hydraulic gradient fluctuations), and characterize groundwater quality. The location of the monitoring wells must be selected to define existing conditions and also in anticipation of potential changes in groundwater gradients during all phases of the project (e.g. mounding, lowering, flow direction changes, etc.). The groundwater monitoring should take into consideration the effects of groundwater to surface water discharge, and enough information must be collected so that potential impacts of dewatering on surface water and wetland features can be evaluated. Nested or multi-level groundwater monitoring wells should be used where appropriate to assess both shallow (overburden) and deep (bedrock) groundwater flow systems, as well as vertical gradients.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Technical Comments	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Collect whatever information will be later required to identify groundwater impacts that may occur as a result of the undertaking, assess contaminant attenuation capacities, and ensure that the proposed mine and associated facility designs incorporates appropriate mitigation measures. Groundwater monitoring and groundwater quality data should be collected up-gradient, cross-gradient, and down-gradient from all relevant facilities which have been sited at the time of the baseline survey. This includes potential groundwater seepage locations, rates and quality into or from facilities such as: open pits, underground developments, tailings, stockpiles, collection ponds, processing facilities, and loading areas.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.
Technical Comments	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Identify potential compliance points and compliance criteria (e.g. Reasonable Use, Provincial Water Quality Objectives, etc.) and ensure that sufficient information is available in the future to produce statistically sound assessments of potential mining and associated facility impacts. The baseline survey should include installation of monitoring wells at potential compliance points and within the footprint of the planned operation works with an aim of having most wells remain in-place during all phases of the project to provide consistent temporal analysis points.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.
Technical Comments	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The output of the hydrogeology baseline survey should include the following: (a) conceptual hydrogeologic model with a written expert opinion summarizing groundwater flow paths, identification of potential receptors, travel times, and water quality; (b) hydrogeologic maps and cross-sections showing: (1) the location of relevant features, including surface water features, water supply wells, and other potential receptors; (2) location of groundwater monitoring wells with respect to proposed facilities/works, stockpiles, potential seeps of contaminated groundwater, surface water features and other potential receptors; (3) the extent of overburden and bedrock aquifers, including bedrock contact/fracture zones; (4) groundwater contours (potentiometric surfaces); and (5) groundwater flow directions including location of all groundwater divides; (c) groundwater analytical results provided in tabular format with ion balances and also presented with ion plots; Laboratory Certificates of Analysis should be available upon request; and (d) identify the need for additional monitoring and assessment to address potential facility development impacts that had not been defined at the time of the baseline survey.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3 - 1st paragraph, last sentence - current says ' ….in the case of temporary suspension or inactivity.' It should read '….in the case of temporary suspension, inactivity or closure out of mine production.'	Thank you for your comment. The suggested wording will be used in the EA.
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3 - 2nd paragraph - refers to 'reclaim'. Suggest using 'rehabilitate'. Reclaim is not a word used in the Mining Act.	Thank you for your comment. The suggested wording will be used in the EA.
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3 - 3rd paragraph - currently says ' reclamation/closure'. Suggest changing to say final stage of closure OR close out. 'reclaim' is not a term used in the mining act and the stage which you are referring to is called close out, which is the final stage of closure.	Thank you for your comment. The suggested wording will be used in the EA.
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3.1- Rehabilitation of the pit is by flooding. It should be noted that at least one sloped enterance shall be left or created to allow a reasonable exit point should inadvertent access occur.	Thank you for your comment. This will be taken into consideration in the EA and in the detailed Closure Plan
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3.6 A landfill site for on-site demolition will be created. Note that landfill sites shall be rehabilitated also and the measure that will be taken to do this should be stated.	Thank you for your comment. This will be taken into consideration in the EA and in the detailed Closure Plan, as applicable.
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 5.3.15- second sentence - currently says ' During the closure phase, mining is terminated and final reclamation of site occurs'. In the Mining Act - Closure means the temporary suspension, inactiviy or close out of a project. You may want to change the wording in that sentence to ' During the close out phase, mining is terminated and final reclamation of site occurs'.	Thank you for your comment. The suggested wording will be used in the EA.
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 5.3.15 third sentence - EA will include an assessment of closure alternative. This should include assessments for all 3 stages of closure, therefore assesment of temp. susp., inactivity and closure out of the Côté Gold Site. I see in the appendixes you have post closure assessment for the Mine rock area and tailings management area - this may be where you want to add assessment for the other stages of closure?	Thank you for your comment. The Closure Plan to be submitted to MNDM during the permitting phase will address the 3 stages of closure. The first two phases (temp. susp. and inactivity) are phases through which the site will transition to ultimately achieve the final selected closed out design. For the EA, we will assess design alternatives for the various aspects of the closed out site. How we achieve the ultimate closed out site and transition through the 3 stages of closure will be detailed in the Closure Plan.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Table 5-7 currently does not include alternative methods for assessing or mitigating AMIS or Mine Hazards that may be encountered in the building of the transmission line or on the Project site itself.	Thank you for your comment. AMIS or Mine Hazards are existing features primarily related to other sites (not a result of the Project development), some of which may affect the ultimate transmission line route (to avoid/minimize encountering these features), but assessing alternatives methods for mitigating these features is not within the scope of the EA for the Project. The AMIS or Mine Hazards, however, will be considered in the Project planning, as well as in the contingency plans.
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Table 7-1 should include potential effects (i.e.health and safety of public and workers) of distrubing any existing mine hazards encountered during construction or mining.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.
Technical Comments	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Mine hazards need to be identified and considered in the EA, impacts identified and how the impacts can be mitigated through permits, or design for example.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.
Technical Comments	352	E-mail	08/14/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Northern Development and Mines related to mine hazards.	Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) The area identified for tailings management includes possible AMIS hazards.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.
Terms of Reference	205	Meeting	04/17/2013	IAMGOLD provided the Ministry of Northern Development and Mines (MNDM) with an update on the Project with respect to permitting, as well as an update on the First Nations and Métis consultation process. Meeting discussions focused on IAMGOLD concerns related to the timelines for the Terms of Reference (ToR) process under the provincial Environmental Assessment (EA).	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) MNDM promised to follow up with the Ministry of the Environment (MOE) on the ToR process as the EA progressed. MNDM provided IAMGOLD with the contact information of program staff at the MOE.	NA
Terms of Reference	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) In general, there is some inconsistency and ambiguity with respect to the language used to describe cultural heritage resources. The term “cultural heritage resources” is intended to capture: (i) built heritage resources, (ii) cultural heritage landscapes, as well as (iii) archaeological resources. Please clarify in the ToR whether references to cultural heritage resources relate to all or certain of the noted categories.	The Proposed ToR will provide clear language on which aspects of the cultural hertiage resources are relevant to this Project

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) The Draft ToR (Section 7.1) indicates that residual effects (after mitigation) will be assessed within the environmental assessment and will consider “effects of the undertaking on the physical, biological and social environment”. Please clarify whether the “social environment” is referring to a different range of environmental components as the “human environment” described earlier, or make the terminology consistent across the ToR.	The terminology will be corrected in the Proposed ToR to avoid confusion.
Terms of Reference	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Please note that the Ministry’s full-name is incorrect on Page 2-3 of the Proposed Stakeholder Engagement Plan (Appendix D) and should read “Ministry of Tourism, Culture and Sport”.	Corrections will be made in the Proposed ToR.
Terms of Reference	239	Letter	06/03/2013	The Ministry of the Environment (MOE) Senior Noise Engineer provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of the Environment	1) Table 11-1 of the ToR states that the construction phase of the proposed Project requires Environmental Compliance Approval (ECA). Construction activities are exempted from Section 9 of the Environmental Protection Act. Therefore, an ECA is not required for the construction phase of the proposed Project, but it still needs to be assessed in the Environmental Assessment (EA).	That was a misstatement, and we understand that the construction phase is not governed by the ECA. There will be a consideration for noise and vibration due to construction activities as part of the EA.
Terms of Reference	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Section 5.2.1 indicates that a comparative evaluation of feasible alternative methods will be conducted. In support of the Ministry’s Culture Services Unit comments the “do nothing” or null alternative is not included for consideration. It should be included in the final ToR.	The Proposed ToR will be revised to include a section addressing the "do nothing" alternative
Terms of Reference	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Section 5.3.1 outlines that Project alternatives have been considered with respect to many components. Not surprisingly, all of them relate to components of the mining process. Was consideration given to including components such as the impacts to other users/sectors (e.g. tourism, forestry)?	The Ministry of the Environment requires that the ToR present the alternatives of the various Project components and present a methodology which will be used to access those alternatives in the EA report. The effect on other users/sectors, such as tourism, forestry, hunting and fishing will be considered in the assessment of alternatives and in the impact assessment section of the EA, for the selected alternative.
Terms of Reference	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) MTCS appreciates that short-term contingency plans may be needed should design changes or other adjustments be necessary as the Project is implemented. Additional information would be useful on how any changes may be communicated with stakeholders, at least on a preliminary basis (e.g. newsletters, public notices), recognizing the scope of those to be consulted may vary depending upon the type of change.	IAMGOLD maintains a Project mailing list and updates individuals on this list about the Project including any changes through the distribution of newspaper and directly mailed notices, fact sheets, and newsletters. IAMGOLD also maintains a Project webpage where this information would be obtained. Future stakeholder meetings, workshops and public open houses will also provide opportunities to share and gather feedback on any Project changes with the public, stakeholders and Aboriginal groups.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) MTCS appreciates the opportunity to review and comment on the draft ToR. We recognize the efforts undertaken to date by the proponent. Nevertheless, we find the document lacks detail as it relates to the local/regional tourism sector and how tourism facilities have been communicated with to date regarding the Project. 2) MTCS has highlighted where we feel the final ToR can be improved as it relates to tourism considerations. Please continue to keep MTCS informed as the Project moves forward. MTCS looks forward to receiving the final ToR and understanding how these comments have been considered in its development.	IAMGOLD will continue to keep MTCS informed about the Project.
Terms of Reference	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) The disposition of land for the transmission line is missing.	The Proposed ToR will be revised to specifically incorporate disposition of land for the transmission line.
Terms of Reference	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) "… most waters will be realigned and not diverted". Terminology here is inconsistent with the LRIA; under the LRIA what IAMGOLD is proposing is considered a diversion. Permitting under LRIA will need to use terms consistent with that legislation.	No change in the Proposed ToR is necessary. Permitting under LRIA will use terminology consistent with the legislation.
Terms of Reference	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Will there be a schedule of monitoring to ensure that erosion is not occurring over time?	Erosion monitoring will be considered in the EA report.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 2.1 states that IAMGOLD entered into a voluntary agreement to meet the Provincial EA requirements for the Project components listed, but it does overtly state that the voluntary agreement requires that an Individual EA be conducted for the entire Project. Please revise the text to reflect this.	Agreed. The text in Section 2.1 will be revised to state that the agreement requires that an Individual EA be conducted for the entire Project.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The study area (stated as being approximately 6,700 hectares) is not clearly delineated in the section, nor in Figure 2. It is not until page 6-3 that the multitude of study areas seem to be generally defined, but this is unclear to the reader who may not be familiar with the local of nearby receptor locations, which watercourses and water bodies could potentially be affected by the Project, the boundaries of the transmission line alignments, nor the human environment local study area. For clarity, please more clearly delineate the study area boundaries in the text and indicate these on maps/figures. Section 4.1 (description of the undertaking) may be a more appropriate section in which to state the study areas because it would be more apparent to the reader earlier in the documentation (including the text that the study areas will be further refined as the Project progresses through the EA).	The study areas relate to the components of the environment that are potentially affected by the Project and as a result these are described in Section 6 - Description of the Environment. Whereas Section 4 however provides information specific to the physical components of the undertaking rather than study areas. For clarity, the text and figures, as applicable, will be revised to more clearly define the limits of the undertaking and the study areas.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The Record of Consultation appears to be incomplete and does not contain a full accounting of all communications with the Ministry of the Environment. The Record of Consultation (e.g., Appendix E, Table E-2) is devoid of any communications with the Ministry of the Environment's Environmental Assessment Branch. Additionally, none of the handouts/presentation slide decks for the interministerial meetings is provided. Please ensure that the Record of Consultation is complete by including these items.	These items will be incorporated in the Proposed Record of Consultation.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 4.1 (page 4-2) states that the description [of the Project components] will be finalized through the EA process and ongoing engineering studies. This suggests that the components may be finalized after the EA process (i.e., during "ongoing" engineering studies). The Project components are expected to be finalized during the EA process, as the preferred alternatives for each component (Table 5-7) will be determined during this phase.	The intent of the text was to describe that the EA and engineering studies are undertaken in parallel. The text will be revised to clarify that "ongoing" engineering studies mean that engineering studies are being carried out in parallel with, and will be informed by the EA and vice-versa.At this stage of the Project, preliminary assessment of impacts to fish habitat has been discussed with Fisheries and Oceans Canada and the Ministry of Natural Resources. Additional field studies and assessment work will be carried out in advance of the EA report. Should it be required to offset mine site effects on fisheries, IAMGOLD is interested in working coopratively with the regulatory agencies and local stakeholders to develop habitat compensation plans that are supportive of Mattagami River fisheries management plans.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 5.2.1 suggests that the performance objectives are separate from evaluation criteria, but section 5.2.2 reveals that they appear to be one and the same. Please revise the text accordingly.	As defined in the ToR, performance objectives are attributes that are required for a successful Project. The evaluation criteria is used to rank various alternatives in relevant to those attributes. The text will be revised to clarify the distinction between these components of the evaluation.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 7.1 makes reference to the "social environment" but this is the first time in the documentation that this term has been made; in all other instances, only the "human environment" has been referenced. Additionally, page 7-1 distinguishes between only the ecological/socio-economic context, without considering the other aspects of the environment. Please clarify and/or define the terms being used.	"Social environment" will be revised to "human environment" to be consistent with the terminology of the ToR. The Proposed ToR will be revised to re-introduce the definitions of natural and human environments and to clarify that all aspects of the environment are considered.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 2.2 opens with stating that the Project "is anticipated to require completion of a Federal EA." As later mentioned in the section, the Canadian Environmental Assessment Agency has indicated that the Project will require a federal EA. Please revise the text in paragraphs 1 and 4.	The text in paragraphs 1 and 4 will be revised noting that a federal EA will be completed for the Project; "once approved" will be replaced by "if approved".

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 2.2 reads: "The ToR, once approved, and the EIS Guidelines . . . " Approval of the ToR is at the Minister's discretion; there is no guarantee that a proposed ToR will be approved. Please revise this text to read "if approved" rather than "once approved."	The text will be revised so that "once approved" will be replaced by "if approved".
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The definition of "environment" does not seem to agree with that in the EAA (natural, economic, social, cultural, built): physical, biological, human. Please revise text (and corresponding tables) to reflect this. Alternatively, re-define "natural" as "physical and biological" and "economic/social/cultural/built" as "human," but it is encouraged that proponents adhere to the environmental components as they are presented in the EAA.	The categories described in the ToR encompass all the elements under the definition of "environment" under the EAA and each category is generally defined by the same elements as in the EAA definition of "environment". For clarity, the text will be revised to clearly identify which elements of the EAA definition are addressed under each category in the ToR.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) For ease of reference and readability, you may wish to consider including in the Table of Contents the various alternatives that were/will be considered for the various Project components, as was done for the Rainy River Gold Project ToR.	The Proposed ToR will be revised to address this comment.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 3.1.1 of Appendix D and section 4.1.1 of Appendix E state that comments and concerns received will be considered and addressed in the Project Description, and that consultation on the draft ToR is expected to occur January through April 2012. The Project Description has already been submitted to the Canadian Environmental Assessment Agency, and the timeframe for the draft ToR has changed. Please revise the text accordingly.	Appendices D and E will be revised to address this comment.
Terms of Reference	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Appendix E section 4: The terms "consultation" and "engagement" appear to be used interchangeably. 'Engagement' is not defined in the Codes of Practice, nor in the EAA. The ministry's expectation is that consultation will be carried out in the manner that is expected per the definition of "consultation" in the Code of Practice for Consultation in Ontario's Environmental Assessment Process. Accordingly, please remove the use of the word "engagement" and replace it with "consultation," citing the definition in the Consultation Code of Practice.	The appendix will be reviewed to ensure consistency in the use of the word consultation.
Terms of Reference	302	Meeting	07/03/2013	On 2013-07-03 an Intergovernmental agency meeting was held with representatives from AMEC, IAMGOLD, the Canadian Environmental Assessment Agency (CEA Agency), the Ontario Ministry of Northern Development and Mines, and the Ontario Ministry of the Environment to discuss the Draft Terms of Reference (ToR) responses and an overview of consultation planning. The meeting notes were finalized on 2013-08-06.	Canadian Environmental Assessment Agency, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Comments about transmission line - in particular the absence of a third routing was not well understood. 2) At a past meeting there was a mention of a third route (Shining Tree Route) that was not included in the draft ToR.	The transmission line was a 115kV line that would not be sufficient capacity to serve the Project needs and was therefore removed from the assessment of alternatives. One of the remaining two options follows the same routing as this previously considered option. There were other comments on routing that we are considering in the Project designs.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	302	Meeting	07/03/2013	On 2013-07-03 an Intergovernmental agency meeting was held with representatives from AMEC, IAMGOLD, the Canadian Environmental Assessment Agency (CEA Agency), the Ontario Ministry of Northern Development and Mines, and the Ontario Ministry of the Environment to discuss the Draft Terms of Reference (ToR) responses and an overview of consultation planning. The meeting notes were finalized on 2013-08-06.	Canadian Environmental Assessment Agency, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the height of the MRA in the new site layout? 2) How long will the channel re-alignments be monitored? 3) What is the update on the landfill?	The height of the MRA changed from 100 to 150m (which is lower than the MRA for Hammond Reef). The aesthetics of the MRA can be optimized through visual screening. The re-aligned channels will not need long-term monitoring. They would be re-vegetated and would start to mimic existing water-courses. The gradients of the channels are the same as the existing channels and therefore the same type of habitat. Landfill options will be carried in the EA, but there is many decisions to be made about which option to use, noting that MNR has approached IAMGOLD about using their landfill near the site. This option needs to be added to the ToR.
Terms of Reference	344	E-mail	07/25/2013	On 2013-07-25, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of Hydro One.	Hydro One Networks, Ontario Ministry of the Environment, IAMGOLD Corporation	1) IAMGOLD has sent us a proposed terms of reference as a public utility that would be interested in the Project. The back sheet of the pages asks for us to fax it to you, I scanned it and hopefully that is okay. If the Côté Gold Project will involve Hydro One in any way we will need to be informed. I checked the box that says we are okay with the Terms of Reference with the comment of notifying Hydro One for any collaboration required.	Thank you for your comment. No further response required.
Terms of Reference	343	E-mail	07/26/2013	On 2013-07-26, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) As Regional Air Compliance Engineer, comments were provided for the draft ToR for Sections 6.3.2 (Air Quality) and 7.2.2 (Effects Analysis), which were incorporated into the Proposed ToR. Therefore I have no further comments. Thanks.	Thank you for you comment. No further response is required.
Terms of Reference	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The proponent has still referenced the construction, operation and closure of an on-site landfill in sections 4.2.1 and 4.2.3.10 without providing further details. My comments from my review of the draft ToR still stand in this matter.	Thank you for your comment.The landfill location has not yet been selected. The on-site and off-site landfill options will be assessed as part of the assessment of alternatives during the EA process.
Terms of Reference	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Notwithstanding bullet #1, in section 5.3.13.1 the proponent refers to assessing the development of an on-site landfill in the EA. If it is standard protocol to assess the development of a landfill at that stage then I have no objection.	Thank you for you comment. No further response is required.
Terms of Reference	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The potential of burning waste on site would require an approval of an Environmental Compliance Approval (ECA) unless it meets the exemptions from approval set forth in section 28.1 of Regulation 347 for a Woodwaste Combustor Site. Burning of any waste other than woodwaste may require an ECA.	Thank you for your comment. The requirement of an ECA approval will be taken into consideration at the permitting stage.
Terms of Reference	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) On-site treatment of contaminated soil may also require Ministry approval depending on the process chosen (ex-situ vs. in-situ). Review of this in the EA stage is acceptable.	Thank you for your comment. No further response is required.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The establishment of sewage lagoons require an Envrionmental Compliance Approval.	Thank you for your comment. The requirement of an ECA approval will be taken into consideration at the permitting stage if sewage lagoons are the preferred option.
Terms of Reference	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) As a reminder from my previous comments which are attached: "Please note that waste rock storage piles are exempt from obtaining an ECA (Part V of EPA) pursuant to section 3(1) of Regulation 347. Similarly, tailing from a mine are also wastes that are exempt from Part V of the EPA as per s. 3(1) of Regulation 347 provided the tailings are not being mixed or comingled with other wastes. Tailings management facilities are approved under the Ontario Water Resources Act."	Thank you for your comment. No further response is required.
Terms of Reference	346	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Surface Water Specialist from the Ministry of the Environment related to the Indicators for the Assessment of Alternatives.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) My review identified a shortcoming in Table 5-4 (Effects to the Physical and Biological Environments Evaluation Criteria and Indicators); the Indicators for Assessment of Alternatives do not adequately identify the potential ecosystem effects of changes in the quantity of surface water. Specifically, the criterion "Effect on Fish and Aquatic Habitat" includes proposed indicators ('Maintenance or provision of fish habitat" and "Maintenance of water flows or conditions suitable for fish passage") that do not represent the entirety of ecosystem services provided by natural water flow and water level in streams and lakes. This could be remedied by including a more holistic indicator such as "Maintenance of natural water flow and water level in streams and lakes to protect the habitat of aquatic biota, including fish".	Thank you for your comment. The assessment of alternatives in the EA will consider the indicator "Maintenance of flows and water levels in streams and lakes suitable to support aquatic species and habitat" rather than the two indicators included in the ToR ("Maintenance or provision of fish habitat" and "Maintenance of water flows or conditions suitable for fish passage").

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	348	E-mail	08/12/2013	On 2013-08-12, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The Ministry of the Environment (MOE) has a mandate under the Environmental Protection Act to minimize the exposure of any person, property, plant or animal life to off-site potential negative effects associated with the operation of certain facilities. To address this concern, and to prevent or minimize exposure to adverse effects, the principles of land use compatibility should be considered during the EA process. Potential land use compatibility issues would include land use conflicts that may result from either a new facility locating so that an existing sensitive is captured within the facility's influence area, or from a new sensitive land use locating within the influence area of an existing facility. Potential adverse effects that could result may include, but not to be limited to: noise and vibration; visual impact; odours and other air emissions; litter; dust and other particulates; and other contaminants. In applying land use compatibility principles, all facilities and components of the proposed project should be considered, including proposed accommodations, diesel generation, and infrastructure such as roads, sewage treatment/disposal and waste disposal facilities. Potentially conflicting uses which may occur within the area of the proposed project would include uses such as seasonal or recreational residences, remote tourism facilities, and trappers 'cabins, among others.	Thank you for your comment. These aspects will be addressed in the EA report.
Terms of Reference	348	E-mail	08/12/2013	On 2013-08-12, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	Please note that both existing uses and committed land uses, which have been approved by regulatory authorities but do not yet exist, should be considered in the evaluation of potential impacts. While the proposed Terms of Reference appears to generally recognize the potential for land use compatibility issues as a result of the proposed project, we would encourage the proponents to ensure that principles of land use compatibility, as summarized above and as articulated in MOE Guidelines, are reflected in the final EA Report, particularly in those sections dealing with the evaluation of alternatives, description of the existing environment, effects identification and assessment methodology, including the identification of mitigation measures and potential monitoring requirements.	Thank you for your comment. These aspects will be addressed in the EA report.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	348	E-mail	08/12/2013	On 2013-08-12, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	Further detail, including information addressing potential influence areas, minimum separation distances, and the use of detailed studies to evaluate potential impacts and identify appropriate mitigation measures, is included in the following MOE Guidelines: Guideline D-1: Land Use Compatibility (1995); - Procedure D-1: Land Use Compatibility: Implementation (1995); Procedure D-1-3: Land use Compatibility: Definitions (1995); Guideline D-2: Compatibility between Sewage Treatment and Sensitive Land Use (1996); Guideline D-4: Land Use On or Near Landfills and Dumps (1994); Guideline D-6: Compatibility between Industrial Facilities and Sensitive Land Uses (1995); Procedure D-6-1: Appendix A: Industrial Categorization Criteria (1995); and Procedure D-6-3: Separation Distances (1995). These D-series Guidelines are available on the MOE website.	Thank you for your comment. These aspects will be addressed in the EA report.
Terms of Reference	348	E-mail	08/12/2013	On 2013-08-12, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 6.2 General Description of the Côté Gold Project: This section indicates that the Côté Gold Property consists of patented and unpatented mining claims, mining leases, and mining licenses of occupation, all located within 17 unorganized townships. We would recommend including additional information in the final Terms of Reference to identify the location and extent of each of these types of ownership, occupation, or lease, particularly with regard to the Côté Gold Project site.	The information requested is included in the federal Project Description and is available on the CEA Agency website.
Terms of Reference	348	E-mail	08/12/2013	On 2013-08-12, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 9.1 Potentially Affected and Interested Stakeholders: We note that this section of the proposed Terms of Reference has been revised to include additional land and resource users in the list of potential stakeholders for the project. To further assist in identifying and addressing potential land use compatibility issues, we recommend that any additional landowners, resource users, or other persons of interest who may potentially experience adverse effects as a result of the project be added to the project mailing/contact list as they are identified, and included in consultation activities throughout the EA process.	Thank you for your comment. The EA report will include a complete list of stakeholders, including any additional stakeholders identified since submission of the ToR. These stakeholders will be consulted with throughout the EA Process.
Terms of Reference	348	E-mail	08/12/2013	On 2013-08-12, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 11.0 Other Approvals Required: Should any portions of the Project site be situated on patented mining claims, we recommend consulting the Ministry of Municipal Affairs and Housing (Sudbury Municipal Services Office) to determine if approvals under the Planning Act are needed to allow for the development of any project components.	Thank you for your comment. The Ministry of Municipal Affairs and Housing will be consulted with, should any Project component be located on patented mining claims.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	347	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Ministry of Economic Development and Innovation.	Ministry of Economic Development and Innovation, Ontario Ministry of the Environment, IAMGOLD Corporation	1) We have no comments on the Terms of Reference beyond those submitted to the proponent on their Draft ToR on June 4, 2013.	Thank you for your comment. No further response is required.
Terms of Reference	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) I have reviewed the proposed ToR for the Côté Gold Project and have no additional comments from those I provided on the Draft ToR. In my comments on the Draft ToR, I provided an outline for our minimum expectations for the baseline studies to support the approval and permitting phase of the project. I have included them again in this email for your reference. Please let me know if you have any questions or require additional information.The purpose of baseline groundwater monitoring programs for proposed new mines is to define pre-development hydrogeological conditions. This information will be subsequently used by the proponent to develop numerical groundwater models and to predict potential impacts of the mine if the Project progresses towards environmental assessment and permitting. This assessment also provides the framework for on-going groundwater monitoring during site development, operation, and closure. Lack of comprehensive baseline information may cause significant site development delays.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.
Terms of Reference	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) To effectively address these uses, the baseline groundwater monitoring program must meet the following requirements: (1) Determine groundwater flow paths, identify potential receptors (e.g. surface water, wetlands, wells, etc.), estimate subsurface travel times (including potential seasonal hydraulic gradient fluctuations), and characterize groundwater quality. The location of the monitoring wells must be selected to define existing conditions and also in anticipation of potential changes in groundwater gradients during all phases of the project (e.g. mounding, lowering, flow direction changes, etc.). The groundwater monitoring should take into consideration the effects of groundwater to surface water discharge, and enough information must be collected so that potential impacts of dewatering on surface water and wetland features can be evaluated. Nested or multi-level groundwater monitoring wells should be used where appropriate to assess both shallow (overburden) and deep (bedrock) groundwater flow systems, as well as vertical gradients.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) (2) Collect whatever information will be later required to identify groundwater impacts that may occur as a result of the undertaking, assess contaminant attenuation capacities, and ensure that the proposed mine and associated facility designs incorporates appropriate mitigation measures. Groundwater monitoring and groundwater quality data should be collected up-gradient, cross-gradient, and down-gradient from all relevant facilities which have been sited at the time of the baseline survey. This includes potential groundwater seepage locations, rates and quality into or from facilities such as: open pits, underground developments, tailings, stockpiles, collection ponds, processing facilities, and loading areas.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.
Terms of Reference	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) (3) Identify potential compliance points and compliance criteria (e.g. Reasonable Use, Provincial Water Quality Objectives, etc.) and ensure that sufficient information is available in the future to produce statistically sound assessments of potential mining and associated facility impacts. The baseline survey should include installation of monitoring wells at potential compliance points and within the footprint of the planned operation works with an aim of having most wells remain in-place during all phases of the project to provide consistent temporal analysis points.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.
Terms of Reference	349	E-mail	08/13/2013	On 2013-08-13, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) related to groundwater monitoring and hydrogeological conditions on behalf their hydrogeologist.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) (4) The output of the hydrogeology baseline survey should include the following: (a) conceptual hydrogeologic model with a written expert opinion summarizing groundwater flow paths, identification of potential receptors, travel times, and water quality; (b) hydrogeologic maps and cross-sections showing: (1) the location of relevant features, including surface water features, water supply wells, and other potential receptors; (2) location of groundwater monitoring wells with respect to proposed facilities/works, stockpiles, potential seeps of contaminated groundwater, surface water features and other potential receptors; (3) the extent of overburden and bedrock aquifers, including bedrock contact/fracture zones; (4) groundwater contours (potentiometric surfaces); and (5) groundwater flow directions including location of all groundwater divides; (c) groundwater analytical results provided in tabular format with ion balances and also presented with ion plots; Laboratory Certificates of Analysis should be available upon request; and (d) identify the need for additional monitoring and assessment to address potential facility development impacts that had not been defined at the time of the baseline survey.	Thank you for your comment. These comments will be considered in the EA preparation and supporting documentation.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3 - 1st paragraph, last sentence - current says ' ….in the case of temporary suspension or inactivity.' It should read '….in the case of temporary suspension, inactivity or closure out of mine production.'	Thank you for your comment. The suggested wording will be used in the EA.
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3 - 2nd paragraph - refers to 'reclaim'. Suggest using 'rehabilitate'. Reclaim is not a word used in the Mining Act.	Thank you for your comment. The suggested wording will be used in the EA.
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3 - 3rd paragraph - currently says ' reclamation/closure'. Suggest changing to say final stage of closure OR close out. 'reclaim' is not a term used in the mining act and the stage which you are referring to is called close out, which is the final stage of closure.	Thank you for your comment. The suggested wording will be used in the EA.
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3.1- Rehabilitation of the pit is by flooding. It should be noted that at least one sloped enterance shall be left or created to allow a reasonable exit point should inadvertent access occur.	Thank you for your comment. This will be taken into consideration in the EA and in the detailed Closure Plan
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 4.2.3.6 A landfill site for on-site demolition will be created. Note that landfill sites shall be rehabilitated also and the measure that will be taken to do this should be stated.	Thank you for your comment. This will be taken into consideration in the EA and in the detailed Closure Plan, as applicable.
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 5.3.15- second sentence - currently says ' During the closure phase, mining is terminated and final reclamation of site occurs'. In the Mining Act - Closure means the temporary suspension, inactiviy or close out of a project. You may want to change the wording in that sentence to ' During the close out phase, mining is terminated and final reclamation of site occurs'.	Thank you for your comment. The suggested wording will be used in the EA.
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) 5.3.15 third sentence - EA will include an assessment of closure alternative. This should include assessments for all 3 stages of closure, therefore assesment of temp. susp., inactivity and closure out of the Côté Gold Site. I see in the appendixes you have post closure assessment for the Mine rock area and tailings management area - this may be where you want to add assessment for the other stages of closure?	Thank you for your comment. The Closure Plan to be submitted to MNDM during the permitting phase will address the 3 stages of closure. The first two phases (temp. susp. and inactivity) are phases through which the site will transition to ultimately achieve the final selected closed out design. For the EA, we will assess design alternatives for the various aspects of the closed out site. How we achieve the ultimate closed out site and transition through the 3 stages of closure will be detailed in the Closure Plan.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Table 5-7 currently does not include alternative methods for assessing or mitigating AMIS or Mine Hazards that may be encountered in the building of the transmission line or on the Project site itself.	Thank you for your comment. AMIS or Mine Hazards are existing features primarily related to other sites (not a result of the Project development), some of which may affect the ultimate transmission line route (to avoid/minimize encountering these features), but assessing alternatives methods for mitigating these features is not within the scope of the EA for the Project. The AMIS or Mine Hazards, however, will be considered in the Project planning, as well as in the contingency plans.
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Table 7-1 should include potential effects (i.e.health and safety of public and workers) of distrubing any existing mine hazards encountered during construction or mining.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.
Terms of Reference	350	E-mail	08/14/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of a representative from the Ministry of Northern Development and Mines related to questions about the terminology and scope of the Proposed Terms of Reference.	Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Mine hazards need to be identified and considered in the EA, impacts identified and how the impacts can be mitigated through permits, or design for example.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.
Terms of Reference	351	E-mail	08/14/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Northern Development and Mines.	Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) There are a number of unpatented mining claims in the area of operations/development. The proponent should ensure that the claims are taken to lease prior to development. IAMGOLD currently has a number of lease requests in with the Mining Lands office at this time.	Thank you for your comment. IAMGOLD is currently working on acquiring all land access required for the construction and operation of the Project and intends to acquire access to all required land prior to construction.
Terms of Reference	352	E-mail	08/14/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Northern Development and Mines related to mine hazards.	Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) There are an estimated 530 AMIS features within 5km of the proposed transmission corridor. Some are hazards and some are not. See file sent by MDNM	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.
Terms of Reference	352	E-mail	08/14/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Northern Development and Mines related to mine hazards.	Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) The EA does not identify how abandoned mine hazards or features, if encountered will be assessed or mitigated.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.
Terms of Reference	352	E-mail	08/14/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Northern Development and Mines related to mine hazards.	Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) The area identified for tailings management includes possible AMIS hazards.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.
Terms of Reference	352	E-mail	08/14/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Northern Development and Mines related to mine hazards.	Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Are there any rehabilitated hazards within the project area that could be impacted?	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	352	E-mail	08/14/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Northern Development and Mines related to mine hazards.	Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Are there any rehabilitated hazards en route the proposed transmission corridor? - If so under the Mining Act, they are required to seek Director approval to disturb any previously rehabilitated mine features (including the mine proposed areas and the area associated with the proposed transmission line). This site should be identified prior to moving forward with construction so permissions can be given.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans. Appropriate authorization will be obtained prior to undertaking any construction of the Project.
Terms of Reference	353	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Energy relating to Power Supply and Routing.	Ministry of Energy, Ontario Ministry of the Environment, IAMGOLD Corporation	1) The ministry does not have any comments on the Record of Consultation, but we do have comments on the draft EA, specifically the section dealing with Power Supply and Routing (section 5.3.14). IAMGOLD has made an effort to respond to initial comments from Ministry staff, however we are still seeking more detail with respect to the anticipated power needs of the project. The proponent should describe the anticipated power needs in the draft Terms of Reference or state that this will be described more in detail in the EA. The power requirements for the project are usually described for each phase (for example the construction phase and the operation phase) and should include approximate dates when the power requirements would begin, and the MWs required at the height of the mine's operations. This information would support the identified need for a 230 kV transmission line connection.	Thank you for your comment. This will be addressed in the EA report.
Terms of Reference	354	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport.	Ministry of Tourism, Culture and Sport, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Appendix B to the proposed ToR's Record of Consultation was consulted to identify the comments our Unit made previously on the draft ToR and the responses from IAMGOLD regarding how those comments would be addressed. We are pleased that the company has responded positively to a number of our comments and made several related edits/additions to the proposed ToR. In particular, the identification of tourism facilities near the project (see Figure 5) and an enhanced recognition of the need to consult with tourism stakeholders as the project evolves. Overall, we are satisfied with IAMGOLD's commitments and related changes in the proposed ToR to address our earlier comments.	Thank you for your comment. No further response is required.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	354	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport.	Ministry of Tourism, Culture and Sport, Ontario Ministry of the Environment, IAMGOLD Corporation	1) We have identified one additional item to bring forward at this time. Section 6.8.2 (Regional Economy) of the proposed ToR includes some new information on tourism visitation and spending in the Sudbury District (page 6-19). We had provided the proponent with information in this regard and we are pleased that they have highlighted some of it in the document. This section identifies that the District received 378,243 person visits in 2010. However, this figure only includes visits from Canadians. When visitors from the United States and overseas are added the total person visits to the District were 412,192. This is the figure that should be used in the section for the sake of accuracy.	Thank you for your comment. This modified figure will be used moving forward in the EA process.
Terms of Reference	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) The SDHU would suggest that information be included regarding major components of the tailings to better determine the adequacy of the tailings pond design, and remediation plans.	Thank you for your comment. The EA report will include further information regarding the Tailings Management Facility design and closure. Additionally, a malfunctions and accidents section will be included in the EA report, which will have specific details on potential emergencies with the tailings facility.
Terms of Reference	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) SDHU wishes to reinforce that protection of water sources for human consumption should be highlighted. Among many factors, changes in flow magnitude, effects of climate change (ie. flooding, rain, and drought), run-off, seepage/leaching, and accidental spills can negatively impact the amount of water available and the safety of that water for human consumption. If water quantity or quality is impacted, how will this be handled?	Thank you for your comment. The EA report will include information on the effect of the Project on the water sources, which will include changes in flow, run-off and seepage management, effect on climate change on the Project as well as malfunctions and accidents.
Terms of Reference	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Although plans for the protection of surface waters are included, the SDHU would suggest that potential impacts and protective measures for ground waters be included.	Thank you for your comment. The EA report will include an assessment of the potential impact of the Project on surface and ground water. It will also include, as required, mitigation and management plans.
Terms of Reference	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) The SDHU would suggest including plans for the safe storage or movement of hazardous materials (including cyanide) and explosives in the event of a natural disaster such as flooding or a forest fire.	Thank you for your comment. The EA report will include information regarding the management of hazardous materials and explosives such that effects to the environment are prevented. Additionally, a chapter on accidents and malfunctions will provide information on the proper response and management of those materials in the event of a natural disaster.
Terms of Reference	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Consideration could be given to the ability to contact local water users (surface water and wells) in the event of an accidental spill or runoff that may adversely affect the local water quality.	Thank you for your comment. The EA report will include a communications plan in the event of malfunctions or accidents.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Has consideration been given to the effects of air pollution such as particulates (PM10, PM2.5) and noise on local permanent and seasonal residents and workers at the camp accommodations? On and off site monitoring may wish to be considered.	Thank you for your comment. The EA report will include information on the effect of the Project on the air quality and noise in the vicinity of the Project site. The aspects considered include noise, vibration, dust, total particulate, fine particulate matter (PM2.5), sulphur oxides, nitrogen oxides, key metals and hydrogen cyanide.
Terms of Reference	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Will there be long term monitoring of the site to ensure that closure procedures are effective in protecting the environment and human health both on the site and in the surrounding area?	Thank you for your comment. The EA report will include an environmental management and monitoring plan, which will include environmental monitoring post-closure.
Terms of Reference	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) The effects of climate change should be considered in terms of: water quality and quantity for operations and human consumption; risk of flood, road wash-out; dry conditions, wildfire prevention, preparedness and evacuation plans; effects of drought or flood/erosion on design of habitat compensation, riparian areas and re-vegetation of areas at closure.	Thank you for your comment. The EA report will include a section on the effect of climate change on the Project. This information is also provided to the engineering team such that potential effects are appropriately considered in the final design of the Project.
Terms of Reference	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Table 5-5: We note that a broader range of criteria have been included under Table 5-5 which provides a preliminary list of evaluation criteria and indicators for the assessment of alternatives, in response to our comments provided on June 5, 2013. However, there appears to be overlap between three criteria and one of the indicators in Table 5-5. In particular, it is not clear why “archaeological sites” are considered twice in the Table 5-5. We have modified the criteria and indicators below to be more consistent with Provincial guidelines. For example, with respect to developing mitigation measures for Aboriginal archaeological sites (e.g. rare Aboriginal archaeological sites, sites identified as sacred or known to contain human remains, woodland aboriginal sites, aboriginal sites where top soil stripping is being contemplated), we recommend the licenced archaeologist engage with Aboriginal communities (including the Métis), when formulating mitigation strategies. These guidelines are incorporated into the indicators for archaeological resources below. We suggest editing Table 5-5 as provided in Table 5-5 [see table].	Thank you for your comment. The criteria will be modified in the alternatives assessment section of the EA, as per MTCS' recommendation.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) 5.2.2 Evaluation Criteria and Indicators: We note that a number of potential data sources for the assessment of alternatives are included in the above-noted section. As suggested in our letter dated June 5, 2013, the following additional data sources could present potential resources in the assessment of alternatives: municipal, provincial and federal registers of properties of cultural heritage value; non-governmental heritage organizations and municipal heritage committees; cultural heritage evaluation report and heritage impact assessment; MTCS's Standards and Guidelines for the Conservation of Provincial Heritage Properties (2011); archaeological assessment(s); and MTCS's Standards and Guidelines for Consultant Archaeologists (2010).	Thank you for your comment. The additional data sources identified by MTCS will be used in the alternatives assessment of the EA.
Terms of Reference	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Section 6.8.6.1 Archaeological Resources This section notes that Stage 1 and 2 Archaeological Assessment studies were undertaken in 2011 and 2012. As of the date of this letter MTCS has not yet received these reports. Reports are reviewed on a first in, first out basis, and depending on the contents of the reports, further archaeology may be required. Please indicate the following in the Proposed ToR, to clarify the review process for archaeological assessment reports: The Ministry of Tourism, Culture and Sport reviews archaeological assessment reports as condition of licencing under the Ontario Heritage Act. This review is to ensure that the licensed professional consultant archaeologist has met the terms and conditions of their archaeological licence, that archaeological sites have been identified and documented according to the standards set by the Ministry and that the archaeological fieldwork and report recommendations ensure the conservation, protection and preservation of the cultural heritage of Ontario. Once reviewed, ministry staff provides the consultant archaeologist with a letter that comments on the archaeological assessment report. If the report complies with Ministry requirements including the Standards and Guidelines for Consultant Archaeologists (2011), the letter informs the licensee that the report has been accepted. This letter is copied to the proponent and the approval authority.	Thank you for your comment. Woodland Heritage Services on behalf of IAMGOLD submitted to MTCS a Stage 2 Archaeological Report for the Côté Gold Project on June 21, 2013. Woodland Heritage Services in the process of completing revisions to this report and a deadline of December 31, 2013 was established by MTCS for this revised report.Woodland Heritage Services is conducting numerous further (Stage 3 and 4) archaeological assessments at the Project site which will also be submitted to the MTCS for clearance. As has been conducted for previous environmental assessments in Ontario, IAMGOLD is recommending that MTCS considers partial clearance for the environmental assessment based on the Stage 2 report that would clear everything except small specific sites. These sites would be cleared once the Stage 3 and 4 reports are filed.Regarding marine archaeological resources, there is, in the opinion of Woodland Heritage Resources, no potential for marine archaeological resources for the Côté Gold Project site and therefore will not be investigated further. A note to this effect will be included in the revised Stage 2 Archaeological Report. The typo on page 6-23 has been noted with apologies.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) (cont'd) We note that there is currently no commitment in the ToR to assess the study area for marine archaeological resources. In Ontario, marine archaeological assessments are conducted separately from land based archaeology. Due to the nature of this project, it is recommended that a marine archaeological assessment be undertaken for those areas where there is a possibility of impacting potential marine (or underwater) archaeological sites located in primary water sources (lake, river, stream). Please correct the typo in the first paragraph of page 6-23 ("…a total of 31 archaeological sites and features have been located…").	Thank you for your comment. Woodland Heritage Services on behalf of IAMGOLD submitted to MTCS a Stage 2 Archaeological Report for the Côté Gold Project on June 21, 2013. Woodland Heritage Services in the process of completing revisions to this report and a deadline of December 31, 2013 was established by MTCS for this revised report.Woodland Heritage Services is conducting numerous further (Stage 3 and 4) archaeological assessments at the Project site which will also be submitted to the MTCS for clearance. As has been conducted for previous environmental assessments in Ontario, IAMGOLD is recommending that MTCS considers partial clearance for the environmental assessment based on the Stage 2 report that would clear everything except small specific sites. These sites would be cleared once the Stage 3 and 4 reports are filed.Regarding marine archaeological resources, there is, in the opinion of Woodland Heritage Resources, no potential for marine archaeological resources for the Côté Gold Project site and therefore will not be investigated further. A note to this effect will be included in the revised Stage 2 Archaeological Report. The typo on page 6-23 has been noted with apologies.
Terms of Reference	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) 11.2 Provincial Environmental Approvals Processes: The above-noted section indicates that MTCS may be involved with permitting of Côté Gold Project components. Please note that while the provisions of the Ontario Heritage Act apply to this undertaking, MTCS is not an approval authority. The ministry licenses consultant archaeologists and reviews archaeological assessment reports as a condition of licensing. Additionally, as a member of the Government Review Team, the ministry reviews documentation prepared as part of a project subject to the Environmental Assessment Act and provides comments from our mandated areas of responsibility to help determine if these are identified, considered and protected prior to a decision being made about an application.	Thank you for the comment. This will be clarified in the EA process.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Appendix B: In our comments submitted to you on June 5, 2013, we expressed concern that the Mine Rock Area Alternatives Assessment does not consider all aspects of cultural heritage resources (i.e. archaeological resources are mentioned, but built heritage resources, cultural heritage resources and cultural heritage landscapes are not included) in the evaluation of alternatives. Your response in the Record of Consultation indicates that “it is our understanding that the terminology used in Appendix B was meant to include all aspects of cultural heritage resources”. Given that the potential for built heritage resources and cultural heritage landscapes has yet to be fully examined through the baseline studies planned for 2013, we are concerned that potential impacts and mitigation will not be considered for a comprehensive range of cultural heritage resources in the siting and design of the Mine Rock Area. A commitment to either update or supplement the Mine Rock Area alternatives assessment with information gathered from the proposed baseline studies planned for 2013 should be included in the Proposed ToR.	Thank you for your comment. Should additional archaeological baseline studies planned for 2013 identify additional built heritage resources and cultural heritage landscapes, MRA siting and/or design may be revised based on these findings. This would be reported in the EA.
Terms of Reference	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Appendix C: Similar to our comments above, in our comments submitted to you on June 5, 2013, we expressed concern that the Tailings Management Facility Alternatives Assessment does not consider all aspects of cultural heritage resources (i.e. archaeological resources are mentioned, but built heritage resources, cultural heritage resources and cultural heritage landscapes are not included) in the evaluation of alternatives. Your response in the Record of Consultation indicates that “it is our understanding that the terminology used in Appendix B was meant to include all aspects of cultural heritage resources”. Given that the potential for built heritage resources and cultural heritage landscapes has yet to be fully examined through the baseline studies planned for 2013, we are concerned that potential impacts and mitigation will not be considered for a comprehensive range of cultural heritage resources in the siting and design of the Tailings Management Facility. A commitment to either update or supplement the Tailings Management Facility alternatives assessment with information gathered from the proposed baseline studies planned for 2013 should be included in the Proposed ToR.	Thank you for your comment. Should additional archaeological baseline studies planned for 2013 identify additional built heritage resources and cultural heritage landscapes, TMF siting and/or design may be revised based on these findings. This would be reported in the EA.
Terms of Reference	357	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the District Planner from the Ministry of Natural Resources.	Ontario Ministry of Natural Resources, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Timmins District of Ministry of Natural Resources has no comments on the Côté Gold Proposed Terms of Reference.	Thank you for your comment. No action is required.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Human Environment							
Aesthetics	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Are you modelling the visual effect of the Mine Rock Areas on the cottagers?	Yes, a visual effects modeling exercise is underway. We will also be preparing an animation to use as a tool in public and Aboriginal consultation for the draft Environmental Assessment.
Aesthetics	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Does the visual effects modeling take into account possible tree harvesting in the area?	We have been working with EACOM, who are the forestry license holder in the area, on this and other management planning for the area. If tree cutting was expected in any of the potentially affected areas, we would consider this is the effects prediction.
Aesthetics	426	Meeting	11/13/2013	IAMGOLD held a meeting with the Gogama Area Citizens Committee to provide the Committee with an update on the Project and an overview of Project effects.	Gogama Area Citizens Committee, Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Will the viewscape be impacted from canoe routes too, or just cottage areas?	Yes, the Mine Rock Area will also affect the viewscape on some canoe routes.
Archaeology and Heritage	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) With respect to the Effects on the Human Environment, please elaborate on the potential applicability of the Provincial Standards and Guidelines for Conservation of Provincial Heritage Properties that could apply to the Côté Gold Project.	The Proposed ToR will include a statement on the potential applicability of the Provincial Standards and Guidelines for Conservation of Provincial Heritage Properties.
Archaeology and Heritage	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Table 5-5 includes a preliminary list of evaluation criteria and indicators for the assessment of alternatives. The indicator included under “Effect on built heritage and cultural heritage landscapes” is: “Avoidance of damage to built heritage resources, or document heritage values if damage or relocation cannot reasonably be avoided.” A broader range of indicators of impacts, in addition to “damage”, should be incorporated. MTCS recommends including “Effect on archaeological resources” as a single category of criteria, considering the specific provincial standards and licensing requirements associated with this component of the environment. In addition, potential data sources are not specified for the criteria and indicators, which appears inconsistent with the Ministry of the Environment's Code of Practice.	Suggestions provided by the MTCS will be taken into consideration, where applicable, in the Proposed ToR and in the Assessment of Alternatives.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Archaeology and Heritage	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) The Draft ToR indicates that studies pertaining to “archaeology and heritage resources” will be completed. It is not clear whether the potential for cultural heritage landscapes will be assessed through the studies described in this section. 2) In addition, please note that separate studies must be undertaken for archaeological resources (below-ground cultural heritage resources) and built heritage resources and cultural heritage landscapes (above-ground cultural heritage resources). 3) The study area for “archaeology” has been defined in the Draft ToR but the “human environment local study area” is not defined. For clarification, we suggest identifying the study area for “archaeology” as a subsection or bullet below the section on the “human environment” to clearly indicate that archaeological resources are a component of the “human environment”.	The Proposed ToR will clearly identify which studies were completed or will be carried out pertaining to archaeology and heritage resources.The study areas will be revised in the Proposed ToR, as requested.
Archaeology and Heritage	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Section 6.8 describes the “human environment” which is intended to capture cultural heritage resources; however, there is no preliminary description of cultural heritage resources alongside a description of population and demographics, regional economy, mineral exploration, forestry and agriculture, community infrastructure and services, and recreation and tourism. It is recommended that a subsection be included under Section 6.8 that provides a preliminary description of cultural heritage resources and indicates that future studies will contribute to a fulsome description of the cultural heritage resources in the study area.	A preliminary description of the cultural heritage resources will be added to this section for completeness.
Archaeology and Heritage	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) The Draft ToR (Table 7-1) describes how the overall Côté Gold Project will have a direct effect on archaeology and heritage resources, including built heritage but does not make mention of potential effects on cultural heritage landscapes. “Archaeology and heritage resources” should be replaced with “cultural heritage resources” as this broader term is more consistent with current terminology and includes: archaeological resources, built heritage resources and cultural heritage landscapes. Each of these categories of the cultural environment need to be considered when considering potential effects of the Côté Gold Project. 2) MTCS notes that there is also a typo in the following bullet: "Potential direct effect on archaeology and heritage resources, include built heritage".	The term "cultural heritage resources" will be used consistently in the Proposed ToR. The typo will be corrected in the Proposed ToR.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Archaeology and Heritage	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) The Mine Rock Area Alternatives Assessment evaluates based on the "Presence of Archaeological Sites", which according to description under Page A-4, include "archaeological and historic heritage" criteria. In addition, the report describes how "Studies are ongoing to determine if archaeological, paleontological or historic structures" have the potential to be affected. The evaluation of alternatives should consider all types of cultural heritage resources, including built heritage resources, cultural heritage landscapes and archaeological resources. 2) In particular, it is not clear from the document whether potential effects on cultural heritage landscapes have been considered. It should also be noted that Archaeological Assessments do not address known or potential built heritage resources or cultural heritage landscapes, and furthermore, do not assess for paleontological remains.	The terminology used in Appendix B was meant to include all aspects of cultural heritage resources.
Archaeology and Heritage	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Similar to the Mine Rock Area Alternatives Assessment, the Tailings Management Facility Alternatives Assessment evaluates based on the "Presence of Archaeological Sites". The evaluation of alternatives should consider all types of cultural heritage resources, including built heritage resources, cultural heritage landscapes and archaeological resources. It is not clear from the report in Appendix C whether effects on all forms of cultural heritage resources were considered in the evaluation of alternatives.	The terminology used in Appendix C was meant to include all aspect of cultural heritage resources.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Archaeology and Heritage	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Table 5-5: We note that a broader range of criteria have been included under Table 5-5 which provides a preliminary list of evaluation criteria and indicators for the assessment of alternatives, in response to our comments provided on June 5, 2013. However, there appears to be overlap between three criteria and one of the indicators in Table 5-5. In particular, it is not clear why “archaeological sites” are considered twice in the Table 5-5. We have modified the criteria and indicators below to be more consistent with Provincial guidelines. For example, with respect to developing mitigation measures for Aboriginal archaeological sites (e.g. rare Aboriginal archaeological sites, sites identified as sacred or known to contain human remains, woodland aboriginal sites, aboriginal sites where top soil stripping is being contemplated), we recommend the licenced archaeologist engage with Aboriginal communities (including the Métis), when formulating mitigation strategies. These guidelines are incorporated into the indicators for archaeological resources below. We suggest editing Table 5-5 as provided in Table 5-5 [see table].	Thank you for your comment. The criteria will be modified in the alternatives assessment section of the EA, as per MTCS' recommendation.
Archaeology and Heritage	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) 5.2.2 Evaluation Criteria and Indicators: We note that a number of potential data sources for the assessment of alternatives are included in the above-noted section. As suggested in our letter dated June 5, 2013, the following additional data sources could present potential resources in the assessment of alternatives: municipal, provincial and federal registers of properties of cultural heritage value; non-governmental heritage organizations and municipal heritage committees; cultural heritage evaluation report and heritage impact assessment; MTCS’s Standards and Guidelines for the Conservation of Provincial Heritage Properties (2011); archaeological assessment(s); and MTCS’s Standards and Guidelines for Consultant Archaeologists (2010).	Thank you for your comment. The additional data sources identified by MTCS will be used in the alternatives assessment of the EA.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Archaeology and Heritage	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Section 6.8.6.1 Archaeological Resources This section notes that Stage 1 and 2 Archaeological Assessment studies were undertaken in 2011 and 2012. As of the date of this letter MTCS has not yet received these reports. Reports are reviewed on a first in, first out basis, and depending on the contents of the reports, further archaeology may be required. Please indicate the following in the Proposed ToR, to clarify the review process for archaeological assessment reports: The Ministry of Tourism, Culture and Sport reviews archaeological assessment reports as condition of licencing under the Ontario Heritage Act. This review is to ensure that the licensed professional consultant archaeologist has met the terms and conditions of their archaeological licence, that archaeological sites have been identified and documented according to the standards set by the Ministry and that the archaeological fieldwork and report recommendations ensure the conservation, protection and preservation of the cultural heritage of Ontario.	Thank you for your comment. Woodland Heritage Services on behalf of IAMGOLD submitted to MTCS a Stage 2 Archaeological Report for the Côté Gold Project on June 21, 2013. Woodland Heritage Services in the process of completing revisions to this report and a deadline of December 31, 2013 was established by MTCS for this revised report.Woodland Heritage Services is conducting numerous further (Stage 3 and 4) archaeological assessments at the Project site which will also be submitted to the MTCS for clearance. As has been conducted for previous environmental assessments in Ontario, IAMGOLD is recommending that MTCS considers partial clearance for the environmental assessment based on the Stage 2 report that would clear everything except small specific sites. These sites would be cleared once the Stage 3 and 4 reports are filed.Regarding marine archaeological resources, there is, in the opinion of Woodland Heritage Resources, no potential for marine archaeological resources for the Côté Gold Project site and therefore will not be investigated further. A note to this effect will be included in the revised Stage 2 Archaeological Report. The typo on page 6-23 has been noted with apologies.
Archaeology and Heritage	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	Once reviewed, ministry staff provides the consultant archaeologist with a letter that comments on the archaeological assessment report. If the report complies with Ministry requirements including the Standards and Guidelines for Consultant Archaeologists (2011), the letter informs the licensee that the report has been accepted. This letter is copied to the proponent and the approval authority.We note that there is currently no commitment in the ToR to assess the study area for marine archaeological resources. In Ontario, marine archaeological assessments are conducted separately from land based archaeology. Due to the nature of this project, it is recommended that a marine archaeological assessment be undertaken for those areas where there is a possibility of impacting potential marine (or underwater) archaeological sites located in primary water sources (lake, river, stream). Please correct the typo in the first paragraph of page 6-23 ("…a total of 31 archaeological sites and features have been located…").	Thank you for your comment. Woodland Heritage Services on behalf of IAMGOLD submitted to MTCS a Stage 2 Archaeological Report for the Côté Gold Project on June 21, 2013. Woodland Heritage Services in the process of completing revisions to this report and a deadline of December 31, 2013 was established by MTCS for this revised report.Woodland Heritage Services is conducting numerous further (Stage 3 and 4) archaeological assessments at the Project site which will also be submitted to the MTCS for clearance. As has been conducted for previous environmental assessments in Ontario, IAMGOLD is recommending that MTCS considers partial clearance for the environmental assessment based on the Stage 2 report that would clear everything except small specific sites. These sites would be cleared once the Stage 3 and 4 reports are filed.Regarding marine archaeological resources, there is, in the opinion of Woodland Heritage Resources, no potential for marine archaeological resources for the Côté Gold Project site and therefore will not be investigated further. A note to this effect will be included in the revised Stage 2 Archaeological Report. The typo on page 6-23 has been noted with apologies.

Archaeology and Heritage	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Appendix C: Similar to our comments above, in our comments submitted to you on June 5, 2013, we expressed concern that the Tailings Management Facility Alternatives Assessment does not consider all aspects of cultural heritage resources (i.e. archaeological resources are mentioned, but built heritage resources, cultural heritage resources and cultural heritage landscapes are not included) in the evaluation of alternatives. Your response in the Record of Consultation indicates that "it is our understanding that the terminology used in Appendix B was meant to include all aspects of cultural heritage resources". Given that the potential for built heritage resources and cultural heritage landscapes has yet to be fully examined through the baseline studies planned for 2013, we are concerned that potential impacts and mitigation will not be considered for a comprehensive range of cultural heritage resources in the siting and design of the Tailings Management Facility. A commitment to either update or supplement the Tailings Management Facility alternatives assessment with information gathered from the proposed baseline studies planned for 2013 should be included in the Proposed ToR.	Thank you for your comment. Should additional archaeological baseline studies planned for 2013 identify additional built heritage resources and cultural heritage landscapes, TMF siting and/or design may be revised based on these findings. This would be reported in the EA.
Human Health	218	E-mail	06/05/2013	The Ministry of the Environment (MOE) sent surface water related comments on Côté Gold Project's Draft Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The criterion "Effect on local residents" should be expanded to "Effect on local residents and recreational users". 2) Surface waters in the area of the mine could potentially be drinking water sources for local residents and recreational users (e.g. campers, canoe trippers), therefore include additional Indicator of "Non-interference with surface water drinking supply."	Agreed, the indicator will be changed as requested.
Human Health	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) SDHU wishes to reinforce that protection of water sources for human consumption should be highlighted. Among many factors, changes in flow magnitude, effects of climate change (ie. flooding, rain, and drought), run-off, seepage/leaching, and accidental spills can negatively impact the amount of water available and the safety of that water for human consumption. If water quantity or quality is impacted, how will this be handled?	Thank you for your comment. The EA report will include information on the effect of the Project on the water sources, which will include changes in flow, run-off and seepage management, effect on climate change on the Project as well as malfunctions and accidents.
Human Health	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Has consideration been given to the effects of air pollution such as particulates (PM10, PM2.5) and noise on local permanent and seasonal residents and workers at the camp accommodations? On and off site monitoring may wish to be considered.	Thank you for your comment. The EA report will include information on the effect of the Project on the air quality and noise in the vicinity of the Project site. The aspects considered include noise, vibration, dust, total particulate, fine particulate matter (PM2.5), sulphur oxides, nitrogen oxides, key metals and hydrogen cyanide.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Indigenous Rights and Title	21	Letter	02/23/2012	Following up on an email request of February 2012, Aboriginal Affairs and Northern Development Canada (AANDC) provided information to the Canadian Environmental Assessment Agency (CEAA) on established or potential Aboriginal and treaty rights in the vicinity of the Côté Gold site.	Aboriginal Affairs and Northern Development Canada, Canadian Environmental Assessment Agency	1) AANDC provided information to CEAA on established or potential Aboriginal and treaty rights in the vicinity of the Côté Gold site.	N/A
Indigenous Rights and Title	205	Meeting	04/17/2013	IAMGOLD provided the Ministry of Northern Development and Mines (MNDM) with an update on the Project with respect to permitting, as well as an update on the First Nations and Métis consultation process. Meeting discussions focused on IAMGOLD concerns related to the timelines for the Terms of Reference (ToR) process under the provincial Environmental Assessment (EA).	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) The MNDM indicated that it would follow up with appropriate staff to ensure that IAMGOLD received a fulsome list of First Nations from the Ministries.	NA
Indigenous Rights and Title	277	Letter	06/07/2013	The Ministry of Northern Development and Mines (MNDM) sent a letter to IAMGOLD on 2013-06-07 outlining the Ministry's requirements before proceeding with the Project including Aboriginal Consultation specifications.	Ministry of Northern Development and Mines, IAMGOLD Corporation	1) The MNDM has determined that the Project has the potential to cause adverse impacts to Aboriginal and treaty rights and consultation will be required with those Aboriginal communities whose rights may be affected.	IAMGOLD has been working with the Ministry of Northern Development and Mines to prepare and finalize this plan of consultation. It will be submitted to the Director of MNDM as soon as possible.
Indigenous Rights and Title	277	Letter	06/07/2013	The Ministry of Northern Development and Mines (MNDM) sent a letter to IAMGOLD on 2013-06-07 outlining the Ministry's requirements before proceeding with the Project including Aboriginal Consultation specifications.	Ministry of Northern Development and Mines, IAMGOLD Corporation	1) Directing IAMGOLD to prepare and submit a plan of consultation for my review with respect to: Mattagami First Nation; Flying Post First Nation; Métis Nation of Ontario Timmins Community Council; Brunswick House First Nation; and Matachewan First Nation (for the Transmission line corridor only*). *Please note that Matachewan First Nation is not identified for the immediate project area including the open pit and related infrastructure. The list is subject to change, based on MNDM's ongoing review of information received during the consultation process or the receipt of assertions by other Aboriginal communities.	N/A
Indigenous Rights and Title	302	Meeting	07/03/2013	On 2013-07-03 an Intergovernmental agency meeting was held with representatives from AMEC, IAMGOLD, the Canadian Environmental Assessment Agency (CEA Agency), the Ontario Ministry of Northern Development and Mines, and the Ontario Ministry of the Environment to discuss the Draft Terms of Reference (ToR) responses and an overview of consultation planning. The meeting notes were finalized on 2013-08-06.	Canadian Environmental Assessment Agency, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What follow-up has been done re: Draft ToR?	We have held open houses in Mattagami First Nation and Flying Post First Nation. The attendance at open houses seemed to be dropping and it appeared that there was not a lot of interest in the ToR. Similar concerns were expressed at the open houses as in the previous open houses and these have been documented in the Record of Consultation.
Land and Resource Use	32	Meeting	10/25/2012	IAMGOLD met with Ministry of the Environment (MOE) to provide Project update.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) MOE explained that domestic waste in local landfills must be planned ahead of time to make sure small facilities can handle.	IAMGOLD identified that waste is currently shipped to the Timmins landfill. IAMGOLD is also considering its own landfill to be permitted on-site for construction and operation.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual responded that in Gogama most of the land is private patented land. The MNR is responsible for all wildlife/fish management even on private land. MNR does not want to sell lots to private land owners since there are other already serviced lots in the town. MNR would like there to be a legitimate need for these lots before they are sold. MNR lots may be available but not for permanent residence, only seasonal. Individual stated that in the last 10 years Gogama has been quiet due to the loss of employment (Domtar, CN). In the past Gogama had a CN work camp, there was a rail station, movie theatre, bowling alley back in 1960's. The area has lost a lot of employment int he last 10-20 years due to forestry.	Thank you for your comment. No further response required.
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual stated that historically there were small farms in the area that supported the CN rail workers camps. There are no agricultural uses now in the region.	Thank you for your comment. No further response required.
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual noted the following: Spanish Forest Management Area (FMA) is in the jurisdiction of the MNR (Chapleau) - EACOM is the Sustainable Forest License (SFL) holder (previously Domtar) and their office is on Birch Street in Timmins; Pineland FMA is in the jurisdiction of MNR Gogama - Pineland Forest Timber Company Ltd. is the SFL holder and EACOM is the management company; Timiskaming FMA is in the jurisdiction of MNR in Kirkland Lake and the SFL held by Timiskaming Forest Allicance Inc. in Englehart and First Resources Management Company is the managing agent; the MNR has access to the forest harvesting plans for the Gogama area. Forestry activities include access (roads, harvesting, renewal (planting), and maintenance of planted areas). There are active forest activities within the Chester Township. There is a 10 year Forest Management Plan and current Annual Work Schedule.	Thank you for your comment. No further response required.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individuals stated the following about fishing: the RSA is a very busy fishing area; angling pressure is high to very high in some lakes (Biscotassi, Mesomikenda, Ramsay and Rice Lakes); Mesomikenda Lake has a Lake Trout Policy that limits the kind of development that can occur. This policy can be found on their website or call them to obtain; Minisinakwa Lake (Gogama) has high angling pressure; Dividing Lake has medium angling pressure; there are tourism lakes to the North East; Mekenda Lodge on the north end of Kenda Lake (but joined to Mesomikenda) as well as on the Rice Lakes; provided list of stocked lakes: Dividing Lake (Walleye); Mesomikenda (Lake Trout, Pike, Walleye, Bass); and the RSA is in Fish Management Zone 10 - there is an active Zone Council that is looking at mining development (generally) and impacts to fisheries.	Thank you for your comment. No further response required.
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual noted that there is lots of trapping in this area. The MNR would need a data sharing agreement to release names of trappers.	Thank you for your comment. IAMGOLD and the MNR are in the process of finalizing a data sharing agreement.
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individuals noted that there are a number of registered canoe routes, but the MNR does not keep statistics on use. The 4M Canoe Route goes through the Côté Gold Project site. The MNR gets approximately 10 calls per year for canoe parties using the route. It is relatively popular with MNR staff, junior rangers completing the route annually. There is lots of local knowledge and history of this route; there are lots of exits and it is relatively easy so very accessible to a wide range of paddlers. MNR can give a copy of canoe routes.	Thank you for your comment. No further response required.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual indicated that there were different contacts for the various Wildlife Management Units that overlap the Regional Study Area (RSA) as follows: Nick Orton (MNR contact) 705-864-1710 - in Chapleau, is the lead contact for WMU 31; Dave Ballak is lead contact for WMU 29; and Wayne Selinger (Espanola) for WMUs 38, 39. Individual stated that the RSA is heavily hunted for moose, small game and bear. Individual noted that there is a Cervid Management Plan for this area that aims to decrease deer populations and increase moose populations. There have been some Elk sightings especially in the southern end of the RSA. Individual stated that Bear Management Areas (BMAs) are allocated to outfitters for non-resident harvesting. Typically 1 tag is issued to hunt 1 bear for a non-resident. Residents can hunt on BMAs or other areas; there are no restrictions as there are for non-resident hunters. Residents can get multiple bear tags. 2) Individual stated that the RSA is very popular for upland game bird hunting and that there are many outfitters and First Nations hunting upland game birds. The MNR does not have statistics for small game hunting as there are no reporting requirements. Individual stated that there is a good population of small game in the RSA. It was noted that the site conditions allow for more time to hunt, so there is more frequent hunting. Individual noted that there is lots of hunting off the Chester Road.	Thank you for your comment. No further response required.
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual stated that there are no Ontario Federation of Snowmobile Clubs (OFSC) trails in the Research Study Area (RSA), except a side trail from Mattagami First Nation to Gogama. There are no official ATV trails. Individual noted that snowmobilers are using portage trails and existing forestry roads - so lots of use in the site area - including the Mesomikenda Lake to Chester Road. These are not maintained by OFSC, just known and used locally.	Thank you for your comment. No further response required.
Land and Resource Use	152	Meeting	11/08/2012	IAMGOLD met with Ministry of Natural Resources (MNR) to gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individuals noted that in winter there is not much activity at or around the Côté Gold site. In the Fall there is hunting activity at/near the site, but there are busier places in the RSA. Now that the Bridge over the Mesomikenda Lake has been re-established, there is more use of the area.	Thank you for your comment. No further response required.
Land and Resource Use	82	Open House	02/27/2013	IAMGOLD held an open house in Gogama, Ontario to present an overview of the IAMGOLD draft Project Description (PD). Approximately 56 attendees participated in the open house.	Gogama Fire Department, Individual - Gogama, Individual - GP, Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) There is a canoe route at Three Duck - Bagsverd waterways.	IAMGOLD acknowledges your feedback, it will be dually considered as we plan and develop the Côté Gold project.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Does the visual effects modeling take into account possible tree harvesting in the area?	We have been working with EACOM, who are the forestry license holder in the area, on this and other management planning for the area. If tree cutting was expected in any of the potentially affected areas, we would consider this is the effects prediction.
Land and Resource Use	266	Meeting	05/23/2013	On 2013-05-23 AMEC, on behalf of IAMGOLD, interviewed the Gogama Local Services Board (GLSB) about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. Meeting notes were finalized on 2013-06-14.	Gogama Local Services Board, AMEC Environment & Infrastructure	1) With regards to tourism, the existing campgrounds are at capacity with people who come back every year. If there is a large influx into the community and there may be pressure on fishing and recreation resources but this has to be confirmed by Ministry of Natural Resources.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Land and Resource Use	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) In Section 5.2.2.5, the specific reference to tourism is appreciated; however the related indicator of “maintenance or improvement of tourism and recreational opportunities” could be strengthened. It may be useful to add an indicator for tourism that speaks to continued access to nearby natural resources (e.g. fish and wildlife).	The Proposed ToR will be revised to include the indicator "continued access to areas used for natural resource harvesting by tourism operators". These areas will include Bear Management Areas which are located in the region. IAMGOLD has identified where tourism operators are located and are discussing their operations and activities as they may relate to the Project area. A map showing the location of these outfitter establishments will be provided in the Proposed ToR. IAMGOLD continues to identify and meet with stakeholders. Information gathered during these meetings will be incorporated in the land and resource use baseline study and appended to the environmental assessment report.
Land and Resource Use	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Figure 5 contains no information on tourism facilities which should have been identified during any baseline socio-economic study. 2) Page 6-3 notes that a human environment local study area is not yet defined for the Project (a regional area has been). Given MTCS's concerns about the lack of information in the ToR about tourism facilities and activities we look forward to seeing how the local human environment study area will be defined in the final ToR.	IAMGOLD has mapped location of tourism facilities and will include this in the Proposed ToR.
Land and Resource Use	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) MTCS identified that Figure 5 does not identify any tourism facilities in proximity to the proposed Project and provided a list of existing resource-based tourism facilities in the Project area. 2) If it has not already been done, MTCS encourages IAMGOLD to contact these facilities to make them aware of the Project and to determine their interest in receiving additional Project-related information on an ongoing basis.	IAMGOLD has mapped locations of tourism facilities and will review these maps to include these establishments if they fall within the expected are of influence in a figure for the Proposed ToR. IAMGOLD continues to identify and meet with stakeholders including tourism operators and if they are interested, will engage them in the Project. Information gathered from tourism operators will be incorporated into the environmental assessment report.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Referencing MTCS comments on Section 6.1, we are unsure whether any tourism facilities have been identified and/or communicated with directly. There is no reference to any specific tourism business that we could find in the draft ToR or the Record of Consultation. We look forward to seeing more details in the final ToR with regard to engagement with the tourism sector. Has dialogue occurred to date with the main resource-based tourism association in the Province, Nature and Outdoor Tourism Ontario? They should be made aware of the Project if they have not been informed already.	IAMGOLD is engaging local tourism operators in the EA process and will continue to engage them throughout the Project life. Details of these discussions will be provided in the Record of Consultation for the Proposed ToR. To date, there has been no dialogue with Nature and Outdoor Tourism Ontario. IAMGOLD will add this organization to the Project mailing list, and discuss their interest and expected level of engagment in the Project.
Land and Resource Use	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) With reference to Appendix B, Mine Rock Area Alternatives Assessment, how were things like Bear Management Areas (BMAs) treated in the assessment that was carried out (if there are some within that proximity distance) since only “outfitter establishments” is referenced?	There is one BMA (GO-31-064) that is proximate to or will be partially overprinted by the Project facilities including the Mine Rock Areas. IAMGOLD will discuss effects and appropriate mitigations with the holder of this BMA.
Land and Resource Use	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) Table 5-5 does not appear to consider effects on commercial bait harvesters, trappers, Bear Management Area or Sustainable Forest License holders.	The Proposed ToR will be modified to include the effects on commercial bait harvesters, trappers, Bear Management Area or Sustainable Forest License holders.
Land and Resource Use	223	Letter	06/08/2013	The Ministry of the Environment (MOE) - Northern Region Planning Unit sent comments on the Draft Terms of Reference (ToR) for the Côté Gold Project.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The MOE has a mandate under the Environmental Protection Act to minimize the exposure of any person, property, plant or animal life to off-site potential negative effects associated with the operation of certain facilities. To address this concern, and to prevent or minimize exposure to adverse effects, the principles of land use compatibility should be reflected in the ToR and addressed during the environmental assessment (EA) process. 2) Iinformation addressing potential influence areas, minimum separation distances, and the use of detailed studies to evaluate potential impacts and identify appropriate mitigation measures, is included in the MOE D-series Guidelines.	Comments noted. These aspects will be addressed in the EA report.
Land and Resource Use	223	Letter	06/08/2013	The Ministry of the Environment (MOE) - Northern Region Planning Unit sent comments on the Draft Terms of Reference (ToR) for the Côté Gold Project.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The extent of local and regional study areas are addressed in this section, which describes the human environment regional study area only in very general terms, and indicates that a human environment local study area has not yet been defined for the Project. We recommend that land uses and activities which could result in land use compatibility issues be considered, along with other factors, as the extent of these areas are identified or further refined. The final ToR should more clearly identify the extent of the study areas for the environmental assessment.	The Proposed ToR will be revised to include a description of the human environment study area.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	223	Letter	06/08/2013	The Ministry of the Environment (MOE) - Northern Region Planning Unit sent comments on the Draft Terms of Reference (ToR) for the Côté Gold Project.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) This section indicates that the Côté Gold Property consists of patented and unpatented mining claims, mining leases, and mining licenses of occupation, all located within 17 unorganized townships. We would recommend including additional information in the final ToR to identify the location and extent of each of these types of ownership, occupation, or lease.	Comments noted. These aspects will be addressed in the environmental assessment report.
Land and Resource Use	223	Letter	06/08/2013	The Ministry of the Environment (MOE) - Northern Region Planning Unit sent comments on the Draft Terms of Reference (ToR) for the Côté Gold Project.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) In order to aid in identifying and addressing potential land use compatibility issues, we recommend that any landowners, resource users, or other interests who may potentially experience adverse effects as a result of the Project be added to the Project mailing/contact list as they are identified, and included in consultation activities throughout the environmental assessment (EA) process.	Comments noted. These aspects will be addressed in the EA report.
Land and Resource Use	223	Letter	06/08/2013	The Ministry of the Environment (MOE) - Northern Region Planning Unit sent comments on the Draft Terms of Reference (ToR) for the Côté Gold Project.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Should any portions of the Project site be situated on patented mining claims, we recommend consulting the Ministry of Municipal Affairs and Housing (Sudbury Municipal Services Office) to determine if any approvals under the Planning Act are needed to allow for the development of any Project components.	Comments noted. These aspects will be addressed in the environmental assessment report.
Land and Resource Use	306	Interview	08/16/2013	On 2013-07-17 IAMGOLD contacted the Ministry of Natural Resources for some general consultation information requests related to trap-line areas, data-sharing, quarry permits and Landfill Sites. A representative from the Ministry of Natural Resources responded on 2013-08-16.	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) The MNR will need to get an idea of the expected impact on trappers and bait fish harvesters in the area. For example, would they be prohibited from trapping on leased land? Would IAMGOLD allow the trapper to trap to prevent the occurance of nuisance beaver problems? The MNR needs to know specifically what area they will not be allowed to trap on so that we can better determine the impact. A map showing tenure (both present and proposed) would be helpful for the MNR to make a determination of impact; the map does not have to be an official map, just something that would provide an idea of what IAMGOLD owns, leases, etc and what land IAMGOLD hopes to acquire in the future. We realize there may be some sensitivity around this.	IAMGOLD has engaged with the trapper whose cabin is currently located on the Site's leased property. IAMGOLD is committed to ongoing engagement with the trapper to discuss potential mitigation measures, and will provide more information to the MNR on what areas of the Project site may be available for trapping as the Project moves into the planning phase.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	306	Interview	08/16/2013	On 2013-07-17 IAMGOLD contacted the Ministry of Natural Resources for some general consultation information requests related to trap-line areas, data-sharing, quarry permits and Landfill Sites. A representative from the Ministry of Natural Resources responded on 2013-08-16.	Ontario Ministry of Natural Resources, IAMGOLD Corporation	2) The MNR does not compensate trappers for loss of trapline areas, fewer mammals, loss of cabin, etc. Examples would be the area that was burned by fire last year, flooded areas, or areas where a forest company is cutting trees. If a trapper decides that he no longer wants their trapline area (for whatever reason), they can relinquish it to the Crown. In keeping with provincial trapline policies, the MNR cannot transfer the head trapper to another trapline area. All trappers apply for vacant traplines, which they are interested in acquiring, and a provincial point system is used to determine the allocation of each vacant line. 3) The MNR has previously provided IAMGOLD with the contact information for the two bait fish harvesters. Bait fish harvesters pay for a township, regardless of how much Crown land is within the township. In the interest of the province dealing fairly with each harvester, there is no compensation for areas that any harvester cannot access.	IAMGOLD has engaged with the trapper whose cabin is currently located on the Site's leased property. IAMGOLD is committed to ongoing engagement with the trapper to discuss potential mitigation measures, and will provide more information to the MNR on what areas of the Project site may be available for trapping as the Project moves into the planning phase.
Land and Resource Use	306	Interview	08/16/2013	On 2013-07-17 IAMGOLD contacted the Ministry of Natural Resources for some general consultation information requests related to trap-line areas, data-sharing, quarry permits and Landfill Sites. A representative from the Ministry of Natural Resources responded on 2013-08-16.	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) There is no Bear Management Area (BMA) specifically for the Mesomikenda Lodge. The BMA for the area around there was allocated to another outfitter. 2) The MNR cannot provide contact information. The procedure to obtain contact information would be for the company (i.e., IAMGOLD) to prepare a letter and MNR may forward it on thier behalf. A transmission corridor would have no effect onthe BMA operations. BMAs are allocated according to a provincial procedure and the size/boundaries may include areas that they are not readily able to utilize. The impact to BMA operators would depend upon the tenure and proposed restrictions based upon what the company plans on allowing in the area. The MNR would suggest that a map would be helpful and examine this further before we discuss contacting the BMA holders.	Thank you for your comment. IAMGOLD will provide a map to the MNR as part of the data sharing agreement.
Land and Resource Use	338	Meeting	08/21/2013	On 2013-08-21, AMEC and IAMGOLD attended a meeting with representatives from the Ministry of Natural Resources (MNR) to discuss waste management options for the Project, including discussion of the Neville Township Waste Plant, which is a MNR landfill.	Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Mesomikenda Cottagers use that locaction. If IAMGOLD takes over ownership will the residents still be able to use the landfill?	Yes, we can arrange that with a dumpster or something, given that they are seasonal cottages and not full time residents. The impact of 20-25 seasonal cottages should be minimal. But we do not want other businesses like the Watershed restaurant to use that location.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	311	Phone Call	08/27/2013	AMEC, on behalf of IAMGOLD, spoke with a representative from the Ministry of Natural Resources (MNR) to retrieve information related to trapline areas, Bear Management Area (BMA) and bait fish harvesting.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure	1) The MNR identified that quotas for certain animals could be adjusted if trapline areas are reduced. Trappers could choose to give up a trapline if they do not want to trap anymore. Trappers need to apply for other trapline areas using a provincial point system. The availability of trapline areas is generally low (could be one to two in the Timmins District). Trapline areas are licensed in the fall; however, if there is any information on trapline vacancies in the District the MNR will let you know.	Thank you for your comment. The information collected will be used to support the Land and Resource Use Baseline Study.
Land and Resource Use	311	Phone Call	08/27/2013	AMEC, on behalf of IAMGOLD, spoke with a representative from the Ministry of Natural Resources (MNR) to retrieve information related to trapline areas, Bear Management Area (BMA) and bait fish harvesting.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure	1) Generally BMAs are rarely vacant; however, we do not have information readily available on vacancies in the District. There will need to be discussion with Glen McFarlane (MNR Supervisor) to determine how effects to BMA areas could be discussed with the person allocated to the BMA. Unlike trapline areas, a person can be allocated more than one BMA. The amount charged to have a BMA is based on the area (square kilometres). BMAs were developed based on historic use areas.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Land and Resource Use	311	Phone Call	08/27/2013	AMEC, on behalf of IAMGOLD, spoke with a representative from the Ministry of Natural Resources (MNR) to retrieve information related to trapline areas, Bear Management Area (BMA) and bait fish harvesting.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure	1) Bait fish harvest blocks (based on townships) are more common and available than trapline areas or BMAs. There are a number of bait fish harvest blocks available in the District. Bait fish harvesters are charged a fee by township allocated. Harvesters can have more than one township allocated and usually harvest from one and move to another the next year. They have to show their harvest plans to prove use and submit reports on harvesting to the MNR.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Land and Resource Use	320	E-mail	08/29/2013	On 2013-08-26 IAMGOLD shared with a representative from the Ministry of Natural Resources (MNR) information related to the traplines, bear management areas and bait fish harvest blocks that overlap the Project site and those that are near the proposed transmission line. In response, on 2013-08-28 the representative requested that AMEC, on behalf of IAMGOLD, share the results of the effects prediction study to help the Ministry prepare to send out letters outlining these effects to potentially impacted resource harvesters. On 2013-08-29 AMEC, on behalf of IAMGOLD, responded and noted that they would share the study with the Ministry once they have finished with data collection and analysis.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The Timmins District has two bait harvest areas available.	Thank you for your comment. This information will be used to support the Land and Resource Use Baseline study.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	320	E-mail	08/29/2013	On 2013-08-26 IAMGOLD shared with a representative from the Ministry of Natural Resources (MNR) information related to the traplines, bear management areas and bait fish harvest blocks that overlap the Project site and those that are near the proposed transmission line. In response, on 2013-08-28 the representative requested that AMEC, on behalf of IAMGOLD, share the results of the effects prediction study to help the Ministry prepare to send out letters outlining these effects to potentially impacted resource harvesters. On 2013-08-29 AMEC, on behalf of IAMGOLD, responded and noted that they would share the study with the Ministry once they have finished with data collection and analysis.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The Timmins District has five Bear Management Areas available.	Thank you for your comment. This information will be used to support the Land and Resource Use Baseline study.
Land and Resource Use	320	E-mail	08/29/2013	On 2013-08-26 IAMGOLD shared with a representative from the Ministry of Natural Resources (MNR) information related to the traplines, bear management areas and bait fish harvest blocks that overlap the Project site and those that are near the proposed transmission line. In response, on 2013-08-28 the representative requested that AMEC, on behalf of IAMGOLD, share the results of the effects prediction study to help the Ministry prepare to send out letters outlining these effects to potentially impacted resource harvesters. On 2013-08-29 AMEC, on behalf of IAMGOLD, responded and noted that they would share the study with the Ministry once they have finished with data collection and analysis.	Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Timmins District currently has no traplines areas available.	Thank you for your comment. This information will be used to support the Land and Resource Use Baseline study.
Land and Resource Use	374	Meeting	10/01/2013	On 2013-10-01, IAMGOLD met with the Member of Provincial Parliament of the Nickel Belt region to provide a general overview and update on the permitting status of the Côté Gold Project. IAMGOLD also provided an update on the status of the Impact Benefit Agreement (IBA) currently being negotiated between IAMGOLD and Wabun Tribal Council. IAMGOLD also provided an update on recent community engagement efforts of IAMGOLD with the Métis Nation of Ontario (MNO).	Government of Ontario, IAMGOLD Corporation	1) Cottagers in the area have raised some concerns on how the development of the project would impact them. Several "cottagers" in the area, are in fact, squatters with no proper legal title to "their land".	Thank you for your comment. IAMGOLD is making note of this concern.
Socio-Economic	34	E-mail	09/13/2012	Request from Gogama Local Services Board (GLSB) for financial assistance for Gogama sewage treatment system project. Meeting set-up with IAMGOLD.	Gogama Local Services Board, IAMGOLD Corporation	1) GLSB requested for financial assistance for an engineering study for Gogama sewage treatment system project. This project is priority for community's future and being able to support new residents of Gogama.	IAMGOLD identified that they may be able to assist but that they would like to meet to obtain more information.
Socio-Economic	33	Meeting	09/24/2012	IAMGOLD met with Gogama Local Services Board (GLSB) to discuss Gogama's sewage treatment system.	Gogama Local Services Board, IAMGOLD Corporation	1) Individual requested assistance from IAMGOLD in amending their Certificate of Approval (CofA) from 300 cubic meters per day (m3/day) to 450 m3/day. Individual identified that this will help to accommodate potential increase in residences for those looking to reside in Gogama.	IAMGOLD will review the information GLSB provided to see if there is a simple solution. IAMGOLD believes there is based on the size of the newly constructed lagoon cells.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	35	E-mail	10/25/2012	IAMGOLD received an email from Gogama Local Services Board (GLSB) regarding the original engineer report for the Gogama lagoon.	Gogama Local Services Board, IAMGOLD Corporation	1) Individual identified that they had found the original engineer report found for Gogama lagoon. Inquired if IAMGOLD would like a copy.	IAMGOLD identified that they will stop by the GLSB office to pick it up.
Socio-Economic	269	Meeting	05/21/2013	AMEC conducted an interview on 2013-05-21 with the Chief Administrative Officer of the City of Greater Sudbury about the potential socio-economic impacts of the Project. Meeting notes were finalized on 2013-06-21.	City of Greater Sudbury, Greater Sudbury Development Corporation, AMEC Environment & Infrastructure	1) Individuals provided the following comments. Exploration is slowing with less money for drilling, etc. Operating mines are still "chugging along", however, with no huge changes. Optimistic that KGHM International will go ahead with their Victoria Project. Cliffs Natural Resources is planning a massive project for which Sudbury would be a major beneficiary. Xstrata Zinc will likely be re-opening two properties in 2016 and the market for zinc is pretty good. Vale is scaling backs its plans on the Clean Air Project but still intends to move forward with Victor-Capré Project.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	269	Meeting	05/21/2013	AMEC conducted an interview on 2013-05-21 with the Chief Administrative Officer of the City of Greater Sudbury about the potential socio-economic impacts of the Project. Meeting notes were finalized on 2013-06-21.	City of Greater Sudbury, Greater Sudbury Development Corporation, AMEC Environment & Infrastructure	1) It is difficult to differentiate projects and their effects. Sudbury is far from a single industry city and no individual project can be looked at as make-or-break. Citizens of the City are resilient and used to the vagaries of the market. There were predictions of doom and gloom for the City's economy in 2008, but this did not happen - this is one of the benefits of not having all of our eggs in one basket. The housing market for example, has remained healthy and stable, and they are currently anticipating a vacancy rate less than 1%.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	269	Meeting	05/21/2013	AMEC conducted an interview on 2013-05-21 with the Chief Administrative Officer of the City of Greater Sudbury about the potential socio-economic impacts of the Project. Meeting notes were finalized on 2013-06-21.	City of Greater Sudbury, Greater Sudbury Development Corporation, AMEC Environment & Infrastructure	1) Sudbury has seen limited social effects from mining projects away from the community; social effects tend to be limited to the host community. Exceptions may be the housing supply, since people establish their homes in proximity to their commute. That said, residents are used to complex geography and long commutes in the area. Effectively there is a strong community culture and a single labour market. 2) It may put positive pressure on Onaping-Levack's housing market, which has been slumping because of relative proximity to the mine site. 3) Specific needs or impacts are not expected from the Project. Sudbury is more underground mining focused in its mining services industry rather than an open pit mining and the terrain is different from the usual terrain at the Project site. However, the City does have a developed aggregate industry and there may be linkages to both industries. 4) Truck traffic is a concern, as Highway 144 has little if any shoulders and frequent wildlife interactions. Improving cell service on that corridor is a concern that the City will talk with IAMGOLD about in the future.	AMEC received accident rates from Highway 144 bypass (at Highway 17) up to and including Marquette township from the North-East Region OPP Detachment.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	266	Meeting	05/23/2013	On 2013-05-23 AMEC, on behalf of IAMGOLD, interviewed the Gogama Local Services Board (GLSB) about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. Meeting notes were finalized on 2013-06-14.	Gogama Local Services Board, AMEC Environment & Infrastructure	1) Labour force will not be made up of people from Gogama. There will be some employees from the community, but Gogama is made up of about 60% seniors. It is a retirement community; the other young people work in the mill for the most part. There might be a few in the community that might work a year or two that have experience but you're not going to have a major number of people available to work in the mine. There will be more in the service, and between Mattagami and Gogama there is about 20 people working for the past 2-3 years. Maybe in the administrative end as well; this is more likely than actual miners. This may change if people with mining experience locate in Gogama in anticipation of the mine opening.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	266	Meeting	05/23/2013	On 2013-05-23 AMEC, on behalf of IAMGOLD, interviewed the Gogama Local Services Board (GLSB) about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. Meeting notes were finalized on 2013-06-14.	Gogama Local Services Board, AMEC Environment & Infrastructure	1) The community attracted 20-25 families that were retirees or semi-retirees based on a brochure six or seven years ago and word of mouth. Retirees need access to medical facilities. Young couples see a public school that is closed as of a year ago and a separate school with 5 students. There are no extra-curricular activities. Some may move to Gogama because they don't want the camp life. We will try to convince people and be ready for them. Right now there is not much developed land for new development and we don't have the money for lot development of 30-40 lots. The government is leery about putting money in for a lot development plan since you need to sustain the development with services and landfill management. We could approach IAMGOLD about funding the service lot, but that is something that possibly the Chamber of Commerce will need to lead. Surveying one lot can cost $1,800. For IAMGOLD to help they need to see a return on that investment. 2) Some poeple may take the opportunity to sell their homes. I've been in Gogama all my life but I'm not getting any younger. I think about moving to the city as I get older and medical problems start showing up and I am not alone in these considerations. But people have not been rubbing thier hands and saying "IAMGOLD is coming, I'm going to sell my house".	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	266	Meeting	05/23/2013	On 2013-05-23 AMEC, on behalf of IAMGOLD, interviewed the Gogama Local Services Board (GLSB) about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. Meeting notes were finalized on 2013-06-14.	Gogama Local Services Board, AMEC Environment & Infrastructure	1) When I was growing up we had 200 kids in school; now we have 5. In September there will be 11 kids. The population will not go sky-high. You need cash flow to expand services; government does not want small communities to grow because they grow too fast and mines for too short a time. People afterward move out and the community can't support themselves, the community declares bankruptcy and the government gets the bill. The best case for growing is that the mine can provide employment, while it is around.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	266	Meeting	05/23/2013	On 2013-05-23 AMEC, on behalf of IAMGOLD, interviewed the Gogama Local Services Board (GLSB) about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. Meeting notes were finalized on 2013-06-14.	Gogama Local Services Board, AMEC Environment & Infrastructure	1) The sewer and water each will take about 1,000 people before they would require new investments. That is a large number. A consultant for MNR put the number together expected the community to decrease.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	266	Meeting	05/23/2013	On 2013-05-23 AMEC, on behalf of IAMGOLD, interviewed the Gogama Local Services Board (GLSB) about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. Meeting notes were finalized on 2013-06-14.	Gogama Local Services Board, AMEC Environment & Infrastructure	1) I'm not sure if residents would be interested in talking to their children or grandchildren about returning to the community to work at the mine. There has been out migration of our youth and I don't know if there would be in migration of youth when the mine becomes operational.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	267	Meeting	05/23/2013	On 2013-05-23, AMEC conducted an interview with the City of Timmins Chief Administrative Officer about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. AMEC confirmed transcript of interview. Meeting notes were finalized on 2013-06-24.	City of Timmins, AMEC Environment & Infrastructure	1) This year we are opening a tender to expand the water capacity in the Northern part of the city which will open 2,000 lots. We don't expect to use 2,000 lots in our lifetime, but those lots will be available by 2014. Currently housing is a big issue identified by the mining companies. It is a barrier to attract engineers to the Timmins area as a result. We should have a handle on it by 2014 but prices for housing remain more expensive than other communities in the area like Cochrane (but cheaper than Sudbury). Our housing study on affordable housing should be complete by Christmas. 2) With regards to the skilled labour force, there is some talk about a shortage in the greater mining area (from Kirkland Lake to Sudbury). In 2020 if everything goes well the Xstrata base metals mine will close and it has 1,040 employees - that is a huge labour force. The price of gold has fallen and there will likely be layoffs as a result from producing mines. The skilled labour force will likely be there when the mine comes. The Conference Board report says we created 5,000 jobs which I find hard to believe because our population is virtually static.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	267	Meeting	05/23/2013	On 2013-05-23, AMEC conducted an interview with the City of Timmins Chief Administrative Officer about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. AMEC confirmed transcript of interview. Meeting notes were finalized on 2013-06-24.	City of Timmins, AMEC Environment & Infrastructure	1) Timmins is going through the implementation of its strategic plan. The essence of that plan is to make Timmins a more attractive place to work, live in and play - for those that live here and those that want to come here. Our initiative would be to help any way we can, either regulatory or with regards to recruitment. While the metallurgical centre closed, about 70 people, we didn't feel a blip. During that time Xstrata Copper closed a mine in Bathursdt, New Brunswick. We got a place and flew a planeload of miners to Timmins and showed them the jobs available. We are willing to do these things. We have an excellent airport which is under city control, not a private entity or the federal government. It has been one of the biggest economic development catalysts we have.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	267	Meeting	05/23/2013	On 2013-05-23, AMEC conducted an interview with the City of Timmins Chief Administrative Officer about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. AMEC confirmed transcript of interview. Meeting notes were finalized on 2013-06-24.	City of Timmins, AMEC Environment & Infrastructure	1) With regards to the skilled labour force, there is some talk about a shortage in the greater mining area (from Kirkland Lake to Sudbury). In 2020 if everything goes well the Xstrata base metals mine will close and it has 1,040 employees - that is a huge labour force. The price of gold has fallen and there will likely be layoffs as a result from producing mines. The skilled labour force will likely be there when the mine comes. The Conference Board report says we created 5,000 jobs which I find hard to believe because our population is virtually static.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	268	Meeting	05/23/2013	On 2013-05-23, AMEC interviewed the Program Manager from the Ontario Provincial Police (OPP) South Porcupine Detachment about the potential socio-economic impacts of the Project. Meeting notes were finalized on 2013-07-03.	Ontario Provincial Police, AMEC Environment & Infrastructure	1) Gogama detachment reports to the South Porcupine Detachment and its jurisdiction extends as far south as Marquette Township and as far north and the Sudbury District line. 2) The detachment has one Seargent and six Constables, a rookie having being recently been added to the detachment. Administration is run through Timmins. The size of this force is not seasonal. 3) Efforts of the Gogama detachment are oriented towards both the provincial highways (mostly Highway 144) and to the large unorganizaed area's trails, lakes, cottages and communities (Gogama).	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	268	Meeting	05/23/2013	On 2013-05-23, AMEC interviewed the Program Manager from the Ontario Provincial Police (OPP) South Porcupine Detachment about the potential socio-economic impacts of the Project. Meeting notes were finalized on 2013-07-03.	Ontario Provincial Police, AMEC Environment & Infrastructure	1) In the summer effort is placed on cottage waterways, deterring behaviour that can lead to drowning. Outside cottage season more effort is directed towards Highway 144, which has a lot of curves, little shoulder and needs consistent oversight. 2) Community needs are met with existing resources. Crime levels are down in 2013 in Gogama, with property crimes falling between 15 and 20% in the South Porcupine cluster.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	268	Meeting	05/23/2013	On 2013-05-23, AMEC interviewed the Program Manager from the Ontario Provincial Police (OPP) South Porcupine Detachment about the potential socio-economic impacts of the Project. Meeting notes were finalized on 2013-07-03.	Ontario Provincial Police, AMEC Environment & Infrastructure	1) The OPP will provide data on vehicle traffic and accidents on Highway 144, noting that a lot of accidents involve animals and are seasonal.	AMEC has received accident rates within the South Porcupine Detachment monitoring area and data will be included in the socio-economic baseline report.
Socio-Economic	268	Meeting	05/23/2013	On 2013-05-23, AMEC interviewed the Program Manager from the Ontario Provincial Police (OPP) South Porcupine Detachment about the potential socio-economic impacts of the Project. Meeting notes were finalized on 2013-07-03.	Ontario Provincial Police, AMEC Environment & Infrastructure	1) The OPP is not concerned about additional demands from the mine but would like to know the size of the construction and operations workforce. 2) OPP does want to know when the worker's camp is built in order to "fly the colours" of the force, since employees need to know the police are there if needed. The OPP will assign a liaison officer, likely the Sergeant of the Gogama detachment, to work with the company on issues including the investigation of industrial accidents and arranging escorts on trucks. The Sergeant should be added to the mailing list for the Project. 3) OPP has a good relationship with NAPS (the two forces engage in joint initiatives), but any questions with respect to NAPS should be addressed to them directly.	Thank you for your comment. IAMGOLD can provide this information to the OPP when the Project is nearing the construction phase.
Socio-Economic	245	Letter	06/05/2013	The Ministry of Economic Development, Trade and Employment and the Ministry of Research and Innovation provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ministry of Economic Development and Innovation	1) In the Rationale for the Undertaking, the projected economic benefits of the Project are identified, including the creation of 1,200 temporary construction jobs and 500 full time permanent positions during the operation of the mine. This will be a significant contribution to the long-term economic vitality of northeastern Ontario, and, in particular, will support the centres of excellence in mining equipment and services in Greater Sudbury and Timmins. The mining supply and services clusters are important components of the innovative capacity of Northern Ontario that will help position the region for success in the emerging knowledge-based economy.	No response or action required.
Socio-Economic	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Section 6.8.2 provides some data for Northeastern Ontario on a few sectors of the economy. Tourism is referenced under “other services” but there is no data on the percentage of the economy it comprises. If that data is available it should be included in the final ToR. 2) MTCS provided tourism visitation and spending data for the Sudbury District which includes Gogama (Census Division 52). This District does not include the Sudbury Census Metropolitan Area (CMA 580). While the Sudbury District is much larger than just the Gogama area it does provide some more localized tourism data.	IAMGOLD has identified that the tourism data for Northeastern Ontario is available and will be incorporating this data into the Proposed ToR and environmental assessment Report.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Section 7.2.2 raises the concept of compensation, as a component of mitigation, using the example of providing alternative fish habitat to offset adverse effects. Does IAMGOLD intend that compensation could also be available to address any potential impacts to nearby businesses such as tourism (e.g. monetary or non-monetary)? For example, if use of a Bear Management Area is impacted or lost? 2) Some other mining-related environmental assessment (EA) ToR that we have reviewed have included language to indicate that the EA will address avoidance of, minimization of, and/or compensation for negative socio-economic effects that could result from projects. We encourage IAMGOLD to consider this as part of the final ToR.	The Proposed ToR will be revised to clarify that mitigation could also include compensation for other areas (i.e., not only fish habitat). This methodology has been accepted by both the Canadian Environmental Assessment Agency and the Ministry of the Environment for various other Federal and Provincial mining EAs.
Socio-Economic	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) The component called “Overall Côté Gold Project” highlights a number of potential effects relating to economic benefits at local, regional, Provincial and Federal scales. They are generally positioned as being positive. Does IAMGOLD believe there could be negative economic effects from the Project (e.g. toward other economic sectors)? If so, the potential for negative effects also needs to be highlighted.	IAMGOLD will assess the economic effects (either positive or negative) of the proposed Project and will present these in the EA Report. IAMGOLD will engage potentially affected tourism operators and determine the nature of any impacts on their operations, and identify and implement mitigation measures, if necessary, to avoid or minimize any negative impacts.
Socio-Economic	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Does not appear to consider effects on commercial bait harvesters, trappers, BMA (Bear Management Area) licencees or SFL holders.	The Proposed ToR will be modified to include the effects on commercial bait harvesters, trappers, BMA licencees and SFL holders.
Socio-Economic	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) Does IAMGOLD have ownership or a strategy for dealing with land ownership with respect to lands they are proposing to flood?	IAMGOLD has a team working on land tenure issues that will need to be addressed for inclusion in the Environmental Assessments.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	354	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport.	Ministry of Tourism, Culture and Sport, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Appendix B to the proposed ToR's Record of Consultation was consulted to identify the comments our Unit made previously on the draft ToR and the responses from IAMGOLD regarding how those comments would be addressed. We are pleased that the company has responded positively to a number of our comments and made several related edits/additions to the proposed ToR. In particular, the identification of tourism facilities near the project (see Figure 5) and an enhanced recognition of the need to consult with tourism stakeholders as the project evolves. Overall, we are satisfied with IAMGOLD's commitments and related changes in the proposed ToR to address our earlier comments.	Thank you for your comment. No further response is required.
Socio-Economic	354	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport.	Ministry of Tourism, Culture and Sport, Ontario Ministry of the Environment, IAMGOLD Corporation	1) We have identified one additional item to bring forward at this time. Section 6.8.2 (Regional Economy) of the proposed ToR includes some new information on tourism visitation and spending in the Sudbury District (page 6-19). We had provided the proponent with information in this regard and we are pleased that they have highlighted some of it in the document. This section identifies that the District received 378,243 person visits in 2010. However, this figure only includes visits from Canadians. When visitors from the United States and overseas are added the total person visits to the District were 412,192. This is the figure that should be used in the section for the sake of accuracy.	Thank you for your comment. This modified figure will be used moving forward in the EA process.
Socio-Economic	374	Meeting	10/01/2013	On 2013-10-01, IAMGOLD met with the Member of Provincial Parliament of the Nickel Belt region to provide a general overview and update on the permitting status of the Côté Gold Project. IAMGOLD also provided an update on the status of the Impact Benefit Agreement (IBA) currently being negotiated between IAMGOLD and Wabun Tribal Council. IAMGOLD also provided an update on recent community engagement efforts of IAMGOLD with the Métis Nation of Ontario (MNO).	Government of Ontario, IAMGOLD Corporation	1) Recently met with Chief Walter Naveau who expressed that it would be helpful to obtain funding for training immediately to ensure Members are prepared for opportunities that may arise from the Project.	IAMGOLD is committed to training First Nations and Aboriginal peoples. Funding and training programs will be initiated as development prospects for the Project are firmed up.
Socio-Economic	425	Open House	11/13/2013	IAMGOLD held an open house in the community of Gogama to discuss potential Project effects and proposed mitigation strategies. There were approximately 16 attendees present.	Gogama Local Services Board, Individual - GP, S+ G Development, IAMGOLD Corporation	1) An individual commented that to think that the Project would not have any effect would be naive on our part, it is too big a Project. With the possibility of community growth, the community needs to be wary of long-term ups and downs once the Project comes to a close. The community needs to be wise in our decision-making process. How does a community that is not a municipality supposrt a possibly growing economy, infrastructure costs, planning.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Methodology and Process							
Baseline Studies	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) MNDM needs more advance notice of upcoming project status “Notices”. Baseline data collection should be over a minimum one year time period (e.g., surface and ground water data). Geochemical characterization also important.	IAMGOLD currently has two years of surface water monitoring data. Geochemistry is currently ongoing and terrestrial/ aquatic surveys that were initiated two years ago are still ongoing.
Baseline Studies	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Initial Bathymetry work that IAMGOLD had done that was shown to MNR’s Area Biologist. How is this to be used for this project? We have some concerns regarding the accuracy of this data, and what it will be used for. MNR would like to see the raw data and methodology that was used to create these maps.	The methodology for developing the bathymetry was as follows: - field crews ran transects across the water bodies collecting spot water depths using sound equipment. - The position of each spot water depth reading was captured by high-performance GPS (Trimble GeoXT), and the corresponding depth reading recorded into an electronic field form in the GPS unit. - The GPS data was then post-processed on desktop software (Timble Pathfinder Office) to achieve sub-meter positional accuracy for each depth reading, and saved as GIS shapefiles. - The shapefiles were imported into ArcGIS, and using the Spatial Analyst extension, a continuous raster surface (interpolated to the water body shorelines) was developed. - The resulting image was then classified according to depth ranges producing the bathymetry map for the water body. The raw data is in shapefile format, and will be provided to the MNR via CD. The EA team's GIS analysts used this raw data in conjunction with supplementary LiDAR topographic data to create bathymetric maps. The bathymetric data will be used in the surface water and groundwater assessments

Baseline Studies	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) Initial bathymetry work complete by IAMGOLD was shown to MNR's Area Biologist. How is this to be used for this Project? We have some concerns regarding the accuracy of this data, and what it will be used for. MNR would like to see the raw data and methodology that was used to create these maps.	The methodology for developing the bathymetry was as follow: (A) Field crews ran transects across the water bodies collecting spot water depths using sounding equipment; (B) The position of each spot water depth reading was captured by high-performance GPS (Trimble GeoXT) and the corresponding depth reading recorded into an electronic field form in the GPS unit; (C) The GPS data was then post-processed on desktop software (Trimble Pathfinder Office) to achieve sub-meter positional accuracy for each depth reading and saved as GIS shapefiles; (D) The shapefiles were imported into ArcGIS, and using the Spatial Analyst extension, a continuous raster surface (interpolated to the water body shorelines) was developed. (E) The resulting raster image was then classified according to depth ranges producing the bathymetry map for the water body. The raw data is in shapefile format and will be provided to the MNR via CD. The EA team's GIS analysts used this raw data in conjunction with supplementary LiDAR topographic data to create bathymetric maps. The bathymetric data will be used in the surface water and groundwater assessments where estimates of
Baseline Studies	248	Letter	06/07/2013	The Ministry of the Environment's (MOE) hydrogeologist provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The individual provided the minimum expectations for baseline studies for mining developments developed by the Northern Region Hydrogeologist. The purpose of baseline groundwater monitoring programs for proposed new mines is to define pre-development hydrogeological conditions. This information will be subsequently used by the proponent to develop numerical groundwater models and to predict potential impacts of the mine if the project progresses towards EA and permitting. This assessment also provides the framework for on-going groundwater monitoring during site development, operation, and closure. Lack of comprehensive baseline information may cause significant site development delays.	Thank you for the comment. No changes in the ToR required. Comments will be considered in the EA preparation.
Baseline Studies	302	Meeting	07/03/2013	On 2013-07-03 an Intergovernmental agency meeting was held with representatives from AMEC, IAMGOLD, the Canadian Environmental Assessment Agency (CEA Agency), the Ontario Ministry of Northern Development and Mines, and the Ontario Ministry of the Environment to discuss the Draft Terms of Reference (ToR) responses and an overview of consultation planning. The meeting notes were finalized on 2013-08-06.	Canadian Environmental Assessment Agency, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the status of the baseline studies? 2) The MOE does not have the not capacity to review initial drafts and will therefore only review final versions. 3) The Agency did not get many comments on the draft EIS Guidelines and that the participant funding opportunities are communicated with the release of the final EIS Guidelines. 4) We would like to be involved in future consultation activities - particularly if they involved Closure concepts/plans.	Initial drafts have been prepared reflecting the 2012 field season data. These will be updated and consultation on these will occur in the fall. A baseline brochure has been created to provide information to the public.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Effects Assessment	252	Letter	05/21/2013	The Ministry of Transportation (MTO) Environmental Assistant provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Transportation	1) There is a potential need for a traffic study to determine if improvements will be necessary to maintain traffic flow as vehicles exit Highway 144 onto Mesomikenda Lake Road.	The use of the Mesomikenda Lake Road is not proposed for use during the construction and operations and closure of the Côté Gold Project. IAMGOLD will engage the Ontario Ministry of Transportation on the potential impacts of mine related traffic on the Sultan Road/ Hwy 144 intersection.
Effects Assessment	218	E-mail	06/05/2013	The Ministry of the Environment (MOE) sent surface water related comments on Côté Gold Project's Draft Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The proposed approach to effects analysis appears to be biased toward findings of "not significant" because Level II (intermediate potential) or Level III (high potential) ratings must be achieved for all attributes involving magnitude, geographic extent, duration and frequency to have an effect defined as "significant". The reasoning for this approach is arguable because a Level 1 (negligible or limited potential) rating for a single attribute, when all others have Level II or Level III ratings, may not necessarily eliminate the potential for significant ecological effects and this should be considered.	Agreed, the methodology will be revised to reflect the comment.
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) In Section 7.2.1, bullets 4 through 6 suggest that effects and changes resulting from the Project will affect the evaluation indicators. How is this possible, since the evaluation will occur during the EA and, therefore, prior to construction/operation? Please revise the text to clarify this.	The bullets refer to predicted effects on the evaluation indicators made during the EA with the exception of the last bullet which refers to proposed post-EA monitoring programs. These are standard EA steps that have been implemented in other mining EAs including the Rainy River Gold Project.
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 5.2.2: Per section 4.2.7 of the Code of Practice, the potential data sources for the criteria and indicators should also be stated, including text stating that the listed data sources are potential sources, subject to change as the EA progresses. Please revise the text accordingly.	Text will be revised as suggested.
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The "performance" rating seems to use a single criterion (or indicator) as its measure (e.g,. cost-effectiveness = competitive return on investment; technical availability = predictably effective with contingencies; ability to service the site effectively = provides a guaranteed supply to the site). This seems to skew the evaluation to a single criterion/indicator instead of all within the category. Section 5.2.3 states that an alternative will be rejected if it attains an unacceptable rating for any single performance objective; because this is the approach to be used, it is all the more critical that the performance objectives consider all of the criteria within a given category instead of only one. By using only one, it skews the evaluation to favour an alternative rating strongly in the single criterion used as the performance objective. Please revise the performance objectives accordingly to better reflect all of the criteria within each category.	This performance rating methodology was developed in consultation with and accepted by MOE for the Rainy River Gold Project and is appropriate for the Côté Gold Project as there are several common elements between the Projects. Please clarify the concern with implementing the approach for this Project.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Table 5-6: one of the criteria refers to "environmental health." The EAA broadly defines "environment" – is this criterion meant to relate to the health of all five aspects of the environment? If so, how will it consider a situation wherein net negative effects are expected on some of the five aspects but net positive effects are expected on others? If it is meant to relate to only one aspect, please clarify and revise the text accordingly.	The criterion is meant to relate to the broad aspects of the environment and these are reflected in the indicators.
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Table 5-4: for the criterion of "effect on fish and aquatic habitat," please explicitly state that one of the indicators will be attainment or maintenance of water quality guidelines for surface water bodies in the study area; only groundwater quality is explicitly mentioned, and there are many surface water bodies that are expected to be impacted by the proposed undertaking.	The first bullet will be revised to specify "surface water" for clarity.
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 7.2.2: The opening paragraph states that the Level rating system (I/II/III) will be performed for all of the evaluation criteria, but the third paragraph on page 7-1 provides Level ratings based on broad environmental categories. Please edit the text in this section to clarify the manner in which the Level rating system will be applied.	The description in the third paragraph provides a general introductory example of how the Level ratings are applied. The words "ecological and/or socio-economic" can be replaced by natural and/or human environment for consistency.
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 7.2.3: it is unclear how projects and activities that "will be carried out" is defined, and also unclear how these projects and activities will be identified. What data sources are proposed to be used to identify these projects/activities and their expected effects (to inform the cumulative effects analysis)?	Projects and activities that "will be carried out" are those projects that have received permits or approvals or are referenced in publicly available documents as planning to proceed.
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) For sections 5.2.2.4 and 5.2.2.5, the blanket criterion of "minimizes adverse effects without mitigation" poses the risk of insufficient transparency in the relative comparison/weighting of the respective criteria within that environmental category. It is unclear to the reader how this will objectively be determined during the evaluation. Please elaborate on this.	In the assessment, each alternative and potential environmental effects will be described in sufficient detail so that the distinction will be clear to the reader between those activities that do not require mitigation, e.g. the effect is avoided; and those activities that require mitigation, e.g. avoidance is not possible.
Effects Assessment	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 5.2.2.6: the criteria relate to both the natural and "human" environment, but the performance rating considers only the natural environment. Please revise the performance rating to also consider the "human" environment, because it is included in the evaluation criteria.	The performance rating will be revised to include the human environment as recommended.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Effects Assessment	287	Meeting	07/16/2013	On behalf of IAMGOLD, Minnow Environmental Inc. had a conversation with a representative from the Ministry of Natural Resources (MNR) around issues related to the protocol for assessing the impact of the Project on wetland areas on 2013-07-16. Discussion related to the MNR requirements for assessing the potential impact on wetlands in the area.	Ontario Ministry of Natural Resources, Minnow Environmental Inc.	1) Primary concern is that wetlands are being well documented and that there is an understanding of what is being lost or modified through the Project. Agrees that if any wetlands have the potential to be a Provincially Significant Wetland then a full wetland classification should be conducted. Would prefer to see complete OWES evaluation conducted, as this is standard for wetlands - recognizing that this can be impracticable or not feasible given the size of wetlands and the landscape in Northern Ontario. The protocol being proposed by Minnow will require further discussion with the Ministry.	If there are any wetlands that have the potential to be a Provincially Significant Wetland we will conduct a full wetland classification on these. The information we are collecting should provide sufficient information on the form and functioning of each wetland, the vegetation and wildlife use. This should allow us to identify any potential areas of concern through the EA which could be further assessed as we move ahead with permitting.
Effects Assessment	425	Open House	11/13/2013	IAMGOLD held an open house in the community of Gogama to discuss potential Project effects and proposed mitigation strategies. There were approximately 16 attendees present.	Gogama Local Services Board, Individual - GP, S+ G Development, IAMGOLD Corporation	1) An individual commented that they have heard all the horror stories and the mess mines leave behind, especially in the early days of mining. The individual continued that from what they have heard so far from IAMGOLD, the Company is doing their homework regarding environmental concerns and issues. The general public should expect no less from IAMGOLD.	N/A
Environmental Assessment	31	E-mail	11/02/2012	IAMGOLD received follow-up email from Ministry of Natural Resources (MNR) providing links about combined Federal/Provincial environmental assessment (EA).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) MNR identified that in Ontario, the Ministry of the Environment (MOE) is the EA authority and provided three website links: MOE, environmental assessment guide, and the Canadian Environmental Assessment Act, 2012 is now in effect.	IAMGOLD acknowledges the information provided by MNR and agrees that a coordinated EA approach is a preferred approach.
Environmental Assessment	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) There is no reference in the draft ToR to the 'do nothing' option. Although this is not a requirement it is encouraged.	That is a fair comment and it is generally addressed through the Pre-Feasibility Study where the viability of the project is assessed. This will be referenced in the Environmental Assessment.
Environmental Assessment	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Please ensure that you are providing justification for scoping out of certain alternatives. For example, reference studies or supporting documents. For example, even for the decision for open pit mining – show maps of extent and depth of the ore body. This adds substance to the rationale for the options assessed.	Yes, we will provide reference materials to justify decisions on options.
Environmental Assessment	352	E-mail	08/14/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Northern Development and Mines related to mine hazards.	Ministry of Northern Development and Mines, Ontario Ministry of the Environment, IAMGOLD Corporation	1) The EA does not identify how abandoned mine hazards or features, if encountered will be assessed or mitigated.	Thank you for your comment. AMIS or Mine Hazards will be considered in the Project planning, as well as in the contingency plans.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Other	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Confirmed that the list of Aboriginal communities to consult includes: Mattagami First Nation, Flying Post First Nation, Brunswick House First Nation, Matachewan First Nation and the Métis Nation of Ontario. This list will be confirmed in writing.	Thank you. IAMGOLD has had much broader discussions with Aboriginal groups such as the Algonquin Anishinabeg Nation Tribal Council, and Wahgoshig First Nation who have stated they have no interest in the project. Others who we will be meeting with to determine interest include the M'chigeeng First Nation from the Robinson Huron Treaty area.
Other	425	Open House	11/13/2013	IAMGOLD held an open house in the community of Gogama to discuss potential Project effects and proposed mitigation strategies. There were approximately 16 attendees present.	Gogama Local Services Board, Individual - GP, S+ G Development, IAMGOLD Corporation	1) An individual inquired if the government was cooperating in keeping up with IAMGOLD's timelines	The federal government is good, they provide us with timelines to follow. The provincial government is also good, but it is a different process where we draft Terms of Reference (ToR) with timelines and they approve them or not. We are best in class to date; no other mine has gone through the Environmental Assessment process this fast. We are waiting for the ToR approval. If we get it in the next month we will have gone through the ToR process in seven months.
Regulatory	5	Meeting	06/27/2012	Minister of Northern Development and Mines (MNDM) met with IAMGOLD on 2012-06-27 and pledged support and assistance for the Côté Gold Project, indicated that the Project is eligible for the provincial power rebate, and provided guidance on First Nations consultations.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) Minister of MNDM referred to local contact for the surface rights application and indicated that if the process gets stalled, IAMGOLD can contact the Minister for assistance.	IAMGOLD will follow up.
Regulatory	10	Meeting	07/26/2012	Representatives of IAMGOLD, Timmins Chamber of Commerce (TCC), Timmins Economic Development Corporation (TEDC), Ministry of Northern Development & Mines (MNDM), City of Timmins and Northern College (NC) gathered to discuss designating a community liaison, training and recruitment opportunities, attendance at the TCC annual general meeting, presentation to City Council, and proposals from MNDM.	City of Timmins, Northern College, Ontario Ministry of Northern Development and Mines, Timmins Chamber of Commerce, Timmins Economic Development Corporation, IAMGOLD Corporation	1) MNDM explained that the goal of this meeting was to introduce IAMGOLD and MNDM, and send the message that IAMGOLD remains actively engaged in advancing the Côté Gold Project. MNDM suggested that IAMGOLD submit a single Project Description to the Canadian Environmental Assessment Agency and indicated that Rainy River Resources is going through this process and may have useful insights to share with IAMGOLD.	IAMGOLD will review follow up with Rainy River Resources' current progress.
Regulatory	53	Site Visit	10/30/2012	IAMGOLD conducted a site meeting with the Ministry of Natural Resources (MNR) and the Ministry of the Environment (MOE) to review all water bodies.	Ontario Ministry of Natural Resources, Ontario Ministry of the Environment, IAMGOLD Corporation	1) Looked at pit area and potential realignments. MOE pleased with data collection to date and stated the more data collected in a baseline water quality the better. Also recommended flow stations that are established with continual flow monitoring (i.e. level logs). It provides better information to make decisions from a permitting perspective.	Data collection was started 2 years ago. Continual flow monitoring stations were already installed.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Regulatory	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The Côté Gold Project has been designated by MNDM as a "One Window" project. The tailings facility will require a Class EA process if there is a need for disposition of Crown land (area is assumed to be a surface rights only lease) - MNDM provides contact information for this aspect to IAMGOLD. Class EA process will be in place by December 31, 2012 and would be similar to CEAA. Contact information is provided to a contact who would act as the go-between with CEAA. Propose bi-weekly meetings. 2) Most projects requiring a (provincial) Individual EA or a number of Class EAs for a particular component(s) of the project have opted/volunteered to undertake an Individual EA for the entire project. Covering the overall project scope makes it easier for the provincial agencies to work with the federal agencies and MOE "have experience to make it work effectively". 3) MNDM has its own Class EA process (for surface rights disposition).	IAMGOLD will confirm land status and follow up as needed. Status of Project claims is currently in the legal process. IAMGOLD will follow up internally on current status.
Regulatory	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) MOE provides contact information for surface water, and air quality. The contact for groundwater is to be determined. 2) MNR provides contact information concerning aggregate permit requirements and for issues related to the Public Lands Act.	IAMGOLD has received contact information for both groundwater and the Public Lands Act.
Regulatory	64	Meeting	12/19/2012	IAMGOLD met with the Ministry of Aboriginal Affairs and Northern Development (Ontario) in Toronto to provide an overview of the Côté Gold Project.	Ontario Ministry of Aboriginal Affairs, IAMGOLD Corporation	1) What stage is the project at from a permitting perspective?	Indicated expected timing of Project Description completion and submission to the Canadian Environmental Assessment Agency.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Regulatory	248	Letter	06/07/2013	The Ministry of the Environment's (MOE) hydrogeologist provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) To effectively address these uses, the baseline groundwater monitoring program must meet the following requirements: 1) Determine groundwater flow paths, identify potential receptors (e.g. surface water, wetlands, wells, etc.), estimate subsurface travel times (including potential seasonal hydraulic gradient fluctuations), and characterize groundwater quality. The location of the monitoring wells must be selected to define existing conditions and also in anticipation of potential changes in groundwater gradients during all phases of the project (e.g. mounding, lowering, flow direction changes, etc.). The groundwater monitoring should take into consideration the effects of groundwater to surface water discharge, and enough information must be collected so that potential impacts of dewatering on surface water and wetland features can be evaluated. Nested or multi-level groundwater monitoring wells should be used where appropriate to assess both shallow (overburden) and deep (bedrock) groundwater flow systems, as well as vertical gradients.	Thank you for the comment. No changes in the ToR required. Comments will be considered in the EA preparation.
Regulatory	277	Letter	06/07/2013	The Ministry of Northern Development and Mines (MNDM) sent a letter to IAMGOLD on 2013-06-07 outlining the Ministry's requirements before proceeding with the Project including Aboriginal Consultation specifications.	Ministry of Northern Development and Mines, IAMGOLD Corporation	1) Directing IAMGOLD to prepare and submit a plan of consultation for my review with respect to: Mattagami First Nation; Flying Post First Nation; Métis Nation of Ontario Timmins Community Council; Brunswick House First Nation; and Matachewan First Nation (for the Transmission line corridor only*). *Please note that Matachewan First Nation is not identified for the immediate project area including the open pit and related infrastructure. The list is subject to change, based on MNDM's ongoing review of information received during the consultation process or the receipt of assertions by other Aboriginal communities.	N/A
Regulatory	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 4.1 (page 4-2) states that the description [of the Project components] will be finalized through the EA process and ongoing engineering studies. This suggests that the components may be finalized after the EA process (i.e., during “ongoing” engineering studies). The Project components are expected to be finalized during the EA process, as the preferred alternatives for each component (Table 5-7) will be determined during this phase.	The intent of the text was to describe that the EA and engineering studies are undertaken in parallel. The text will be revised to clarify that "ongoing" engineering studies mean that engineering studies are being carried out in parallel and will be informed by the EA and vice-versa.
Stakeholder Engagement	22	Letter	08/19/2011	Ministry of Northern Development and Mines (MNDM) informed Trelawney which Aboriginal groups to consult. MNDM also sent notice of amendments to the Ontario Mining Act.	Ontario Ministry of Northern Development and Mines	1) MNDM informed Trelawney which Aboriginal groups to engage. MNDM also sent notice of amendments to the Ontario Mining Act.	Trelawney will consider the information provided by MNDM.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	5	Meeting	06/27/2012	Minister of Northern Development and Mines (MNDM) met with IAMGOLD on 2012-06-27 and pledged support and assistance for the Côté Gold Project, indicated that the Project is eligible for the provincial power rebate, and provided guidance on First Nations consultations.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) Minister of MNDM advised IAMGOLD to minimize time and possible issues on First Nations dimensions and to carefully document any/all interaction with them.	IAMGOLD appreciates this feedback and has been dilligently tracking records of contact.
Stakeholder Engagement	5	Meeting	06/27/2012	Minister of Northern Development and Mines (MNDM) met with IAMGOLD on 2012-06-27 and pledged support and assistance for the Côté Gold Project, indicated that the Project is eligible for the provincial power rebate, and provided guidance on First Nations consultations.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) Minister of MNDM requested a visit the site.	IAMGOLD will schedule a site visit following the EA commencement for all interested regulatory agencies.
Stakeholder Engagement	10	Meeting	07/26/2012	Representatives of IAMGOLD, Timmins Chamber of Commerce (TCC), Timmins Economic Development Corporation (TEDC), Ministry of Northern Development & Mines (MNDM), City of Timmins and Northern College (NC) gathered to discuss designating a community liaison, training and recruitment opportunities, attendance at the TCC annual general meeting, presentation to City Council, and proposals from MNDM.	City of Timmins, Northern College, Ontario Ministry of Northern Development and Mines, Timmins Chamber of Commerce, Timmins Economic Development Corporation, IAMGOLD Corporation	1) MNDM recommended IAMGOLD involve groups downstream of the Côté Gold Project through the use of a communications strategy. MNDM recommended IAMGOLD to start engaging environmental non-governmental organizations (ENGOs), including Northwatch and Mining Watch. MNDM recommended IAMGOLD do community outreach across Northeastern Ontario and participate/sponsor the annual Mattagami Fishing Derby. 2) TEDC suggested IAMGOLD get involved in the Wabun Tribal Council Golf Tournament, use the TEDC's job postings board for IAMGOLD employment opportunities, deliver a presentation to City Council, issue a press release to local media distributing more detailed information about the acquisition and goals of the project, communicate if both English and French, attend Mining Expo in Las Vegas, September 21-23, 2012 as part of the Northeastern Ontario mining group, meet with MPP and MP for the Timmins-James Bay ridings, appoint a community representative for Timmins area to liaise locally on a regular basis.	1) IAMGOLD has engaged in dialogue with Northwatch and Mining Watch as per the recommendation. 2-3) IAMGOLD acknowledges your feedback, and it will be considered and implemented where appropriate.
Stakeholder Engagement	10	Meeting	07/26/2012	Representatives of IAMGOLD, Timmins Chamber of Commerce (TCC), Timmins Economic Development Corporation (TEDC), Ministry of Northern Development & Mines (MNDM), City of Timmins and Northern College (NC) gathered to discuss designating a community liaison, training and recruitment opportunities, attendance at the TCC annual general meeting, presentation to City Council, and proposals from MNDM.	City of Timmins, Northern College, Ontario Ministry of Northern Development and Mines, Timmins Chamber of Commerce, Timmins Economic Development Corporation, IAMGOLD Corporation	3) NC and the City of Timmins requested that IAMGOLD attend 'Welcome to Timmins' event held in September for companies or groups new to Timmins and contribute to the Northern Training Program. NC and the City of Timmins requested that IAMGOLD attend/sponsor the National Aboriginal Day and sit on Northern College Advisory Boards and to work with NC to develop high school education programs so that students enter the labour market down the road with the skills needed in order to work for IAMGOLD.	1) IAMGOLD has engaged in dialogue with Northwatch and Mining Watch as per the recommendation. 2-3) IAMGOLD acknowledges your feedback, and it will be considered and implemented where appropriate.
Stakeholder Engagement	32	Meeting	10/25/2012	IAMGOLD met with Ministry of the Environment (MOE) to provide Project update.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) MOE requested that IAMGOLD consult with them ahead of time moving forward, explaining that this will help with the permitting process.	IAMGOLD agreed and noted that they are currently developing the Federal Project Description and will circulate a draft to all stakeholders prior to submission to the Canadian Environmental Assessment Agency to get feedback and ensure that there are no delays or surprises.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Mattagami Region Conservation Authority (MRCA) requests that IAMGOLD include Upper Mattagami River Water Management Committee to provide an overview of the Project. MRCA also provides contact of the Ministry of the Environment (MOE) that IAMGOLD should contact concerning a "Source Water Protection Plan".	IAMGOLD will contact the Upper Mattagami River Water Management Committee and follow up with the contact of the MOE.
Stakeholder Engagement	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Canadian Environmental Assessment Agency (CEAA) member asks if the pit and proposed mine rock areas (i.e., southern portion of study area) are located in proximity to the Treaty No. 9 and Robinson Treaty areas? 2) The Ministry of Northern Development and Mines (MNDM) identified that the Project area is not within the watershed for the Treaty No. 9 and Robinson Treaty areas. The Sagamok First Nation is aware of the Project (through previous contact by Trelawney) but they did not indicate an interest at that time. MNDM will try to obtain similar communication understanding as with IAMGOLD (i.e., between individual First Nations under the Wabun Tribal Council).	IAMGOLD will undertake broad consultation with all communities in the area. IAMGOLD is currently negotiating an Impact Benefit Agreement (IBA) with the Wabun Tribal Council. The Southern portion of the project does not enter into Robinson Treaty Area.
Stakeholder Engagement	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) MNR's consultation with Aboriginals requires a minimum of 90 days. It was noted that another project was delayed by approximately a year for not properly consulting. 2) The Ministry of the Environment (MOE) will undertake Aboriginal consultation for all permit/approval submissions and will provide a draft of the approval(s) to the Aboriginals prior to finalizing. 3) MNDM will undertake Aboriginal consultation in accordance with the new regulations/protocols. The Ministries have to do their own consultations, but can delegate certain aspects.	IAMGOLD will undertake broad consultation with all communities in the area. IAMGOLD is currently negotiating an Impact Benefit Agreement (IBA) with communities within the Wabun Tribal Council.

Stakeholder Engagement	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Mattagami Region Conservation Authority (MRCA) has limited staff and limited delegated authority under the Lakes and Rivers Improvement Act, but would coordinate with the Ministry of Natural Resources (MNR) and Fisheries and Oceans Canada (DFO) to provide input regarding water quantity, land hazards and alteration of water bodies. MRCA should be included in correspondence sent to the MNR and DFO, and would prefer receipt of document hard copies if possible. IAMGOLD should contact the Source Water Protection Committee and provide some sort of short presentation on the Project, and also to City Council.	IAMGOLD has already met with City Council. IAMGOLD will contact the Committee and arrange for a presentation.
Stakeholder Engagement	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) MNDM needs more advance notice of upcoming project status “Notices”. Baseline data collection should be over a minimum one year time period (e.g., surface and ground water data). Geochemical characterization also important.	IAMGOLD currently has two years of surface water monitoring data. Geochemistry is currently ongoing and terrestrial/ aquatic surveys that were initiated two years ago are still ongoing.
Stakeholder Engagement	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Discussions with Fisheries and Oceans Canada (DFO) to date have only been by phone. DFO will want a draft of the Project Description (PD) before going into detailed discussions. A draft of the Project Description (PD) should be forwarded to Environment Canada. IAMGOLD should contact Environment Canada (only the biologists are available now).	IAMGOLD will contact Environment Canada.
Stakeholder Engagement	29	Meeting	11/19/2012	Meeting between IAMGOLD and the Ministry of Northern Mines and Development (MNDM). IAMGOLD introduced the Côté Gold Project, and the specific related aspects of power, aboriginal engagement, and permitting.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) IAMGOLD highlighted the importance of power relating to project viability and cost management at Côté Gold. 2) MNDM encouraged IAMGOLD to coordinate with the Ministry of Energy.	IAMGOLD has been engaging in dialogue with the Ministry of Energy.
Stakeholder Engagement	29	Meeting	11/19/2012	Meeting between IAMGOLD and the Ministry of Northern Mines and Development (MNDM). IAMGOLD introduced the Côté Gold Project, and the specific related aspects of power, aboriginal engagement, and permitting.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) IAMGOLD generally discussed the permitting of the Côté Gold Project and asked if the MNDM had any recommendations for advancing the project expediently. 2) MNDM encouraged IAMGOLD to coordinate with their respective team at the MNDM and provided points of contact.	IAMGOLD followed up with points of contact in order to advance project expediently.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	29	Meeting	11/19/2012	Meeting between IAMGOLD and the Ministry of Northern Mines and Development (MNDM). IAMGOLD introduced the Côté Gold Project, and the specific related aspects of power, aboriginal engagement, and permitting.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) IAMGOLD discussed its general approach with Aboriginal communities, with specific reference to Wabun Tribal Council, Mattagami First Nation and Flying Post First Nation. IAMGOLD sought further information on the Resource Benefit Sharing file within Aboriginal Affairs. 2) MNDM commended the Company's commitment to substantive engagement with impacted communities. MNDM encouraged IAMGOLD to coordinate with a few points of contact within Aboriginal Affairs on the Resource Benefit Sharing file.	IAMGOLD has been continuining to engage in dialogue with potentially impacted communities. IAMGOLD has followed up with points of contact within Aboriginal Affairs.
Stakeholder Engagement	40	E-mail	11/27/2012	Coordination between AMEC and the City of Timmins for a presentation to inform and update the City about the proposed Côté Gold Project during the 2013-01-07 Council Meeting. Following up on AMEC's request on 2012-11-27 to the City Clerk confirmed a time for presentation at 6:00 pm in the Council Chambers and requested AMEC to send the presentation in advance by Wednesday, January 3, 2013.	City of Timmins, AMEC Environment & Infrastructure	1) City of Timmins, City Clerk confirms time for presentation on 2013-01-07 at 6:00 pm in the Council Chambers and requests AMEC to send presentation by 2013-01-03.	IAMGOLD confirmed the presentation would be submitted by 2013-01-03.
Stakeholder Engagement	39	E-mail	11/28/2012	Coordination between AMEC and Greater City of Sudbury for a presentation of the Côté Gold Project to City Council. Following up on AMEC's email request, the Greater City of Sudbury asked AMEC to send a written request for the presentation.	City of Greater Sudbury, AMEC Environment & Infrastructure	1) Request to submit a formal letter to present on the Côté Gold Project to City Council Meeting and provided the link to Rules of Procedure By-Law.	IAMGOLD identified that they would prepare a letter and submit to the City.
Stakeholder Engagement	64	Meeting	12/19/2012	IAMGOLD met with the Ministry of Aboriginal Affairs and Northern Development (Ontario) in Toronto to provide an overview of the Côté Gold Project.	Ontario Ministry of Aboriginal Affairs, IAMGOLD Corporation	1) Has the company actively engaged with First Nations communities in connection with the project?	Provided an overview of the extensive engagement with Mattagami First Nation, Flying Post First Nation and Wabun Tribal Council – further discussed our intent to engage with Aboriginal communities more broadly pending confirmation from the Canadian Environmental Assessment Agency and the Ministry of Northern Development and Mines on impacted groups.
Stakeholder Engagement	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Informed IAMGOLD that the mine area is potentially within both the Mattagami Region Conservation Authority Area and the City of Timmins Source Water Protection Zone. Recommended that the company discuss their plans with both.	IAMGOLD will connect with the Conservation Authority to further discuss.
Stakeholder Engagement	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Government Review Team (GRT) members need advance notice to allot time to review the ToR. Who do you plan to distribute to ToR to?	IAMGOLD will work with the MOE to determine who to distribute the ToR to.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	212	Phone Call	05/08/2013	IAMGOLD met with the Ministry of the Environment (MOE) to discuss the timing of release of the Draft Terms of Reference (ToR) Notice of Commencement and receipt of the ToR documents. All participants agree that the notice and the documents be received on approximately the same day and that the second newspaper placement of the Notice of Commencement planned for the week of 2013-05-13 should be revised. In response, the Notice of Commencement was not issued the week of 2013-05-13 but a revision was made to the open house notices issued the week of 2013-05-13 to include messages about the dates of the review period.	Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The MOE requested information on upcoming open houses and other stakeholder and Aboriginal meetings.	IAMGOLD subsequently provided this information to the MOE.
Stakeholder Engagement	250	E-mail	05/27/2013	The Ministry of Aboriginal Affairs (MAA) sent an email advising that the Ministry of Northern Development of Mines (MNDM) will be identifying the list of Aboriginal communities for consultation.	Ontario Ministry of Aboriginal Affairs	1) MAA confirmed that MNDM will be identifying the list of Aboriginal communities for consultation for the Project and MAA will be supporting this work internally.	No response or action required.
Stakeholder Engagement	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Appendix E addresses some corporate approaches to dealing with Aboriginal communities and the importance of partnerships and engagement. It states that Aboriginal engagement is based on principles of trust, respect and transparency. Regardless of the stakeholder involved (Aboriginal or non-Aboriginal) we believe these principles should underlie engagement and consultation activities. Therefore, it is encouraged that IAMGOLD consider including similar language in Appendix D (Proposed Stakeholder Engagement Plan) as well. 2) Section 4.1.1 of Appendix E makes reference to activities expected to occur between January-April 2012. This section should be revisited to reflect if these activities have already been completed.	Thank you for the comment. The Stakeholder Engagement Plan will be revised to address the comment. The Aboriginal Engagement Plan will be updated to reflect the expected activities to occur as part of the environmental assessment.
Stakeholder Engagement	227	Letter	06/09/2013	The Ministry of Northern Development and Mines (MNDM) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) In Appendix D, Table 2-1 but also page 9-1 of main document, suggest to expand the list to include Ontario Prospectors Association, Ontario Mining Association and then the local Northeast Ontario Prospector Association groups (Porcupine Prospectors and Developers Association and the Sudbury Prospectors and Developers). There is a list of environmental groups it might be an idea to balance the list and have representation from the mining sectors as well.	The suggested list of non-governmental organizations will be included to Table 2-1 of the Stakeholder Engagement Plan and in Section 9.1 of the ToR. This information will also be added to Section 2.2 of the Record of Consultation.
Stakeholder Engagement	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) In Section 6.1, please state in the ToR that all baselines will all be conducted in consultation with any and all stakeholders and Aboriginal communities having interest in what is being studied.	The Proposed ToR will be revised to state that applicable stakeholders were consulted.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) In Section 9.3, there is a reference to Appendices B and C. Please revise the text to refer to Appendices D and E.	The text will be revised to correct these typos.
Stakeholder Engagement	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 9.3: The draft ToR states that an IAMGOLD community newsletter will be widely distributed “on a regular basis.” This is too vague a timeframe; please clarify.	The text will be revised to correct these typos.The ToR will be updated to indicate that the IAMGOLD community newsletter will be prepared and widely distributed at least 3 times per year and will highlight information about the Côté Gold Project, EA findings including summaries of baseline studies, upcoming public meetings and to encourage feedback through the Company website, dedicated e-mail address, or through direct contact with Company staff.
Stakeholder Engagement	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) For the sake of transparency in the decision-making process, please consider revising the ToR to state that the EA Report will document how the Project has been modified as a result of input from stakeholders and Aboriginal communities.	The Proposed ToR will be revised to include a statement that the EA will document changes made as a result of input from stakeholders and Aboriginal communities.
Stakeholder Engagement	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Appendices D and E: reference is made to issues tracking and to consultation/engagement milestones, but the text does not clearly indicate how input from interested persons will be obtained. This is a requirement of the Code of Practice; please revise the text to address this.	Theses appendices will be updated to reflect the comment and include the input from interested parties will be obtained at open houses through discussions and written comments (i.e., comment forms) or through direct meetings with interested parties.
Stakeholder Engagement	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 3.2 of Appendix D and section 4.2 of Appendix E suggest that consultation with stakeholders and Aboriginal communities during the EA will occur only on the draft EA. Consultation is a key component of the EA process and is to occur with stakeholders and Aboriginal communities throughout the EA process and not only when the draft EA is completed. Early EA consultation with all interested stakeholders and Aboriginal communities is of key importance for a proposed undertaking. Please revise the text to reflect this, and to provide clarity regarding at what points (milestones) in the EA process these interested persons will be engaged (e.g., through Public Information Events) – examples could include: 1- After the completion of baseline studies; 2- After alternatives and evaluations criteria/indicators are finalized; 3- After the evaluation of alternatives is completed; 4- After the preferred scenario (for all components) and mitigating measures have been determined; and/or; 5- Draft EA Report.	These appendices will be revised to reflect that consultation will occur throughout the preparation of the EA. The consultation that has occurred to date has been on the Project Description, alternatives, and the draft ToR. Prior to consultation on the draft EA document, consultation will occur throughout the preparation of the EA and include providing information about and gather information for the baseline studies, potential impacts and appropriate mitigation or enhancement measures to manage any effects.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Appendix E: needs, interests and capacity are likely to differ amongst Aboriginal communities. Please consider including text in the consultation plan speaking to consideration/flexibility in how IAMGOLD will respond to these differing consultation needs and interests/concerns.	IAMGOLD is actively seeking feedback from First Nation and Métis communities about how they would like to be involved in the Project and has taken these preferences into account in the consultation efforts undertaken to date. An example is the preference of the Mattagami and Flying Post First Nations to use a third-party consultant chosen by the Wabun Tribal Council to conduct Aboriginal Traditional Knowledge and Land Use studies. Appendix E text will be revised to highlight any consultation preferences, needs and interests/concerns of the communities and note that IAMGOLD is open to considering these throughout the life of the Project.
Stakeholder Engagement	276	E-mail	07/09/2013	The Canadian Environmental Assessment Agency (the Agency) sent a disposition table on 2013-07-09 with the Agency's responses to IAMGOLD's comments on the Draft Environmental Impact Statement (EIS) Guidelines for the Project.	Canadian Environmental Assessment Agency, IAMGOLD Corporation	1) The existing text in the guidelines is not onerous, the Agency feels that the proponent can easily provide the Aboriginal group (Algonquin Anishinabeg Nation Tribal Council, AANTC) with these documents. Since these documents are already being produced for the other listed Aboriginal groups, the task should not be onerous. AANTC has not confirmed directly with the Agency their level of interest in the Project; therefore, the requirement cannot be changed within the guidelines.	The documents will be provided to AANTC.
Stakeholder Engagement	425	Open House	11/13/2013	IAMGOLD held an open house in the community of Gogama to discuss potential Project effects and proposed mitigation strategies. There were approximately 16 attendees present.	Gogama Local Services Board, Individual - GP, S+ G Development, IAMGOLD Corporation	1) An individual identified that because some people and businesses may be considering long-term decisions around the Project, it is important that any major decision that could alter the existing timeline of mine operation be made public (i.e. due to gold price, the construction and operations phase may be delayed by a year or two). Timely communications is important.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Stakeholder Engagement	425	Open House	11/13/2013	IAMGOLD held an open house in the community of Gogama to discuss potential Project effects and proposed mitigation strategies. There were approximately 16 attendees present.	Gogama Local Services Board, Individual - GP, S+ G Development, IAMGOLD Corporation	1) An individual identified that they appreciate that IAMGOLD holds open houses like these. It is very important to keep the community informed. As mentioned in the presentation, IAMGOLD is a community partner. The individual identified that IAMGOLD has already been a very generous community partner. They have already donated $30,000-35,000 to the community through the Gogama Local Services Board alone; an example is the flow meter project. If community members have questions, who do they call?	They can go online through the Côté Gold website and send an email to Côtégold@iamgold.com and it will be redirected to the correct person to answer their questions. Alternatively, they can contact Cheryl Naveau and she will redirect the questions to the appropriate person.
Mining							
Ancillary Facilities	306	Interview	08/16/2013	On 2013-07-17 IAMGOLD contacted the Ministry of Natural Resources for some general consultation information requests related to trap-line areas, data-sharing, quarry permits and Landfill Sites. A representative from the Ministry of Natural Resources responded on 2013-08-16.	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) The individual identified that they passed IAMGOLD's inquiry to Kyle Stanley who will follow up.	Thank you for your comment. IAMGOLD will continue this dialogue with Kyle Stanley from MNR.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Employee Accommodations/Camp	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Where will housing for construction be? Will it be an onsite camp? Gogama has limited sewage capacity.	IAMGOLD is working with Gogama on this and looking to put in applications to expand the sewage capacity. IAMGOLD is going to house workers at the site in a work camp.
Employee Accommodations/Camp	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will people be transported to the Project site?	Generally we will be drawing workers from Timmins and Sudbury which are too far for daily commuting. So we will likely bus people from those locations. This helps with security at the site (we know what people are bringing in) and we will not need to provide as much parking space. We will be open to local people driving daily. The shifts will be one week in/one out.
Employee Accommodations/Camp	226	Letter	06/06/2013	The Sudbury District Health Unit (SDHU) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Sudbury and District Health Unit, IAMGOLD Corporation	1) The living areas for this proposed mine are regulated by Reg. 554 Camps in Unorganized Territory under the Health Protection and Promotion Act. The SDHU requests that plans for the accommodations, dining areas and food preparation areas be sent to the Sudbury & District Health Unit for review before construction.	Thank you for the comment. The plans for accommodations, dining areas and food preparation areas will be sent to the Sudbury & District Health Unit for review prior to construction.
Employee Accommodations/Camp	227	Letter	06/09/2013	The Ministry of Northern Development and Mines (MNDM) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) Suggests that the ToR include how IAMGOLD will consider accomodations for the employees - construction and demolition of the camp, waste generated from the camp etc. 2) Suggests the notice be circulated to Ministry of Municipal Affairs and Housing because crews and mine workers will be living on-site.	A description of construction activities and associated activities such as waste management will be provided in the EA. Note that one of the assessments of alternatives to be carried out as part of the EA includes domestic waste management. The Ministry of Municipal Affairs and Housing received an electronic copy of the draft ToR.
Other	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the host rock?	IAMGOLD responded that the host rock is granodiorite.
Other	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will the waste be managed onsite? Gogama cannot handle any waste. 2) Many aspects of waste management need to be thought of since there is no local waste disposal capacity and waste management decisions may trigger environmental assessment requirements	IAMGOLD has not made that decision yet. There are two options which are to build your own waste management system or hire a private company to come remove it from the site and dispose of it in their private site.
Other	84	Meeting	02/27/2013	IAMGOLD met with the Gogama Local Services Board, Gogama Recreation Committee, Gogama Chamber of Commerce, Gogama Fire Department, Gogama Snowmobile Club and the Venture Centre to present the draft Project Description (PD). There were 14 people in attendance.	Gogama Chamber of Commerce, Gogama Fire Department, Gogama Local Services Board, Gogama Recreation Committee, Gogama Roads Board, Gogama Snowmobile Club, The Venture Centre, Unknown Individual, IAMGOLD Corporation	1) Individual inquired if acid-generating materials will stay on-site?	IAMGOLD identified that those details have not been determined yet. There will be ongoing testing done over the next two years and continuously throughout the life of mine.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Other	252	Letter	05/21/2013	The Ministry of Transportation (MTO) Environmental Assistant provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Transportation	1) The MTO would like to learn more about the potential impacts to Hwy 144 related to the impacts or dangers associated with hauling hazardous solid or liquid waste off-site and how they will be regulated.	All transport of wastes and other materials will be according to applicable regulatory requirements. IAMGOLD will consider the potential for accidents and malfunctions associated with hauling material to and from the Project site.
Other	216	E-mail	05/31/2013	The Ministry of Tourism, Culture and Sport (MTCS) provided comments on Côté Gold's Draft Terms of Reference (ToR). MTCS provided revised comments on 2013-06-05, correcting a typo on the final page of their comments.	Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) MTCS notes that the “do nothing” alternative is not included in the alternatives under consideration in the Draft ToR. Consistent with the Ministry of the Environment's “Code of Practice for Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario” the “do nothing” alternative should always be considered as it acts as a starting point for the comparison of alternatives.	The Proposed ToR will be revised to include a section addressing the "do nothing" alternative.
Other	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 5.3.1.11, IAMGOLD must be careful using mine rock as an aggregate supply as, while it may not be acid generating, there may still be the potential for other contaminants to leach out of the rock and impact water quality. The MNR has had past experiences where the use of mine rock has resulted in arsenic contamination. IAMGOLD needs to be aware that there is a very real possibility that mine rock may not be able to be used as a source of aggregate.	The aggregate to be used for construction will undergo a series of tests, including metals leaching and acid generation, to ensure that the material is suitable and will not contain contaminants that could be released in the environment.
Other	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The draft ToR does not include the “do nothing” alternative. While this is not required, the Code of Practice (page 18) strongly recommends that a “do nothing” alternative always be considered because it acts as a baseline against which all other alternatives are compared.	The Proposed ToR will be revised to include a section addressing the "do nothing" alternative.
Other	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Section 5.3.1.13: I recall during at least one of the interministerial meetings, IAMGOLD made reference to a third transmission line route, which I understand is no longer being considered. Because it was an alternative route which was considered for the Project, it should be mentioned in the ToR – and if it were screened out, then a rationale for having done so should be provided, as it was both for onsite diesel-fired power generation and for renewable energy as the primary power source for site operations.	All options considered to date are described in the Draft ToR. The ‘third option’ was, we believe, the concept of tying into the 115 kV line at Shining Tree. However, the Project power demands have increased such that a 230 kV line is required. Therefore this third option is no longer suitable.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Plant Site	302	Meeting	07/03/2013	On 2013-07-03 an Intergovernmental agency meeting was held with representatives from AMEC, IAMGOLD, the Canadian Environmental Assessment Agency (CEA Agency), the Ontario Ministry of Northern Development and Mines, and the Ontario Ministry of the Environment to discuss the Draft Terms of Reference (ToR) responses and an overview of consultation planning. The meeting notes were finalized on 2013-08-06.	Canadian Environmental Assessment Agency, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the height of the MRA in the new site layout? 2) How long will the channel re-alignments be monitored? 3) What is the update on the landfill?	The height of the MRA changed from 100 to 150m (which is lower than the MRA for Hammond Reef). The aesthetics of the MRA can be optimized through visual screening. The re-aligned channels will not need long-term monitoring. They would be re-vegetated and would start to mimic existing water-courses. The gradients of the channels are the same as the existing channels and therefore the same type of habitat. Landfill options will be carried in the EA, but there is many decisions to be made about which option to use, noting that MNR has approached IAMGOLD about using their landfill near the site. This option needs to be added to the ToR.
Plant Site	306	Interview	08/16/2013	On 2013-07-17 IAMGOLD contacted the Ministry of Natural Resources for some general consultation information requests related to trap-line areas, data-sharing, quarry permits and Landfill Sites. A representative from the Ministry of Natural Resources responded on 2013-08-16.	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) The MNR's Aggregate Technical Specialist providedthe following response: As per the Aggregate Resources Act RSO 1990 as amended, the requirement on Crown land of requiring an aggregate permit lies with the prime activity. If the prime activity is for something else other than extraction for aggregate then an aggregate permit is not required and the by-product of aggregate can be used for that project. But should large amounts of aggregate be created by the prime activity and stockpiling of aggregate specifically for sale then that would need further review.	Thank you for your comment. No further action required at this time.
Process (Leaching, etc.)	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) MNDM was interested in knowing about the stripping ratio.	IAMGOLD responded that the stripping ratio is 2 to 2.5 approximately.
Process (Leaching, etc.)	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Ensure there is adequate baseline data, including multiple years for the four potential effluent discharge locations.	IAMGOLD will ensure that there is adequate baseline information in the baseline for the MOE's review.
Process (Leaching, etc.)	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Would like more information on how much water will be discharged and how often. What precautions will be taken with respect to flood management? If there is a high rain event what is the potential for untreated wastewater to be released?	Detailed Project water balance is currently being established. Details on discharge quantities and frequency are not yet available, but will be available and used for the preparation of the Environmental Assessment. The Project components are engineered such that release of contact water without treatment is highly unlikely. The design criteria will be available and will be provided with the EA report. In addition, the EA report will describe measures to prevent and manage malfunctions and accidents.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Process (Leaching, etc.)	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Page 4-2 (2nd paragraph), the MNR would like more information on how much water will be discharged and how often. What precautions will be taken with respect to flood management? If there is a high rain event what is the potential for untreated wastewater to be released?	Detailed Project water balance is currently being established. Details on discharge quantities and frequency are not yet available, but will be available and used for the preparation of the EA. The Project components are engineered such that release of contact water without treatment is highly unlikely. The design criteria will be available and will be provided with the EA report. In adddition, the EA report will describe measures to prevent and manage malfunctions and accidents.
Tailing Impoundment	19	Open House	11/08/2012	IAMGOLD conducted an open house in Gogama on 2012-10-08 to introduce themselves and the Project to the community. Poster boards included updates on the status of the Project. There were 73 community members in attendance. Attendees were provided opportunities to ask questions of the Project team, offered comment forms and asked if they would like to be added to the Project mailing list.	Aboriginal Women in Mining, Gogama Chamber of Commerce, Individual - GP, Mattagami First Nation, Ontario Ministry of Natural Resources, S+ G Development, Unknown Individual, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual wanted to know more about IAMGOLD's plans to store and treat tailings and waste rock in the area.	IAMGOLD had a number of conceptual plans for tailings and waste rock storage areas that were currently under a stringent review. They would be graded from most desirable to least. However, plans are still preliminary and IAMGOLD will try and have more information on this for the next open house.
Tailing Impoundment	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) For discharging into a water body (i.e., Mesomikenda Lake), IAMGOLD will need to consider mixing zone(s) and what (biota) could be impacted. Environment Canada will be interested in the water bodies being overprinted. Are alternative tailings disposal methods being considered (i.e., paste, thickened, conventional, stacked)?	IAMGOLD states that to date, only potential tailings areas have been identified. Alternative tailings disposal methods will be considered as the Project is develops. Discharge locations will be analyzed in a few proposed locations not just Mesomikenda, this decision will depend on the data results.
Tailing Impoundment	226	Letter	06/06/2013	The Sudbury District Health Unit (SDHU) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Sudbury and District Health Unit, IAMGOLD Corporation	1) The SDHU suggests that information be included regarding major components of the tailings to better determine the adequacy of the tailings pond design and remediation plans.	The EA report will include further information regarding the Tailings Pond Design. Additionally, a malfunctions and accidents section will be included in the EA report, which will have specific details on potential emergencies with the tailings pond.
Tailing Impoundment	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) On page A-5 a description of the socio-economic indicator relating to proximity to existing permanent or temporary residences is provided. Proximity is defined as five kilometres from a mine rock storage area. Why was five kilometres selected in this case?	The 5 km distance was selected such that in such a sparsely populated area, there was a chance that potential receptors would be included.
Tailing Impoundment	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) The SDHU would suggest that information be included regarding major components of the tailings to better determine the adequacy of the tailings pond design, and remediation plans.	Thank you for your comment. The EA report will include further information regarding the Tailings Management Facility design and closure. Additionally, a malfunctions and accidents section will be included in the EA report, which will have specific details on potential emergencies with the tailings facility.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Tailing Impoundment	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Appendix C: Similar to our comments above, in our comments submitted to you on June 5, 2013, we expressed concern that the Tailings Management Facility Alternatives Assessment does not consider all aspects of cultural heritage resources (i.e. archaeological resources are mentioned, but built heritage resources, cultural heritage resources and cultural heritage landscapes are not included) in the evaluation of alternatives. Your response in the Record of Consultation indicates that “it is our understanding that the terminology used in Appendix B was meant to include all aspects of cultural heritage resources”. Given that the potential for built heritage resources and cultural heritage landscapes has yet to be fully examined through the baseline studies planned for 2013, we are concerned that potential impacts and mitigation will not be considered for a comprehensive range of cultural heritage resources in the siting and design of the Tailings Management Facility. A commitment to either update or supplement the Tailings Management Facility alternatives assessment with information gathered from the proposed baseline studies planned for 2013 should be included in the Proposed ToR.	Thank you for your comment. Should additional archaeological baseline studies planned for 2013 identify additional built heritage resources and cultural heritage landscapes, TMF siting and/or design may be revised based on these findings. This would be reported in the EA.
Tailing Impoundment	425	Open House	11/13/2013	IAMGOLD held an open house in the community of Gogama to discuss potential Project effects and proposed mitigation strategies. There were approximately 16 attendees present.	Gogama Local Services Board, Individual - GP, S+ G Development, IAMGOLD Corporation	1) Will there be tailings left in the pond once the Project is over.	All tailings will be staying in the tailings pond then covered with grass, etc.
Transmission Line	5	Meeting	06/27/2012	Minister of Northern Development and Mines (MNDM) met with IAMGOLD on 2012-06-27 and pledged support and assistance for the Côté Gold Project, indicated that the Project is eligible for the provincial power rebate, and provided guidance on First Nations consultations.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) Minister of MNDM indicated that the Côté Gold Project is eligible for the provincial power rebate.	IAMGOLD thanks MNDM for the information and will follow-up accordingly.
Transmission Line	46	Meeting	11/15/2012	IAMGOLD provided a PowerPoint presentation on the current status of the Project Description of the Côté Gold Project, primarily to understand the Environmental Assessment (EA) requirements, and show maps of: the project location/setting, location of local First Nations (FNs), regional and local watershed boundaries, a preliminary site layout (including proposed tailings storage areas, mine rock areas, the open pit, plant site facilities, camp location, water diversions, transmission line routes). A currently proposed high level EA, permitting and construction schedule was also presented.	AMEC Environment & Infrastructure, Canadian Environmental Assessment Agency, Mattagami Region Conservation Authority, Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) For a new (more direct) route for the power transmission line, the Ministry of Natural Resources (MNR) would require: “values” to be assessed; consideration of different options for power; advantages/ disadvantages of different routes; identification of impact(s) on Navigable Waters and cottagers. May need to also contact Transport Canada regarding interference of wires on floatplanes.	IAMGOLD will assess the alternatives transmission corridors within the coordinated EA.
Transmission Line	29	Meeting	11/19/2012	Meeting between IAMGOLD and the Ministry of Northern Mines and Development (MNDM). IAMGOLD introduced the Côté Gold Project, and the specific related aspects of power, aboriginal engagement, and permitting.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) IAMGOLD highlighted the importance of power relating to project viability and cost management at Côté Gold. 2) MNDM encouraged IAMGOLD to coordinate with the Ministry of Energy.	IAMGOLD has been engaging in dialogue with the Ministry of Energy.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transmission Line	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The substation that would need to be added on the 500kV line is a major undertaking and would take approximately 7 years to build. 2) If IAMGOLD goes with the transmission line alternative route, how much longer will it take?	IAMGOLD is not proposing a transmission line that would require new substation construction on the 500 kV line.
Transmission Line	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Are Aboriginal communities aware of the options being evaluated for the power line.	IAMGOLD responded that they are meeting with the Mattagami First Nation later that evening to discuss the transmission line proposal.
Transmission Line	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) We want to be involved in the transmission lines as soon as possible and be sure to do the work for several of the options, not just your preferred one. Have two alternatives for the lines, something might come up and again, involve us soon.	IAMGOLD will conduct an assessment of the transmission line alternatives and involve MNR and other government agencies in this assessment as appropriate. The preferred alternative will be presented and assessed in the EA report.
Transmission Line	82	Open House	02/27/2013	IAMGOLD held an open house in Gogama, Ontario to present an overview of the IAMGOLD draft Project Description (PD). Approximately 56 attendees participated in the open house.	Gogama Fire Department, Individual - Gogama, Individual - GP, Ontario Ministry of Natural Resources, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual identifies a preference of using the existing transmission corridor.	IAMGOLD acknowledges your feedback, it will be considered as we plan and develop the Côté Gold project.
Transmission Line	84	Meeting	02/27/2013	IAMGOLD met with the Gogama Local Services Board, Gogama Recreation Committee, Gogama Chamber of Commerce, Gogama Fire Department, Gogama Snowmobile Club and the Venture Centre to present the draft Project Description (PD). There were 14 people in attendance.	Gogama Chamber of Commerce, Gogama Fire Department, Gogama Local Services Board, Gogama Recreation Committee, Gogama Roads Board, Gogama Snowmobile Club, The Venture Centre, Unknown Individual, IAMGOLD Corporation	1) Will the hydro line be dedicated to the mine and maintained by the mine?	IAMGOLD identified that the hydro line would be owned and maintained by IAMGOLD but maintenance will probably be contracted out. This is to eliminate issues of future use by others that could potentially limit IAMGOLD's requirements. The line would be removed at closure to rehabilitate the site unless something else develops in the area that would require power in the future.
Transmission Line	156	E-mail	04/10/2013	IAMGOLD responded to a request for clarification from the Ministry of the Environment (MOE) and Ministry of Transportation (MTO) on the stormwater management plan and on the proposed transmission line infrastructure near Highway 144. The MTO acknowledged on 2013-04-10 to have received IAMGOLD's response.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Will there be infrastructure reuired to be placed beneath Highway 144?	IAMGOLD is not proposing any infrastructure to cross under Highway 144. The transmission line alternatives will require crossing overhead of Highway 144 at some point but the location will depend on the preferred alternative. As discussed, IAMGOLD is interested in discussing aspects of the Project with MTO given the main access to the Project site is by Highway 144 and trucking will be the primary source of material entering and exiting the site.
Transmission Line	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Why are you crossing Kenogamissi Lake with the transmission line? There has been some clearing for a potential transmission line to link a new dam located between Mattagami and Kenogamissi Falls which may provide another option for the alignment.	IAMGOLD is working with the Ontario Power Generation on the routing options but obviously it would be good to check on this if there could be some synergies with new dams/power sources.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transmission Line	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) MTCS notes the comments from the Ministry of Natural Resources relating to the proposed transmission line that suggests IAMGOLD contact Transport Canada regarding potential interference of the transmission wires on floatplanes. MTCS looks forward to additional information regarding IAMGOLD's discussions with Transport Canada in this regard and any resulting modifications to the Project in the final ToR.	IAMGOLD acknowledges the potential concerns with the proposed transmission line crossing of Kenogamissi Lake. IAMGOLD is reviewing the proposed alignment and alternative route in order to avoid or minimize the concern. If needed IAMGOLD will engage Transport Canada regarding the transmission line, all discussions will be documented in either the Proposed ToR, Record of Consultation and/or the environmental assessment report.
Transmission Line	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) The disposition of land for the transmission line is missing.	The Proposed ToR will be revised to specifically incorporate disposition of land for the transmission line.
Transmission Line	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Transmission Line crossing Kenogamissi Lake, is not a good idea as indications are that airplanes frequently land on this lake and the transmission line may be a safely hazard. If this is to remain as one of the options, we would suggest that it cross between Kenogamissi Lake and Mattagami Lake (Mattagami Lake Dam / Tembec Bridge area). Recommend talking to OPG as there may have already been initial work looking at a transmission line around here (at least as far as the dam). 2) Transmission Line placement was not included as assessment for alternatives, yet there are two proposed options given. Should include the decision process for determining transmission line placement.	This information has been passed on to the engineering team and will be further considered in the design of the Project. The engineering team will also contact OPG to discuss alignment options.
Transmission Line	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) On Page 2-1, the disposition of land for the transmission line is missing.	The Proposed ToR will be revised to specifically incorporate disposition of land for the transmission line.
Transmission Line	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Page 5-22, the transmission line crossing Kenogamissi Lake, is not a good idea as indications are that airplanes frequently land on this lake and the transmission line may be a safely hazard. If this is to remain as one of the options, we would suggest that it cross between Kenogamissi Lake and Mattagami Lake (Mattagami Lake Dam/Tembec Bridge area). The MNR recommends contacting Ontario Power Generation (OPG) as there may have been initial work completed to look at a transmission line around here (at least as far as the dam).	This information has been passed on to the engineering team and will be further considered in the design of the Project. The engineering team will also contact OPG to discuss alignment options.
Transmission Line	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) The transmission line placement was not included as assessment for alternatives, yet there are two proposed options given. Should include the decision process for determining transmission line placement.	The transmission line placement is considered in Section 5.3.1.12 as well as in the summary in Table 5-7.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transmission Line	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 4.2.3.6, does the outlined reclamation apply to the entire length of the transmission line or only to a measured portion?	Closure of the transmission line is addressed in Section 4.2.3.11. The reclamation measures apply to the entire length of the transmission line.
Transmission Line	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) In section 4.2.3.11, you may wish provide more clarity by stating that transfer of ownership of the 230 kV transmission line will be evaluated at the end of the Project.	Text will be revised as suggested for clarity.
Transmission Line	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Considering the great distance over which the 230 kV transmission line will be built (130 to 170 km), it is unclear to the reader why there are only two routing alternatives that will be considered. The Rainy River Gold Project included four alternative routings for the 230 kV transmission line, and this was over a distance of less than 20 km. Please provide a rationale as to why more routes will not be considered for the Project	The Proposed ToR will be revised to include a rationale for no further routings being proposed.
Transmission Line	302	Meeting	07/03/2013	On 2013-07-03 an Intergovernmental agency meeting was held with representatives from AMEC, IAMGOLD, the Canadian Environmental Assessment Agency (CEA Agency), the Ontario Ministry of Northern Development and Mines, and the Ontario Ministry of the Environment to discuss the Draft Terms of Reference (ToR) responses and an overview of consultation planning. The meeting notes were finalized on 2013-08-06.	Canadian Environmental Assessment Agency, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Comments about transmission line - in particular the absence of a third routing was not well understood. 2) At a past meeting there was a mention of a third route (Shining Tree Route) that was not included in the draft ToR.	The transmission line was a 115kV line that would not be sufficient capacity to serve the Project needs and was therefore removed from the assessment of alternatives. One of the remaining two options follows the same routing as this previously considered option. There were other comments on routing that we are considering in the Project designs.
Transmission Line	353	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Energy relating to Power Supply and Routing.	Ministry of Energy, Ontario Ministry of the Environment, IAMGOLD Corporation	1) The ministry does not have any comments on the Record of Consultation, but we do have comments on the draft EA, specifically the section dealing with Power Supply and Routing (section 5.3.14). IAMGOLD has made an effort to respond to initial comments from Ministry staff, however we are still seeking more detail with respect to the anticipated power needs of the project. The proponent should describe the anticipated power needs in the draft Terms of Reference or state that this will be described more in detail in the EA. The power requirements for the project are usually described for each phase (for example the construction phase and the operation phase) and should include approximate dates when the power requirements would begin, and the MWs required at the height of the mine's operations. This information would support the identified need for a 230 kV transmission line connection.	Thank you for your comment. This will be addressed in the EA report.
Transport (Road, Barge, etc.)	252	Letter	05/21/2013	The Ministry of Transportation (MTO) Environmental Assistant provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Transportation	1) The MTO would like to learn more about the potential impacts to Hwy 144 related to the estimated increase in traffic from construction vehicles, transport trucks, heavy machinery, consultatnts, employees, etc.	No response or action required. IAMGOLD will estimate and assess the traffic levels that may occur at all phases of the Project within the EA.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transport (Road, Barge, etc.)	252	Letter	05/21/2013	The Ministry of Transportation (MTO) Environmental Assistant provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Transportation	1) The MTO would like to learn more about the potential impacts to Hwy 144 related to the estimated extra weights and its potential impact on the highway during the two year construction period and over the life of the mining operations.	At this time it is expected that road volume and loads will be within the current road designs. If engineering work determines otherwise, effects on roads will be assessed in the EIS. IAMGOLD will consult the Ontario Ministry of Transportation on the potential weight of vehicles hauling material to and from the Project.
Waste Rock Piles	19	Open House	11/08/2012	IAMGOLD conducted an open house in Gogama on 2012-10-08 to introduce themselves and the Project to the community. Poster boards included updates on the status of the Project. There were 73 community members in attendance. Attendees were provided opportunities to ask questions of the Project team, offered comment forms and asked if they would like to be added to the Project mailing list.	Aboriginal Women in Mining, Gogama Chamber of Commerce, Individual - GP, Mattagami First Nation, Ontario Ministry of Natural Resources, S+ G Development, Unknown Individual, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual wanted to know more about IAMGOLD's plans to store and treat tailings and waste rock in the area.	IAMGOLD had a number of conceptual plans for tailings and waste rock storage areas that were currently under a stringent review. They would be graded from most desirable to least. However, plans are still preliminary and IAMGOLD will try and have more information on this for the next open house.
Waste Rock Piles	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) On page A-4 there is a description of the socio-economic indicator relating to proximity to existing permanent or temporary residences is provided. Proximity is defined as three kilometres from a mine rock area. Why was three kilometres chosen?	The three kilometre proximity was chosen as this is the distance that noise emissions must be managed within that could affect outfitter or tourism operator establishments.
Waste Rock Piles	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Please describe the difference in legislative requirements for developing a demolition landfill within a non-acid generating mine rock stockpile vs. developing it within an approved landfill site. 2) If not economically feasible to remove machinery, equipment and other materials, what will be done with it? 3) Will there be groundwater monitoring in this area? The placement of piezometers and their monitoring schedule should be included. 4) Does the outlined reclamation apply to the entire length of the transmission line or only to a measured portion?	The EA will consider the alternatives for the closure of buildings and associated management of demolition waste. As part of this assessment, environmental and social implications as well as legislative requirements will be weighed. The proposed ToR will be modified to remove the reference to "if not economically feasible". Groundwater monitoring is currently being carried out and will continue to be carried out during all Project phases. Data collected will be presented in the Hyrdogeological baseline report. Future monitoring activities will be described in the EA report. Closure of the transmission line is addressed in Section 4.2.3.11. The reclamation measures apply to the entire length of the transmission line.
Waste Rock Piles	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Must be careful using mine rock as an aggregate supply as, while it may not be acid generating, there may still be the potential for other contaminants to leach out of the rock and impact water quality. We have had past experiences where the use of mine rock has resulted in arsenic contamination. IAMGOLD needs to be aware that there is a very real possibility that mine rock may not be able to be used as a source of aggregate.	The aggregate to be used for construction will undergo a series of tests, including metals leaching and acid generation, to ensure that the material is suitable and will not contain contaminants that could be released in the environment.
Waste Rock Piles	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 4.2.3.2, it should be mentioned that “progressive rehabilitation” may not occur if fewer Mine Rock Areas (MRAs) are used than the original number of MRAs anticipated.	The Proposed ToR will be revised to reflect this comment.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Waste Rock Piles	307	E-mail	08/16/2013	On 2013-08-13 a Project Manager from the Canadian Environmental Assessment Agency (the Agency) sent AMEC an email with a request to receive information about what percent of the waste rock and tailing are potentially acid generating and what neutralization potential ratio Côté Gold is using. On 2013-06-16 AMEC responded to these inquiries.	Canadian Environmental Assessment Agency, AMEC Environment & Infrastructure	1) What percent of waste rock and what percent of tailings are potentially acid generating and what is the neutralization potential ratio Côté Gold is using?	Current estimates of potentially acid generating (PAG) rock are based on a database of approximately 150 samples using a neutralization potential ratio (NPR) threshold of 2 (where NPR <2 is assumed to be PAG). The current database has 3% of the samples with an NPR<2, which suggests that a very low percentage of the rock volume will be PAG. Overall NPR of the mine rock appears to be well above the NPR=2 threshold. Results are currently pending on a larger and more representative database (1000+ samples). Results are also pending on acid-base accounting (ABA) tests of simulated tailing samples. However, data from preliminary studies completed last year by others suggest that the tailings will be non-PAG (NPAG).
Waste Rock Piles	356	E-mail	08/19/2013	The Ministry of the Environment (MOE) provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Ministry of Tourism, Culture and Sport related to the indicators for the assessment of alternatives and the archaeological assessment studies.	Ontario Ministry of the Environment, Ontario Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Appendix B: In our comments submitted to you on June 5, 2013, we expressed concern that the Mine Rock Area Alternatives Assessment does not consider all aspects of cultural heritage resources (i.e. archaeological resources are mentioned, but built heritage resources, cultural heritage resources and cultural heritage landscapes are not included) in the evaluation of alternatives. Your response in the Record of Consultation indicates that “it is our understanding that the terminology used in Appendix B was meant to include all aspects of cultural heritage resources”. Given that the potential for built heritage resources and cultural heritage landscapes has yet to be fully examined through the baseline studies planned for 2013, we are concerned that potential impacts and mitigation will not be considered for a comprehensive range of cultural heritage resources in the siting and design of the Mine Rock Area. A commitment to either update or supplement the Mine Rock Area alternatives assessment with information gathered from the proposed baseline studies planned for 2013 should be included in the Proposed ToR.	Thank you for your comment. Should additional archaeological baseline studies planned for 2013 identify additional built heritage resources and cultural heritage landscapes, MRA siting and/or design may be revised based on these findings. This would be reported in the EA.
Water Sources	156	E-mail	04/10/2013	IAMGOLD responded to a request for clarification from the Ministry of the Environment (MOE) and Ministry of Transportation (MTO) on the stormwater management plan and on the proposed transmission line infrastructure near Highway 144. The MTO acknowledged on 2013-04-10 to have received IAMGOLD's response.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The MOE requests that IAMGOLD confirm its plans to include a stormwater management plan in the EA.	The mine site is several kms away from the highway, therefore any water management plans as required to comply with MOE ECAs and Environment Canada’s Metal Mining Effluent Regulations will only be within the footprint of the mine operations area. All predicted changes in watershed hydrology will be assessed as an environmental effect within our EA, impacts will be mitigated to the extent possible and measures will be incorporated into the water management plan.

Negotiated Agreements							
Compensation	405	Meeting	11/13/2013	IAMGOLD met with the Ministry of Aboriginal Affairs (MAA) - Strategic Planning and Economic Policy Branch Director and team to provide an update of the Project and status of consultation with Aboriginal communities potentially impacted by the Project. IAMGOLD also sought input from the Ministry on various aspects of the Impact Benefit Agreement (IBA).	Ontario Ministry of Aboriginal Affairs, IAMGOLD Corporation	1) Does the MAA have any resources available that would help companies as a guide to managing the financial compensation aspects of the IBA. 2) The MAA would suggest reaching out to other companies, where possible, to see if they have any useful resources.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Contracts	405	Meeting	11/13/2013	IAMGOLD met with the Ministry of Aboriginal Affairs (MAA) - Strategic Planning and Economic Policy Branch Director and team to provide an update of the Project and status of consultation with Aboriginal communities potentially impacted by the Project. IAMGOLD also sought input from the Ministry on various aspects of the Impact Benefit Agreement (IBA).	Ontario Ministry of Aboriginal Affairs, IAMGOLD Corporation	1) Can the MAA team for their guidance on how they might best facilitate participation by First Nations businesses in activities arising from the Project. 2) MAA will share the methodology that was used in order to develop the Government of Ontario's Procurement Strategy, should it prove useful.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Impact Benefit Agreements	405	Meeting	11/13/2013	IAMGOLD met with the Ministry of Aboriginal Affairs (MAA) - Strategic Planning and Economic Policy Branch Director and team to provide an update of the Project and status of consultation with Aboriginal communities potentially impacted by the Project. IAMGOLD also sought input from the Ministry on various aspects of the Impact Benefit Agreement (IBA).	Ontario Ministry of Aboriginal Affairs, IAMGOLD Corporation	1) The Mattagami First Nation Chief would like to see if there any near-term opportunities for education and training initiatives to commence. 2) The MAA will provide further information on funding opportunities available for the education and training piece of the IBA. In the near-term, it was suggested that IAMGOLD could target skills upgrading or basic literacy programs.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Impact Benefit Agreements	405	Meeting	11/13/2013	IAMGOLD met with the Ministry of Aboriginal Affairs (MAA) - Strategic Planning and Economic Policy Branch Director and team to provide an update of the Project and status of consultation with Aboriginal communities potentially impacted by the Project. IAMGOLD also sought input from the Ministry on various aspects of the Impact Benefit Agreement (IBA).	Ontario Ministry of Aboriginal Affairs, IAMGOLD Corporation	1) Does the MAA have any resources available that would help companies as a guide to managing the financial compensation aspects of the IBA. 2) The MAA would suggest reaching out to other companies, where possible, to see if they have any useful resources.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Property	150	Meeting	04/30/2013	IAMGOLD met with Ministry of Natural Resources (MNR) and Ministry of Northern Development and Mines (MNDM) representatives to provide an update on the Côté Gold Project. A follow-up email was sent to the MNR on 2013-06-01 and recorded in ROC213.	Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, AMEC Environment & Infrastructure, Golder Associates, IAMGOLD Corporation, Minnow Environmental Inc.	1) Participants had questions related to land tenure issues.	IAMGOLD is aware of the current land tenure and has retained a firm that specializes in this type of work to benefit from the potential of the Côté Gold project.
Property	338	Meeting	08/21/2013	On 2013-08-21, AMEC and IAMGOLD attended a meeting with representatives from the Ministry of Natural Resources (MNR) to discuss waste management options for the Project, including discussion of the Neville Township Waste Plant, which is a MNR landfill.	Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Q: IAMGOLD asked about available information on the existing Landfill. 2) Response: MOE had information readily available. MNR asked to send a written request and they will put together a package.	N/A
Property	338	Meeting	08/21/2013	On 2013-08-21, AMEC and IAMGOLD attended a meeting with representatives from the Ministry of Natural Resources (MNR) to discuss waste management options for the Project, including discussion of the Neville Township Waste Plant, which is a MNR landfill.	Ministry of Natural Resources, Ontario Ministry of Natural Resources, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Q: Will IAMGOLD be allowed to conduct surveys or other work on the landfill in order to better understand the liabilities associated with the existing landfill? 2) Response: MNR responded that this should not be an issue and that they have received funding for work to be done on the Landfill and proposed to collaborately conduct the work.	N/A

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Project Phase							
Closure	84	Meeting	02/27/2013	IAMGOLD met with the Gogama Local Services Board, Gogama Recreation Committee, Gogama Chamber of Commerce, Gogama Fire Department, Gogama Snowmobile Club and the Venture Centre to present the draft Project Description (PD). There were 14 people in attendance.	Gogama Chamber of Commerce, Gogama Fire Department, Gogama Local Services Board, Gogama Recreation Committee, Gogama Roads Board, Gogama Snowmobile Club, The Venture Centre, Unknown Individual, IAMGOLD Corporation	1) Individual stated that the tailings facilities are perceived as nightmares; has IAMGOLD made closure plans?	IAMGOLD identified that there must be an approved Closure Plan before the Project can begin. The Closure Plan identifies the rehabilitation of the site to a natural state.
Closure	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Has there been any consideration of the effects of construction and decommissioning of the work camp (physical implications such as waste and water management, clearing, etc.)	Yes, this will be covered in the Environmental Assessment. The camp is considered with other physical infrastructure needed at the mine site. There will be a permanent camp (for operations) and a temporary camp for construction.
Closure	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Mine Closure – Include consideration for SAR during mine closure – some species may be using the area and mine closure operations may impact that habitat (eg. Bank swallows in aggregate pits).	The Proposed ToR will be revised to include consideration for SAR species during mine closure.
Closure	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) It was mentioned that the pit itself once the mine was closed would be filled with water, returning it back to a "larger Côté Lake". What would the potential for metals/ contaminants to leach into the lake? Will monitoring be conducted to ensure the "lake" is healthy before it can be considered closed? Will this lake be used as part of the habitat compensation? We would like to see a detailed description on this proposal. If the final lake depth is going to be in the 650m depth range, MNR would argue that much of this depth isn't suitable for habitat and will influence the productivity of the lake.	As we currently understand the pit wall geochemistry, it is unlikely that metals or other contaminants will leach from the pit walls into the lake. However, this potential is currently being investigated in more detail. As the lake fills post-closure, ongoing monitoring will be carried out to get a clear understanding of lake water quality. At this stage of the Project, proposed habitat compensation measures have not been developed but will be as additional field studies and assessments are carried out. Fish habitat compensation will be overseen by Fisheries and Oceans Canada, the Ministry of Natural Resources, and the Mattagami Region Conservation Authority.
Closure	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 4.2.3.2 (Page 4-6), the area must be vegetated with native species (this comment applies to all sections that describe revegetation).	The Proposed ToR will be revised to specify that revegetation will occur with native species. The Proposed ToR will be revised to reflect this comment.
Closure	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Mine Closure (Page 5-23), the MNR identifies that the assessment should included consideration for Species at Risk (SAR) during mine closure as some species may be using the area and mine closure operations may impact that habitat (eg. Bank swallows in aggregate pits).	The Proposed ToR will be revised to include consideration for SAR species during mine closure.
Closure	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 4.2.3.2, it should be mentioned that "progressive rehabilitation" may not occur if fewer Mine Rock Areas (MRAs) are used than the original number of MRAs anticipated.	The Proposed ToR will be revised to reflect this comment.
Closure	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 4.2.3.6, if it is not economically feasible to remove machinery, equipment and other materials, what will be done with it?	The Proposed ToR will be modified to remove the reference to "if not economically feasible".

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Closure	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 4.2.3.6, does the outlined reclamation apply to the entire length of the transmission line or only to a measured portion?	Closure of the transmission line is addressed in Section 4.2.3.11. The reclamation measures apply to the entire length of the transmission line.
Closure	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) The ToR mentioned that the pit would be filled with water at closure, returning it back to a "larger Côté Lake". What would the potential for metals/contaminants to leach into the lake? Will monitoring be conducted to ensure the "lake" is healthy before it can be considered closed? Will this lake be used as part of the habitat compensation? We would like to see a detailed description on this proposal. If the final lake depth is going to be in the 650 metre depth range, the MNR would argue that much of this depth is not suitable for habitat and will influence the productivity of the "lake".	Based on the current understanding of the pit wall geochemistry, it is unlikely that metals or other contaminants will leach from the pit walls into the lake. However, this potential is currently being investigated in more detail. As the lake fills post-closure, ongoing monitoring will be carried out to get a clear understanding of lake water quality. At this stage of the Project, proposed habitat compensation measures have not been developed but will be as additional field studies and assessment are carried out. Fish habitat compensation will be overseen by Fisheries and Oceans Canada, the Ministry of Natural Resources, and the Mattagami Region Conservation Authority.
Closure	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Will there be long term monitoring of the site to ensure that closure procedures are effective in protecting the environment and human health both on the site and in the surrounding area?	Thank you for your comment. The EA report will include an environmental management and monitoring plan, which will include environmental monitoring post-closure.
Closure	425	Open House	11/13/2013	IAMGOLD held an open house in the community of Gogama to discuss potential Project effects and proposed mitigation strategies. There were approximately 16 attendees present.	Gogama Local Services Board, Individual - GP, S+ G Development, IAMGOLD Corporation	1) In your closure plan, how long will you have to come back and check the site?	We will have to look after the site for however long we predict the Site will need to close. One estimate is that it will take 75 years for the pit to fill with water if left to do so naturally. Detour Gold has predicted it will take 120 years to fill their pit.
Construction	221	Meeting	05/23/2013	IAMGOLD and AMEC met with the Ministries of Northern Development and Mines (MNDM), Environment (MOE), and Natural Resources (MNR) to provide a Project update and to review the Draft Terms of Reference.	Canadian Environmental Assessment Agency, Government of Ontario, Ministry of the Environment, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Has there been any consideration of the effects of construction and decommissioning of the work camp (physical implications such as waste and water management, clearing, etc.)	Yes, this will be covered in the Environmental Assessment. The camp is considered with other physical infrastructure needed at the mine site. There will be a permanent camp (for operations) and a temporary camp for construction.
Construction	249	E-mail	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) Senior Environmental Officer provided comments on the Draft Terms of Reference (ToR).	Ontario Ministry of the Environment	1) Reviewer recommends that IAMGOLD review the Ontario Regulation 102/94, Part IV and Part V for large construction and demolition projects, since some of the buildings for this mine will have a total floor area of more than 2,000 square meters.	Thank you for the comment. No changes to the Proposed ToR required.
Operations	84	Meeting	02/27/2013	IAMGOLD met with the Gogama Local Services Board, Gogama Recreation Committee, Gogama Chamber of Commerce, Gogama Fire Department, Gogama Snowmobile Club and the Venture Centre to present the draft Project Description (PD). There were 14 people in attendance.	Gogama Chamber of Commerce, Gogama Fire Department, Gogama Local Services Board, Gogama Recreation Committee, Gogama Roads Board, Gogama Snowmobile Club, The Venture Centre, Unknown Individual, IAMGOLD Corporation	1) Individual inquired about the grade of the gold?	IAMGOLD responded that the gold grade is less 1 gram per ton.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Risks and Mitigation							
Environmental Management	224	Letter	06/07/2013	The Ministry of Tourism, Culture and Sport (MTCS) - Northern Policy and Planning Unit provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ministry of Tourism, Culture and Sport, IAMGOLD Corporation	1) Table 7-1 documents a preliminary summary of potential effects for various Project components. For several different components (e.g. mine operations, buildings etc.) there are effects noted for things like water quality and loss of aquatic/terrestrial habitat but nothing relating to fish and wildlife species/populations. Again we would suggest more direct language relating to potential species effects.	Table 7-1 in the Proposed ToR will be modified to include effects on fish and wildlife species/populations. IAMGOLD will assess the economic effects (either positive or negative) of the proposed Project and will present these in the environmental assessment report. IAMGOLD will engage potentially affected tourism operators and determine the nature of any impacts on their operations, and identify and implement mitigation measures, if necessary, to avoid or minimize and negative impacts.
Environmental Management	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Must be vegetated with native species (this comment applies to all sections that describe revegetation).	The Proposed ToR will be revised to specify that revegetation will occur with native species.
Environmental Management	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) Given that the Project is consistent with Fisheries Management Plans, IAMGOLD could consider implementing supporting compensation initiatives if compensation provided by proposed realignments was not sufficient.	Habitats credit approach will only be used if any compensation initiatives were undertaken that provided more compensation than required for the Project. These credits could potentially be used in the future to support First Nation initiatives. IAMGOLD will pursue habitat credits if the opportunity warranted it.
Environmental Management	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) No major concerns with the Proposed project. Approach seems feasible.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Environmental Management	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) On-site treatment of contaminated soil may also require Ministry approval depending on the process chosen (ex-situ vs. in-situ). Review of this in the EA stage is acceptable.	Thank you for your comment. No further response is required.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Environmental Management	425	Open House	11/13/2013	IAMGOLD held an open house in the community of Gogama to discuss potential Project effects and proposed mitigation strategies. There were approximately 16 attendees present.	Gogama Local Services Board, Individual - GP, S+ G Development, IAMGOLD Corporation	1) An individual commented that from what they have seen so far, the necessary precautions are being taken but the community must continually be on guard to ensure the process put in place does not fail. Continuous monitoring is a must and every concern should be complied with to ensure the biological environment is not jeapordized in any way.	N/A
Malfunctions	226	Letter	06/06/2013	The Sudbury District Health Unit (SDHU) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Sudbury and District Health Unit, IAMGOLD Corporation	1) Consideration could be given to the ability to contact local water users (surface water and wells) in the event of an accidental spill or runoff that may adversely affect the local water quality.	The EA report will include a communications plan in the event of malfunctions or accidents.
Malfunctions	276	E-mail	07/09/2013	The Canadian Environmental Assessment Agency (the Agency) sent a disposition table on 2013-07-09 with the Agency's responses to IAMGOLD's comments on the Draft Environmental Impact Statement (EIS) Guidelines for the Project.	Canadian Environmental Assessment Agency, IAMGOLD Corporation	1) The context here (in Section 7.1.2 on page 12) is "accidents and malfunctions". If IAMGOLD intends to use these as mitigation, the Agency (and/or other federal departments) needs to know what the plans are. If the details of the plans are not provided, there is no way to determine if residual effects would be significant. If IAMGOLD is not using response plans and will provide exactly what is to be done in case of accident/malfunction, then the detailed plans may not be required.	No response required.
Malfunctions	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Consideration could be given to the ability to contact local water users (surface water and wells) in the event of an accidental spill or runoff that may adversely affect the local water quality.	Thank you for your comment. The EA report will include a communications plan in the event of malfunctions or accidents.
Monitoring	226	Letter	06/06/2013	The Sudbury District Health Unit (SDHU) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Sudbury and District Health Unit, IAMGOLD Corporation	1) Will there be long term monitoring of the site to ensure that closure procedures are effective in protecting the environment and human health both on the site and in the surrounding area?	The EA report will include an environmental management and monitoring plan, which will include environmental monitoring post-closure.
Monitoring	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Groundwater monitoring in this area may need to be carried out. The placement of piezometers and their monitoring schedule should be included.	Groundwater monitoring is currently being carried out and will continue to be carried out during all Project phases. Data collected will be presented in the Hydrogeological baseline report. Future monitoring activities will be described in the EA report.
Monitoring	228	Letter	06/07/2013	The Ministry of Natural Resources (MNR) provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of Natural Resources, IAMGOLD Corporation	1) Will there be a schedule of monitoring to ensure that erosion is not occurring over time?	Erosion monitoring will be considered in the EA report.
Monitoring	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With respect to Section 4.2.3.3 (Page 4-6), groundwater monitoring in this area may need to be carried out. The placement of piezometers and their monitoring schedule should be included.	Groundwater monitoring is currently being carried out and will continue to be carried out during all Project phases. Data collection will be presented in the hydrogeological baseline report. Future monitoring activities will be described in the EA report.
Monitoring	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to the top of page 4-7, will there be a schedule of monitoring to ensure that erosion is not occurring over time?	Erosion monitoring will be considered in the EA report.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Monitoring	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With respect to Section 5.3.1.9, the MNR disagrees that Bagsverd Creek is being realigned. This entire creek section is being removed (along with its tributaries). Under the Lakes and Rivers Improvement Act (LRIA), these are watercourse channelizations that are diverting water; they are not simply realignments. With the construction of the new stream, and subsequent flooding of it, what measures are proposed to limit the initial sedimentation? Will these new streams be monitored? What will be the plan if the stream realigns itself or there is excessive/unacceptable erosion?	No change in the Proposed ToR is necessary. Permitting under LRIA will use terminology consistent with the legislation. IAMGOLD is proposing to apply natural channel design priniciples that have been used throughout Ontario to remediate or realign natural corridor systems. As a result, the realigned system will both convey flows in a natural manner and mimic or where possible, enhance the ecological function of the watershed. Preliminary construction details reported in the EA will address sedimentation and outline monitoring plans.
Monitoring	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 4.2.3.6, will there be groundwater monitoring in this area? The placement of piezometers and their monitoring schedule should be included.	Groundwater monitoring is currently being carried out and will continue to be carried out during all Project phases. Data collected will be presented in the hydrogeological baseline report. Future monitoring activities will be described in the EA Report.
Monitoring	276	E-mail	07/09/2013	The Canadian Environmental Assessment Agency (the Agency) sent a disposition table on 2013-07-09 with the Agency's responses to IAMGOLD's comments on the Draft Environmental Impact Statement (EIS) Guidelines for the Project.	Canadian Environmental Assessment Agency, IAMGOLD Corporation	1) With reference to Sections 11.4 and 16 (on pages 34 and 40, respectively), the follow-up program is defined in the Canadian Environmental Assessment Act, 2012 as both a monitoring and follow-up program. The programs have been separated in the guidelines but if one plan is provided that covers aspects of these sections of the EIS Guidelines (i.e. determines the effectiveness of mitigation measures) it will be accepted. This definition will not be provided in the EIS Guidelines but if IAMGOLD provides the definition/explanation it will be accepted.	No response required.
Monitoring	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) Will there be long term monitoring of the site to ensure that closure procedures are effective in protecting the environment and human health both on the site and in the surrounding area?	Thank you for your comment. The EA report will include an environmental management and monitoring plan, which will include environmental monitoring post-closure.
Other	104	Meeting	02/15/2013	IAMGOLD met with FedNor (Federal Economic Development Initiative for Northern Ontario) to introduce the Côté Gold Project and solicit their input on the development of their education, training, and skills development (ETSD) strategy.	FedNor, IAMGOLD Corporation	1) FedNor suggested that IAMGOLD be mindful of safety issues on the highway to and from Sudbury and Timmins.	Safety and traffic effects will be addressed in the EA.
Other	236	Letter	06/10/2013	On 2013-06-10, the Ministry of the Environment (MOE) project officer provided comments to IAMGOLD on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) Appendices D and E: relating to issues resolution, the sections state that if an issues arises where agreement (between IAMGOLD and the concerned person) cannot be reached, “IAMGOLD will continue to work to resolve the issue and where necessary involve third parties.” Please elaborate on the nature of the third parties and for what purpose/in what capacity they will be involved (e.g., moderation, arbitration).	Appendices D and E will be updated to reflect the comment and include the information below.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic Management	29	Meeting	11/19/2012	Meeting between IAMGOLD and the Ministry of Northern Mines and Development (MNDM). IAMGOLD introduced the Côté Gold Project, and the specific related aspects of power, aboriginal engagement, and permitting.	Ontario Ministry of Northern Development and Mines, IAMGOLD Corporation	1) IAMGOLD discussed its general approach with Aboriginal communities, with specific reference to Wabun Tribal Council, Mattagami First Nation and Flying Post First Nation. IAMGOLD sought further information on the Resource Benefit Sharing file within Aboriginal Affairs. 2) MNDM commended the Company's commitment to substantive engagement with impacted communities. MNDM encouraged IAMGOLD to coordinate with a few points of contact within Aboriginal Affairs on the Resource Benefit Sharing file.	IAMGOLD has been continuining to engage in dialogue with potentially impacted communities. IAMGOLD has followed up with points of contact within Aboriginal Affairs.
Socio-Economic Management	266	Meeting	05/23/2013	On 2013-05-23 AMEC, on behalf of IAMGOLD, interviewed the Gogama Local Services Board (GLSB) about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. Meeting notes were finalized on 2013-06-14.	Gogama Local Services Board, AMEC Environment & Infrastructure	1) When I was growing up we had 200 kids in school; now we have 5. In September there will be 11 kids. The population will not go sky-high. You need cash flow to expand services; government does not want small communities to grow because they grow too fast and mines for too short a time. People afterward move out and the community can't support themselves, the community declares bankruptcy and the government gets the bill. The best case for growing is that the mine can provide employment, while it is around.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic Management	267	Meeting	05/23/2013	On 2013-05-23, AMEC conducted an interview with the City of Timmins Chief Administrative Officer about the potential socio-economic impacts of the Project. The information will be used in the socio-economic baseline as part of the Environmental Assessment. AMEC confirmed transcript of interview. Meeting notes were finalized on 2013-06-24.	City of Timmins, AMEC Environment & Infrastructure	1) With regards to the skilled labour force, there is some talk about a shortage in the greater mining area (from Kirkland Lake to Sudbury). In 2020 if everything goes well the Xstrata base metals mine will close and it has 1,040 employees - that is a huge labour force. The price of gold has fallen and there will likely be layoffs as a result from producing mines. The skilled labour force will likely be there when the mine comes. The Conference Board report says we created 5,000 jobs which I find hard to believe because our population is virtually static.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic Management	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) Does IAMGOLD have ownership or a strategy for dealing with land ownership with respect to lands they are proposing to flood?	IAMGOLD has a team working on land tenure issues that will need to be addressed for inclusion in the Environmental Assessments.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Waste Management	174	Meeting	02/20/2013	IAMGOLD met with various government representatives from the Ministry of the Environment (MOE), Ministry of Natural Resources (MNR), Ministry of Northern Development and Mines (MNDM), and Ministry of Transportation (MTO) to discuss the Côté Gold Draft Project Description.	AMEC Environment & Infrastructure, Ontario Ministry of Natural Resources, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Liquid cyanide was an issue for the communities involved with the Detour Gold Project, aspect of spills during transportation to the site and concerns with the water near by.	Cyanide pellets will be used rather than liquid cyanide.
Waste Management	199	Open House	05/23/2013	IAMGOLD held an Open House in Timmins 2013-05-23 to present the Draft Terms of Reference. There were 43 people in attendance. A Project Manager from the Mattagami Region Conservation Authority sent in a comment form on 2013-05-24 to IAMGOLD.	ABB, Canadian Trade-Ex, City of Timmins, College Boreal, Individual - Sudbury, Individual - Timmins, Mattagami First Nation, Mattagami Region Conservation Authority, Mesomikenda Lake Cottage Owner, Mining Life and Exploration News Magazine, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, ReadyQuip, Stratum Group, Unknown Individual, Westburne, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Concerned about site location - disposal of campsite waste and sewage.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Waste Management	237	E-mail	06/04/2013	The Ministry of the Environment (MOE) Senior Review Engineer provided comments on the Côté Gold Project Draft Terms of Reference (ToR).	Ontario Ministry of the Environment, IAMGOLD Corporation	1) From a waste management perspective, if the company is intending on developing and constructing an on-site landfill and, if so, more detail should be included regarding it including site capacity, design, the need for potential hydrogeological studies, etc. as well as a discussion of more environmentally sustainable alternatives. Alternatives should be presented for land disposal of any materials. Approvals for new landfills greater than 40,000 cubic metres in capacity are subject to approval through the Environmental Assessment Act as well as the Environmental Protection Act (EPA). Please note that waste rock storage piles are exempt from obtaining an Environmental Compliance Approval (Part V of EPA) pursuant to section 3(1) of Regulation 347. Similarly, tailing from a mine are also wastes that are exempt from Part V of the EPA as per s. 3(1) of Regulation 347 provided the tailings are not being mixed or comingled with other wastes. Tailings management facilities are approved under the Ontario Water Resources Act.	Thank you for the comment. No action or response required.
Waste Management	226	Letter	06/06/2013	The Sudbury District Health Unit (SDHU) provided comments on the Côté Gold Project Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Sudbury and District Health Unit, IAMGOLD Corporation	1) The SDHU suggests including plans for the safe storage or movement of hazardous materials (including cyanide) and explosives in the event of a natural disaster such as flooding or a forest fire.	The EA report will include information regarding the management of hazardous materials and explosives such that effects to the environment are prevented. Additionally, a chapter on accidents and malfunctions will provide information on the proper response and management of those materials in the event of a natural disaster.

Table D-11c: Comments and Responses - Government

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Waste Management	246	E-mail	06/07/2013	The Ministry of Natural Resources (MNR) - Timmins District provided comments on the Draft Terms of Reference (ToR) for the Environmental Assessment (EA).	Ontario Ministry of Natural Resources	1) With reference to Section 4.2.3.6, please describe the difference in legislative requirements for developing a demolition landfill within a non-acid generating mine rock stockpile verses developing it within an approved landfill site.	The EA will consider the alternatives for the closure of buildings and the associated management of demolition waste. As part of this assessment, envirommental and social implications as well as legislative requirements will be weighed. The Proposed ToR will be modified to remove the reference to "if not economically feasible".
Waste Management	273	Meeting	06/25/2013	IAMGOLD hosted a site visit and meeting on 2013-06-25 with representatives from the Ministry of Natural Resources (MNR) and the Department of Fisheries and Oceans (DFO). The purpose of the meeting was for IAMGOLD to update the DFO and the MNR about two major changes in the Project: a reduction in the number of Mine Rock Areas (MRA), and a change in the channel realignments to accommodate the revised MRA footprint. Updated meeting minutes and presentations were circulated on 2013-07-22. IAMGOLD also noted in an email on 2013-07-17 changes to the Proposed Terms of Reference (ToR) that have been addressed since the meeting on 2013-06-25.	Fisheries and Oceans Canada (DFO), Ministry of Natural Resources, Ontario Ministry of Natural Resources, IAMGOLD Corporation, Minnow Environmental Inc., Calder Engineering	1) The Site currently does not have a caretaker and is not being operated properly. There is potential for the MNR and IAMGOLD to develop an agreement to take over ownership of the Neville waste disposal. This agreement may be beneficial to IAMGOLD for the Project if it is suitable and can be expanded to accommodate the operation and amended to suit the Project.	N/A
Waste Management	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The potential of burning waste on site would require an approval of an Environmental Compliance Approval (ECA) unless it meets the exemptions from approval set forth in section 28.1 of Regulation 347 for a Woodwaste Combustor Site. Burning of any waste other than woodwaste may require an ECA.	Thank you for your comment. The requirement of an ECA approval will be taken into consideration at the permitting stage.
Waste Management	345	E-mail	07/31/2013	On 2013-07-31, the Ministry of the Environment (MOE) provided comments on the IAMGOLD Draft Proposed Terms of Reference (ToR) on behalf of the Waste Engineer from the MOE.	Ontario Ministry of the Environment, IAMGOLD Corporation	1) The establishment of sewage lagoons require an Envrionmental Compliance Approval.	Thank you for your comment. The requirement of an ECA approval will be taken into consideration at the permitting stage if sewage lagoons are the preferred option.
Waste Management	355	E-mail	08/19/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Environmental Health Division of the Sudbury & District Health Unit.	Ontario Ministry of the Environment, Sudbury and District Health Unit, IAMGOLD Corporation	1) The SDHU would suggest including plans for the safe storage or movement of hazardous materials (including cyanide) and explosives in the event of a natural disaster such as flooding or a forest fire.	Thank you for your comment. The EA report will include information regarding the management of hazardous materials and explosives such that effects to the environment are prevented. Additionally, a chapter on accidents and malfunctions will provide information on the proper response and management of those materials in the event of a natural disaster.

Ontario

August 19, 2011

Dear Sir/Madam:

RE: **Contacting Aboriginal Communities**

Recent amendments to Ontario's Mining Act are intended to provide greater clarity and certainty to the province's mining industry while acknowledging and respecting Aboriginal and treaty rights.

These amendments address consultation with Aboriginal communities taking a graduated approach in which the degree of consultation reflects the nature of proposed mining activities and their potential adverse impacts on Aboriginal and treaty rights. While work is underway to develop the regulations and policies that will implement this approach, the Ministry of Northern Development, Mines and Forestry ("MNDMF") is continuing to take a transitional approach, reflected by this letter, to ensure that its consultation obligations are being met.

Enclosed with this letter is an attachment that provides contact information for the Aboriginal communities located in the area of your mining claim(s), which should be contacted with regard to intended mineral exploration activities. This list reflects MNDMF's current understanding, which continues to develop with time, of the traditional or asserted land use areas of local Aboriginal communities. These same communities are provided quarterly updates and maps with regard to the mining claims recorded in the area of their communities. If you become aware of other Aboriginal communities who express an interest in your project, please contact us as soon as possible.

MNDMF continues to advise proponents to engage with Aboriginal communities and begin developing a working relationship as early in the mining sequence as possible. We believe that early contact and relationship-building with Aboriginal communities makes good business sense and can help a proponent to address any potential issues at the outset, as well as those that may arise later in a project.

While the Crown has the ultimate responsibility for ensuring appropriate consultation takes place with Aboriginal communities, both the Courts and mineral industry guidelines indicate that proponents have an important role to play in carrying out aspects of the consultation process. For example, a proponent is in the best position to describe their exploration plans and develop measures to prevent or diminish potential adverse impacts identified by the Aboriginal communities.

.../2

On that basis, MNDMF is advising mining claim holders to contact potentially affected Aboriginal communities, describe your intended mineral project activities and seek the input of the communities. We recommend that you keep a written record of your contact and communications with the communities. Where you authorize another party to explore on your claim(s), you should ensure that they are aware of the contents of this letter. Where any significant issues arise during your interactions with Aboriginal communities, MNDMF should be contacted. Ministry staff are available to meet with Aboriginal communities and proponents to hear concerns and attempt to address them.

While MNDMF does not require proponents to enter written arrangements with Aboriginal communities, we recognize that in many circumstances such arrangements can help to structure and advance the parties' relationship. Where aspects of an arrangement are intended to address any consultation and accommodation obligations that arise from your exploration activities, MNDMF may require further information in order to assess their adequacy.

You may also wish to consider the following industry resources around engaging with Aboriginal communities:

- Ontario Mineral Industry Cluster Council (OMIC) – "Guide for Junior Exploration Companies and Prospectors"
  http://www.omicc.ca/doc/2007Aug10BuildingADialogue.pdf
- Prospectors and Developers Association of Canada (PDAC) – "e3Plus: A Framework for Responsible Exploration"
  http://pdac.ca/e3plus

If you have any questions or concerns, I can be reached at the numbers above or by email at: MED@ontario.ca

Sincerely,

C. Blancher-Smith

C. Blancher-Smith

Without Prejudice

February 23, 2012

Steve Woolfenden
Project Manager
Canadian Environmental
Assessment Agency CEAA
55 St. Clair Ave
Toronto, Ontario M4T 1M2
Steve.woolfenden@ceaa-acee.gc.ca

Dear Mr. Wolfenden,

Thank you for your email of February 7, 2012 requesting information held by Aboriginal Affairs and Northern Development Canada (AANDC) on established or potential Aboriginal and treaty rights in the vicinity of the Cote Lake Gold Deposit site (Trelawney Mining and Exploration) site at Cote Lake near Gogama, Ontario.

The Government of Canada consults with Canadians on matters of interest and concern to them. Consulting is an important part of good governance, sound policy development and decision-making. In addition to good governance objectives, Canada has statutory and contractual commitments, as well as a common law obligation to consult with First Nations, Métis and Inuit when it contemplates conduct that might adversely impact Aboriginal or treaty rights (established or potential) that are section 35 of the *Constitution Act, 1982*.

For more information regarding the duty to consult, please refer to *Aboriginal Consultation and Accommodation - Updated Guidelines for Federal Officials to Fulfill the Duty to Consult - 2011*. These guidelines can be found at www.ainc-inac.gc.ca/ai/arp/cnl/ca/intgui-eng.asp.
It is important to note that the information held by AANDC is provided as contextual information and may or may not pertain directly to Aboriginal or treaty rights. In most cases, the Aboriginal community remains best positioned to explain their traditional use of land, their practices or claims that may fall under section 35, including claims they may have put before the courts.

The Department has recently developed a new information system, the Aboriginal and Treaty Rights Information System (ATRIS), which brings together information regarding Aboriginal groups such as their location, related treaty information, claims (specific, comprehensive and special) and litigation. Using ATRIS and a 100 km radius surrounding the project location, information regarding potentially affected Aboriginal communities is presented in the attached report in the following sections for each community:

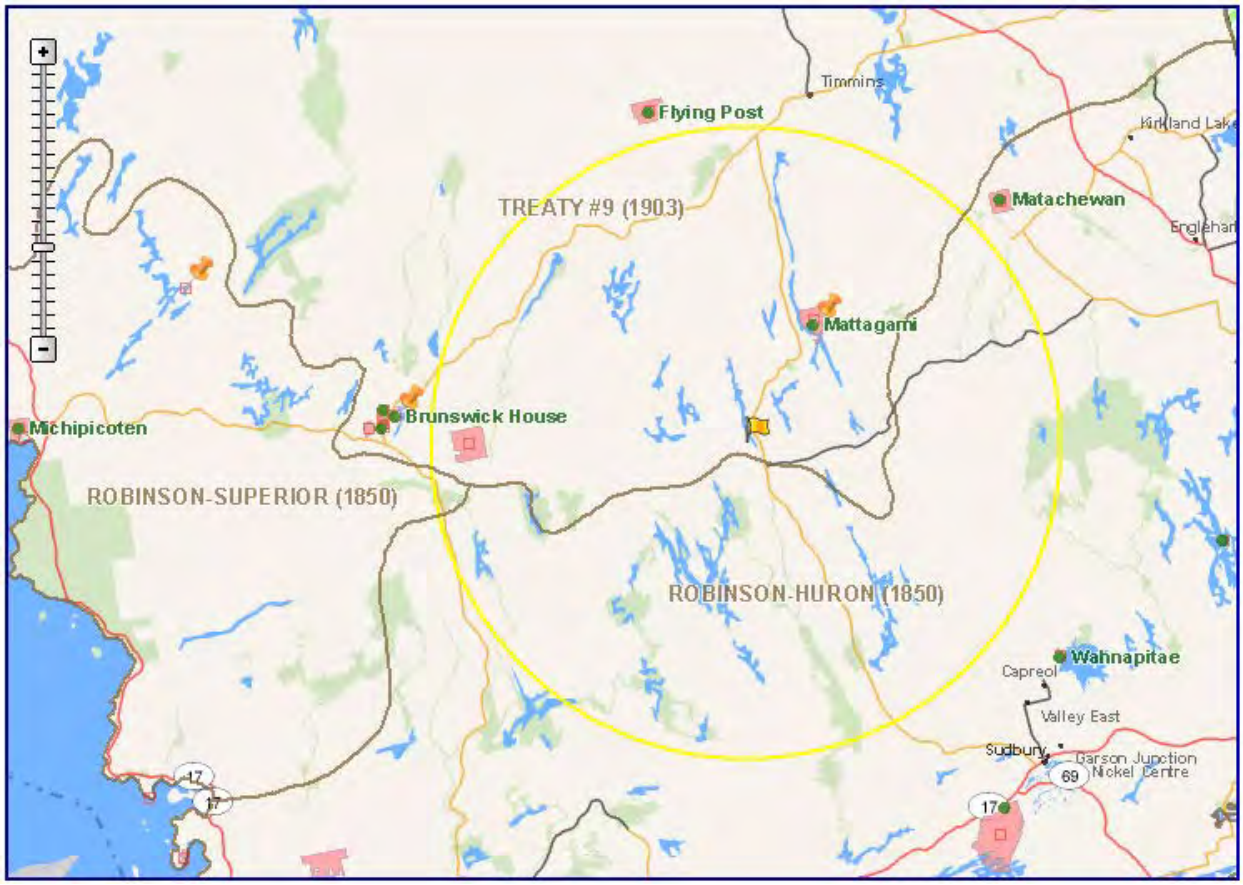
Aboriginal Community Information includes key contact information and any other information such as Tribal Council affiliation.

Treaties, Claims and Negotiations includes Historic Treaties, Specific, Comprehensive and Special Claims. Self-Government may be part of Comprehensive claims or stand-alone negotiations.

Litigation usually refers to litigation between the Aboriginal Group and the Crown, often pertaining to section 35 rights assertions or consultation matters.

Also included, where available, is a section entitled **Other Considerations**. This may include information on Métis rights, consultation-related protocols or agreements and other relevant information.

Should you require further assistance regarding the information provided, or if you would prefer that a smaller or greater buffer be used to gather information, please do not hesitate to contact me.



Regards,

Allison Berman
Regional Subject Expert for Ontario
Consultation and Accommodation Unit
Aboriginal Affairs and Northern Development Canada
300 Sparks Street, Ottawa

First Nation/Aboriginal Community Information

Within a 100 km radius of your project there are 3 communities which are Mattagami First Nation, Brunswick House First Nation and Missanabie Cree First Nation (yellow pin without label). The following information should assist you in planning any consultation that may be required.

In general, where historic treaties have been signed, the rights of signatory First Nation's are defined by the terms of the Treaty. In many cases, however, there are divergent views between First Nations and the Crown as to what the treaty provisions imply or signify. For each First Nation below, the relevant treaty area is provided.

In areas where no historic treaty exists or where such treaties were limited in scope (i.e. where only certain rights were addressed by the treaty, such as the Peace and Friendship Treaties), there may be comprehensive claims that are asserted or being negotiated. Comprehensive claim negotiations are the means by which modern treaties are achieved.

Specific claims refer to claims made by a First Nation against the federal government related to outstanding lawful obligations, such as the administration of land and other First Nation assets, and to the fulfillment of Indian treaties, although the treaties themselves are not open to re-negotiation. The following input provides summaries of relevant claims that are current to the date of the response. As the claims progress regularly, it is recommended that the status of each claim be reviewed through the Reporting Centre on Specific Claims at: http://pse4-

esd4.ainc-inac.gc.ca/SCBRI/CASCC/CascLoginPage.aspx?ReturnUrl=%2fSCBRI%2fMain%2fReportingCentre%2fIndexExternal.aspx%3flang%3deng&lang=eng

Self-government agreements set out arrangements for Aboriginal groups to govern their internal affairs and assume greater responsibility and control over the decision making that affects their communities. Many comprehensive claims settlements also include various self-government arrangements. Self-government agreements address: the structure and accountability of Aboriginal governments, their law-making powers, financial arrangements and their responsibilities for providing programs and services to their members. Self-government enables Aboriginal governments to work in partnership with other governments and the private sector to promote economic development and improve social conditions.

First Nation/Aboriginal Communities

Specific Claims
Name: Timber
Status: settled through negotiations
Description: The First Nation alleged that flooding of 1340 acres of Mattagami Indian reserve No. 71, and damage to and loss of use of resources (timber) and graveyard due to flooding caused by the operation of the Mattagami Dam in 1922. They also alleged a breach of lawfull obligation for granting a timber license in 1928 for a period of 5 years although the surrender expired in 1930.

Self Government Negotiations
Nishnawbe-Aski Nation Self-Government Agreement

Litigation
Name: HMTQ v. Colleen Baulne, Ronald Baulne, Gilles Bond
Status: active
Court No.: not yet available
Description: The Defendant alleged that in 2009 she built a cabin on Flag Lake from which she and her family members engaged in harvesting activities, which she maintains is an exercise of their treaty rights. Prior to constructing, Ms. Baulne and the Chief of Mattagami First Nation provided Ontario's Ministry of Natural Resouces (MNR) with notice of the cabin's location, their intention to use the cabin (to facilitate the exercise of treaty rights), and that they had the First Nation's support for constructing the cabin. Prior to constructing the cabin, Ms. Baulne sought and received funding to build the cabin, and MNR was involved in approving and administering that funding. In September 2010, Ms. Baulne, Mr. Baulne and Mr. Bond were charged for constructing the cabin without a work permit for failing to comply with a stop-work order, and for depositing the trailers on public land.

Specific Claims
Name: Treaty Land Entitlement
Status: active litigation
Description: Unfulfilled treaty land entitlement pursuant to Treaty No. 9.
Treaty Land Entitlement (TLE) claims are intended to settle the land debt owed to those First Nations who did not receive all the land they were entitled to under historical treaties signed by the Crown and First Nations. Settlement agreements are negotiated among First Nations, the Government of Canada and provincial/territorial governments. According to the terms of the agreement, a specified amount of Crown lands is identified and/or a cash settlement is provided so that a First Nation may purchase federal, provincial/territorial, or private land to settle the land debt. Once selected or purchased, this land can be added to the First Nations' reserve under the Additions to Reserve process. For more information on this particular TLE visit: http://www.aboriginalaffairs.gov.on.ca/english/negotiate/missanabie/missanabie.asp

Traditional Territory
The Missanabie Cree First Nation undertook a land use study in 2003 and records their history of land use in traditional territory in and around Missinabi Lake, Dog Lake and Wabatongushi Lake. Visit the Missanabie Cree First Nation website for more information.

Self Government Negotiations
Nishnawbe Aski Nation (NAN) Stand-Alone Self Government Negotiations
See "Other Considerations" below for more information.

Litigation

Name: Chief John Fletcher, Jacqueline Fletcher and Roy Gideon on their own behalf and on behalf of all members of the Missanabie Cree First Nation, v. HMTQ in Right of Ontario and Attorney General of Canada on behalf of HMTQ in Right of Canada
Status: active litigation
Court No.: 95-CU-84670CM
Description: In this action, the Missanabie Cree principally allege that both Canada and Ontario failed to set aside one square mile of reserve land for the First Nation pursuant to Treaty 9. The Plaintiffs allege this failure constitutes a breach of treaty and breach of fiduciary duty owed by Canada to the First Nation.

Name: Mushkegowuk Council Attawapiskat First Nation, Chapleau First Nation, Fort Albany First Nation, Kashechewan First Nation, Missanabie First Nation, Moose Cree First Nation and Weenusk First Nation v. HMTQ (Ontario)
Status: Abeyance
Court No.: 99-CV-163548
Description: The Applicants challenge provisions of the Ontario Works Act, 1997 which designate the First Nation bands as 'delivery agents' for the province and require them to implement measures related to 'workfare'. The applicants argue that s. 91(24) provides that the federal government have exclusive authority to make laws in relation to Indians. They further argue that workfare and welfare provisions conflict with the applicants self-government rights recognised in the Indian Act. In the alternative, these provisions interfere with Indian status and are beyond the constitutional capacity of Ontario.

Traditional Territory Assertions by the Algonquins of Quebec
A map of the assertion made by the Algonquins of Quebec has been provided separately from this response. This map was prepared specifically for this response to illustrate the approximate location to the project vicinity. The boundaries of the territory are not exact. This map is for reference purposes only. For comparison, the Algonquins have published a map of their asserted territory which can be found at:
http://lafrontiere.canoe.ca/webapp/sitepages/content.asp?contentid=139338&id=288

Claims and Negotiation History of the Algonquins of Quebec
In 1985, the Algonquin communities of Kitcisakik and in 1986, Kitigan Zibi, submitted each a comprehensive claim. In 1987, Canada refused to accept the claims of both bands and required that the Algonquins of Quebec take a coordinated approach as well as additional research.

In 1989, five Algonquin communities of Quebec (Kitigan Zibi, Lac Simon, Eagle Village – Kipawa, Wolf Lake and Timiskaming), representing the majority of Algonquins submitted their comprehensive claim which included the territory of western Quebec and eastern Ontario. In 1990, Canada proposed to the Algonquins that they submit a joint claim. In 1991, some bands withdrew their submission in order to work on creating one joint submission; this claim never was brought forward.

In 1994, the Kitigan Zibi First Nation submitted a modified claim which comprised of 48 000 km^2 in Quebec only. The claim was never officially refused, however in 1998 Canada decided not to enter into negotiation with Kitigan Zibi. Several issues had been raised in their claim, in particular obtaining from them certainty of their rights and titles, specifically should other

Algonquin nations make a claim on the same territory.

On April 21, 2010, the Algonquin Anishinabeg Nation Tribal Council, representing the Abitibiwinni, Eagle-Village, Kitcisakik, Kitigan Zibi, Lac Simon, Long Point and Wahgoshig (the latter being on Ontario First Nation) asserted their traditional territory and defined the limits. However, AANDC has not yet received a formal comprehensive claim submission. Furthermore, the Algonquin Nation Secretariat (ANS), represented by Wolf Lake and Timiskaming, are also preparing a comprehensive claim. The Barriere Lake community is no longer a member of the ANS since 2008.

Contact information
There are nine Quebec First Nations and one Ontario First Nation (located in Quebec) who have asserted claims to territory in the Quebec National Capital region. It is recommended that consultation should include the two underlined organizations of the Algonquin of Quebec, along with the ten individual First Nation communities which may or may not be represented by these organizations. A potential right or Aboriginal title may exist for all the Algonquin communities that are indicated below:

Specific Claims and litigation filed by Kitigan Zibi Anishinabeg
Name: Grant to Oblats – 1868
Status: under assessment – Justice Department preparing legal opinion
Description: The Plaintiff alleges a breach of fiduciary duty by granting $1000 of their money to the Pères Oblat de l'Immaculée Conception, to the detriment of the First Nation.

Name: Road Allowances Lot 1, 2, 3 and 4 Desert Front Range & lot 32, 33 and 34 Gatineau Front Range
Status: in negotiations
Description: The Plaintiff alleges road allowances located inside Lots 1 to 4 Desert Front Range and Lot 32 to 34 Gatineau Front Range were never surrendered.

Name: Shore Allowance Along the Desert and Gatineau Rivers
Status: in negotiations
Descriptions: The Plaintiff alleges the shore allowance was not included in Surrenders 134,136,369 and 408.

Name: Surrender 134 Lot B Gilmour – Timber licences
Status: in negotiations
Description: The Plaintiff alleges an invalid surrender due to falsification of signature and breach of fiduciary obligation in obtaining sufficient timber revenues and rents from farmland.

Name: Surrender 238 Lot 4 Desert Front Range
Status: in negotiations
Description: The Plaintiff alleges invalid surrender and illegal payment of proceeds to individuals from the lease of reserve land.

Name: Surrender 257 Lot 3 Desert Front Range
Status: in negotiations
Description: Alleges that the surrender of 10, 000 square feet of Lot 3 Desert Front Range is invalid.

Name: Surrender 276 Lot 3 Desert Front Range
Status: in negotiations
Description: The Plaintiff alleges that the surrender for lease of one half acre of Lot 3 Desert Front Range is invalid.

Name: Surrender 277 Lot 4 Desert Front Range

Status: in negotiations
Description: The Plaintiff alleges that the surrender for lease of 1 acre was invalid.

Name: Surrender 291 Lot 3 Desert Front range
Status: in negotiations
Description: The Plaintiff alleges an invalid surrender and alleged illegal payment of proceeds to individuals from the lease of reserve land.

Name: Surrender 292 Lot 3 Desert Front range
Status: in negotiations
Description: The Plaintiff alleges that the surrender of ¾ of an acre is invalid.

Name: Surrender 324 Lot 51,52 and 53
Status: in negotiations
Description: The Plaintiff alleges that this surrender for lease is invalid.

Name: Surrender 330 Lot 3 Desert Front range
Status: in negotiations
Description: The Plaintiff alleges that the surrender for lease of 1.13 acres was invalid, and payment of proceeds to individuals was illegal.

Name: Surrender 337 Lot 4 Desert Front range
Status: in negotiations
Description: The Plaintiff alleges an illegal sale of reserve land – unsurrendered portion of Lot 4, Desert Front range (20.5 acres).

Name: Surrender 369 Lot 5 Desert Front range
Status: in negotiations
Description: The Plaintiff alleges the forgery of the signatures and other irregularities concerning the surrender.

Name: Surrender 373 Lot 1 to 4 Desert Front Range
Status: in negotiations
Description: The First Nation alleges that the surrender was invalid.

Name: Surrender 388 – 100 acres
Status: in negotiations
Description: The Plaintiff alleges that Surrender 388 is invalid, and that the Crown failed in its fiduciary duty by allowing alienation of reserve lands by virtue of an illegal surrender.

Name: Surrender 389 Lot 18B, 19B and 20 Gatineau Front Range and Lot 18 to 21
Status: in negotiations
Description: The Plaintiff alleges that the surrender is invalid because of the fraudulent nature.

Name: Surrender 392 Lot 10, 11 Desert Front Range and Lot 25 Range 4,5.
Status: in negotiations
Description: The Plaintiff alleges the improper surrender for sale of approximately 30 acres in lots 10 and 11 Desert Front Range and 25 acres in lot 4 and 5.

Name: Surrender 395 Lot 14 Range 7

Status: in negotiations
Description: The Plaintiff alleges an improper surrender of reserve land which resulted in loss of use and revenue.

Name: Surrender 396 Lot 11 road range east
Status: in negotiations
Description: The Plaintiff alleges an improper surrender of reserve land.

Name: Surrender 403 Lot 14 Road Range west
Status: in negotiations
Description: The Plaintiff alleges an improper surrender of reserve land.

Name: Surrender 405 Lot 1, 2 and 3 South Desert Front Range
Status: in negotiations
Description: The Plaintiff alleges that the 1898 surrender was invalid.

Name: Surrender 408 Lot 32 to 34 Gatineau Front Range
Status: in negotiations
Description: The Plaintiff alleges an invalid 1899 surrender of Lot 32, 33 and 34 Gatineau Front Range, which involves approximately 64.4 acres.

Name: Surrender 430 Lots 14 and 15 Road Range west
Status: in negotiations
Description: The Plaintiff alleges an improper surrender of reserve land.

Name: Surrender 504 Corbeau Dam Lots 4,5 and 6 Gatineau Front Range and ROW on Lot 1 to 4
Status: in negotiation
Description: The Plaintiff alleges that the 1905 surrender was invalid, and that there was a lack of consent obtained by the First Nation for a 1925 right of way.

The following claims have been concluded with no lawful obligation by the Crown found.
Name: Timber fees and rentals
Description: The Plaintiff alleged that DIAND failed to discharge its fiduciary obligation to the First Nation by not properly carrying out its responsibilities in relation to the management and accounting of Indian funds from timber fees.

Name: Surrender 360 Lot 29 Road range
Description: The Plaintiff alleges that the surrender for lease of 1 acre of Lot 29 Road Range West was invalid.

Name: Surrender 136 Lot 1-2 &3
Description: The First Nation alleged an invalid surrender and illegal payment of proceeds to individuals from the lease of reserve land lot 1, 2 and 3, Desert Front Range.

Name: Surrender 256 Lot 4 Desert Front Range
Description: The Plaintiff alleged a transgression during the surrender for lease of Lot 4.

Litigation

Name: Kitigan Zibi Aanishnabeg Band (Whiteduck et al) v. HMTQ
Status: abeyance - pleadings
Court No: T-2884-96
Description: The Plaintiffs claim that Canada has breached its trust, fiduciary, equitable, statutory and common law obligations in regard to a series of surrenders of tracts of land on the reserve, they claim, were done fraudulently. The plaintiffs further claim that the breaches constitute an infringement of their treaty, Aboriginal and constitutional rights. They claim to be entitled to all those certain portions of land forming part of the Reserve and described in the following surrenders: August 1873; September 1873; June 1874; February 1878; June 1893; June 1894; August 1895; June 1897; August 1898; January 1899, and in all other surrenders not yet covered by these proceedings. The plaintiffs are claiming special, punitive and exemplary damages in an amount to be determined by the Court.

Name: Joseph Allen Russell Fraser
Court : Cour provinciale du Québec
Status: active
Description: The Plaintiff alleges that the right to fish for subsistence purposes, has been recognized by the *Côté decision* for members of the First Nation.

Aboriginal Rights and the *Côté decision*
Individuals from the Kitigan Zibi Anishinabeg First Nation were prosecuted for illegally entering a Controlled Harvest Zone of Bras Coupé Desert (the "zone d'exploitation controlee, or Z.E.C.). This 1,100 km sq. wilderness zone is located in the Outaouais region of Quebec.

The Supreme Court of Canada rendered its decision in 1996, and determined that there was an Aboriginal right to fish for food. It also determined that section 35 protection of Aboriginal rights was held not to be conditional on proof of Aboriginal title to the land where the activity took place. The Court assumed without deciding the existence of the alleged treaty right, that the provincial regulation did not restrict or infringe the right to fish under the Treaty of Swegatchy. The interpretation of treaty rights by the courts will continue in the future. The link to the decision is: http://scc.lexum.org/en/1996/1996scr3-139/1996scr3-139.html

Other Considerations

Métis Consultation
The inclusion of the Métis in s.35 represents Canada's commitment to recognize and value their distinctive cultures, which can only survive if they are protected along with other Aboriginal communities.

The Office of the Federal Interlocutor for Métis and Non-Status Indians (OFI) is aware that the Métis Nation of Ontario (MNO), its Regions and community councils, have asserted a Métis right to harvest in a large section of the province. However, the best source of information on the nature of these assertions, is from the Métis themselves, who can be contacted via their provincial or national organization.

In 2003, the Supreme Court of Canada affirmed Métis rights under s.35 of the Constitution Act, 1982, in the Sault St. Marie area, in the *Powley* decision. For more information on the Powley decision visit the following link: www.aadnc-aandc.gc.ca/eng/1100100014419

The provincial government has accommodated Métis rights on a regional basis within Métis harvesting territories identified by the MNO. These accommodations are based on credible Métis rights assertions. An interim agreement (2004) between the Métis Nation of Ontario (MNO) and the Ministry of Natural Resources (MNR) recognizes the MNO's Harvest Card system. This means that Harvester's Certificate holders engage in traditional Métis harvest activities. For a map of Métis traditional harvesting territories visit the MNO website at: http://www.metisnation.org/harvesting/harvesting-map.aspx

Métis Nation of Ontario
In partnership with Community Councils, MNO has established a consultation process. Note however, that this organization does not represent all Métis in Ontario. The Métis Consultation Unit is located within the MNO head office:
500 Old St. Patrick Street, Unit D
Ottawa, Ontario, K1N 9G4
Phone: (613) 798-1488
Fax: (613) 725-4225
For a list of community Councils in the area of your activity, visit the MNO site.
www.metisnation.org/home.aspx

Métis National Council
350 Sparks Street, Suite 201
Ottawa, Ontario, K1R 7S8
Phone: (613) 232-3216
Fax: (613) 232-4262
www.metisnation.ca

For an indication of the population in Ontario who self-identify as Métis, visit the Statistics Canada website. The Ontario map indicates populations as small as 250 up to over 2,000 within its borders.
http://geodepot.statcan.gc.ca/2006/13011619/20080513012009031301161 9/16181522091403090112_13011619/151401021518090709140112_20152001121305200919090416151 6_0503-eng.pdf

Métis Litigation in Ontario
Name: HMTQ in Right of Canada v. Michel Blais
Status: active
Court No.: 08-213
Description: The Applicant is charged with unlawfully harvesting forest resources in a Crown forest without a license contrary to the Crown Forest Sustainability Act, 1994. The Applicant, a Métis, asserts that he is an Aboriginal person within the meaning of s. 35 of the Constitution Act, 1982 and that the alleged harvesting occurred in lands set apart for the Batchewana Band pursuant to the Robinson Treaty of 1850. He claims that the Batchewana First Nation may permit Métis persons to exercise the same Aboriginal and treaty rights as its members pursuant to this treaty.

Name: HMTQ in Right of Canada v. Denis Larabie
Status: active
Court No.: n/a
Description: The defendant has been charged for unlawfully hunting cow and bull moose without a license and possessing killed wildlife contrary to s.6 (1)(a) and s.12 of the Fish and Wildlife Conservation Act. The defendant identifies himself as Métis and claims that he was exercising his Aboriginal and/or treaty right by hunting within his traditional territory in Ontario.

Name: HMTQ in Right of Canada, Laurie Desautels v. Henry Wetelainen Jr.
Status: active
Court No.: CV-08-151
Description: The defendant, Henry Wetelainen Jr., intends to question the constitutional validity of sections 28, 31 and 40 of the Crown Forest Sustainability Act (1994), S.O. 1994, c. 25 and Ontario Regulation 167/95, as amended, in relation to an act or omission of the government of Ontario. The defendant claims that he was exercising Aboriginal and treaty rights afforded by the Adhesion to Treaty 3, by harvesting wood within his traditional territory. He claims that he is a Métis/Non-Status Indian and that the imposition of payment for harvesting or use of the forest resource is an infringement and violates is constitutional rights.

Name: R. v. Laurin, Lemieux, Lemieux
Status: concluded
Court No.: ONCJ 265
Description: Three Métis defendants were charged with fishing violations and claimed that the decision of the Ministry of Natural Resources (MNR) to prosecute them violated the terms of the Interim Agreement (2004) between the MNR and the Métis Nation of Ontario (MNO). As the defendants were indeed Harvester Card holders authorized to fish in the Mattawa/Nipissing territory, therefore, they were entitled to the exemption in the agreement.

The Court concluded that laying of charges against any valid Harvester Card holder who is harvesting in the territory designated on the card within 2 years of the 2004 agreement was a breach. The Court was clear to note that this case did not make any ruling regarding the merits of any claim that the Mattawa/Nipissing area contains section 35 rights bearing Métis communities.

Other Relevant Métis Litigation
Name: Harry Daniels v. HMTQ in Right of Canada
Status: awaiting decision
Court No.: T-2172-00
Description: The Plaintiff (several individuals along with the Congress of Aboriginal Peoples CAP) seek judicial declarations that: Métis and non-Status Indians are “Indians” under section 91(24); that the Crown owes a fiduciary duty to Métis and non-Status Indians as Aboriginal peoples; and, Métis and non-Status Indians have the right to be consulted and negotiated with in good faith by the government of Canada, on a collective basis through representatives of their choice.

Membership
First Nations may or may not delegate certain authority and/or powers to tribal councils to administer programs, funding and/or services on their behalf. The best source of information with respect to consultation is though individual First Nations themselves.

Chiefs of Ontario
The Chiefs of Ontario is a coordinating body for 133 First Nation communities in Ontario. The main objective of this body is to facilitate the discussion, planning, implementation and evaluation of all local, regional and national matters affecting its members.

Mushkegowuk Tribal Council
This organization provides leadership to its council of seven First Nation Chiefs and its regional council. In May 2005, the Chiefs of Mushkegowuk Council established the Mushkegowuk Environmental Research Centre (MERC). This First Nation owned independent agency undertakes and coordinates research relating to the environmental and natural resources with a focus on the Western James Bay basin in Ontario. MERC's mandate is to address environmental information needs including traditional knowledge, fish, wildlife, birds, water quality and land management. MERC was created in response to the commencement of significant industrial activities in the northern portion of the territory, despite there being a minimum of ecological information for environmental monitoring and assessment.

Treaty Areas- Treaty 9 (1905)
Also known as the James Bay Treaty, the area is comprised of approximately 90,000 square miles of the provincial lands drained by the Albany and Moose River systems. This area was occupied by the Ojibwa and the Cree.

*Atlas of Canada Map

In July 1905, it was agreed in Council by the Government of Canada to admit to treaty any Indian whose hunting grounds cover portions of the Northwest Territories lying between the Albany River, the District of Keewatin and Hudson Bay, and to set aside reserves in that territory. Due to the absence of Aboriginal peoples in the treaty region in 1905, negotiators returned in August of 1906. Additional clauses were added to the treaty along with the inclusion of eight additional reserves.

Signatories and their descendants **retained "the right to pursue their usual vocations of hunting, trapping and fishing throughout the tract surrendered"**. Exceptions to these rights pertain to tracts of land that have been taken up "for settlement, mining, lumbering, trading and other purposes".

Self Government Agreement Negotiations
Nishnawbe Aski Nation (NAN) Stand-Alone Self Government Negotiations

Bilateral framework agreements on governance and education jurisdictions were formally signed between Canada and NAN in 1999. The negotiations are intended to provide the First Nations of NAN with on-reserve jurisdiction over their governance and education systems.

The aggregation of 49 First Nations and communities in northern Ontario who make up NAN signed agreements-in-principle (AIPs) pursuant to the framework agreements. The AIPs represent a step toward a Final Agreement that will lay the foundation for effective and accountable First Nation governance and education jurisdiction.

A requisite number of AIPs have been initialed and the parties are seeking authority to approve signing these documents. At this time, NAN continues to do preparatory work for moving into the Final Agreement stage of the negotiations. This year, NAN will be doing rounds of

community consultations to seek input from their First Nations in the development of possible models of government.

Sent: Friday, November 02, 2012 4:44 PM
To: David Brown
Subject: Combined Federal-Provincial Environmental Assessments

Hi David,

This is just a quick follow-up to our meeting last week. Below are some links for you to look at with regard to combined federal-provincial EAs. For the province of Ontario, the Ministry of the Environment is our environmental assessment authority. The second link is the actual Combined EA Guide. I assume that the company dealt with the federal EA process when working with your Quebec mines, but you may not be aware that CEAA 2012 recently came into effect, so the 3rd link has some information on that.

http://www.ene.gov.on.ca/environment/en/industry/assessment_and_approvals/environmental_assessments/STDPROD_075713

http://www.ene.gov.on.ca/stdprodconsume/groups/lr/@ene/@resources/documents/resource/std01_079521.pdf

http://www.ceaa-acee.gc.ca/default.asp?lang=En&n=B053F859-1#type03

Hope this helps,
Suzanne

November 8, 2012

Meeting Notes – FINAL

3- 5 p.m.

Group Interview MNR Gogama, ON

Project:	IAMGOLD Côté Gold Project
Purpose:	To gather information on land uses for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.

Attendees:

Dave Ballack, Biologist, MNR Gogama (DB)
John Radigan, Conservation Officer, MNR Gogama (JR)
Gail Ballack, Area Forester, MNR Gogama (GB)
Caroline Burgess, AMEC (CB)
Cheryl Naveau, IAMGOLD (CN)

CB indicated that AMEC is preparing a socio-economic and land use baseline report for the Côté Gold Project for IAMGOLD. She provided some preliminary maps of various land uses (gathered from publically available sources) for a delineated Regional Study Area (RSA).

Gogama Lands:

CB asked about MNR land ownership within Gogama.

DB Response: In Gogama, most of the land is private patented land. The MNR is responsible for all wildlife/fish management even on private land. MNR does not want to sell lots to private land owners since there are other already serviced lots in the town. MNR would like there to be a legitimate need for these lots before they are sold. MNR lots may be available but not for permanent residence only seasonal. More information can be obtained from Kyle Stanley (MNR Land Person, Timmins) 705-235-1300.

DB stated that in the last 10 years Gogama has been quiet due to the loss of employment (Domtar, CN). In the past, Gogama had a CN work camp, there was a rail station, movie theatre, bowling alley back in1960's. Lost a lot of employment in the last 10-20 years due to forestry.

Agriculture:

CB asked if there were any agricultural uses in the Regional Study Area.
DB stated that historically there were small farms in the area that supported the CN rail workers camps. There are no agricultural uses now in the region.

Forestry:

CB asked GB about forestry uses in the Regional Study Area.

GB noted the following:

- Spanish FMA is in the jurisdiction of MNR (Chapleau): EACOM is the Sustainable Forest License (SFL) holder (previously Domtar) – their office is on Birch Street in Timmins.

- Pineland FMA is in the jurisdiction of MNR Gogama – Pineland Forest Timber Company Ltd. is the SFL holder; EACOM is the management company.

- Timiskaming Forest is in the jurisdiction of MNR in Kirkland Lake. The SFL held by Timiskaming Forest Alliance Inc. in Englehart. First Resources Management Company is the managing agent.

- MNR has access to the forest harvesting plans for the Gogama area. Forestry activities include access (roads, harvesting, renewal (planting), and maintenance of planted areas). There are active forest activities within the Chester Township. There is a 10 year Forest Management plan and current Annual Work Schedule.

Fishing:

CB asked if JR and DB could comment on the use of the Regional Study Area for fishing and the relative importance of the Côté Gold project site for these activities.

JR and DB stated the following about fishing that:

- The RSA is a very busy fishing area.
- Angling pressure is high to very high in some lakes – Biscotasi, Mesomikenda, Ramsay and Rice Lakes.
- Mesomikenda Lake has a Lake Trout Policy that limits the kind of development that can occur – This policy can be found on their website or call them to obtain.
- Miniskakwa Lake (Gogama) has high angling pressure.
- Dividing Lake has medium angling pressure.
- There are tourism lakes to the NE – Mekenda Lodge on the north end of Kenda Lake (but joined to Mesomikenda) as well as on the Rice Lakes.
- JR provided list of stocked lakes. Dividing Lake (Walleye); Mesomikenda (Lake Trout, Pike, Walleye, Bass)
- JR confirmed that the RSA is in Fish Management Zone 10 – there is an active Zone Council that is looking at mining development (generally) and impacts to fisheries – contact Sarah Vacsotto (MNR contact) 705-864-3159 – in Chapleau. Zone 10 and Zone 8 border on the Sultan Road along the project site. Zone 8 is on the North side of the Sultan Road and Zone 10 is to the South. Although Chester Lake Sub-watershed crosses the Sultan Road into Zone 10.

Trapping:

JR noted that there is lots of trapping in this area – MNR would need a data sharing agreement to release names of trappers.
CB indicated that IAMGOLD is in regular contact with the local trapper Phil Tamlin.

Canoe Routes:

JR and DB noted that there are a number of registered canoe routes, but MNR does not keep stats on use. The 4M Canoe Route goes through the Côté Gold project site. MNR gets approximately 10 calls per year for canoe parties using the route. It is relatively popular with MNR staff, junior rangers completing the route annually. There is lots of local knowledge and history of this route – lots of exits and it is relatively easy so very accessible to a wide range of paddlers.

MNR can give a copy of a map of canoe routes.

Hunting:

CB asked if JR and DB could comment on the use of the Regional Study Area for hunting and the relative importance of the Côté Gold project site for these activities.

DB indicated that there were different contacts for the various Wildlife Management Units that overlap the RSA as follows:

- Nick Orton (MNR contact) 705-864-1710 – in Chapleau. is the lead contact for WMU 31.
- DB is the lead contact for WMU 29
- Wayne Selinger (Espanola) for WMUs 38, 39

DB stated that the RSA is heavily hunted for moose, small game and bear.

DB noted that there is a Cervid Management Plan for this area that aims to decrease deer populations and increase moose populations.
There have been some Elk sightings especially in the southern end of the RSA.

DB stated that Bear Management Areas (BMAs) are allocated to outfitters for non-resident harvesting. Typically 1 tag is issued to hunt 1 bear for a non-resident. Residents can hunt on BMAs or other areas; there are no restrictions as there are for non-resident hunters. Residents can get multiple bear tags.

JR stated that the RSA is very popular for upland game bird hunting and that there are many outfitters and First Nations hunting upland game birds. MNR does not have statistics for small game hunting as there are no reporting requirements. DB stated that there is a good population of small game in the RSA. It was noted that the site conditions allow for more time to hunt, so there is more frequent hunting.

JR noted that there is lots of hunting off the Chester road.

Snowmobiling:

JR stated that there are no Ontario Federation of Snowmobile Clubs (OFSC) trails in the RSA – except a side trail from MNF to Gogama (CB observation: there are also ATV trails along the highway – but not OFSC maintained). There are no official ATV Trails.

JR noted that snowmobilers are using portage trails and existing forestry roads – so lots of use in the site area – including the Mesomikenda Lake to Chester Road. These are not maintained by OFSC, just known and used locally.

Use of the Côté Gold Site:

CB asked about hunting and other recreation activities specifically at the Côté Gold site

JR noted that in winter there is not much activity at or around the Côté Gold site.
In the Fall there is hunting activity at/near the site, but there are busier places in the RSA.

JR and DB noted now that the Bridge over the Mesomikenda Lake has been re-established, there is more use of the area.

Other:

CB asked about the possibility of having a data sharing agreement with MNR to obtain access to mapped land use data. DB suggested contacting Doug MacMillan (Timmins) for Data Sharing Agreement 705-235-1300.

Subject: Cote Gold - draft PD

Dear Ms. Davis,

Please see the attached correspondence regarding the submission of IAMGOLD's draft Project Description (PD) for the Côté Gold Project.

The draft PD is too large to email directly to you, so we have loaded it onto AMEC's ftp site to facilitate your access along with a concordance table to assist your review. Please see ftp instruction below.

In addition to me, Mr. Stephan Theben of AMEC Consulting is listed as an alternate contact for the conduct of the EA. If you have any difficulties uploading the document I am sure he will be able to assist you.

We would like to schedule meetings in the coming days to formally present the information and discussion various technical and procedural aspects of the project. I will contact you next week to get the ball rolling.

We are excited to be taking this step and look forward to working with you in finalizing our PD and if required, conduct a standard environmental assessment of the project.

Regards,

Steve

Stephanie Davis
Project Manager
Canadian Environmental Assessment Agency
Ontario Regional Office
55 St-Clair Avenue East, Room 907
Toronto, Ontario M4T 1M2

SUBJECT: Côté Gold Project - submission of draft Project Description

IAMGOLD is planning to construct, operate and eventually reclaim a new open pit gold mine at the Côté Gold Project site.

The proposed mine located 20 km southwest of Gogama, Ontario is estimated to have a 15 year mine life and will process about 60,000 tonnes of ore each day.

Major project components include: an open pit mine; an ore processing plant; a 230 kV transmission corridor; an explosives factory; mine rock areas; and a tailings management facility.

The Project will also include channel realignments, roads, water management facilities, camp facilities, habitat compensation works and other required mine infrastructure.

IAMGOLD has well-developed community relations policy and procedures and is committed to involving Aboriginal people, governments, local communities and other stakeholders in the Côté Gold Project.
In an effort to build positive working relationship in the early stages of the Project, IAMGOLD has regularly met their nearest First Nation and Métis neighbours to discuss and actively involve them in the Côté Gold Project.

Attached is a draft Project Description prepared and submitted to initiate dialogue on the requirements of a final Project Description and which will support the Canadian Environmental Assessment Agency's determination on the applicability of Canadian Environmental Assessment Act (2012). Also IAMGOLD is requesting the Crown consider the information provided and identify the Aboriginal groups that they anticipate will need to be consulted with respect to the Côté Gold Project. IAMGOLD is keen to advance the engagement activities on the project to fulfill our community relations goals and seek their input on the final Project Description.

Please advise us if you need any further information to complete our request.

Sincerely,

Signed original by mail.

Steve Woolfenden,
Manager, Corporate Environmental Assessment and Approvals

Meeting Minutes for IAMGOLD Corporation – Cote Gold Draft Project Description

Ontario Government Complex, MNDM Boardroom 1, E-Wing, South Porcupine
February 20, 2013 9:00 – 11:45 am

Attending	Teleconference
Steve Woolfenden (IAMGOLD)	Natalie Dugas (MTO)
Dave Brown (IAMGOLD)	Ed Snucins (MOE)
Carroll Leith (MOE)	Ellen Cramm (MOE)
Steve Momy (MOE)	Sandra Ausma (MOE)
Denis Durocher (MOE)	Shannon Innis (MOE)
Glen Mcfarlane (MNR)	Wesley Wright (MOE)
Suzanne DeForest (MNR)	Alex Blasko (MOE)
Robert Calhoun (MNDM)	
Dawn-Ann Metsaranta (MNDM)	
Debbie Dyke (AMEC)	
Stephan Theban (AMEC)	

Minutes

Meeting started at 9:10 am.
Instructions around the table and then the participants who joined in via teleconference.

Steve W. started off with a brief description of IAMGOLD, overview of the project and team members – key people to talk to and have meetings with for the various aspects of the project. Location of the project (closer to Timmins than Sudbury).

Stephan then talked more about the specifics of the proposed operation-Open pit –similar to Detour Gold, process plant, also similar to Detour Gold, processing will be done in the standard way- crushing, grinding, gravity separation, cyanide leaching, cyanide destruction with as much cyanide recovery for reuse before destruction. 3 areas of mine rock storage at 100 m height. Pipeline/ slurry to the TMF which sits on Bagsverd Creek, crest elevation 40-50 m above grade. Water discharge- 2 options, Bargsverd Creek or Mesomikenda Lake. 1200 people during construction stage and 500 people to run mine operation.

Water will be discharged and then taken with varying times of the year. Water is obviously a large component of the project. The pit will overprint Cote Lake. Water will be rerouted and dams in 3 areas around the pit will be insulted. Water would be rerouted from the lakes around the pit that would have these dams. The water that currently moves threw Bagverd Creek will be rerouted to the west side of the TMF area. This particular realignment of the water course will require geochemistry of the surrounding rocks and landscape to ensure there will not be any environmental issues that may develop such as ARD.

3 cottages are close to the mine rock piles and about 2.5 km from the pit.

Bob asked what the stripping ratio was – 2 to 2.5 approx.

Stephan - Construction on site to build the mine is typical, other than the rerouting of the water. Not a lot of detail discussed here. Water quality, management and treatment will be a large component. As well as air quality and noise management.

Steve M. -Where will housing for construction be; Onsite camp? Gogama is limited for sewage works.
Dave. -Working with Gogama on this and they are looking to put in applications to expand such things. But we are not planning on putting our construction crew in Gogama but rather at the camp on site.

Stephan -Transmission line will be 230 kV so the operations are not limited. There are a few options – follow a current easement from Timmins down the shinning Tree then over to the mine site, more direct route or follow the further east 500kV line.

Bob/Dave - The substation that would need to be added on the 500kV line is a major undertaking and would take approximately 7 years to build.
Steve - meeting with Mattagami First Nations this afternoon/evening and will discuss these options with them.
Wesley – can you share your outcome of the meeting tonight with everyone?
Steve – Yes

Carroll – asked if aboriginal communities were aware of the options being evaluated for the power line – SW indicated that discussion with Mattagami FN was going to take place that evening.

Carroll – informed SW that mine area is potentially within both the Mattagami Region Conservation Authority Area and the City of Timmins Source Water Protection Zone. Recommended that the company discuss their plans with both.

Stephan – At closure various components will be reclaimed. The rerouting of the watercourse would remain at closure.

Bob- what is the host rock?
Dave – Granodiorite.

Stephan – EA Triggers: 230 kV line, 5 mega watts, disposition of Crown Land, possible explosive site.

Steve M- waste management, onsite? Gogama cannot handle any waste. Sewage also, gogama cannot handle this.
Steve W.– We have not made that decision yet.
Steve M. – 2 options are build your own or hire a private company to come remove it from the site and dispose of it in their private site.

Steven W. – Water and Habitat compensation. 80 ha of water being moved/displaced. In discussion with DFO. Option 1 -building a new habitat of the same amount being displaced – 'no net loss' or like for a like. Option 2 – habitat conservation bank; build one, have Wabun Tribal Council or someone else become the custodians of it, work with DFO, MNR, MOE etc

to make that happen. DFO is hard to work with at the moment due to their structure changes and all mining related projects will be handled out of Edmonton.
Build habitat into wetlands for specisies to be relocated to. It might be that IAMGOLD builds the habitat bank and does a joint venture with a local community.
Denis- who decides the 'credit' for each project? Is it just monetary?
Steve W. – it may be financial compensation, fish habitat research, number of ha effected, etc. A possible bank site may be a legacy site and we fix that up to become a habitat bank. There is come effects prediction.

Are communities aware of this opportunity?
Steve W.- We are going to a community meeting at Mattagmi FN today, Flying Post was last week and next week we have 2 public sessions in Timmins, Gogama and Sudbury. We will have another team specific for consultation.

Stephan – Timelines, production early 2017. must submit EA (federal and provincial) and make the decision of how IAMGOLD wants to proceed with that.
Steve W. – biggest risk is the TOR for MOE. We have 7 months to complete that step and the shortest time that we know of it taking so far was for Osisko and that took 10 months.

Next Steps:
Aboriginal consultation
Final PD (Mid-march)
Provincial EA – draft TOR mid-May
Discussion on Provincial Regulations
Bulk Sample:
DA-could be a Class EA involved for MNDM and / or an Advanced Exploration Closure Plan. Will send you more information after the meeting once I confirm what is required.

Alex? Or Wesley? – AMEC is making a TOR at the moment but IAMGOLD has not decided which route they will be taking – to harmonize or not? When will IAMGOLD be deciding?
Steve W. – within a few weeks.
Alex? Or Wesley? – if you go with the alternative route than what your hoping for how much longer will it take? ERT members need a heads up to allot time to review the TOR. ERT masterlist – who you plan to distribute it to. Ensure consultation has been adequately consulted before the TOR is submitted.
Steve W. – this Draft Project description was for the Federal requirements and does not have the provincial requirements as of yet.
DA- will get Steve the timelime for a Section 52 permissions to test mineral content and give the contact in MNDM for our EA process – Jennifer Lillie-Peatz.
Dave – Bulk sample of 20 000 tonnes, from 3 locations.
Suzanne asked for a copy of the Draft PD as she does not have it.

10 minute break.

<u>Round table:</u>

Ministry of Environment
Ed- Recommend MOE be part of discussions with DFO regarding fish habitat compensation; PTTW will be needed for the open pit. Uncertain about effect of changes to federal Fisheries Act.

Ed- Ensure there is adequate baseline data, including multiple years for the four potential effluent discharge locations.
Steve W. – Trelawney started many of the background studies and IAMGOLD has continued all the work. They plan to give a report before the end of the field season that way if there is additional work needed they still have the field season to gather that further data.
Denis- are you doing baseline studies this summer?
Steve W.- yes, concentrating on the transmission corridors as we haven't done much work on these lines yet.
Denis –other projects have brought MOE, MNR, etc early on in the process for baseline monitoring planning, scheduling and to ensure they are meeting the regulators base measures.
Steve W- We have just received from consultants all the data and in April/May we hope to meet with MOE, MNR etc, so that we have the summer to do any additional studies that may be needed.
Wesley – Draft EA (end of 2013 target) IEA timeline goes to end of 2014 so you have given yourselves a year to do the EA? It would be good get a list of the permits in the order they will be needed.
Stephan – There is a more detail to this timeline and it is not this simple. A lot of work and detail is in another timeline diagram that is not shown here in the presentation.

Denis- Waste management- a lot of aspects need to be thought of with regards to this. There is no local waste disposal capacity, and waste management decisions may trigger EA requirements. Liquid cyanide was an issue for the communities involved with the Detour Project, aspect of spills during transportation to the site and concerns with the water near by.
Stephan – Cyanide pellets will be used.
Ellan – MNR – for the disposition of Crown Land.
DA- Land tenure/leases for the land, applications should be sent in sooner than later.
Steve W- We are going to hire a new land manager for those types of things.

Shannon- Baseline data – waiting for that before any comments can be made.
Sandra- Air quality baseline monitoring program, consult with MOE first.
Dave- Can we use historic data? Or do you have other ideas?
Sandra – Ensure you know what is adequate and there is enough of the data. Contact me if need be at any time.
Denis- Does MNR collect meteorological data in Gogama?
Glen – Yes, we have a weather station but we only collect the data during fire season.
Steve W – We need more but we do have a weather station on site.

Ministry of Natural Resources
Glen – Land tenure, makes it easier for the PD if they are all leases. We want to be involved in the transmission lines as soon as possible and be sure to do the work for several of the options, not just your preferred one.
Steve W – cross country route is an economic benefit as it is 40 km shorter.
Glen- have two alternatives for the lines, something might come up and again, involve us soon.
Steve W – base case – follow what is already there.
Glen- Camp set up – 1200 people to start for construction then 500 for operations, how will sewage waste, disposal sites etc. be handled? MMAH may need to be involved with Gogama if IAMGOLD plans to add additions to the small townsite.
Steve W- not sure what we will do with the transition from 1300 to 500 in camp. No plans at this time for any development in Gogama.

Suzanne – Trelawney had an issue with a surface rights owner with the easement from shinning tree to the mine site which may have gone to the mining commissioner. Will have to look at my notes to see for sure.

Ministry of Transportation
Natalie – How is the mine currently being accessed? The Chester Domtar Rd entrance expires at the end of 2013 – Dec. 31, 2013.
Debbie – Can that be renewed?
Natalie- Yes or it can be changed to a permit road entrance. Also where the transmission crosses hwy 144 their will be a need for encroachment / building permits.
Dave- Is the road that expires from hwy 144 or from the Sultan Rd?
Natalie – from 144.
Wesley – Diesel generator I think you mean 5 kW not KV. Recommends involving MNR soon on that as well as anyone who is involved in the Source Protection for the region.
DA- Kees Pols was invited to this meeting who would speak to the Source Protection but he had a meeting already booked. He was also at the meeting in November so he is aware of this project.

Ministry of Northern Development and Mines
DA- One Window Project designation starts once a Notice of Project Status is received. I suggest getting that in as soon as possible. Where does the Closure Plan fit into your timeline? And Land tenure – have a look at this and figure out where lease applications need to be submitted. The new process for the closure plans ensures Aboriginal consultation is started and completed before the closure plan is submitted to MNDM. And a NPS must be received no later than one year before the mine production starts.

Once a NPS is received I can help book and facilate meetings as often as needed between IAMGOLD and the ministries. This may mean meetings every few weeks due to its complexity.

Who is the one Window Lead now? I haven't heard from Bob Carreau who was initially my contact.
Steve W – I will be the contact person.
DA- I will find out more information on bulk samples and if you will need an Advanced Exploration Closure Plan for that.

11:45 am End of meeting.

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0

Meeting with
Boards of Gogama

February 27, 2013 – 4:30 p.m.
Ruby's Restaurant, Gogama, Ontario

Present:
- Cheryl Naveau, First Nations Liaison & Public Relations, IAMGOLD
- Dave Brown, Manager, Environmental Services, IAMGOLD
- Natalie Gaudette, Staff Assistant, IAMGOLD
- Roxanne Veronneau, Chairperson, Gogama Local Services Board / Board Member, Gogama Local Roads Board
- Claude Secord, Vice-Chairperson, Gogama Local Services Board / Vice-Chairperson, Gogama Local Roads Board
- Andre Jodouin, Board Member, Gogama Local Services Board
- Gilles Veronneau, Board Member, Gogama Local Services Board
- Gerry Talbot, Secretary, Gogama Local Services Board
- Edmond Chenier, Acting Chairperson, Gogama Chamber of Commerce
- Daniel Mantha, Board Member, Gogama Chamber of Commerce
- Mike Benson, Chief, Gogama Fire Department
- Pat DeBlois, Chairperson, Gogama Snowmobile Club
- Natalie Sear-Beland, Member, Gogama Recreation Committee
- Christine Cloutier, Member, Gogama Recreation Committee
- Tamara Mathieu, Member, Gogama Recreation Committee
- Suzanne Viel, Business Development Officer, The Venture Centre
- Roxanne Daoust, Business Development Consultant, The Venture Centre

Dave Brown walked through a hardcopy of the IAMGOLD draft Project Description, explaining that copies handed out would need to be returned to Natalie.

Highlighted during the presentation:

- IAMGOLD's Zero Harm policy in relation to Health & Safety, Partnerships with Communities, and the minimization of the environmental footprint.
- IAMGOLD has 50 partnerships with governmental and civil society organizations; specifically mentioned were "Right to Play" to be launched at the Mattagami First Nation, and IAMGOLD's standing in the top 5 sponsors for the Canadian Cancer Society

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

- Q: Gerry Talbot asked what is the grade of gold?
- A: Dave answered under 1 gram per ton

- if project moves ahead, construction is planned to start in early 2015, with production scheduled to start in 2017
- there's a proposal to reallign Bagsverd Creek to accommodate a tailings management facility
- expected production: 60,000 tones per day
- currently 4 drills working until June, with an additional 2 to start then
- additional baseline work to be done
- monthly water studies done for the past 2 years for baselines, in order to better predict what will happen after production starts
- draft Project Description was submitted to government agencies February 2013; the final draft to be submitted March 2013
- some issues are still pending (i.e. location of facilities, water management plans, transmission line, etc)

- Q: Gerry Talbot asked if someone wants to touch base with IAMGOLD, do they contact Cheryl initially?
- A: Cheryl answered yes.

- working to diminish greenhouse gases, possibly by using an in-pit conveyor system)
- the mine itself will not be seen from Highway 144
- detailed engineering studies to be done with geochemical and geotechnical studies
- acid-generating materials will be contained; it is yet to be determined how they will be disposed

- Q: Gerry Talbot asked if acid-generating materials will stay on site?
- A: Dave said they weren't sure yet, that there will be ongoing testing done over the next 2 years and continuously throughout the life of Mine.

- Q: Gerry Talbot asked if the leeching run-off from piled materials would be harmful?
- A: Dave explained that there are new permitting processes whereby every drop of water on-site must be managed, collected if necessary and treated before being discharged off-site if it is not of good quality. Dave added that a lot of water will

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

be needed for this project and that IAMGOLD will reuse on-site as much water as possible.

- it is expected that during the construction phase there will be 1,200 workers on-site, scaling back to 500 full-time workers once production begins

- Q: Gerry Talbot asked if Côté Gold would be similar to Detour?
- A: Dave said yes, Côté Gold will be based on Detour design and set-up.

- Q: Gerry Talbot stated that tailing facilities are perceived as nightmares and asked if IAMGOLD have made closure plans?
- A: Dave answered that they have to have a closure plan before starting the project, a plan that will rehab the site to its natural state.

- Q: Daniel Mantha asked if he was to go out and buy drilling equipment, would he have a realistic chance at a contract with IAMGOLD?
- A: Dave explained that all contracts goes to bid/tender but that local businesses can be favored but that there are limits (i.e. expertise, cost)

- Gerry Talbot commented that people have to make their own opportunities, not wait for IAMGOLD to come knocking, and that making a connection is a good 1st step.
- Dave agreed.

- Q: Roxanne Veronneau asked if there is a package for suppliers, listing requirements, measures, etc.?
- A: Cheryl said not yet since the project is still fairly new but that they are working towards creating those. Dave added that this isn't a definite project yet but that for IAMGOLD this is their future, however is gold prices were to drop too low then there won't be a project.

- Dave said that everyone wants to be proud of this project because we're all from Northern Ontario. Cheryl added that this could be a legacy for Gogama.
- Roxanne Veronneau commented that the help received in Gogama and Mattagami First Nation from IAMGOLD has been great.

- Q: Roxanne Veronneau asked if the Economic Study would be returned by the government by December 2013.

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

- A: Dave explained that they are in the Environmental Assessment phase, where the government will give a list of what needs to be studied. He added that the Economic Impact Assessment needs to be completed & submitted by December 2013.

- Q: Roxanne Veronneau asked when the forecasted service needs would be required?

- A: Dave said that construction would start in 2015 at the earliest, starting with the hydro line, but that nothing can be done until the Environmental Assessment process is completed.

- Q: Roxanne Veronneau asked if there were any employment opportunities available before 2015?
- A: Dave answered that he wasn't sure, that they are currently supporting consulting, drilling, archaeology, field digs, etc.; he said that this is a 2 year process. Cheryl added that once the project moves forward workers will be needed in all mining areas (i.e. accounting, camp support, kitchen, mining, etc.)

- Q: Gerry Talbot asked if it was too early to send applications for jobs?
- A: Cheryl explained that they are not expanding at this moment but that the local community will be notified when they have a list of required services and positions.

- 2 to 3 years of archaeology studies have been done on-site
- IAMGOLD is working closely with the local communities such as Gogama, Mattagami First Nation and Flying Post First Nation by doing consultations
- there are currently approximately 50 workers on-site, 23 of whom are from these local communities

- Q: Gerry Talbot asked if there's a timeline to make the list of needs known? Those individuals thinking of starting businesses need to plan.
- A: Dave answered that the list is part of the Environmental Assessment work and that the terms of reference are expected to be done by December 2013. He said that IAMGOLD is very transparent about its plans. Cheryl added that their door is always open, to call if anyone would like a tour.

- Q: Roxanne Veronneau asked when the expected 1200 workers would be hired?

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

- A: Dave said early 2015 at the earliest when moving into construction phase but that they would quickly move into production phase in 2 years if all goes well. Cheryl added that IAMGOLD is not building a town at the site and that miners and their families may want to move to Gogama although IAMGOLD plans to set up and house workers onsite.

- there is a proposal for a tailings dam to be built which would be 24 meters high
- as much water as possible will be recycled and reused on-site
- the possibility of seasonal discharge is being researched
- all water on-site must be collected, treated, and ditched before discharged
- the water management facilities must be designed prior to the beginning of construction
- 2 power line options were explained; an option to be chosen within the next few weeks

- Q: Gerry Talbot asked if the hydro line would be dedicated to the mine and maintained by the mine?

- A: Dave answered that the line would be owned and maintained by IAMGOLD but maintenance will probably be contracted out. This is to eliminate issues of future use by others that could potentially limit IAMGOLD requirements. He added that the line will be removed at closure to rehabilitate the site unless something else develops in the area that would require power in the future.

- consultations with local communities are required by federal regulation; several more sessions will be held in the future
- IAMGOLD has voluntarily agreed to do environmental assessments for the provincial government, in addition to mandatory environmental assessments required by the federal government
- there are three teams: Physical, Biological, and Human Environments
- IAMGOLD has developed a partnership with Laurentian University and donated $1.25 Million Dollars to help sponsor the 1st Canadian open-pit mining program because trained people will be needed in the next 5 years

Cheryl thanked the Gogama Local Services Board for their ongoing support and expressed IAMGOLD's wish to be a good neighbor with all local boards and committees.

All copies of the draft Project Description were returned and the meeting ended at 5:30 p.m.

Subject: Cote Gold Project - Voluntary EA Request Letter

Good afternoon Wesley,

Please find attached a scanned copy of our request to assess the Cote Gold Project in one coordinated Individual EA versus assessing individual components of the project in numerous EA processes under pursuant to the *Environmental Assessment Act*.

As noted in the letter, IAMGOLD is hopeful that volunteering to assess the entire project within one process we deliver tangible benefits for the project and all stakeholders.

We look forward to working closely with the Ministry of the Environment to deliver a high quality environmental assessment.

We have reviewed the GRT list and included two versions for your consideration, one includes redlined revisions and the second version shows the list with the proposed excluded agencies deleted.

Also I have attached a copy of the Oct 24, 2012 43-101 Report along with electronic access to the Project Description.

If you have any questions please do not hesitate to contact me and I a look forward to apeaking with you soon to discuss the next steps in the process.

Regards,

Steve

Your “Standard” FTP site has been set-up

Your “**Standard” FTP** site has been set-up and a 'Test' folder created to ensure everything is working well.
You can use your FTP (file transfer protocol) site to exchange large files with colleagues and clients without using email.

To open your FTP site

- This is the unique link to your FTP site
  ftp://iamgold:img121522@amftp.amec.com
- **Do not click the link! Use the following steps for quick and easy access...**
- **Copy** the above link
- Right-click on the **My Computer** icon on your desktop and select **Explore**
  or
  Using your keyboard, press and hold the **Windows** key and tap the **letter E** to display **My Computer / Windows Explorer**
- **Paste** the link you copied from above into the **Address** box and click **Go** or press **Enter** (You can type the details into the **Address** box if you prefer...)
- The site should open automatically for you (if not, see 'Tip' below)
- You can now copy files into your FTP site, create sub-folders if required, then email the same link to colleagues or external clients and easily exchange large documents
- **This guide** gives step-by-step instructions on how to use an FTP site and details on how long the site will remain live

---

Tip

If the above does not work for you, to open the FTP site -

- **Click** this link **ftp://iamgold:img121522@amftp.amec.com**
  FTP root at amftp.amec.com or **FTP root at apftp.amec.com**
- Click the **Page** button (or the **View** menu option) and then select **Open FTP Site in Windows Explorer**
- When asked for username and password enter these details

March 21, 2013

Ian Parrot
A/Director, Environmental Assessment and Approvals Branch
Ministry of the Environment
2 St. Clair Avenue West, 12th Floor
Toronto ON, M4V 1L5

Dear Mr. Parrot:

Re: IAMGOLD Corporation - Côté Gold Project
Proposal for Voluntary Agreement under the *Environmental Assessment Act*

The Côté Gold Project is a proposed gold mine project located in the Chester and Neville Townships, District of Sudbury, in northeastern Ontario, approximately 20 kilometres (km) southwest of Gogama, 130 km southwest of Timmins, and 200 km northwest of Sudbury (see below). The Project site is located within an area with moderately hilly boreal mixed wood forest, bogs, and fens and lakes commonly less than 10 m deep. The land use of the area is focused primarily on timber production and mineral exploration and development, and secondly on tourism development and limited public recreational facilities. It is anticipated that the Project activities would provide economic stimulus through employment and procurement, as well as from contractors needing temporary accommodations and other services close to the Project site.

IAMGOLD is planning to construct, operate and eventually reclaim a new open pit gold mine at the Côté Gold Project site to produce gold for sale in the global marketplace. Although engineering studies are in progress, the major physical works related to the Côté Gold Project are proposed to consist of:

- Open pit: approximately 210 hectares (ha) with a depth of approximately 650 m. Mining will occur at a rate of approximately 60,000 tonnes per day (tpd) of ore production over an approximate 15 year period. In recognition that the open pit mine design is preliminary, for the purpose of this document an additional 20% contingency should be added to the above mining rate and total production value to allow for flexibility, and design changes resulting from the ongoing exploration program and engineering analyses;
- Mine rock and overburden stockpile areas: approximately 20 million tonnes (Mt) of overburden and 810 Mt of mine rock not required for site construction purposes will be stored in surface stockpiles. Low-grade ore stockpile(s) will also be developed;
- Ore processing plant;
- Tailings management facility: a preferred area for TMF development has been selected. This TMF covers an area of approximately 900 ha and will provide capacity for the storage of a minimum 300 Mt of tailings over the expected Project life. The maximum

Dear Chief Jerome,

The Canadian Environmental Assessment Agency (the Agency) must decide whether a federal environmental assessment is required for the proposed Côté Gold Mine located 20 kilometres southwest of the community of Gogama.

To assist it in making its decision, the Agency is seeking input from the Algonquin Anishinabeg Tribal Council on the proposed mine development and its potential effects on the environment. We are asking for your input by Monday, April 15th.

Please see the attached letter seeking your input, and the link to the summary of the project description (below). Both the letter and a summary of the project description have been mailed to you. A link to the complete project description is included below.

Link to the summary of the project description:
http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=87329

Link to the Côté Gold project page on the Canadian Environmental Assessment Registry:
http://www.ceaa-acee.gc.ca/050/details-eng.cfm?evaluation=80036

If you have any questions or comments please contact me at ellen.campbell@ceaa-acee.gc.ca or by phone at (416) 952-7006.

Thank you,

Ellen Campbell

Chief Alice Jerome
Algonquin Anishinabeg Tribal Council
81 Kichi Mikan,
Maniwaki,QC
J9E 3C3
info@anishinabenation.ca

Dear Chief Jerome,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on Algonquin Anishinabeg Tribal Council (AATC) member communities' rights or interest.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

Canada

The Agency is currently seeking the initial views of the Algonquin Anishinabeg Tribal Council on the following matters based on the information set out in the project description:

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your member communities. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your member communities':
  - health and socio-economic conditions,
  - physical and cultural heritage,
  - current use of lands and resources for traditional purposes, or
  - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your member communities' potential or established Aboriginal or Treaty rights.

Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Algonquin Anishinabeg Tribal Council.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review
The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it could have on your member communities' potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Yours sincerely,

Anjala Puvananathan
Regional Director
OntarioRegion

Dear Chief Neshawabin,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on your community.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

The Agency is currently seeking the initial views of the Brunswick House First Nation on the following matters based on the information set out in the project description:

Canada

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your community. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your community's:
    - health and socio-economic conditions,
    - physical and cultural heritage,
    - current use of lands and resources for traditional purposes, or
    - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your potential or established Aboriginal or Treaty rights.

Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Brunswick House First Nation.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review

The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any proposed impacts it could have on your potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Yours sincerely,

Anjala Puvananathan

Dear Chief Ray,

The Canadian Environmental Assessment Agency (the Agency) must decide whether a federal environmental assessment is required for the proposed Côté Gold Mine located 20 kilometres southwest of the community of Gogama.

To assist it in making its decision, the Agency is seeking input from Flying Post First Nation on the proposed mine development and its potential effects on the environment. We are asking for your input by Monday, April 15th.

Please see the attached letter seeking your input, and the link to the summary of the project description (below). Both the letter and a summary of the project description have been mailed to you. A link to the complete project description is included below.

Link to the summary of the project description:
http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=87329

Link to the complete project description.

Chief Murray Ray
Flying Post First Nation
P.O. Box 1027
Nipigon, ON
P0T 2J0
flypost@shawbiz.ca

Dear Chief Ray,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on your community.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

The Agency is currently seeking the initial views of the Flying Post First Nation on the following matters based on the information set out in the project description:

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your community. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your community's:
    - health and socio-economic conditions,
    - physical and cultural heritage,
    - current use of lands and resources for traditional purposes, or
    - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your potential or established Aboriginal or Treaty rights.

Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Flying Post First Nation.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review

The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any proposed impacts it could have on your potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Yours sincerely,

Dear Chief Naveau,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on your community.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

The Agency is currently seeking the initial views of the Mattagami First Nation on the following matters based on the information set out in the project description:

Canada

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your community. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your community's:
    - health and socio-economic conditions,
    - physical and cultural heritage,
    - current use of lands and resources for traditional purposes, or
    - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your potential or established Aboriginal or Treaty rights.

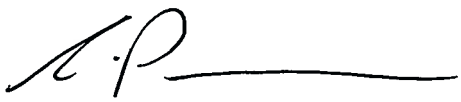
Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Mattagami First Nation.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More Information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review



The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any proposed impacts it could have on your potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Dear Mr. Lefebre,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on your community.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

The Agency is currently seeking the initial views of the Métis Nation of Ontario, Region 3, on the following matters based on the information set out in the project description:

Canada

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your community. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your community's:
    - health and socio-economic conditions,
    - physical and cultural heritage,
    - current use of lands and resources for traditional purposes, or
    - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your potential or established Aboriginal or Treaty rights.

Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Métis Nation of Ontario, Region 3.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review

The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Steve, hi. The Notice of Commencement looks good. Just two points:

1. MOE is referred to as the Ministry, Ministry of the Environment, and Ontario Ministry of the Environment. You could perhaps opt to have the first reference (fourth paragraph) indicate 'Ministry of the Environment (Ministry)' with all subsequent references simply stating Ministry – but that is entirely up to you.
2. The date of April 19, 2013 is quite likely going to have to be revised, pending discussions at Monday's meeting.

Thanks,

Subject: Cote Gold - voluntary EA and ToR

Mr. Parrott,

IAMGOLD recognizes that our offer to enter into a Voluntary Individual EA, dated March 21, 2013, has not yet been accepted; however, in anticipation of this being accepted we are preparing the draft Terms of Reference to be ready for review as early as April 19th.

As you may know, the federal PD was deemed complete and the project entered the 45 days screening phase pursuant to CEAA 2012 on March 26, 2013. We are keen to meet with you and discuss completion of the voluntary agreement along with our EA consultation strategy to ensure we are well coordinated with the anticipated federal EA.

We have attached the proposed Notice of Commencement for your review and comment. If you have any comments, we would like to receive these by end of the day Tuesday, April 9th .

We have also attached a summary of the consultation activities completed to-date and our proposed consultation activities as part of the draft Terms of Reference review period. We seek your concurrence on the proposed consultation activities for the draft Terms of Reference.

Can you please let me know if you and your staff are available on Tuesday April 9th at 9am or if another day of the week is preferred.

Sincerely,

Steve

Subject: RE: Cote Gold Project - Voluntary EA Request Letter

Hi Wesley,

We are not proposing any infrastructure to cross under the highway that I am aware of. Both transmission line options will require crossing over Hwy 144 at some point but the location will depend on the preferred alignment. As discussed, IAMGOLD is interested in discussing aspects of the project with MTO given the main access to the site is Hwy 144 and trucking will be the primary source of material entering and exiting the site. At this time, we are working with the design engineers to determine what the potential volume of trucks may be during the construction phase and at operations. Once we have an understanding of the volumes, we can have an informed discussion with MTO about the potential impacts on Hwy 144 and any required mitigation measures which we can include in our proposed Individual EA process.

In regards to the development of stormwater managements plan, the mine site is several kms away from the highway so any water management plans as required to comply with MOE ECAs and Environment Canada's Metal Mining Effluent Regulations will only be within the footprint of the mine operations area. All predicted changes in watershed hydrology will be assessed as an environmental effect within our EA, impacts will be mitigated to the extent possible and measures will be incorporated into the water management plan.

I will be happy to provide the Project Description to MTO if it was not distributed to them as part of the interagency meetings held to date.

Regards,

Steve

Subject: RE: Cote Gold Project - Voluntary EA Request Letter

Theresa, hi. Catching up on emails – last week was very busy, so please forgive me if I've already responded to this. See attached – it's the GRT master list that we send to proponents for individual EAs. Heather is listed as one to be included for all projects that will involve preparation of stormwater management plans or alterations to existing watershed/subwatershed plans. The Cote Gold project won't be the latter, but they must anticipate preparing a stormwater management plan in order to have included Heather McClintock.

Steve: can you confirm?

Also, in addition to a proposed "improvement" to the existing highway, my understanding is that the project could also trigger MTO's class EA if it included any infrastructure beneath the highway. Am I mistaken? (I'm not saying this project will do so, just touching base to ensure my understanding of triggers is correct)

Thanks,

Subject: Côté Gold Project - Environmental Assessment - Documentation Preference

The **Côté Gold Project** is an advanced stage gold exploration project located in the Chester and Neville Townships, District of Sudbury, in northeastern Ontario, approximately 20 kilometres southwest of Gogama, 130 kilometres southwest of Timmins, and 200 kilometres northwest of Sudbury. **IAMGOLD** proposes to construct, operate and eventually rehabilitate a new open pit gold mine on the property. The preliminary site layout proposes to place the required mine-related facilities in close proximity to the open pit, to the extent practicable, on lands to which IAMGOLD has access, or expects to have access.

The Côté Gold Project is expected to progress into a coordinated Federal and Provincial environmental assessment process. It is expected that the Ministry of Environment's Voluntary Agreement letter will be issued this week.

AMEC, on behalf of IAMGOLD, would like to request your preference for receiving documentation in the future. We have found in the past that some government departments and other government review team members prefer to receive information in differing formats and by requesting in advance we may be able to reduce the number of hard copies produced and couriered, as well as ease your involvement. Documents which are expected to be circulated include the Draft Terms of Reference, and, as the process moves forward, the Proposed Terms of Reference, the Draft Environmental Assessment and the Final Environmental Assessment.

Could you please indicate in what format you prefer to receive future documentation and how many copies you require?

1) No interest / no further communication required
2) Hard copy
2) Digital copy (CD / DVD)
3) Digital copy (download only)
4) A combination of the above (please clarify).

If you prefer to receive a hard copy, please also provide us with your current mailing address.

We understand that your preferences / involvement could change in the future.

Best regards,

Stephan Theben

Mr. Theban

For the purpose of the Côté Gold Project I will be your contact from the Health Unit. The SDHU is very interested in seeing the details on this mine and commenting as appropriate. If you could send us at least 1 hard copy of the documents (two would be preferable, but given the size of these documents it may not be an option) it would be appreciated. Please send them attention to myself at Sudbury & District Health Unit, 1300 Paris Street, Sudbury, Ontario P3E 3A3.

Subject:	IAMGOLD - Côté Gold Project - Draft Terms of Reference
Date:	Tuesday, May 07, 2013 4:12:48 PM
Attachments:	IAMGOLD_CoteGold_NoticeofCommencementTOR_6May2013.pdf

Government Review Team Members:

IAMGOLD Corporation (IAMGOLD) has initiated a Voluntary Individual environmental assessment under the Ontario Environmental Assessment Act for the development and operation of the Côté Gold Project. The Côté Gold Project is a majority owned Project held by a subsidiary of IAMGOLD, and is a proposed open pit gold mine with related processing facilities and infrastructure, located in northeastern Ontario, about 20 kilometres southwest of Gogama.

The first step in the environmental assessment is the preparation of a Terms of Reference (ToR). A Draft ToR describing the proposed work plan for addressing the Environmental Assessment Act requirements has been voluntarily prepared for public comment and review by the Government Review Team and other stakeholders. As a next step, after incorporation of comments received on the Draft ToR, a Proposed ToR will then be issued for public comment. If approved by the Minister, the Proposed ToR will provide the framework and requirements for the preparation of the Environmental Assessment for the Côté Gold Project.

IAMGOLD is making the Draft ToR available to the public for review and comment beginning May 10, 2013 and ending June 9, 2013. Copies of the Notice of Commencement, Draft ToR and Record of Consultation will be available for download starting May 10 from the IAMGOLD website at: www.iamgold.com .

Note that hard copies, if requested by Government Review Team members, have been sent out and should arrive shortly.

All comments and any questions about the Côté Gold Project and the draft ToR should be received in writing by June 9, 2013 and directed to:

Subject: Request for interview concerning the socio-economic effects of the proposed Côté Gold Project

Dear Mr. Simeoni,

As part of socio-economic data collection for IAMGOLD's Côté Gold Project (see below), AMEC on behalf of IAMGOLD is undertaking interviews with key personnel in communities that may be effected by the proposed project. I will be in Sudbury on Tuesday, May 21st and was hoping that I could take that opportunity to sit down with you and ask some questions about your community and some of the work you are doing. These questions would be provided in advance of the meeting for your review and any record of the content of our discussion would be subject to your review as well. If this time is not convenient for you, I hope we can make alternative arrangements for an interview by telephone or simply to respond to the questions by e-mail. My contact details are as follows:

Cheyenne Martin
Economist, AMEC
Tel: (905) 568-1917
Cell: (647) 963-6084
Email: cheyenne.martin@amec.com

I look forward to further discussions with you on this request.

Sincerely,

Cheyenne Martin

Dear Chief Jerome,

On May 10, 2013, the Canadian Environmental Assessment Agency determined that a standard environmental assessment will be required for the proposed Côté Gold Mine Project.

We now invite your community to review and provide comments on the draft Environmental Impact Statement Guidelines, which will identify to IAMGOLD Corporation the requirements for preparing their Environmental Impact Statement for the project. The attached letter contains additional information on how your community can participate in this next stage of the environmental assessment process. Both the letter and the attached Draft Environmental Impact Statement Guidelines have been mailed to you.

If you have any questions or comments please contact me at minecotemine@ceaa-acee.gc.ca or by phone at (416) 952-7006.

Thank you,

Ellen Campbell

info@anishinabenation.ca

Dear Chief Jerome,

SUBJECT: Comments requested on the draft Environmental Impact Statement Guidelines and Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 26, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to the Algonquin Anishinabeg Tribal Council of a 20 day public comment period of the project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project).

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

The Agency invites the Algonquin Anishinabeg Tribal Council to review and comment on the draft Environmental Impact Statement (EIS) guidelines (attached). Information is also being provided to further explain the next phase in the EA process and how Crown consultation will be integrated into the EA process.

The purpose of the EIS guidelines is to identify for the proponent the information requirements for their preparation of an Environmental Impact Statement (EIS) for a designated project[1].The EIS guidelines specify the nature, scope and extent of the information required. Please note that the deadline for submitting comments for consideration in the finalization of this document is **June 12, 2013.**

---

[1] In this document "project" has the same meaning as "designated project" as defined in the *Canadian Environmental Assessment Act, 2012.*

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Crown consultation will be integrated into the EA process to the greatest extent possible. The Agency will be responsible for coordinating federal-Aboriginal consultations related to potential or established Aboriginal or Treaty rights that could be adversely impacted by the proposed Project.

Federal funding may be made available to support the participation of some Aboriginal groups during later phases of an EA (EIS Review and EA Report Review). The Agency will advise you of any opportunities to apply for funding. Information on the Agency's Participant Funding Program, including the *Guide to the Participant Funding Program*, is available at: www.ceaa-acee.gc.ca.

Provincial Review

The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca. Consultation activities associated with the federal and provincial reviews will be coordinated to the extent possible in order to ensure effective consultation takes place with the Algonquin Anishinabeg Tribal Council.

Ellen Campbell will be managing the EA and conducting Crown Consultation for this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it may have on your potential or established Aboriginal or Treaty rights.

Information that you provide to the Agency is considered public and may be subject to public access to information requests. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you send them in.

Sincerely,

Anjala Puvananathan

Hi Steve, Regent,

As part of the 'Good Governance' approach for Aboriginal groups associated with the Côté Gold project, CEAA sent a letter to Matachewan First Nation, Beaverhouse First Nation, and Chapleau-Ojibwe First Nation informing these communities of the decision that an EA is commencing for the project. We were unable to source an e-mail address for the Chapleau-Ojibwe First Nation so their letter was sent by Canada Post only. Attached is your cc.

Thanks,

Ellen

Chief Murray Ray
Flying Post First Nation
P.O. Box 1027
Nipigon, ON
P0T 2J0
flypost@shawbiz.ca

Dear Chief Ray,

SUBJECT: Comments requested on the draft Environmental Impact Statement Guidelines and Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 26, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to Flying Post First Nation of a 20 day public comment period of the project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). The Agency received your comments from Flying Post First Nation regarding the potential for loss of physical and cultural heritage and associated traditional ecological knowledge, potential impacts to the shared traditional territory of Flying Post First Nation and Mattagami First Nation, and potential long-term effects.

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

The Agency invites Flying Post First Nation to review and comment on the draft Environmental Impact Statement (EIS) guidelines (attached). Information is also being provided to further explain the next phase in the EA process and how Crown consultation will be integrated into the EA process.

The purpose of the EIS guidelines is to identify for the proponent the information requirements for their preparation of an Environmental Impact Statement (EIS) for a

Canada

designated project[1].The EIS guidelines specify the nature, scope and extent of the information required. Please note that the deadline for submitting comments for consideration in the finalization of this document is **June 12, 2013.**

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Crown consultation will be integrated into the EA process to the greatest extent possible. The Agency will be responsible for coordinating federal-Aboriginal consultations related to potential or established Aboriginal or Treaty rights that could be adversely impacted by the proposed Project.

Federal funding may be made available to support the participation of some Aboriginal groups during later phases of an EA (EIS Review and EA Report Review). The Agency will advise you of any opportunities to apply for funding. Information on the Agency's Participant Funding Program, including the *Guide to the Participant Funding Program*, is available at: www.ceaa-acee.gc.ca.

Provincial Review

The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca. Consultation activities associated with the federal and provincial reviews will be coordinated to the extent possible in order to ensure effective consultation takes place with Flying Post First Nation.

[1] In this document "project" has the same meaning as "designated project" as defined in the *Canadian Environmental Assessment Act, 2012.*

Ellen Campbell will be managing the EA and conducting Crown Consultation for this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it may have on your potential or established Aboriginal or Treaty rights.

Information that you provide to the Agency is considered public and may be subject to public access to information requests. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you send them in.

Sincerely,

Anjala Puvananathan
Regional Director
Ontario Region

Dear Chief Batisse,

On May 10, 2013, the Canadian Environmental Assessment Agency determined that a standard environmental assessment will be required for the proposed Côté Gold Mine Project. The attached letter has also been mailed to you.

If you have any questions or comments please contact me at minecotemine@ceaa-acee.gc.ca or by phone at (416) 952-7006.

Thank you,

Ellen Campbell

Dear Chief Batisse,

SUBJECT: Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 28, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to Matachewan First Nation that the Agency had received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project and was determining whether an environmental assessment (EA) would be required.

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

Information about the project can be accessed on the Canadian Environmental Assessment Registry (CEAR) site: http://www.ceaa-acee.gc.ca/050/details-eng.cfm?evaluation=80036

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Canada

Provincial Review
The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca.

Ellen Campbell will be managing the EA on this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions.

Sincerely,

Anjala Puvananathan

walternaveau@knet.ca

Dear Chief Naveau,

SUBJECT: Comments requested on the draft Environmental Impact Statement Guidelines and Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 26, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to Mattagami First Nation of a 20 day public comment period of the project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project).

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

The Agency invites Mattagami First Nation to review and comment on the draft Environmental Impact Statement (EIS) guidelines (attached). Information is also being provided to further explain the next phase in the EA process and how Crown consultation will be integrated into the EA process.

The purpose of the EIS guidelines is to identify for the proponent the information requirements for their preparation of an Environmental Impact Statement (EIS) for a designated project[1].The EIS guidelines specify the nature, scope and extent of the information required. Please note that the deadline for submitting comments for consideration in the finalization of this document is **June 12, 2013.**

---

1 In this document "project" has the same meaning as "designated project" as defined in the *Canadian Environmental Assessment Act, 2012.*

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Crown consultation will be integrated into the EA process to the greatest extent possible. The Agency will be responsible for coordinating federal-Aboriginal consultations related to potential or established Aboriginal or Treaty rights that could be adversely impacted by the proposed Project.

Federal funding may be made available to support the participation of some Aboriginal groups during later phases of an EA (EIS Review and EA Report Review). The Agency will advise you of any opportunities to apply for funding. Information on the Agency's Participant Funding Program, including the *Guide to the Participant Funding Program*, is available at: www.ceaa-acee.gc.ca.

Provincial Review

The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca. Consultation activities associated with the federal and provincial reviews will be coordinated to the extent possible in order to ensure effective consultation takes place with Mattagami First Nation.

Ellen Campbell will be managing the EA and conducting Crown Consultation for this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it may have on your potential or established Aboriginal or Treaty rights.

Information that you provide to the Agency is considered public and may be subject to public access to information requests. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you send them in.

Sincerely,

Anjala Puvananathan
Regional Director

Dear Mr. Lefebre,

SUBJECT: Comments requested on the draft Environmental Impact Statement Guidelines and Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 26, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to the Métis Nation of Ontario, Region 3 Consultation Committee of a 20 day public comment period of the project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). The Agency received your comments from the Métis Nation of Ontario, Region 3 Consultation Committee regarding the potential for effects on health and socio-economic conditions, physical and cultural heritage, and current use of lands and resources

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

The Agency invites the Métis Nation of Ontario, Region 3 Consultation Committee to review and comment on the draft Environmental Impact Statement (EIS) guidelines (attached). Information is also being provided to further explain the next phase in the EA process and how Crown consultation will be integrated into the EA process.

The purpose of the EIS guidelines is to identify for the proponent the information requirements for their preparation of an Environmental Impact Statement (EIS) for a

Canada

designated project[1].The EIS guidelines specify the nature, scope and extent of the information required. Please note that the deadline for submitting comments for consideration in the finalization of this document is **June 12, 2013.**

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Crown consultation will be integrated into the EA process to the greatest extent possible. The Agency will be responsible for coordinating federal-Aboriginal consultations related to potential or established Aboriginal or Treaty rights that could be adversely impacted by the proposed Project.

Federal funding may be made available to support the participation of some Aboriginal groups during later phases of an EA (EIS Review and EA Report Review). The Agency will advise you of any opportunities to apply for funding. Information on the Agency's Participant Funding Program, including the *Guide to the Participant Funding Program*, is available at: www.ceaa-acee.gc.ca.

Provincial Review

The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca. Consultation activities associated with the federal and provincial reviews will be coordinated to the extent possible in order to ensure effective consultation takes place with the Métis Nation of Ontario, Region 3 Consultation Committee.

[1] In this document "project" has the same meaning as "designated project" as defined in the *Canadian Environmental Assessment Act, 2012.*

Ellen Campbell will be managing the EA and conducting Crown Consultation for this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it may have on your potential or established Aboriginal or Treaty rights.

Information that you provide to the Agency is considered public and may be subject to public access to information requests. RE: Coté Gold Project, Review of IAMGOLD draft Terms of Reference

Dear Mr. Woolfenden;

The Ministry of Transportation (MTO) would like to thank IAMGOLD for its distribution of the Notice of Commencement, draft Terms of Reference (ToR), and Record of Consultation of the proposed Coté Gold Mine for our review. We have reviewed the ToR. Please be advised MTO wishes to remain an agency of interest.

It appears that Highway 144 will be used as the main transportation mode for machinery and materials movement in and out of the site. The highway is about 6 km east of the Coté Gold site. Based on this initial review MTO would like to learn more about the following potential impacts to Hwy 144:

- The estimated increase in traffic from construction vehicles, transport trucks, heavy machinery, consultants, employees, etc.;
- The estimated extra weight, of the above noted vehicles, and its potential impact on the highway during the two year construction period and over the life of the mining operations;
- The impacts or dangers associated with hauling hazardous solid or liquid waste off-site and how they will be regulated ;
- There is a potential need for a traffic study to determine if improvements will be necessary to maintain traffic flow as vehicles exit Highway 144 onto Mesomikenda Lake Road;
- Drainage issues associated with the realignment of the Mollie River, which flows beneath the highway (17T 436449 E, 5260701 N) to ensure there are no impacts on the integrity of the highway and its foundations);
- How impacts to fish and/or fish habitat will be mitigated or if there is any alteration to fish habitat with the realignment of the Mollie River;

Further concerns may arise as the study moves forward. We are interested in hearing from IAMGOLD in the future. Should you have any comments, please feel free to contact Marlo Johnson, Head, Environmental Section.

Sincerely,

C. Gervais

Carole-Anne Gervais
Environmental Assistant

May 23rd, 2013

Meeting Notes – DRAFT FOR REVIEW

Ontario Provincial Police – South Porcupine Detachment
Timmins, ON

Project:	IAMGOLD Côté Gold Project
Purpose:	To gather information on Ontario Provincial Police activity in the Gogama area for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.

Attendees:
Sergeant Stephen Meunier, Program Manager, Ontario Provincial Police – South Porcupine Detachment
Cheyenne Martin, AMEC (CM)

CM indicated that AMEC is preparing a socio-economic and land use baseline report for the Côté Gold Project for IAMGOLD. He provided some preliminary maps of various land uses (gathered from publically available sources) for a delineated Regional Study Area (RSA) and a fact sheet on the project.

Emergency services and policing

- Gogama detachment reports to the South Porcupine Detachment and its jurisdiction extends as far south as Marquette Township and as far north as the Sudbury District line.
- The detachment has one (1) Sergeant and six (6) Constables, a rookie having being recently been added to the detachment. Administration is run through Timmins. The size of this force is not seasonal.
- Efforts of the Gogama detachment are oriented towards both the provincial highways (mostly Highway 144) and to the large unorganized area's trails, lakes, cottages and communities (Gogama).
- In the summer effort is placed on cottage waterways, deterring behavior that can lead to drowning. Outside cottage season more effort is directed towards Highway 144, which has a lot of curves, little shoulder and needs consistent oversight.
- Community needs are met with existing resources. Crime levels are down in 2013 in Gogama, with property crimes falling between 15 and 20% in the South Porcupine cluster.
- Sergeant Meunier will provide data on vehicle traffic and accidents on Highway 144, noting that a lot of accidents involve animals and are seasonal.
- The OPP is not concerned about additional demand from the mine but would like to know the size of the construction and operations workforce.

- OPP does want to know when the worker's camp is built in order to "fly the colours" of the force, since employees need to know the police are there if needed. The OPP will assign a liaison officer, likely the Sergeant of the Gogama detachment, to work with the company on issues including investigation of industrial accidents and arranging escorts on trucks. The Sergeant should be added to the mailing list for the project.
- OPP has a good relationship with NAPS (the two forces engage in joint initiatives), but any questions with respect to NAPS should be addressed to them directly.

Subject: Côté Gold Project
Date: May-27-13 2:23:31 PM

ATTN: Stephan Theben, Cathy Stothart, Steven Woolfenden

Good afternoon,

I am writing this email to confirm receipt of three pieces of correspondence, regarding the Côté Gold project, that were sent to the Ministry of Aboriginal Affairs (MAA). The Ministry of the Environment often directs proponents whose projects are subject to environmental assessment legislation to seek assistance from MAA in identifying Aboriginal communities that may have interest in the area of a project. MAA's role in environmental assessment processes is limited to providing assistance to proponents and other ministries in identifying Aboriginal communities who may have potentially affected interests or rights. Through internal discussions, it has come to my attention that the Ministry of Northern Development of Mines (MNDM) will be identifying the list of Aboriginal communities for consultation for this project and MAA will be supporting this work internally. If you have any questions about the list, feel free to contact Glenn Seim, MNDM Regional Supervisor at 705-235-1627.

Kind regards,

Our File No.	**:**	52EA038
Proponent	**:**	IAMGOLD Corporation
Subject	**:**	Côté Gold Project, Individual Environmental Assessment, Draft ToR
Location	**:**	Chester and Neville Townships, District of Sudbury

Dear Steven Woolfenden,

The Ministry of Tourism, Culture and Sport ("MTCS") has received the draft Terms of Reference (April 2013) prepared for the Côté Gold Project Individual Environmental Assessment project (the "Draft ToR"). The package also included the final Record of Consultation main report and associated appendices. MTCS's interest in this project relates to our mandate of conserving, protecting and preserving Ontario's cultural heritage resources including archaeological resources, built heritage resources, and cultural heritage landscapes.

Purpose of the Undertaking and Environmental Assessment

The purpose of the undertaking is to produce doré gold for sale and provide a return on investment to shareholders of IAMGOLD Corporation, by constructing and operating a gold mine and associated facilities (the "Côté Gold Project"). The proponent, IAMGOLD Corporation, entered into a Voluntary Agreement with the Ontario Ministry of the Environment ("MOE") to conduct an Individual Environmental Assessment for the Côté Gold Project that will meet the requirements of the Ontario ***Environmental Assessment Act***. The issuance of the proposed Terms of Reference is to provide the framework for completing a Provincial Individual EA. In addition to the Provincial Individual EA process, we understand that the Côté Gold Project is also undergoing a Federal EA.

MTCS Comments on the Study Framework Outlined in the ToR

General Comments – Ontario EA Process

We note that the "do nothing" alternative is not included in the alternatives under consideration in the Draft ToR. Consistent with the MOE "Code of Practice for Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario" (2009) (the "Code of Practice") the "do nothing" alternative should always be considered, as it acts as a starting point for the comparison of alternatives.

General Comments - Terminology
In general, there is some inconsistency and ambiguity with respect to the language used to describe cultural heritage resources.

The term "cultural heritage resources" is intended to capture: (i) built heritage resources, (ii) cultural heritage landscapes, as well as (iii) archaeological resources. Please clarify in the Draft ToR whether references to cultural heritage resources relate to all or certain of the above-noted categories.

5.2.2.5 Effects to the Human Environment
Please elaborate on the potential applicability of the Provincial Standards and Guidelines for Conservation of Provincial Heritage Properties that could apply to the Côté Gold Project. For example (underlined text is added): "IAMGOLD acknowledges that there are Provincial Standards and Guidelines for Conservation of Provincial Heritage Properties that could apply should the Côté Gold Project involve properties that the Government of Ontario owns or controls that have cultural heritage value or interest (i.e. provincial heritage properties)".

Table 5-5
Table 5-5 includes a preliminary list of evaluation criteria and indicators for the assessment of alternatives. The indicator included under "Effect on built heritage and cultural heritage landscapes" is: "Avoidance of damage to built heritage resources, or document heritage values if damage or relocation cannot reasonably be avoided." A broader range of indicators of impacts, in addition to "damage", should be incorporated. Suggestions are included in the table below.

We recommend including "Effect on archaeological resources" as a single category of criteria, considering the specific provincial standards and licensing requirements associated with this component of the environment.

In addition, potential data sources are not specified for the criteria and indicators, which appears inconsistent with the Code of Practice. We recommend several data sources in the following table.

Recommended Criteria, Indicators and Data Sources		
Criteria	**Indicators for the Assessment of Alternatives**	**Potential Data Sources**
Effect on built heritage resources and cultural heritage landscapes	• Destruction of any, or part of any, built heritage resources, cultural heritage landscapes, heritage attributes or features;	Municipal, provincial and federal registers of properties of cultural heritage value, non-governmental heritage organizations, municipal heritage committees. Cultural heritage evaluation report, and heritage impact assessment. The Ministry of Tourism, Culture and Sport's, Standards and Guidelines for the Conservation of
	• Alteration that is not sympathetic or is incompatible, with the historic fabric and appearance of cultural heritage resources;	
	• Shadows created that alter the appearance of a built heritage resource, cultural heritage landscape, heritage attribute or change the viability of a natural feature or plantings, such as a garden;	
	• Isolation of a built heritage resource or heritage attribute from its surrounding environment, context or a significant	

Recommended Criteria, Indicators and Data Sources		
Criteria	**Indicators for the Assessment of Alternatives**	**Potential Data Sources**
	relationship; • Direct or indirect obstruction of significant views or vistas within, from or of built heritage resources or cultural heritage landscapes; • A change in land use such as rezoning a battlefield from open space to residential use, allowing new development or site alteration to fill in the formerly open spaces.	Provincial Heritage Properties (2011).
Effect on archaeological resources	• Land disturbances (such as a change in grade that alters soils and drainage patterns that adversely affect an archaeological resource);	Archaeological assessment(s). The Ministry of Tourism, Culture and Sport's, Standards and Guidelines for Consultant Archaeologists (2010).

Section 6.1
The Draft ToR indicates that studies pertaining to "archaeology and heritage resources" will be completed. It's not clear whether the potential for cultural heritage landscapes will be assessed through the studies described in this section. In addition, please note that separate studies must be undertaken for archaeological resources (below-ground cultural heritage resources) and built heritage resources and cultural heritage landscapes (above-ground cultural heritage resources).

The study area for "archaeology" has been defined in the Draft ToR, but the "human environment local study area" is not defined. For clarification, we suggest identifying the study area for "archaeology" as a subsection or bullet below the section on the "human environment" to clearly indicate that archaeological resources are a component of the "human environment".

Section 6.8
This section describes the "human environment" which is intended to capture cultural heritage resources; however, there is no preliminary description of cultural heritage resources alongside a description of population and demographics, regional economy, mineral exploration, forestry and agriculture, community infrastructure and services, and recreation and tourism. It is recommended that a subsection be included under section 6.8 that provides a preliminary description of cultural heritage resources and indicates that future studies will contribute to a fulsome description of the cultural heritage resources in the study area.

Section 7.1
The Draft ToR indicates that residual effects (after mitigation) will be assessed within the EA and will consider "effects of the undertaking on the physical, biological and social environment". Please clarify whether the "social environment" is referring to a different range of environmental components as the "human environment" described earlier, or make the terminology consistent across the Draft ToR.

Table 7-1
The Draft ToR describes how the overall Côté Gold Project will have a direct effect on archaeology and heritage resources, including built heritage but does not make mention of

potential effects on cultural heritage landscapes. "Archaeology and heritage resources" should be replaced with "cultural heritage resources" as this broader term is more consistent with current terminology and includes: archaeological resources, built heritage resources and cultural heritage landscapes. Each of these categories of the cultural environment need to be considered when considering potential effects of the Côté Gold Project.

We note that there is also a typo in the following bullet:

- Potential direct effect on archaeology and heritage resources, include~~-~~ing built heritage;

Appendix B
The Mine Rock Area Alternatives Assessment evaluates based on the "Presence of Archaeological Sites", which according to description under page A-4, include "archaeological and historic heritage" criteria. In addition, the report describes how "Studies are ongoing to determine if archaeological, paleontological or historic structures" have the potential to be affected. The evaluation of alternatives should consider all types of cultural heritage resources, including built heritage resources, cultural heritage landscapes and archaeological resources. In particular, it is not clear from the document whether potential effects on cultural heritage landscapes have been considered. It should also be noted that Archaeological Assessments do not address known or potential built heritage resources or cultural heritage landscapes, and furthermore, do not assess for paleontological remains.

Appendix C
Similar to the Mine Rock Area Alternatives Assessment, the Tailings Management Facility Alternatives Assessment evaluates based on the "Presence of Archaeological Sites". The evaluation of alternatives should consider all types of cultural heritage resources, including built heritage resources, cultural heritage landscapes and archaeological resources. It is not clear from the report in Appendix C whether effects on all forms of cultural heritage resources were considered in the evaluation of alternatives.

Appendix D
Please note that the ministry's full-name is incorrect on page 2-3 of the Proposed Stakeholder Engagement Plan (Appendix D) and should read "Ministry of Tourism, Culture and Sport".

Concluding Remarks
These form the MTCS's comments on the Terms of Reference for the Rainy River Gold Project EA. We would be pleased to discuss any of our comments and/or provide additional information. We would also appreciate being kept informed regarding the manner in which MTCS's input has been considered, and wish to remain on the circulation list for this project.

Sincerely,
Amy Didrikson, MCIP, RPP

Dear Steven Woolfenden,

I'm attaching revised comments with a typo corrected on the final page, respectfully requesting that you replace the comments sent below with the revised attached letter.

Also, I understand that our colleagues in the Northern Policy & Planning Unit, Tourism Policy and Research Branch of the Ministry of Tourism Culture and Sport may also be submitting comments from a Tourism perspective. To clarify, the attached comments are sent on behalf of the Cultural Services Unit of the Ministry of Tourism, Culture and Sport and address our mandate under the Ontario Heritage Act to conserve Ontario's cultural heritage resources.

Please let me know if you have any questions.
Regards,
Amy

Our File No.	**:**	52EA038
Proponent	**:**	IAMGOLD Corporation
Subject	**:**	Côté Gold Project, Individual Environmental Assessment, Draft ToR
Location	**:**	Chester and Neville Townships, District of Sudbury

Dear Steven Woolfenden,

The Ministry of Tourism, Culture and Sport ("MTCS") has received the draft Terms of Reference (April 2013) prepared for the Côté Gold Project Individual Environmental Assessment project (the "Draft ToR"). The package also included the final Record of Consultation main report and associated appendices. MTCS's interest in this project relates to our mandate of conserving, protecting and preserving Ontario's cultural heritage resources including archaeological resources, built heritage resources, and cultural heritage landscapes.

Purpose of the Undertaking and Environmental Assessment

The purpose of the undertaking is to produce doré gold for sale and provide a return on investment to shareholders of IAMGOLD Corporation, by constructing and operating a gold mine and associated facilities (the "Côté Gold Project"). The proponent, IAMGOLD Corporation, entered into a Voluntary Agreement with the Ontario Ministry of the Environment ("MOE") to conduct an Individual Environmental Assessment for the Côté Gold Project that will meet the requirements of the Ontario ***Environmental Assessment Act***. The issuance of the proposed Terms of Reference is to provide the framework for completing a Provincial Individual EA. In addition to the Provincial Individual EA process, we understand that the Côté Gold Project is also undergoing a Federal EA.

MTCS Comments on the Study Framework Outlined in the ToR

General Comments – Ontario EA Process

We note that the "do nothing" alternative is not included in the alternatives under consideration in the Draft ToR. Consistent with the MOE "Code of Practice for Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario" (2009) (the "Code of Practice") the "do nothing" alternative should always be considered, as it acts as a starting point for the comparison of alternatives.

General Comments - Terminology
In general, there is some inconsistency and ambiguity with respect to the language used to describe cultural heritage resources.

The term "cultural heritage resources" is intended to capture: (i) built heritage resources, (ii) cultural heritage landscapes, as well as (iii) archaeological resources. Please clarify in the Draft ToR whether references to cultural heritage resources relate to all or certain of the above-noted categories.

5.2.2.5 Effects to the Human Environment
Please elaborate on the potential applicability of the Provincial Standards and Guidelines for Conservation of Provincial Heritage Properties that could apply to the Côté Gold Project. For example (underlined text is added): "IAMGOLD acknowledges that there are Provincial Standards and Guidelines for Conservation of Provincial Heritage Properties that could apply should the Côté Gold Project involve properties that the Government of Ontario owns or controls that have cultural heritage value or interest (i.e. provincial heritage properties)".

Table 5-5
Table 5-5 includes a preliminary list of evaluation criteria and indicators for the assessment of alternatives. The indicator included under "Effect on built heritage and cultural heritage landscapes" is: "Avoidance of damage to built heritage resources, or document heritage values if damage or relocation cannot reasonably be avoided." A broader range of indicators of impacts, in addition to "damage", should be incorporated. Suggestions are included in the table below.

We recommend including "Effect on archaeological resources" as a single category of criteria, considering the specific provincial standards and licensing requirements associated with this component of the environment.

In addition, potential data sources are not specified for the criteria and indicators, which appears inconsistent with the Code of Practice. We recommend several data sources in the following table.

Recommended Criteria, Indicators and Data Sources		
Criteria	**Indicators for the Assessment of Alternatives**	**Potential Data Sources**
Effect on built heritage resources and cultural heritage landscapes	• Destruction of any, or part of any, built heritage resources, cultural heritage landscapes, heritage attributes or features;	Municipal, provincial and federal registers of properties of cultural heritage value, non-governmental heritage organizations, municipal heritage committees. Cultural heritage evaluation report, and heritage impact assessment. The Ministry of Tourism, Culture and Sport's, Standards and Guidelines for the Conservation of
	• Alteration that is not sympathetic or is incompatible, with the historic fabric and appearance of cultural heritage resources;	
	• Shadows created that alter the appearance of a built heritage resource, cultural heritage landscape, heritage attribute or change the viability of a natural feature or plantings, such as a garden;	
	• Isolation of a built heritage resource or heritage attribute from its surrounding environment, context or a significant	

Recommended Criteria, Indicators and Data Sources		
Criteria	**Indicators for the Assessment of Alternatives**	**Potential Data Sources**
	relationship; • Direct or indirect obstruction of significant views or vistas within, from or of built heritage resources or cultural heritage landscapes; • A change in land use such as rezoning a battlefield from open space to residential use, allowing new development or site alteration to fill in the formerly open spaces.	Provincial Heritage Properties (2011).
Effect on archaeological resources	• Land disturbances (such as a change in grade that alters soils and drainage patterns that adversely affect an archaeological resource);	Archaeological assessment(s). The Ministry of Tourism, Culture and Sport's, Standards and Guidelines for Consultant Archaeologists (2010).

Section 6.1
The Draft ToR indicates that studies pertaining to "archaeology and heritage resources" will be completed. It's not clear whether the potential for cultural heritage landscapes will be assessed through the studies described in this section. In addition, please note that separate studies must be undertaken for archaeological resources (below-ground cultural heritage resources) and built heritage resources and cultural heritage landscapes (above-ground cultural heritage resources).

The study area for "archaeology" has been defined in the Draft ToR, but the "human environment local study area" is not defined. For clarification, we suggest identifying the study area for "archaeology" as a subsection or bullet below the section on the "human environment" to clearly indicate that archaeological resources are a component of the "human environment".

Section 6.8
This section describes the "human environment" which is intended to capture cultural heritage resources; however, there is no preliminary description of cultural heritage resources alongside a description of population and demographics, regional economy, mineral exploration, forestry and agriculture, community infrastructure and services, and recreation and tourism. It is recommended that a subsection be included under section 6.8 that provides a preliminary description of cultural heritage resources and indicates that future studies will contribute to a fulsome description of the cultural heritage resources in the study area.

Section 7.1
The Draft ToR indicates that residual effects (after mitigation) will be assessed within the EA and will consider "effects of the undertaking on the physical, biological and social environment". Please clarify whether the "social environment" is referring to a different range of environmental components as the "human environment" described earlier, or make the terminology consistent across the Draft ToR.

Table 7-1
The Draft ToR describes how the overall Côté Gold Project will have a direct effect on archaeology and heritage resources, including built heritage but does not make mention of

potential effects on cultural heritage landscapes. "Archaeology and heritage resources" should be replaced with "cultural heritage resources" as this broader term is more consistent with current terminology and includes: archaeological resources, built heritage resources and cultural heritage landscapes. Each of these categories of the cultural environment need to be considered when considering potential effects of the Côté Gold Project.

We note that there is also a typo in the following bullet:

- Potential direct effect on archaeology and heritage resources, include~~-~~ing built heritage;

Appendix B
The Mine Rock Area Alternatives Assessment evaluates based on the "Presence of Archaeological Sites", which according to description under page A-4, include "archaeological and historic heritage" criteria. In addition, the report describes how "Studies are ongoing to determine if archaeological, paleontological or historic structures" have the potential to be affected. The evaluation of alternatives should consider all types of cultural heritage resources, including built heritage resources, cultural heritage landscapes and archaeological resources. In particular, it is not clear from the document whether potential effects on cultural heritage landscapes have been considered. It should also be noted that Archaeological Assessments do not address known or potential built heritage resources or cultural heritage landscapes, and furthermore, do not assess for paleontological remains.

Appendix C
Similar to the Mine Rock Area Alternatives Assessment, the Tailings Management Facility Alternatives Assessment evaluates based on the "Presence of Archaeological Sites". The evaluation of alternatives should consider all types of cultural heritage resources, including built heritage resources, cultural heritage landscapes and archaeological resources. It is not clear from the report in Appendix C whether effects on all forms of cultural heritage resources were considered in the evaluation of alternatives.

Appendix D
Please note that the ministry's full-name is incorrect on page 2-3 of the Proposed Stakeholder Engagement Plan (Appendix D) and should read "Ministry of Tourism, Culture and Sport".

Concluding Remarks
These form the MTCS's comments on the Terms of Reference for the Côté Gold Project EA. We would be pleased to discuss any of our comments and/or provide additional information. We would also appreciate being kept informed regarding the manner in which MTCS's input has been considered, and wish to remain on the circulation list for this project.

Sincerely,

Subject:	FW: 13-1197-0003: MNR Discussion Follow-up
Date:	June-01-13 5:01:15 PM

Todd,

As a follow-up to our discussion regarding basking turtle surveys and eastern whip-poor-will surveys I would like to confirm the following points that I have highlighted from our telephone discussion of Thursday May 16, 2013:

- Discussion topics related to the Basking Turtle Survey Approach Memo that was submitted to the Timmins District Ministry of Natural Resources (MNR) on May 10, 2013.
    - Habitat criteria (i.e. water depth, substrate type, aquatic vegetation and presence/absence of basking locations) that are being used to assess turtle habitat are appropriate for Blanding's turtle;
    - It is appropriate to remove low potential habitat from 2013 basking turtle survey program;
    - The approach is consistent with the MNR methodology;
    - Based on the MNR methodology a minimum of five surveys in a single season are required to confirm presence/absence of Blanding's turtle.

- Discussion topics related to results of the 2012 whip-poor-will surveys:
    - No whip-poor-will were observed on the mine site during the 2012 survey and the the only whip-poor-will observation was outside of the mine site along the proposed power transmission corridor;
    - The 2012 whip-poor-will survey providing thorough coverage of the mine site;
    - No additional whip-poor-will surveys are required on the mine site in 2013.

It would be appreciated if you could reply to this email and confirm that the details noted above are accurate.

RE: Draft Terms of Reference – Noise and Vibration Review Comments
Côté Gold Project Environmental Assessment
Noise EA File: E-0009-13

This is in response to your e-mail correspondence dated May 7, 2013.

We have reviewed the Draft Terms of Reference (ToR), prepared by AMEC Environment & Infrastructure and dated April 2013, regarding the proposed Côté Gold Project in Chester and Neville Townships, District of Sudbury, in north-eastern Ontario.

The following are our noise and vibration review comments:

1. **Applicable Guidelines and Documents:** Section 6.3.3 of the ToR has identified the class environment of the proposed project to be Class 3 as per MOE Publication NPC-232. However, there are other guidelines and documents that also need to be used to assess the noise impacts from the proposed project, as applicable:

    a. Construction Noise:
        i. MOE Publication NPC-115, "Construction Equipment"; and
        ii. MOE Publication NPC-118, "Motorized Conveyances".

    b. Construction/Operations Vibration:
        i. MOE Publication NPC-207, "Impulse Vibration in Residential Buildings", November 1983, as amended.

    c. Construction/Operations Blasting:
        i. MOE Publication NPC-119, "Blasting", Model Municipal Noise Control

By-Law, Final Report, August 1978.

d. Noise Report shall be prepared in accordance with the following documents:
    i. MOE Publication NPC-233, "Information to be Submitted for Approval of Stationary Sources of Sound", October 1995, as amended; and
    ii. Supporting Information for the Preparation of an Acoustic Assessment Report, Prepared by the Air and Noise Unit, Environmental Assessment and Approvals Branch, November 2003.

2. **Construction Phase:** Table 11-1 of the ToR states that the construction phase of the proposed project requires Environmental Compliance Approval (ECA). Construction activities are exempted from Section 9 of the Environmental Protection Act. Therefore, an ECA is not required for the construction phase of the proposed project, but it still needs to be assessed in the Environmental Assessment.

We trust the above review comments would be of assistance to you.

If you have any questions, please contact Enoch Tse, P.Eng. at 416-212-4201.

Enoch Tse, P.Eng.

Subject: RE: IAMGOLD Cote Gold Project - draft ToR electronic files

Wesley,

I have reviewed the company's draft Terms of Reference and have the following comments to offer for consideration:

From a waste management perspective, it is detailed in the draft Terms of Reference that hazardous and non-hazardous waste will be managed accordingly with recycling options being investigated and wastes managed on-site being shipped off-site for disposal by licensed haulers to licensed facilities. However, it should be noted that section 4.2.3.10 states that "at the end of reclamation activities, on-site landfill(s) will be capped and re-vegetated consistent with the remainder of the Site." The term "landfill" is also used in section 4.2.1 when discussing primary construction phase activities. It should be clarified if the company is intending on developing and constructing an on-site landfill and, if so, more detail should be included regarding it including site capacity, design, the need for potential hydrogeological studies, etc. as well as a discussion of more environmentally sustainable alternatives. . While approval for a small landfill (i.e. Less than 40,000 cubic metres in capacity) may be granted through future ECA applications, it should not be assumed that approval would be granted or that establishing a small landfill would be a preferred alternative in site decommissioning. Alternatives should be presented for land disposal of any materials. Approvals for new landfills greater than 40,000 cubic metres in capacity are subject to approval through the Environmental Assessment Act as well as the Environmental Protection Act.

Please note that waste rock storage piles are exempt from obtaining an ECA (Part V of EPA) pursuant to section 3(1) of Regulation 347. Similarly, tailing from a mine are also wastes that are exempt from Part V of the EPA as per s. 3(1) of Regulation 347 provided the tailings are not being mixed or comingled with other wastes. Tailings management facilities are approved under the Ontario Water Resources Act.

If you have any questions or require anything further from me, please do not hesitate to ask.

Sincerely,

David Lee, P. Eng. ∫ Sr. Review Engineer

Mr. Stephan Theben, Dipl.-Ing.
Associate Environmental Consultant
AMEC Environment and Infrastructure
160 Traders Blvd. East
Mississauga, ON L4Z 3K7

Dear Mr. Theben:

Thank you for sharing a copy of the Draft Terms of Reference for the Provincial Individual Environmental Assessment of the proposed IAMGOLD Côté Gold Project in the northwestern section of the District of Sudbury, with the Ministry of Economic Development, Trade and Employment and the Ministry of Research and Innovation

Comments on the technical details of the Terms of Reference are beyond the purview of our Ministries. However, we note, in the Rationale for the Undertaking, the projected economic benefits of the project, including the creation of 1,200 temporary construction jobs and 500 full time permanent positions during the operation of the mine. This will be a significant contribution to the long-term economic vitality of northeastern Ontario, and, in particular, will support the centres of excellence in mining equipment and services in Greater Sudbury and Timmins. The mining supply and services clusters are important components of the innovative capacity of Northern Ontario that will help position the region for success in the emerging knowledge-based economy.

We look forward to the receipt of the Final Terms of Reference, and, ultimately, to the completion of the Individual Environmental Assessment and commencement of the project.

Sincerely,

Michael Helfinger
Senior Policy Advisor
Cabinet Office Liaison and Policy Support Unit

Subject: RE: IAMGOLD Côté Gold and Source Water Protection Planning

Steve,

It is good to hear from you again and I hope all is well with you also.
Basically, I attended the IAM Gold "open House" to ensure that they were aware that the proposed mine and tailings pond is in the headwaters of the Mattagami River, which is the source of drinking water for the City of Timmins.
As I am sure you are aware, the Intake Protection Zone 3 is delineated by a 120 metre setback around all of the lakes and streams (tributaries) that contribute water to the Mattagami River upstream of the Timmins Water Filtration Plant intake.
While any threat from the proposed site (tailings pond, waste rock, landfill/waste disposal) would not even be rated as a Low threat based on the IPZ 3 vulnerability score, we wanted to ensure that IAM Gold is aware that this area is the headwaters for the Municipal drinking water source and that an associated vulnerable area exists nearby. Additionally, this area has been delineated as a Highly Vulnerable Aquifer.
The Approved Assessment Report and the Proposed Source Protection Plan are available on our Drinking Water Source Protection website – www.dwsp.ca – under "Developing the Plan" if you wish to review them.

I don't think that we need to have a meeting, but I am available to answer any questions that you may have.

Best Regards,
Joe Evers

Subject: IAMGOLD Côté Gold and Source Water Protection Planning

Hi Joe,
Hope you are well.
I am currently a part of the project team working on the IAMGOLD Côté Gold project Environmental Assessment. Specifically, I am working on the surface water system around the proposed site.

As I understand it, you have attended a recent open house and expressed some concern over water quality. Given that we worked on the surface water quality technical background documents for the MRCA Source Protection Plan, we thought that it was best if I contact you.

Would you like to meet to discuss the proposed development in the context of your source protection plan? I can either discuss by phone or make a trip to Timmins.

Thanks, talk to you soon.
Steve

MEMORANDUM

To: Wesley Wright, Project Evaluator, Operations Division

From: Heather Gardiner, Planner
Source Protection Programs Branch

Re: Review of the Individual EA for IAMGOLD

Thank you for circulating the above noted draft Individual Environmental Assessment (EA) project to the Source Protection Programs Branch (SPPB) for the opportunity to review and provide comments. As you are aware source protection plans have been developed by local Source Protection Committees, working with their local municipalities and supported by source protection authorities/conservation authorities. This proposed project is within the Mattagami Region Source Protection Area. The EA assesses components of a proposal for a gold mining operation in northern Ontario approximately 20 km south-west of Gogama in the Mattagami Region Conservation/ Source Protection Area. The Mattagami River provides drinking water to the City of Timmins. We recommend that you circulate information and materials about the proposal to the Mattagami Region Conservation Authority and provide them with the opportunity to comment, if you have not done so already.

Projects of this nature have the potential to impact sources of drinking water and it is therefore important that SPPB has the opportunity to review them to ensure sources of drinking water are not impacted or that potential impacts will be mitigated. Furthermore, once source protection plans are approved by the Minister it will be imperative to ensure that the approved policies are being complied with.

<u>Assessment report and delineation of vulnerable areas</u>

The proposed mine site is shown on figure 1.1 of the Draft Terms of Reference.The Mattagami region local assessment report indicates that the proposed mine and associated infrastructure is in the Mattagami river watershed upstream of the City of Timmins water supply, in the following vulnerable areas: intake protection zone-3 (IPZ-3) with a vulnerability score of 2 and in the highly vulnerable aquifer (HVA) with a vulnerability score of 6. Vulnerability scores range from 0-10 with 10 being highly vulnerable. Intake protection zone 3 is part of the broader watershed area that contributes to the drinking water system for the City of Timmins. A score of 2 indicates that threats to drinking water could only be considered as low risk. Highly vulnerable aquifers are mapped based on local information about the susceptibility of underlying

aquifers to water-borne contaminants. The proposal is in a HVA with a vulnerability score of 6, meaning that threats to drinking water could be considered low or moderate. Although the project does fall within these vulnerable areas, neither chemical nor pathogen threats would be considered significant. The potential impact of this proposal on the Timmins drinking water system would be considered low risk. The potential impact of this development on Timmins drinking water system is therefore minimal.

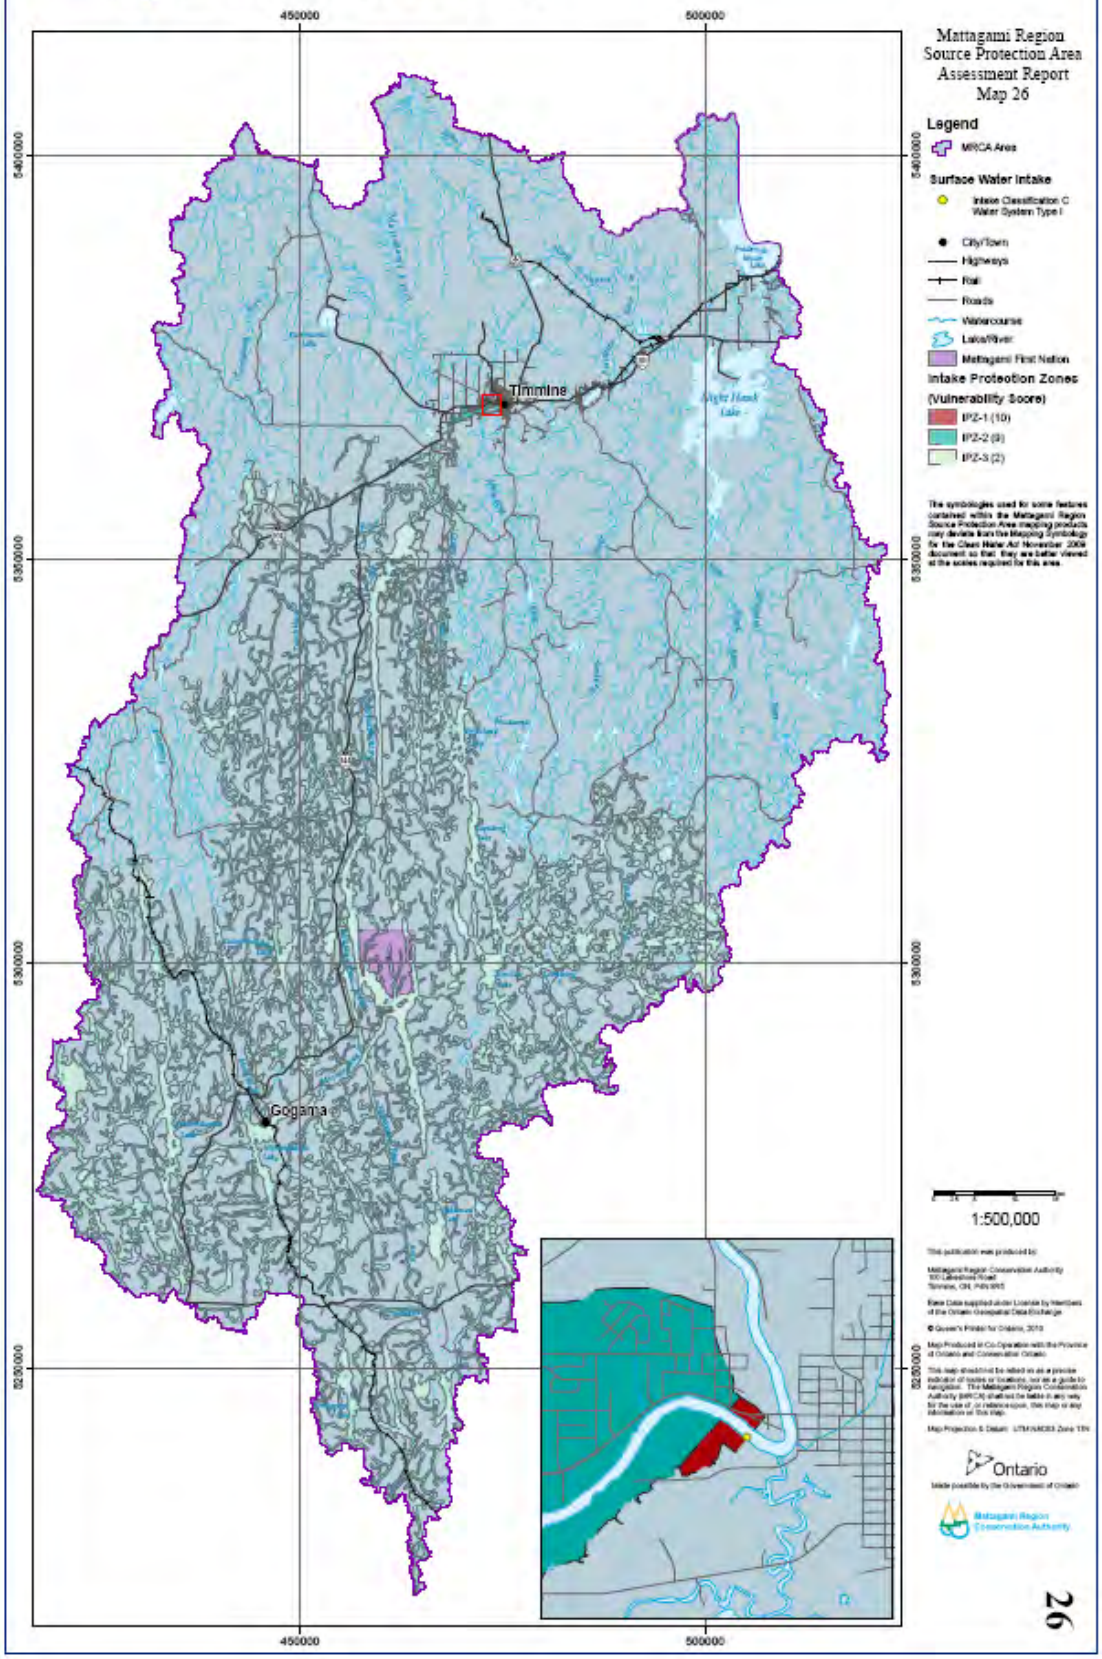
Proposed Source Protection Plan Policies

The proposed Mattagami Region source protection plan contains policies to address threats related to mining operations in the IPZ-3 and the HVA. After the plans take effect, prescribed instruments will have to "have regard to" policies in the plans that affect areas where the vulnerability scores indicate that threats could be moderate or low.

The Mattagami Region Source Protection Plan was submitted to the Minister of the Environment for review and approval on August 17, 2012 and is currently under review. At this time, none of the comments presuppose the outcome of this review, however, the plan should be considered as a locally approved plan. When the plan takes effect, the proposal could be subject to policies that address these vulnerable areas. We recommend that you review the plan at the link below, with particular note to the policies that address threats to drinking water related to mining operations (policy 4.1 on page 48 and policy 5.5 on page 58).

http://www.dwsp.ca/en/proposed-source-protection-plan-for-the-city-of-timmins-municipal-drinking-water/

Policy 4.1 asks that the MOE consider the vulnerable areas in their review criteria of ECAs, require notification to the City of Timmins in their emergency response plans, sampling monitoring and reports, and require installation of appropriate spill containment structures. Policy 5.5 asks that the Ministry of Northern Development and Mines ensure that the mine sites in Ontario are closed in a manner that ensures public safety and is consistent with sound environmental practices.



The policies do not address significant threats to drinking water, and therefore are not legally binding, however, if the policies are approved, the MOE would have to "have regard for" policy 4.1 when issuing a prescribed instrument for waste or sewage.

Thank you for considering the Source Protection Programs Branch's comments on the draft TOR for the EA. Please keep us informed as to the comments you provide to proponent as well as to any responses or questions received from the proponent that may relate to the comments herein. Please don't hesitate to contact me if you have questions on any of these matters.

Wesley,

With respect to the IAMGOLD draft TofR, sections 6.3.2 (Air Quality) and 7.2.2 (Effects Analysis) were reviewed as they relate to air. The reviewer has the following comment;

1. In Section 7.2.2, the proponent states that dispersion modelling results will be compared to the Ministry's Ambient Air Quality Criteria. It should also be stated that results will be compared to the Ministry document 'Summary of Standards and Guidelines to support Ontario Regulation 419'.

Subject: MOE Surface Water comments Draft ToR Cote Lake Project

Hi Steven,

I have reviewed the surface water portions of the document "Côté Gold Project Provincial Individual Environmental Assessment Draft Terms of Reference" submitted to IAMGOLD Corporation by AMEC Environment & Infrastructure and dated April 2013.

My comments are as follows.

Table 5-4 Effects to the Physical and Biological Environments Evaluation Criteria and Indicators

The first bullet (i.e. Indicators for the Assessment of Alternatives) of the Criteria "Effect on Fish and Aquatic Habitat" and "Effect on Wetlands" should be reworded to be consistent with Ontario Ministry of the Environment Water Management Policies, as follows: "Attainment or maintenance of water quality guidelines for the protection of aquatic life, or where pre-mine water quality does not meet the Provincial Water Quality Objectives it shall not be degraded further."

Similarly, add following Indicator for the criterion “Effect on Fish and Aquatic Habitat”: “Maintain stream flow/level and lake level to protect natural function.”

Table 5-5 Effect to the Human Environment Evaluation Criteria and Indicators

The criterion “Effect on local residents” should be expanded to “Effect on local residents and recreational users”.

Surface waters in the area of the mine could potentially be drinking water sources for local residents and recreational users (e.g. campers, canoe trippers), therefore include additional Indicator of “Non-interference with surface water drinking supply.”

Table 5-6 Effect on Environmental Health and Sustainability

The second bullet (i.e. Indicators for the Assessment of Alternatives) for the Criterion “Effect on environmental health and sustainability” should be reworded for consistency with Ontario Ministry of the Environment Water Management Policies, as follows: “Attainment or maintenance of water quality guidelines for the protection of aquatic life, or where pre-mine water quality does not meet the Provincial Water Quality Objectives it shall not be degraded further.”

5.3.1.12 Domestic Sewage

Assessment of alternatives should consider the impacts of domestic sewage nutrient loading on the water quality of surface water receivers. If discharge will enter a lake trout lake the impacts of nutrient loading on lake trout dissolved oxygen habitat should be evaluated; this will include baseline characterization of end-of-summer dissolved oxygen/temperature profiles and mean volume-weighted hypolimnetic dissolved oxygen.

6.6.1 Surface Water Quality

The parameters being measured are described generically as metals, major ions, nutrients and organics. This description does not include pH, alkalinity, conductivity, hardness and potentially other parameters, but without a complete listing the baseline data collection cannot be fully evaluated. There should be a complete list of analytical parameters.

6.6.2 Sediment

The argument that natural background levels may exceed Lowest Effect Level (LEL) is not reason enough to exclude consideration of LEL values from the evaluation. Reference area

sediment will be used to characterize natural background levels. The background may or may not be greater than LEL. Therefore, sediment evaluation should include comparison to both LEL and Severe Effect Level (SEL) values and to reference area values.

6.7.1 Aquatic Resources

It appears that not all surface waters that may be affected by the mine have been part of baseline assessment to date. Obvious ones that appear to be missing include Weeduck Lake, Three Duck Lakes, Chester Lake, the main basin of Bagsverd Lake, and Mesomikenda Lake.

Figure 2 should clearly indicate the names of all lakes that have been surveyed and listed in Table 6-2.

Being considered as potential receivers of treated mine effluent are Mesomikenda Lake and Bagsverd Creek. It is important that those waters be described physically, chemically and biologically, including critical aquatic habitat (e.g. spawning areas) that may be affected by mine effluent, in particular within the potential future mixing zone(s). Bagsverd Creek should have baseline sampling that includes characterization of the stream with distance downstream of the mine past the potential future mixing zone; if Bagsverd Creek empties into a lake or joins a larger stream those should be included in baseline assessment.

6.8.4 Community Infrastructure and Services

A dam operated by Ontario Power Generation controls the water level of Mesomikenda Lake. The EA should consider if there is potential for surface water needed for mine operations (e.g. effluent discharge, water taking) to be affected by lake level management at the dam.

7.2.2 Effects Analysis

The proposed approach to effects analysis appears to be biased toward findings of “not significant” because Level II (intermediate potential) or Level III (high potential) ratings must be achieved for all attributes involving magnitude, geographic extent, duration and frequency to have an effect defined as “significant”.

The reasoning for this approach is arguable because a Level 1 (negligible or limited potential) rating for a single attribute, when all others have Level II or Level III ratings, may not necessarily eliminate the potential for significant ecological effects and this should be considered.

Ed

Subject: Aboriginal Consultation Information re: Cote Gold Project - ON

Hello Project Leadership,

I am writing on behalf of the Consultation and Accommodation Unit(CAU) of Aboriginal Affairs and Northern Development Canada (AANDC).

As a rule, AANDC officials do not participate in environmental assessments that pertain to projects off-reserve, nor does the department track how other parties carry out their EAs. Therefore, in future **please omit AANDC officials from your public information notification for projects that do not intersect with reserve land**. This information has been relayed to the Ministry of Environment, and their contact list will be updated shortly.

If you are contacting AANDC to request Aboriginal consultation information, please **reply** and we will be happy to provide it. The CAU's Consultation Information Service (CIS)has been established as a 'single window approach' to help co-ordinate departmental responses to consultation-related queries coming from federal departments and third parties. Please provide a radius (in kilometres) around your project from which you would like information. We will provide information related to Aboriginal groups and their asserted or established Aboriginal and/or treaty rights and claims, to the extent that these are known by AANDC.

Future requests for Aboriginal consultation information from AANDC, can be submitted directly to the following mailbox: UCA-CAU@aadnc-aandc.gc.ca.To facilitate a more timely response, use the following subject heading in your e-mail: request for '**Aboriginal consultation information'.** If you do not require this information from the CAU, please remove us from your notification mailing list.

Kind regards,

Consultation and Accommodation Unit
Aboriginal Affairs and Northern Development Canada

IAMGOLD Corporation – Cote Gold Project
Attention: Steven Woolfenden
Manager, Corporate Environmental Approvals and Permit
401 Bay Street, Suite 3200, P.O. Box 153
Toronto, ON M5H 2Y4

Dear Mr. Woolfenden:

Re: Cote Gold Project, draft Terms of Reference (Provincial Environmental Assessment Process) Chester and Neville, Townships, District of Sudbury

The Sudbury & District Health Unit (SDHU) is providing comments to the proposed draft Terms of Reference document in order that potential environmental health impacts can be addressed by the proponent. It is our hope that in identifying health impacts proactively mitigation measures would be put in place to reduce risks over the long term. We would request that consideration be given to the following points:

1. The SDHU would suggest that information be included regarding major components of the tailings to better determine the adequacy of the tailings pond design, and remediation plans.

2. SDHU wishes to reinforce that protection of water sources for human consumption should be highlighted. Among many factors, changes in flow magnitude, effects of climate change (ie. flooding, rain, and drought), run-off, seepage/leaching, and accidental spills can negatively impact the amount of water available and the safety of that water for human consumption. If water quantity or quality is impacted, how will this be handled?

3. Although plans for the protection of surface waters are included, the SDHU would suggest that potential impacts and protective measures for ground waters be included.

4. The SDHU would suggest including plans for the safe storage or movement of hazardous materials (including cyanide) and explosives in the event of a natural disaster such as flooding or a forest fire.

5. Consideration could be given to the ability to contact local water users (surface water and wells) in the event of an accidental spill or runoff that may adversely affect the local water quality.

6. Has consideration been given to the effects of air pollution such as particulates (PM10, PM2.5) and noise on local permanent and seasonal residents and workers at the camp accommodations? On and off site monitoring may wish to be considered.

7. Will there be long term monitoring of the site to ensure that closure procedures are effective in protecting the environment and human health both on the site and in the surrounding area?

8. The effects of climate change (particularly changing... remove weather patterns) should be considered in terms of: water quality and quantity for operations and human consumption; risk of flood, road wash-out; dry conditions, wildfire prevention, preparedness and evacuation plans; effects of drought or flood/erosion on design of habitat compensation, riparian areas and re-vegetation of areas at closure.

The living areas for this proposed mine are regulated by *Reg. 554 Camps in Unorganized Territory under the Health Protection and Promotion Act.* The SDHU requests that plans for the accommodations, dining areas and food preparation areas be sent to the Sudbury & District Health Unit for review before construction.

The SDHU appreciates the opportunity to comment on this application. If you have any questions or require additional information please contact Ide Vettoretti, *Environmental Health Specialist* at 705.522.9200, ext. 213 or Burgess Hawkins, *Manager* at 705.522.9200, ext. 218.

Yours truly,

Shelley Westhaver
Interim Director
Environmental Health Division

Hey Dave,

I believe the one window approach was the preferred approach.

The Trappers and BMA information we may not be able to release contact information due to sensitivity problems. Will try and get back to you on this as there may be some information we can provide.

Not aware of any other commercial fishing in the area aside from the baitfish.

With respect to harvest data and tag limits.

- 2012 harvest data is not yet available.

Harvest by WMU is available for

- Moose 2006-2011
- Deer 2008-2011
- Bear 2006-2011

Online at http://www.mnr.gov.on.ca/en/Business/FW/2ColumnSubPage/STDPROD_095049.html

2013 Tag quotas for Deer and Moose available online at,
http://www.mnr.gov.on.ca/en/Business/FW/2ColumnSubPage/STEL02_173985.html

Moose Resource Reports for WMU available online at
http://www.mnr.gov.on.ca/en/Business/FW/2ColumnSubPage/STDPROD_101571.html

From speaking to you on the phone earlier about sharing data, such as bathymetry we will have to put together a formal data sharing agreement. I will need some more details on what information it is you are looking for.

Thanks

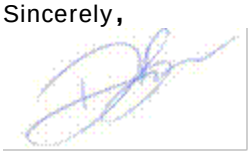
Subject: Information request

Hello Suzanne and Todd,

I just wanted to request some information to support our baseline work. We have a number of different consultants working together for this project so I will do my best to limit the number of emails coming from all directions for information request so it is not so confusing. Let me know if MNR wants a one point of contact or just continue with individual consultant leads contacting you?

For our land use baseline report, we would like to gather some data about fur harvesting from the various trapline permit holders in the study area.
Could you provide their contact information (we have contact info already for Phil Tamlin(he is the number 2 on trapline closest to the project around the Cote Lake area))?



Also:

- is there still an active BMA licence for the Mesomikenda Lodge? Can the MNR provide a list of the outfitters that have active BMA licences in the area (including those that may overlap with the transmission line corridor options) that we can contact?

- any other commercial fishing in the project area besides the baitfish harvesting?

- the 2012-2013 harvest data and the 2013-2014 tag limits for WMUs 29, 31, 38, and 39? We are specifically looking for data on moose, deer, and bear.

Sincerely,

Dave Brown

RE: Draft Terms of Reference
IAMGOLD Cote Gold Project
Chester and Neville Townships, Ontario

As requested, I have reviewed the groundwater-related portions of the report entitled *Provincial Individual EA, Draft Terms of Reference for the Cote Gold Project*, prepared by AMEC Environment & Infrastructure (AMEC) and dated April 2013. This review was focused on whether the Draft Terms of Reference (ToR) has identified the activities that may potentially impact the groundwater quality and quantity at the Cote Gold Mine (the site), as well as any mitigation measures associated with those impacts. In order to quantify potential groundwater impacts, baseline groundwater conditions for the site and surrounding area must be established. The baseline groundwater studies were briefly described in the draft ToR; however, provided below is an outline that Northern Region Hydrogeologist's have developed that provides our minimum expectations for baseline studies for mining developments:

> *The purpose of baseline groundwater monitoring programs for proposed new mines is to define pre-development hydrogeological conditions. This information will be subsequently used by the proponent to develop numerical groundwater models and to predict potential impacts of the mine if the project progresses towards environmental assessment and permitting. This assessment also provides the framework for on-going groundwater monitoring during site development, operation, and closure. Lack of comprehensive baseline information may cause significant site development delays.*
>
> *To effectively address these uses, the baseline groundwater monitoring program must meet the following requirements:*
> 1) *Determine groundwater flow paths, identify potential receptors (e.g. surface water, wetlands, wells, etc.), estimate subsurface travel times (including potential seasonal hydraulic gradient fluctuations), and characterize groundwater quality. The location*

of the monitoring wells must be selected to define existing conditions and also in anticipation of potential changes in groundwater gradients during all phases of the project (e.g. mounding, lowering, flow direction changes, etc.). The groundwater monitoring should take into consideration the effects of groundwater to surface water discharge, and enough information must be collected so that potential impacts of dewatering on surface water and wetland features can be evaluated. Nested or multi-level groundwater monitoring wells should be used where appropriate to assess both shallow (overburden) and deep (bedrock) groundwater flow systems, as well as vertical gradients.

2) *Collect whatever information will be later required to identify groundwater impacts that may occur as a result of the undertaking, assess contaminant attenuation capacities, and ensure that the proposed mine and associated facility designs incorporates appropriate mitigation measures. Groundwater monitoring and groundwater quality data should be collected up-gradient, cross-gradient, and down-gradient from all relevant facilities which have been sited at the time of the baseline survey. This includes potential groundwater seepage locations, rates and quality into or from facilities such as: open pits, underground developments, tailings, stockpiles, collection ponds, processing facilities, and loading areas.*

3) *Identify potential compliance points and compliance criteria (e.g. Reasonable Use, Provincial Water Quality Objectives, etc.) and ensure that sufficient information is available in the future to produce statistically sound assessments of potential mining and associated facility impacts. The baseline survey should include installation of monitoring wells at potential compliance points and within the footprint of the planned operation works with an aim of having most wells remain in-place during all phases of the project to provide consistent temporal analysis points;*

4) *The output of the hydrogeology baseline survey should include the following:*

   a) *conceptual hydrogeologic model with a written expert opinion summarizing groundwater flow paths, identification of potential receptors, travel times, and water quality;*

   b) *hydrogeologic maps and cross-sections showing: 1) the location of relevant features, including surface water features, water supply wells, and other potential receptors; 2) location of groundwater monitoring wells with respect to proposed facilities/works, stockpiles, potential seeps of contaminated groundwater, surface water features and other potential receptors; 3) the extent of overburden and bedrock aquifers, including bedrock contact/fracture zones; 4) groundwater contours (potentiometric surfaces); and 5) groundwater flow directions including location of all groundwater divides;*

   c) *groundwater analytical results provided in tabular format with ion balances and also presented with ion plots; Laboratory Certificates of Analysis should be available upon request; and*

   d) *identify the need for additional monitoring and assessment to address potential facility development impacts that had not been defined at the time of the baseline survey.*

If you wish to discuss any of these recommendations, please do not hesitate to contact me. The purpose of the preceding review is to provide advice to the Ministry of the Environment regarding groundwater conditions based on the information provided in the above referenced documents. The conclusions, opinions and recommendations of the reviewer are based on

information provided by others, except where otherwise specifically noted. The Ministry cannot guarantee that the information that has been provided by others is accurate or complete. A lack of specific comment by the reviewer is not to be construed as endorsing the content or views expressed in the reviewed material.

Subject: Comments on Draft ToR for Côté Gold Project

Dear Steven Woolfenden:

On behalf of the Ministry of Tourism, Culture and Sport's Northern Policy and Planning Unit, please find attached our comments on the draft EA Terms of Reference and Record of Consultation for the above project. The comments reflect a tourism perspective in line with our Unit mandate to provide strategic northern tourism policy and planning expertise and promote activities that protect, diversify and enhance industry interests on patented/Crown lands and waters in Northern Ontario

If you have any questions or comments relating to the attached, please let me know. Note that I will be away from the office from June 10th until June 17th but would be pleased to address any questions upon my return.

Jim Antler
Policy Advisor, Northern Policy & Planning Unit

A) INTRODUCTION

The Northern Policy and Planning Unit's main function is to provide strategic tourism policy and planning expertise to industry, other ministries and other levels of government. We also promote activities that protect, diversify and enhance tourism industry interests on patented/ Crown lands and waters in Northern Ontario. As such, our comments on the draft Terms of Reference (ToR) relay a tourism perspective. The Culture Services Unit of our Ministry has already provided comments on the document relating to their mandate.

The comments below outline areas where additional information could be included in the final ToR to better ensure any potential tourism-related interests can be identified and considered.

B) COMMENTS ON SPECIFIC SECTIONS OF THE DRAFT TERMS OF REFERENCE

The comments are presented in the same chronological order as the sections are presented in the draft ToR.

Main Body

Section 5.2.1: Alternatives Assessment and Evaluation Methodology – Performance Objectives

This section indicates that a comparative evaluation of feasible alternative methods will be conducted. In support of our Ministry's Culture Services Unit comments we also note that the "do nothing" or null alternative is not included for consideration. It should be included in the final ToR.

Section 5.2.2.4: Evaluation Criteria and Indicators: Effects to the Physical and Biological Environments

Table 5-4 outlines a number of proposed indicators for a variety of environmental component criteria, including maintenance or provision of fish habitat, and area, type and quality of terrestrial habitat that would be displaced/altered. However, there is no reference to species population indicators for either fish or wildlife.

Consideration should be given to incorporating some direct population indicators for both fish and wildlife in this section.

Section 5.2.2.5: Evaluation Criteria and Indicators: Effects to the Human Environment

Table 5-5 displays proposed criteria and indicators for several human environmental components including criteria relating to effects on tourism and recreation. The specific reference to tourism is appreciated; however the related indicator of "maintenance or improvement of tourism and recreational opportunities" could be strengthened.

It may be useful to add an indicator for tourism that speaks to continued access to nearby natural resources (e.g. fish and wildlife). For example, there may be Bear Management Area within or surrounding the project area that is held by resource-based tourism operations (MNR's Gogama office should be able to provide information on where these may be located). If the project may impact the use of these areas or other fish and wildlife resources how will that be addressed to avoid loss of business opportunities?

There is very little information in the draft ToR or Record of Consultation with regard to the location and scope of tourism operations/activities in the project area. This is covered in more detail below as it relates to our comments on Section 6.1 and Figure 5. Without understanding where tourism facilities are located and the types of activities they undertake on the landscape it will be a challenge to know whether tourism opportunities have been maintained or enhanced.

Section 5.3.1: Alternatives for the Project: Identification of Alternatives

This section outlines that project alternatives have been considered with respect to many components. Not surprisingly, all of them relate to components of the mining process. Was consideration given to including components such as the impacts to other users/sectors (e.g. tourism, forestry)?

Section 6.1: Description of the Environment: Overview of the Study Area

Several existing and planned studies are noted in this section including ones relating to socio-economics (e.g. draft socio-economic baseline study dated 2013). There is also reference to Figure 5 which maps nearby communities and residences, including cottage areas. However, this figure contains no information on tourism facilities which should have been identified during any baseline socio-economic study. More detailed comments on Figure 5 and the omission of tourism facilities are outlined in the section below.

In addition, on page 6-3 it notes that a human environment local study area is not yet defined for the project (a regional area has been). Given our concerns about the lack of information in the ToR about tourism facilities and activities we look forward to seeing how the local human environment study area will be defined in the final draft EA ToR.

Figure 5: Townships and Cottage Residential Areas

There is no information on Figure 5 or elsewhere in the draft Tor or Record of Consultation that identifies any tourism facilities in proximity to the proposed project.

It is our understanding that there is a resource-based tourism facility on Mesomikenda Lake called Mackenda Wilderness Lodge (formerly Kenda Wilderness Lodge). Contact information we have for the business is as follows:

Mackenda Wilderness Lodge
Robert MacDonald
3620 Lakeshore Blvd. West

Toronto, Ontario M8W 1P2
Summer Telephone (705) 894-2096

We are also aware of resource-based tourism facilities on Minisinakwa Lake including Gogama Lodge, Morin's All Season Resort and Quiet Waters Cottages. Camp Gilla is south of the project area on Lake Azure.

If it has not already been done, we encourage IAMGOLD to contact these facilities to make them aware of the project and to determine their interest in receiving additional project-related information on an ongoing basis.

We recommend that the Gogama Office of the Ministry of Natural Resources be approached to help identify all of the tourism facilities located in the area mapped on Figure 5. These should be mapped in the final ToR.

It is important that local tourism operators have direct opportunities to be engaged in any discussions relating to the proposed project so that their interests can be considered.

Section 6.7.1: Biological Environment: Aquatic Resources

Table 6-2 identifies the fish species captured for a variety of water bodies in the vicinity of the project. However, Weeduck and the Three Duck Lakes chain are not included despite their close proximity. What was the rationale for not including them in the assessment work?

Section 6.8.2: Human Environment: Regional Economy.

This section provides some data for Northeastern Ontario on a few sectors of the economy. Tourism is referenced under "other services" but there is no data on the percentage of the economy it comprises. If that data is available it should be included in the final ToR.

We are able to provide tourism visitation and spending data for the Sudbury District which includes Gogama (Census Division 52). See the attachment below. This District does not include the Sudbury Census Metropolitan Area (CMA 580). While the Sudbury District is much larger than just the Gogama area it does provide some more localized tourism data.

A map of Ontario's Census Divisions is found at the following link - http://geodepot.statcan.ca/Diss2006/Maps/Maps_Cartes/SGC-CGT/10_ON_2006.pdf

This information may also be useful for a revised Section 6.8.5 (Recreation and Tourism) in the final ToR. Currently, this section contains very minimal tourism-related information both in terms of area facilities/businesses and visitation/spending.

The final ToR needs to better describe the contribution of the tourism sector to the region as well as the nature and scope of tourism businesses in the area covered by Figure 5.

Section 7.2.2: Effects Analysis Methodology: Effects Analysis

This section raises the concept of compensation, as a component of mitigation, using the example of providing alternative fish habitat to offset adverse effects. Does IAMGOLD intend that compensation could also be available to address any potential impacts to nearby businesses such as tourism (e.g. monetary or non-monetary)? For example, if use of a Bear Management Area is impacted or lost?

Some other mining-related EA ToR that we have reviewed have included language to indicate that the EA will address avoidance of, minimization of, and/or compensation for negative socio-economic effects that could result from projects. We encourage IAMGOLD to consider this as part of the final ToR.

On page 7-1 there is discussion of AMEC's (consultant) methodology for determining the significance of effects. It states that this methodology has been "accepted." By whom? The Ministry of Environment?

Section 7.3 Preliminary Description of Potential Effects

Table 7-1 documents a preliminary summary of potential effects for various project components. For several different components (e.g. mine operations, buildings etc.) there are effects noted for things like water quality and loss of aquatic/terrestrial habitat but nothing relating to fish and wildlife species/populations. Again we would suggest more direct language relating to potential species effects.

The component called "Overall Côté Gold Project" highlights a number of potential effects relating to economic benefits at local, regional, Provincial and Federal scales. They are generally positioned as being positive.

Does IAMGOLD believe there could be negative economic effects from the project (e.g. toward other economic sectors)? If so, the potential for negative effects also needs to be highlighted.

Section 9.1: Potentially Affected and Interested Stakeholders

This section identifies stakeholders/interests that have been identified as having an interest in the project. Local small business owners are identified as a block without any more detail on who these may be or what sectors they represent. Following upon our comments on Section 6.1, we are unsure whether any tourism facilities have been identified and/or communicated with directly. There is no reference to any specific tourism business that we could find in the draft ToR or the Record of Consultation.

We look forward to seeing more details in the final ToR with regard to engagement with the tourism sector.

Has dialogue occurred to date with the main resource-based tourism association in the Province, Nature and Outdoor Tourism Ontario? They should be made aware of the project if they have not been informed already. Contact information for the association is as follows:

Nature and Outdoor Tourism Ontario (NOTO)
Attn: Laurie Marcil, Acting Executive Director
386 Algonquin Avenue
North Bay, ON P1B 4W3
(705) 472-5552

Section 10.0: Flexibility to Accommodate new Circumstances

We appreciate that short-term contingency plans may be needed should design changes or other adjustments be necessary as the project is implemented. Additional information would be useful on how any changes may be communicated with stakeholders, at least on a preliminary basis (e.g. newsletters, public notices), recognizing the scope of those to be consulted may vary depending upon the type of change.

Appendix B: Mine Rock Area Alternatives Assessment

We appreciate that this Appendix references "outfitter establishments" as a category of permanent or temporary residences to be factored in to the assessment. However, there is little detail in the assessment report or draft ToR to identify where these establishments are and what interests they may have in the project.

On page A-4 a description of the socio-economic indicator relating to proximity to existing permanent or temporary residences is provided. Proximity is defined as 3 kilometres from a mine rock storage area. Why was 3 kilometres chosen?

How were things like Bear Management Areas treated in the assessment that was carried out (if there are some within that proximity distance) since only "outfitter establishments" is referenced?

Appendix C: Tailings Management Facility Alternatives Assessment

In line with the above comments on Appendix B, we appreciate that this Appendix references "outfitter establishments" as a category of permanent or temporary residences to be factored in to the assessment. Again, there is little detail in the assessment report or draft ToR to identify where these establishments are and what interests they may have in the project.

On page A-5 a description of the socio-economic indicator relating to proximity to existing permanent or temporary residences is provided. Proximity is defined as 5 kilometres from a mine rock storage area. Why was 5 kilometres selected in this case?

As with Appendix B, how were things like Bear Management Areas treated in the assessment that was carried out (if there are some within that proximity distance) since only "outfitter establishments" is referenced?

Appendix E: Proposed Aboriginal Engagement Plan

Section 2.3: Corporate Expectations

This section addresses some corporate approaches to dealing with Aboriginal communities and the importance of partnerships and engagement. It states that Aboriginal engagement is based on principles of trust, respect and transparency. Regardless of the stakeholder involved (Aboriginal or non-Aboriginal) we believe these principles should underlie engagement and consultation activities. Therefore, it is encouraged that IAMGOLD consider including similar language in Appendix D (Proposed Stakeholder Engagement Plan) as well.

Section 4.1.1: Engagement on the draft Terms of Reference/Project Description: Engagement Purpose

This section makes reference to activities expected to occur between January-April 2012 (underlining added). This section should be revisited to reflect if these activities have already been completed.

C) COMMENTS ON THE RECORD OF CONSULTATION

Section 5.3: Summary of Comments – Government Agencies

We note the comments from the Ministry of Natural Resources relating to the proposed transmission line that suggests IAMGOLD contact Transport Canada regarding potential interference of the transmission wires on floatplanes. We look forward to additional information regarding the company's discussions with Transport Canada in this regard and any resulting modifications to the project in the final ToR.

D) FINAL COMMENTS

We appreciate the opportunity to review and comment on the draft ToR. We recognize the efforts undertaken to date by the proponent. Nevertheless, we find the document lacks detail as it relates to the local/regional tourism sector and how tourism facilities have been communicated with to date regarding the project.

We have highlighted where we feel the final ToR can be improved as it relates to tourism considerations. Please continue to keep us informed as the project moves forward. We look forward to receiving the final ToR and understanding how our comments have been considered in its development

June 7, 2013

IAMGOLD – Terms of Reference Comments from Timmins District MNR
June 7, 2013

Page 2-1: 2-1: The disposition of land for the transmission line is missing.

Page 2-2: Section 7: "… most waters will be realigned and not diverted". Terminology here is inconsistent with the LRIA; under the LRIA what IAMGOLD is proposing is considered a diversion. Permitting under LRIA will need to use terms consistent with that legislation.

Page 4-2: 2nd Paragraph: Would like more information on how much water will be discharged and how often. What precautions will be taken with respect to flood management? If there is a high rain event what is the potential for untreated wastewater to be released?

Page 4-3: What is being done with the fish that will be transferred? Where will they be putting them? Will they be going from a lake into lake, or a stream into stream? Need to ensure we are not introducing new and/or unwanted species into systems where they are not known to occur. What will be done if invasive species or introduced species are encountered?

Page 4-6: 4.2.3.2: Must be vegetated with native species (this comment applies to all sections that describe revegetation).

Page 4-6: 4.2.3.2: It should be mentioned that "progressive rehabilitation" may not occur if fewer MRAs are used than the original number of MRAs anticipated.

Page 4-6: 4.2.3.3: Groundwater monitoring in this area may need to be carried out. The placement of piezometers and their monitoring schedule should be included.

Page 4-7: top of page: Will there be a schedule of monitoring to ensure that erosion is not occurring over time?

Page 4-7: 4.2.3.5: Using aggregate pits as fish habitat compensation needs to be detailed very thoroughly to determine if it would be an acceptable use.

Page 4-7: 4.2.3.6: Please describe the difference in legislative requirements for developing a demolition landfill within a non-acid generating mine rock stockpile vs. developing it within an approved landfill site.

Page 4-7: 4.2.3.6: If not economically feasible to remove machinery, equipment and other materials, what will be done with it?

Page 4-7: 4.2.3.6: Will there be groundwater monitoring in this area? The placement of piezometers and their monitoring schedule should be included.

Page 4-7: 4.2.3.6: Does the outlined reclamation apply to the entire length of the transmission line or only to a measured portion?

Page 5-5: Table 5-5: Does not appear to consider effects on commercial bait harvesters, trappers, BMA (Bear Management Area) licencees or SFL holders.

Page 5-18: 5.3.1.7 – It should be noted in this section that Mesomikenda Lake is a water-level controlled lake.

Page 5-18: 5.3.1.9 – MNR disagrees that Bagsverd Creek is being realigned. This entire section is being removed (along with its tributaries). As previous comment, we need to be carful with terminology. Under the LRIA these are watercourse channelizations that are diverting water; they are not simply realignments.

With the construction of the new stream and subsequent flooding of it what measures are proposed to limit the initial sedimentation? Will these new streams be monitored? What will be the plan if the stream realigns itself or there is excessive/ unacceptable erosion?

Page 5-20: 5.3.1.11 Aggregate Supply: Must be careful using mine rock as an aggregate supply as, while it may not be acid generating, there may still be the potential for other contaminants to leach out of the rock and impact water quality. We have had past experiences where the use of mine rock has resulted in arsenic contamination. IAMGOLD needs to be aware that there is a very real possibility that mine rock may not be able to be used as a source of aggregate.

Page 5-22: Transmission Line crossing Kenogamissi Lake, is not a good idea as indications are that airplanes frequently land on this lake and the transmission line may be a safely hazard. If this is to remain as one of the options, we would suggest that it cross between Kenogamissi Lake and Mattagami Lake (Mattagami Lake Dam / Tembec Bridge area). Recommend talking to OPG as there may have already been initial work looking at a transmission line around here (at least as far as the dam).

Page 5-23: Mine Closure – Include consideration for SAR during mine closure – some species may be using the area and mine closure operations may impact that habitat (eg. Bank swallows in aggregate pits).

Page 6-4: Paragraph 7 – Correct this paragraph to; "There are no **known**, Areas of Natural and Scientific Interest, or Provincially Significant Wetlands within or near to the general Project site area." All the wetlands in this area are considered

unevaluated wetlands. Their significance at this time is not known, these wetlands should be evaluated in order to determine their significance.

Page 6-13: Vegetation Communities: Would recommend ecosystem classification be done using the Provincial Ecological Land Classification, instead of the Forest Ecosystem Classification. This is the provincial standard for land classification.

Page 6-15:

3rd paragraph: What criteria were used to identify potential bat hibernacula during the winter aerial survey?

There is no mention of potential hibernacula in the area (abandoned mine).

5th paragraph: Canada Warbler is provincially a Special Concern species not Threatened.

MNR also notes that Bank Swallow has recently been listed as Threatened by COSEWIC and a review by COSSARO (provincially) could potentially list this species as Threatened or Endangered in the near future.

Page 11-2: Table 11-1: Land Use Permits for MNR – It is possible that several different types of dispositions may be required, not just Land Use Permits.

Other MNR comments or concerns:

Transmission Line placement was not included as assessment for alternatives, yet there are two proposed options given. Should include the decision process for determining transmission line placement.

It was mentioned that the pit itself once the mine was closed would be filled with water, returning it back to a "larger Cote Lake". What would the potential for metals/ contaminants to leach into the lake? Will monitoring be conducted to ensure the "lake" is healthy before it can be considered closed? Will this lake be used as part of the habitat compensation? We would like to see a detailed description on this proposal. If the final lake depth is going to be in the 650m depth range, MNR would argue that much of this depth isn't suitable for habitat and will influence the productivity of the lake.

Initial Bathymetry work that IAMGOLD had done that was shown to MNR's Area Biologist. How is this to be used for this project? We have some concerns regarding the accuracy of this data, and what it will be used for. MNR would like to see the raw data and methodology that was used to create these maps.

Dear Mr. Woolfenden:

Re: **Cote Gold Project, Provincial Individual Environmental Assessment, Draft Terms of Reference**

Thank you for the opportunity to review the April 2013 document entitled *"Cote Gold Project Provincial Individual Environmental Assessment Draft Terms of Reference"*, prepared by AMEC Environment & Infrastructure.

It is our understanding that this document sets out the proposed framework and work plan for addressing provincial *Environmental Assessment Act* requirements when preparing an Individual Environmental Assessment for the proposed Cote Gold Project, consisting of a proposed open pit gold mine with related processing facilities and infrastructure, to be developed approximately 20 kilometres southwest of Gogama. We further understand that a final proposed Terms of Reference, considering comments received on the draft Terms of Reference, will be submitted and issued for a public comment period at a later date.

The Ministry of the Environment's Northern Region Planning Unit has reviewed the above-noted document, and has the following comments.

General Comments

The Ministry of the Environment (MOE) has a mandate under the Environmental Protection Act to minimize the exposure of any person, property, plant or animal life to off-site potential negative effects associated with the operation of certain facilities. To address this concern, and to prevent or minimize exposure to adverse effects, the principles of land use compatibility should be reflected in the Terms of Reference and addressed during the EA process.

Potential land use compatibility issues would include land use conflicts that may result from either a new facility locating so that an existing sensitive is captured within the facility's influence area, or from a new sensitive land use locating within the influence area of an existing facility. Potential adverse effects that may result may include, but not be limited to: noise and vibration; visual impact; odours and other air emissions; litter; dust and other particulates; and other contaminants. In applying land use compatibility

principles, all facilities and components of the proposed project should be considered, including proposed accommodations, diesel generation, and infrastructure such as roads, sewage treatment/disposal and waste disposal facilities. Potentially conflicting uses which may occur within the area of the proposed project would include uses such as seasonal or recreational residences, remote tourism facilities, and trappers' cabins, among others.

Please note that both existing uses and committed land uses, which have been approved by regulatory authorities but do not yet exist, should be considered in the evaluation of potential impacts.

The principles of land use compatibility, as summarized above and as articulated in MOE Guidelines should be reflected in the Terms of Reference, and particularly in those sections dealing with the evaluation of alternatives, description of the existing environment, effects identification and assessment methodology including the identification of mitigation measures, and potential monitoring requirements.

Further detail, including information addressing potential influence areas, minimum separation distances, and the use of detailed studies to evaluate potential impacts and identify appropriate mitigation measures, is included in the following MOE Guidelines:

- *Guideline D-1: Land Use Compatibility.* (1995)
- *Procedure D-1: Land Use Compatibility: Implementation.* (1995)
- *Procedure D-1-3: Land Use Compatibility: Definitions.* (1995)
- *Guideline D-2: Compatibility between Sewage Treatment and Sensitive Land Use.* (1996)
- *Guideline D-4: Land Use On or Near Landfills and Dumps.* (1994)
- *Guideline D-6: Compatibility between Industrial Facilities and Sensitive Land Uses.* (1995)
- *Procedure D-6-1: Appendix A: Industrial Categorization Criteria* (1995)
- *Procedure D-6-3: Separation Distances* (1995)

These D-series Guidelines are available on the MOE website at:
http://www.ene.gov.on.ca/environment/en/resources/index.htm .

Section 6.1 Overview and Study Area
The extent of local and regional study areas are addressed in this section, which describes the human environment regional study area only in very general terms, and indicates that a human environment local study area has not yet been defined for the project. We recommend that land uses and activities which could result in land use compatibility issues be considered, along with other factors, as the extent of these areas are identified or further refined. The final Terms of Reference should more clearly identify the extent of the study areas for the EA.

Section 6.2 General Description of the Cote Gold Project
This section indicates that the Cote Gold Property consists of patented and unpatented mining claims, mining leases, and mining licenses of occupation, all located within 17 unorganized townships. We would recommend including additional information in the final Terms of Reference to identify the location and extent of each of these types of ownership, occupation, or lease.

Section 9.1 Potentially Affected and Interested Stakeholders
In order to aid in identifying and addressing potential land use compatibility issues, we recommend that any landowners, resource users, or other interests who may potentially experience adverse effects as a result of the project be added to the project mailing/contact list as they are identified, and included in consultation activities throughout the EA process.

Section 11.0 Other Approvals Required
Should any portions of the project site be situated on patented mining claims, we recommend consulting the Ministry of Municipal Affairs and Housing (Sudbury Municipal Services Office) to determine if any approvals under the *Planning Act* are needed to allow for the development of any project components.

Please contact me at your convenience if you have questions or wish to discuss these comments.

Yours truly,

Ellen Cramm, MCIP, RPP
Environmental Planner/EA Coordinator

Subject: RE: IAMGOLD Cote Gold Project - draft ToR comments due at end of this week

Hi Wesley

I have review the draft Term of Reference for the IAMGold, Cote Gold Project.

Based on my review, I feel the document touches on all aspects of the project that will require approvals for our ministry. I do recommend we make the company aware of Ontario Regulation 102/94, Part IV and Part V for large construction and demolition projects, since I suspect some of the buildings for this mine will have a total floor area of more than 2,000 square meters.

If you have any further questions, please do not hesitate to contact me at my office.

Sincerely,

Steven Momy

MEMORANDUM

TO: Steve Woolfenden
Manager, Corporate Environmental Assessments and Approvals
IAMGOLD Corporation

FROM: Wesley Wright
Project Officer
Environmental Approvals Branch

RE: Review of the Draft Terms of Reference for the Côté Gold Project Environmental Assessment
EA FILE NO. 05-09-02

Thank you for submitting the draft Terms of Reference (ToR) for the Côté Gold Project (Project), which was received on May 6, 2013 by the Environmental Assessment Services Section (EASS).

The EASS has reviewed the above-noted draft ToR in accordance with the requirements of the *Environmental Assessment Act* (EAA), its associated regulations, and the MOE's Code of Practice for Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario (Code of Practice) dated October 2009. The EASS offers the following comments for your consideration when finalizing the ToR for formal submission.

Section 2.0

1. Section 2.1 states that IAMGOLD Corporation (IAMGOLD) entered into a voluntary agreement to meet the provincial environmental assessment (EA) requirements for the Project components listed, but it does overtly state that the voluntary agreement requires that an individual EA be conducted for the entire Project. Please revise the text to reflect this.
2. Section 2.2 opens with stating that the Project "is anticipated to require completion of a Federal EA." As later mentioned in the section, the Canadian Environmental Assessment Agency has indicated that the Project will require a federal EA. Please revise the text in paragraphs 1 and 4.
3. Section 2.2 reads: "The ToR, once approved, and the EIS Guidelines . . . " Approval of the ToR is at the Minister's discretion; there is no guarantee that a proposed ToR will be approved. Please revise this text to read "if approved" rather than "once approved."

Section 4.0

4. The study area (stated as being approximately 6,700 hectares) is not clearly delineated in the section, nor in Figure 2. It is not until page 6-3 that the multitude of study areas seem to be generally defined, but this is unclear to the reader who may not be familiar with the local of nearby receptor locations, which watercourses and water bodies could potentially be affected by the Project, the boundaries of the transmission line alignments, nor the human environment local study area. For clarity, please more clearly delineate the study area boundaries in the text and indicate these on maps/figures. Section 4.1 (description of the undertaking) may be a more appropriate section in which to state the study areas because it would be more apparent to the reader earlier in the documentation (including the text that the study areas will be further refined as the Project progresses through the EA).
5. Section 4.1 (page 4-2) states that the description [of the Project components] will be finalized through the EA process and ongoing engineering studies. This suggests that the components may be finalized after the EA process (i.e., during "ongoing" engineering studies). The Project components are expected to be finalized during the EA process, as the preferred alternatives for each component (Table 5-7) will be determined during this phase.
6. Please elaborate on the habitat compensation proposed in section 4.1—will any agencies be involved in overseeing this and/or commenting on the compensation measures proposed?
7. Section 4.2.1 states that the sequencing of construction activities "will also consider" fish spawning and bird nesting seasons. Depending on input from government agencies, IAMGOLD may be required to not simply "consider" spawning and nesting seasons, but to limit/cease construction (for all or some of the Project components, in all or some of the study area) during these spawning/nesting windows.
8. In section 4.2.3.11, you may wish provide more clarity by stating that transfer *of ownership* of the 230 kV transmission line will be evaluated at the end of the Project.

Section 5.0

9. The draft ToR does not include the "do nothing" alternative. While this is not required, the Code of Practice (page 18) strongly recommends that a "do nothing" alternative always be considered because it acts as a baseline against which all other alternatives are compared.
10. The definition of "environment" does not seem to agree with that in the EAA (natural, economic, social, cultural, built): physical, biological, human. Please revise text (and corresponding tables) to reflect this. Alternatively, re-define "natural" as "physical and biological" and "economic/social/cultural/built" as "human," but it is encouraged that proponents adhere to the environmental components as they are presented in the EAA.
11. For ease of reference and readability, you may wish to consider including in the Table of Contents the various alternatives that were/will be considered for the various Project components, as was done for the Rainy River Gold Project ToR.
12. Section 5.2.2: Per section 4.2.7 of the Code of Practice, the potential data sources for the criteria and indicators should also be stated, including text stating that the listed data sources are *potential* sources, subject to change as the EA progresses. Please revise the text accordingly.
13. Section 5.2.1 suggests that the performance objectives are separate from evaluation criteria, but section 5.2.2 reveals that they appear to be one and the same. Please revise the text accordingly.
14. The "performance" rating seems to use a single criterion (or indicator) as its measure (e.g,. cost-effectiveness = competitive return on investment; technical availability = predictably effective with contingencies; ability to service the site effectively = provides a

guaranteed supply to the site). This seems to skew the evaluation to a single criterion/indicator instead of all within the category. Section 5.2.3 states that an alternative will be rejected if it attains an unacceptable rating for any single performance objective; because this is the approach to be used, it is all the more critical that the performance objectives consider all of the criteria within a given category instead of only one. By using only one, it skews the evaluation to favour an alternative rating strongly in the single criterion used as the performance objective. Please revise the performance objectives accordingly to better reflect all of the criteria within each category.

15. For sections 5.2.2.4 and 5.2.2.5, the blanket criterion of "minimizes adverse effects without mitigation" poses the risk of insufficient transparency in the relative comparison/weighting of the respective criteria within that environmental category. It is unclear to the reader how this will objectively be determined during the evaluation. Please elaborate on this.
16. Table 5-4: for the criterion of "effect on fish and aquatic habitat," please explicitly state that one of the indicators will be attainment or maintenance of water quality guidelines for surface water bodies in the study area; only groundwater quality is explicitly mentioned, and there are many surface water bodies that are expected to be impacted by the proposed undertaking.
17. Section 5.2.2.6: the criteria relate to both the natural and "human" environment, but the performance rating considers only the natural environment. Please revise the performance rating to also consider the "human" environment, because it is included in the evaluation criteria.
18. Table 5-6: one of the criteria refers to "environmental health." The EAA broadly defines "environment" – is this criterion meant to relate to the health of all five aspects of the environment? If so, how will it consider a situation wherein net negative effects are expected on some of the five aspects but net positive effects are expected on others? If it is meant to relate to only one aspect, please clarify and revise the text accordingly.
19. Section 5.3.1.13: I recall during at least one of the interministerial meetings, IAMGOLD made reference to a third transmission line route, which I understand is no longer being considered. Because it was an alternative route which was considered for the Project, it should be mentioned in the ToR – and if it were screened out, then a rationale for having done so should be provided, as it was both for onsite diesel-fired power generation and for renewable energy as the primary power source for site operations.
20. Considering the great distance over which the 230 kV transmission line will be built (130 to 170 km), it is unclear to the reader why there are only two routing alternatives that will be considered. The Rainy River Gold Project included four alternative routings for the 230 kV transmission line, and this was over a distance of less than 20 km. Please provide a rationale as to why more routes will not be considered for the Project.

Section 6.0

21. Section 6.1: For all baseline studies, please state in the ToR that they will all be conducted in consultation with any and all stakeholders and Aboriginal communities having interest in what is being studied.
22. Table 6-2: some lakes in the study area (Mesomikenda Lake, Three Duck Lakes, Weeduck Lake, Schist Lake) seem to be absent from the fish sampling. Also, please clarify if the 'Unnamed Lake' in Table 6-2 is Unnamed Lake #1 or Unnamed Lake #2 in Figure 2. At any rate, this would suggest that the other Unnamed Lake was also absent from the fish sampling program. Why were fish species not captured in these water bodies?

Section 7.0

23. Section 7.1 makes reference to the "social environment" but this is the first time in the documentation that this term has been made; in all other instances, only the "human environment" has been referenced. Additionally, page 7-1 distinguishes between only the ecological/socio-economic context, without considering the other aspects of the environment. Please clarify and/or define the terms being used.
24. Section 7.2.1: bullets 4 through 6 seem to suggest that effects and changes *resulting from the Project* will affect the evaluation indicators. How is this possible, since the evaluation will occur during the EA and therefore prior to construction/operation? Please revise the text to clarify this.
25. Section 7.2.2: The opening paragraph states that the Level rating system (I/II/III) will be performed for all of the evaluation criteria, but the third paragraph on page 7-1 provides Level ratings based on broad environmental categories. Please edit the text in this section to clarify the manner in which the Level rating system will be applied.
26. Section 7.2.3: it is unclear how projects and activities that "will be carried out" is defined, and also unclear how these projects and activities will be identified. What data sources are proposed to be used to identify these projects/activities and their expected effects (to inform the cumulative effects analysis)?

Section 9.0 (and Appendices D and E)

27. Section 9.3: Reference is made to Appendices B and C. Please revise the text to refer to Appendices D and E.
28. Section 9.3: The draft ToR states that an IAMGOLD community newsletter will be widely distributed "on a regular basis." This is too vague a timeframe; please clarify.
29. For the sake of transparency in the decision-making process, please consider revising the ToR to state that the EA Report will document how the Project has been modified as a result of input from stakeholders and Aboriginal communities.
30. Appendices D and E: relating to issues resolution, the sections state that if an issues arises where agreement (between IAMGOLD and the concerned person) cannot be reached, "IAMGOLD will continue to work to resolve the issue and where necessary involve third parties." Please elaborate on the nature of the third parties and for what purpose/in what capacity they will be involved (e.g., moderation, arbitration).
31. Appendices D and E: reference is made to issues tracking and to consultation/engagement milestones, but the text does not clearly indicate how input from interested persons will be obtained. This is a requirement of the Code of Practice; please revise the text to address this.
32. Section 3.2 of Appendix D and section 4.2 of Appendix E suggest that consultation with stakeholders and Aboriginal communities during the EA will occur only on the draft EA. Consultation is a key component of the EA process and is to occur with stakeholders and Aboriginal communities throughout the EA process and not only when the draft EA is completed. Early EA consultation with all interested stakeholders and Aboriginal communities is of key importance for a proposed undertaking. Please revise the text to reflect this, and to provide clarity regarding at what points (milestones) in the EA process these interested persons will be engaged (e.g., through Public Information Events) – examples could include:
    - After the completion of baseline studies;
    - After alternatives and evaluations criteria/indicators are finalized;
    - After the evaluation of alternatives is completed;
    - After the preferred scenario (for all components) and mitigating measures have been determined; and/or,

- Draft EA Report.

33. Section 3.1.1 of Appendix D and section 4.1.1 of Appendix E state that comments and concerns received will be considered and addressed in the Project Description, and that consultation on the draft ToR is expected to occur January through April 2012. The Project Description has already been submitted to the Canadian Environmental Assessment Agency, and the timeframe for the draft ToR has changed. Please revise the text accordingly.
34. Appendix E section 4: The terms "consultation" and "engagement" appear to be used interchangeably. 'Engagement' is not defined in the Codes of Practice, nor in the EAA. The ministry's expectation is that consultation will be carried out in the manner that is expected per the definition of "consultation" in the Code of Practice for Consultation in Ontario's Environmental Assessment Process. Accordingly, please remove the use of the word "engagement" and replace it with "consultation," citing the definition in the Consultation Code of Practice.
35. Appendix E: needs, interests and capacity are likely to differ amongst Aboriginal communities. Please consider including text in the consultation plan speaking to consideration/flexibility in how IAMGOLD will respond to these differing consultation needs and interests/concerns.

Record of Consultation

36. The Record of Consultation appears to be incomplete and does not contain a full accounting of all communications with the Ministry of the Environment. The Record of Consultation (e.g., Appendix E, Table E-2) is devoid of any communications with the Ministry of the Environment's Environmental Assessment Branch. Additionally, none of the handouts/presentation slide decks for the interministerial meetings is provided. Please ensure that the Record of Consultation is complete by including these items.

The EASS is of the view that the additions and modification to the ToR outlined above should be undertaken. Should you have any questions, please contact Mr. Wesley Wright, Project Officer, by phone at 416-325-5500 or by e-mail at wesley.wright@ontario.ca. Alternatively, you may contact Ross Lashbrook, EASS Supervisor, by phone at 416-314-7765 or by e-mail at ross.lashbrook@ontario.ca.

Meeting Notes – DRAFT FOR REVIEW

Gogama Local Services Board
Timmins, ON

Project:	IAMGOLD Côté Gold Project
Purpose:	To gather information on Gogama for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.

Attendees:
Gerry Talbot (GT), Gogama Local Services Board
Cheyenne Martin, AMEC (CM)

CM indicated that AMEC is preparing a socio-economic and land use baseline report for the Côté Gold Project for IAMGOLD. He provided some preliminary maps of various land uses (gathered from publically available sources) for a delineated Regional Study Area (RSA) and a fact sheet on the project.

Labour force in Gogama

GT: Labour force will not be made up of people from Gogama. There will be some employees from the community, but Gogama is made up of about 60% seniors. It is a retirement community; the other young people work in the mill for the most part. There might be a few in the community that might work a year or two that have experience but you're not going to have a major number of people available to work in the mine. There will be more in the service end, and between Mattagami and Gogama there is about 20 people working for the past 2-3 years. Maybe in the administrative end as well; this is more likely than actual miners. This may change if people with mining experience locate in Gogama in anticipation of the mine opening.

Business in Gogama

GT: Prospectors have come to the area since the 1930's.There have been investors in the community that have been burned by high graders that have come through, and some people in the community ~~is~~ may not be convinced that the project is going to happen. The price of gold has fallen below $1,400, but IAMGOLD must have confidence about gold prices since they are still moving forward with their plans. The company is very community-oriented and very willing to communicate. The first open house had 75 to 100 community people attending. Although some may be leery (especially among the older residents) and a bit skeptical they are ultimately supportive of the project because of the employment they've seen at the site already. I haven't seen all of the plans yet but as long as they keep moving forward they will have the support of the people in the community. There is not a lot of negative sentiment.

With regards to tourism, the existing campgrounds are at capacity with people who come back every year. If there is a large influx into the community and there may be pressure on fishing and recreation resources but this has to be confirmed by Ministry of Natural Resources.

With regards to the procurement process, there is confusion with regard to the priority given to local communities. When jobs are available, how do they define first contact? Is it ordered as Mattagami first, Flying Post second, Gogama third, etc.? What is the procedure going to be? Who is first on the list?

There is a perception that by some that Contractors are approaching First Nations and making arrangements where they are subcontracting for, say Mattagami, and operating with a letter of approval from council. Then they go ahead and work for IAMGOLD. Is that how the process is to work? We don't have a lot of businesses in town but Janet Lowe had said that we have to create our own opportunities. If a local company wants to offer services to the mine they seem amenable, but local companies need to know the process. Residents don't know who to talk to if they want to do business with the mine.

Vision of economic development

GT: As a community you have to be investment-ready. This can be from businesses moving in and from people wanting to live in Gogama because of the mine. The problem lies with who takes the lead on making sure that the community is investment-ready. Right now we have the Local Services Board which is basically the municipal office that has worked with IAMGOLD and has been the voice for Gogama. But the local services board does not have the mandate or financial resources to support ~~for~~ economic development. We offer services on a user fee basis. We don't have funding for economic development initiatives. The Gogama Chamber of Commerce has been dormant for the last 2-3 years but the Chamber could take the lead on this type of activity. This would not mean that the LSB would not be involved, we all have to work together. This would include not only preparing the community but making sure that there is good communication between IAMGOLD and the community. It could eventually become the representative for the community to IAMGOLD. That said, we need to watch that we don't have more than one group talking to IAMGOLD about what the future holds and the Chamber of Commerce still needs to be revived. The LSB is still the group that is elected.

The Chamber of Commerce has four executive members but they are not meeting on a regular basis. In order for the Chamber to grow we need to find people with the same community vision to work together and it is not an easy task to take on. It is a long-term job.

The LSB is making sure in terms of services – sewer, water, etc. – in preparation for the project.

The community attracted 20-25 families that were retirees or semi-retirees based on a brochure six or seven years ago and word of mouth. Retirees need access to medical facilities. Young couples see a public school that is closed as of a year ago and a separate school with 5 students. There are no extra-curricular activities. Some may move to Gogama because they don't want the camp life. We will try to convince people and be ready for them. Right now there is not much developed land for new development and we don't have the money for a lot development of 30-40 lots. The government is leery about putting in money for a lot development plan, since you need to sustain the development with services and landfill management. We could approach IAMGOLD about funding the service lot, but that is something possibly the Chamber of Commerce will need to lead. Surveying one lot can cost $1,800. For IAMGOLD to help they need to see a return on that investment.

Some people may take the opportunity to sell their homes. I've been in Gogama all my life but I'm not getting any younger. I think about moving to the city as I get older and medical problems start showing up and I am not alone in those considerations. But people have not been rubbing their hands and saying "IAMGOLD is coming, I'm going to sell my house".

Changing population

GT: The sewer and water each will take about 1,000 people before they would require new investments. That is a large number. A consultant for MNR put the number together expected the community to decrease. When I was growing up we had 200 kids in school; now we have 5. In September there will be 11 kids. The population will not go sky-high. You need cash flow to expand services; government does not want small communities to grow because they grow too fast and around mines for too short a time. People afterward move out and the community can't support themselves, the community declares bankruptcy and the government gets the bill. The best case for growing is that the mine can provide employment, while it is around.

I'm not sure if residents would be interested in talking to their children or grandchildren about returning to the community to work at the mine. There has been out migration of our youth and I don't know if there would in migration of youth when the mine becomes operational.

Going forward

GT: Cheryl has been a good liaison and we have a good rapport with her. I have had one meeting with Aaron and I would like to keep that communication going. Communication is going to be the success of anything that is going to move forward. From a community perspective we owe it to IAMGOLD to let them know how the community is going to go forward into the future, either through a renewed Chamber or through the Local Service Board.

May 21st, 2013

Meeting Notes – DRAFT FOR REVIEW

City of Greater Sudbury
Sudbury, ON

Project:	IAMGOLD Côté Gold Project
Purpose:	To gather information on the City of Greater Sudbury for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.

Attendees:
Doug Nadorozny, CAO City of Greater Sudbury
Ian Wood, Director of Economic Development, City of Greater Sudbury
Bill Lautenbach, General Manager, Growth and Development, City of Greater Sudbury
Cheyenne Martin, AMEC (CM)

CM indicated that AMEC is preparing a socio-economic and land use baseline report for the Côté Gold Project for IAMGOLD. He provided some preliminary maps of various land uses (gathered from publically available sources) for a delineated Regional Study Area (RSA) and a fact sheet on the project.

Baseline data
Ian Wood agreed to provide information on major employers and mining service companies in the city as well as construction companies capable of bidding on major construction projects.

Projects in the area

- Exploration is slowing with less money for drilling, etc.
- Operating mines still "chugging along", however, with no huge changes.
- Optimistic that KGHM will go ahead with the Victoria project.
- Cliffs Natural Resources is planning a massive project for which Sudbury will be a major beneficiary.
- Xstrata Zinc will likely be re-opening two properties in 2016 and the market for Zinc is pretty good.
- Although Vale is scaling back its plans on the Clean Air Project but still intends to move forward with Victor-Capré.

Effects of mining projects
It is difficult to differentiate projects and their effects. Sudbury is far from a single industry city and no individual project can be looked at as make-or-break. Citizens of the city are resilient and used to the vagaries of the market. There were predictions of doom and gloom for the city's economy in 2008 but this did not happen – one of the benefits of not having all its eggs in one basket.

The housing market, for example, has remained healthy and stable and they are currently anticipating a vacancy rate less than 1%.

Relationship to the project

The City will be able to play a support role, setting up breakfasts between IAMGOLD and the city's service providers to talk about needs. The City has organized initiatives to help local suppliers in the Indian market, held seminars on opportunities in Minnesota, and have worked to connect youth with the labour requirements of mining producers. They are willing to send information and hold events.

They do not have a global policy on procurement but they hope that IAMGOLD's procurement process is open and transparent. IAMGOLD should include the Sudbury Construction Association in construction planning.

Laurentian University encourages private partnerships through its Centre for Excellence in Mining Innovation (CEMI).

Social impact of mining projects

Sudbury has seen limited social effects from mining projects away from the community; social effects tend to limited to the host community. Exceptions may be the housing supply, since people establish their homes in proximity to their commute. That said, residents are used to complex geography and long commutes in the area. Effectively there is a strong community culture and a single labour market.

It may put positive pressure on Onaping-Levack's housing market, which has been slumping because of relative proximity to the mine site.

Specific needs or impacts are not expected from the project. Sudbury is more underground-focused in its mining services industry rather than open pit and the terrain is different from the usual terrain at Côté Lake. However, the city does have a developed aggregate industry and there may be linkages to both industries.

Truck traffic is a concern, as Highway 144 has little or no shoulders and frequent wildlife interactions. Improving cell service on that corridor is a concern that the city will talk with IAMGOLD about in the future.

Education and Training

If there are specific needs that IAMGOLD has for training, the city has two colleges and a university that can offer directed training. NORCAT, a spinoff of Cambrian College, offers site-specific training that can be administered remotely.

May 23rd, 2013

Meeting Notes – DRAFT FOR REVIEW

City of Timmins
Timmins, ON

Project:	IAMGOLD Côté Gold Project
Purpose:	To gather information on City of Timmins for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.

Attendees:

Joe Torlone (JT), CAO City of Timmins
Cheyenne Martin, AMEC (CM)

CM indicated that AMEC is preparing a socio-economic and land use baseline report for the Côté Gold Project for IAMGOLD. He provided some preliminary maps of various land uses (gathered from publically available sources) for a delineated Regional Study Area (RSA) and a fact sheet on the project.

Effects of mining projects

JT: Our experience has been positive for projects have been good except for a historic experience with a company called ERG. It was in the heart of the city and there were some negative consequences.

The Hollinger project, which is taking place right in the city, has been a good experience. The only frustration is that the regulatory process goes at a snail's pace. We don't see unexpected costs associated with IAMGOLD given that is geographically removed from the city. It may help our mining suppliers and we would like to see a project office here. There's no downside from our perspective.

Lessons learned

JT: What we have learned working with mining companies is that it is critical to have comprehensive, complete, open and transparent communication – not just with First Nations, but for everybody. People need to have a full understanding of what you're doing. Suspicious attitudes pop up because people are uninformed. We've told Goldcorp that you need to painstakingly inform the public of everything you need to go through for approval. Because that project is in the heart of our city, dust and noise problems are very important and you need to mitigate those effects – a communication plan is very important. Goldcorp has done it the best of any of the companies we've worked with so far in terms of achieving this.

Put a management plan to manage each issue, and they've put tools online. They've taken measures, putting testing stations all around the open pit area for noise and reporting them online (at least regarding what is required for permitting). They've employed architectural firms to beautify areas, they've come to council a lot on the project. My first recommendation is to come to council and introduce the project. Mining companies often have to be dragged through this process since it is not something they are familiar with. IAMGOLD gave a good presentation to council a month ago that was well-received.

Enhancing effects

JT: We would love to have IAMGOLD open their office in Timmins. We hope they would be receptive to have Timmins suppliers have access to their procurement processes as Sudbury would be. We would help IAMGOLD inform employees about the services, accommodation etc. Timmins has to offer. We are a regional centre looking north. We would make every effort to entice people to live in Timmins. Spouses or partners need to know what we have to offer in this community with bilingual schools. Cochrane is facing issues with capacity with the population growth associated with Detour Gold.

Labour markets and housing

JT: This year we are opening a tender to expand the water capacity in the northern part of the city which will open 2,000 lots. We don't expect to use 2,000 lots in our lifetime, but those lots will be available by 2014. Currently housing is a big issue identified by the mining companies. It is a barrier to attract engineers to the Timmins area as a result. We should have a handle on it in 2014 but prices for housing will remain more expensive than other communities in the area like Cochrane (but cheaper than Sudbury). Our housing study on affordable housing should be complete by Christmas.

With regards to the skilled labour force, there is some talk about a shortage in the greater mining area (from Kirkland Lake to Sudbury). In 2020 if everything goes well the Xstrata base metals mine will close and it has 1,040 employees – that is a huge labour force. The price of gold has fallen and there will likely be layoffs as a result from producing mines. The skilled labour force will likely be there when the mine comes. The Conference Board report says we created 5,000 jobs which I find hard to believe because our population is virtually static.

Strategic Initiatives

JT: Timmins is going through the implementation of its strategic plan. The essence of that plan is to make Timmins a more attractive place to work, live in and play – for those that live here and those that want to come here. Our initiative would be to help any way we can, either regulatory or with regards to recruitment. When the metallurgical centre closed, about 70 people, we didn't feel a blip. During that time Xstrata Copper closed a mine in Bathurst, New Brunswick. We got a plane and flew a planeload of miners to Timmins and showed them the jobs available. We are willing to do these things. We have an excellent airport which is under city control, not a private entity or the federal government. It has been one of the biggest economic development catalysts we have.

Procurement

JT: We can host evenings which would introduce buyers at IAMGOLD to introduce them to all of the service providers to hear about the company's needs. We're going through a project at the airport for launching stratospheric balloons with the Canadian Space Agency and the French

Space Agency. These balloons are as tall as the Eiffel tower and a football field wide and carry a payload of a ton and a half. There are 21 sea containers coming in from France. We got the crane which was integral to it. There can be supply bottlenecks in this region – sharing information and plans with suppliers can be critical. Also, sharing procurement processes at IAMGOLD so they can familiarize themselves. Timmins would also like to showcase what we have to offer.

May 23rd, 2013

Meeting Notes – DRAFT FOR REVIEW

Ontario Provincial Police – South Porcupine Detachment
Timmins, ON

Project:	IAMGOLD Côté Gold Project
Purpose:	To gather information on Ontario Provincial Police activity in the Gogama area for the Socio-Economic Baseline report being prepared by AMEC Environment & Infrastructure.

Attendees:

Sergeant Stephen Meunier, Program Manager, Ontario Provincial Police – South Porcupine Detachment

Cheyenne Martin, AMEC (CM)

CM indicated that AMEC is preparing a socio-economic and land use baseline report for the Côté Gold Project for IAMGOLD. He provided some preliminary maps of various land uses (gathered from publically available sources) for a delineated Regional Study Area (RSA) and a fact sheet on the project.

Emergency services and policing

- Gogama detachment reports to the South Porcupine Detachment and its jurisdiction extends as far south as Marquette Township and as far north as the Sudbury District line.
- The detachment has one (1) Sergeant and six (6) Constables, a rookie having being recently been added to the detachment. Administration is run through Timmins. The size of this force is not seasonal.
- Efforts of the Gogama detachment are oriented towards both the provincial highways (mostly Highway 144) and to the large unorganized area's trails, lakes, cottages and communities (Gogama).
- In the summer effort is placed on cottage waterways, deterring behavior that can lead to drowning. Outside cottage season more effort is directed towards Highway 144, which has a lot of curves, little shoulder and needs consistent oversight.
- Community needs are met with existing resources. Crime levels are down in 2013 in Gogama, with property crimes falling between 15 and 20% in the South Porcupine cluster.
- Sergeant Meunier will provide data on vehicle traffic and accidents on Highway 144, noting that a lot of accidents involve animals and are seasonal.
- The OPP is not concerned about additional demand from the mine but would like to know the size of the construction and operations workforce.

- OPP does want to know when the worker's camp is built in order to "fly the colours" of the force, since employees need to know the police are there if needed. The OPP will assign a liaison officer, likely the Sergeant of the Gogama detachment, to work with the company on issues including investigation of industrial accidents and arranging escorts on trucks. The Sergeant should be added to the mailing list for the project.
- OPP has a good relationship with NAPS (the two forces engage in joint initiatives), but any questions with respect to NAPS should be addressed to them directly.

DRAFT

MEETING NOTES - DRAFT

July 3, 2013

2:00 – 4:30

Project:	Côté Gold Project		
Purpose:	ToR Comments and Responses Overview and Consultation Planning		
Attendees:			
	IAMGOLD	**AMEC**	**Government**
	Aaron Steeghs (AS)	Stephan Theben (ST)	Wesley Wright (WW; MOE)
	Steve Woolfenden(SW)	Caroline Burgess (CB)	Ellen Campbell (EC; CEAA)
		Sophie Bertrand (SB)	Dawn-Ann Metsaranta (DAM; MNDM – Teleconference)
Distribution:	Attendees		

AGENDA

Topic	Action By	Due Date / Status
Overview of draft ToR Comments		
• SW indicated that the proposed ToR comment period would begin on July 19th and that the ToR will include a new site plan. • SW noted that the EIS Guidelines are expected on or before July 12.	Info	--
• SB provided an overview of the comments: o 158 comments, received primarily from government agencies: MTCS, IO, MOE, MEDTE, MNDM, MAA as well as the Sudbury Health Unit, the Mesomikenda Cottagers Association and Sanantana Resources. o No comments received from Aboriginal groups • Purpose of the meeting to discuss how IAMGOLD is responding to these comments and get feedback on how we are responding. This feedback will be used to finalize the ToR.	Info	--
• WW asked what follow up was done with Aboriginal groups re: draft ToR. • SW noted that there was open houses in MFN and FPFN and that the attendance was dropping from earlier open houses and that not a lot of interest in the ToR. Similar concerns were expressed at the open houses as in the previous open houses and these are documented in the Record of Consultation. Some First Nations have indicated that they are very busy with consultation on other projects and are getting consultation fatigue. • SW noted that IAMGOLD was at the Timmins Mining conference at the end of May and that their booth was busy and the ToR materials were there for review.	Info	--
• ST went through comment groups (handed out summary of comments):		
• Group 1: Comments asking for information that will be covered in the EA (and not the ToR) as the information is not yet available. There was	Info	--

general agreement that this was an appropriate response.		
• Group 2: Comments about assessment indicators (e.g., comment # 77, 78, 115, 116). ST noted that the indicators used were developed by MNR for a previous mining EA in Ontario and there is concern that if new indicators are introduced that MNR would object to changes in the design of the assessment tool. WW and DAM committed to discuss this issue with MNR	WW/DAM	By July 4
• Group 3: Comments about including the "do nothing" alternative. ST indicated that this will be incorporated and will be addressed through the Pre-feasibility Study for the Project. There was general agreement that this was an appropriate response.	Info	--
• Group 4: Comments about the impact assessment methodology (comment #22). ST stated that he agreed with the suggestions and the methodology will be revised accordingly. There was general agreement that this was an appropriate response.	Info	--
• Group 5: Comments about including study area maps (comment # 105). The study areas will not be included in the ToR because there are over 20 different study areas to reflect differences in areas of influence by discipline area (e.g., air quality study areas are different that socio-economic study areas). Further, since baseline work is still underway, these study areas could shift somewhat before being established for the EA. There was general agreement that this was an appropriate response as long as the rationale for not including the study area maps is clearly stated in the ToR.	ST – added rationale for ToR	Before July 19
• Groups 6: Comments about habitat compensation. To address these comments IAMGOLD had a meeting and site tour with MNR and DFO (late June) and are discussing compensation measures that will support existing Fish Management Plans. Fish habitat credits are also being considered. There are good opportunities to work with Aboriginal groups on habitat compensation measures. Overall there could be close to no net loss in fish habitat due to current site designs. There was general agreement that this was an appropriate response.	Info	--
• Group 7: MTO comments will be addressed by discussing highway effects directly with them. There was general agreement that this was an appropriate response.	Info	--
• Group 8: Comments about the transmission line – in particular the absence of a third routing was not well understood. WW noted that at a past meeting there was mention of a third route (Shining Tree route) that was not included in the draft ToR. SW clarified that this transmission line was a 115 kV line that would not be sufficient capacity to serve Project needs and was therefore removed from the assessment of alternatives. One of the remaining 2 options follows the same routing as this previously considered option. There were other comments on routing that we are considering in the project designs. There was general agreement that this was an appropriate response.	Info	--
Overview of New Site Layout		
ST and SW presented highlights of new site plan: • Changes include the removal of the 2 MRAs on the east side of the original site plan to reflect design changes and cottager comments • Changes to channel re-alignments	Info	--

• Only 1 low-grade stock pile • Different areas for plant and work camp • Closure concept includes removal of some of the channel re-alignments around the plant site, others will be permanent (Bagsford Creek)		
• WW asked what the height of the MRA is in the new site layout. • SW stated it changed from 100 to 150 m (which is lower than the MRA for Hammond Reef). The aesthetics of the MRA can be optimized through visual screening.	Info	--
• WW asked how long the channel re-alignments would need to be monitored. • SW stated that the re-aligned channels would not need long-term monitoring. They would be re-vegetated and would start to mimic existing water-courses. The gradients of the channels are the same as the existing channels and therefore same type of habitat.	Info	--
• EC asked about the landfill. SW stated that the landfill options will be carried in the EA, but that there is many decision to be made about which option to use, noting that the MNR has approached IAMGOLD about using their landfill near the site. This option needs to be added to the ToR.	ST – ensure all landfill options included in the ToR.	Before July 19
• SW outlined other changes that may still occur on the site plan such as the location of the water intake and discharge locations.	Info	--
• SW clarified that the aggregate pit names are the 'permitted' names – and that they are not mislabelled on the site plan.	Info	--
• SW noted that the new site plan will be presented in the ToR.		
Overview of Changes to the Record of Consultation		
• CB provided an overview of the revised format of the Record of Consultation to ensure that the consultation period on the draft ToR is separated out in the text and appendices. There was general agreement that this was appropriate.	Info	--
• CB and AS provided an overview of the consultation plans which include meetings with Aboriginal communities on effects predictions and mitigations prior to the draft EA being submitted and further consultation (meetings, open houses, document reviews) on the draft EA in early 2014. There was general agreement that this was appropriate.	Info	--
• AS provided an overview of other ongoing involvement of stakeholders and Aboriginal groups in the Project including involvement and support for TK/TLU studies, Archaeology and socio-economics. • AS noted the planned Cultural Heritage day at the site at the end of July to review TK/TLU and archaeology with the MF N and FPFN.	Info	--
Other Discussion Items		
• WW asked about the status of the baseline studies. SW stated that initial drafts have been prepared reflecting 2012 field season data. These will be updated and consultation on these will occur in the fall. A baseline brochure has also been created to provide information to the public. • WW indicated that the MOE has no capacity to review initial drafts and to therefore send only finals.	Info	--
• It was noted that the Aboriginal technical review of documents was being	AS	Ongoing as

facilitated through the Wabun Tribal Council. IAMGOLD will support these reviews and encourage use of other government capacity funding. • WW indicated that there is interest in knowing who (if any) will be providing review comments and to get in writing an indication if no comments will be received. AS will facilitate this information sharing.		required for document reviews
• EC noted that the Agency did not get many comments on the draft EIS Guidelines and that the participant funding opportunities are communicated with the release of the final EIS Guidelines.	Info	--
• CB asked if there was any interest on the part of the government agencies in participating in upcoming stakeholder and Aboriginal group meetings. It was noted that many of the Aboriginal group leadership make trips to Toronto and may be available for meetings at that time. EC and MOE appreciated the offer and will attend meetings if possible. To date, most of the Agency contacts have been via conference call. • DAM stated she would like to be involved in future consultation activities – particularly if they involve Closure concepts/plans.	Info	--

RE: Côté Gold Project, Environmental Assessment Report Form and Notice of Submission

Dear Mr. Wright:

As you are aware, following the completion of the draft Terms of Reference (ToR) comment period for the Côté Gold Project, the next step in the environmental assessment is to submit a proposed ToR for public comment. If approved by the Minister, the Proposed ToR will provide the framework and requirements for the preparation of the Environmental Assessment for the Côté Gold Project.

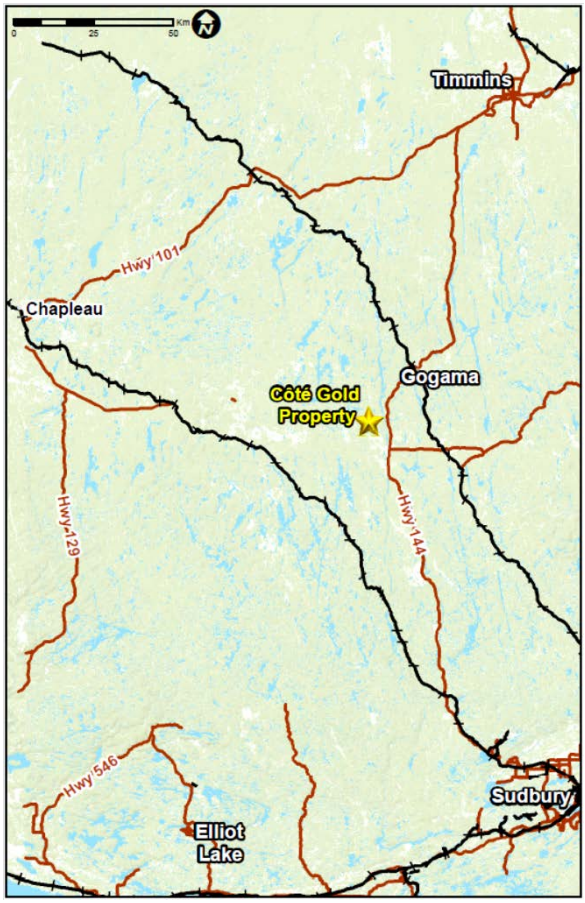
IAMGOLD is planning to make the proposed ToR available for review and comment beginning July 19, 2013. As prescribed in section 5.1 of the Code of Practice, I have attached a signed copy of the Environmental Assessment Summary Form and a copy of the Notice of Submission.

Sincerely,

Steven Woolfenden
Manager, Corporate Environmental Approvals and Permits
IAMGOLD Corporation

Encl.

1. Environmental Assessment Summary Form – entitled “Terms of Reference Summary for the Environmental Assessment Web site”
2. Notice of Submission



Notice of Submission of Terms of Reference

Côté Gold Project

As part of the planning process for the **Côté Gold Project**, the Proposed Terms of Reference is being submitted to the Ministry of the Environment for review as required under the *Environmental Assessment Act*. If approved by the Minister of the Environment, the Terms of Reference will serve as the framework for the preparation and review of the Environmental Assessment for the proposed undertaking.

The Côté Gold Project is a majority owned Project held by a subsidiary of **IAMGOLD Corporation** (IAMGOLD), and consists of a proposed open pit gold mine with related processing facilities and infrastructure. The Project is located in northeastern Ontario, approximately 20 kilometres southwest of Gogama.

The Project is anticipated to be a significant contributor to the local economy and will provide employment opportunities. Consultation on the Côté Gold Project was initiated by IAMGOLD in 2012.

The Proposed Terms of Reference is available for review during regular business hours at the following locations:

Gogama

IAMGOLD Corporation
Côté Gold Project
3 Mesomikenda Lake Road
P.O. Box 100
Gogama, ON P0M 1W0
T: 705-269-0010

Gogama Public Library

2 St. Clair Ave. West, Floor 12A
Toronto, ON M4V 1L5
T: 416-314-8001/1-800-461-6290

The Proposed Terms of Reference will also be available for download at: www.iamgold.com and will be available for review at local First Nation community and Métis offices.

Written comments about the Proposed Terms of Reference must be received by **August 19, 2013**. All comments should be submitted to:

Wesley Wright, Project Officer
Ministry of the Environment
Environmental Approvals Branch
2 St. Clair Avenue West, Floor 12A
Toronto, ON M4V 1L5
T: 416-325-5500/1-800-461-6290
F: 416-314-8452
E-mail: Wesley.Wright@ontario.ca

A copy of all comments will be forwarded to IAMGOLD for their consideration. For further information about the proposed Project please contact:

Steven Woolfenden
Manager, Corporate Environmental Assessments and Approvals

Under the *Freedom of Information and Protection of Privacy Act* and the *Environmental Assessment Act*, unless otherwise stated in the submission, any personal information such as name, address, telephone number and property location included in a submission will become part of the public record files for this matter and will be released, if requested, to any person.

Ontario

Ministry of the Environment

Terms of Reference Summary

for the Environmental Assessment Web Site

General Information and Instructions

General:

Information requested by this form is collected under the authority of Regulation 334, made under the *Environmental Assessment Act*. The project and summary information provided in this form will be posted for a minimum 30-day consultation period on the environmental assessment page of the Ministry of the Environment's website.

This form requires French translation before it is posted on the website. The Ministry requires 5 to 10 business days for French translation services. Therefore, the completed form should be submitted (electronic copy and hard copy) to the Environmental Assessment and Approvals Branch at least two weeks prior to the posting date.

The proponent is responsible for ensuring that copies of the terms of reference are delivered to the appropriate government reviewers, other interested persons and the places of public record on or before the posting date.

The proponent must contact the Branch to determine an agreed upon **posting date** and **terms of reference distribution date**. The posting of the terms of reference summary information also represents the commencement of the regulated timeline for the review and decision about the terms of reference.

Instructions:

1. This form must be accurately completed. Questions regarding the completion and submission of this form should be directed to the Project Officer at the Environmental Assessment and Approvals Branch. **AN INCOMPLETE FORM WILL BE RETURNED TO THE PROPONENT**.
2. Please ensure that you have included a hardcopy and an electronic copy of the proposed distribution list, notice of submission, Terms of Reference Executive Summary (maximum 2 pages in length), the study area map and a copy of the proposed terms of reference with this form.
3. Please send the completed form to:

   Director, Environmental Assessment and Approvals Branch
   Attention: Project Officer
   Ministry of the Environment
   2 St. Clair Avenue West, Floor 12A
   Toronto ON M4V 1L5
4. The summary portion of this form should not exceed two pages.

7. Project Summary - This portion of the form should not exceed two pages.

Summary:

Should provide a brief project description including the purpose of study (problem or opportunity) and the study area location.

The Propsed ToR will provide the framework for completing a Provincial Individual EA, in order to allow approvals to be issued to construct and operate a proposed open pit gold mine, and associated facilities, for the Côté Gold Project (the Project) to produce gold for sale. The Project is situated in the Chester and Neville Townships, District of Sudbury, in northeastern Ontario, approximately 20 kilometres (km) southwest of Gogama, 130 km southwest of Timmins, and 200 km northwest of Sudbury. Coordinates for the proposed open pit are at Universal Transverse Mercator (UTM) 5266765 E, 429629 N (NAD 1983 UTM Zone 17N). The Project site is accessible by Highway 144 to the east via the Mesomikenda Lake access road. Highway 144 connects with Sudbury in the south, Gogama, and Timmins in the north. The area is mainly characterized by gentle hills, mixed forests, lakes and rivers. The site is located on two subwatersheds, the Mollie River system and the Mesomikenda River system. Additionally, the intercontinental watershed divide is located south of the Project property, with the nearest boundary located more than 3.5 km southwest from the proposed open pit location. The Project site is located in a low density rural area and land use in the area consists of recreational activities by locals and tourists, including fishing, camping and hunting. It is also extensively used for sustainable harvesting of timber.

The purpose of the undertaking is to produce doré gold bars for sale and provide a return on investment to shareholders of IAMGOLD, by constructing and operating a gold mine (the Côté Gold Project). IAMGOLD proposes to construct, operate and finally reclaim a new open pit gold mine on the Project property. The preliminary site layout proposes to install the necessary mine-related facilities in clise proximity to the open pit, primarily on private lands owned by IAMGOLD. The major Project components are expected to include:

- open pit;
- ore processing plant;
- maintenance garage, fuel and lube facility, warehouse and administration complex;
- construction and operations accommodations complex;
- explosives manufacturing and storage facility (emulsion plant);
- various stockpiles (low-grade ore, overburden and mine rock (MRA));
- aggregate extraction with crushing and screening plants;
- tailings management facility (TMF);
- on-site access roads and pipelines, power infrastructure and fuel storage facilities;
- potable and process water treatment facilities;
- domestic and industrial solid waste handling facilities (landfill);
- water management facilities and drainage works, including watercourse realignments; and
- transmission line and related infrastructure.

Open pit mining operations are expected to occur at a rate of approximately 60,000 tonnes per day of ore production. Overburden and mine rock stripped from the open pit wull be stored in an adjacent mine rock area (MRA). An explosives manufacturing and storage facility will be developed to support mining operations as per industry best practices.

Ore processing will be carried out using conventional whole ore cyanidation for gold recovery, followed by in-plant cyanide destruction using the SO2/Air oxidation process. Tailings will be stored in a constructed TMF. The ore processing plant will

operate on extensive waste water recycle derived from the TMF and mine water. Excess TMF and mine water which cannot be used in recycling will be discharged to either the Mesomikenda or Bagsverd Lake, after a secondary polishing pond. Such discharge will meet all applicable Federal and Provincial effluent discharge requirements, and will be protective of receiving water aquatic life within the lakes (and as a result, also protective of downstream water quality). Discharge locations are under investigation.

A maintenance garage, warehouse and administration complex will be developed in the vicinity of the open pit. Non-hazardous domestic solid wastes will likely be deposited in an on-site landfill, unless suitable off-site landfill capacity can be found. Hazardous solid and liquid waste will be hauled off-site by licenced contractors to licenced storage facilities. Domestic sewage will be treated using a package sewage treatment plant or equivalent. Workers are expected to be housed within local communities, though some may be accomodated as needed in the proposed accomodations complex at the Project site.

It is expected, as part of the proposed development of the open pit, that the Côté Lake will need to be drained. Additionally, it is expected that portions of the Three Duck Lakes, Chester Lake, Clam Lake, Bagsverd Ceek and the Mollie River system will require realignment to allow safe development and operation of the open pit and TMF, although this remains under investigation.

Power for the initial construction will be provided through the existing transmission line (1 MW) as well as with diesel generators (less than 5 MW). Permanent power will be provided through a proposed 230 kV transmission line connection from the existing Hydro One in Timmins at the Porcupine Substation. The proposed alignments for this transmission line remain under investigation.

June 7, 2013

Stephen Letwin
President and CEO
IAMGOLD Corporation
401 Bay Street, Suite 3200 P.O. Box 153
Toronto ON M5H 2Y4

Dear Mr. Letwin:

RE: Aboriginal Consultation Requirements – IAMGOLD Corporation
Cote Gold Project

The Ministry of Northern Development and Mines (MNDM) has reviewed the Notice of Project Status for the Cote Gold Project (the "Project"). IAMGOLD Corporation will be required to submit an advanced exploration closure plan, including financial assurance, before proceeding with the Project. The company must also conduct public notice, as per section 141 (1)(b) of the *Mining Act*.

The MNDM has determined that the Project has the potential to cause adverse impacts to Aboriginal and treaty rights and consultation will be required with those Aboriginal communities whose rights may be affected.

In accordance with subsection 8.1(3)1 of Ontario Regulation 240/00, I am directing IAMGOLD Corporation to prepare and submit a plan of consultation for my review with respect to:

- Mattagami First Nation
- Flying Post First Nation
- Métis Nation of Ontario Timmins Community Council
- Brunswick House First Nation
- Matachewan First Nation (for the Transmission line corridor only*)
  *Please note that Matachewan First Nation is not identified for the immediate project area including the open pit and related infrastructure.

This list is subject to change, based on MNDM's ongoing review of information received during the consultation process or the receipt of assertions by other Aboriginal communities.

Subject: Comments from IAMGOLD - EIS Guidelines

Hi Steve,

Further to my letter earlier today, attached is a disposition table responding to the comments provided by IAMGOLD on the draft EIS Guidelines for the Côté Gold project.

As always, please contact me if you have questions/concerns.

Thanks,

Ellen

IAMGOLD Comments on draft EIS Guidelines for Côté Gold Project.

#	Section of EIS Guidelines	Guideline	Comment	Rationale for exclusion / modification	CEAA response
1	3.5, page 6	The draft EIS Guideline states that the title of the document will contain the term "environmental impact statement".	Suggest to modify "environmental impact statement".	As this environmental assessment report will comply with Federal and Provincial governments, a title suitable to both parties is necessary. IAMGOLD will engage with CEAA and MOE to develop a document title and table of contents that are satisfactory for both parties.	The name of the document is not a concern as long as it meets the requirements of the EIS Guidelines.
2	3.5, page 6	The draft EIS Guideline states that: "Detailed studies...will be provided in separate appendices and will be referenced by appendix, section and page in the text of the main document..."	Suggest to remove the requirement for referencing page numbers.	As there will be various reference to the detailed studies in appendices, which will be finalized at the same time as the EA report, it would be a very onerous task to provide page numbers.	Reference removed. Page #'s can be excluded, as long as the appropriate appendix is referenced.
3	7.1.1, page 11	The draft EIS Guideline indicates the need to use Valued Components as defined in the guideline as: "Valued Components (VCs) refer to attributes associated with the project that have been identified to be of concern by the proponent, government agencies, Aboriginal peoples and/or the public. The value of a	Environmental indicators will be used to allow the assessment of all environmental effects. The selection of environmental indicators will include, where relevant, components of the environment that are considered valued by key stakeholders and will also include key ecosystem components.	As required by the draft EIS Guidelines (Section 10.1.1, page 27; Section 10.1.2, page 29): "each environmental effect will be assessed". Furthermore, according to Section 10.1.1, page 29, the EA will demonstrate that all aspects of the project are examined.	It is acknowledged that there is flexibility to include an element (or elements) in the EIS.

		component not only relates to its role in the ecosystem, but also to the value placed on it by humans"			
4	7.1.2, page 12	As required by the draft EIS Guidelines (Section 10.1.1, page 27; Section 10.1.2, page 29): "each environmental effect will be assessed". Furthermore, according to Section 10.1.1, page 29, the EA will demonstrate that all aspects of the project are examined.	Suggest to modify as follows: "Provide the outline and the principles that will be followed in the detailed contingency and response plans."	Typically, in an EA, the outline and principles of the future contingency and response plans are presented. Detailed plans are then developed once the Project goes into the detailed engineering phase which is when sufficient information becomes available.	The context here is "accidents and malfunctions". If IAMGOLD intends to use these as mitigation, CEAA (and/or other federal departments) need to know what the plans are. If the details of the plans are not provided, there is no way to determine if residual effects would be significant. If IAMGOLD is not using response plans and will provide exactly what is to be done in case of accident/malfunction, then the detailed plans may not be required.
5	9.1.2, page 17	The draft EIS Guideline indicates that the Atmospheric Environment and Climate section must include: "Ambient air quality in the project areas and, for the mine site, the results of a baseline survey of ambient air quality, including the following contaminants: Total Suspended Particulates, PM10, PM2.5, SOx, VOCs,	Suggest to modify as follows: "Ambient air quality in the project areas and, for the mine site, the results of a baseline survey of ambient air quality, including the following contaminants: Total Suspended Particulates, PM10, PM2.5, metals, SOx, NOx".	Contaminants of concern are expected to be particulate fractions, SOx, NOx and metals content in fugitive dust. AMEC will obtain and analyze 5 years background air quality data from MOE/EC air monitoring stations (Sault Ste Marie and Sudbury) including PM2.5, NOx, SOx. VOCs are not expected to be a significant contaminant of concern and is therefore not considered a suitable indicator to assess effects on air quality for this project. Background	The Environmental Code of Practice for Metal Mines indicates that any diesel generation will create VOCs. http://www.publications.gc.ca/site/eng/345934/publication.html If VOCs are not expected to be significant, the data/analysis needs to be provided to back up that assumption. Ellen Campbell spoke with Stephan Theben and Sophie

		NOx".		data on TSP metals and PM10 will be collected onsite over a 3-month period during the dry season as being representative of the most impacted season.	Bertram on June 26, 2013, and clarified that VOCs will be monitored and included in the EIS.
6		The draft EIS Guideline states that for the Algonquin Anishinabeg Tribal Council the Proponent must make key EA summary documents accessible and make plain language summaries of these documents available and ensure the group's views are heard and recorded.	Suggest that this be amended to: informing Algonquin Anishinabeg Nation Tribal Council (AANTC) when key EA summary documents are available for review and send plain language summaries of these documents if requested.	This suggested edit is based on recent discussions with Chief Jerome of the AANTC who has informed IAMGOLD that there was agreement amongst the seven community Chiefs' of the AANTC that they were not going to make an assertion on the Côté Gold Project and that they did not require ongoing consultation and engagement efforts. IAMGOLD sent a letter on April 11, 2013 confirming the details of this phone conversation, and IAMGOLD further committed in the letter that they will continue to notify the AANTC about the progress of the environmental studies and the Project. IAMGOLD initially engaged the Algonquin Anishinabeg Nation Tribal Council (AANTC) via phone and letter. IAMGOLD contacted the AANTC by phone on April 3, 2013 and offered to present the draft Project Description in person in mid April 2013. IAMGOLD subsequently spoke with Chief Jerome of the AANTC on April 10, 2013. IAMGOLD	Because the existing text in the guidelines isn't onerous, the Agency feels that the proponent can easily provide the Aboriginal group with the documents. Since these documents are already being produced for the other listed groups, the task shouldn't be onerous. Because the AANTC has not confirmed directly with CEAA their level of interest in the project, the requirement can't be changed within the Guidelines.

				remains receptive to addressing any concerns from the AANTC that may arise.	
7	11.4 and 16, pages 34 and 40	The draft EIS Guideline requires two separate programs: a Follow-Up Program and a Monitoring Program.	Suggest that one program be developed which would encompass the requirements of the Follow-Up Program as well as the Monitoring Program. This program would be entitled “Monitoring Program”.	The two programs have very similar objectives and having one single location in the EA report where to find this information would be more transparent and concise. Typically, in an EA, the outline and principles of the future monitoring and environmental management plans are resented. Detailed plans are then developed once the Project goes into the detailed engineering phase which is when sufficient information becomes available.	The Follow-up program is defined in the Act as both a monitoring and follow-up program. The programs have been separated in the guidelines but if one plan is provided that covers aspects of sections 11.4 and section 16 of the EIS Guidelines (i.e. determines effectiveness of mitigation measures) it will be accepted. This definition won’t be provided in the EIS Guidelines but if IAMGOLD provides the definition/explanation it will be accepted.

Thanks Cynthia,

Would like to clarify that I would also prefer to see a complete OWES evaluation be conducted, as this is typically MNRs standard for wetlands. Although I do recognize that this can be difficult to do with the size of the wetlands and the landscape in Northern Ontario. And it may not be practical or feasible; but it is MNRs standard for wetlands. The alternative you are providing may be feasible but difficult to really determine that until after we have seen the results, and as mentioned will require further discussions with the MNR.

Also with respects to Dave taking over the file, that has yet to be confirmed by my supervisors, it just seems like the most likely choice.

Subject: Conversation with Todd Copeland MNR

Hi All; I spoke with Todd Copeland of MNR today about the memo on our approach to assessing wetlands. His primary concern is that the wetlands are well documented and there is an understanding of what if being lost or modified through the project. I said that I think our current approach will accomplish this. He said that Dave Ballak would be taking over the file and will be pushing for full wetland classifications for every wetland. Todd and I agreed that this might be overkill on a project this size and if we can demonstrate that other EA's in Ontario have used a similar approach to what we are proposing then should be okay. There will likely be a need to resolve this issue with Dave Ballak or senior MNR personnel directly. I suggested that we use the protocol we have developed and if any of the wetlands have the potential to be a Provincially Significant Wetland (PSW) then we conduct a full wetland classification on these. Todd thought this was a reasonable approach. I indicated that the information we are collecting should provide sufficient information on the form and functioning of each wetland, the vegetation and wildlife use. This should allow us to identify any potential areas of concern through the EA which could be further assess as we move ahead with permitting (i.e. any further wetland classifications could be done in 2014).

Subject: IAMGOLD - Côté Gold Project - Proposed Terms of Reference

Government Review Team Members:

IAMGOLD Corporation (IAMGOLD) is continuing the Voluntary Individual environmental assessment process under the Ontario Environmental Assessment Act for the development and operation of the Côté Gold Project. The Côté Gold Project is a majority-owned Project held by a subsidiary of IAMGOLD, and is a proposed open pit gold mine with related processing facilities and infrastructure, located in northeastern Ontario, about 20 kilometres southwest of Gogama.

The Draft ToR describing the proposed work plan for addressing the Environmental Assessment Act requirements was made available for review by the Government Review Team, the public and other stakeholders from May 10 until June 9, 2013. As a next step, after incorporation of comments received on the Draft ToR, a Proposed ToR is now being issued for public comment. If approved by the Minister, the Proposed ToR will provide the framework and requirements for the preparation of the Environmental Assessment for the Côté Gold Project.

IAMGOLD is making the Proposed ToR available to the public for review and comment beginning July 19, 2013 and ending August 19, 2013. Copies of the Notice of Commencement, Proposed ToR and Record of Consultation will be available for download starting July 19 from the IAMGOLD website at: www.iamgold.com .

Note that hard copies, if requested by Government Review Team members, have been sent out and should have arrived by now or should arrive shortly.

All written comments on the Proposed ToR should be submitted by August 19, 2013 to:

Wesley Wright, Project Officer
Ministry of the Environment, Environmental Approvals Branch
2 St. Clair Avenue West, Floor 12A, Toronto, ON M4V 1L5

Cote Gold – Site Visit and Meeting with MNR and DFO

Minutes

Date: June 25, 2013

Location: Côté Gold

Distribution: Steven Woolfenden, Dave Brown, Cynthia Russel, Kim Connors, Robert Whyte, Todd Copeland, Kyle Stanley, Kelly Eggers, Véronique D'Amours-Gaurthier

Attendees:

Steve Woolfenden – IAMGOLD

Dave Brown - IAMGOLD

Cynthia Russel – Minnow Environmental Inc.

Kim Connors – Minnow Environmental Inc.

Rob Whyte – Calder Engineering

Todd Copeland – Ministry of Natural Resources

Kyle Stanely – Ministry of Natural Resources

Kelly Eggers – Department of Fisheries and Oceans (phoned in)

Véronique D'Amours-Gaurthier – Department of Fisheries and Oceans (phoned in)

Cynthia commenced the meeting by introducing everyone and by providing an itinerary of what was planned for the meeting. Steve Woolfenden followed by providing an update and description of two major changes that had occurred since the distribution of the Project Description: a reduction in the number of Mine Rock Areas (MRAs; from three to one) and a change in the channel realignments to accommodate the revised MRA footprint. IAMGOLD indicated that updated information on the project description will be provided to DFO and MNR, however it is not the plan to resubmit the Project Description to CEAA.

Minnow presented a presentation on the Aquatic Resources surrounding the Côté Lake Gold project (presentation attached).

Todd Copeland asked for the definition that will be used for intermittent streams? IAMGOLD confirmed that a definition for an intermittent stream will be provided and consistently applied throughout the project.

Calder followed with a presentation describing the proposed realignments to the Mollie River and Bagsverd Creek (presentation attached).

Following the Calder presentation, Kelly Eggers asked if consideration had been given to any potential loss of habitat associated with raising lake water levels in Chester Lake. Cynthia commented that given the morphometry of Chester Lake (very shallow in the north end) it is unlikely that existing littoral habitat would be lost but rather the littoral habitat would be increased. It was confirmed that all aspects of habitat will be documented as part of the assessment of the realignments, including any that would be lost with raising and lowering water bodies.

Todd Copeland asked whether or not IAMGOLD has ownership or a strategy for dealing with land ownership with respect to lands they are proposing to flood. Steve Woolfenden confirmed that this is an ongoing process and that IAMGOLD has a team working on land tenure issues that will need to be addressed for inclusion in the EA's. Kyle Stanley raised concerns of timing of channel construction, how much time would be given for vegetation to establish prior to flooding and what would be done to prevent erosion. Rob Whyte responded that construction would occur during winter months with the intent that a minimum of one growing season would be provided for vegetation growth. In addition, other methods would potentially be used to assist in the stabilization of the constructed channel and minimize erosion (i.e., core matting and use of coffer dams to control inflow).

A question was posed about transmission corridor maintenance. Kelly Eggers confirmed that DFO has an Operation Statement for Maintenance of Riparian Vegetation in Existing Rights-of-Way. A discussion followed concerning the one-time fording of watercourses. MNR and DFO indicated this didn't mean once a month fording but rather one event (over and back).

Kelly Eggers commented that the approach so far was adequate but IAMGOLD may want to consider the use of habitat units in the assessment of habitat loss and compensation provided within the proposed water realignments. This would offer more flexibility in accounting for lacustrine versus riverine losses not being replaced at the same ratio, and may demonstrate that the loss of habitat is offset. Kelly Eggers also commented that the compensation ratio may be low considering the long timeframe for pit lake establishment.

IAMGOLD indicated that if the compensation provided by proposed realignments was not sufficient (although it would appear it might be) that they would consider supporting

compensation initiatives within the watershed or region and asked if DFO would be amenable to this approach. Kelly Eggers indicated that as long the project was consistent with Fisheries Management Plans that this type of approach was acceptable. Cynthia Russel asked if Todd Copeland could put together a list of opportunities for compensation within the region such that IAMGOLD could consider it and be prepared to move forward if required. Todd indicated that he believed he could readily develop such a list (with help from Kelly Eggers).

Cynthia reviewed the timelines for the project and the EA specifically and stressed the need of IAMGOLD to identify any significant issues with the realignments and approach to fish compensation. Cynthia asked if either agency saw any fatal flaws with the proposed approach.

Both DFO and MNR confirmed that there were no major concerns with the proposed project and while they could not formally comment until the information was before them, the approach seemed feasible.

Steve Woolfenden discussed IAMGOLDs corporate responsibility and approach for the project and the possibility of offsite habitat compensation in order to offset and contribute to compensation within the project as well as obtain habitat credits. Steve clarified that the habitat credits approach would only be used if any compensation initiatives were undertaken that provided more compensation than required for the Cote Gold project. These credits could potentially be used in the future to support First Nation initiatives. Steve indicated that he recognized this was a process that was not yet finalized but wanted to let DFO know that IAMGOLD would pursue habitat credits if the opportunity warranted it.

Cynthia Russel asked Kelly Eggers to comment on the timeframe for Fisheries Act Authorization (FAA) under the new regulations. Kelly Eggers responded that she was unfamiliar with Major Projects Management Office timelines, but there are timelines indicated under CEAA 2012 as well as in the proposed *Fisheries Act* Regulations and if requested she would check into what those timelines were. Steve Woolfenden commented that the timeframe for an FAA would likely meet current timeless or shorter with the new regulations (~4 months for a Major Project).

Steve Woolfenden reminded everyone that habitat compensation would be accounted for differently depending on which regulation the loss of habitat fell under. Bagsverd Creek and a small section of the Mollie River would fall under Section 36 of the *Fisheries Act* (i.e. Schedule 2 of the MMER) and everything else would be accounted for under Section 35 of *Fisheries Act.*

Kelly Eggers inquired as to whether all Harmful Alteration, Disruption or Destruction (HADD) of fish habitat had been identified in the presentations provided. Steve Woolfenden indicated that there may be other smaller HADD of fish habitat identified (i.e., discharge for sewage, water taking), however the majority was presented and discussed within the presentations given.

Kyle Stanley mention the MNR owned Neville Township Landfill Site currently does not have a care taker and is not being operated properly. He stated that there is potential for the MNR and IAMGOLD to develop an agreement to take over ownership and operations of the Neville waste disposal. He stated that it may be beneficial to IAMGOLD for the Cote Project if it is suitable and can be expanded to accommodate the operation considering the existing C of A and a possibility to amend to suit the project.

We will have to discuss potential with MNR and MOE to see if could be feasible and what studies would be require for existing liabilities.

Kyle Stanley also stated that the material produced from the realignments may be considered a by-product from a project so it is possible that there may not be any a requirement for an aggregate or quarry permit from the MNR. The Timmins District MNR Aggregate Technical Specialist will have to review the project details to confirm what authorization is required.

He will follow-up to make sure this information is correct.

Subject: RE: minutes from June 25

Hi Kelly,

Thanks for the input.

Just a note on the changes to the project. IAMGOLD is discussing with CEAA on how best to present the changes to the federal review team. IAMGOLD has included the changes within the proposed ToR but there is no plan to update the federal project description.

The only change which we have not captured within the proposed ToR is a minor change to the Transmission Line. MNR recommended we consider crossing near or over the Mattagami Lake hydroelectric facility, in response, IAMGOLD and its consulting team has begun the process of assessing this option, I expect that we will proceed with the change and it will be captured within the EA.

As I am sure you have experienced, major projects undergo changes throughout the planning and assessment process. The Cote Gold project will likely continue to evolve as we optimize the mine plan and work to minimize environmental effects.

Steve

Subject: IAMGOLD - Côté Gold Project - Proposed Terms of Reference

Government Review Team Members:

IAMGOLD Corporation (IAMGOLD) is continuing the Voluntary Individual environmental assessment process under the Ontario Environmental Assessment Act for the development and operation of the Côté Gold Project. The Côté Gold Project is a majority-owned Project held by a subsidiary of IAMGOLD, and is a proposed open pit gold mine with related processing facilities and infrastructure, located in northeastern Ontario, about 20 kilometres southwest of Gogama.

The Draft ToR describing the proposed work plan for addressing the Environmental Assessment Act requirements was made available for review by the Government Review Team, the public and other stakeholders from May 10 until June 9, 2013. As a next step, after incorporation of comments received on the Draft ToR, a Proposed ToR is now being issued for public comment. If approved by the Minister, the Proposed ToR will provide the framework and requirements for the preparation of the Environmental Assessment for the Côté Gold Project.

IAMGOLD is making the Proposed ToR available to the public for review and comment beginning July 19, 2013 and ending August 19, 2013. Copies of the Notice of Commencement, Proposed ToR and Record of Consultation will be available for download starting July 19 from the IAMGOLD website at: www.iamgold.com .

Note that hard copies, if requested by Government Review Team members, have been sent out and should have arrived by now or should arrive shortly.

All written comments on the Proposed ToR should be submitted by August 19, 2013 to:

Wesley Wright, Project Officer
Ministry of the Environment, Environmental Approvals Branch
2 St. Clair Avenue West, Floor 12A, Toronto, ON M4V 1L5
T: 416-325-5500 / 1-800-461-6290 F: 416-314-8452
E-mail: Wesley.Wright@ontario.ca

Questions about the Côté Gold Project should be directed to:

IAMGOLD Corporation – Côté Gold Project

Subject: RE: IMGOLD Baseline plan

Hi Steve,
I've reviewed the plan and passed on my comments to Steve Momy who is the Environmental Officer assigned to the IAMGOLD site – the district is typically Technical Support's client so our reviews go to them. Normally reports, plans, etc. would be submitted to the district office and requests for review come through them. Steve can pass on my detailed comments to you. I believe he's on vacation this week, so maybe contact him next week – Steven.Momy@ontario.ca or (705) 235-1513

I didn't have any major concerns, just a few minor comments.

Also, tomorrow is my last day as the AQA for northern region. I'll helping Eastern Region as their AQA (Kingston Tech Support office) for the next 2 months working out of the Sudbury office. My phone number may be changing in the next few weeks as I may have to switch cubes.

You must be coming up to your summer vacation time - Enjoy!

Regards,
Sandra

Sandra

Here is the baseline air monitoring plan for the Cote Gold site as promised. As noted in your earlier discussion with Ray Potvin, it will be a combination of long term data (Sudbury and Sault Ste Marie) together with short term (3-month) onsite monitoring. I note that the monitoring equipment operation was audited successfully by the MOE on July 3rd.

Regards

Steve

Memo

To:	**Sandra Ausma, Ph.D., P.Eng., MOE, Air Quality Analyst**	File no	**TC121522**
From:	**Steve Lamming**	cc	**Debbie Dyck, AMEC**
Tel	**905-568-2929x4159**		**Steve Woolfenden, IAMGOLD**
Date	**18 July 2013**		**Dave Brown, IAMGOLD**
Subject	**Baseline Air Quality Data Collection for the IAMGOLD Côté Gold Project Site**		

The Côté Gold Project (the Project) is an advanced stage gold exploration project located in the Chester and Neville Townships, District of Sudbury, in northeastern Ontario, approximately 20 kilometres (km) southwest of Gogama, 130 km southwest of Timmins, and 200 km northwest of Sudbury. IAMGOLD Corporation (IAMGOLD) proposes to construct, operate and eventually reclaim a new open pit gold mine on the property. As part of the Environmental Assessment for the Project, AMEC is pleased to provide to the Ministry of the Environment (MOE) for comment, a summary of our proposed activities for baseline air data collection and analysis.

The program objective is to develop a representative air quality data set for use as project baseline. It is anticipated that the most likely contaminants of concern with be particulate matter and associated metals (fugitive sources), as well as nitrogen oxides and sulphur oxides (combustion sources).

The baseline data set for the project is considered as two components:

- Long term (5-year) meteorological and air quality data from MOE or Environment Canada monitoring stations in the area; and
- Short term, on-site confirmatory sampling for a selected parameter set.

Long term data will be collected from the Sudbury (SO2, PM10, PM2.5) and Sault Ste Marie (SO2, NO2, NO, NOx, PM2.5, O3) MOE stations for the most recent 5-year period available. Summary statistics will be prepared.

The air quality monitoring equipment has been installed at the project site (Figure 1) and sampling will run from May 5th through August 8th 2013. Concentrations of TSP and PM10 will be measured using hi-vol samplers on a 1 in 6 day sampling schedule. Concentrations of SO2 and NO2 will be measured using passive samplers, sampling monthly over the same time period. All the TSP filters will also be analyzed for the standard ICP metals scan. The locations of the samplers relative to the on-site meteorological station are shown in Figure 2. Samplers were connected to the main power source at the project site and were installed on designated platforms.

Sampling methodologies were selected following MOE requirements described in its 'Operations Manual for Air Quality Monitoring in Ontario' (hereafter called the Manual),

AMEC Environment & Infrastructure,
a division of AMEC Americas Limited
160 Traders Blvd East, Suite 110
Mississauga, Ontario, Canada L4Z 3K7
Tel (905) 568-2929
Fax (905) 568-1686 www.amec.com

published in March 2008. Filters and passive sampler media will be sent to an MOE approved laboratory for analysis.

Figure 1. Site Monitoring Location

Figure 2. Sampler Layout Relative to Meteorological Station

The on-site meteorological station is a 10 m tower that monitors:

- Air temperature, relative humidity and pressure
- Wind speed and direction (RM Young anemometer and vane @ 10 m)
- Solar radiation
- Total precipitation (the tipping bucket is heated for snowfall)

The station sensors are connected to a Campbell Scientific CR1000 logger.

The site air quality monitoring program will incorporate a QA/QC component to ensure that the basic elements outlined in the Manual are adhered to. These include: site selection, sampling system requirements, hi-vol flow calibration checks, data validation and reporting, documentation and personnel training. It is understood that MOE staff may conduct an audit of the site for siting criteria conformance, and to undertake hi-vol flow calibration audits as specified in the Manual.

Flow calibrations were checked on start-up and confirmed to be within required limits. Local staff were trained on sampler operation, as well as filter change-out. They were also trained to change out the sampler motors, if required, and two spare motors were left on site in case of failure. Confirmatory flow calibrations will be done at the end of the sampling program prior to removal of the equipment.

Data will be reported in the formats and in the units of measurement and statistics outlined in the Manual. The results will be compared against the applicable Ambient Air Quality Criteria (AAQC) and/or standards defined in O. Reg 419/05.

Subject: Cote Gold Terms of Reference

Hi Wesley,

IAMGOLD has sent us a proposed terms of reference as a public utility that would be interested in this project. The back sheet of the page asks for us to fax it to you, I scanned it and hopefully that is ok. If the Cote Gold Project will involve Hydro One in any way we will need to be informed. I checked the box that says we are ok with the terms of reference with the comment of notifying Hydro One for any collaboration required.

Thanks,

Subject: RE: Cote Gold - proposed ToR to be submitted Friday (July 19)

Wesley,

I have reviewed the Terms of Reference ("ToR") and have the following comments to provide regarding the waste management relevant portions of the document. My previous comments on the draft ToR are also attached for your convenience.

1. The proponent has still referenced the construction, operation and closure of an on-site landfill in sections 4.2.1 and 4.2.3.10 without providing further details. My comments from my review of the draft ToR still stand in this matter.

2. Notwithstanding bullet #1, in section 5.3.13.1 the proponent refers to assessing the development of an on-site landfill in the EA. If it is standard protocol to assess the development of a landfill at that stage then I have no objection.

3. The potential burning of waste on site would require approval of an ECA unless it meets the exemptions from approval set forth in section 28.1 of Regulation 347 for a Woodwaste Combustor Site. Burning of any waste other than woodwaste may require an Environmental Compliance Approval.

4. On-site treatment of contaminated soil may also have need for Ministry approval depending on the process chosen (ex-situ vs. in-situ). Review of this in the EA stage is acceptable.

5. The establishment and operation of sewage lagoons require an Environmental Compliance Approval.

As a reminder, from my previous comments which are attached:

> “Please note that waste rock storage piles are exempt from obtaining an ECA (Part V of EPA) pursuant to section 3(1) of Regulation 347. Similarly, tailing from a mine are also wastes that are exempt from Part V of the EPA as per s. 3(1) of Regulation 347 provided the tailings are not being mixed or comingled with other wastes. Tailings management facilities are approved under the Ontario Water Resources Act. “

I trust this is satisfactory. I am off on holiday until August 19th. If you require anything further, I will attend to it then.

Sincerely,

David Lee, P. Eng. ∫ Sr. Review Engineer

RE: Cote Gold Project Proposed Terms of Reference Provincial Individual EA

As requested, I have completed a surface water review of the report entitled "Provincial Individual EA Proposed Terms of Reference for the Côté Gold Project" prepared for IAMGOLD Corporation by AMEC Environment & Infrastructure and dated July 2013.

My review identified a shortcoming in Table 5-4 (Effects to the Physical and Biological Environments Evaluation Criteria and Indicators); the Indicators for Assessment of Alternatives do not adequately identify the potential ecosystem effects of changes in the quantity of surface water. Specifically, the criterion "Effect on Fish and Aquatic Habitat" includes proposed indicators ("Maintenance or provision of fish habitat" and "Maintenance of water flows or conditions suitable for fish passage") that do not represent the entirety of ecosystem services provided by natural water flow and water level in streams and lakes. This could be remedied by including a more holistic indicator such as "Maintenance of natural water flow and water level in streams and lakes to protect the habitat of aquatic biota, including fish".

MEETING NOTES - DRAFT

July 3, 2013

2:00 – 4:30

Project:	Côté Gold Project		
Purpose:	ToR Comments and Responses Overview and Consultation Planning		
Attendees:			
	IAMGOLD	**AMEC**	**Government**
	Aaron Steeghs (AS)	Stephan Theben (ST)	Wesley Wright (WW; MOE)
	Steve Woolfenden(SW)	Caroline Burgess (CB)	Ellen Campbell (EC; CEAA)
		Sophie Bertrand (SB)	Dawn-Ann Metsaranta (DAM; MNDM – Teleconference)
Distribution:	Attendees		

AGENDA

Topic	Action By	Due Date / Status
Overview of draft ToR Comments		
• SW indicated that the proposed ToR comment period would begin on July 19th and that the ToR will include a new site plan. • SW noted that the EIS Guidelines are expected on or before July 12.	Info	--
• SB provided an overview of the comments: o 158 comments, received primarily from government agencies: MTCS, IO, MOE, MEDTE, MNDM, MAA as well as the Sudbury Health Unit, the Mesomikenda Cottagers Association and Sanantana Resources. o No comments received from Aboriginal groups • Purpose of the meeting to discuss how IAMGOLD is responding to these comments and get feedback on how we are responding. This feedback will be used to finalize the ToR.	Info	--
• WW asked what follow up was done with Aboriginal groups re: draft ToR. • SW noted that there was open houses in MFN and FPFN and that the attendance was dropping from earlier open houses and that not a lot of interest in the ToR. Similar concerns were expressed at the open houses as in the previous open houses and these are documented in the Record of Consultation. Some First Nations have indicated that they are very busy with consultation on other projects and are getting consultation fatigue. • SW noted that IAMGOLD was at the Timmins Mining conference at the end of May and that their booth was busy and the ToR materials were there for review.	Info	--
• ST went through comment groups (handed out summary of comments):		
• Group 1: Comments asking for information that will be covered in the EA (and not the ToR) as the information is not yet available. There was	Info	--

general agreement that this was an appropriate response.		
• Group 2: Comments about assessment indicators (e.g., comment # 77, 78, 115, 116). ST noted that the indicators used were developed by MNR for a previous mining EA in Ontario and there is concern that if new indicators are introduced that MNR would object to changes in the design of the assessment tool. WW and DAM committed to discuss this issue with MNR	WW/DAM	By July 4
• Group 3: Comments about including the "do nothing" alternative. ST indicated that this will be incorporated and will be addressed through the Pre-feasibility Study for the Project. There was general agreement that this was an appropriate response.	Info	--
• Group 4: Comments about the impact assessment methodology (comment #22). ST stated that he agreed with the suggestions and the methodology will be revised accordingly. There was general agreement that this was an appropriate response.	Info	--
• Group 5: Comments about including study area maps (comment # 105). The study areas will not be included in the ToR because there are over 20 different study areas to reflect differences in areas of influence by discipline area (e.g., air quality study areas are different that socio-economic study areas). Further, since baseline work is still underway, these study areas could shift somewhat before being established for the EA. There was general agreement that this was an appropriate response as long as the rationale for not including the study area maps is clearly stated in the ToR.	ST – added rationale for ToR	Before July 19
• Groups 6: Comments about habitat compensation. To address these comments IAMGOLD had a meeting and site tour with MNR and DFO (late June) and are discussing compensation measures that will support existing Fish Management Plans. Fish habitat credits are also being considered. There are good opportunities to work with Aboriginal groups on habitat compensation measures. Overall there could be close to no net loss in fish habitat due to current site designs. There was general agreement that this was an appropriate response.	Info	--
• Group 7: MTO comments will be addressed by discussing highway effects directly with them. There was general agreement that this was an appropriate response.	Info	--
• Group 8: Comments about the transmission line – in particular the absence of a third routing was not well understood. WW noted that at a past meeting there was mention of a third route (Shining Tree route) that was not included in the draft ToR. SW clarified that this transmission line was a 115 kV line that would not be sufficient capacity to serve Project needs and was therefore removed from the assessment of alternatives. One of the remaining 2 options follows the same routing as this previously considered option. There were other comments on routing that we are considering in the project designs. There was general agreement that this was an appropriate response.	Info	--
Overview of New Site Layout		
ST and SW presented highlights of new site plan: • Changes include the removal of the 2 MRAs on the east side of the original site plan to reflect design changes and cottager comments • Changes to channel re-alignments	Info	--

• Only 1 low-grade stock pile • Different areas for plant and work camp • Closure concept includes removal of some of the channel re-alignments around the plant site, others will be permanent (Bagsford Creek)		
• WW asked what the height of the MRA is in the new site layout. • SW stated it changed from 100 to 150 m (which is lower than the MRA for Hammond Reef). The aesthetics of the MRA can be optimized through visual screening.	Info	--
• WW asked how long the channel re-alignments would need to be monitored. • SW stated that the re-aligned channels would not need long-term monitoring. They would be re-vegetated and would start to mimic existing water-courses. The gradients of the channels are the same as the existing channels and therefore same type of habitat.	Info	--
• EC asked about the landfill. SW stated that the landfill options will be carried in the EA, but that there is many decision to be made about which option to use, noting that the MNR has approached IAMGOLD about using their landfill near the site. This option needs to be added to the ToR.	ST – ensure all landfill options included in the ToR.	Before July 19
• SW outlined other changes that may still occur on the site plan such as the location of the water intake and discharge locations.	Info	--
• SW clarified that the aggregate pit names are the 'permitted' names – and that they are not mislabelled on the site plan.	Info	--
• SW noted that the new site plan will be presented in the ToR.		
Overview of Changes to the Record of Consultation		
• CB provided an overview of the revised format of the Record of Consultation to ensure that the consultation period on the draft ToR is separated out in the text and appendices. There was general agreement that this was appropriate.	Info	--
• CB and AS provided an overview of the consultation plans which include meetings with Aboriginal communities on effects predictions and mitigations prior to the draft EA being submitted and further consultation (meetings, open houses, document reviews) on the draft EA in early 2014. There was general agreement that this was appropriate.	Info	--
• AS provided an overview of other ongoing involvement of stakeholders and Aboriginal groups in the Project including involvement and support for TK/TLU studies, Archaeology and socio-economics. • AS noted the planned Cultural Heritage day at the site at the end of July to review TK/TLU and archaeology with the MF N and FPFN.	Info	--
Other Discussion Items		
• WW asked about the status of the baseline studies. SW stated that initial drafts have been prepared reflecting 2012 field season data. These will be updated and consultation on these will occur in the fall. A baseline brochure has also been created to provide information to the public. • WW indicated that the MOE has no capacity to review initial drafts and to therefore send only finals.	Info	--
• It was noted that the Aboriginal technical review of documents was being	AS	Ongoing as

facilitated through the Wabun Tribal Council. IAMGOLD will support these reviews and encourage use of other government capacity funding. • WW indicated that there is interest in knowing who (if any) will be providing review comments and to get in writing an indication if no comments will be received. AS will facilitate this information sharing.		required for document reviews
• EC noted that the Agency did not get many comments on the draft EIS Guidelines and that the participant funding opportunities are communicated with the release of the final EIS Guidelines.	Info	--
• CB asked if there was any interest on the part of the government agencies in participating in upcoming stakeholder and Aboriginal group meetings. It was noted that many of the Aboriginal group leadership make trips to Toronto and may be available for meetings at that time. EC and MOE appreciated the offer and will attend meetings if possible. To date, most of the Agency contacts have been via conference call. • DAM stated she would like to be involved in future consultation activities – particularly if they involve Closure concepts/plans.	Info	--

Mr. Woolfenden,

I am currently evaluating and providing comments with respect to Abandoned Mines for the Notice of Class Environmental Assessment for Minor Transmission Facilities as submitted by your company for the Côté Gold Project.

In order for our Ministry to conduct a comprehensive review of the project and provide relevant information to you, would it be possible to obtain the GIS shape files as represented in the "IAMGOLD_Cote Gold_Proposed Terms of Reference_July2013" document, specifically for Figure 2: Preliminary Site Plan and Figure 4: Proposed Transmission Line Alignment?

If you have any questions on this request, feel free to contact myself directly.

Sincerely,

Marc Stewart

Dear Mr. Wright:

Re: **Cote Gold Project, Provincial Individual Environmental Assessment, Proposed Terms of Reference**

Thank you for the opportunity to review the July 2013 document entitled *"Cote Gold Project Provincial Individual Environmental Assessment Proposed Terms of Reference"*, prepared by AMEC Environment & Infrastructure. It is our understanding that this document, if approved by the Minister, will provide the framework for the preparation and review of the Environmental Assessment for the proposed Cote Gold Project, consisting of a proposed open pit gold mine with related processing facilities and infrastructure, located approximately 20 kilometres southwest of Gogama.

The Ministry of the Environment's Northern Region Planning Unit has reviewed the above-noted document, and has the following comments.

General Comments

The Ministry of the Environment (MOE) has a mandate under the *Environmental Protection Act* to minimize the exposure of any person, property, plant or animal life to off-site potential negative effects associated with the operation of certain facilities. To address this concern, and to prevent or minimize exposure to adverse effects, the principles of land use compatibility should be considered during the EA process.

Potential land use compatibility issues would include land use conflicts that may result from either a new facility locating so that an existing sensitive is captured within the facility's influence area, or from a new sensitive land use locating within the influence area of an existing facility. Potential adverse effects that

could result may include, but not be limited to: noise and vibration; visual impact; odours and other air emissions; litter; dust and other particulates; and other contaminants. In applying land use compatibility principles, all facilities and components of the proposed project should be considered, including proposed accommodations, diesel generation, and infrastructure such as roads, sewage treatment/disposal and waste disposal facilities. Potentially conflicting uses which may occur within the area of the proposed project would include uses such as seasonal or recreational residences, remote tourism facilities, and trappers' cabins, among others.

Please note that both existing uses and committed land uses, which have been approved by regulatory authorities but do not yet exist, should be considered in the evaluation of potential impacts.

While the proposed Terms of Reference appears to generally recognize the potential for land use compatibility issues as a result of the proposed project, we would encourage the proponents to ensure that the principles of land use compatibility, as summarized above and as articulated in MOE Guidelines, are reflected in the final EA Report, particularly in those sections dealing with the evaluation of alternatives, description of the existing environment, effects identification and assessment methodology, including the identification of mitigation measures and potential monitoring requirements.

Further detail, including information addressing potential influence areas, minimum separation distances, and the use of detailed studies to evaluate potential impacts and identify appropriate mitigation measures, is included in the following MOE Guidelines:

- *Guideline D-1: Land Use Compatibility.* (1995)
- *Procedure D-1: Land Use Compatibility: Implementation.* (1995)
- *Procedure D-1-3: Land Use Compatibility: Definitions.* (1995)
- *Guideline D-2: Compatibility between Sewage Treatment and Sensitive Land Use.* (1996)
- *Guideline D-4: Land Use On or Near Landfills and Dumps.* (1994)
- *Guideline D-6: Compatibility between Industrial Facilities and Sensitive Land Uses.* (1995)
- *Procedure D-6-1: Appendix A: Industrial Categorization Criteria* (1995)
- *Procedure D-6-3: Separation Distances* (1995)

These D-series Guidelines are available on the MOE website at:
http://www.ene.gov.on.ca/environment/en/resources/index.htm .

Section 6.2 General Description of the Cote Gold Project
This section indicates that the Cote Gold Property consists of patented and unpatented mining claims, mining leases, and mining licenses of occupation, all located within 17 unorganized townships. We would recommend including additional information in the final Terms of Reference to identify the location and extent of each of these types of ownership, occupation, or lease, particularly with regard to the Cote Gold Project site.

Section 9.1 Potentially Affected and Interested Stakeholders
We note that this section of the proposed Terms of Reference has been revised to include additional land and resource users in the list of potential stakeholders for the project. To further assist in identifying and addressing potential land use compatibility issues, we recommend that any additional landowners, resource users, or other interests who may potentially experience adverse effects as a result of the project be added to the project mailing/contact list as they are identified, and included in consultation activities throughout the EA process.

Section 11.0 Other Approvals Required
Should any portions of the project site be situated on patented mining claims, we recommend consulting the Ministry of Municipal Affairs and Housing (Sudbury Municipal Services Office) to determine if approvals under the *Planning Act* are needed to allow for the development of any project components.

Please contact me at your convenience if you have questions or wish to discuss these comments.

Yours truly,

Ellen Cramm, MCIP, RPP
Environmental Planner/EA Coordinator

Subject: Proposed Terms of Reference for Cote Gold Project

Hi Steven and Wesley,

I have reviewed the proposed TOR for the Cote Gold Project and have no additional comments from those I provided on the Draft TOR. In my comments on the Draft TOR, I provided an outline for our minimum expectations for the baseline studies to support the approval and permitting phase of the project. I have included them again in this email for your reference. Please let me know if you have any questions or require additional information.

> *The purpose of baseline groundwater monitoring programs for proposed new mines is to define pre-development hydrogeological conditions. This information will be subsequently used by the proponent to develop numerical groundwater models and to predict potential impacts of the mine if the project progresses towards environmental assessment and permitting. This assessment also provides the framework for on-going groundwater monitoring during site development, operation, and closure. Lack of comprehensive baseline information may cause significant site development delays.*
>
> *To effectively address these uses, the baseline groundwater monitoring program must meet the following requirements:*
> 1) *Determine groundwater flow paths, identify potential receptors (e.g. surface water, wetlands, wells, etc.), estimate subsurface travel times (including potential seasonal hydraulic gradient fluctuations), and characterize groundwater quality. The location of the monitoring wells must be selected to define existing conditions and also in anticipation of potential changes in groundwater gradients during all phases of the project (e.g. mounding, lowering, flow direction changes, etc.). The groundwater monitoring should take into consideration the effects of groundwater to surface*

water discharge, and enough information must be collected so that potential impacts of dewatering on surface water and wetland features can be evaluated. Nested or multi-level groundwater monitoring wells should be used where appropriate to assess both shallow (overburden) and deep (bedrock) groundwater flow systems, as well as vertical gradients.

2) *Collect whatever information will be later required to identify groundwater impacts that may occur as a result of the undertaking, assess contaminant attenuation capacities, and ensure that the proposed mine and associated facility designs incorporates appropriate mitigation measures. Groundwater monitoring and groundwater quality data should be collected up-gradient, cross-gradient, and down-gradient from all relevant facilities which have been sited at the time of the baseline survey. This includes potential groundwater seepage locations, rates and quality into or from facilities such as: open pits, underground developments, tailings, stockpiles, collection ponds, processing facilities, and loading areas.*

3) *Identify potential compliance points and compliance criteria (e.g. Reasonable Use, Provincial Water Quality Objectives, etc.) and ensure that sufficient information is available in the future to produce statistically sound assessments of potential mining and associated facility impacts. The baseline survey should include installation of monitoring wells at potential compliance points and within the footprint of the planned operation works with an aim of having most wells remain in-place during all phases of the project to provide consistent temporal analysis points;*

4) *The output of the hydrogeology baseline survey should include the following:*

    a) *conceptual hydrogeologic model with a written expert opinion summarizing groundwater flow paths, identification of potential receptors, travel times, and water quality;*

    b) *hydrogeologic maps and cross-sections showing: 1) the location of relevant features, including surface water features, water supply wells, and other potential receptors; 2) location of groundwater monitoring wells with respect to proposed facilities/works, stockpiles, potential seeps of contaminated groundwater, surface water features and other potential receptors; 3) the extent of overburden and bedrock aquifers, including bedrock contact/fracture zones; 4) groundwater contours (potentiometric surfaces); and 5) groundwater flow directions including location of all groundwater divides;*

    c) *groundwater analytical results provided in tabular format with ion balances and also presented with ion plots; Laboratory Certificates of Analysis should be available upon request; and*

    d) *identify the need for additional monitoring and assessment to address potential facility development impacts that had not been defined at the time of the baseline survey.*

Comment
4.2.3 - 1st paragraph, last sentence - current says ' ….in the case of temporary suspension or inactivity.' It should read '….in the case of temporary suspension, inactivity or closure out of mine production.'
4.2.3 - 2nd paragraph - refers to 'reclaim'. Suggest using 'rehabilitate'. Reclaim is not a word used in the Mining Act.
4.2.3 - 3rd paragraph - currently says ' reclamation/closure'. Suggest changing to say final stage of closure OR close out. 'reclaim' is not a term used in the mining act and the stage which you are referring to is called close out, which is the final stage of closure.
4.2.3.1- Rehabiliatation of the pit is by flooding. It should be noted that at least one sloped enterence shall be left or created to allow a reasonable exit point should inadvertent access occur.
4.2.3.6 A landfill site for on-site demolition will be created. Note that landfill sites shall be rehabilitated also and the measure that will be taken to do this should be stated.
5.3.15- second sentence - currently says ' During the closure phase, mining is terminated and final reclamation of site occurs'. In the Mining Act - Closure means the temporary suspension, inactiviy or close out of a project. You may want to change the wording in that sentence to ' During the close out phase, mining is terminated and final reclamation of site occurs'.
5.3.15 third sentence - EA will include an assessment of closure alternative. This should include assessments for all 3 stages of closure, therefore assesment of temp. susp., inactivity and closure out of the Cote Gold Site. I see in the appendixes you have post closure assessment for for Mine rock area and tailings management area - this may be where you want to add assessment for the other stages of closure?
Table 5-7 currently this table does not include alterative methods for assessing or mitigating AMIS or Mine Hazards that may be encountered in the building of the transmission line or on the project site itself.
Table 7-1 should include potential effects (i.e.health and safety of public and workers) of distrubing any existing mine hazards encountered during construction or mining.
Mine hazards need to be idenfied and considered in the EA, impacts identified and how the impacts can be mitigated through permits, or design for example.
There are a number of unpatened minign claims in the area of operations/development. The proponent should ensure that the claims are taken to lease prior to development. IAMGOLD currently has a number of lease requests in with the Mining Lands office at this time.

estimated 530 AMIS features within 5km of the proposed transmission corridor. Some are hazards some are not.	**see attached Zip file**
The EA does not identify how abandoned mine hazars or features, if encourntered will be assess or mitigated.	
The area identified for tailings management includes possible AMIS hazards	
Are there any rehabilitated hazards within the project area that could be impacted?	
Are there any rehabilitated hazards en route the proposed transmission corridor? - If so under the Mining Act, they are required to seek Director approval to disturb any previously rehabilitated mine features (including the mine proposed areas and the area assoicated with the proposed transmission line). Site should be identified prior to moving forward with construction so permissions can be given.

Cc: Stanley, Kyle (MNR); Copeland, Todd (MNR)
Subject: Follow up Questions

Hi Suzanne,

Nice talking to again today.

Here are some questions if you can answer or forward off to the appropriate person:

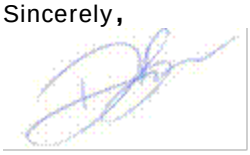
1. We will need to decide on a process where non Aboriginal trappers will be compensated for their loss of trap-line areas. Can MNR contribute with an approach on how this could be negotiated.(ie. Are there other grounds available?, transfer?, compensation payment?) Also bait harvesters?
   Before we move forward with this, we would need to get an idea of what you expect the impact to be on the trappers and bait harvesters in the area. For example, are they not going to be allowed to trap on leased land? Would you allow them to trap to prevent the occurrence of nuisance beaver problems? If we know specifically what area they will not be allowed to trap on, we would be better able to determine the impact to them. A map

showing tenure (both present and proposed) would be helpful for us to make a determination of impact – the map doesn't have to be an official, set-in-stone map, just something that would give us an idea of what you own, lease etc and what land you are hoping to acquire in the future. I realize there may be some sensitivities around this and that you have confidential plans but I'm hoping we will be able to figure out how to do this! We do not compensate trappers for loss of trapline area, fewer mammals, loss of cabin etc. Examples would be the area that was burned by the fire last year, flooded areas, or areas where a forest company is cutting trees. If a trapper decides that he no longer wants his trapline (for whatever reason), he can relinquish it to the Crown. In keeping with our provincial trapline policies, we cannot just transfer the head trapper to another trapline. All trappers apply for vacant traplines which they are interested in acquiring, and a provincial point system is used to determine the allocation of each vacant line.
I had already given you the contact information for the 2 bait harvesters, when you said that you wanted to discuss the project with them. I spoke to them personally and they agreed to let me release their information. Bait harvesters pay for a whole township, regardless how much Crown land is within the township. In the interest of the province dealing fairly with each harvester, there is no compensation for areas that any harvester cannot access.

2. Also is there still an active BMA licence for the Mesomikenda Lodge? There is no BMA specifically for Mesomikenda Lodge. The BMA for the area around there was allocated to a BMA operator. Can the MNR provide a list of the outfitters that have active BMA licences in the area (including those that may overlap with the transmission line corridor options) that we can contact? We cannot provide contact information. The normal procedure would be for the company to prepare a letter and MNR may forward it on their behalf. A transmission corridor would have no effect on BMA operations. BMA areas are allocated according to a provincial procedure and the size/boundaries may include areas that they are not readily able to utilize. Similar to our response above, the impact to BMA operators would depend upon the tenure and proposed restrictions based upon what the company plans on allowing in the area. I would suggest that we try to look at a map and examine this further before we discuss contacting the BMA holders.

3. Follow up on putting together a formal data sharing agreement.(Spoke to Todd Copeland previously) I have asked my supervisor, Doug MacMillan, to call you regarding the data sharing agreement. He is the Planning & Information Management Supervisor and his phone number is (705) 235-1316.

4. If we propose to use material (if suitable)from the cut on the proposed realignments for the starter dams for the tailings area would that require an aggregate or quarry permit from MNR or would it be classified as a byproduct from one project? Our Aggregate Technical Specialist provided me with the following response: As per the ***Aggregate Resources Act RSO 1990 as amended*** the requirement on crown land of requiring an aggregate permit lies with the prime activity.
If the prime activity is for something else other than extraction for aggregate then an aggregate permit is not required and the by-product of aggregate can be used for that project. But should large amounts of aggregate be created by the prime activity and stockpiling of aggregate specifically for sale then that would need further review.



5. Also I would like to initiate discussions on the MNR Neville Landfill Site as a follow up to a conversation with Kyle Stanley on the Cote Gold Project site tour. I passed on your

message to Kyle yesterday and I'm sure he has already contacted you.

I know you are on holidays next week but if Kyle and Glen are available next Wednesday July 24th I would like to propose a conference call to discuss the Neville Landfill.

I will send a call number once I know if they are available.

Sincerely,

Dave Brown

Subject: RE: question about mine rock

Ellen:

Current estimates of potentially acid generating (PAG) rock are based on a database of approximately 150 samples using an neutralization potential ratio (NPR) threshold of 2 (where NPR<2 is assumed to be PAG). The current database has 3% of the samples with an NPR<2, which suggests that a very low percentage of the rock volume will be PAG. Overall NPR of the mine rock appears to be well above the NPR=2 threshold. Results are currently pending on a larger and more representative database (1000+ samples).

Results are also pending on ABA testing of simulated tailings samples. However, data from preliminary studies completed last year by others suggest that the tailings will be non-PAG (NPAG).

Hope this helps. Let me know if you have any questions or comments.

Regards,

Stephan

Subject: question about mine rock

Hi Stephan,

One of the federal team members has asked for information on the percent of waste rock and the percent of tailings that are PAG and what NPR (neutralisation potential ratio) Côté Gold is using?

I wondered if you could help direct this inquiry. This is information will help to determine which

experts need to be lined up for reviewing information (and possibly coming to the site visit on August 29).

Thanks,

Ellen

August 19, 2013

Wesley Wright
Project Officer
2 St. Clair Avenue West, Floor 12A
Toronto, ON M4V 1L5

Dear Mr. Wright

Please find below comments from the Ministry of Energy on the IAMGOLD Proposed Terms of Reference and Record of Consultation for the Côté Gold Project that were sent out to the Government Review Team. Our interests in this project are linked to the engagement and consultation with the First Nations and Metis communities and to the electricity supply and transmission needs.

The ministry does not have any comments on the Record of Consultation, but we do have comments on the draft EA, specifically the section dealing with Power Supply and Routing (section 5.3.14).

IAMGOLD has made an effort to respond to initial comments from Ministry staff, however we are still seeking more detail with respect to the anticipated power needs of the project.

The proponent should describe the anticipated power needs in the draft Terms of Reference or state that this will be described in more detail in the EA. The power requirements for the project are usually described for each phase (for example the construction phase and the operation phase) and should include approximate dates when the power requirements would begin, and the MWs required at the height of the mine's operations. This information would support the identified need for a 230 kV transmission line connection.

If you have any questions please call me at 327-7302.

Sincerely,

Cheryl

Wesley Wright
Project Officer, Environmental Approvals Branch
Ministry of the Environment
2 St. Clair Avenue West, Floor 12A
Toronto, ON M4V 1L5

Dear Mr. Wright:

Re: Review of Proposed Terms of Reference for the Côté Gold Project
EA FILE NO. 05-09-02

The Sudbury & District Health Unit (SDHU) is providing comments to the proposed draft Terms of Reference document in order that potential environmental health impacts can be addressed by the proponent. It is our hope that in identifying health impacts proactively mitigation measures would be put in place to reduce risks over the long term. We would request that consideration be given to the following points:

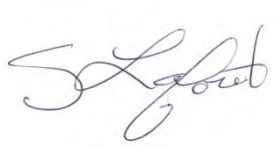
1. The SDHU would suggest that information be included regarding major components of the tailings to better determine the adequacy of the tailings pond design, and remediation plans.

2. SDHU wishes to reinforce that protection of water sources for human consumption should be highlighted. Among many factors, changes in flow magnitude, effects of climate change (ie. flooding, rain, and drought), run-off, seepage/leaching, and accidental spills can negatively impact the amount of water available and the safety of that water for human consumption. If water quantity or quality is impacted, how will this be handled?

3. Although plans for the protection of surface waters are included, the SDHU would suggest that potential impacts and protective measures for ground waters be included.

4. The SDHU would suggest including plans for the safe storage or movement of hazardous materials (including cyanide) and explosives in the event of a natural disaster such as flooding or a forest fire.

5. Consideration could be given to the ability to contact local water users (surface water and wells) in the event of an accidental spill or runoff that may adversely affect the local water quality.



6. Has consideration been given to the effects of air pollution such as particulates (PM10, PM2.5) and noise on local permanent and seasonal residents and workers at the camp accommodations? On and off site monitoring may wish to be considered.

7. Will there be long term monitoring of the site to ensure that closure procedures are effective in protecting the environment and human health both on the site and in the surrounding area?

8. The effects of climate change (particularly changing… remove weather patterns) should be considered in terms of: water quality and quantity for operations and human consumption; risk of flood, road wash-out; dry conditions, wildfire prevention, preparedness and evacuation plans; effects of drought or flood/erosion on design of habitat compensation, riparian areas and re-vegetation of areas at closure.

The SDHU appreciates the opportunity to comment on this application. If you have any questions or require additional information please contact Ido Vettoretti, *Environmental Health Specialist* at 705.522.9200, ext. 213 or Burgess Hawkins, *Manager* at 705.522.9200, ext. 218.

Yours truly,

Stacey Laforest
Interim Director
Environmental Health Division

RE: Proposed Terms of Reference for IAMGOLD's Côté Gold Project (July 2013)

Dear Mr. Wright:

Thank you for your correspondence of July 12, 2013 to the Government Review Team seeking comments on the above proposed Terms of Reference (ToR). On behalf of our Ministry's Northern Policy and Planning Unit, I am pleased to provide the following comments.

Our Unit's main function is to provide strategic tourism policy and planning expertise to industry, other ministries and other levels of government. We also promote activities that protect, diversify and enhance tourism industry interests on patented/Crown lands and waters in Northern Ontario. As such, our comments on the proposed ToR relay a tourism perspective. The Culture side of our Ministry would be responsible to provide comments on the document relating to their mandate.

Appendix B to the proposed ToR's Record of Consultation was consulted to identify the comments our Unit made previously on the draft ToR and the responses from IAMGOLD regarding how those comments would be addressed. We are pleased that the company has responded positively to a number of our comments and made several related edits/additions to the proposed ToR. In particular, the identification of tourism facilities near the project (see Figure 5) and an enhanced recognition of the need to consult with tourism stakeholders as the project evolves. Overall, we are satisfied with IAMGOLD's commitments and related changes in the proposed ToR to address our earlier comments.

We have identified one additional item to bring forward at this time. Section 6.8.2 (Regional Economy) of the proposed ToR includes some new information on tourism visitation and spending in the Sudbury District (page 6-19). We had provided the proponent with information in this regard and we are pleased that they have highlighted some of it in the document.

This section identifies that the District received 378,243 person visits in 2010. However, this figure only includes visits from Canadians. When visitors from the United States and overseas are added the total person visits to the District were 412,192. This is the figure that should be used in the section for the sake of accuracy.

We look forward to receiving additional information on the project as the environmental assessment process is carried out. In the meantime, please do not hesitate to contact me if you have any questions relating to the above comments.

Sincerely,

James A. Antler

Re: Environmental Assessment Terms of Reference – IAMGOLD Côté Gold Project

Dear Mr. Wright,

Wabun Tribal Council has reviewed the Notice of Submission by IAMGOLD of Proposed Terms of Reference for an environmental assessment under the Ontario *Environmental Assessment Act* of its proposed Côté Gold Project located in the traditional territories of Mattagami First Nation and Flying Post First Nation southwest of Gogama. Wabun Tribal Council has been authorized by the First Nations to coordinate their participation in both the Provincial and Federal environmental assessments of the proposed Project. As such, we are providing preliminary comments on the Proposed Terms of Reference as an attachment to this letter.

We anticipate further discussion with IAMGOLD and the Ministry respecting our proposed changes to Proposed Terms of Reference. Given vacation schedules, we have not yet had a chance to discuss our comments with IAMGOLD and so we are providing a copy of these comments to IAMGOLD as well. Please contact me at my office (705-268-9066) or by email (sbatise@wabun.on.ca) to arrange this discussion.

Sincerely,

Linda Keay

Per Shawn Batise

Provincial Individual EA

Proposed Terms of Reference for the Côté Gold Project

Wabun Tribal Council Comments

GENERAL COMMENTS

Background. Wabun Tribal Council recently received a copy of the Notice of Submission from the Ontario Ministry of the Environment (the "MoE") in relation to the following document:

> Côté Gold Project Provincial Individual Environmental Assessment Proposed Terms of Reference, July 2013
>
> (the "Proposed ToR").

The review of the Proposed ToR was undertaken by Rick Hendriks of Camerado Energy Consulting at the request of and in consultation with Wabun Tribal Council. For brevity, comments provided below focus mainly on concerns and requests for clarification in relation to the Proposed ToR. The MoE Code of Practice (Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario) was consulted in preparing this review.

Scope of Alternatives Considered. The Code of Practice indicates that: "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected." We have reviewed the terms of reference from that perspective.

In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario *Environmental Assessment Act*". It is our understanding, therefore, that a "focussed EA" as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows:

> *Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment. Screening criteria must be developed and the screening process must be logical and traceable*. [our underlining]

And later in the Code of Practice:

> *The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in the terms of reference for limiting the examination of alternatives*. [our underlining]

Our general concern is that the screening criteria and process employed in the Proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.

Consideration of Aboriginal and Treaty Rights. In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use."

We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the consideration of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (i.e. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is one of only six broad criteria.

As the Proponent and the Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up large areas of lands and waters, and would involve lasting and, in some instances, permanent changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accommodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of the First Nations. Thus the Proposed Terms of Reference should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.

SPECIFIC COMMENTS

S.5.2.2.1 Cost-effectiveness – Financial Thresholds. The Proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return on investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself".

In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily based on cost-effectiveness:

Mining – Open pit and underground mining

Mine Rock and Overburden Management – Establish a temporary stockpile location...returned to the pit at closure

Non-hazardous waste – Incineration

Power Supply and Routing – On-site diesel generation

A review of section 5.3 Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives. No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR.

We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alternative in dollars and as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take a position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.

S.5.3.1 Identification of Alternatives – Work Schedules. The Proposed ToR suggest that the Proponent is considering options for worker accommodation in an on-site construction camp or in an off-site residence. Under either option, work schedule alternatives will need to be considered, including the length of shifts and the length of work rotations. We recommend that the Proposed ToR include criteria for an assessment of work schedules during the environmental assessment.

S.5.3.1 Identification of Alternatives – Mine Production Rates. Of the alternatives listed for consideration, we note that mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed Project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).

S.5.3.1 Identification of Alternatives – Labour Supply. Typically, mining operations in this region of Ontario draw employees from a variety of populations, including both

men and women, Aboriginals and non-Aboriginals, and local, regional, Provincial, national and foreign workers. Rates of unemployment continue to remain relatively high in the region and Province compared to historic levels, suggesting the need for consideration of pro-active approaches to employment at the proposed Project. While the ultimate make-up of the proposed Project labour force is the product of a variety of factors, including market conditions and skill requirements, proponents have the ability to significantly influence the make-up of the labour force through bid evaluation criteria in requests for proposals and investments in training programs for specific populations, among other means. We believe that it is in the interests of the Proponent to transparently assess its options for the Project labour supply during the environmental assessment, particularly in relation to the locational source of its labour force (i.e. local, Provincial or foreign). We recommend that labour supply be assessed as an alternative in the environmental assessment. We are currently in discussions with IAMGOLD about the labour supply issue and we see value in bringing the work and discussions we are undertaking into the EA process, to avoid duplication of efforts.

S.5.3.2 Identification of Alternatives – Road Transportation. The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1 indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. We recommend that an assessment of the off-site road transportation route alternatives, including the location of key staging areas (e.g. whether in Sudbury, Timmins or elsewhere) be conducted as part of the environmental assessment.

S.5.3.14 Power Supply and Routing. The current project configuration envisions the construction of a 230 kV transmission line of approximately 160 km in length originating in Timmins. This transmission line adds considerably to the capital costs of the proposed Project and substantially expands the Project footprint. Considering also that this 230 kV line would currently have no useful purpose following construction, we see the importance of considering carefully options for avoiding construction of the transmission line, and the need to justify the preferred alternatives during the environmental assessment. The Proposed ToR indicate (at p.5-24) that a "review of transmission infrastructure that could serve the Project during operations has been carried out" the review is not attached to the Proposed ToR and so the scope of the review is unclear to reviewers.

The Proposed ToR indicates that: "there is a 115 kV transmission line located approximately 50 km east of the Project, however, 115 kV will not be sufficient for the Project." It is not stated whether the "insufficiency" is the result of electrical capacity or energy shortfalls or both. Presuming it is capacity, was consideration given to reducing the mine production capacity of the facilities (i.e. lengthening the production phase) as a means of lowering power demand? We note that diesel power has been considered for "periodic use during the operations phase (and

potentially during the closure phase) as needed when grid power is unavailable" but it does not appear that diesel power has been considered as a supplement to grid power to lessen capacity or energy requirements from the grid in order to avoid construction of the 230 kV transmission lines. Other options may also be available to lower the requirements for grid power but it is unclear whether they were considered.

In summary, the dismissal of alternatives that do not require the construction of a 230 kV transmission line is not traceable in the Proposed ToR. While dismissing these alternatives may be justified, this cannot be determined from the information provided in the Proposed ToR. If the referenced "review of transmission alternatives" evaluated alternatives that adequately considered changes to the mine design, then we recommend that it be appended to the Proposed ToR. This would meet the requirement of the Code of Practice to "provide justification in the terms of reference for limiting the examination of alternatives." However, we do not know if the review the proponent has completed has considered changes to the mine production rate or other design aspects that would lower the electricity demand of the proposed Project in order to avoid construction of the 230 kV transmission line. In this case, we recommend that the Proposed ToR carry forward to the environmental assessment stage a consideration of alternatives that do not involve the construction of the 230 kV transmission line as well as the alternative of constructing the 230 kV transmission line.

7.2.3 Definition and Approach to Cumulative Effects. The Proposed ToR indicates the following:

> *The cumulative effects analysis presented in the EA will therefore be restricted to the analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that "will be carried out"; and to those projects of significance within the broader regional context, which may overlap the undertaking in regards to type of effect, time and space.*

In proposing this approach, the Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law.

The recently published CEA Operational Policy Statement[1] states that:

> *Information on the environmental effects of past or existing physical activities may be helpful:*
>
> *If the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project;*
>
> *if information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or*

[1] CEA Agency. May 2013. Assessing Cumulative Environmental Effects under the *Canadian Environmental Assessment Act, 2012* (www.ceaa-acee.gc.ca/default.asp?lang=En&n=1DA9E048-1)

if an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.

The "gold standard" in cumulative environmental effects assessment involves the determination of a pre-development baseline. Such a baseline often provides the most "help" in predicting the environmental effects of a designated project and "assistance" in identifying appropriate mitigation measures. While there are sometimes challenges to creating a pre-development baseline in terms of the availability of suitable pre-development data, this is not always the case. While there will likely be some uncertainty associated with pre-development conditions, the same can be said for the existing project baseline due to the inherent limitations in data gathering. The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations.

The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. However, a pre-development baseline allows the characterization of what has been lost or gained as a result of the effects of prior projects and activities. This is fundamental, for example, to determining the remaining potential for a region to support the exercise of Aboriginal land-based rights protected in Treaty 9.

By providing insight into what has been lost, a pre-development baseline sheds light on the importance of what remains intact (e.g. in terms of ecosystem functions, habitat, preferred species populations, biodiversity, cultural landscapes, etc.) and what still remains possible (e.g. hunting, fishing, gathering, quiet enjoyment of the land, etc.). The loss of fish and wildlife habitat and harvesting opportunities associated with the proposed Project take on greater importance as a result of what has already been lost or taken up by other projects and activities.

The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects for the potential and established Aboriginal and treaty rights and related interests of Aboriginal groups. Further, the Proponent must be required to consult with Aboriginal groups on the available information and seek to augment this information with available traditional knowledge concerning the historical context.

Additionally, in describing the "existing project baseline", the Proposed ToR must give consideration not only to a snapshot of current conditions, but must also include trend or comparative analysis, as appropriate to the available data, to provide insight into whether conditions are becoming more or less favourable in relation to the environmental components or indicators under study (e.g. are species populations rising, stable or falling?)

Hi Doug,

As a follow up to our conversation today I have received the PDF bathymetry mapping of Mesomikenda Lake adjacent to the Cote Gold Project in Gogama from Dave Ballak. I have send PDF bathymetry maps to Todd Copeland in return but we are interested in the working files of Mesomikenda to allow us to work everything together. We are willing to exchange the working files of a number of surrounding lakes that we have completed bathymetry on if interested.

These Lakes are identified as:

1. Neville Lake
2. Delaney Lake
3. Dividing Lake
4. Un-named Lake #1 and #2(North of Bagsverd Lake)
5. Un-named Lake #3 (By 3 Duck Lake)
6. Clam Lake
7. Little clam Lake
8. Cote Lake
9. Chester Lake
10. Bagsverd Lake
11. Weeduck
12. Three Duck Lake

Please let me know if this is acceptable and if you require anything else for this process.

Sincerely,

Dave Brown

Hi Caroline,

I finally managed to catch up with Glen McFarlane and he has determined that it would be best if we were to see your effects predictions report before we move forward on sending letters to affected resource harvesters. We're thinking that it may be a little early in the process, to be sending out letters.

At present, Timmins District has available 2 Bait Harvest Areas and 5 Bear Management Areas. There are no vacant traplines within the District.

I have attached the provincial policies that we follow regarding trapping. The first one shows the point system that we use when allocating traplines and the second one outlines the sizes allowed for trap cabins etc. These are both public documents so feel free to use them as you wish.

I hope this helps,
Suzanne

Hi Suzanne,

Just a follow up to your response about the Traplines, BMA, and bait harvesters that potentially could be affected.

I know you would like a formal letter asking if the MNR could ask the permit holder if we could contact them to discuss the project, which I will do after Caroline could have a chat with you today if you are available?

Suzanne's number is (705)-235-1383.

Also Caroline can you send Suzanne the maps that you have for discussion.

Thanks,

Subject: Follow up with MNR

Dave:
To follow up with MNR on potential effects on resource use areas, please pass along to Suzanne at MNR that the Project is potentially over printing the following areas:

Traplines overlapping the Project site:
GO023
GO024
GO031

Traplines that may have cabins on or near proposed transmission line corridors:
GO028
GO032
GO033

Bear Management Areas with portions is overlapping with the Project site or one of the transmission line corridors:
GO-31-064 (Project site overlap)
GO-29-066 (transmission line alternative overlap)

Bait Fish Harvest blocks: in Chester, Neville, and to a lesser extent in Potier and Yeo townships (for which we have contacts)

At this point, we are interested to know from MNR the availability/vacancy in the region of: bait fish harvest blocks, BMAs and traplines that any displaced resource users may apply for.

As we discussed, I am happy to call her in the next few days to discuss the information request further.

RE: Côté Gold Project, Title Search

Dear Mrs. Myslicki:

This letter is to inform Infrastructure Ontario (IO) that IAMGOLD has conducted a title search and the results indicate that IO does not manage lands within the Côté Gold Project study area.

Following the request of IO, received May 9, 2013, IO will be removed from the Project's mailing list and no further communication regarding the Côté Gold Project Environmental Assessment will be sent.

Thank you for participating in the review of our draft and proposed Terms of Reference, if at any time in the future you have any questions about the project, please feel free to contact me.

Sincerely,

Steven Woolfenden

Subject: Highway 144 - Number of Accidents information request

Good Morning Sergeant Noel,

It was a pleasure speaking to you on Friday, September 6th 2013. To recap, we discussed a request for accidents rates information on Highway 144 from Sudbury to Gogama. The purpose of this request is to provide the mining company (IAMGOLD) with traffic information to have an understanding of accident rates near the Project site and to help inform/identify potential risks and develop proper mitigation if necessary. This information will be incorporated into the Environmental Assessment in accordance with the requirements of the Ontario Environmental Assessment Act.

Details of request:

On May 23rd, 2013 Cheyenne Martin of AMEC had an interview with Sergeant Stephen Meunier from the OPP South Porcupine Detachment in regards to the potential impacts that a proposed mining project (See background information below: Côté Gold Project) near Gogama could have on Police services in the area. Information was shared with AMEC from the South Porcupine Detachment: 334 accidents between August 27, 2012 to August 27 2013 for the area monitored by the South Porcupine Detachment.

On Wednesday, September 4th 2013 I spoke with Staff Sergeant Gary Mills and requested accident rates from Sudbury to Gogama on Highway 144. Sergeant Mills suggested that I call you to **request accident rates from August 27, 2012 to August 27, 2013 on Highway 144 from Sudbury to Gogama.**

Thank you kindly for your time,

Donald Charette

AMEC VOIP: #717-2205

Background: Socio-economic data collection for the Côté Gold Project

IAMGOLD Corporation (IAMGOLD) acquired Trelawney Mining and Exploration Inc. (Trelawney) in 2012, which had been exploring the Côté Gold Project (the Project) property since 2009, with the objective of developing an open pit gold mine and mill. As of November 4, 2012, the Côté Gold drill hole database contains results of 293 diamond drill holes for a total of 158,047 m. The Project is located in the Chester and Neville Townships, District of Sudbury, in northeastern Ontario, approximately 20 kilometres (km) southwest of Gogama, 130 km southwest of Timmins, and 200 km northwest of Sudbury (see attached figure).

IAMGOLD has entered into a Voluntary Agreement with the Ontario Ministry of the Environment to conduct an Environmental Assessment for the Project in accordance with the requirements of the Ontario Environmental Assessment Act. An Environmental Assessment considers the potential environmental effects (positive or negative) of a proposal. A federal environmental assessment will also be required for the Project. IAMGOLD has contracted AMEC Environment and Infrastructure (AMEC) to prepare both the Provincial and Federal environmental assessments. IAMGOLD has undertaken or commissioned environmental, hydrogeological, geotechnical, mineralogical, engineering, logistics, socio-economic, and economic studies related to potential property development.

Good day Cheyenne

Sorry for the delay in getting this information to you. 144 Hwy north of Marquette Lake experienced 76 motor vehicle collisions between 27 August 2012 and 27 August 2013. If you require anything further, please do not hesitate to ask.

Kindest Regards,

Steve

Subject: Accident rates for Highway 144

Hi,

I wanted to follow-up on accident rates for Highway 144 north of Marquette Township between August 27, 2012 and August 27, 2013. I believe I was quoted a number of 334, but I think of made a mistake transcribing it since that seems high relative to the rates south of Marquette Township. Would it be possible for you to check if this number is correct? Sorry for troubling you with this.

Dear Mr. Woolfenden:

RE: Further Direction on the Plan of Consultation – IAMGOLD Corporation Cote Gold Project

Thank you for letter dated July 17, 2013 regarding the submission of a Plan of Consultation for the Aboriginal communities identified for the Cote Gold Project. The Ministry of Northern Development and Mines (MNDM) reviewed the two documents attached to your July 17, 2013 letter; Section 9.0 and Appendix E of the Proposed Terms of Reference for the Provincial Environmental Assessment. The extent to which IAMGOLD Corp. has reached out and engaged with Aboriginal communities and tribal councils to date is exceptional.

To meet the requirements of the *Mining Act*, a complete Plan of Consultation is still required. The above mentioned documents do form the basis of what is required with the exception that a schedule for interim reports needs to be added. These reports set out specific times or dates the proponent will report back to the MNDM on the progress of their consultation plan, and allows the Ministry to give guidance as appropriate.

Please add a schedule for interim reports to your prepared Plan of Consultation, resubmit and continue to engage as you have described.

If you have questions regarding this correspondence, please contact Dawn-Ann Metsaranta at 705-235-1643 or by email dawn-ann.metsaranta@ontario.ca.

Sincerely,

Gordon MacKay
Director of Mine Rehabilitation

Subject: Cote Gold - WTC responses to comments on proposed ToR

Afternoon Wesley,

As I noted this week, IAMGOLD is now able to provide you with our official responses to the comments sent in by Wabun Tribal Council. It is our understanding that WTC will be writing you directly to indicate that IAMGOLD has adequately accommodated their concerns.

In regards to the selection of the 230kV transmission line, please see the response to comment #9 which provides more detail on the existing capacity of the 115kV versus projected power needs of the project.

It is our opinion that based on our previous commitments, the responses provided here, along with the support of Wabun Tribal Council, we have demonstrated that the proposed ToR thoroughly outlines the EA requirements of the project. Further, we request that MOE proceeds with obtaining Ministerial approval of the proposed ToR for the Cote Gold project.

If you have any further questions please do not hesitate to contact me.

Steve

Côté Gold Project - Proposed ToR Comments and Response

#	Comment	IAMGOLD Response
1	General Comments on Background: Wabun Tribal Council recently received a copy of the Notice of Submission from the Ontario Ministry of the Environment (the "MoE") in relation to the following document: "Cote Gold Project Provincial Individual Environmental Assessment Proposed Terms of Reference, July 2013" (the "Proposed ToR"). The review of the Proposed ToR was undertaken by Rick Hendriks of Camerado Energy Consulting at the request of and in consultation with Wabun Tribal Council. For brevity, comments provided below focus mainly on concerns and requests for clarification in relation to the Proposed ToR. The MoE Code of Practice (Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario) was consulted in preparing this review.	Thank you for your comment. No action is required.
2	General Comments on Scope of Alternatives Considered: The Code of Practice indicates that "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected." We have reviewed the terms of reference from that perspective. In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario *Environmental Assessment Act*" It is our understanding, therefore, that a "focussed EA" as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows: *Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment. Screening criteria must be developed and the screening process must be logical and traceable.* [our underlining] And later in the Code of Practice: *The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in the terms of reference for limiting the examination of alternatives.* [our underlining] Our general concern is that the screening criteria and process employed in the proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.	Thank you for your comment. Additional, to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16) [our underlining]. Table 5-7 of the Proposed ToR outlines the rationale for excluding some of the alternatives. Additionally, text to support this is provided in Section 5.0. It should be noted that the assessment of alternatives process presented in the Proposed ToR, in addition to be compliant with the Code of Practice for the Preparation of the Terms of Reference, has been largely proposed, adjusted and vetted for this Project by the MOE and other provincial ministries. This methodology, including the screening criteria and process employed, has been used in other mining EAs in Ontario.

Côté Gold Project - Proposed ToR Comments and Response

#	Comment	IAMGOLD Response
3	General Comments on Consideration of Aboriginal and Treaty Rights. In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use." We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the considerations of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (ie. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is one of only six broad criteria. As the Proponent and Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up large areas of lands and waters, and would involve lasting, and in some instances, permanent changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accommodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of the First Nations. Thus the Proposed Terms of Reference should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.	Thank you for your comment. IAMGOLD recognizes the importance of consultation with Aboriginal people as an integral aspect of the Project. Participation in consultation ensures an open and fair process, and strengthens the quality and credibility of the results. In a coordinated effort with the Provincial and Federal government agencies, IAMGOLD intends to prepare one knowledge base about the current environment and the potential effects of the Project on various aspects of the environment. This knowledge base will be used to populate the required environmental assessments (EAs), including the Assessment of Alternatives. The method that will be used in the EA to assess alternatives looks at a range of Performance Objectives/Criteria. Under each of these objectives/criteria there are a number of relevant indicators which must be evaluated- Effects on Aboriginal and Treaty Rights is one such indicator. As part of the EA, the IAMGOLD EA team will evaluate each indicator, including Effects on Aboriginal and Treaty Rights, and give each of them one of three ratings: Preferred, Acceptable, Unacceptable. If any objective/criterion is rated 'unacceptable', as determined by the IAMGOLD EA team, then the alternative as a whole is automatically rated 'Unacceptable' and therefore rejected. For clarity and by way of example, if the IAMGOLD EA team rated Effects on Aboriginal and Treaty Rights as being "Unacceptable" for a particular alternative, that alternative would automatically be rated "Unacceptable" and rejected by the Company. Therefore presenting Aboriginal and Treaty Rights as a standalone criterion will not give it more weight than if presented as an indicator. This methodology of assessing impacts has been provided by the Ontario Ministry of the Environment and is used in several other EAs for mining projects. Note also that 5 of the 15 human environment criteria are directly related to Aboriginal peoples, their lands, rights, culture and other interests. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use Information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the alternatives assessment.

#	Comment	IAMGOLD Response
4	Specific Comments on S.5.2.2.1 Cost-effectiveness - Financial Thresholds. The proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return of investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself". In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily based on cost effectiveness: Mining - open pit and underground mining Mine Rock and Overburden Management - Establish a temporary stockpile location ... returned to the pit at closure Non-hazardous waste - Incineration Power Supply and Routing - On-site diesel generation A review of section 5.3 Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives. No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR. We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alterative in dollars as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.	Thank you for your comment. Additional to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16) [our underlining]. The Code of Practice does not specifically require information on financial thresholds to be provided in the Terms of Reference. Additional explanation for screening out the identified alternatives is provided below: Mining - a combination of open pit and underground mining was screened out primarily due to the fact that developing a smaller pit combined with an underground operation is not technically suitable as the gold is finely disseminated in the ore body. Additionally, it is not anticipated that the combination of open pit and underground mining be economically feasible. This last rationale is not the primary or sole reason for its exclusion. Mine Rock and Overburden Management - Establishing a temporary stockpile location and returning the mine rock to the mined pit at closure is not a practice commonly used in Ontario. This is mainly due to the fact that moving a large amount of mine rock, in this case more than 800 Mt, is uneconomical. The cost of backfilling the open pit with mine rock would be in the order of several billion dollars. Non-hazardous waste - Incineration in itself is not a costly endeavour. This practice is not acceptable from an air quality perspective, which requires costly mitigation measures to be implemented. These measures are what causes this alternative to become economically unviable. Power Supply - On-site diesel generators to support operations will result in the release of greater amounts of CO2, NOx and particulate emissions than other alternatives. Additionally, it is not considered to be cost effective due to the large amount of fuel required for its operation.
5	Specific Comments on S.5.3.1 Identification of Alternatives - Work Schedules. The Proposed ToR suggests that the Proponent is considering options for worker accommodation in an on-site construction camp or in an off-site residence. Under either option, work schedule alternatives will need to be considered, including the length of shifts and the length of work rotations. We recommend that the Proposed ToR include criteria for an assessment of work schedules during the environmental assessment.	Thank you for your comment. The length of shifts and the length of work rotations will not be influenced by the worker's accommodation alternatives. These factors are considered in the Project planning phase and are not aspects covered under the environmental assessment process. Work rotations will be factored into the environmental assessment in terms of its potential effect on social conditions, and the ability to exercise traditional or cultural activities. Appropriate work schedules will be determined further in the Project planning, however, feedback at this early stage is welcomed. It should be noted that work schedules are part of the on going IBA discussions.

#	Comment	IAMGOLD Response
6	Specific Comments on S.5.3.1 Identification of Alternatives - Mine Production Rates. Of the alternatives listed for consideration, we note that the mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).	Thank you for your comment. The Pre-Feasibility Study currently underway takes into account the financial aspects of the Project. IAMGOLD understands that a longer operations phase leads to longer periods of employment. If the Project's operation phase is extended, this would lead to a reduction in the workforce required for operation. This would change the circumstances applicable to the socio-economic benefits, but may not make them better. The duration of the mine life is determined by multiple factors which include the global market, the return on investment, the availability and cost of workforce and the proponent's operational and economic targets. For this low-grade Project the throughput rate was benchmarked against other low grade projects such as Canadian Malartic and Detour Gold, which have comparable production rates. Benchmarking is a method commonly used to compare the feasibility of future projects with projects that are already in production or that are more advanced from an engineering standpoint. The Project, as currently defined in the Proposed ToR, has been optimized for economic viability. Significant Project life extensions would render the Project uneconomical. Therefore, an extension in mine life is not a viable alternative to be assessed in the EA. Note that this issue is related to the chosen transmission line alternative (i.e. 115 kV vs 230 kV). As such this issue will be addressed in more detail in the reponse to comment #9 below. IAMGOLD will sign a non-disclosure agreement relating to the disclosure of detailed Project information, which is intended to support the parties' discussions on an Impact Benefit Agreement.
7	Specific Comments on S.5.3.1 Identification of Alternatives - Labour Supply. Typically, mining operations in this region of Ontario draw employees from a variety of populations, including both men and women, Aboriginals and non-Aboriginals, and local, regional, provincial, national and foreign workers. Rates of unemployment continue to remain relatively high in the region and Province compared to historic levels, suggesting the need for consideration of pro-active approaches to employment at the proposed Project. While the ultimate make-up of the proposed Project labour force is the product of a variety of factors, including market conditions and skill requirements, proponents have the ability to significantly influence the make-up of the labour force through bid evaluation criteria in requests for proposal and investments in training programs for specific populations, among other means. We believe that it is in the interests of the Proponent to transparently assess its options for the Project labour supply during the environmental assessment, particularly in relation to the locational source of its labour force (i.e. local, provincial, or foreign). We recommend that labour supply be assessed as an alternative in the environmental assessment. We are currently in discussion with IAMGOLD about the labour supply issue and we see value in bringing the work and discussions we are undertaking into the EA process, to avoid duplication of efforts.	Thank you for your comment. IAMGOLD's goals for labour supply is to use equal opportunity employment practices. The Project will require a certain amount of skilled workforce, which may need to be obtained from Timmins or Sudbury. Labour effects will be assessed as part of the socio-economic effects assessment for the Project. Once the effects are understood, the most appropriate options for addressing labour shortages (if any) will be determined. Information from the labour and training strategy that IAMGOLD and Wabun Tribal Council are working on together will inform these options. It should be noted that labour supply is part of the on going IBA discussions.
8	Specific Comments on S.5.3.2 Identification of Alternatives - Road Transportation. The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1 indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. We recommend that an assessment of the off-site road transportation route alternatives, including the location of key staging areas (e.g. whether in Sudbury, Timmins or elsewhere) be conducted as part of the environmental assessment.	Thank you for your comment. Highway 144 will be used to transport material to the site. An assessment of the effects of the Project on Highway traffic will be presented in the EA. At the present time no highway modifications are planned or expected to be required to accommodate Project traffic.

#	Comment	IAMGOLD Response
9	Specific Comments on S.5.14 Power Supply and Routing. The current project configuration envisions the construction of a 230 kV transmission line of approximately 160 km in length originating in Timmins. This transmission line adds considerably to the capital costs of the proposed Project and substantially expands the Project footprint. Considering also that this 230 kV line would currently have no useful purpose following construction, we see the importance of considering carefully options for avoiding construction of the transmission line, and the need to justify the preferred alternatives during the environmental assessment. The Proposed ToR indicate (at p.5-24) that a "review of transmission infrastructure that could serve the Project operations has been carried out". The review is not attached to the Proposed ToR and so the scope of the review is unclear to reviewers. The Proposed ToR indicates that: "there is a 115 kV transmission line located approximately 50 km east of the Project, however, 115 kV will not be sufficient for the Project." It is not stated whether the "insufficiency" is the result of electrical capacity or energy shortfalls or both. Presuming it is capacity, was consideration given to reducing the mine production capacity of the facilities (i.e. lengthening the production phase) as a means of lowering power demand? We note that diesel power has been considered for "periodic use during the operations phase (and potentially during the closure phase) as needed when power grid is unavailable" but it does not appear that diesel power has been considered as a supplement to grid power to lessen capacity or energy requirements from the grid in order to avoid construction of the 230 kV transmission lines. Other options may also be available to lower the requirements for grid power but it is unclear whether they were considered. In summary, the dismissal of alternatives that do not require the construction of a 230 kV transmission line is not traceable in the Proposed ToR. While dismissing these alternatives may be justified, this cannot be determined from the information provided in the Proposed ToR. If the referenced "review of transmission alternatives" evaluated alternatives that adequately considered changes to the mine design, then we recommend that it be appended to the Proposed ToR. This would meet the requirement of the Code of Practice to "provide justification in the terms of reference for limiting the examination of alternatives." However, we do not know if the review of the proponent has completed has considered changes to the mine production rate or other design aspects that would lower the electricity demand of the proposed Project in order to avoid construction of the 230 kV transmission line. In this case, we recommend that the proposed ToR carry forwards to the environmental assessment stage a consideration of alternatives that do not involve the construction of the 230 kV transmission line as well as the alternative of constructing the 230 kV transmission line.	Thank you for your comment. The Cote Gold Project is a low-grade Project. To be economically viable, low-grade projects require a high mining rate. A 230 kV line is preferred for capacity reasons but also to prevent energy shortfalls. IAMGOLD has thoroughly reviewed whether it is viable or not to run the Project with a 115 kV line. Based on the infrastructure requirements for the Project, a 230 kV transmission line has been deemed necessary, and a 115 kV line is not considered a technically, financially realistic and economically viable solution for IAMGOLD. A 115 kV line could provide a maximum of 70-80 MW. The current project design requires 120 MW. In addition the capacity of the 115 kV line would be at its limit at 70-80 MW and the stability of the system would be questionable, meaning the ability of the 115 kV line to deliver consistent power for a facility needing 70-80 MW was severely stretched. Also, from an efficiency standpoint, smaller lines have greater line loss rates, as such, use of a 115kV line would waste power and increase power costs. Moreover, with greater power capacity available through a 230 kV line, IAMGOLD will assess the potential to a more power-intensive mining method (in-pit crushing and conveying, IPCC) IPCC use if deemed appropriate can significantly reduce the GHG emissions typically emmitted from the truck fleet. The 120 MW estimate does not include the power which would be required to operate IPCC, as IPCC is still being evaluated by the Project team. Also, with the 230 kV line, IAMGOLD would have capacity in the power system to support potential future expansions of the mine and/or local needs, whereas with a 115kV line, expansion options would be significantly entirely eliminated or extremely limited.

#	Comment	IAMGOLD Response
10	Specific Commends on 7.2.3 Definition and Approach to Cumulative Effects. The proposed ToR indicates the following: *The cumulative effects analysis presented in the EA will therefore be restricted to the analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that "will be carried out"; and to those projects of significance within the broader regional context, which may overlap the undertaking in regards to type of effect, time and space.* In proposing this approach, the Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law. The recently published CEA Operational Policy Statement states that: *Information on the environmental effects of past or existing physical activities may be helpful:* *- If the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project;* *- If information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or* *- If an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.* The "gold standard" in cumulative environmental effects assessment involves the determination of a pre-development baseline. Such a baseline often provides the most "help" in predicting the environmental effects of a designated project and 'assistance in identifying appropriate mitigation measures. While there are sometimes challenges to creating a pre-developed baseline in terms of the availability of suitable pre-development data, this is not the case. While there will likely be some uncertainty associated with pre-development conditions the same can be said for the existing project baseline due to the inherent limitations in data gathering. The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations. The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. However, a pre-development baseline allows the characterization of what has been lost or gained as a result of the effects of prior projects and activities. This is fundamental, for example, to determine the remaining potential for a region to support the exercise of Aboriginal land-based rights protected in Treaty 9. By providing insight into what has been lost, a pre-development baseline sheds light on the importance of what remains intact	Thank you for your comment. The cumulative effects assessment is not a MOE requirement under the Code of Practice for the Preparation of an Environmental Assessment. Cumulative effects assessment has been included as it is a requirement under the Federal EA Process. There is no requirement by the MOE with regards to "pre-development baseline". The CEA Operational Policy Statement issued in May 2013 states the following with regards to the cumulative effects assessment and the need for "pre-development baseline". *Present-day environmental conditions reflect the cumulative environmental effects of many past and ongoing physical activities. A description of past environmental conditions can at times improve the understanding of cumulative environmental effects for a specific VC.* *Information on the environmental effects of past or existing physical activities may be helpful:* *• if the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project;* *• if information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or* *• if an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.* [our underlining] The baseline studies carried out for the Project reflect the cumulative environmental effects of past and ongoing physical activities. This baseline was carried out over various years. It is not believed that a description of past environmental conditions will help in the understanding of cumulative environmental effects, as identified in the CEA Operational Policy Statement. The intent of the cumulative environmental assessment is consider the overall effect of the planned projects on the environment based on the existing baseline conditions. It should be noted that historic use of the area will be documented in the archaeology baseline. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use Information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the cumulative effects assessment. IAMGOLD understands the importance that Aboriginal people give to the land and

#	Comment	IAMGOLD Response
	(e.g. in terms of ecosystem functions, habitat, preferred species populations, biodiversity, cultural landscapes, etc.) and what still remains possible (e.g. hunting, fishing, gathering, quiet enjoyment of the land, etc.). The loss of fish and wildlife habitat and harvesting opportunities associated with the proposed Project take on greater importance as a result of what has already been lost or taken up by other projects and activates. The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects for the potential and established Aboriginal and treaty rights and related interest of Aboriginal groups. Further, the Proponent must be required to consult with Aboriginal groups on the available information and seek to augment this information with available traditional knowledge concerning the historical context. Additionally, in describing the "existing project baseline", the Proposed ToR must give consideration not only to a snapshot of current conditions, but must also include trend or comparative analysis, as appropriate to the available data, to provide insight into whether conditions are becoming more or less favourable in relation to the environmental components or indicators under study (e.g. are species populations rising, stable or falling?)	resources in the vicinity of the Project and will work with Aboriginal communities to determine what mitigation and monitoring measures are preferred. After Project closure is completed, the area occupied by the Project will be rehabilitated. The cumulative effects assessment will be presented in the EA. As part of this assessment IAMGOLD will look at the combined footprint of this Project and other reasonable foreseeable projects within the local and/or regional study area.

Re: EA Terms of Reference – IAMGOLD Côté Gold Project

Dear Mr. Wright,

On August 19, 2013, Wabun Tribal Council on behalf of Mattagami First Nation and Flying Post First Nation submitted comments concerning the Proposed Terms of Reference for an environmental assessment under the Ontario *Environmental Assessment Act* of IAMGOLD's proposed Côté Gold Project located in the traditional territories of Mattagami First Nation and Flying Post First Nation southwest of Gogama.

Since that time, Wabun has had further discussions with IAMGOLD and we are providing revised comments on the Proposed Terms of Reference as an attachment to this letter. As indicated, we have resolved our remaining outstanding issues and no further changes are requested or required of the Proposed Terms of Reference.

Please contact me at my office (705-268-9066) or by email (sbatise@wabun.on.ca) with any further questions or concerns.

Sincerely,

Shawn Batise
Executive Director

Provincial Individual EA

Proposed Terms of Reference for the Côté Gold Project

Wabun Tribal Council Revised Comments

1. GENERAL COMMENTS

1. **Background**. Wabun Tribal Council recently received a copy of the Notice of Submission from the Ontario Ministry of the Environment (the "MoE") in relation to the following document:

    - Côté Gold Project Provincial Individual Environmental Assessment Proposed Terms of Reference, July 2013

    (the "Proposed ToR").

    The review of the Proposed ToR was undertaken by Rick Hendriks of Camerado Energy Consulting at the request of and in consultation with Wabun Tribal Council. For brevity, comments provided below focus mainly on concerns and requests for clarification in relation to the Proposed ToR. The MoE Code of Practice (Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario) was consulted in preparing this review.

2. **Scope of Alternatives Considered**. The Code of Practice indicates that: "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected." We have reviewed the terms of reference from that perspective.

    In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario *Environmental Assessment Act*". It is our understanding, therefore, that a "focussed EA" as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows:

    > *Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment. Screening criteria must be developed and the screening process must be logical and traceable.* [our underlining]

    And later in the Code of Practice:

    > *The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in the terms of reference for limiting the examination of alternatives.* [our underlining]

Our general concern is that the screening criteria and process employed in the Proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.

3. **Consideration of Aboriginal and Treaty Rights**. In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use."

   We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the consideration of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (i.e. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is one of only six broad criteria.

   As the Proponent and the Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up large areas of lands and waters, and would involve lasting and, in some instances, permanent changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accommodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of the First Nations. Thus the Proposed Terms of Reference should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.

Additional Comments

The Proponent has clarified that:

> *"...if the IAMGOLD EA team rated Effects on Aboriginal and Treaty Rights as being "Unacceptable" for a particular alternative, that alternative would automatically be rated "Unacceptable" and rejected by the Company.*
>
> *Therefore presenting Aboriginal and Treaty Rights as a standalone criterion will not give it more weight than if presented as an indicator."*

This clarification addresses the concern raised in our initial comments. No changes to the Proposed ToR are requested.

2. SPECIFIC COMMENTS

4. **S.5.2.2.1 Cost-effectiveness – Financial Thresholds**. The Proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return on investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself".

   In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily based on cost-effectiveness:

   - Mining – Open pit and underground mining
   - Mine Rock and Overburden Management – Establish a temporary stockpile location…returned to the pit at closure
   - Non-hazardous waste – Incineration
   - Power Supply and Routing – On-site diesel generation

   A review of section 5.3 Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives. No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR.

   We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alternative in dollars and as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take a position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.

   Additional Information

   The Proponent has provided adequate clarification as to why the following were screened out of the environmental assessment solely or primarily based on cost-effectiveness:

   - Mining – Open pit and underground mining
   - Mine Rock and Overburden Management – Establish a temporary stockpile location…returned to the pit at closure

- Non-hazardous waste – Incineration

With respect to the power supply alternatives, IAMGOLD has committed to provide further information to Wabun in order to better assess these alternatives. See additional comments below in relation to 6. Mine Production Rates and 9. Power Supply and Routing.

No changes to the Proposed ToR are requested.

5. **S.5.3.1 Identification of Alternatives – Work Schedules**. The Proposed ToR suggest that the Proponent is considering options for worker accommodation in an on-site construction camp or in an off-site residence. Under either option, work schedule alternatives will need to be considered, including the length of shifts and the length of work rotations. We recommend that the Proposed ToR include criteria for an assessment of work schedules during the environmental assessment.

   Additional Comments

   The Proponent has indicated that work schedules will be addressed during the planning phase following the environmental assessment.

   No changes to the Proposed ToR are requested.

6. **S.5.3.1 Identification of Alternatives – Mine Production Rates**. Of the alternatives listed for consideration, we note that mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed Project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).

   Additional Comments

   IAMGOLD has committed to provide further information to Wabun in order to better assess mine production rates. See additional comments below in relation to 9. Power Supply and Routing.

   No changes to the Proposed ToR are requested.

7. **S.5.3.1 Identification of Alternatives – Labour Supply**. Typically, mining operations in this region of Ontario draw employees from a variety of populations, including both men and women, Aboriginals and non-Aboriginals, and local, regional, Provincial, national and foreign workers. Rates of unemployment continue to remain relatively high in the region and Province compared to historic levels, suggesting the need for consideration of pro-active approaches to employment at the proposed Project. While the ultimate make-up of the proposed Project labour force is the product of a variety of factors, including market conditions and skill requirements, proponents have the ability to significantly influence the make-up of the labour force through bid evaluation criteria in requests for proposals and investments in training

programs for specific populations, among other means. We believe that it is in the interests of the Proponent to transparently assess its options for the Project labour supply during the environmental assessment, particularly in relation to the locational source of its labour force (i.e. local, Provincial or foreign). We recommend that labour supply be assessed as an alternative in the environmental assessment. We are currently in discussions with IAMGOLD about the labour supply issue and we see value in bringing the work and discussions we are undertaking into the EA process, to avoid duplication of efforts.

Additional Comments

The Proponent has indicated that labour effects will be assessed as part of the socio-economic effects assessment for the Project and that, once the effects are understood, the most appropriate options for addressing labour shortages (if any) will be determined.

No changes to the Proposed ToR are requested.

8. **S.5.3.2 Identification of Alternatives – Road Transportation**. The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1 indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. We recommend that an assessment of the off-site road transportation route alternatives, including the location of key staging areas (e.g. whether in Sudbury, Timmins or elsewhere) be conducted as part of the environmental assessment.

Additional Comments

The Proponent has clarified that only Highway 144 will be used for project-related transportation and that an assessment of the effects on Highway 144 will be presented in the EA.

No changes to the Proposed ToR are required.

9. **S.5.3.14 Power Supply and Routing**. The current project configuration envisions the construction of a 230 kV transmission line of approximately 160 km in length originating in Timmins. This transmission line adds considerably to the capital costs of the proposed Project and substantially expands the Project footprint. Considering also that this 230 kV line would currently have no useful purpose following construction, we see the importance of considering carefully options for avoiding construction of the transmission line, and the need to justify the preferred alternatives during the environmental assessment. The Proposed ToR indicate (at p.5-24) that a "review of transmission infrastructure that could serve the Project during operations has been carried out" the review is not attached to the Proposed ToR and so the scope of the review is unclear to reviewers.

The Proposed ToR indicates that: "there is a 115 kV transmission line located approximately 50 km east of the Project, however, 115 kV will not be sufficient for

the Project." It is not stated whether the "insufficiency" is the result of electrical capacity or energy shortfalls or both. Presuming it is capacity, was consideration given to reducing the mine production capacity of the facilities (i.e. lengthening the production phase) as a means of lowering power demand? We note that diesel power has been considered for "periodic use during the operations phase (and potentially during the closure phase) as needed when grid power is unavailable" but it does not appear that diesel power has been considered as a supplement to grid power to lessen capacity or energy requirements from the grid in order to avoid construction of the 230 kV transmission lines. Other options may also be available to lower the requirements for grid power but it is unclear whether they were considered.

In summary, the dismissal of alternatives that do not require the construction of a 230 kV transmission line is not traceable in the Proposed ToR. While dismissing these alternatives may be justified, this cannot be determined from the information provided in the Proposed ToR. If the referenced "review of transmission alternatives" evaluated alternatives that adequately considered changes to the mine design, then we recommend that it be appended to the Proposed ToR. This would meet the requirement of the Code of Practice to "provide justification in the terms of reference for limiting the examination of alternatives." However, we do not know if the review the proponent has completed has considered changes to the mine production rate or other design aspects that would lower the electricity demand of the proposed Project in order to avoid construction of the 230 kV transmission line. In this case, we recommend that the Proposed ToR carry forward to the environmental assessment stage a consideration of alternatives that do not involve the construction of the 230 kV transmission line as well as the alternative of constructing the 230 kV transmission line.

Additional Comments

IAMGOLD has committed to provide further information to Wabun in order to better assess power supply and routing. See additional comments above in relation to 4. Financial Thresholds and 6. Mine Production Rates.

No changes to the Proposed ToR are requested.

10. **7.2.3 Definition and Approach to Cumulative Effects**. The Proposed ToR indicates the following:

> *The cumulative effects analysis presented in the EA will therefore be restricted to the analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that "will be carried out"; and to those projects of significance within the broader regional context, which may overlap the undertaking in regards to type of effect, time and space.*

In proposing this approach, the Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law.

The recently published CEA Operational Policy Statement[1] states that:

> *Information on the environmental effects of past or existing physical activities may be helpful:*
>
> - *if the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project;*
> - *if information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or*
> - *if an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.*

The "gold standard" in cumulative environmental effects assessment involves the determination of a pre-development baseline. Such a baseline often provides the most "help" in predicting the environmental effects of a designated project and "assistance" in identifying appropriate mitigation measures. While there are sometimes challenges to creating a pre-development baseline in terms of the availability of suitable pre-development data, this is not always the case. While there will likely be some uncertainty associated with pre-development conditions, the same can be said for the existing project baseline due to the inherent limitations in data gathering. The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations.

The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. However, a pre-development baseline allows the characterization of what has been lost or gained as a result of the effects of prior projects and activities. This is fundamental, for example, to determining the remaining potential for a region to support the exercise of Aboriginal land-based rights protected in Treaty 9.

By providing insight into what has been lost, a pre-development baseline sheds light on the importance of what remains intact (e.g. in terms of ecosystem functions, habitat, preferred species populations, biodiversity, cultural landscapes, etc.) and what still remains possible (e.g. hunting, fishing, gathering, quiet enjoyment of the land, etc.). The loss of fish and wildlife habitat and harvesting opportunities associated with the proposed Project take on greater importance as a result of what has already been lost or taken up by other projects and activities.

The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects

---

[1] CEA Agency. May 2013. Assessing Cumulative Environmental Effects under the *Canadian Environmental Assessment Act, 2012* (www.ceaa-acee.gc.ca/default.asp?lang=En&n=1DA9E048-1)

for the potential and established Aboriginal and treaty rights and related interests of Aboriginal groups. Further, the Proponent must be required to consult with Aboriginal groups on the available information and seek to augment this information with available traditional knowledge concerning the historical context.

Additionally, in describing the "existing project baseline", the Proposed ToR must give consideration not only to a snapshot of current conditions, but must also include trend or comparative analysis, as appropriate to the available data, to provide insight into whether conditions are becoming more or less favourable in relation to the environmental components or indicators under study (e.g. are species populations rising, stable or falling?)

Additional Comments

The Proponent has indicated that a cumulative effects assessment is not a MOE requirement under the Code of Practice for the Preparation of an Environmental Assessment.

Consideration of cumulative effects is a requirement of CEAA 2012, and is addressed in section 12.1.2 of the EIS Guidelines issued by the Canadian Environmental Assessment Agency for the proposed Project.

Wabun does not share the Proponent's perspective that a cumulative effects assessment can be limited to a consideration of the residual effects of the proposed Project in combination with only reasonably foreseeable future projects. Past projects and activities must also be considered as part of the federal environmental assessment pursuant to CEAA 2012 and the EIS Guidelines.

No changes to the Proposed ToR are required.

Subject: RE: waste disposal site options

Hi Kyle,

As a follow up to our conversation yesterday I apologize for the delayed response I was on holidays for 2 weeks.

We are currently reconfiguring the Neville Landfill proposed layout to attempt to lower Closure cost. The first layout proposed by AMEC to suit our project has a larger surface area than the other greenfield sites that are also proposed therefore there is a significant increase in capping material. (approx. $200,000 difference). This takes into account the existing waste. AMEC was instructed to take another look at the proposed layout to see if this cost can be reduced with a smaller footprint but achieve the same volume.

I am hoping we can decide by the end of this week or Monday on which site is best suited so we can move forward.

Sincerely,

Dave Brown

Hello Dave,
When I spoke to you a couple weeks ago, you had just received the report from your consultant regarding your waste disposal options. I am just following up with you to find out what your plans are regarding the Neville Waste Disposal Site.
I am hopeful that you could give us an update to help us better plan our WDS management strategies.
Thanks,

Kyle Stanley

Afternoon Dawn-Ann,

Happy new year!

As indicated by Mr. Mackay, Director of Mine Rehabilitation in his letter to IAMGOLD dated September 16, 2013, we have attached a revised Plan of Consultation to meet the requirements of the *Mining Act*. This plan is consistent with the proposed ToR and includes the requirement for a reporting schedule. As such, I am also providing here a report of activities completed in Q3 and Q4 of 2013.

If you have any comments on the revised plan or the report information submitted please do not hesitate to contact me or Emma Malcolm.

Regards,

Steve

Subject: Cote Gold Project - ToR Approved

Good morning, everyone. The Minister has approved the proposed Terms of Reference for IAMGOLD's Cote Gold Project. Please see the attached Notice of Approval and decision letter to the proponent. IAMGOLD will now be moving forward with the environmental assessment, which will include a number of consultation points that will provide opportunity for providing comments and sharing concerns.

Should you have any questions or concerns about the project, please contact:

Steve Woolfenden
Manager, Corporate Environmental Assessments and Approvals
IAMGOLD Corporation
401 Bay Street Suite 3200, PO Box 153
Toronto ON M5H 2Y4

Dear Mr. Woolfenden:

Thank you for submitting your Terms of Reference on July 19, 2013 for an environmental assessment for the Côté Gold Project. The ministry has completed its review and I wish to inform you that I have approved your Terms of Reference.

As required by subsection 6.1(1) of the Environmental Assessment Act, your environmental assessment must now be prepared in accordance with the approved Terms of Reference. While this approval provides additional certainty to your environmental assessment decision-making process, it does not secure approval of an undertaking. IAMGOLD Corporation is responsible for fulfilling the commitments outlined in the Terms of Reference and for providing the appropriate level of quality in the environmental assessment.

Should you wish to vary significantly from your approved Terms of Reference in preparing your environmental assessment, you will need to submit a new Terms of Reference for my decision. In the event of any uncertainty, you should consult with the Ministry of the Environment through the ministry's Environmental Approvals Branch.

Should you require further assistance please contact Mr. Wesley Wright, Project Officer of the Environmental Approvals Branch, at 416-325-5500 or by e-mail at wesley.wright@ontario.ca.

Yours sincerely,

Jim Bradley
Minister

TERMS OF REFERENCE - NOTICE OF APPROVAL

ENVIRONMENTAL ASSESSMENT ACT

SUBSECTION 6(4)

APPROVAL OF TERMS OF REFERENCE

FOR

THE PREPARATION OF AN ENVIRONMENTAL ASSESSMENT

RE: Proponent: IAMGOLD Corporation

Undertaking: Côté Gold Project

EA File No.: EA FILE NO. 05-09-02

As provided for by subsection 6(4) of the Environmental Assessment Act, the Terms of Reference, as submitted for approval to the Ministry of the Environment on July 19, 2013 to govern the preparation of an environmental assessment for the above-noted undertaking, is hereby approved.

Reasons:

I am satisfied that an environmental assessment prepared in accordance with the Terms of Reference will be consistent with the purpose of the Environmental Assessment Act and the public interest for the following reasons:

1. The Terms of Reference ensures that the environmental assessment will be completed using a public, Aboriginal and government agency consultation process that is open and transparent;

2. The Terms of Reference ensures that the completed environmental assessment will contain a sufficient level of detail to accurately assess the environmental effects of a reasonable range of alternatives and the proposed undertaking;

3. The Terms of Reference sets out a planning process that will ensure the completed environmental assessment will be consistent with the purpose of the Environmental Assessment Act and the public interest; and,

4. All issues and concerns raised have adequately been addressed in the Terms of Reference or can be addressed during the preparation of the environmental assessment.

Dated the 14th day of January, 2019 at TORONTO. J.B

Meeting Minutes for IAMGOLD Corporation – Cote Gold Lease Application update

Teleconference MNDM Boardroom 2, E-Wing, South Porcupine
January 21, 2014 3:00-3:15 pm

Teleconference
Dave Brown (IAMGOLD)
Marie-France Bugnon (IAMGOLD)
Brian Laine (MNDM)
Julie McFarling (MNDM)
Dawn-Ann Metsaranta (MNDM)

Minutes

The lease applications for IAMGOLD's Cote Gold project are in groups that are at different stages of the process.

Julie will describe and give an update on each of these groups and where they are in the process.

1) Surface and mining rights lease applications, 4 at this stage. Preliminary survey instructions were given in 2012, and final instrcutions for the survey were provided in June 2013. Marie-France says the surveying was finished last week and should be filed with the ministry soon. Mining Lands will wait for this to come in.
2) Surface and mining rights lease applications, 3 at this stage. Waiting on survey directions at this time. MNDM was waiting for comments to come in from MNR on these. MNDM has heard from MNR and now we just wait for instructions from the survey general.
   - Marie-France asked if IAMGOLD should anticipate surveying could begin this summer. Julie said that would be very likely.
3) Surface rights only lease applications, 4 at this stage. Currently in the screening process for MNDM's class EA.
   -Name change was brought up by Marie-France for these. Julie will check to see if this name change is registered/recorded with Mining Lands and the status on that to see if anything further needs to be done by the company.
4) Surface rights only, 4 at this stage. Most recent received by Mining Lands office. Currently in the comment stage with partner ministries at this time, then these will move into screening for MNDM's class EA.

February 12, 2014

Dr. John Pollock
Woodland Heritage Services
Suite 913, 5 Harding Ave
Toronto, ON
M6M 0A3

Dear Dr. John Pollock

Re: Partial Archaeological Clearance for Côté Gold Project Area (Chester, Yeo and Neville Townships, Sudbury District, Ontario)

Following direction from the Ministry of Tourism, Culture and Sport (MTCS) IAMGOLD is asking that you, Dr. John Pollock, submit this letter of request, for partial Environmental Assessment (EA) clearance for the Côté Gold Project (the Project), in conjunction with the Stage 2 archaeological report that you have prepared for the Project.

IAMGOLD understands that receiving partial EA clearance is confirmation that MTCS is satisfied with the archaeological assessment and specified protection of archaeological sites within the Project area. Receiving partial clearance will also allow the Ministry of Environment to approve the EA, prior to the complete review and inclusions of the Stage 3 and Stage 4 reports into the Ontario Public Register of Archaeological Reports, thereby avoiding any Project delays due to outstanding archaeological assessment concerns.

Based on the Stage 1 and 2 Archaeological Resource Assessment of the IAMGOLD Côté Gold project (submitted May 15, 2013 / Revised November 18, 2013), IAMGOLD is requesting partial (EA) clearance to complete Stage 3 and/or 4 archaeological work at the following 10 sites.

It is anticipated that all Stage 3, and Stage 4 work (if required) on these 10 sites, and their associated technical reports, will be completed by the summer of 2014.

Pre-contact Archaeological Sites:

1) Two Pike Point – CjHl-11
2) Côté Lake 1 Site – CjHl-12
3) Flat Rock Site – CjHl-2
4) Rocky Narrows 2 – CjHl-15
5) Chester 1 Site – CjHl-4
6) Chester 3 Site – CjHl-5
7) Chester 5 Site – CjHl-7

Historical Archaeological Sites:

1) Chester 2- CjHl-19
2) Shepherd Mining Site – CjHl-21
3) Shannon Cabin – CjHl-25

IAMGOLD
CORPORATION

401 Bay Street, Suite 3200, PO Box 153
Toronto, Ontario, Canada M5H 2Y4

W www.iamgold.com **E** info@iamgold.com

The above 10 sites, and all other registered archaeological sites outside of the potential Project impact areas, are protected by a 20m protective buffer and a 50m monitoring zone. Appropriate steps will be taken to safeguard non-excavated archaeological sites by ensuring that all archaeological work remains outside the peripheral of their 20m protective buffer.

Pending approval, monitoring of the above sites will be undertaken on a monthly basis, during construction, by Côté Gold environmental monitoring project staff, trained by a licensed archaeologist, in conjunction with independent monitoring by a licensed archaeologist.

All archaeological work that has already been completed, and the above proposed work, is based on current Project designs. We understand that if changes are made to the Côté Gold project design, and other registered sites or high potential areas could be affected by the project, further archaeological work may be required.

Sincerely,

Steve Woolfenden,
Manager, Corporate Environmental Assessments and Approvals,
IAMGOLD Corporation

Subject: Cote Gold Project - PreSubmission meeting

Good Afternoon,

As discussed, IAMGOLD is interested in holding a meeting with available GRT/FRT members in advance of submitting the EIS/Draft EA to CEAA for the concordance review and initiate the draft EA review.

We would like the meeting to be held on April 7th and are looking to you to coordinate participants we need to attend the meeting.

Our focus of this meeting will be to cover the physical and biological disciplines and review at a high level the results of baseline studies and effects assessments. If needed we can setup a separate meeting to cover archaeology and the human environment disciplines.

Once we have confirmed the date, we can provide an agenda. I will look into setting up a webex to limit travel requirements for the meeting.

Can you please let me know if this works for both the provincial and federal teams, as you know I strongly believe that it is best to have both levels of government participate in these meetings.

Regards,

Steve

Dear Mr. Woolfenden:

RE: Updated Plan of Consultation – IAMGOLD Corporation
Cote Gold Project

Thank you for your updated Plan of Consultation received January 2014 for the Cote Gold Project. The Ministry of Northern Development and Mines (MNDM) has reviewed the document carefully and as requested you have added a schedule for interim reports to Section 4.5 of the Plan of Consultation. At this time MNDM does not have any further guidance to give with respect to consultation on this project.

Consultation processes are by their nature, fluid and evolving processes and so it is important to recognize that IAMGOLD may need to adjust its approach to Consultation as the process goes on and if any new information comes to light.

I look forward to seeing the interim reports for this plan of Consultation at which time I may or may not give further direction.

If you have questions regarding this correspondence please contact Dawn-Ann Metsaranta at 705-235-1643 or by email dawn-ann.metsaranta@ontario.ca.

Subject: Conformity Review of the Final Environmental Impact Statement for the Côté Gold Project

Dear Mr. Woolfenden:

As a follow-up to the Canadian Environmental Assessment Agency's (the Agency) letter of May 13, 2014, the Agency has determined that the Environmental Impact Statement (EIS) for the Côté Gold Project conforms to the EIS Guidelines. This conformity review does not include a review of the technical merit of the information presented; therefore, the subsequent technical review may result in requests for additional information in order to assist the Agency in reaching a conclusion on the potential for significant adverse environmental effects.

As discussed, the Agency requests confirmation on the timeframe of when the EIS will be delivered to Aboriginal groups to prepare for the federal public comment period on the EIS, anticipated to begin on June 2, 2014.The Agency confirms that IAMGOLD will deliver the requisite printed copies to the federal review team by June 2, 2014.

Should there be any questions, please contact me at 416-952-7006 or via email at Ellen.Campbell@ceaa-acee.gc.ca.

Sincerely,

Ellen Campbell

Dear Chief Jerome:

Subject: Conformity Review of the Final Environmental Impact Statement for the Proposed Côté Gold Project

This letter is to inform you that the Canadian Environmental Assessment Agency (the Agency) received the final Environmental Impact Statement (EIS) from IAMGOLD Corporation (the proponent) on May 12, 2014 and has concluded that the EIS conforms to the requirements set out in the EIS Guidelines.

The conformity review did not include a review of the technical merit of the information presented. The Agency, in collaboration with other federal departments, will conduct a technical review of the EIS. This technical review may result in requests for additional information from the proponent.

The Agency invites the Algonquin Anishinabeg Tribal Council to comment on the potential environmental effects of the project and the proposed measures to prevent or mitigate those effects as described in the proponent's EIS Summary.

Please find enclosed a CD copy of the EIS Summary and main report. The formal public comment period is anticipated to commence on June 2, 2014.

Any written comments can be sent to the Agency by July 2, 2014.

Information that you provide to the Agency at any time during the environmental assessment is considered public and may be subject to public access-to-information. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact me to discuss prior to submitting the information to the Agency.

Dear Chief Martel,

On May 13, 2013, the Canadian Environmental Assessment Agency (the Agency) wrote to advise you that the Côté Gold Project (the Project) is subject to an environmental assessment (EA) under the *Canadian Environmental Assessment Act* 2012 (CEAA 2012).

The purpose of this letter is to continue to inform your community about progress during the EA. A final Environmental Impact Statement (EIS) from IAMGOLD Corporation (the proponent) was received by the Agency on May 12, 2014. The Agency has concluded that the final EIS conforms to the requirements set out in the EIS Guidelines. The conformity review did not include a review of the technical merit of the information presented. The Agency, in collaboration with other federal departments, will conduct a technical review of the EIS. This technical review may result in requests for additional information from the proponent.

Information about the project can be accessed on the Canadian Environmental Assessment Registry (CEAR) site:

Subject: Conformity Review of the final Environmental Impact Statement for the Proposed Côté Gold Project

This letter is to inform you that the Canadian Environmental Assessment Agency (the Agency) received the final Environmental Impact Statement (EIS) from IAMGOLD Corporation (the proponent) on May 12, 2014 and has concluded that the EIS conforms to the requirements set out in the EIS Guidelines.

The conformity review did not include a review of the technical merit of the information presented. The Agency, in collaboration with other federal departments, will conduct a technical review of the EIS. This technical review may result in requests for additional information from the proponent.

Since the Agency has determined that the EIS conforms to the EIS Guidelines, we respectfully request your review and comments. For your information, we are including a printed copy of the EIS Summary and a CD of the EIS and appendices. The proponent has confirmed that paper copies of the EIS Summary and main body of the EIS as well as electronic copies of the appendices will be sent to your community to facilitate your review. Should you need additional copies or other related documents, please inform the undersigned.

In particular, we are seeking

- your comments on the adequacy of the proponent's responses to your concerns;
- your views on the accuracy of the proponents information on issues your community has raised; and,
- your opinion on any proposed ways of addressing the impacts.

To facilitate your involvement, your community is being provided with documents in advance of the formal comment period. The formal public comment period is anticipated to commence on June 2, 2014.

.../2

Please provide your comments to the Agency by July 2, 2014.

As part of the review of this project, the Agency is also interested in meeting with your community. The Agency, working with the proponent, will be contacting your community directly to organize meetings.

Your input and the findings of the technical review, including any additional information that the proponent may provide, will assist the Agency in reaching a conclusion on the potential for significant adverse environmental effects.

Information that you provide to the Agency at any time during the environmental assessment is considered public and may be subject to public access-to-information. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact me to discuss prior to submitting the information to the Agency.

Should you have any questions, please contact me at 416-952-7006 or via email at minecotemine@ceaa-acee.gc.ca.

Dear Chief Naveau:

Subject: Conformity Review of the Final Environmental Impact Statement for the Proposed Côté Gold Project

This letter is to inform you that the Canadian Environmental Assessment Agency (the Agency) received the final Environmental Impact Statement (EIS) from IAMGOLD Corporation (the proponent) on May 12, 2014 and has concluded that the EIS conforms to the requirements set out in the EIS Guidelines.

The conformity review did not include a review of the technical merit of the information presented. The Agency, in collaboration with other federal departments, will conduct a technical review of the EIS. This technical review may result in requests for additional information from the proponent.

Since the Agency has determined that the EIS conforms to the EIS Guidelines, we respectfully request your review and comments. For your information, we are including a printed copy of the EIS Summary and a CD of the EIS and appendices. The proponent has confirmed that paper copies of the EIS Summary and main body of the EIS as well as electronic copies of the appendices will be sent your community to facilitate your review. Should you need additional copies or other related documents, please inform the undersigned.

In particular, we are seeking

- your comments on the adequacy of the proponent's responses to your concerns;
- your views on the accuracy of the proponents information on issues your community has raised; and,
- your opinion on any proposed ways of addressing the impacts.

To facilitate your involvement, your community is being provided with documents in advance of the formal comment period. The formal public comment period is anticipated to commence on June 2, 2014.

.../2

Please provide your comments to the Agency by July 2, 2014.

As part of the federal environmental assessment of this project, the Agency is also interested in meeting with your community. The Agency, working with the proponent, will be contacting your community directly to organize meetings.

Your input and the findings of the technical review, including any additional information that the proponent may provide, will assist the Agency in reaching a conclusion on the potential for significant adverse environmental effects.

Information that you provide to the Agency at any time during the environmental assessment is considered public and may be subject to public access-to-information. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact me to discuss prior to submitting the information to the Agency.

Should you have any questions, please contact me at 416-952-7006 or via email at minecotemine@ceaa-acee.gc.ca.

Sincerely,

Ellen Campbell
Project Manager, Ontario Region

Dear Mr. Lefebvre:

Subject: Conformity Review of the Final Environmental Impact Statement for the Proposed Côté Gold Project

This letter is to inform you that the Canadian Environmental Assessment Agency (the Agency) received the final Environmental Impact Statement (EIS) from IAMGOLD Corporation (the proponent) on May 12, 2014 and has concluded that the EIS conforms to the requirements set out in the EIS Guidelines.

The conformity review did not include a review of the technical merit of the information presented. The Agency, in collaboration with other federal departments, will conduct a technical review of the EIS. This technical review may result in requests for additional information from the proponent.

Since the Agency has determined that the EIS conforms to the EIS Guidelines, we respectfully request your review and comments. For your information, we are including a printed copy of the EIS Summary and a CD of the EIS and appendices. The proponent has confirmed that paper copies of the EIS Summary and main body of the EIS as well as electronic copies of the appendices will be sent to your community to facilitate your review. Should you need additional copies or other related documents, please inform the undersigned.

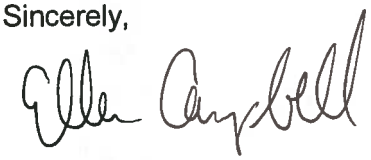
In particular, we are seeking

- your comments on the adequacy of the proponent's responses to your concerns;
- your views on the accuracy of the proponents information on issues your community has raised; and,
- your opinion on any proposed ways of addressing the impacts.

To facilitate your involvement, your community is being provided with documents in advance of the formal comment period. The formal public comment period is anticipated to commence on June 2, 2014.

.../2

Please provide your comments to the Agency by July 2, 2014.



As part of the review of this project, the Agency is also interested in meeting with the MNO Region 3 Consultation Committee. The Agency, working with the proponent, will be contacting the MNO directly to organize meetings.

Your input and the findings of the technical review, including any additional information that the proponent may provide, will assist the Agency in reaching a conclusion on the potential for significant adverse environmental effects.

Information that you provide to the Agency at any time during the environmental assessment is considered public and may be subject to public access-to-information. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact me to discuss prior to submitting the information to the Agency.

Should you have any questions, please contact me at 416-952-7006 or via email at minecotemine@ceaa-acee.gc.ca.

Sincerely,

Ellen Campbell

To: Walker, Korey (MNR)
Cc: Emma Malcolm
Subject: RE: Request for Shape Files

Hi Korey,

IAMGOLD currently holds or has access to the mineral rights for the mine footprint and most of the infrastructure. IAMGOLD is currently preparing additional material requested by the Mining and Lands Commissioner in support of our application to seek easements over lands jointly held with Sanatana Resources.

In addition to seeking the easements we require for the mine site, IAMGOLD has applied to MNDM to receive surface rights under the Mining Act for most of the mine site infrastructure but as you know these lands cannot be leased until the completion of the EA process. As such, at this time we do not have map which shows the project site situated on lands that are currently leased to IAMGOLD.

With regards to the transmission corridor, now that the EA process has determined the cross country corridor to be the preferred alignment we will be initiating a program in the coming week to seek the appropriate easements and land tenure.

Hope that provides some clarity.

Regards,

Steve

Subject: RE: Request for Shape Files

Hi Emma,

Thank you for the shapefiles, they are very helpful.

I am assuming that the actual mining operation will be situated on a mining lease(s) (excluding the transmission corridor). Do you have a shapefile for this form of tenure also?

Thanks again.

Hi Korey,

I'm happy to try and fill this request as best as I can - however ….

We do not have a 'mine study area' – in the EA text we refer to both a 'local study area' and a 'regional study area' ? Which were you hoping to receive shape files for?

Hi Emma,

My name is Korey Walker and I am the new Timmins District Planner. I will be acting as your Timmins District contact moving forward if needed. After discussing with technical staff, it looks like we are going to need *two* hard copies with everything, plus the DVDs. A lot of people will need to review the documents, meaning multiple copies are needed. Thank you.

Subject: Preferred Format for Environmental Assessment Submission

Dear Government Review Team Member,

IAMGOLD has been busy preparing for the submission of our Draft Environmental Assessment / Environmental Impact Statement.

As part of this preparation, we are kindly requesting that you indicate which format you would prefer to receive a copy of the associated documents in.

The following options are available to you :

a. Electronic only (DVD)
b. Hard Copy of Executive Summary (EN or FR) + DVD
c. Hard Copy of Executive Summary (EN or FR) and EA without appendices + DVD
d. Complete Hard Copy of Executive Summary (EN or FR), EA and Appendices + DVD
e. Option a, b or c with select appendices

Attached you will find the *Table of Contents* for the EA/EIS to help you determine your needs. In the interest of sustainability, IAMGOLD is recommending that you select option A.

Given the time sensitivity of submission, we ask that you please indicate your preference by **Tuesday, April 15th 2014 @ 5pm**, at the latest. Please note that if you have not responded by this date you will automatically receive an electronic copy (option A).

Thank you in advance for your cooperation.

Best regards,
Emma Malcolm

Chief Murray Ray Shawn Batise (Wabun Tribal Council) Cathy Ray Myrma McLeod Rosie Ray Penny Ann Robin Unknown Lynn Ray Ray Ray Unknown Valerie Bull Joyce Roy Shelly Bob McLeod Cole Clearwater Addy Clearwater Budsy Manilla Unknown Ray S Ray Susan Baril Richard Ray	Aaron Steeghs Steve Woolfenden Emma Malcolm Sylvain Morissette Cheryl Naveau Dave Brown Stephan Theben	Corey Decker (CEAA) Sherry Boodram (CEAA) Paul Jordan (MOE)

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

Introductions:

CN provided a welcome to all community members from Flying Post. She expressed thanks on behalf of IAMGOLD and the Cote Gold Project to the Chief, leaderships and community members for their continued participation in, and facilitation of Project meetings.

AS introduced all of the attendees from IAMGOLD and the government. He provided an outline for the open house and explained why government regulators were participating in the consultation and presentation. AS reminded community members that IAMGOLD continues to open to consultation at any time there is an interest. AS thanked Chief and Council for allowing IAMGOLD to come and do consultation in their community.

Presentations:

SW provided a Project overview refresher to reintroduce the community to the Project, or provide a high level summary of the Project and its associated components for members who have not previously attended open house / community meetings. The Project overview discussion included high level concepts around closure, plans for development of channel realignments and the development of a new 230KV transmission line.

CD provided information to the community about the role of the Canadian Environmental Assessment Agency and the Federal Environmental Assessment process. He expressed the importance of Aboriginal consultation with the Federal Environmental Assessment process and the Federal 'duty to consult'. CD also informed the community about the status of the Cote Gold Project in the Federal EA process, and the current and forthcoming comment periods.

Questions about EA Process:

SB (WTC): Is there an expiry date on an approved environmental assessment?

CD: There is no expiration date on the permit, but we are looking at changing policy to modify conditions so that if certain elements of the Project are to change considerably, the approval would change as well.

SB (WTC): So once the engineering design and feasibility studies are done – and if any big changes are made – will another Environmental Assessment be required?

CD + SW: The EA will be approved for the Project as is. However, if a major change to the

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

design was made – i.e. we changed the location of the TMF, then yes, we would do another EA or aspects of the permitting would also have to be changed.

Participant Funding Process:

SB: provided community with an explanation of CEAA's Participant Funding Process. He noted that FPFN had received money from CEAA to complete a technical review of the EA. This money was being used to hire a consultation who will advocate on behalf of the communities (FPFN and MFN) to ensure that they have a fulsome understanding of the Project and its potential environmental effects from the perspective of the community.

EA Findings:

DB: provided an overview of the potential effects the Project will have on the biological, physical and human environment. For each discipline studied in the EA, DB explained the findings of the EA with respect to current baseline conditions, the mitigations proposed in the EA, and what the residual effects for the Project will be.

Questions re: Project and Project effects:

Q: To confirm, as one of the mitigations, IAMGOLD will not allow Project staff to hunt or fish on site?

DB: Correct. While on shift, Project staff will not be allowed to hunt or fish on the site property.

Q: Since your last presentation, what in terms of the Project design has changed?

AS: We have changed the design of the Mine Rock Area. Previously we planned for three smaller MRA, but our current design now has it placed in one location. This was done to reflect community feedback, and thinking that one MRA would reduce impact of Project size, impact on water and noise.

SW: Mine discharge to Mesomikenda, has now been consolidated to Bagsverd creek. The EA revealed that the effect on the environment to Bagsverd is actually smaller – this is generally because the lack of flow in and out of Mesomikenda would allow the mine effluent to settle too

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

much. We have also worked to close the loop on the tailings facility to reduce freshwater intake and mine effluent. The new scenario will segregate any water that has come into contact with cyanide, it will reduce the amount of water collected and used, and it will allow us to ensure that any water that is discharged to the environment will be well below all required standards or limits.

ST: We have also selected the 230kv transmission line as the preferred alternative as the power supply to the Project. Additionally, there is now only the tailings pipeline on the west of the TMF, the east option no longer exists.

Q: What is the intake of water per day for the mine?

ST: Approximately 10 % on average of the total ore processing plant water requirements.

Final Comments from Chief Murray Ray:

When I think of non-miners in this community, I don't think they can fully conceptualize the size of the open pit. It would be useful if we could see some images of Projects of a comparable size. It would be a useful tool for the average person.

I think it is important that we think carefully of future generation. With a Project of this size hurting so much of the environment, it is important that it is at least offset with jobs and progress. And while this Project may bring a lot of progress, it has to be worth it, and that can be difficult to judge.

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

June 23, 2014

Meeting Objective: Provide members of the general public from the City of Timmins and surrounding areas with an opportunity to ask questions about and listen to a presentation outlining the Project Description, an update on the status of the Project in the EA process and a Summary of EA Findings.

Location: Days Inn Conference Centre, Timmins ON

Attendees:

Government Regulators	**General Public**	**Team**
Steven Momy (MOE)	Paula Clarke	Steven Woolfenden
Carl Johansson (CEAA)	Justin Chemello	Aaron Steeghs
Corey Dekker (CEAA)	James View	Sylvain Morrissette
Korey Walker (MNR)	Larry Gervais	David Brown
Dawn-Ann Metsaranta (MNDM)	Leonard Rickard	Alan Smith
	Pat Bauford	Cheryl Naveau
	Shane Lebrun	Stephan Theben
	Tiber Lesko	Emma Malcolm
	Pat Gibbons	
	Paul Wilson	
	John Boissoneault	
	Garry Richards	
	Kevin Montgomery	

Introductions and Project Overview:

SW: provided introductions, including introducing members of the IMG team that were in attendance and staff from CEAA that were attending the open house.

SW: provided presentation on Project overview – discussed the Project and its associated components and infrastructure – included a discussion of transmission line, closure concepts, and water channel realignments.

EA Process:

IAMGOLD
CÔTÉ GOLD PROJECT

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

SW: explained IAMGOLDs permitting process for the Project. Made clear that the EA is only one step in the permitting process and discussed future federal and provincial permits that the Project will require. Also mentioned anticipated timelines for completing the feasibility study which will help determine the economics, and ultimately potential for development of the Project.

SW: Explained the status of the Project in relation to the EA process. Also discussed consultation efforts to date, including how IAMGOLD has considered comments received during consultation throughout the EA process and environmental management planning.

CD: There are a number of permits and approvals that IAMGOLD will have to secure before IAMGOLD can proceed with building the mine – including approval in the Federal EA process. The intention of the Federal EA process is to determine the significance of the effects of the mine on the environment.

CD: Provided an overview of the role of CEAA, what kind of work they do at the Agency and the requirements are of a proponent in the EA process.

CD: Explained where IAMGOLD is at in the Federal EA process, and what milestones IAMGOLD needed to achieve to get there.

Environmental Assessment Findings and Project Effects:

SW: provided a presentation that explained: what disciplines (physical, biological, human environment) IAMGOLD studied as part of the EA, the current conditions for each discipline at the Project site, mitigations that will be applied to minimize effects of the Project on the environment, and the residual effects of the Project. Noted that the EA findings reveal that the Project will not have any significant residual effects.

Poster Boards:

IAMGOLD made poster boards available for viewing and individual discussion with attendees. The poster boards reflected content available in the presentation for attendees who did not hear presentation, or had specific questions they wanted to discuss one-on-one with an IMG team member.

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0

Introductions and Project Overview:

AS: provided introduction of IAMGOLD and Government regulators to community members.

AS: gave overview of Project description including a description of the site layout – explained what has changed in the Project design since the last time IAMGOLD met with the community – provided a description of the selected preferred alternative for the transmission line (identified in the EA) and other associated infrastructure and components required for the development / operation of the Project.

AS: explained the planning and approvals schedule for the EA, and where opportunities for consultation are available – noted that consultation is an ongoing process, and that IMG is available for consultation opportunities at communities request. Additionally, he explained the significance of comments received during consultation in modifying Project design or proposed environmental management systems.

Exploration Update:

ASmith: provided a description of the 2014 drilling program. Informed the community that the Exploration team was open to providing any information or hosting a consultation session if they had further questions.

Federal EA Process:

CD: provided an explanation about CEAA's role, the Federal EA process, the importance of Aboriginal participation in the EA and which Federal regulatory agencies will participate in the EA process.

Q: Is this considered consultation or an information session?

CD: There is not just one event that is 'consultation'. Rather, anytime information is shared with you from either the proponent or the government, it should be considered consultation – it is very much an ongoing process.

Environmental Assessment Findings Presentation:

SW: provided an overview of all the disciplines (human, physical and biological environments) that were studied for the EA. For each discipline, SW explained what the existing conditions at the Project site currently are, the proposed mitigations and what the residual effects of the Project will be after the mitigations are applied. He noted that the findings of the EA revealed that there will be no significant residual effects as a result of the Project and that the Human and Ecological Health Risk Assessment revealed that there is not harmful effects to human or ecological receptors expected from the Project.

Participant Funding and Technical Review:

SB: explained that CEAA has provided money to Mattagami First Nation to hire a consultant to complete a technical review on EA. He explained the benefit of doing this – primarily that this allows the EA to be reviewed from a community perspective before it goes to the Federal and Provincial governments, respectively, for approval.

SB: noted that prior to MFN receiving funding from the Federal government, IAMGOLD provided support to the community vis-à-vis Wabun Tribal Council to hire a technical advisor to participate in the EA review process on the community's behalf.

Comments from Chief Walter Naveau:

WN: The water has a lot of spiritual importance for us. I would like to continue a dialogue with IAMGOLD that is based on trust. It is important that we develop a relationship that will support our generation and those that will come after us.

WN: You have not yet talked about us as a species at risk – if you are taking away our fish and mushrooms away from us – you are putting us at risk. We need to think very carefully about how we move forward.

WN: I am pleased to accept the tobacco that IAMGOLD has offered to us, on the condition that IAMGOLD continues to treat our community with respect.

Community Questions / Comments:

Q: There was a poster put up in the community requesting input from people who wanted to participate in a TK/TLU study. The poster requested that our information about the land and our uses be specific to the IMG Project area. I would like to inform you that we cannot provide information in the format you are requesting because we use the land beyond the perimeter of the IMG property. I would also like to note as a mother, and as a woman, that we have a responsibility to the water – without water we would not survive, it is very sacred – subsequently, I am requesting that a full ceremony take place at Cote Lake immediately – and I happy to coordinate that.

SB: The TK/TLU study interviews that were occurring today had nothing to do with IAMGOLD. That information is being retrieved for Wabun's own purpose.

CN: I have passed along the request from another elder to ensure that we do a traditional pipe ceremony on site. We will see to it that this is held as soon as possible.

Q: What is IAMGOLD going to do about the Eagle's nest? Q: Is the Ministry of Natural Resources aware of this nest?

SW: As per the presentation provided to the community, IAMGOLD will remove the Eagle's nest. However, the environmental assessment studies have identified that the local Eagle population as a whole will not be impacted, as there is sufficient suitable habitat in the region to support the population. As explained in the presentation, during the comment period, all relevant provincial and federal ministries are invited to make comment on the Draft EA/EIS report.

Q: Is there a biodiversity report on Cote Lake? Has Chief and Council seen this Report?

SW: As per the presentation provided to the community, IAMGOLD has completed substantial reports on wildlife and vegetation communities in the Project area. Notice of public review of the Draft EA/EIS was provided to the community prior to this meeting.

Q: I also agree that women need to stand together to provide a dialogue to men with our input in the Project. Our female elders, and other women of the community want to give more guidance and direction on the Project. Traditionally, water ceremonies are led by women – that is the way the process is to be done. You need women's input on the Project – you need to talk to women in the community.

AS: We are definitely interested in, and willing to commit to hosting a women's session in the community. We are also committed to incorporating women's input – or allowing them to guide/determine the way the traditional pipe ceremony on site is done.

Q: How is elders knowledge being incorporated into the EA? For what purpose are you using our elders knowledge?

AS: Generally, the reason IAMGOLD sought to incorporate traditional knowledge into the EA was to ensure that there is a balance of more than just the scientific effects presented in the EA. We recognize that there are definitely effects that will stem from the Project which is why we complete an IBA – once negotiations on the IBA are completed

Q: The way this material is being presented is inaccessible to non-miners.

AS: We are working on trying to find different ways to present the technical material that is in the EA. We have provided at the front of the room a fact sheet that summarizes in plain language the key findings of the EA. We will also be available after this presentation do discuss these issues one-on-one with you.

Q: Do we have a 100% guarantee that our water will not be affected? If not, then what? What about seepage?

SW: During the presentation, IAMGOLD explained all mitigations and components of Project design that will be implemented to ensure that water quality remains well below criteria and guideline limits.

Q: I think it is important that IAMGOLD seek information from groups other than just elders. I also use the land, and I've learned traditional practices from my elders that I would like to share.

AS: We have always been, and remain committed to consultation at any point throughout this process. We are open to feedback from everyone.

Q: I don't think it is possible to run a mine for 15 years and have it return to the same way it was before. It is going to take a very long time for this land to be healed. I want the land to be protected for my grandchildren – and my concern is for the health of the land- how much rehabilitation can really be done?

AS: Advances in mining over the past couple of decades have made it a much safer industrial activity. This means that there will be no arsenic or mercury involved that could pose a risk to

humans or to the land. We will use cyanide, but it will be destroyed. It is our job, and our commitment to ensure that we minimize our impact to the land. We will also be required to submit permit applications and demonstrate financial assurance for closure before we can proceed any further with the development of the Project. Closure permits require us to demonstrate that we have the capacity to rehabilitate the land to a productive state.

ST: In spite of closure activities, there will be an impact, but IMG has committed in the IBA to revegetate as much as possible, and bring the land back to as natural a state as possible. It should be noted however, that this process will take a 50-80 years for the pit to fill and for the land to be revegetated. The EA process is always a way of working to prevent issues and minimize the impact on the land as much as possible – we are considering how we can best manage the land now, in 15 years, and 80 years from now.

AS: At our next presentation, we will bring pictures of other sites that IAMGOLD has rehabilitated so you have a better idea of what the site will look like. We recognize that there is a negative history in the mining sector, and we want to do things better.

SB: We are also negotiating an IBA to address some of these impacts that cannot be mitigated – for impacts that cannot be mitigated, you as a community will be compensated.

Poster Boards:

IAMGOLD made poster boards available for viewing and individual discussion with attendees. The poster boards reflected content available in a presentation for attendees who did not hear presentation, or had specific questions they wanted to discuss one-on-one with an IMG team member.

Consultation Materials:

IAMGOLD made the following materials available to attendees to take home for additional information:

- June “Let’s Talk” Community Newsletter
- Career and Employment Fact Sheet
- Environmental Assessment Process Fact Sheet
- Environmental Assessment Findings Fact Sheet
- Comment Form

CEAA made the following materials available to attendees to take home for additional information:

- Cote Gold Project Fact Sheet

- Copy of Presentation Deck

Côté Gold Project,

T: (705) 269 0010. F: (705) 269 1199

June 27, 2014

Meeting Objective: Provide the Consultation Committee of the Metis Nation of Ontario – Region 3 with an overview of Project Description, EA update and Summary of EA Findings

Location: Cedar Meadows Resort and Spa, Timmins ON

Attendees:

Métis Nation of Ontario	**Government Representatives**	**IAMGOLD Team**
Liliane Ethier	Steven Momy (MOE)	Aaron Steeghs
Alain Lefebvre	Charles Gauthier (EC)	Steven Woolfenden
Urgel Courville	Carl Johansson (CEAA)	Cheryl Naveau
Andy Lefebvre	Corey Dekker (CEAA)	Stephan Theben
James Wager		Emma Malcolm
Marcel LaFrance		

Introductions and Project Overview:

AS: provided overview of Project including discussion of anticipated employment #s, size of Project (comparable to Detour), a description of the Project layout, the preferred alternative for the transmission line identified in the EA and a discussion of closure concepts.

AS: explained where IAMGOLD is currently at in the permits, approvals and EA process. He mentioned the importance of providing comments on the Project, so that IAMOGLD can adequately address input provided by the MNO and modify plans for environmental management of the Project where possible.

JW: Can you please explain where IAMGOLD is at in terms of final approvals for the EA? When will you submit the final EIS?

SW: The EIS was accepted by CEAA (following a conformity review by the Agency) on May 13, 2014. Provincially, the same document is referred to as the Draft EA.

JW: The duty to consult is primarily required in the EA process – whereas once a company moves into the permitting phase, it is much more about monitoring impacts to Metis rights – so that is why we are so concerned about identifying our rights.

Federal EA Process:

IAMGOLD
CÔTÉ GOLD PROJECT

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

CD: explained CEAA's role in the EA process and how the Federal process works. He noted the importance of Aboriginal consultation in the EA process, and where IAMGOLD is currently at in the Federal EA process. He also mentioned some of the Federal regulatory agencies that will begin engaging the MNO as IAMGOLD moves forward with their application for other permits.

JW: What is the role of other Federal authorities in the EA process?

CD: Other agencies will advise on EA decisions throughout the EIS comment period, and then later will work on permits with IAMGOLD. During the EA process, CEAA will act as the lead regulatory agency.

JW: We would like to see a list of potential permits that will need to be obtained by IAMGOLD in the future and what government authorities are involved in the decision-making around those permits.

Environmental Assessment Findings Presentation:

SW: gave a presentation on the findings of the EA. He reviewed each of the disciplines that were studied as part of the EA (human, physical, biological). He explained what each of the existing conditions at the Project site for those disciplines, what the proposed mitigation plans are and what the residual effects will be after the environmental management plans are applied.

Questions/Comments:

Q: What is out timeline to provide TK into the EA – we need to make sure that we get traditional Metis knowledge into EA.

SW: We can have a further discussion about that, however, it is our hope to have the final EA in by the Fall of 2014.

AL: What are the absolute numbers for GHG emissions that will come from the Project?

ST: They are all available in the air quality report and appendix.

JW: What is the percentage of GHG emissions that will come from the Project for the region in which we harvest?

SW: Unfortunately we do not have that information available right now, but we can look into finding that out for you.

UC: Will the blasting affect the fish?

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

SW: We have assessed the impact of blasting on fish in the EA. For the most part, the only areas of fish habitat that will be affected are in lakes that will be dammed. Further, the areas that will be impacted are not spawning areas. Having said that, as we move forward with planning the development of the channel realignments and offsetting measures, we will keep this potential impact in mind.

JW: How many kilometres of new channel realignment will be developed?

SW: Approximately 6 km.

JW: Why are there a handful of samples (from the geochemistry study) that show low levels of sulphur?

ST: For the most part, the geology is consistent – especially in comparison to other mines, there is very little levels of sulphur in the rock. Additionally, there is a fair amount of carbonate, so we are very positive about how little acid has the potential to be generated.

ML: How will you know if you build a water realignment in an area where the rock is high in sulphur?

ST: As part of the Project design, we have determined where the channel realignments will go already. Subsequently, we have an ongoing testing and sampling program to ensure that our realignments will only bring water into contact with rock that is also non-acid generating.

JW: So is it your understanding that all elevated levels of elements in the water are a result of purely natural sources?

SW: Yes, based on our assessment, this is our understanding.

Q: Do the studies assess where specific vegetation communities grow? Or, do they just list the vegetation communities in the area? I anticipate that this information is something that will come out of our Traditional Knowledge study.

AL: In the forestry industry, there is a requirement to leave a buffer zone around any raptors nests. Do those same requirements apply to the mining industry?

SW: Given the Project design, we will be required to remove the eagles nest. However, there is plenty of other suitable habitat for raptor nesting in the Project area.

Q: What policies will be in place (if any), when/if animals invade the Project site?

Côté Gold Project,
3 Mesomikenda Lake Rd
PO Box 100, Gogama, ON. P0M 1W0
T: (705) 269 0010. F: (705) 269 1199

SW: There will be policies in place to either avoid/stop work in the area. We will also provide mandatory staff training to ensure that they are aware of the Project's policies and procedures around wildlife. We will also follow MNR reporting requirements. Further, we have set a policy that none of our staff will be allowed to hunt or fish on-site. We would also stop blasting if any large animals were around.

JW: When you refer to 'suitable habitat', what are you describing, quality and quantity?

SW: We assess for 'suitable habitat' by assessing the cumulative effects – we look to see after the Project effects, if there is still enough habitat for population maintenance and growth.

AL: In the archaeological assessment, was there any distinction made between Metis and First nation pre-contact archaeological sites?

SW: We can ask John Pollock (the consultant for the study) for further details on this.

AL: What are you referring to when you use the term 'risk-based reference' value?

ST: This is a way of measuring the potential risks for *each* species around the Project.

JW: Currently, your EIS is void of descriptions of any impact to the Metis – you suggest there are no residual effects – but you do not know what the impact to the Metis. Until we can identify impacts, we need to assume that these impacts are significant.

AS: We are keen to incorporate the Metis TK study into the EA if the information is received in a timely manner. As we have mentioned over the past year or so, the sooner we can receive this information from you, the better idea we will have of potential impacts moving forward.

SW: I do not agree that without the TK information we can conclude that the effects on Metis people as significant is a valid assumption. We have considered impacts on Aboriginal people (First Nations and Metis) within our EA. Certainly if the TK study provides information about the use of the site that we are not currently aware of it will be given the appropriate level of consideration.

Subject: Draft EA Cote Gold Project - Ministry Comments on Air Quality

Wesley,

Attached are my comments on Air Quality with respect to Draft EA Cote Gold Project. Appendix F (Air Quality Technical Support Document) was reviewed as it relates to emission estimating techniques. Not included in this review (as they are reviewed by other Ministry personnel); dispersion modelling review, air monitoring information, GHG Assessment Report Review.

Thanks,

Jodie Horihan, P.Eng.

Reference #	Reviewer Name and Position	Ecosystem Topic	Reference to EIS/EA	Page/Section of EA	Summary of Comment/ Rationale	Proposed Action
MOE_1	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	S5.2.1, pg 5-2	Document states 'Fugitive dust emissions from the tailings management facility (TMF) were not quantitatively assessed; measures to control dust from the TMF are required to eliminate the potential for dusting from the large exposed area.' Shouldn't this source be included in the estimates with a control efficiency of DBMP Plan accounted for?	Include quantitative assessment of fugitive dust emissions from TMF complete with a control efficiency consistent with DBMP Plan.
MOE_2	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	S5.1, Pg 5-1	Document references DBMP for construction phase to be developed. Will this be submitted to Ministry for review? Other similar projects have Construction DBMP submitted to Regional Technical Support Section for review.	State whether Construction DBMP to be submitted to the Ministry.
MOE_3	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	S5.2.2, pg 5-2	Maximum emissions scenario to include ore processing in addition to mining activities? This is not mentioned in description of MES.	Ensure ore processing is included in MES.
MOE_4	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	S5.2.3.1, pg 5-8	Table 5-4 shows compliance with O.Reg 419 (excluding background and mobile). What about emissions due to on-site traffic (i.e., mobile, haul trucks)? Were those emissions included in modelling and compared to O.Reg 419 limits?	Ensure fugitive emissions due to on-site traffic are included in dispersion modelling..
MOE_5	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	Appendix III: Emission Calculations	Emission estimate calculations for generator sets are not clearly shown. Reviewer could not duplicate estimates.	Detailed and clear calculations should be shown in ECA submission.
MOE_6	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	Appendix III: Emission Calculations	Estimates for material loading and unloading at stockpiles assume a water control efficiency of 75%. Not clear where control efficiency is from. Other Mining EA's have shown lower control efficiency. No discussion on Best Management Practices Plan provided to verify control efficiency.	Revisit control efficiency when Best Management Practices Plan developed to ensure that conservative control efficiency percentage is applied to emission estimate.
MOE_7	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	Appendix III: Emission Calculations	HCN Emissions from leaching process based on Australian NPI data. Data quality of emission estimate not provided.	Provide sufficient supporting documentation to substantiate emission calculation and data quality assessment with ECA submission.
MOE_8	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	Appendix III: Emission Calculations	Control efficiency for road dust emissions was assumed to be 85% which the reviewer finds to be in the high end of control efficiency range.	Revisit control efficiency when Best Management Practices Plan developed to ensure that conservative control efficiency percentage is applied to emission estimate.
MOE_9	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	Appendix III: Emission Calculations	Emission estimates for CN destruction relied on mfg key data sheet. Data quality is uncertain.	When using supplier info for emission estimates, enough supporting documentation should be provided by the proponent to support the emission estimate calculation and for Ministry verification of estimate and data quality assessment
MOE_10	J.Horihan, Regional Air Compliance Engineer	Atmospheric Environment (including Air Quality)	Appendix F, Air Quality Technical Support Document	Appendix III: Emission Calculations	Emission estimate calculations assumed a silt content of 5.9% (what is this based on?). CEMI 'Guide to the Preparation of BMP Plan for the Control of Fugitive Dust for Ontario Mining Sector Aug 2010' suggests a silt content of 9.14% is typical for Ontario Mining Sites. In addition, a control efficiency of 75% was assumed.	At ECA stage, supporting documentation should be provided to support silt content. Also revisit control efficiency when Best Management Practices Plan developed.

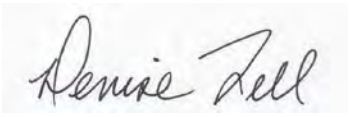
Via email: Steve_Woolfenden@iamgold.com

Dear Mr. Woolfenden,

RE: Environment Canada (EC) Comments on the Mine Waste Disposal Alternatives Assessment for the Proposed IAMGOLD Côté Gold Project



IAMGOLD included an assessment of alternatives for mine waste disposal in Appendix U of the Côté Gold project's Environmental Impact Statement (EIS) that was submitted to the Canadian Environmental Assessment Agency (Agency) on May 9, 2014.

Environment Canada (EC) has reviewed the alternatives assessment for mine waste disposal in context of the requirements of the *Metal Mining Effluent Regulations (*MMER) and our comments are provided in the Attachment.

The requested information is required in order for EC to be satisfied that the alternatives assessment for the TIA is complete in accordance with our *Guidelines for the Assessment of Alternatives for Mine Waste Disposal* (http://ec.gc.ca/pollution/default.asp?lang=En&n=125349F7-1), and contains the details we require to determine if the mine waste disposal alternatives assessment is sufficient for selecting the preferred alternative. A satisfactorily completed alternatives assessment is required before EC can undertake consultation on the proposed regulatory amendments for Schedule 2 of the MMER.

We would appreciate your response as soon as possible. If this information is not provided concurrently during the environmental assessment process it could hinder EC's ability to process any regulatory amendments to Schedule 2 of the MMER within the timeframe of the shorted 5-6 month streamlined approvals process. Please contact me at 905-336-4951 or via email at Denise.Fell@ec.gc.ca should you have any questions or concerns.

Sincerely,

Denise Fell
Environmental Assessment Officer

Attachment 1: Côté Gold project: Environment Canada's Technical Review of Final EIS – Comments related to Alternatives Assessment and MMER Regulatory Requirements

S. Boodram, Canadian Environmental Assessment Agency

Côté Gold project: Environment Canada's Technical Review of Final EIS – Comments on Alternatives Assessment and MMER Regulatory Requirements

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
EC-9	EPOD Expert Support	Water Quality		EIS Report, Section 11.2.2, Table 11-4	In Table 11-4: Impact Assessment Matrix for the Operations Phase under Water Quality and the indicator Change in Water Quality related to discharges and runoff the Proponent has only identified process water and the TMF. In recognition of requirements stated in the MMER it may be more appropriate to state "construction and operation of engineered water management systems to collect surface drainage (runoff) and seepage from the operations area and in particular the TMF, MRA, low-grade ore stockpile, overburden stockpiles, plant site area and associated buildings, and explosives manufacturing areas."	Consider the relevance of having the appropriate plans and engineered structures in place and amend Table 11-4 accordingly.
EC-28	MPD	Assessment of Alternatives for Tailings Management Facility	8.1	Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants General Comments about the pre-screening of the Candidate Alternatives	EC's Guidelines for Mine Waste Disposal has not been followed by the proponent. The first step is to identify candidate alternatives by developing a list of all possible candidate mine waste disposal alternatives for the site. The second step, the pre-screening assessment, is to optimize the alternatives to be analyzed in more detail by eliminating alternatives that have obvious deficiencies or 'fatal flaws'. Unfortunately, these steps have not been met since the proponent has identified six alternatives for which a pre-screening assessment has not been done. In section 2 (Background), the proponent indicates that a pre-screening assessment has been completed whereby a total of 14 candidate tailings management sites were identified and investigated as part of an initial pre-screening assessment (KPL, 2012) but has failed to provide and include the information as part of this alternatives assessment analysis. The proponent should note that the alternatives assessment document must be a standalone document that should be complete and include all the necessary information, description, justification and rationale that were considered in evaluating the alternatives. As water bodies frequented by fish will be needed for tailings disposal, the alternatives assessment analysis should provide all information that was used to justify such an approach. In addition, the alternatives assessment study as well as the fish habitat compensation plan to offset the loss of fish habitat resulting from the deposit of tailings in waters frequented by fish are key documents that will be needed to proceed with the MMER amendments which require public consultations.	In order to adequately complete these steps, the proponent should provide a map indicating the boundaries of the mine property, which has not been included in the report. Then the proponent is requested to identify all possible alternatives for which fatal flaws assessment will be conducted to eliminate alternatives that could not be considered because of obvious deficiencies.
EC-29	MPD	Assessment of Alternatives for Mine Waste Disposal	8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants, March 5, 2013 Appendix U3 Tailings Management Facility Alternatives Assessment, March 5, 2013 **General Comments**	In general, in developing the alternative assessments for the Mine Rock Area and the Tailings Management Facility, the Proponent has partly followed the Multiple Accounts Analysis approach outlined in the Guidelines for the Assessment of Alternatives for Mine Waste Disposal (EC 2011), however there are a number of areas where the requirements of the guidelines have not been met. The document needs to be updated as a whole. The proponent is reminded that the alternatives assessment is needed to support a potential amendment to the *Fisheries Act* and as such it is important that the document includes, among other things, a thorough evaluation of the impacts to water bodies, aquatic life and socio economic factors. This evaluation needs to take into account the views of the communities impacted by the project. The alternatives assessment report as well as the fish habitat compensation plan to offset the loss of fish habitat resulting from the deposit of mine waste in waters frequented by fish will also be key documents used during the public consultations that are required for *Metal Mine Effluent Regulations* amendments. Therefore, it should be a standalone document that must be complete and include all the necessary information, description, justification and rationale that were considered in evaluating the alternatives. This document ultimately needs to justify that the use of the fish frequented water bodies is the option that makes the most sense. Please note as well that the comments provided below are organized separately for Appendices U1 (Waste Rock Areas) and U3 (Tailings Management Facilities) of the report. Please note that the comments for these two sections are similar	EC requests that the proponent provide a standalone document for the alternatives assessment for the mine rock and tailings management facilities that addresses the following comments related to this aspect.
EC-30	MPD	Assessment of Alternatives for Mine Waste Disposal	Section 8.1	Appendix U1and Appendix U3	It is not clear whether any fish-frequented natural water bodies would be affected by the polishing pond and the mine water pond. If that is the case, the two ponds will be subject to Schedule 2 of the MMER.	EC requests that the proponent: 1. Provide information on whether there are fish-frequented natural water bodies that would be affected by the polishing pond and the mine water pond. 2. Add the locations of the Polishing Pond and the

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
						Mine Water Pond to Figure 1.2 Overall Site Layout.
EC-31	MPD	Assessment of Alternatives for Mine Rock Disposal	8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants Figure 1-2	In various sections of the EIS, the proponent indicates low-grade ore will be stockpiled northeast of the open pit for processing later in the mine life. On Figure 1-2 of the EIS, a portion of area envisaged by the proponent to stockpile the low-grade ore will impact a portion of the upper section of the Three Duck Lakes. (Also see comment EC-1 above.) If this area of Three Duck Lake is fish frequented, the *Metal Mining Effluent Regulations* (MMER) will need to be amended in order to add this portion of the lake to Schedule 2 of the MMER.	Assuming that the portion of the Upper section of the Three Duck Lakes is frequented by fish, the proponent will need to provide an alternative assessment for the disposal of the low-grade ore since it is going to impact waters that are frequented by fish in order to support a regulatory amendment to MMER Schedule 2.
EC-32	MPD	Consultation	Section 2	Chapter 4 Consultation Summary	It is stated in Chapter 4 "The goal of consultation for the Project is to provide stakeholders, Aboriginal communities andgovernment agencies with information and gather their feedback about:• the Company;• the status of exploration and mining-related activities;• the EA processes and related documents including the Provincial ToR and the Federal PD;• the environmental baseline studies and any anticipated environmental effects and associated effects management strategies; and• the closure plan concepts (this will be a key consultation activity as part of preparation ofthe final EA)." Public comments and traditional knowledge received through consultations are also important information for selection of alternative means to carry out the project and address the public concerns through the project design.	EC requests that the proponent include "to collect inputs for the project design and selection of evaluation criteria" in the goal of their consultation.
EC-33	MPD	Consultation	Section 2	Appendix D Consultation Record	Table D12-1 to Table D12-17 record the comments received and responses provided for each consultation session. However, references are not provided for the location in the EIS where responses are provided. For example, Table D12.2 Topic Tailings Impoundment, the proponent responded "The EA report will include further information regarding the Tailings Management Facility design and closure. Additionally, a malfunctions and accidents section will be included in the EA report, which will have specific details on potential emergencies with the tailings facility." But it is not clear where this information is provided.	EC requests that the proponent insert references for the EIS location in which the responses are provided to allow for proper cross referencing.
EC-34	MPD	Assessment of Alternatives for Mine Rock Disposal	Section 8.1	Chapter 5, Appendix U1	It is stated in Chapter 5 that "Open pit mining will occur at a mining rate of aproximately 60,000 tonnes/day (tpd) of ore production. Extraction of the ore through pit development will result in the production of an approximately estimated 20 million tonnes (Mt) of overburden and 850 Mt of mine rock." In this case, the strip ratio is only 2.65, which is lower than industrial practice.	EC requests that the proponent provide clarification on the estimation of mine rock generation and verify the estimate of the Mine Rock footprint.
EC-35	MPD	Assessment of Alternatives for Mine Rock Disposal	Section 8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants Pre-screening of the Candidate Alternatives	EC's Guidelines for the Assessment of Alternatives for Mine Waste Disposal indicate that the first step is to identify candidate alternatives by developing a list of all possible candidate mine waste disposal alternatives for the site. The second step, the pre-screening assessment, is to optimize the alternatives to be analyzed in more detail by eliminating alternatives that have obvious deficiencies or 'fatal flaws'. In Section 1.5 (background), the proponent indicates that a total of 12 candidate MRA sites were identified and investigated as part of an initial pre-screening assessment (KPL, 2013) but they did not provide the information as part of this alternatives assessment analysis.	EC requests that the proponent provide the prescreening study and incorporate it in the alternative assessment report. The study should include the detailed information, description and justification that were considered in eliminating some of the candidate MRA sites.
EC-36	MPD	Assessment of Alternatives for Mine Rock	Section 8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment	The description of each candidate MRA is weak and too general in describing each option.	EC requests that the proponent describe in more detail the specifics of each option taking into account presence of water bodies, water courses, fish communities, fisheries values, hydrology, hydrogeology, water quality, aquatic habitat,

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
		Disposal		Report – Knight Piesold Consultants Section 2.2 Summary of MRA Options		vegetation and wildlife, terrestrial habitat, wetlands, etc. Maps indicating detailed characteristics that were considered in the analysis should be provided for each alternative. For each candidate option, please also provide the following additional details: - subsurface conditions including lithological units underlying the candidate options - overburden thickness and depth to bedrock - competency of bedrock and presence/absence of structural weaknesses such as faults, joints, etc. - ability to control and manage seepage - number of dams required for each candidate option and their dimensions (length, width, height).
EC-37	MPD	Assessment of Alternatives for Mine Rock Disposal	Section 8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants Table 2.1 Summary of Mine Rock Area Options Details	The criteria 'Land Ownership and Mineral Rights' indicates that options 2, 3 and 4 are not completely within the mine/claim boundary. In Table 2.1, the proponent indicates that alternatives 2, 3 and 4 are not completely within the boundaries of the mine property but does not indicate how this could affect the choice of these options.	The proponent should explain if (and how) land ownership could impact the choice of the options and provide, a map showing the project boundaries in relation to each option.
EC-38	MPD	Assessment of Alternatives for Mine Rock Disposal	Section 8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants Table 2.1 Summary of Mine Rock Area Options Details	The proponent indicates that MRA 1, 2, 3 and 4 potentially contain water bodies and/or a watercourse (Criteria 'Site Contains a Waterbody and /or a Watercourse').	The proponent needs to better characterize each of these alternatives and indicate if water bodies and/or streams are present as well as if they are fish frequented. For those that are fish frequented, assessment of fisheries resources is required.
EC-39	MPD	Assessment of Alternatives for Mine Rock Disposal	Section 8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants	The alternative assessment document is dated March 5, 2013 but the Draft Environmental Assessment Report is dated May 2014. In that regard, several discrepancies have been noted, namely and most importantly the fact that the conclusions of alternative assessment analysis does not reflect what is proposed in the draft EIS as the proposed MRA. For example: • The draft EIS indicates that the mine rock and overburden will be disposed of in only one area which is a slightly different version of option 1 without options 2 and 3 that were considered in the alternative assessment analysis.	EC requests that the proponent revisit the alternatives assessment analysis and make sure that the conclusions of the analysis are consistent with what it is proposed in the EIS documents. The proponent needs to address the discrepancies as listed in our comments..

					distance	
EC-44	MPD	Assessment of Alternatives for Mine Rock Disposal	Section 8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants Table 3.5	The sub-account 'Land Acquisition' is included under the 'Technical Account' in Table 3.5. This sub-account does not appear to be appropriate for the 'Technical Account' and should be moved to another appropriate Account such as the 'Socio-economic Account'.	EC requests that the proponent move this sub-account to the "Socio-economic' account, where it may be more appropriate.
EC-45	MPD	Assessment of Alternatives for Mine Rock Disposal	Section 8.1	Table3.1 Mine Rock Area Alternatives Assessment Account, Sub-account and Indicator Rationale in Appendix U1	"Foundation preparation and access construction" is located in the Economics account only. It should be in the Technical account as well as it reflects the technical challenges.	It is recommended that "Foundation preparation and access construction" also be added to the Technical account.
EC-46	MPD	Assessment of Alternatives for Mine Rock Disposal	Section 8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants Table 3.1 Account, Sub-Account and Indicator Rationale	The rationale provided in this table is weak and too general. As it stands, these descriptions are too general and not specific to the project. Since the description of each MRA option is weak in providing detailed information (section 2.2) based on site specificity, it is impossible for an external reviewer to have a good understanding of how the selected indicators are reflecting and taking into account site specificity. Detailed comments on the description of each indicator provided in Appendix A are provided below.	EC requests that the proponent provide more in-depth description of the indicators that are considered in the analysis. The proponent should consider other indicators in the Assessment of alternatives that would contribute to assessing the project impacts, such as: • **Environmental**: dam failure potential, dam failure consequences, MRA footprint, total catchment area, total watershed area, existing streams and water bodies frequented by fish, value of fish habitat, loss of rare and endangered wildlife species, quantity and quality of terrestrial habitat disturbed, wildlife, terrestrial and aquatic flora, water quality, potential for contamination, etc. • **Socio-economic:** impact on existing communities, recreational use, Importance for aboriginal land and resource use activities (hunting/trapping/ fishing/ plant gathering), public acceptability, community consultation, community engagement, etc. • **Technical:** number of containment dams required, total containment dam volume, embankment construction, water management, diversion dams required, etc. • **Economic**: post closure cost, fish habitat

Table 3.2 Account, Sub-account and Indicator Weights</td><td>The sub-account and indicator weights are not justified. These weights need to be justified and supported by appropriated information that was considered in establishing them as indicated in EC's Guidelines.</td><td>Please provide justifications (rationale) for the sub-account and indicator weights with appropriate supporting information that was considered in establishing them as indicated in the EC Guidelines.</td></tr>
<tr><td>EC-48</td><td>MPD</td><td>Assessment of Alternatives for Mine Rock Disposal</td><td>8.1</td><td>Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants

Table 3.3 Summary of Indicator Values</td><td>Several indicators considered in the analysis do not have any bearing on the analysis since they have the same values. This is the case for the following indicators: Adjacent Fish Ecology, Total Moose Winter Habitat Altered/Lost, Total Moose Aquatic Feeding Habitat Altered/Lost, Post-Closure Chemical Stability, Human Health (Indirect Exposure), Aboriginal Peoples Interests and Current Land Use, Presence of Archaeological Sites, Recreational Access, Geotechnical Conditions, and Consequence of Operational Error.</td><td>Indicators that do not provide any differentiation between options should not be included in the ledger analysis as indicated in the EC Guidelines (section 2.5).

For those, the proponent should provide a list of all indicators that were considered but not included in the analysis on that basis and provide the rationale explaining why they were excluded.</td></tr>
<tr><td>EC-49</td><td>MPD</td><td>Assessment of Alternatives for Mine Rock Disposal</td><td>8.1</td><td>Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants

Table 3.4 Summary of Indicators value Scales</td><td>The value scales established for several indicators are inappropriate to reflect the project scenario. The following are some examples that are given to illustrate the issue.

• Number of Watersheds: according to Table 3.3, the number of watersheds impacted by the various MRA options range from 0 to 2 but the value scale provided in Table 3.4 range from 0 up to greater than 6. Furthermore, the value of 6 (best) has been given when one watershed is impacted. The proposed scale would be more appropriate since it better reflects the range of values provided in Table 3.3 and provides a better differentiation between MRA options. Based on the suggested scale, the indicator values would then be 4, 4, 2, 4, 2 and 2 instead of 6, 6, 5, 6, 5 and 5.
<table>
<tr><th>Value</th><th>Proposed by Proponent</th><th>Suggested by EC</th></tr>
<tr><td>6(best)</td><td>1 watershed</td><td>0 watershed</td></tr>
<tr><td>5</td><td>2</td><td></td></tr>
<tr><td>4</td><td>3</td><td>1 watershed</td></tr>
<tr><td>3</td><td>4</td><td></td></tr>
<tr><td>2</td><td>5</td><td>2 watershed</td></tr>
</table></td><td>The proponent should revisit all scales and update their MAA evaluation as suggested in the Comment column.</td></tr>
</table>

<table>
<tr><th>Reference #</th><th>Reviewer's Sub-group/ Branch</th><th>Ecosystem Topic</th><th>Reference to EIS Guidelines</th><th>Reference to EIS</th><th>Summary Comment/ Rationale</th><th>Information Request</th></tr>
<tr><td></td><td></td><td></td><td></td><td></td><td>
<table>
<tr><td>1(worst)</td><td>> 6</td><td>> 2</td></tr>
</table>
• Stream Length Removed: according to Table 3.3, the stream length removed ranges from 0 m to 530 m but the value scale for this indicator ranges from 0 to 6 km in Table 3.4. The suggested following scale would be more appropriate and would provide a better differentiation between options. Based on the suggested scale, the indicator values would then be 3, 1, 2, 6, 6 and 6 instead of 5, 5, 5, 6, 6 and 6.
<table>
<tr><td>Value</td><td>Proposed by Proponent</td><td>Suggested by EC</td></tr>
<tr><td>6(best)</td><td>None</td><td>none</td></tr>
<tr><td>5</td><td>0 - 1.5 km</td><td>1-125 m</td></tr>
<tr><td>4</td><td>1.6 and 3.0 km</td><td>126-250 m</td></tr>
<tr><td>3</td><td>3.1 and 4.5 km</td><td>251-375 m</td></tr>
<tr><td>2</td><td>4.6 and 6.0 km</td><td>376-500 m</td></tr>
<tr><td>1(worst)</td><td>>6.0 km</td><td>>500 m</td></tr>
</table>
• Loss of waterbodies: according to Table 3.3, the area of waterbodies lost ranges from 0 ha to 8.6 ha but the scale value ranges from 0 to greater than 250 ha using different increments. The proponent should explain why different increments are used. The proposed scale by the proponent is inadequate and is not reflecting the indicator values determined for each MRA options. Also, this indicator should not include wetlands which should be considered separately. It is important to differentiate water bodies that are frequented by fish and wetlands. The suggested following scale would be more appropriate and would provide a better differentiation between options. Based on the suggested scale, the indicator values would then be 6, 6, 2, 5, 6 and 5 instead of 6, 6, 5, 6, 5 and 5.
<table>
<tr><td>Value</td><td>Proposed by Proponent</td><td>Suggested by EC</td></tr>
<tr><td>6(best)</td><td>None</td><td>None</td></tr>
<tr><td>5</td><td>0 - 15 ha</td><td>0 – 2,25 ha</td></tr>
<tr><td>4</td><td>15 - 50 ha</td><td>2.26 – 5.50 ha</td></tr>
<tr><td>3</td><td>50 - 125 ha</td><td>5.51 – 7.75 ha</td></tr>
<tr><td>2</td><td>125 - 250 ha</td><td>7.76 - 10 ha</td></tr>
<tr><td>1(worst)</td><td>>250 ha</td><td>>10.0 ha</td></tr>
</table>
• Flow Change: For the indicators that are evaluated qualitatively, scales should be explained, described and justified.
</td><td></td></tr>
<tr><td>EC-50</td><td>MPD</td><td>Assessment of Alternatives for Mine Rock Disposal</td><td>8.1</td><td>Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight</td><td>The conclusions of the report are unclear. It is stated that "The results of the MAA indicate that MRA 1, 2 and 3 are the preferred MRA Options for the project".

The ranking for MAR1, 2 and 3 are #1, #2 and #4. MRA 2 and MRA3 are in the 2nd the 4th place, how can they be a preferred option?</td><td>EC requests that the proponent clarify the conclusions made for MRA selection.

In addition, the proponent is requested to address the inconsistency between the conclusions in the Alternative Assessment report and what it is</td></tr>
</table>

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
				Piesold Consultants Section 5.1 Conclusion	Does it mean that the combined three options will be used for mine rock disposal? The total capacity of the combined three options will be 732 Mm3 (i.e., 240, 174 and 318 Mm3) while the total capacity required is 442 Mm3.	proposed as MRA in the draft environmental assessment report.
EC-51	MPD	Assessment of Alternatives for Mine Rock Disposal	8.1	Appendix U1, Mine Rock Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants Appendix A – Description of Indicators Environmental Indicators	The proponent must provide more in depth description of the indicators that are considered in the analysis. As it stands, these descriptions are too general and not specific to the project. Since the description of each MRA option is weak in providing detailed information (section 2.2) based on site specificity, it is impossible for an external reviewer to have a good understanding of how these indicators are reflecting and taking into account site specificity. The proponent needs to provide in the document a thorough description of the justification for all the indicator scores (i.e. values in Table 4.3). Here are some weaknesses that should be addressed for the following indicators: **Environmental Indicators**: • **Number of Watersheds**: Maps should be provided showing boundaries of the watersheds impacted by each option. • **Stream Length Removed:** Maps should be provided showing streams impacted. • **Loss of Waterbodies:** Maps should be provided showing each waterbody impacted. • **Flow Change**: Maps should be included showing the area affected by the flow change. Detailed information should also be provided on how these flow changes were calculated. • **Potential for Negative Influence on Surface Water Quality from Groundwater Seepage**: This indicator needs to be better described. The proponent should also describe how this indicator was evaluated for each option. • **Loss of Fish Bearing Water**: The proponent indicates that "The expected quality and quantity of fish habitat potentially lost under the MRA Options was used to assign relative scores as a measure of the impact of each option for this indicator". The quantity and quality of fish habitat must be described and assessed for each option. The proponent should conduct field studies and characterize each site accordingly. • **Adjacent Fish Ecology**: Same comment as for the previous indicator. In addition, this indicator should not be included in the analysis since it does not provide a differentiation between options as indicated in EC's Guidelines (section 2.5). This indicator should be redefined to better consider the specifics of the site for each option. • **Habitat of Species of Special Concern Altered/Lost**: The proponent must better assess and describe the population associated for each of the identified species. The results of the study conducted by Golder (2012) must be summarized as part of the alternative assessment report and included in the analysis. Assessing this indicator based only on habitat lost is insufficient. • **Total Moose Winter Habitat Altered/Lost and Total Moose Aquatic Feeding Habitat Altered/Lost**: These two indicators are described and taken into account in the analysis but do not have any bearing since there is no habitat associated. The leger analysis should not include indicators that do not provide differentiation between options as indicated in EC's Guidelines (section 2.5). • **Total Vegetative Habitat Altered/Lost:** The proponent should identify, assess and describe the plant communities that are across the mine site and justify why this indicator is important and relevant. As presented, there is no indication that this indicator is justified for inclusion in the analysis.	EC requests that the proponent provide justification of the scoring for each indicator, as described in the previous column.

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
					• **Total Wetland Area Removed**: The proponent must provide a better description of the wetlands impacted in terms of quality and better justify its importance. Assessing the impacts on wetlands based on area removed is not adequate. The proponent should describe the wildlife diversity that is referred in the description of this indicator. • **Post-Closure Chemical Stability**: This indicator needs better assessment since a certain amount of PAG material will be generated. It is difficult to envisage that water quality will not be impacted. As it stands, the same indicator values have been assigned to each MRA. So, if after reconsideration the indicator values remain the same for all MRA options, the analysis should exclude this indicator since it does not provide differentiation between options as indicated in EC's Guidelines (section 2.5). **Socio-economic Indicators**: The socio-economic account includes seven indicators and among them, four indicators have the same values for all 6 MRA options considered. As already mentioned, indicators that do not differentiate alternatives should not be included in the analysis as per EC's Guidelines (section 2.5). Furthermore, the assessment of this account is weak since it does not take into consideration any impacts that the project may have on the Aboriginal communities and other land users. The three remaining indicators i.e**., Human Health (Direct Exposure), Proximity to Existing Permanent or Temporary Residences and Visibility and Aesthetics** are not providing an adequate assessment of the project impacts on these communities. The proponent will need to revisit his assessment, his choice of indicators in order to take into account the impacts of the project on the communities impacted. Furthermore, the proponent will need to take into account the comments provided by these communities and reflect them in the analysis, • **Human Health (Direct Exposure)**: The proponent needs to better describe and justify how the values were assigned to this indicator. The description provided for this indicator is weak and not sufficiently justified. • **Proximity to Existing Permanent or Temporary Residences**: The justification for including this indicator is weak and needs to be described in more detail. As presently described, it is difficult to assess and understand the importance of the impacts that the project may have on approximately 5 residences located 3 km away from the site considering that some of them are trapper cabins, temporary camp sites, and seasonal residences. The proponent should indicate the numbers of trapper cabins, camps sites, seasonal and permanent residences which were assessed for this indicator. Maps should be provided indicating the location of the residences that were considered in the assessment. • **Visibility and Aesthetics:** The inclusion of this indicator in the analysis needs to be better justified. How relevant is this indicator considering that the highway, camps, cabins, and residences are located approximately 3 km away from the mine site? Three km seems to be a considerable distance to minimize impacts on visibility and aesthetics. **Technical Indicators:** • **Storage Efficiency (at pile height of 100 m):** The description of this indicator is too general and very confusing. None of the MRA analyzed has sufficient capacity to store all mine rock and overburden. The proponent must provide the criteria that will be used to select the MRAs. The conclusions of the analysis indicate that MRA options 1, 2 and 3 are the preferred MRA options for the project but do not indicate if all three options will be used for storage although the combined 3 options have a 165% capacity which is much more than needed. The MRA option 3 has a total capacity of 97% of the total planned mine rock volume when considering the additional capacity by expanding the pile from a height of 100 m to 150 m. However, the EIS indicates that a modified MRA 1 has been selected although this option has a storage capacity of only 72% when considering the additional capacity by expanding the pile from a height of 100 m to 150 m. The alternative assessment analysis must be revisited to clarify these	

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
					discrepancies and the indicators be reassessed accordingly. • **Vertical Expansion Capacity**: As indicated in the previous comment, none of the MRA options analyzed has sufficient capacity to store all mine rock and overburden. Selecting an indicator to assess the potential expansion capacity of the each MRA option does not make sense. Rather, the storage efficiency indicator should assess the achievable maximum capacity to store all mine rock and then assess additional capacity for mine expansion. The proponent needs to reconsider their approach with respect to both storage efficiency and expansion capacity indicators. • **Site Preparation**: The description and justification for the inclusion of this indicator are weak and need to be better described. What does site preparation mean and include? The proponent should describe the level of complexity that they are referring to. Is the complexity only related to construction of haul roads and runoff collection systems? These particular works (roads and ditches) are usually not complex. What is the basis upon which the qualitative measures were assigned to each MRA option? • **Geotechnical Conditions**: The assessment of the geotechnical conditions is the same for all six MRA options. As previously indicated, indicators that do not contribute to differentiate alternatives should not be included in the analysis as per EC's Guidelines (section 2.5). • **Land Area and Title Holders**: The description and justification of this indicator are weak and need to be better assessed. How is it possible to consider potential locations for the disposal of mining waste on land for which IAMGOLD does not own? This particular criterion should have been assessed at the beginning of the alternatives assessment analysis as being a 'fatal flow' or not. How is it possible to consider areas for mining waste disposal without having the certainty that the land will be accessible? In that regard, it seems that the proponent has not considered the alternatives assessment analysis as a serious exercise. The proponent should review and reconsider the process of assessing alternatives for mine disposal as described in EC's Guidelines and more specifically Step 1: Identify Candidate Alternatives, and Step 2: Pre-Screening Assessment. In addition this indicator should not be included as technical but rather in the socio-economic account. • **MRA Catchment Area:** The description of this indicator is weak and needs further consideration. Since none of six MRA options have the required storage capacity and that the conclusions of the analysis is unclear about which MRA options will be used for waste rock disposal, more considerations should be given to this indicator. The proponent should also provide details on how the ratio was calculated by providing a table showing the footprint and the mine rock tonnage used to calculate the ratios for each MRA options. The proponent has not indicated if the mine rock stored includes the expansion capacity. • **Pipeline Length**: The proponent should provide detailed information about what was considered to calculate the pipeline length. A table should be provided indicating the pipeline length for runoff water, seepage and others. • **Pumping Requirements**: The description of this indicator is too vague. The description indicates that the pumping requirements are for the runoff collection pond. This indicator should also describe, as part of the pumping requirements, the number of pumps needed and other characteristics related to the pumping system that will be required for each MRA option. • **Ease of Runoff Management**: The description of this indicator is weak and vague. The description provided by the proponent for this indicator takes into account several factors such as catchment area, number of collecting points, the perimeter ditching length (if required) and the distance from the plant site. Details of these factors have not been provided, nor how they were considered in calculating the values of this indicator for each MRA option. The proponent needs to provide these details and how indicator values were calculated.	

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
					• **Consequence of Operational Error:** The assessment of the consequence operational error is the same for all six MRA options. As previously indicated, indicators that do not contribute to differentiate alternatives should not be included in the analysis as per EC's Guidelines (section 2.5). If the proponent's desire is to include this indicator, better description of this indicator should be provided as well as the methodology used to estimate the values of this indicator for each MRA option. **Economic Indicators:** The economic account includes several indicators that are not evaluated based on costs but rather on indirect components of the MRA options. The proponent needs to provide a detailed cost assessment for each MRA option as well as the cost for the fish habitat compensation plan to offset the loss of fish habitat resulting from the deposit of waste rock in waters frequented by fish.	
EC-52	MPD	Assessment of Alternatives for Tailings Management Facility	8.1	Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants Maps	As presented, the maps included in the report do not provide sufficient details on each alternative considered especially with respect to lakes and streams frequented by fish that will be impacted.	The analysis should include more detailed maps. For better clarity and in order to provide a better understanding, the proponent is requested to provide maps that include detailed and specific information that are considered in the analysis.
EC-53	MPD	Assessment of Alternatives for Tailings Management Facility	8.1	Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants Section 3.2 Summary of TMF Options	The Summary of TMF Options section of Appendix U3 is vague and too general in describing each option.	EC requests that the proponent describe in more detail the specifics of each option taking into account presence of water bodies, water courses, fish communities, fisheries values, hydrology, hydrogeology, water quality, aquatic habitat, vegetation and wildlife, terrestrial habitat, wetlands, etc. Maps providing detailed characteristics are requested for each alternative.
EC-54	MPD	Assessment of Alternatives for Tailings Management Facility	8.1	Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants Section 3.2 Summary of	The criteria 'Land Ownership and Mineral Rights' indicates that options 1, 2 and 3 are not completely within the mine/claim boundary. However, in Table 4.3, all alternatives get the same score for indicator "Land Area and Title Holders". For the options that are located partly outside of the mine property, the proponent must indicate if this could have a significant impact on the choice of the option (or could it be considered as a fatal flaw). As it stands, the conclusions of the alternatives assessment analysis indicates that the option 1 (TMF 1B) is the preferred tailings disposal option but there is no certainty that scenario is feasible as proposed because it partly falls outside the mine property.	EC requests that the proponent verify and explain the evaluation of "Land Area and Title Holders" indicator. EC requests that the proponent include maps that show the boundaries of the mine property and must indicate, for each option, the areas that are within the boundary and the ones that are outside of the mine property.

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
				TMF Options		
EC-55	MPD	Assessment of Alternatives for Tailings Management Facility	8.1	Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants Section 3.2 Summary of TMF Options	The proponent indicates that all TMF options contain water bodies and/or watercourses (Criteria 'Site Contains a Waterbody and /or a Watercourse'). As presented, this criterion also includes the presence of wetlands.	The proponent needs to better characterize each of these alternatives and indicate if water bodies and/or streams are present as well as if they are fish frequented. For those that are fish frequented, assessment of fisheries resources is required. Wetlands should be assessed separately from waterbodies/ watercourses.
EC-56	MPD	Assessment of Alternatives for Tailings Management Facility	8.1	Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants Table 4.1 Account, Sub-Account and Indicator Rationale	The rationale provided in this table is weak and too general. As it stands, these descriptions are too vague and not specific to the project. Since the description of each TMF option is weak in providing detailed information (section 3.2) based on site specificity, it is impossible for an external reviewer to have a good understanding of how most of the selected indicators are reflecting and taking into account site specificity. Detailed comments on the description of each indicator provided in Appendix A are provided below.	EC requests that the proponent provide more indepth description of the indicators that are considered in the analysis. The following indicators are typically considered: • Environmental: dam failure potential, dam failure consequences, TMF footprint, total catchment area, total watershed area, existing streams and water bodies frequented by fish, value of fish habitat, loss of rare and endangered wildlife species, quantity and quality of terrestrial habitat disturbed, wildlife, terrestrial and aquatic flora, water quality, potential for contamination, etc. • Socio-economic: impact on existing communities, recreational use, Importance for Aboriginal land and resource use activities (hunting/trapping/ fishing/ plant gathering), public acceptability, community consultation, community engagement, etc. • Technical: number of containment dams required, total containment dam volume, embankment construction, water management, diversion dams required, etc.
EC-57	MPD	Assessment of Alternatives for Tailings Management Facility	8.1	Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants	The sub-account and indicator weights are not justified. These weights need to be justified and supported by appropriated information that was considered in establishing them as indicated in EC's Guidelines.	Please provide justifications (rationale) for the sub-account and indicator weights with appropriate supporting information that was considered in establishing them as indicated in EC's Guidelines.

<tr><th>Reference #</th><th>Reviewer's Sub-group/ Branch</th><th>Ecosystem Topic</th><th>Reference to EIS Guidelines</th><th>Reference to EIS</th><th>Summary Comment/ Rationale</th><th>Information Request</th></tr>
<tr><td></td><td></td><td></td><td></td><td>Table 4.2 Account, Sub-Account and Indicator Weights</td><td></td><td></td></tr>
<tr><td>EC-58</td><td>MPD</td><td>Assessment of Alternatives for Tailings Management Facility</td><td>8.1</td><td>Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants

Table 4.3 Summary of Indicator Values</td><td>Several indicators considered in the analysis do not have any bearing on the analysis since they have the same values. This is the case for the following indicators: Number of Watersheds, Change in Receiving Water Quality, Post-Closure Chemical Stability, Human Health (Direct Exposure), Human Health (Indirect Exposure), Aboriginal Peoples Interests and Current Land Use, Presence of Archaeological Sites, Recreational Access, Visibility and Aesthetics, Land Area and Title Holders, Monitoring and Maintenance.</td><td>Indicators that do not provide any differentiation between options should not be included in the ledger analysis as indicated in EC's Guidelines (section 2.5).

For those, the proponent should provide a list of all indicators that were considered but not included in the analysis on that basis and provide the rationale explaining why they were excluded.</td></tr>
<tr><td>EC-59</td><td>MPD</td><td>Assessment of Alternatives for Tailings Management Facility</td><td>8.1</td><td>Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants

Table 4.4 Summary of Indicator Value Scale</td><td>The value scales established for several indicators are inappropriate and do not reflect the range of values determined for the indicators associated with each TMF option. In some other cases, the scales are not defined with the view of maximizing the differentiation between options. The following are some examples that are given to illustrate the issue.

• Total Catchment Area: Based on the proponent scale, the indicator values for the TMF options are 2, 4, 4, 4, 4 and 5. Based on the suggested scale, the indicator values would be 2, 3, 3, 4, 3 and 5.

<table>
<tr><td>Value</td><td>Proposed by Proponent</td><td>Suggested by EC</td></tr>
<tr><td>6(best)</td><td><600</td><td><600</td></tr>
<tr><td>5</td><td>600-700</td><td>601-675</td></tr>
<tr><td>4</td><td>700-800</td><td>676-750</td></tr>
<tr><td>3</td><td>800-900</td><td>751-825</td></tr>
<tr><td>2</td><td>900-1000</td><td>826-900</td></tr>
<tr><td>1(worst)</td><td>> 1000</td><td>> 900</td></tr>
</table>

• Number of Watersheds: According to Table 4.3, the number of watersheds impacted by the various TMF options is the same for all options, i.e., 1. As previously indicated, this indicator should not be included in the analysis since it does not provide any differentiation between options as indicated in EC's Guidelines (section 2.5).

• Stream Length Removed: According to Table 4.3, the stream length removed ranges from 0 m to 9.2 km. The following suggested scale would be more appropriate in reflecting the values indicated in Table 4.3 in order to provide a better differentiation between options. Based on the suggested scale, the indicator values would then be 1, 2, 2, 4, 5 and 6 instead of 2, 3, 3, 4, 4 and 6.

<table>
<tr><td>Value</td><td>Proposed by Proponent</td><td>Suggested by EC</td></tr>
<tr><td>6(best)</td><td>None</td><td><2 km</td></tr>
</table>
</td><td>The proponent is requested to revisit all scales and re-evaluate the scores for each alternative accordingly. The conclusion should be updated based on the new scores.</td></tr>
</table>

<table>
<tr><th>Reference #</th><th>Reviewer's Sub-group/ Branch</th><th>Ecosystem Topic</th><th>Reference to EIS Guidelines</th><th>Reference to EIS</th><th>Summary Comment/ Rationale</th><th>Information Request</th></tr>
<tr><td></td><td></td><td></td><td></td><td></td><td>
<table>
<tr><td>5</td><td>0 – 3 km</td><td>2 - 3.5 km</td></tr>
<tr><td>4</td><td>3 – 6 km</td><td>3.5 – 5 km</td></tr>
<tr><td>3</td><td>6 – 9 km</td><td>5 – 6.5 km</td></tr>
<tr><td>2</td><td>9 – 12 km</td><td>6.5 – 8 km</td></tr>
<tr><td>1(worst)</td><td>> 12 km</td><td>> 8 km</td></tr>
</table>

Loss of waterbodies: According to Table 4.3, the area of waterbodies lost ranges from 73.3 ha to 148.2 ha but the scale values range from 0 to greater than 500 ha using different increments. The proponent should explain why different increments are used. The proposed scale by the proponent is inadequate and is not reflecting the indicator values determined for each TMF option. Also, this indicator should not include wetlands which should be considered separately. It is important to differentiate water bodies that are frequented by fish and wetlands. The suggested following scale would be more appropriate and would provide a better differentiation between options. Based on the suggested scale, the indicator values would then be 3, 2, 2, 5, 4, and 5 instead of 4, 3, 3, 4, 4 and 4.

<table>
<tr><td>Value</td><td>Proposed by Proponent</td><td>Suggested by EC</td></tr>
<tr><td>6(best)</td><td>None</td><td>< 70 ha</td></tr>
<tr><td>5</td><td>0 - 50 ha</td><td>70 – 90 ha</td></tr>
<tr><td>4</td><td>50 - 125 ha</td><td>90 – 110 ha</td></tr>
<tr><td>3</td><td>125 - 250 ha</td><td>110 – 130 ha</td></tr>
<tr><td>2</td><td>250 - 500 ha</td><td>130 - 150 ha</td></tr>
<tr><td>1(worst)</td><td>>500 ha</td><td>>150 ha</td></tr>
</table>

Flow Change: For the indicators that are evaluated qualitatively, scales should be explained, described and justified. For instance, the scale defined for this indicator is based on a % change in the flow. The proponent should explain and describe how the flow change was calculated. As it is, there is no means for an external evaluator to assess the adequacy of the information provided.

</td><td></td></tr>
<tr><td>EC-60</td><td>MPD</td><td>Assessment of Alternatives for Tailings Management Facility</td><td></td><td>Appendix U3, Tailings Management Facility (TMF) Alternatives Assessment Report – Knight Piesold Consultants</td><td>The proponent should provide more in depth description of the indicators that are considered in the analysis. As it stands, these descriptions are too general and not specific to the project. Since the description of each TMF options is weak in providing detailed information (section 2.2) based on site specificity, it is impossible for an external reviewer to have a good understanding of how these indicators are reflected and take into account site specificity. The proponent needs to provide in the document a thorough description of the justification for all the values in Table 4.3.

Here are some weaknesses that should be addressed for the following indicators:

Environmental Indicators:</td><td>EC requests that the proponent provide justification for the scoring of each indicator considered in the analysis.</td></tr>
</table>

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
				Section 3.2 Summary of TMF Options, Table 4.3 Appendix A – Description of Indicators	• **Number of Watersheds: M**aps should be provided showing boundaries of the watersheds impacted by each option. Table should also be included comparing each option in terms of number of watersheds and area impacted. • **Stream Length Removed: M**aps should be provided showing streams impacted. A table listing each stream and their respective length should also be provided. • **Loss of Waterbodies: M**aps should be provided showing each waterbody impacted. A table listing each waterbody and their respective area impacted should also be provided for each option. • **Requires Surface Water Realignment: M**aps should be provided showing what the surface water realignment needs are. These water realignments should be described in more detail for each option. • **Flow Change: M**aps should be included showing the area affected by the flow change. Detailed information should also be provided on how these flow changes were calculated in evaluating this indicator. • **Change in Receiving Water Quality:** This indicator needs to be better described. The proponent should also explain how this indicator was evaluated for each option. • **Potential for Seepage:** This indicator needs to be better described. The proponent should also explain how this indicator was evaluated for each option. • **Potential for Negative Influence on Surface Water Quality from Groundwater Seepage:** This indicator needs to be better described. The proponent should also explain how this indicator was evaluated for each option. • **Loss of Fish Bearing Water:** The proponent indicates that **"**The expected quality and quantity of fish habitat potentially lost under the TMF options was used to assign relative scores as a measure of the impact of each option for this indicator". The quantity and quality of fish habitat must be described and assessed for each option and not be assessed based on expectation. The proponent must conduct field studies and characterize the site accordingly. • **Adjacent Fish Ecology: S**ame comment as for the previous indicator. In addition, this indicator should not be included in the analysis since it does not provide a differentiation between options as indicated in EC's Guidelines (section 2.5). This indicator should be redefined to better consider the specifics of the site for each option. • **Habitat of Species of Special Concern Altered/Lost:** The proponent must better assess and describe the population associated for each of the identified species. The results of the study conducted by Golder (2012) must be summarized as part of the alternative assessment report and included in the analysis. Assessing this indicator based only on habitat lost is insufficient**.** • **Total Moose Winter Habitat Altered/Lost** and **Total Moose Aquatic Feeding Habitat Altered/Lost:** These two indicators are described and taken into account in the analysis but do not have any bearing since there is no habitat associated. The analysis should not include indicators that do not provide differentiation between options as indicated in EC's Guidelines (section 2.5). • **Total Vegetative Habitat Altered/Lost:** The proponent should identify, assess and describe the plant communities that are across the mine site and justify why this indicator is important and relevant. As presented, there is no indication that this indicator is justified for inclusion in the analysis. • **Total Wetland Area Removed:** The proponent must provide a better description of the wetlands impacted in terms	

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
					of quality and better justify its importance. Assessing the impacts on wetlands based on area removed is not adequate. The proponent should describe the wildlife diversity that is referred to in the description of this indicator. • **Post-Closure Chemical Stability:** This indicator needs better assessment since a certain amount of PAG material will be generated. It is difficult to envisage that water quality will not be impacted. As it stands, the same indicator values have been assigned to each TMF. So, if after reconsideration the indicator values remain the same for all TMF options, the analysis should exclude this indicator since it does not provide differentiation between options as indicated in EC's Guidelines (section 2.5). • **Post-Closure Flow Change: M**aps should be included showing the area affected by the flow change. Detailed information should also be provided on how these flow changes were calculated in evaluating this indicator. **Socio-economic Indicators:** The socio-economic account includes seven indicators and among them, six indicators have the same values for all 6 TMF options considered. As already mentioned, indicators that do not differentiate alternatives should not be included in the analysis as per EC's Guidelines (section 2.5). Furthermore, the assessment of this account is weak since it does not take into consideration any impacts that the project may have on the Aboriginal communities and other land users. The only remaining indicator i.e., **Proximity to Existing Permanent or Temporary Residences** is not providing an adequate assessment of the project impacts on the residents. The proponent will need to revisit this assessment and the choice of indicators in order to take into account the impacts of the project on the communities impacted. Furthermore, the proponent will need to take into account the comments provided by these communities and reflect them in the analysis. • **Proximity to Existing Permanent or Temporary Residences: T**he justification for including this indicator is weak and needs to be described in more detail. As presently described, it is difficult to assess and understand the importance of the impacts that the project may have on approximately 5 residences located 3 km away from the site considering that some of them are trapper cabins, temporary camp sites, and seasonal residences. The proponent should indicate the numbers of trapper cabins, camps sites, seasonal and permanent residences which were assessed for this indicator. Maps should be provided indicating the location of the residences that were considered in the assessment. **Technical Indicators:** • **Maximum Embankment Height and Average Embankment Height:** The proponent needs to better describe and justify the use of these two indicators which seem to take into account the same reality. Perhaps the use of one indicator taking into account both would be more appropriate. • **Expansion Capacity: T**he expansion capacity storage indicator should assess the achievable maximum capacity to store additional tailings beyond the proposed amount for the project. The values of the indicators given for each TMF option should be in terms of additional tonnage or volume. As presented, the assessment of the expansion capacity of each TMF options is subjective and does not provide an adequate assessment. • **Site Preparation**: The description and justification for the inclusion of this indicator are weak and need to be better described. What does site preparation mean and include? The proponent should describe the level of complexity that is referred to. Is the complexity only related to construction of haul roads and runoff collection systems? These particular works (roads and ditches) are usually not complex. What is the basis upon which the qualitative measures were assigned to each TMF option?	

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
					• **Pumping Requirements:** The description of this indicator is too vague. This indicator should also describe the number of pumps needed and other characteristics related to the pumping system that will be required for each TMF option. • **Ease of Operation during Start-up:** The description of this indicator is weak and vague. Details on how this indicator was evaluated for each of the TMF options need to be provided. • **Final Embankment Volume**: The description of this indicator is weak and vague. Details on how this indicator was evaluated for each of the TMF options need to be provided. • **Geotechnical Conditions**: The assessment of the geotechnical conditions is weak, vague and too general. Descriptions should be more specific and provide more details for each of the TMF options. For instance, description of competent and non-competent bedrock should be provided with their respective importance in term of length or percentage. • **Land Area and Title Holders:** The assessment of this indicator is the same for all six TMF options. As previously indicated, indicators that do not contribute to differentiate alternatives should not be included in the analysis as per EC's Guidelines (section 2.5). • **TMF Catchment Area:** The description of this indicator is weak and needs further consideration. Maps should be provided showing those areas. • **Ease of Water Management Including Polishing Pond:** The description of this indicator is weak and needs better description and justification on how the qualitative measures were determined. • **Ease of Seepage Management:** The description of this indicator is weak and needs better description and justification on how the qualitative measures were determined. • **Monitoring and Maintenance Requirements:** The description of this indicator is weak and needs better description and justification on how the qualitative measures were determined. • **Consequence of Operational Error:** The description of this indicator is weak and needs better description and justification on how the qualitative measures were determined. In addition this indicator should not be included as technical but rather in the socio-economic account. • **Ease of Decommissioning and Closure:** The description of this indicator is weak and needs better description and justification on how the qualitative measures were determined. • **Post Closure Landform Stability:** The description of this indicator is weak and needs better description and justification on how the qualitative measures were determined. **Economic Indicators:** The economic account includes several indicators for which no detailed costs have been provided. Details of cost estimates must be provided as well as the cost for the fish habitat compensation plan to offset the loss of fish habitat resulting from the deposit of tailings in waters frequented by fish.	
EC-61	MPD	Assessment of	Section 8.1	Chapter 5, Appendix U3	The report states: "During the operations phase of the Project, ore will be fed to the mill at an average rate of approximately 55,000 tonnes per day";	EC requests that the proponent provide a projection of the tailings generation over the project life (by

Reference #	Reviewer's Sub-group/ Branch	Ecosystem Topic	Reference to EIS Guidelines	Reference to EIS	Summary Comment/ Rationale	Information Request
		Alternatives for Tailings Management Facility			"The mine life is expected to be approximately 15 years"; "The initial evaluation recommended in-process thickened tailings (50% solids content) and it is carried forward for the options assessment.". Given this, the total ore to be processed is calculated around 300 Mt and the tailings generation is approximately 600 Mt. However, the proponent states in Appendix U3 that "Tailings will be managed in the tailings management facility (TMF). The TMF will need to store approximately 300 million tonnes of tailings, based on current reserves".	year), including storage of TMF, water content of tailings in the TMF and height of embankments/dams, and verify the TMF footprint as well.
EC-62	MPD	Assessment of Alternatives for Tailings Management Facility	Section 8.1	Table 4.1, Appendix U3	"Consequences of Operational Error" indicator currently under the Technical account is more relevant to the Environmental Account.	It is recommended that "Consequences of Operational Error" sub-account be moved to the Environmental Account.
EC-63	MPD	Assessment of Alternatives for Tailings Management Facility	Section 8.1	Table 4.1, Appendix U3	The size of TMF foot print is a common concern of the public.	It is recommended that TMF foot print be added under the Socio-economics account.
EC-64	MPD	Assessment of Alternatives for Tailings Management Facility	Section 8.1	Table 4.3 Tailings Management Facility Alternatives Assessment Summary of Indicator Values in Appendix U3	The number assigned to "total catchment area" under the Environmental account and the Technical account is the footprint area as described in Section 3.2 Summary of TMF Options.	EC requests that the proponent verify the value assigned for "total catchment area".
EC-65	MPD	Assessment of Alternatives for Tailings Management Facility	Section 8.1	Table 4.3 Tailings Management Facility Alternatives Assessment Summary of Indicator Values in Appendix U3	In Table 4.3, brief descriptions are provided for: 1. "Requirement for Surface Water Realignment", Environmental account 2. "Loss of Fish Bearing Water", Environmental account 3. "Recreation Access", Socio-Economic account 4. "Expansion Capacity", Technical account 5. "Geotechnical Conditions", Technical account However, the information provided is not sufficient to score the impacts following the Indicator Value Scales listed in Table 4.4.	EC requests that the proponent provide additional qualitative information for each of the six alternatives with respect to the five indicators mentioned to the left.
EC-66	MPD	Assessment of Alternatives for Tailings Management Facility l	Section 8.1	Table 4.4 Tailings Management Facility Alternatives Assessment Summary of Indicator Value Scales, Appendix U3	The "Reclaim Pumping Requirements" (in meters of water head) are all below "0" in Table 4.3 while the value scale provided for this indicator in Table 4.4 are: 6 (Best) Less than 5 km 5 Between 5 and 8 km 4 Between 8 and 11 km 3 Between 11 and 14 km 2 Between 14 and 17 km 1 (Worst) Greater than 17 km	It is recommended that the proponent revise the scale for "Reclaim Pumping Requirements" so that it is suitable for the project scenario.
EC-67	MPD	Assessment	Section 8.1	Table 4.3, Table	Errors are found on scores assigned to indicators (Table 4.5) following the scales listed in Table 4.3 and Table 4.4.	It is recommended that the proponent verify these

Subject: RE: Metis Region GHG emission

I am not aware of any GHG inventory for that region. We only have breakdowns on a provincial basis from the federal national inventory report. Some municipalities have done local inventories under the federation of Canadian municipalities Partners in Climate Protection program. Ontario inventories under FCM can be found here.

http://www.fcm.ca/home/programs/partners-for-climate-protection/members/ontario.htm

Many of the these inventories are for municipal operations only and do not include the full community. Sudbury is pretty advanced in this area.

We have started a pilot project for the Greater Golden Horseshoe.

It is unlikely anything has been done for that specific region.

Patrick

Hi Paula

I went to a meeting with the Metis Nation of Ontario (MNO) and IAMGOLD regarding the mine project near Gogama. A question was asked if anyone know what the Green House Gas Emission rate for MNO-Region 3.

Do you know anyone who would know what the Green House Gas Emission rate is for North Eastern Ontario?

Thanks

Hi Steve,

Great to meet with you last week – despite the meetings not being all that thrilling!

If you recall, there was a question from James Wager at the MNO meeting last Friday regarding GHG emissions in the MNO - Region 3 area.

As far as we know, the province would not have that level of detail of information for GHG levels – however, I wanted to follow up just in case.

Could you please let me know if accessing this information is possible. If so, how can I retrieve it?

Thank you in advance for your assistance.

Best,
Emma

Hi Wesley

Based on my review of the draft EA and my knowledge of a typical mining operation. I offer the following comments related to potential ECA's needed prior to the development and operation of this mining site:

- ECA (industrial sewage works) for the proposed tailings management facility, including the final effluent polishing pond.
- ECA (industrial sewage works) for the proposed mine water settling pond for the open pit, including PTTW for the dewater of Cote Lake during the construction phase and the open pit during operation phase of the project.
- ECA (industrial sewage works) for the proposed mine rock area, to capture all storm water runoff from this site.
- ECA (industrial sewage works) for the proposed low-grade ore stockpile, to capture all storm water runoff from this site.
- ECA (industrial sewage works) for any oil/water separators require at the fuel and lubrication facility, maintenance garage, and on-site electrical substation.
- ECA (domestic sewage treatment) for the treatment of all domestic waste (human waste) produced at the mill complex, office complex, housing complex, emulsion plant which will be required to accommodate both the construction phase of the project ,approximately 1,500 workers, and the operation phase for the life of the mine with a projected 350-360 workers . This would include any ECA approvals required for the final disposal of all and any processed organic sludge produced by the treatment process.
- ECA (domestic sewage treatment) for the treatment of any back wash water from the proposed potable and process water treatment facility that will service the milling complex and

accommodations complex. This would include any ECA for the final disposal of process organic sludge produced by the treatment process.

- ECA (waste disposal site) for the final disposal of all waste materials generated on site both during the construction phase and operation phase for the life of the mine. This would include any areas developed for the storage of any recycled materials to be stored on site while awaiting for shipment off site to an approved recycling facility. I do note that the size of the project, will require the company to address Ontario Regulation 102/94 – Waste Audits and Waste Reduction Work Plans, Part IV – Large Construction Projects for this mining project.
- ECA (industrial air) site wide for the proposed ore processing complex, maintenance garage complex, fuel and lubrication complex, warehouse complex, administration complex, accommodations complex, explosives manufacturing complex, electrical substation and on-site diesel power generators.
- ECA (waste management system) for the transportation of all and any waste materials off-site onto provincial highways.
- PTTW for the taking of fresh water from Mesomikenda Lake, projected portions of Three Duck Lakes, Chester Lake, Clam Lake, Mollie River and Bagsverd Creek to be either dammed or realigned for the development of the open pit and tailings management facility.
- Waste Generator Registration under Ontario Regulation 347 for the generation, storage and disposal of any hazardous and liquid industrial waste produced at the site.

If you have any further question, please do not hesitate to contact me at my office.

Subject: Cote Gold draft EA Groundwater comments

Hi Steve,

Please find attached my comments on your draft EA submission for the Cote Gold Project.

Regards,
Simon

Reference #	Reviewer Name and Position	Ecosystem Topic	Reference to EIS/EA	Page/Section of EA	Summary of Comment/ Rationale	Proposed Action
MOE-GW01	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Chapter 5.0—Project Description/Chapter 6.0—Description of the Environment/Appendix J—Water Quality TSD	§5.3.4—Open Pit Material Geochemical Characterization/§6.3.4.3—Summary/Appendix J—Water Quality TSD (Attachement II—Water Quality Modelling Report,§2.4—Modelled Parameters)	Section 5.3.4 states "…the likelihood of net acid conditions occurring in the mine rock piles is considered to be very low. Therefore, inclusion of any PAG materials with the bulk of the waste will likely be an appropriate management method and segregation of any PAG materials does not appear to be necessary." This approach may not be adequate based on the combined impact of PAG material and ML. It was noted that elevated levels of As, Bi, Cu, Se, Cd, and Mo are present in mine and waste rock and short term leach tests showed elevated levels of V, Ag, Cr, and Cu frequently above PWQO criteria, among other metals that were less frequently in exceedance. Section 6.3.4 confirms that PAG material does exist within the mine rock and mine waste rock. However, the alternative of separating material with ARD/ML potential from inert mine wastes was not considered. The Water Quality Monitoring Report does not consider pH or alkalinity in the model used for predictions of water quality. It is assumed that the small quantity of PAG material was not expected to significantly change the pH and alkalinity of the receiving environment. Including pH and alkalinity in the model would help to provide evidence that PAG material is not a significant concern for this project, justifying the statements made in §5.3.4.	The alternative of separating material with ARD/ML potential from inert mine wastes and the impact of this undertaking on the project should be assessed in the EA. The Water Quality Model should be expanded to include pH and alkalinity to help to fully assess the impacts of the PAG material that does exist.
MOE-GW02	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Chapter 5.0—Project Description	§5.6.5.2—Cyanide Use and Destruction	The third chemical reaction depicted on page 5-15 of the draft EA appears to be unbalanced with respect to oxygen: $2CN^- + Na_2S_2O_5 + O_2(g) + H_2O \rightarrow 2CNO^- + Na_2SO_4 + H_2SO_4$ This mistake is expected to be a simple typographical error.	Please correct this error in the EA and provide a description of any impacts to the project that this change may have on the project.
MOE-GW03	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Chapter 5.0—Project Description	§5.10.4—TMF Water Management	In this section there was no mention of retention time or water balance in the TMF. It is anticipated that the cyanide that does report to the TMF will need adequate exposure to an appropriate environment (temperature and UV) to further decompose.	In the EA discuss how adequate retention time for the water within the TMF will be achieved.
MOE-GW04	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Chapter 5.0—Project Description	§5.13—Fuel and Chemical Management	Fuel (diesel) tanks are to be located onsite. It has been assumed that these tanks will be located above ground, however, no discussion of secondary containment was provided.	Confirm the accuracy of this assumption and provide details on secondary containment of the fuel tanks.
MOE-GW05	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Chapter 5.0—Project Description	§5.14—Domestic and Industrial Waste Management	Domestic waste generated onsite is to be transferred to the MNR Chester Township Landfill, which will need expanding to serve the project for the life of the mine. The draft EA does not appear to indicate what studies have been done to verify that expansion of this waste disposal site (WDS) is reasonable or provide acknowledgement of the permitting requirements and timeline of such an undertaking.	In the EA, provide details on the feasibility of the expansion of the proposed WDS and a discussion of the process and timeline involved in acquiring and expanding the WDS.
MOE-GW06	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Chapter 5.0—Project Description	§5.14—Domestic and Industrial Waste Management	The wording of the second last paragraph of this section is unclear. It should be noted that all waste oils, lubricants, solvents and cleaners are stored with appropriate secondary containment.	Verify, in the EA, that no matter how these waste products are stored, appropriate secondary containment will be in place.

MOE-GW07	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Chapter 5.0—Project Description	§5.14.1.1—Air Emissions	The draft EA notes that water from the mine water pond will be used for dust suppression on roads. However, a discussion of the quality of this water and its suitability for direct discharge to the environment was not provided.	In the EA, provide details on how it will be ensured that the quality of the water used for dust suppression will be of a quality appropriate for discharge to the environment. It is expected that this water should meet PWQO criteria.
MOE-GW08	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Chapter 5.0—Project Description	§5.16.2.2—Mine Rock Area (also mentioned in §5.17—Table 5-2)	This section suggests that there will be flat surfaces within the MRA where water could potentially pool.	The waste pile(s) within the MRA should be graded to promote surface drainage and eliminate the pooling of water. The EA should reflect this MRA design detail.
MOE-GW09	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix H—Hydrogeology TSD	§2.7—Effect Prediction/Attachment II—Groundwater Model	The groundwater model presented does not appear to be calibrated, which is a necessary tool to assess model accuracy.	In the EA, provide details on the calibration of the groundwater model and discuss the accuracy of the model. It is anticipated that updated hydrogeology results will be provided upon adequate calibration of the model.
MOE-GW10	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix H—Hydrogeology TSD	§2.7—Effect Prediction/Attachment II—Groundwater Model	The tailings management facility (TMF) was not explicitly considered in the groundwater model. It was assumed by IAMGOLD that the distance between the open pit and the TMF was sufficient to assume no interactions. Even though the TMF is removed from the open pit, the groundwater system in the area of the TMF is an important aspect of the project. The groundwater flow regime surrounding the TMF and seepage from the TMF need to be simulated to help assess the impact of the TMF, including an estimate of seepage that is expected to bypass the tailings dam seepage ponds (TDSPs). The low grade ore stockpile was not included in the groundwater model since ponds will be placed in low lying areas surrounding the stockpile to collect seepage. This is not a valid reason to exclude such a large mine feature from the model. The groundwater flow regime in the area will be altered by the stockpile and quantification of the seepage from the stockpile, including an estimate of seepage that will bypass the collections ponds, is required to assess the impact of the stockpile on the environment.	Include the TMF and low grade ore stockpile in the groundwater model for the EA. The groundwater flow regime in the areas of the TMF and stockpile, groundwater interactions in these areas with other mine components, seepage from the TMF and stockpile, and a prediction of the seepage that will bypass the TDSPs and stockpile seepage collection ponds should be provided in the EA. Include an estimate of the quantities of the seepage from the TMF and stockpile that are expected to reach nearby surface water bodies in the EA.
MOE-GW11	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix H—Hydrogeology TSD	§2.7—Effect Prediction/Attachment II—Groundwater Model	While groundwater contour maps were provided, no maps depicting the groundwater flow direction were included in the draft EA, which are helpful in assessing site hydrogeology.	In the EA, please include maps depicting the groundwater flow direction.
MOE-GW12	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	§2.4—Selection of Effects Assessment Indicators	Groundwater quality is not considered an effects assessment indicator (EAI) in the draft EA since it is assumed that groundwater discharges locally to surface water. However, groundwater can be used as an indicator to assess impact to water quality before it has discharged to surface water. The monitoring wells installed onsite can be used to assess groundwater quality and identify water quality issues before surface water bodies have been impacted.	Groundwater should be included as an EAI in the EA and appropriate assessments on groundwater quality should be completed.
MOE-GW13	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	§4.3.1—Conceptual Model/Attachment II—Water Quality Modelling Report	The water quality model assumes that the effluent discharge from the site does not contain cyanide from the processing plant, nor any constituents generated by the cyanide leaching or destruction process. This assumption is not reasonable since it is fully expected that the	Remove, or adequately justify, the assumption that the effluent discharge from the site will contain no cyanide or constituents generated by the cyanide leaching or destruction process from

					TMF will contain cyanide (Attachment II—Water Quality Monitoring Report), which eventually discharges to the environment via the process plant, mine water pond and polishing pond. While it is anticipated that destruction of cyanide will take place, it cannot be expected that destruction will be complete.	the EA and provide updated water quality predictions.
MOE-GW14	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	§4.3.1—Conceptual Model/Attachment II—Water Quality Modelling Report	The water quality model appears to assume that all seepage is captured in the seepage collection ponds. This assumption is not reasonable and the quality and quantity of seepage from major mine components (MRA, TMF and low grade ore stockpile) that bypasses the collection ponds needs to be quantified with associated loadings to surface water bodies predicted.	In the EA, quantify the volume of seepage that bypasses the collection ponds and provide predictions of associated loadings from major mine features (MRA, TMF, low grade ore stockpile) to surface water bodies.
MOE-GW15	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	§4.5.1—Conceptual Model/ Attachment II—Water Quality Modelling Report	In several areas in these sections it is mentioned that there will be vegetative cover on 25% of the MRA. This 25% value does not appear to be explained, however, the value is used to predict a reduction in contact water associated with runoff in the MRA.	Please discuss in the EA why only 25% of the MRA is expected to be covered with vegetation and show how the runoff from this 25% will not eventually come into contact with the non-covered portions of the MRA.
MOE-GW16	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	§5.2.3—Sediment	This section states that there will be no analyses for nutrients (including ammonia) or cyanide species conducted on sediment samples collected. The presence of nutrients and cyanide species within sediment samples will help to assess the impacts of the project on the environment.	In the EA, include nutrients and cyanide species as parameters to be analysed in sediment samples.
MOE-GW17	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	§5.2.2—Groundwater	The groundwater monitoring plan seems reasonable but it will be expected that additional information will be provided during the approvals process.	Nothing required for the EA but please note that additional information, including monitoring well installation locations and sampling frequency will be required during the approvals process.
MOE-GW18	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	§5.3—Groundwater Quality	This section states that aesthetic parameter guidelines are not considered in the draft EA.	Aesthetic parameters are to be included as an assessment of groundwater quality in the EA.
MOE-GW19	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §2.5.3.1—MRA Contact Water	The first 20 weeks of humidity cell test results were neglected as they were classified as “first flush”. This omission does not appear reasonable and additional information is required for its justification.	Provide additional information in the EA to justify why it is appropriate to omit the first 20 weeks of humidity cell test results. Based on the information provided, it may be deemed necessary by the MOECC that these results be included in water quality predictions.
MOE-GW20	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §2.5.3.1—MRA Contact Water	During geochemical testing of the rock materials onsite, diorite was classified as either high arsenic diorite or low arsenic diorite. This idea does not seem reasonable as it is possible that arsenic is fairly consistent within the diorite onsite and average levels of arsenic would be more appropriate.	Provide further discussion on the classification of high arsenic diorite and low arsenic diorite in the EA and include details on the changes of the water quality model results that would be observed if an average arsenic level was used for all diorite.
MOE-GW21	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §2.5.3.1—MRA Contact Water	Where reported values of parameters were below detection limits, a loading of 50% of the detection limit was assumed for water quality model predictions. It is the opinion of the MOECC that a more conservative approach should be used given the variability of analysis results at parameter levels near detection limits.	In the EA, show the sensitivity of the water quality model to these values varied between 50% of the detection limit and 100% of the detection limit.

MOE-GW22	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §2.5—Input Data/§2.5.3—Contact Water Runoff and Seepage/ §2.5.3.1—MRA Contact Water (Table 7—Adjustments to Scaled-Up Waste Rock Loading Rates)/§2.5.5—TMF Runoff and Seepage	The values used as adjustment factors for loading rates in the water quality model are not discussed in detail. Further information is required to assess the validity of these values. No water quality model results were provided representing the case where no adjustment factors were used. This scenario would represent a worst case, show the sensitivity of the model to these adjustment factors and provide insight into potential impacts to the environment. An adjustment factor was applied to the loadings of the tailings material due to the assumed discrepancies in the size of material between the tailings and that used for humidity cell testing. However, it is expected that tailings material will be similar in size to the pulverized material used for humidity cell testing since tailings material will be comparatively crushed during processing.	Please provide additional details and discussion in the EA regarding the development and use of these adjustment factors. Include model results using no adjustment factors to represent a worst case scenario. Please include such discussion and apply this same approach to all adjustment factors outlined in §2.5—Input Data. Please provide discussion in the EA detailing the comparison in size of material between that used for humidity cell tests and that of the tailings.
MOE-GW23	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §2.5.4—Residual Explosives Inputs	It was assumed that half of the residual explosive material would stay in the pit while half would be associated with the material that will be removed from the pit. This assumption does not seem reasonable as it is expected that the majority of the explosives residual would be removed from the open pit during progression excavation, increasing the predicted concentration of associated contaminants reporting to the MRA, low grade ore stockpile and processing plant.	Please provide justification for this assumption in the EA.
MOE-GW24	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §2.5.5—TMF Runoff and Seepage	The geochemistry of the tailings material was assumed to be the average of the geochemistry results from the mine rock since no tailings specific tests were conducted. This approach does not seem reasonable since tailings material will be more concentrated than the mine rock and will be associated with additional contaminants related to ore processing.	For the EA, conduct geochemical tests on material representing the expected tailings and update the geochemistry and water quality model accordingly.
MOE-GW25	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §2.5.5—TMF Runoff and Seepage	It was assumed in the draft EA that copper is adsorbed during seepage through the TMF. No discussion of the capacity of the TMF for this adsorption process was provided.	Please provide additional information on copper adsorption within the TMF and discuss the copper adsorption capacity of the material relating to the life of the mine and anticipated volume of copper associated with the tailings material.
MOE-GW26	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §2.5.6—Process Water Quality	No tests results were provided to confirm the assumptions made regarding the quality of the process water.	Provide test results to confirm the process water quality within the EA.
MOE-GW27	S. Haslam, Regional Hydrogeologist (in-training)	Groundwater (including water quality and quantity)	Appendix J—Water Quality TSD	Attachment II—Water Quality Modelling Report: §3.0—Model Results	This section included no discussion of the water quality results. While a reference to Appendices A through C, which include tabularized data, was provided, no interpretation or discussion of the results was included.	In the EA, provide discussion and interpretation of the water quality model results, including anticipated accuracy of the results and potential impacts to the environment.

P.O. Box 153
Toronto, Ontario M5H 2Y4

Dear Mr. Woolfenden:

Re: Notice of Consultation Opportunity
Draft Environmental Assessment (EA) /Environmental Impact Statement (EIS)
Cote Gold Project -IAMGOLD Corporation
Chester and Neville Townships

The Sudbury & District Health Unit (SDHU) has reviewed the Draft Environmental Assessment Report dated May, 2014. Thank you for including the comments submitted by the SDHU on June 6, 2013 in response to the draft Terms of Reference, within the Draft Environmental Assessment. We also appreciate the opportunity to provide comments for this proposal. The SDHU looks forward to additional updates on this project and notice of any future activities and community meetings regarding the Cote Gold Project. The following comments are provided for your consideration:

Executive Summary

Page	Comment
ES-9 Last bullet EX -10 Project Phases	Calculations indicate that the sewage discharge for the site, including bunkhouses, will exceed 10,000L per day, and therefore will be permitted by the Ministry of Environment. However, an indication of the type of sewage system being considered; sewage treatment plant, subsurface discharge or haulage to a municipal sewage treatment system, should be included.

Environmental Assessment Report – Main Text

Page	Comment
Page 4-9	Please include the Sudbury & District Health Unit as a potential government ministry/ agency of interest.
Page 5-21 Sec 5.10.3	Potable water for consumption and domestic use will be required to meet requirements under the Camps in Unorganized Territory, Regulation 554 R.R.O. 1990. Additionally the SDHU suggests that a potable water storage system be considered as a back-up, in the event that issues arise with the treatment system.

Environmental Assessment Report – Main Text continued

Page	Comment
Page 5-29 Sec 5.11.1	The accommodations complex will be subject to requirements under the Camps in Unorganized Territory, Regulation 554 R.R.O. 1990. Prior to accommodation facilities being put into use, an inspection by an SDHU public health inspector is required to ensure compliance with the above noted regulation. The local SDHU public health inspector is also available for consultation regarding requirements of regulation, prior to initiation, and during construction.
Page 12-8 Sec 12.3.5 2nd Bullet	Given the typically heavily mineralized nature of native soils found in areas with mining, consideration should be given as to whether "general" Ontario soils are a reasonable comparison for future deposits, or alternatively, should local soil composition be used.

Appendices

Page	Comment
Appendix C-1 Page 11-2 Table 11-1	Please include the Sudbury & District Health Unit in the list of approvals for on-site accommodations and food.
Appendix C-1 Page 11-1 Sec 11-2 (paragraph 2)	Please include the Sudbury & District Health Unit in the list of approvals for on-site accommodations and food.

Should you have any questions or require additional clarification, please contact Ido Vettoretti, Specialist, Environmental Health Division at 705.522.9200, ext. 213.

Sincerely,

Stacey Laforest
Director
Environmental Health Division

Reference #	Reviewer Name and Position	Ecosystem Topic	Reference to EIS/EA	Page/Section of EA	Summary of Comment/ Rationale	Proposed Action
MOE-SW01	E. Snucins, MOECC Surface Water Specialist	Surface water	Chapter 5.0—Project Description	5.10.5 Final Effluent Quality and Discharge	*This section states that it is expected a receiving water assimilative capacity study will be carried out as part of provincial approvals process to determine acceptable receiving water effluent loadings that will not compromise receiving water aquatic life*. Environmental effects cannot be fully evaluated in the absence of receiving-water assimilative capacity study and receiving-water based effluent criteria.	The proponent needs to more fully evaluate the alternatives for effluent treatment and discharge by assessing receiving-water assimilative capacity, modeling the mixing zones, and developing receiving-water based effluent criteria. Effluent criteria to be developed taking into consideration the Ministry's "Deriving Receiving-Water Based, Point-Source Effluent Requirements for Ontario Waters, July 1994".
MOE-SW02	E. Snucins, MOECC Surface Water Specialist	Surface water	Appendix J Water Quality	4.1 Effects Assessment Indicator Parameters and Comparison Criteria	*This section states that for effects predictions for water quality of surface water receivers, the simulated concentrations of parameters are compared to the 95th percentile baseline concentrations and against a set of Water Quality Guidelines. The only exception is free cyanide, where a Site Specific Criterion (SSC) of 0.0098 mg/L was derived from the Water Environment Research Foundation (WERF) document titled: Scientific Review of Cyanide Ecotoxicology and Evaluation of Ambient Water Quality Criteria (WERF 2007)."* When comparing long-term monthly monitoring data to water quality guidelines the 75th percentile is normally used to characterize background as per the Ministry guidance document "Deriving Receiving-Water Based, Point-Source Effluent Requirements for Ontario Waters, July 1994". A single baseline percentile value was calculated for the entire study area; this does not take into account spatial variability. Baseline characterization needs to be site-specific. The WERF-proposed criterion for free cyanide of 0.0098 mg/L is not endorsed by this Ministry.	The proponent should: (1) Use the 75th percentile to define background water quality, in accordance with the Ministry's "Deriving Receiving-Water Based, Point-Source Effluent Requirements for Ontario Waters, July 1994". (2) Characterize baseline water quality according to individual sampling locations. This may require additional water sampling where too few data are available to adequately characterize temporal (seasonal/annual) variability. (3) Use the PWQO and CWQG for cyanide.
MOE-SW03	E. Snucins, MOECC Surface Water Specialist	Surface water	Appendix J Water Quality	4.3.1 Conceptual Model	*This section states the model assumes effluent will not contain cyanide.* Process water containing cyanide will be discharged to the TMF.	Include cyanide in the assimilative capacity assessment and effluent criteria development.

MOE-SW04	E. Snucins, MOECC Surface Water Specialist	Surface water	Appendix J Water Quality	Water Quality Modeling Report 2.4 Modeled Parameters	*Modeled parameters did not include mercury.* Watercourse re-alignments will result in flooding of land. There is high potential for existing elemental mercury to be converted to its bio-available form, methyl-mercury, leading to increases in the concentration of methyl-mercury in rivers, lakes and residing fish.	The proponent should (1) define baseline conditions for water chemistry and fish tissue using advanced sampling and analytical protocols for low level total and methyl mercury according to guidance from MOECC Northern Region; and (2) model the potential impact of flooding on mercury levels in fish tissue (e.g. Johnson et al. 1991. Can. J. Fish Aquat. Sci. 48: 1468-1475) Also include evaluation of the potential for increased sulphate levels to influence mercury methylation.
MOE-SW05	E. Snucins, MOECC Surface Water Specialist	Surface water	Appendix J Water Quality	Water Quality Modeling Report 2.4 Modeled Parameters	*Modeled parameters did not include Total Dissolved Solids (TDS).* Previous experience at mine sites shows that discharge of effluent high in TDS can result in meromictic stratification of receiving lake.	The proponent should evaluate the potential for effluent TDS to produce meromixis in proposed receivers of mine effluent.
MOE-SW06	E. Snucins, MOECC Surface Water Specialist	Surface water	Appendix J Water Quality	Water Quality Modeling Report 2.4 Modeled Parameters	*Total Phosphorus (TP) was modeled using GoldSim. The majority of TP sample analyses had a high detection limit (20 ug/L).* The province's recommended model for TP in Ontario lakes on the Precambrian Shield is the Lakeshore Capacity Model. This model can calculate water quality effects from point source discharges and shoreline development. Model input includes TP data, measured with low detection limit, to characterize average ice-free period lake TP concentration. The TP Interim PWQO and Revised PWQO for Precambrian Shield Lakes are intended to help maintain recreational water quality and to protect cold water fish habitat. Cold water fish habitat in Neville Lake is located in a proposed mixing zone. Mesomikenda Lake, another of the proposed receivers, contains lake trout.	The proponent should: (1) Obtain low-level TP data for potential receivers; (2) Determine the impact of the mine on TP concentrations and cold water dissolved oxygen habitat. Guidance on TP sampling, analysis and modeling are provided in the document "Lakeshore Capacity Assessment Handbook Protecting Water Quality in Inland Lakes on Ontario's Precambrian Shield. May 2010 " prepared by Ministry of Environment, Ministry of Natural Resources, and Ministry of Municipal Affairs and Housing.

Subject: RE: Cote Gold: GRT comments due Monday, July 14

Hi Wesley,

As requested, SDB conducted a cursory review of the following report:

- **Human and Ecological Health Risk Assessment (May 2014), Appendix W of the Draft Environmental Assessment Report (Version 4) for the Côté Gold Project.**

Our reviewers concluded that the report is missing key aspects and information needed to conduct a proper review. Through the report, there are multiple references to sections and other Appendices (e.g. Appendicies F, G, J and K, L, M and N) of the EAR that appear to contain some of this information. However, it cannot be expected for the reviewers to have to navigate through all these sections and appendices in order to extract all the relevant information needed to support the RA.

Base on the above and in order for SDB to conduct a proper review, it is recommended that a consolidated RA report be prepared including all the information required to supports the RA. This report should be re-submitted to the MOE for review.

Please let me know if you have any questions,

Thanks,

Camilo Martinez

Subject: RE: Cote Gold: GRT comments due Monday, July 14

Hi Steve,

Attached are the air quality comments for the Cote Gold draft EA. This review considers only air quality aspects of the documents including baseline air quality, air quality assessment, and air quality monitoring and do not include meteorological data, air quality modelling as per O. Reg. 419/05 requirements, emission rates estimates, and greenhouse gas emissions.

Please let me know if you have any questions.

Regards,
Guowang

Guowang Qiu, Ph.D.
Air Quality Analyst
Northern Region, Technical Support

Reference #	Reviewer Name and Position	Ecosystem Topic	Reference to EIS/EA	Page/Section of EA	Summary of Comment/ Rationale	Proposed Action
MOE_AQ_1	G. Qiu, Air Quality Analyst	Atmospheric Environment (including Air Quality)	EIS report, Section 6.3.2 pages 6-7 – 6-13 and Appendix F - Air Quality TSD, Section 4 and Appendix I.		For the background air quality, baseline air quality data was obtained from a number of sources including the Environment Canada National Air and Pollution Surveillance (NAPS) Network and the Atmospheric Environment Service's Canadian Air and Precipitation Monitoring Network (CAPMoN). In addition, an on-site air quality monitoring was also conducted for approximately three months in 2013, including TSP and metals in TSP, PM_{10}, SO_2 and NO_2 for comparison to long-term air quality data. Average and 90th percentile of values were presented and compared with standards/AAQCs. The report indicated that regional air quality data from MOE stations (Sudbury, Sault Ste Marie and North Bay) was considered to be conservative when used as baseline data for the regional study area considering the remote location of the study area, but it was not clear what the background concentration for each compound is.	The report should clearly state what the background concentration is for each contaminant.
MOE_AQ_2	G. Qiu, Air Quality Analyst	Atmospheric Environment (including Air Quality)	EIS report, Section 6.3.2 page 6-11		The report stated that "A number of these metals have Ambient Air Quality Criteria (AAQCs) in Ontario (MNR, 2012a) based upon the potential health impacts" The reference cited should be MOE instead of MNR.	Revisit and revise the reference.
MOE_AQ_3	G. Qiu, Air Quality Analyst	Atmospheric Environment (including Air Quality)	EIS report, Section 6.3.2 Table 6-6, Appendix F, Section 4.2.5 Table 4-6 and Appendix I Section 3.2.5 Table 3-11.		Background metals concentrations were summarized in the above tables based on the monitoring results from air samples collected at the on-site Cote Gold station. Average concentrations for some metals, for instance chromium, lead and nickel were less than method detection limits, but no information was provided as to how the average concentrations were calculated.	Provide an explanation on the calculation of the average concentrations when metals concentrations are lower than detection limits.
MOE_AQ_4	G. Qiu, Air Quality Analyst	Atmospheric Environment (including Air Quality)	Appendix F, Appendix I Cote Gold Project Baseline Report Air Quality Final Version.		In the List of Appendices, it showed Appendix A: Air Quality Baseline and Background Monitoring Data, but Appendix A was not included in the document.	Appendix A should be included in the report.
MOE_AQ_5	G. Qiu, Air Quality Analyst	Atmospheric Environment (including Air Quality)	EIS report, Section 9.2 Page 9-13, Section 11.2.1 Table 11-3, and Appendix F, Section 5.1 Page 5-1.		The report indicated that air quality effects from construction phase will be less, and of shorter duration compared to those from the operations phase. The Proponent also stated that air quality impacts had been assessed to be not significant with the application of mitigative measures, but no air quality assessment was conducted for the construction phase.	It is recommended that an assessment for construction phase be conducted to support the statements provided by the Proponent. The air quality assessment for the construction phase should include TSP, PM_{10}, $PM_{2.5}$ and NOx and compare with relevant applicable criteria.
MOE_AQ_6	G. Qiu, Air Quality Analyst	Atmospheric Environment (including Air Quality)	Appendix F, Section 5.2.3.		The cumulative air quality impacts including background concentrations for PM and CACs were mentioned and compared with the provincial AAQCs, but no results were included in the report.	Results for all pollutants with both modelled concentrations and background concentrations should be provided and presented in a single table, e.g. in Tables 5-2 and 5-3, and also presented graphically (isopleths) for cumulative assessment. It is recommended that the frequency analysis also be completed on the cumulative impacts including background concentrations, and presented graphically to provide information on the specific locations potentially frequent exceedances of the AAQCs.
MOE_AQ_7	G. Qiu, Air Quality Analyst	Atmospheric Environment (including Air	EIS report, Section 16.4 Table 16-1, and Appendix F, Section		An ambient air monitoring program was proposed by the Proponent to assess the air quality effects and the effectiveness of the mitigative measures implemented during construction and operations phases. The	The monitoring parameters should also include PM_{10}, $PM_{2.5}$, dustfall and hydrogen cyanide, in addition to TSP (including metals) based on the

		Quality)	7.0 Page 7-1 and Table 7-1.		proposed air quality monitoring program includes TSP and metals, and passive sampling for SO_2 /NOx throughout the duration of the construction and operation phases. PM_{10}, $PM_{2.5}$ and hydrogen cyanide should also be included in the monitoring program based on the modelling results. . It should be noted that passive sampling will just give approximations of long term exposure, but no information about acute short term impacts. Significant long term impacts from site vehicles, generators and blasting etc. are unlikely to occur.	modelling results. It is suggested a continuous NOx monitoring be conducted instead of the passive sampling considering about the short term impacts and modelling results. In addition, prior to initiating ambient air quality monitoring, a monitoring plan should be submitted to the ministry for review and approval. The air monitoring program should follow the ministry's guidance document - Operations Manual for Air Quality Monitoring in Ontario (PIBS 6687e).

Comment	Section
Are there any rehabilitated hazards en route the proposed transmission corridor? - If so under the Mining Act, they are required to seek Director approval to disturb any previously rehabilitated mine features (including the mine proposed areas and the area assoicated with the proposed transmission line). Site should be identified prior to moving forward with construction so permissions can be given. NOTE- this is not a 'permit' but simply authorization through a formal request/letter to the Director.	
In the list of Provincial EA's the Dispositition of Crown resources is listed. MNDM requires that their Class EA (Class Environmental Assessment for Activities of the MNDM under the Mining Act) for the discretionary tenure decision related to the disposition of surface rights for mining and mining related purposes be included in this list specifically.	Section 2.2
Section 4.4.2 talks about the comments received by Aboriginal groups and generally what they were realted to. Is there somewhere within the or throughout the document that you address specifically lets say the effect on fish habitat with regards to the comments or concerns of the First Nations group? It would be good to tie the two together and not just mention the concerns and then not specifically address them in the alternatives (which you may do, i just haven't gotten there yet).	
small quantity of mine rock is potentially acid generating - what is the specifics of this? The calculations should be discussed in more detail in the document. I know that it is within Appendix E as well. Rob Purdon will comment further on this.	Section 4.4.4.1
The last sentense in this section - reads …two mine rock areas close to Mesomikenda Lake have not been removed from the proposed project. I think you mean to say …have NOW been removed? Since you just have the one MRA proposed.	Section 4.4.4.6
It might be more helpful to have more of a description of the ditching and seepage collection ponds around the MRA. Is there only going to be one ditch, will it be all the way around the MRA, is there room for two ditches to ensure the collection of any flow through the mine rock, are two ditches not necessary, why? etc. etc.	Section 5.5.1
Same as above. More details on the ditching and collection ponds would be nice here.	Section 5.7

It is noted that most of the rocks will be non-acid generating, if there are tailings that are acid generating will they be handled differently and how? There is no mention of how the TMF will manage these if they are found to be more common than expected. Since tests are still ongoing and it cannot be deterimed with confidence that the tailings will be completely non-acid generating it might be wise to describe and plan for handling of the acid-generting tailings/rock.	Section 5.10.4
The two stages of post closure was an interesting way of describing the different phases. The monitoring program for post closure is not described in detail here, which is fine, however that detail will be required in the actual closure plan.	Section 5.16.2-5.16.4.4
Is it mentioned how the knowledge gained through the background reseasch and the TK/TLUs was taken into consideration for the development of the various components of the project? How the project was changed to mitigate or avoid areas of cultural significance for instance.	Section 6.5.2
It states that no information was provided about the waterfowl hunting route or portage rouch and if these were currently being used, along with other examples of information that would have been useful. Did IAMGOLD do further consultation specfically to get these answers (current use of the sites) to help them develop/ alter the project? Is this covered in Section 10?	Section 6.5.2.2.
In the Traditional Land use on page 11-33 it discusses the cultural, spiritual and ceremonial sites - effects and the mitigation for this. The mitigation measure is to inform workers of locally nesting raptors, but then it says under magnitude that the project does not over lap important cultural, sites. Why are nesting raptors under this section? explain a bit more if that is where it belongs.	Table 11-3
operational mines - hollinger open pit - Goldcorp. Is a new one that should also be calculated into the cumulative effects analysis. I see you have it as a note, but it is a significant mine that should be in the list of operation mines.	Section 14.2.1
Cumulative effects should also take into consideration the past mines or larger exploration projects in the area. (AMIS sites may come into play here).	
Sudbury Prospectors and Developers should read Sudbury Prospectors and Developers Assoication.	
The table for impact assessment matrix is helpful and addresses items directly impacted by the Cote Gold Project operation site. Is there another table that lists this for the hydro line? Will or has this been looked at. There are a number of mining claims along the hydro line corrador proposed, as well as a number of AMIS site which should be taken into consideration.	

Appendix E Geochemical Characterization Report I concur with the proponent's conclusion that the bulk of the open pit materials and overburden will not have a high net potential for acid rock drainage. However I note the following: • Most mine rock has low total sulphur concentrations, however, some samples returned up to ¼% sulphide and up to 7% of the samples were identified as Potentially Acid Generating (PAG). Additionally, some samples were identified with low Neutralizing Potential (NP). • The proponent has used a proxy approach to estimate NP and potential acidity to guide future characterization of mine rock. I am generally supportive of proxy techniques provided they are supported by appropriate technical justification and an ongoing auditing program. The proponent needs to provide details of a program to audit the proxy technique for characterization of mine rock using the proposed Leco Carbon and Sulphur analyses to estimate NP and MPA during operations. I am concerned that there is no proposed segregation of PAG vs non-PAG mine rock. The proponent contends that such segregation is not required given the overall low sulphide content combined with the neutralization potential which should be sufficient to mitigate any local acid generating conditions. This would occur in an ideal situation where PAG material is adequately mixed so that local ARD would be mitigated by adjoining material with a net neutralization potential. If this ideal situation does not develop, we could see pockets of PAG rock situated in oxidizing areas of the waste rock pile generating low pH runoff. Unfortunately, it does not appear that the proponent has constructed a block model to map out the three dimensional distribution of the PAG material. This would be very helpful in determining the spatial distribution of the PAG relative to the mining sequencing and could better inform decision making regarding the need to segregate PAG from non-	Section 5.3.4

If there is to be no segregation and separate storage of PAG from non-PAG materials, the proponent needs to construct a block model to illustrate the spatial distribution of PAG materials and provide details as to how the PAG rock will be handled in the mining sequence so as to mitigate the potential for ML/ARD. I note that the proponent has not performed any humidity cell work on the tailings and has only preliminary data from the humidity cells for mine rock and other materials. This is a key component that is missing from the geochemical characterization as it will speak to the potential for long term water quality impacts for the tailings and waste rock piles which, in turn, have ramifications for efforts to mitigate such impacts following closure. The proponent should provide results of humidity cell work on tailings samples from test milling to provide an indication of the ML/ARD characteristics of the tailings and provide insight as to the lag time to the onset of acidic conditions.	Con't…
There is potential for Mine Rock to leach metals despite the low volume of PAG material, however the Project Description indicates that "issues with regards to the flooded open pit water chemistry are not anticipated." Additionally, Appendix J – Water Quality Technical Support Document describes mitigation measures and modelling conclusions on water quality and speaks to a lack of exceedences of Water Quality Guidelines. This does not appear to recognize the requirements of the Mine Rehabilitation Code. The proponent should be advised that the Mine Rehabilitation Code requires that the surface water quality of a closed out site shall meet the PWQO or, where the proponent establishes that it is not practicable to meet the objectives set out therein, shall meet the background levels for water quality if the proponent establishes scientifically what those levels were. While the proponent has presented sufficient information to move the project to the next stage, the proponent should be advised that MNDM will be seeking more clarity around surface water quality and contingency plans through the Closure Plan.	Section 5.16.2.1
The Project Description indicates that "flat surfaces of the Mine Rock Area will be partially covered with a layer of overburden and partially vegetated". One of the ways to control/reduce water quality impairments from waste rock piles is to grade surfaces to shed water and reduce infiltration. It is not clear how extensive these "flat areas" will be but the proponent must contour all surfaces of the Mine Rock Area to reduce infiltration.	Section 5.16.2.2

The Project Description indicates that, if water quality of the Mine Rock Area is not deemed suitable for direct discharge to the environment once the pit lake has flooded begins to discharge, the proponent will continue to pump water from the seepage collection ponds into the pit. It is not clear how directing impaired water into the open pit (which could have water quality impairments as well) will improve overall discharge water quality from the site in the second closure stage. The proponent should be advised that more details with respect to their contingencies for dealing with potential surface water quality impairments from the Mine Rock Area will be required to support a Closure Plan submitted for filing.	Section 5.16.4.1
The proponent has described how the Tailings Management Facility will be closed with the assumption that the tailings will be NAG. This assumption is based on Acid Base Accounting and elemental content work. However, the proponent has not performed any kinetic testing on samples of tailings produced during test milling and it may be premature to conclude that ML/ARD will not be a long term issue in the absence of the kinetic testing. The proponent should provide results of humidity cell work on tailings samples from test milling to provide an indication of the ML/ARD characteristics of the tailings and provide insight as to the lag time to the onset of acidic conditions.	Section 5.16.2.4

Subject: RE: Cote Gold Project - Draft EA

Hello Steve:

Please find attached comments from our waste engineer.

Ed and a few other reviewers have asked for additional time, which I understand is not ideal. So for those outstanding comments, including mine, we are aiming to get them to you be the end of the month. I may send you my comments in separate parts, i.e. conformance with ToR .

It is better to take the time now to flush out all of the comments/concerns during the draft EA as opposed to after receipt of the final EA. The reviewers, myself included, are working towards completing a very comprehensive review of your document now to avoid issues later at the end of the process to avoid conditions and/or extensions.

I have received additional comments on the draft EA, which can be found attached. I understand that Wesley has been forwarding comments to you as he receives them and that IAMGOLD is working on responding to those comments.

The table below lists all of the comments we have received thus far including the comments attached. Please review the table and let me know if it is correct and let me know if there is anyone I have missed.

Reference #	Reviewer Name and Position	Ecosystem Topic	Reference to EIS/EA	Page/Section of EA	Summary of Comment/ Rationale	Proposed Action
MOECC-1	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 9, Description of Project Effects	S.9.2, p. 9-12 “Air Quality”	It is not clear from the description provided whether potential effects related to the on-site aggregate pits were assessed.	Clarify whether effects related to proposed on-site aggregate pits were considered.
MOECC-2	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 9, Description of Project Effects	S. 9.3, “Noise and Vibration”, S 9.3.2.1, 9.3.2.2 (p. 9-18 – 9-20)	It is not clear from the description provided whether potential effects related to the on-site aggregate pits were assessed.	Clarify whether effects related to the proposed on-site aggregate pits were included.
MOECC-3	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 9, Description of Project Effects	S. 9.10, “Land and Resource Use”, S 9.10.2.3 (p. 9-61)	This section addresses effects remaining “at the end of the closure phase”, but does not speak to potential effects during closure activities.	Address potential effects during closure phase.
MOECC-4	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 10, Mitigation Measures	Table 10-3, p. 10-38 “Land Use”	Table refers to use of 300 m (minimum setbacks as per the MOE D-Series Guidelines). Note that, in the absence of technical studies which identify an actual influence area of less than 1000 metres, the minimum required separation distance between sensitive land uses and Class III Industrial Facilities is 1000 metres. Where an actual influence area of less than 1000 metres is identified through the completion of technical studies, the minimum required separation distance may be reduced to a distance equal to or greater than the identified influence area. Separation distances less than 300 metres between sensitive uses and Class III Industrial Facilities would not be supported by the D-Series Guidelines.	Clarify how the D-Series Guidelines have been interpreted and applied to sensitive uses within the study areas.
MOECC-5	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 10, Mitigation Measures	Table 10-3, p. 10-38 “Land Use”	Table indicates that mitigation measures for potential loss of BMAs are “to be determined through consultation between the MNR and any affected BMA holders”. Proposed mitigation should be determined during the EA process and identified in the final EA document to meet requirements of the EA process.	Identify any proposed mitigation during the EA process.

MOECC-6	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 10, Mitigation Measures	Table 10-3, p. 10-39 “Land Use”	Table indicates that mitigation measures for potential loss of trapline area are to be determined through consultation between the MNR and affected trappers. Any proposed mitigation should be determined during the EA process and identified in the final EA document to meet requirements of the EA process.	Identify any proposed mitigation during the EA process.
MOECC-7	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 10, Mitigation Measures	Table 10-3, p. 10-39 “Land Use”	Table states that mitigation measures for relocation of trapper cabins or buildings are to be determined through consultation between the MNR and affected trappers. Any proposed mitigation should be determined during the EA process and identified in the final EA document to meet requirements of the EA process.	Identify any proposed mitigation during the EA process.
MOECC-8	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 11, Impact Assessment	Table 11-3, p. 11-32 “Land Use”	For “Cottages and Outfitters”, under “Magnitude”, the table indicates that “The Project is proximal to cottage areas or areas used by outfitters and may require the removal of a few cottages but will not limit the use of these areas by most cottagers/outfitters.” If removal of some cottages is being proposed as a potential mitigation measure it should be identified as such, and directly linked to a potential effect. The potential removal of area cottages to address potential impacts warrants further detailed discussion in Section 10 - Mitigation Measures (if applicable). Regardless of whether cottage removal is proposed as a mitigation measure or for other reasons, it warrants further discussion in Appendix O - Land and Resource Use Technical Support Document.	Identify cottage removal as a mitigation measures (if applicable) and link to potential effect(s). Include detailed discussion of potential cottage removal in Section 10 (if applicable) and in Appendix O.
MOECC-9	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 11, Impact Assessment	Table 11-4, p. 11-51 “Land Use”	For “Cottages and Outfitters” under “Magnitude”, the table indicates that “The Project is proximal to cottage areas or areas used by outfitters and may require the removal of a few cottages but will not limit the use of these areas by most cottagers/outfitters.”	Identify cottage removal as a mitigation measures (if applicable) and link to potential effect(s). Include detailed discussion of potential cottage removal in Section 10 (if

					If removal of some cottages is being proposed as a potential mitigation measure it should be identified as such, and directly linked to a potential effect. MOECC-10	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Section 11, Impact Assessment	Table 11-5, p. 11-70 “Land Use”	For “Cottages and Outfitters” under “Magnitude”, the table indicates that “The Project is proximal to cottage areas or areas used by outfitters and may require the removal of a few cottages but will not limit the use of these areas by most cottagers/outfitters.” If removal of some cottages is being proposed as a potential mitigation measure it should be identified as such, and directly linked to a potential effect. The potential removal of area cottages to address potential impacts warrants further detailed discussion in Section 10 - Mitigation Measures (if applicable). Regardless of whether cottage removal is proposed as a mitigation measure or for other reasons, it warrants further discussion in Appendix O - Land and Resource Use Technical Support Document.	Identify cottage removal as a mitigation measures (if applicable) and link to potential effect(s). Include detailed discussion of potential cottage removal in Section 10 (if applicable) and in Appendix O.
MOECC-11	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Appendix O, Land and Resource Use Technical Support Document	S.3.1, p. 3-1 “Construction Phase”	There is no indication as to which specific project components were considered during modelling and assessment of potential effects. For example, were the impacts of proposed aggregate pits and the proposed waste disposal site considered?	Clarify which project components were considered during evaluation of potential effects.

MOECC - 12	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Appendix O, Land and Resource Use Technical Support Document	S3.1.1.1, p. 3-3 "Effects Management Strategies"	This section refers to minimum setback requirements of 300 metres for Class III Industrial Facilities, based on the MOE D-Series Guidelines. Please be advised that, in the absence of technical studies which identify an actual influence area of less than 1000 metres, the minimum required separation distance between sensitive land uses and Class III Industrial Facilities is 1000 metres. Where an actual influence area of less than 1000 metres is identified through the completion of technical studies, the minimum required separation distance may be reduced to a distance equal to or greater than the identified influence area. Separation distances less than 300 metres between sensitive uses and Class III Industrial Facilities would not be supported by the D-Series Guidelines. Further detail should be included to clarify how these principles have been applied to sensitive land uses within the study areas (ie: what are the actual influence areas that have been identified through technical studies?)	Add further detail to clarify how the D-Series Guidelines have been interpreted and applied to sensitive uses with in the study areas.
MOECC - 13	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Appendix O, Land and Resource Use Technical Support Document	S3.1.5, p. 3-14 "Access to Trapline Areas and Cabins	The document states: "The potential exists for effects to occur to trapper cabins along the Shining Tree TLA, most notably in trapline areas G0028, G0032, and F0033. Currently, the exact location of these trap cabins is unknown, and therefore it is not known if cabins would need to be moved due to incompatibility with the TLA." The exact location of the trap cabins must be identified, and potential impacts assessed during the EA process, with the results included in the in the final EA document, in order to meet requirements of the EA process.	Identify exact trap cabin locations, assess potential impacts, and propose mitigation (if necessary) during the EA process.
MOECC- 14	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Appendix O, Land and Resource Use Technical Support	S.3.1.7, p.3-18 "Cottages and Outfitters"	The document states: "Numerous cottages and outfitters are located near the Project site." It would be helpful to describe the approximate distance	Generally describe applicable distances in the text.

			Document		between individual cottage and outfitter sites and the project site and/or various relevant project components.	
MOECC-15	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Appendix O, Land and Resource Use Technical Support Document	S. 3.2, p. 3-22 “Operations Phase”	There is no indication as to which specific project components were considered during modelling and assessment of potential effects. For example, were the impacts of proposed aggregate pits and the proposed waste disposal site considered?	Clarify which project components were considered during evaluation of potential effects.
MOECC-16	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Appendix O, Land and Resource Use Technical Support Document, Appendix I, Land and Resource Use Baseline Study Report	S5.3.4, p. 5-12	In discussing the residential cottage area on Mesomikenda Lake in Neville Township, the document states “This cottage area is north of the Project Site but within the footprint of the Project components.” Additional detail should be included to clarify which project components, and to provide approximate distance between individual cottage sites and various project components.	Provide further detail in text to clarify distance between individual cottage sites and specific project components.
MOECC-17	E. Cramm, Environmental Planner/EA Coordinator	Land use compatibility	Appendix O, Land and Resource Use Technical Support Document, Appendix I, Land and Resource Use Baseline Study Report	Fig. 16. Local Recreational Sites, Trails, Tourist Establishment Areas and Cottage Residential Areas	Figure 16 map symbols are not consistent with the legend, potentially causing confusion to readers. (Cottage Residential Sites are shown as gold/yellow in legend and lime green on map.)	Revise Figure to ensure symbols are shown consistently on map and in legend.

RE: Draft Environmental Assessment – Noise and Vibration Review Comments
Côté Gold Project Environmental Assessment
Noise EA File: E-0009-13

This is in response to your e-mail correspondence dated May 23, 2014.

We have reviewed the Noise and Vibration Technical Support Document in the Appendix G of the Draft Environmental Assessment (N&V Report), prepared by AMEC Environment & Infrastructure and dated January 2014, regarding the proposed Côté Gold Project in Chester and Neville Townships, District of Sudbury, in north-eastern Ontario.

The following are our noise and vibration review comments:

1. **Construction Phase:** The N&V Report states that construction activities will take place at night time. It needs to be confirmed with Municipality that night time construction activities are allowed and indicated in the N&V Report.

2. **Vacant Lot Noise Receptors:** Table 2-2 of the N&V Report indicates that receptors include cottage residential sites, recreation access points, and tourist establishment areas, but not the vacant lots in the study areas that are zoned for future noise sensitive uses. Such vacant lots need to be assessed to demonstrate that the facility will operate in compliance with Ministry Publication NPC-300.

We trust the above review comments are of assistance to you.

If you have any questions, please contact Enoch Tse, P.Eng. at 416-212-4201.

MEMORANDUM

TO: Wesley Wright
Special Project Manager
Environmental Approvals Branch

FROM: David Lee
Senior Review Engineer
Environmental Approvals Branch

RE: COTE GOLD PROJECT DRAFT ENVIRONMENTAL ASSESSMENT

As requested, I have reviewed the draft Environmental Assessment documents submitted by IAMGOLD Corporation ("IAMGOLD") as it pertains to the management and disposal of waste and the potential need for an Environmental Compliance Approval for a Waste Disposal Site or Waste Management System. The focus of my review centred around the document entitled *"Draft Environmental Assessment Report"* dated May 2014, and prepared by AMEC Environment & Infrastructure.

The large scale project proposed by IAMGOLD involves the creation of a "Mine Rock Area". The Mine Rock being placed for final disposal in the stockpile is a designated waste under Regulation 347 however it is a waste that is exempt from approval under Part V of the EPA as per s. 3(1) of the regulation. As a result, no Environmental Compliance Approval for a Waste Disposal Site would be required for the area. The stockpiles would include full wastewater management infrastructure including a variety of collection ponds that redirect to a single mine water pond where it is redirected for use in the ore processing facility and/or polishing pond. The EA report considers the effect of acid generation and metal leaching from the mine rock but claims that there is low potential for acid generation as a result of geochemical testing although further testing is still being completed. Given the size of the stockpiles, it may be prudent to assume that untreated run-off and leachate may be of a lesser quality than anticipated and contingencies should be explored. However, this can be performed at the EPA application stage. Ultimately the ore processing water is discharged to the Tailings Management Facility and polishing ponds where it is discharged to a nearby receiver.

Tailings from the mine are also wastes that are exempt from Part v of the EPA as per s. 3(1) of Regulation 347 provided the tailings are not being mixed or comingled with other wastes. Comments on the tailings management pond should be provided by the wastewater team here at EAB.

Liquid and hazardous wastes that are generated from the project are to be managed by the proponent until such a time as it is hauled by ministry approved carriers and disposed of at licensed disposal facilities. Generators managing their own wastes do not require an Environmental Compliance Approval for storing and handling their own generated wastes. However, final disposal or processing of any of these wastes would require an ECA to do so.

In section 5.11.2 of the EA report, the proponent states that solid, non-hazardous wastes from on-site operations would be "disposed of using the existing MNR Neville Township Landfill … 2 km from the Project site". The proposal considers the possibility for IAMGOLD to acquire, expand and operate the landfill and assume all responsibilities for closure and maintenance or to simply contract use of the landfill from MNR wherein all responsibilities would continue to remain with the Crown. MNR is currently conducting a capacity study on the existing landfill to see if it will meet Project requirements and the future requirements of the existing local residences. It is unclear how much waste has been estimated for disposal though the consultant claims in Chapter 7 of the report that the landfill would likely require approval for an expansion. Other alternatives include trucking waste to an existing landfill or develop an on-site landfill. EAB staff should review the MNR capacity study as well as the current performance of the existing landfill before the recommendation of the consultant can be supported. It should be noted that approvals for new landfills greater than 40,000 cubic metres in capacity are subject to approval under the Environmental Assessment Act as well as the Environmental Protection Act with landfills greater than 40,000 cubic metres requiring undergoing the Environmental Screening Process and landfills greater than 100,000 cubic metres requiring an Individual Environmental Assessment. Any new landfill to be proposed within the project site may be subject to the requirements of Regulation 232/98 depending on the site capacity. Any landfill site proposed will require, as a minimum, long term environmental monitoring and care as well as adequate Financial Assurance.

If you require anything further from me or have questions related to the above comments, please contact me at (416) 314-8256.

Subject: RE: Cote Gold Project - Draft EA

Good morning Steve:

Sorry about that. SPPB commented as follows:

> **The proposed undertaking is in an area within the watershed of the Mattagami river which supplies water to the City of Timmins. The distance of the operation from the intake is great, so the operation would not impact the water supply to Timmins. However, if there are residents near the proposed undertaking on private systems, the area is part of a highly vulnerable aquifer and that should be taken into consideration in the EA.**

Thanks,

Cindy

Subject: Review of Cote Gold Project EIS

Hello Sherry and Corey,

Please confirm receipt of the attached review in pdf and text versions.

If the Agency wishes to arrange a time to discuss, please contact me and we can set up a time in August. I am on the road this coming week and then on holiday the following week and then on the road again. Shawn is also unavailable until the week of August 11.

Best regards,

Rick

Subject: Cote Gold EA - Additional comments

Good morning Steven:

Please find attached comments from EMRB on air quality assessment and modelling.

I wanted to provide you with an update on my review of the draft EA. I believe I may have initially told you that I was working to get you something for end of last week. Unfortunately, I am still working on my review, specifically ensuring the draft EA is compliant with the approved ToR.

Would you rather receive my comments in parts or all at once? I know you are currently busy working on the comments received thus far, not sure if sending it in parts will create some confusion (document control).

Let me know,

Memorandum

July 21st, 2014

To: Cindy Batista, Project Officer – Project Coordination, EAB

From: Abby Salb, M.Sc, P.Eng, Air Dispersion Modelling Engineer, EMRB

Re: Comments on Cote Gold EA – Air Quality Assessment

As part of the assessment, EMRB reviewed the following documents, provided in the submission from I AM Gold – Cote Gold Project, dated February 2014:

- Appendix F: Air Quality Technical Support Document (dated February 2014)
  - Appendix I: Baseline Report – Air Quality (December 2013)
  - Appendix II: Emissions Summary Tables – dated February 2014
  - Appendix III: Emissions Calculations

- Appendix W: Ecological and Human Health Risk Assessment (dated May 2014)
  - ***Reviewed Tables 1, 2, and 3 only*** for consistency with Appendix F

In addition to these documents, EMRB also reviewed the air dispersion modelling files for the Air Quality Assessment that were provided (dated June 23rd, 2014). These were assumed to apply to both the Ambient Air Quality Assessment (i.e. comparison to AAQCs) and the O.Reg.419/05 Ontario Compliance Assessment (OCA). However, only a single set of model files were provided, so it is not clear as to whether a separate modelling assessment was undertaken for O.Reg.419/05 OCA compliance, but not provided.

EMRB considered only the air dispersion modelling aspects in the review of the documents provided and did not review other aspects including the following:

- Calculation of emission rates;
- Greenhouse gas or climate change assessment;
- Human health and ecological risk assessment (HHERA);
- Background ambient concentrations.

The following are EMRBs specific comments as related to the air dispersion modelling aspects of the noted reports.

- The report does not provide a process description to thoroughly describe the rates and extent of the processes that are occurring on site. As a result, the report lacks sufficient detail on the types, activity levels and specific locations of emission sources.
    - Additional details and process descriptions are required to assess whether all significant emission sources were included in the dispersion modelling assessment, that they were appropriately located on the site, and appropriately characterized in the air dispersion model (i.e. stack temperature, stack heights/pile heights, flow rates, etc).

- The emissions data presented in Tables 5-2 and 5-4 are the same for all contaminants, even though the report notes that the emissions in 5-4 only include sources to be considered for O.Reg.419/05 compliance. As such, it would be expected that for some species such as TSP, PM_{10}, $PM_{2.5}$, NO_x, CO, and others, modelled emissions would be lower for the O.Reg.419/05 scenario. A table that shows which sources and emissions were excluded would be helpful. Please clarify this discrepancy and provide any supporting information used in the assessment.

- The emissions calculations in Appendices II and III provide sample calculations for different types of emission sources, but do not provide sufficient detail to illustrate how emissions from multiple sources were apportioned into a single modelled source. This is necessary to be able to trace the sample emissions from the tables to the model input files, in order to verify the model inputs. One example is the calculation of NO_x (or NO_2) emissions from the open pit. Sources of NO_x include blasting, vehicle exhaust etc. While the emissions shown in the emission summary table can be summed for the PIT sources, a sample calculation should be provided for at least one contaminant (such as NO_x) to clearly provide traceability to the emission rate in the model input files (in $g/m^2/s$) for the PIT. Therefore:

    - Where multiple emission sources are lumped into a single model source, the report (or Appendix) should contain a table that clearly shows which emissions have been included in specific model sources.

- The model files indicate that the emissions were varied for some hours of the day. Neither the report nor the appendices discuss the derivation of how these hourly variations in the emissions are modelled (i.e. likely due to blasting). Sample calculations showing the determination of the hourly scaling factors used in the dispersion modelling inputs should be provided for each contaminant.

- Page 5-2 of the report states that *"..in order to compare to the ambient NO_2 standard, the model was run using the appropriate U.S. EPA NO to NO_2 atmospheric chemistry algorithms*." There are several options available for this within the AERMOD model (i.e. ozone limiting method (OLM), plume volume molar ratio method (PVMRM), and ambient ratio method (ARM)), but the method of choice

and rationale for the choice was not provided in the report. The AERMOD model files indicate that the OLM method was used, with seasonal, hourly varying ozone concentrations. These ozone concentrations and their source were not presented or discussed in the report. Please provide additional details on the use of the ozone limiting method, and any supporting data or assumptions used for this purpose (i.e. ozone concentrations, rationale for initial NO/NO_2 fractions in the emissions, etc). In addition, all of the supporting information and assumptions should be provided in the report or the appendix, since most readers will not have access to the air dispersion modelling files.

  - The dispersion modelling input files indicate that a single in-stack NO_2:NO_x ratio was used to characterize all NO_x emission sources from the Project. Given that these sources represent a diverse range of emission characteristics (i.e. NO_x from blasting, NO_x in vehicle exhaust, etc.) it is unlikely that this is the same for all of these source types. Further detail is required to demonstrate that the use of a single NO/NO_2 split to characterize all site sources is reasonable.
  - Table 5-4 indicates that the concentrations shown are NO_x (as NO_2). Please clarify whether these concentrations represent total NO_x mathematically expressed as NO_2 concentrations or whether they represent NO_2 only. Compliance with O.Reg.419/05 generally requires that these concentrations represent *total* NO_x. As such, it is not appropriate to use the OLM to predict concentrations of NO_2 for this comparison. Please clarify whether the OLM was used for these concentrations. (Please note that separate model files/runs for O.Reg.419/05 compliance were not provided so it is not clear whether different model runs were completed for these comparisons).

- It is not clear whether the concentration isopleths shown in Figures 7 – 15 pertain to the Ambient Air Quality scenario (i.e. for comparison to AAQCs) or whether they pertain to the O.Reg.419/05 compliance scenario. This is an important distinction which should be clearly illustrated on the figures, since the report noted that the emissions included in each scenario were supposed to differ.

- Based on the information in the report and air dispersion model files it is unclear as to whether Emergency Diesel Generator (EDG) testing was included in the air dispersion modelling. EDG testing can significantly contribute to short term NO_x/NO_2 concentrations and as such should be considered cumulatively with other on-site sources to illustrate that the facility can meet the appropriate limits during EDG testing. Provide further details as to how this source was included in the modelling. If it has been excluded, this could have implications on subsequent assessments that use the resulting modelled data, such as the HHERA.

- The report does not note which version of the AERMOD model was used in the assessment. The AERMOD model output files indicate that AERMOD version 12345 was used in the assessment. It should be noted that the current regulatory version for compliance assessment with O.Reg.419/05 is 06341 and as such a s.7 request to use an alternate model would be required as part of the ECA application.

- The report notes that the meteorological data supplied to AMEC included precipitation. This is typically used to include wet and dry deposition in the air dispersion modelling, which was used according to the information in the model input files. The report makes no mention of this however, and does not provide any information or rationale for the selection of the assumed particle size distribution, etc. Please clarify this in the report and provide any necessary supporting assumptions.

    - In addition, although the meteorological data used in this assessment was provided by MOE EMRB and includes parameters for depletion assessments; use of wet and dry depletion is a non-default option. Note that EMRB approval is required under O.Reg.419/05 for use of non-default options. It is not clear as to whether the maximum POI concentrations shown in Table 5-4 for compliance with O.Reg.419/05 include the use of wet and dry depletion. Separate model files for these scenarios were not provided. Please clarify whether this option was used, and if wet/dry depletion was considered provide revised tables without the use of depletion.

- The report does not provide a model source diagram that clearly shows the source layout, locations, sizes, etc. While this can be found using the model input files, this information should be provided in the report to provide a representation of how the emission sources were considered, with a corresponding table to show which specific emission sources were included in the modelled sources.

    - The source layout constructed from the model input files appears to indicate that only certain on-site roads were considered in the modelling assessment. The main access road to/from the site does not appear to have been considered in the assessment. The report provides no details on the amount of traffic on this roadway, which would likely be used to ship materials to and from the site, and as such can be a significant contributor to site wide emissions. Please provide further details on this source (i.e vehicle activity per hour/day) and relative emissions compared to other on-site sources.

- The assessment considered a nested receptor grid; however two different sets of model files were provided for NO_x/NO_2. The first file referenced the maximum concentrations shown in Table 5-2, but the grid used only appears to encompass areas to the north of the site. The second model file for NO_2 used a full grid, but the model results differ from those shown in the report. Please clarify the difference between the two different model scenarios, and the reasons/rationale for the discrepancy in the receptor grids.
    - Note that for the purposes of compliance with O.Reg.419/05 a full nested receptor grid as described in the regulation must be used unless prior approval is obtained from EMRB.

- The predicted air concentrations shown in Table 5-2 and 5-3 are consistent with those shown in Tables 1, 2 and 3 of the HHERA. It is however important to note

that these concentrations *do not include a background contribution* suggesting that background contributions were not likely considered in the HHERA.

Good morning Steven:

I have followed up with Ed Snucins and MNR (only provided preliminary comments) and I'm waiting to hear back. I too need to provide you with my comments, sorry for the delay, but it's taking me more time then anticipating going through the whole document and appendices, while balancing my other work responsibilities.

In the meantime, please find attached the ministry's wastewater comments.

Thanks,

Cindy

MEMORANDUM

TO: Cindy Batista
Project Officer
Environmental Approvals Branch

FROM: Fariha Pannu, M.Eng., P.Eng.
Senior Wastewater Engineer
Approval Services Unit – Team 4
Environmental Approvals Branch

RE: Review of Draft Environmental Assessment for the Cote Gold Project, Chester and Neville Townships, Ontario.

Pursuant to your request, I am providing my review comments on the IAMGOLD Corporation's Environmental Impact Statement / Draft Environmental Assessment Report dated May, 2014 for the Cote Gold Project, prepared by AMEC.

I have completed my review of the Draft Environmental Assessment Report for the proposed new open pit gold mine focusing on the mandate of our unit under Section 53 of Ontario Water Resources Act (OWRA).

On behalf of the Environmental Approvals Branch, Approval Services Unit, I provide the following comments:

1. The Draft EA report has identified the preferred alternative for development of the open pit gold mine and associated processing and support facilities, including an Open Pit, an Ore Processing Plant, a Tailings Management Facility, a Mine Rock Area, Linear Infrastructure including a transmission line, Water Management Facilities including drainage works, pipelines and water management ponds, and supporting infrastructure that includes an accommodation camp for workers. The approach used in the EA report to identify the best alternatives for developing specific Project components is reasonable.

2. Receiver-based, site-specific effluent discharge criteria as well as acceptability of all discharge locations would have to be established in consultation with the Ministry's Technical Support Section (Tech Support), Northern Region and evidence of acceptance provided with the application for approval of Sewage Works.

3. Evidence of acceptance of all proposed surface water and ground water monitoring programs by the Technical Support Section would have to be provided at the time of application for approval of Sewage Works.

4. The application for Sewage Works would have to include a design brief that presents details of the final design of the Sewage Works, including (but not necessarily limited to):

    - description of the proposed project and associated sewage works;
    - mine site hydrology and water management strategy (water balance, dewatering flow management);
    - detailed description of the stormwater management works to service waste rock areas and potentially contaminated stormwater (geochemical characterization of waste rock);
    - predictive models of surface and groundwater quality including the following: trace metal analysis, acid generating potential – Acid Base Accounting (ABA), metal leaching potential – Net Acid Generation (NAG), short term leach testing (lab test and/or pilot/scale testing results);
    - Tailings management facility design including: volumetric capacity, spillway design, dam crest elevations clearly noting the Environmental Design Flow (EDF) and the Probable Maximum Flood (PMF)
    - Ministry's Tech Support accepted effluent quality criteria (objectives, limits and monitoring requirements for surface and groundwater), along with comparison of effluent criteria and monitoring requirements with requirements under the federal Metal Mining Effluent Regulation (MMER), and MISA requirements;
    - detailed description of the discharge treatment system and identification of process design parameters;
    - detailed process design and sizing calculations for all major processes;
    - hydraulic calculations for all process streams within sewage works;
    - product information details of the type of explosive(s), boosters, igniters etc. to be used in the mine blasting operations to determine presence or absence of Dinitrotoluene (2, 4 Dinitrotoluene and 2, 6 Dinitrotoluene)
    - overview of contingency planning measures for the proposed facilities in the event of emergencies and spills and/or berm/dyke failure, i.e. the Spill Contingency Plan and the Emergency Response Plan; and
    - cooling water effluent stream(s) and treatment requirements.

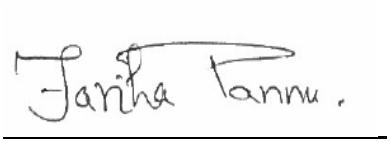
5. Record of consultation with aboriginal communities summarizing any technical or environmental issues noted as a result of the consultation efforts and how those issues have been addressed would have to be provided along with a list of contact persons (chief, council and other as appropriate) for each Aboriginal community including names, mailing address, e-mail, phone and fax.

6. Proof of continued public and stakeholder consultation and engagement including Aboriginal groups would have to be provided.

7. Evidence of filing of the mine's Closure Plan with Ministry of Northern Development & Mines and a copy of the Closure Plan would have to be provided. If closure plan not filed at the time of Sewage Works approval application, the status of closure plan development and record of consultation with aboriginal groups for the closure plan would have to be provided.

8. Clearances obtained from local municipalities and other regulatory agencies as applicable, e.g. municipal Source Water Protection consultation would have to be provided.

9. It is noted that agreed on effluent discharge limits and monitoring requirements established with the Ministry do not exempt the applicant from fulfilling their obligations under O. Reg. 560/94 Effluent Monitoring and Effluent Limits – Metal Mining Sector or the federal Metal Mining Effluent Regulation.



10. With respect to design information provided in the Draft EA, it is specified that an Effluent Treatment Plant for treatment of excess water from the proposed Polishing Pond to Bagsverd Creek may be provided if required. This would have to be evaluated very carefully as effluent discharge criteria are established. The Effluent Treatment Plant would have to be included in the Sewage Works if deemed necessary after the evaluation.

11. It is recommended that an overall plan showing the location of all tailings management facility alternatives be included in the Knight Piesold's Tailings Management Facility Alternatives Assessment Report (Appendix U3).

It is expected that the above sewage works related issues will be addressed as part of the detailed pre-application consultation with the Ministry (including Environmental Approvals Branch, Sudbury Regional Office and Northern Region Technical Support Section).

If you require any additional information, please do not hesitate to contact me at (416) 314 8177.

Yours sincerely,

Fariha Pannu, M.Eng., P. Eng.

Subject: MNRF Cote Gold Comments
Importance: High

Good morning Steven:

Please find attached the formal comments from MNRF, including attachments.

MNRF Regional Engineering will be submitting comments separately. I was informed comments from Regional Engineering will be submitted no later than August 12th.

Thanks,

Cindy

Species Grouping	Common Name	Scientific Name	COSSARO	COSEWIC
Bird	Bald Eagle	*Haliaeetus leucocephalus*	Special concern	Not listed
Bird	Barn Swallow	*Hirundo rustica*	Threatened	Threatened
Bird	Black Tern	Chlidonias niger	Special concern	Not listed
Bird	Bobolink	*Dolichonyx oryzivorus*	Threatened	Threatened
Bird	Canada Warbler	*Cardellina canadensis*	Special concern	Threatened
Bird	Chimney Swift	*Chaetura pelagica*	Threatened	Endangered
Bird	Common Nighthawk	*Chordeiles minor*	Special concern	Threatened
Bird	Eastern Whip-poor-will	*Caprimulgus (Antrostomus) voc*	Threatened	Special Concern
Bird	Golden Eagle	*Aquila chrysaetos*	Endangered	Not listed
Bird	Golden Winged-Warbler	*Vermivora chrysoptera*	Special concern	Threatened
Bird	Olive-Sided Flycatcher	*Contopus cooperi*	Special concern	Threatened
Bird	Peregrine Falcon	*Falco peregrinus*	Special concern	Special concern
Bird	Rusty Blackbird	*Euphagus carolinus*	Not listed	Special concern
Bird	Short-Eared Owl	*Asio flammeus*	Special concern	Special concern
Bird	Yellow Rail	*Coturnicops noveboracensis*	Special concern	Special concern
Bird	Bank Swallow	*Riparia riparia*	Threatened	Threatened
Bird	Eastern Meadowlark	*Sturnella magna*	Threatened	Threatened
Bird	Wood Thrush	*Hylocichla mustelina*	Special concern	Threatened
Bird	Eastern Wood-pewee	*Contopus virens*	Special concern	Special Concern
Fish	Lake Sturgeon	*Acipenser fulvescens*	Special concern - S. James Bay-Hudson Bay drainage	Special concern - S. James Bay-Hudson Bay drainage

Highlighted cells indicate changed that will be made June 27, 2014. E. Whip (only change to genus)

Kirtland's Warbler (might be suitable habitat in the Gogama area watershed), as of April 201
Rusty-patched Bumble Bee - Cochrane Region - Chris Chenier is looking into his list and wil
He wasn't able to find anything on his current NHIC SAR
Will leave off of the Timmins District list until it is found cl

4 nothing is noted on ebird or BBA.
ll let me know if he finds anything on the bee.
layer, is going to ask for an updated version. This species was collected in the James Bay area.
oser…it's possible that it is here…just hasn't be caught/identified

2) Prescriptions for Vegetation Management Around Bird Nests

Osprey

Primary nests
There is a 300m buffer (Area of Concern – AOC) around all primary osprey nests (these are nests are known or suspected to have been used within the last 5 years). Harvest (brushing) and tending (spraying) operations are permitted within the AOC (from 75m-300m) as long as they occur outside of the timing restrictions (April 15 – August 31). If work is to take place within 75 m of an osprey nest, please contact the MNR biologist as a site visit may be required.

Alternate osprey nests
There is a 150m AOC around all alternate osprey nests (these are nests that are known or suspected to have been occupied within the past 5 years that are not primary nests). Harvest (brushing) and tending (spraying) operations are permitted within the AOC (from 75m-150m) as long as they occur outside of the timing restrictions (April 15 – August 31). If work is to take place within 75 m of an alternate osprey nest, please contact the MNR biologist as a site visit may be required.

Inactive osprey nests
There is a 75m AOC around inactive osprey nests (nests not known or suspected to have been occupied within the last 5 years). Harvest (brushing) and tending (spraying) operations are permitted within the AOC (from 20m-75m) as long as they occur outside of the timing restrictions (April 15 – August 31). If work is to take place within 20 m of an inactive osprey nest, please contact the MNR biologist as a site visit may be required.

Bald Eagle

Primary nests
There is a 400m AOC around all primary BE nests (nests known or suspected to have been occupied at least once within the past 5 years). Harvest and tending operations are permitted within the AOC (from 100m-400m) as long as they occur outside of the timing restrictions (March 1 – August 31). If work is to take place within 100m of a primary BE nest, please contact the MNR biologist as a site visit may be required.

Alternate nests
There is a 200m AOC around all BE alternate nests (nests known or suspected to have been occupied at least once within the past 5 years that is not a primary nest). Harvest and tending operations are permitted within the AOC (from 100m-200m) as long as they occur outside of the timing restrictions (March 1 – August 31). If work is to take place within 100m of an alternate BE nest, please contact the MNR biologist as a site visit may be required.

Inactive nests
There is a 100m AOC around all BE inactive nests (nests not known or suspected to have been occupied within the past 5 years). Harvest and tending operations are permitted within the AOC (from 20m-100m) as long as they occur outside of the timing restrictions (March 1 – August 31). If work is to take place within 20m of an inactive BE nest, please contact the MNR biologist as a site visit may be required.

Great Blue Heron Colony

Active colonies
There is a 300m AOC around all active GBH colonies (measured from the peripheral nests). A colony is considered active if it known or suspected to have been occupied within the last 10 years (unless documented as unoccupied for the last 5 years). Harvest and tending operations are permitted within the AOC (from 75m – 300m) as long as it occurs outside of the timing window (April 1 – August 15). If work is to take place within 75m of an active GBH colony, please contact the MNR biologist as a site visit may be required.

Inactive colonies
There is a 30m AOC around all inactive GBH colonies (measured from the peripheral nests). A colony is considered inactive if the area has not been known or suspected to have been used within the last 10 years, or if documentation exists showing the area has not been used for the last 5 consecutive years. If work is to take place within 30m of an inactive GBH colony, please contact the MNR biologist as a site visit may be required.

Great gray owl, northern goshawk and red-shouldered hawk

Primary nests
There is a 400m AOC around all primary great gray owl, northern goshawk and red-shouldered hawk nests (nests known or suspected to have been occupied at least once within the past 5 years). Harvest and tending is permitted within the AOC (from 50m-400m) as long as it occurs outside of the timing window (March 15 – July 15). If work is to occur within 50m of a primary great gray owl, northern goshawk or red-shouldered hawk nest, please contact the MNR biologist as a site visit may be required

Alternate nests
There is a 50m AOC around all alternate great gray owl, northern goshawk and red-shouldered hawk nests (nests known or suspected to have been occupied at least once within the past 5 years that is not the primary nest). If work is to occur within 50m of a primary great gray owl, northern goshawk or red-shouldered hawk nest, please contact the MNR biologist as a site visit may be required

Inactive nests
Inactive nests are those not known or suspected to have been occupied within the last 5 years. If work is to take place within 20m of the nest please contact the MNR biologist as a site visit may be required.

Common stick-nesting raptors, tree-nesting common ravens and unknown stick nests

Occupied nests
Barred owl – 200m AOC
Broad-winged hawk, great-horned owl, long-eared owl, red-tailed haw – 100m AOC
Common raven, merlin, sharp-shinned hawk – 50m AOC

Harvest can occur within these AOC's subject to timing restrictions. The nest tree must be retained. Timing restrictions are:

February 1 – May 31 for great horned owl
February 15 – June 15 for common raven
March 15 – July 15 for barred owl, long-eared owl, red-tailed hawk
April 1 – July 31 for broad-winged hawk, merlin and sharp-shinned hawk

Unoccupied nests
Broad-winged hawk, merlin, sharp-shinned hawk or unknown small stick-nest (<75cm diameter) – nest tree will be retained

Barred owl, common raven, great horned owl, long-eared owl, red-tailed hawk or unknown large stick nest (≥75cm diameter) – if work is to take place within 20 of one of these nests, please contact the MNR biologist as a site visit may be required.

Cavities used by nesting raptors or nesting

Occupied and unoccupied nests/communal roosts

Barred owl – 100m AOC
Great horned owl, northern hawk owl, chimney swift – 50m AOC
American kestrel, boreal owl, eastern screech-owl, northern saw-whet owl – 25m AOC

Harvest and tending operations are allowed outside of the following timing windows, subject to restrictions (see below).

Timing restrictions:
February 1 - May 31 for great-horned owl
March 15 – July 15 for barred owl
April 1 – July 31 for American kestrel and boreal owl

Restrictions on harvest:

Trees used by American kestrel, boreal owl, eastern screech-owl and northern saw-whet owl – nest tree will be retained
Trees used by barred owl, great horned owl, chimney swift – if work is to occur within 20m of nest/communal roost tree you must contact the MNR biologist as a site visit will be required

Ground-nesting raptors

Turkey vulture – 150m AOC
Short-eared owl – 100m AOC
Northern harrier – 50m AOC

Harvest and tending operations can occur in these areas outside of the following timing restrictions:

March 15 – July 15 for short-eared owl
April 1 – July 31 for northern harrier
May 1 – August 31 for turkey vulture

Forest-nesting birds not covered by direction in other sections

Waterfowl, grouse or wild turkey nests containing eggs – 10m AOC around all nests containing eggs until birds have abandoned the nest

Nests of songbirds or other small birds containing eggs or young – 3m AOC around all nests containing eggs or young until birds have abandoned the nest

3) Conditions on Operations Around Waterways

1. It is your responsibility to be aware of and comply with all relevant provincial or federal legislation, municipal by-laws, other MNR approvals or required approvals from other agencies in regards to water crossings.
2. No material from brushing or clearing operations to enter waterways.
3. Any spills are to be reported to the Ministry of Environment immediately.
4. A slope dependent reserve will be applied to all waterways.
    a. No heavy machinery/grubbing/sediment disturbance in the reserve; hand tools are permitted.
    b. Reserve to start at woody shrubs such as alders, willows, Labrador Tea or Leatherleaf. If these species are not present, then the reserve should start at the edge of vegetation communities capable of providing an effective barrier to sediment movement.
    c. The reserve specifics are in the table below.

Slope (%)	Reserve Width (m)	Angle (°)
0-15	30	0-8
16-30	50	9-17
31-45	70	18-24
46+	90	23-31

We have conducted a search of our known Species at Risk (SAR) occurrences in the Timmins District and have found none in the immediate area of the undertaking. However, because this district has not been extensively surveyed in all locations, there is still the potential for SAR to be observed in the project area, including Blanding's Turtle (Threatened), Whip-poor-will (Threatened), Bobolink (Threatened), Common Nighthawk (Special Concern), Olive-sided Flycatcher (Special Concern) and Snapping Turtle (Special Concern) to name a few. For a full list of potential SAR in the Timmins district to be aware of, refer to the table enclosed ("Timmins District Species at Risk") and visit the Species at Risk in Ontario list for more detailed habitat information:

http://www.mnr.gov.on.ca/en/Business/Species/2ColumnSubPage/276722.html

Based on a review of the above information, Ministry staff have determined that the activities associated with the project, as currently proposed, have a low probability of contravening section 9 (species protection) of the *Endangered Species Act, 2007* (ESA 2007) provided the following conditions are implemented:

1) If a Blanding's Turtle or Snapping Turtle is observed nesting within the work area, a buffer of 30 m will be applied around the nest, where no proposed work activities will occur and the Timmins District MNR Species at Risk Biologist will be contacted immediately to discuss your options.
2) If a Whip-poor-will, Bobolink, Common Nighthawk, Olive-sided Flycatcher or any other SAR bird is flushed off its nest, a 30 m buffer should be placed around the nest, where no proposed work activities will occur until the Timmins District MNR Species at Risk Biologist is contacted and options are discussed.
3) If any other species at risk are observed within the work area, work must cease and the Timmins District MNR Species at Risk Biologist must be immediately contacted for direction.
4) If any species at risk are harmed or killed as a result of the work being done, all work activities must cease and the Timmins District MNR Species at Risk Biologist must be immediately contacted for direction.

Should any of the project parameters change, or if it is not possible to comply with the above conditions, please notify the Timmins District MNR office immediately to obtain advice on whether the changes require authorization under the ESA 2007. Please be advised that applying for a permit or agreement does not guarantee approval and processes can take several months.

It is also important to be aware that changes may occur in both species and habitat protection. The Committee on the Status of Species in Ontario (COSSARO) meets regularly to evaluate species for listing and/or re-evaluate species already listed. As a result, species' designations may change that could in turn change the level of protection they receive under the ESA 2007. Also, habitat protection provisions for a species may change (e.g. if a species-specific habitat regulation comes into effect). The regulation would prescribe the area as the habitat of the species. The ESA 2007 applies to species listed on the Species at Risk in Ontario list.

In addition to the SAR concerns, please find enclosed a list of prescriptions for handling bird nests you might encounter during your work. If it is not possible to comply with the above conditions, please notify the Timmins District MNR office immediately.

Please be advised that it is your responsibility to be aware of and comply with all relevant provincial or federal legislation, municipal by-laws, other MNR approvals or required approvals from other agencies.

IAMGOLD - Cote Gold Project - Draft Environmental Assessment Report
List of Required Alterations, Comments and Editorial corrections from
Ministry of Natural Resources and Forestry - Timmins District

Type: R=required; **E**=editorial; **C**=comment or clarification needed
Alteration: Describe the required alteration with enough detail to give proponent author direction to make the change
Completed: Indicate here how the alteration has been addressed in the final EA 9/17/2014

Type	Pg# - draft	Section, Paragraph or Table #	Alteration	Completed or explanation of alteration
R	ES-3	2nd Paragraph	The construction of the TMF will affect the flows of two streams that flow into Mesomikenda Lake and have the potential to affect potential Northern Pike spawning habitat. What studies, if any, were done in these potential areas to identify habitat? MNRF staff has noted spawning behaviour in these areas.	
R	ES-3	4th Paragraph	What are the measurements that are being implemented to minimize solid wastes; will this expansion be seen in the lifetime of the mine? Once opportunities to recycle hazardous waste are investigated, will they be implemented?	
R	ES-6	3rd Paragraph	The executive summary speaks to impacts to Three Duck Lakes and Clam Lake. These lakes are not discussed in your compensation package. Please explain.	
R	Figure ES-2	-	A potential discharge location is noted at the northern most portion of Figure ES-2. Where will the pipe be located leading to the discharge location? Will this pipeline be built above or below ground?	
R	Figure ES-2	-	How will the realignment of Bagsverd Creek be crossed by the tailings pipeline? What measures will be in place for any pipeline failures?	
R	Figure ES-2	-	How is outflow being monitored at the north end of the site?	
R	Figure ES-2/ ES-3	Map/2nd Paragraph	What is the predicted volume of water to be taken from Mesomikenda Lake by season? How will impacts to spawning be mitigated? Please discuss the notion of a “seasonal need for fresh water make-up (from Mesomikenda Lake).”	
R	Figure ES-2	-	Blasting at a mine in the North East Ontario, on similar geological make-up, has caused eutrophication and algae blooms on lakes on the downwind side. Please explain how you plan to control dust, nitrogen and

Alteration: Describe the required alteration with enough detail to give proponent author direction to make the change
Completed: Indicate here how the alteration has been addressed in the final EA 9/17/2014

Type	Pg# - draft	Section, Paragraph or Table #	Alteration	Completed or explanation of alteration
			nitrates from entering Mesomikenda Lake.	
R	ES-2	2nd Paragraph	With the flow changes to the Mollie River, how will the Dividing Lake Walleye that utilize this flow be addressed?	
R	ES-9	2nd Bullet	How will water management and monitoring for heavy metals and acid generation be done in the low-grade stockpile?	
C	ES-10	5th Bullet	Please note that any lay down area on Crown land, will require a permit.	
R	ES-13	2nd Bullet	Please be more specific, what percentage of water will be recycled? This is important because when cyanide is released into the environment, it negatively impacts fish populations.	
C	ES-13	7th Bullet	It is stated that "progressive site reclamation, where and to the extent practical." Specific information should be provided.	
R	ES-13	List of activities carried out during operations phase	During ore processing, how will the effects of cyanidation be mitigated? What are the detailed precautionary plans? • Cyanide is extremely toxic to birds and mammals that are drawn to cyanide solution collection ponds as a source of water. How will this be mitigated? • Ponds can leak or overflow, posing threats to underground drinking water supplies and wildlife in lakes and streams. (area is known to have groundwater infiltration) How will this be mitigated? • Fish and Benthic macroinvertebrate are

Alteration: Describe the required alteration with enough detail to give proponent author direction to make the change
Completed: Indicate here how the alteration has been addressed in the final EA 9/17/2014

Type	Pg# - draft	Section, Paragraph or Table #	Alteration	Completed or explanation of alteration
			extremely sensitive to low cyanide concentrations. How will this be mitigated?	
R	ES-13	3rd Paragraph	It will take 50 to 80 years for the pit to fill up with water. Who will be responsible for the dam and monitoring it in this timeframe? How is this work going to be funded?	
R	ES-16	1st Paragraph	With the changing of groundwater flow, what studies have been completed to see the impact of upwelling in Mesomikenda Lake? These upwelling's are very important for Lake Trout spawning within the lake.	
R	ES-16	2nd Paragraph	What influence did the old mine site have on hydrological and background water quality studies?	
C	ES-17	1st Paragraph	The proposed mine site is located on the transition between Boreal and Great Lakes St Laurent Forest, with red and white pine species found in the area.	
R	ES-17	3rd and 4th Paragraph	Please provide surveys, methodology and accreditation of staff who completed wildlife surveys. What was the survey methodology used to determine that there was no significant habitat found? Was Ecological Land Classification (ELC) used here?	
C	ES-19	1st Paragraph	Walleye are found within the water body complexes stated in the executive summary and are also found by your studies. Additionally, Walleye are known to spawn in this area and these lakes are made up of Walleye complexes. What were your survey methods and timing of year? What is the experience of the crew surveying? Which ponds were surveyed?	
C	Table ES-2	Water Supply Section	There is no discussion of impacts to hydro-electric generation. Mesomikenda Lake is a Hydro Reservoir and is utilized in winter for Hydro production. Additionally, what are the effects on Lake Trout?

Ministry of Natural Resources and Forestry - Timmins District

Type: R=required; **E**=editorial; **C**=comment or clarification needed
Alteration: Describe the required alteration with enough detail to give proponent author direction to make the change
Completed: Indicate here how the alteration has been addressed in the final EA 9/17/2014

Type	Pg# - draft	Section, Paragraph or Table #	Alteration	Completed or explanation of alteration
R	Table ES-2	Water Discharge Section	There is no mention of source water protection and its impacts by discharging into Mesomikenda Lake. Also, the effects on Lake Trout are not explored. Please clarify.	
R	Table ES-2	Watercourse Realignment	Compensation only addresses water course realignment, not the destruction and loss of the lake portion. How will the proponent compensate this loss of lake habitat? In Timmins District, an area with similar geological make-up, mine rock was used to dam a lake and is now leaching toxic material that has impacted the lake. What is your plan to deal with a similar situation should this happen?	
R	Table ES-2	Site Infrastructure	There is no indication on the map or in this section on the existing infrastructure on the east side of Mesomikenda Lake. There is also no mention of the existing MOU in regards to the bridge. Please explain.	
E	ES-30	4th Paragraph	Gogama Area Citizens Committee does not exist anymore.	
R	ES-35	6th Paragraph	The effects on water resources do not include the persistence of contaminants from blasting agent in waste rock effluent. Please explain.	
C	ES-37	1st Paragraph	The landfill site Neville Twp is currently being utilized. This needs to be identified in the report.	
C	ES-39	5th Paragraph	Please provide more specific information regarding offsetting measures for fish habitat.	
R	ES-39	8th Paragraph,	There will be a major impact to the 4M canoe route and tourism anticipated. How might this impact local communities?	
C	ES-40	5th Paragraph	What are considered “neutral” or “insignificant” effects? Please be more specific.	
C	5-4	Sec 5.3.3 & 5.14.3	The mine life is said to be 15 years, however, Post-Closure Phase Stage I is said to last 50 to 80 years. It is stated on Page 5-38 that “further details will be

Type	Pg# - draft	Section, Paragraph or Table #	Alteration	Completed or explanation of alteration
			determined as the engineering studies progress during the permitting stage." It is difficult to determine environmental impact if further details will be determined later. MNRF suggests providing more information in an updated version of the EA around Post-Closure Phase Stage 1.	
R	-	General	Has there been a study of the benthic macroinvertebrate communities in the area and the effects of the mine on their community composition?	
C	6-3	5th Paragraph	The report notes that "annual water losses, based on total water lost to the atmosphere through evapotranspiration (ET) and to deep ground water resources is in the range of 400 mm to 600 mm (MNR, 1984). Annual water surplus is in the range of 200 mm to 500 mm." **1:** Is there more up-to-date information than 1984? **2:** Please cite where the annual water surplus range data came from.	
R	6-42	8th Paragraph	Were wetland evaluations carried out by a certified MNRF Ontario Wetland Evaluation System (OWES) Ontario Wetland Evaluator? If so, please provide a copy of the OWES evaluations. Additionally, how will wetland features be compensated if altered or removed?	
R	6-44 – 6-46	Sec 6.4.2.2	Page 6-44 notes that the regional study area is 3,788 km² and the local study area is 119 km². Thus, the local area is approximately 3.14% of the regional study area. With this in mind, given that plant community surveys and species at risk-vegetation surveys were performed at the local scale - pg.6-45, 6-46 - please clarify the following

Type	Pg# - draft	Section, Paragraph or Table #	Alteration	Completed or explanation of alteration
			statement: "The vegetation baseline studies for the regional and local study areas around the project site demonstrate… the majority of the recorded plant species are native to Ontario and no provincially or federally listed or rare species were identified through field studies" pg.6-48. The latter suggests surveys were also performed at a regional scale, please clarify and expand on how these surveys are representative of the proposed project area.	
C	6-51	4th Paragraph	As per the Draft Whip-poor-will Survey Protocol: "…auditory surveys must be conducted by Qualified Professionals… " Please provide the qualifications and experience of the surveyors.	
E	6-51	4th Paragraph	Please note that as per the results of the Jan and Jun 2013 COSSARO Meetings, the previous scientific name of Eastern Whip-poor-will - *Caprimulgus vociferous* - has been changed to *Antrostomus vociferous.*	
R	6-53	1st Paragraph	As stated in the Draft EA Report: pg. 6-53 "…Where possible, these -reptile and amphibian- surveys were combined with waterbird breeding surveys and breeding bird surveys to gain efficiencies, and were completed between 10:00 a.m. and17:00 p.m." Please clarify how the latter was possible since the reptile and Amphibian surveys were completed between 10:00 and 17:00 and the waterbird breeding ground surveys and breeding bird surveys were completed 30 minutes before sunrise and had to be completed no later than 10:00 Please clarify which Unnamed Lake (1 or 2) the studies were performed in.

Completed: Indicate here how the alteration has been addressed in the final EA 9/17/2014

Type	Pg# - draft	Section, Paragraph or Table #	Alteration	Completed or explanation of alteration
R	6-53	2nd Paragraph	**First paragraph (Amphibian Surveys):** "One round of three minute surveys was completed at four survey locations, following the Marsh Monitoring Program … for guidance, on June 5 to 8, 2012". **As per the Marsh Monitoring Program:** "Each route is to be surveyed for calling amphibians **three times** during the spring and early summer… By conducting three surveys, you should be able to detect all species present. The first survey is timed to monitor species that breed very early (e.g., Chorus Frog, Wood Frog and Spring Peeper). The second survey should coincide with "optimum" breeding for Spring Peeper, American Toad, Northern Leopard Frog, Pickerel Frog and, where they occur, Fowler's Toad. The third survey will monitor late-season breeders, Gray Treefrog, Cope's Gray Treefrog, Mink Frog, Green Frog, and Bullfrog". **Second paragraph (Amphibian Surveys):** "Surveys were initiated half an hour after sunset and ended near midnight during evenings with little or no wind a minimum temperature of 5 C". **As per the Marsh Monitoring Program:** "Frogs and toads always require an air temperature greater than 5C (41F) to elicit calling activity. "Late season" frogs (bullfrogs and green frogs)'species known to occur in the study area (Ontario Nature Ontario Reptile and Amphibian Atlas)' don't begin their calling activity until temperatures are even higher. Therefore **night-time air temperature should be greater than 5C (41F) for the first survey, 10C (50F) for the second survey and 17C (63F) for the third survey**". As well as: "…in **Northern regions**, surveys can start at **22:00** in the summer even if it isn't dark then".

Dear Mr. Woolfenden,

Subject: Information Request #1 from the Technical Review of the Final Environmental Assessment Report (Environmental Impact Statement) for the Côté Gold Project

The Canadian Environmental Assessment Agency (the Agency) has completed its technical review of the Côté Gold Project (the Project) Environmental Impact Statement from IAMGOLD Corporation (the proponent).

The Agency submits the following attachment with information requests in relation to atmospheric environment, groundwater, surface water, terrestrial landscape, fish and fish habitat, migratory birds, and Aboriginal peoples.

Please be advised that the federal clock has stopped on **August 1, 2014**, with the Agency's submission of the attached information requests to the proponent.

IAMGOLD's provision of additional information will support the federal environmental assessment and the determination of significant adverse environmental effects.

Additional comments and information requests from the Agency relevant to the federal environmental assessment may be provided as appropriate, should they emerge due to comments received from the public, Aboriginal groups, federal departments, and provincial ministries. For example, in relation to the characterization of environmental effects, mitigation measures, or residual effects in support of drafting the federal Environmental Assessment Report.

.../2

The federal clock will commence at the time the Agency receives responses to all comments and information requests provided to the proponent.

At the conclusion of all information requests the Agency requests that IAMGOLD submit one completed addendum to the Environmental Impact Statement summarizing the information requests and responses.

In accordance with the Canadian Environmental Assessment Registry provisions in Section 35 of the Act, this letter and attachment will be made available upon request to interested parties and Aboriginal Groups participating in the federal environmental assessment.

Should there be any questions regarding the information requests submitted, the Agency would be pleased to facilitate a discussion. Please contact me at 416-954-7334 or via email at MineCoteMine@ceaa-acee.gc.ca to discuss.

Sincerely,

Sherry Boodram
A/Project Manager
Canadian Environmental Assessment Agency, Ontario Region

Federal Information Requests on the Final Environmental Impact Statement (Draft Environmental Assessment Report) for the Côté Gold Mine Project

August 1, 2014

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
PD1-1	Description of the Project – Retention Dam at Three Duck Lake	5.6, 5.7	EIS Report, Section 1.3, Section 5.5.2	The EIS states that the location of the low-grade ore stockpile was available because the safe setback distance away from the open pit for the retention dam on Three Duck Lake (upper) will expose "an area suitable for this application". It is unclear how the distance for the setback of the retention dam was selected and whether it was controlled strictly by the safety case for mining operations within the open pit or whether the dam was pushed back further into Three Duck Lake away from the open pit than needed strictly for the safety case to accommodate plans for a low-grade ore stockpile. If the latter situation, then this results in a greater impact on Three Duck Lake than absolutely necessary for safe operation of the mine. The response to this information request will assist the Agency to determine the project's potential effects to fish habitat.	a) Provide a description of any alternative areas considered for the low-grade stockpile area
PD1-2	Description of the Project – Haul Roads	5.6, 5.7	EIS Report, Section 5.3.3	The EIS states that 225 tonne off-highway haul trucks will be used to transport to the primary crusher or stockpiles ore and waste rock. However, the haul roads are not shown on any map or figure, so potential effects (dust, runoff, spills) cannot be fully appreciated. The response to this information request will assist the Agency to determine the project's potential effects to the terrestrial landscape, migratory birds, water quality, fish and fish habitat.	a) Provide in a map or figure for the location of the ore and waste rock haul roads for use by the 225 tonne heavy trucks.
PD1-3	Description of the Project – Laydown Areas Water Quality	5.6, 5.7	EIS Report, Section 1.3, Section 5.11.1	In the EIS, it is identified that some material for tailings dam construction will need to be stockpiled for short periods of time for the construction of the Tailings Management Facility (TMF). The EIS indicates that it is planned to place these small and temporary stockpiles within the future TMF footprint so as to avoid additional clearing. The Proponent also identifies that general laydown areas will be required near the ore processing plant during the construction phase.	a) Provide a map which indicates the location(s), boundaries and sizes of the laydown area(s) within the TMF footprint, adjacent tothe ore processing plant, and any other areas for which it is planned to utilize land for the laydown of equipment and materials.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				With the exception of the above, the details on other laydown areas are vague and undefined. The creation of laydown areas is likely to prompt the clearing of vegetation and include the temporary storage of construction materials that may consist of overburden, crushed waste rock, or aggregate that could be a source for sediments and other contaminants mobilized by precipitation. For the management of water quality it would be of benefit to optimize and minimize the use of these laydown areas. The creation of laydown areas may have other environmental effects. The response to this information request will assist the Agency to determine the project's potential effects to the terrestrial landscape, migratory birds, and water quality.	b) Provide a description of the predicted environmental effects of the construction and operation of laydown areas during the construction phase of the project. c) Provide a description of the planned duration for which these laydown areas will be used, and what mitigation measures will be in place during their use.
PD1-4	Description of the Project – Overburden Stockpiles associated with TMF and Watercourse Realignments Water Quality	5.6, 5.7	EIS Report, Section 5.7	The EIS states that with respect to overburden that "Prior to development of the TMF dams, topsoil as needed, will be stripped from the TMF area. This topsoil may be used in construction of the channel realignments or be stockpiled around the TMF footprint where appropriate in low height, small stockpiles, to be used for future closure activities." There is no information in the EIS on the exact locations or how the drainage from these stockpiles will be managed and monitored during the time that the overburden is stockpiled and before the material is utilized in rehabilitation of the site. Furthermore, it is unclear whether the creation of new watercourse realignments may result in the clearing of overburden and result in additional stockpiles being necessary for overburden gathered during construction of the engineered watercourse channels. The response to this information request will assist the Agency to determine the project's potential effects to the terrestrial landscape, migratory birds, and water	a) Provide in a map or figure the location(s) of the overburden stockpiles associated with the TMF and the new watercourse realignments (if applicable) b) Provide a description of the predicted environmental effects of the construction and operation of overburden stockpiles during all phases of the project c) Provide a description of how drainage from these stockpiles will be managed and monitored.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				quality.	
EA1-1	Indirect Environmental Effects	10.1.2	5.11 Chapter 9	The EIS has provided a brief summary of the explosives manufacturing and storage facilities that will be located at the project site, including a proposed location (Figure 1-2). Based on section 10.1.2 of the EIS Guidelines, "*the proponent shall describe any change that may be caused by the project on the environment, which is defined as the components of the Earth, including:* *– Land, water and air, including all layers of the atmosphere;* *– All organic and inorganic matter and living organisms; and* *– The interacting natural systems that include the components described above.* *These descriptions will be integrated into the effects assessment sections of each VC included in the EIS".* Some changes to the environment that that are directly linked or necessarily incidental to the provision of a licence for the explosives manufacturing and storage facilities by NRCan are described (e.g. impacts to air quality from construction of project infrastructure) however, some information is missing. The response to this information request will assist the Agency to determine the project's potential effects to the environment as a result of a federal authority exercising a duty or power.	a) Identify the changes to the environment that may result from the construction, operation or decommissioning of the explosives manufacturing and storage facility and any mitigation or management practices that will be implemented to minimize impacts to the environment, include the following at a minimum. • Construction of explosives manufacture and storage: - Air quality - Vegetation and Soils - Water Quality • Operation of explosives manufacture and storage: - Water Quality • Environmental effects of accidents and malfunctions: b) Provide the following explosives factory or magazine management plans and procedures : • Spill Contingency Plan • Emergency Response Plan • Operating Procedures.
AE1-1	Atmospheric Environment (including Air Quality)	Section 3.4.3, p. 5; Section 9.1.2, p. 17	Appendix F, Section 5.2.3, Tables 5-2 and 5-3, p. 5-5 to 5-6; Appendix F,	Baseline air quality data in the project area were obtained from a number of sources including the Canadian Air and Precipitation Monitoring Network (CAPMoN), National Air and Pollution Surveillance Network (NAPS), and the proponent's own on-site monitoring station. In emission summary tables (Appendix F, Section 5.2.3, Tables 5-2 and 5-3), the background concentration of each compound is unclear, and	a) Provide the background levels that were used for each compound in Tables 5-2 and 5-3, preferably by adding a column to each table. Indicate whether these background levels were used in the assessment summarized in Table 5-3. Provide a

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
			Section 5.2.3, p. 5-9; Appendix F, Appendix II Appendix F, Section 4.2.1, p. 4-1; Appendix F, Section 4.2.2, p. 4-2	the source used to determine the background concentration of each compound is also unclear. (In Appendix F, Section 5.2.3.2, page 5-9, only background levels for particulate matter are stated.) For the air quality data from CAPMoN, the proximity of the monitoring stations to the project site is unclear. The responses to this information request will assist the Agency in dbaseline air quality conditions, in order to determine potential environmental effects to Aboriginal peoples resulting from the project.	rationale if these background levels were not used. b) Provide a rationale for not including PM2.5 in background monitoring at the project site. c) Provide the locations and distances to the project site of the CAPMoN monitoring stations that were used in this report.
AE1-2	Atmospheric Environment (including Air Quality)	Section 3.2, p. 2; Section 9.1.2, p. 17	Appendix F, Section 4.2.5, Table 4-6	Average concentrations for chromium, lead and nickel at the Project site are shown to be less than the method detection limits. No information is provided as to how the average concentrations were calculated. The response to this information request will assist the Agency in understanding baseline air quality conditions, in order to determine potential environmental effects to Aboriginal peoples resulting from the project.	a) Provide an explanation of how average concentrations are calculated when samples have concentrations below the method detection limits.
AE1-3	Atmospheric Environment (including Air Quality)	Section 9.1.2, p. 17; Section 10.1.1, p. 27; Section 10.1.2, p. 29	EIS Report- Section 9.2.2.1, p. 9-13; Appendix F Section 5.1, p. 5-1; EIS Report, Section 5.11.1, p. 5-30; Section 11.2, Table 11-3, p. 11-21 to 11-23	The proponent indicates in the EIS Report, Section 9.2.2.1, that it only conducted an air quality (AQ) assessment for the operation phase of the project. The proponent states that activities in the construction phase use similar mining equipment as the operations phase, and that construction phase effects will be less, and of shorter duration than those predicted for operational phase. Environment Canada has found, in reviewing mining projects, that the range of activities in the construction phase cannot be directly compared with that in the operation phase. For example, transportation emissions may differ as there will be (according to the EIS Report, Section 5.11.1, p. 5-30) approximately 1,500 workers during the construction phase, compared to approximately 500 workers during the operation phase. This could result in higher mobile emissions in the construction phase from passenger cars and trucks, along with the additional use of diesel	a) Provide an AQ assessment that incorporates the construction, operation and decommissioning phases of the project, including assessment of short term AQ impacts from site preparation and construction activities with a focus on NOx, TSP, PM10 and PM2.5. b) Provide a worst-case scenario assessment during the construction phase, predicting NOx, TSP, PM10 and PM2.5 (for 1-hr and 24-hr averaging period) during construction, and with comparisons with AAQC and /or NAAQO.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
			Appendix F, Section 5.2.1, p. 5-2	generators for power and aggregate pits during construction. Environment Canada has found, from AQ assessments of other mining projects, that exceedances of air quality standards for particulate matter and NOx (for 1-hr and 24-hr averaging period) have been observed during this phase in those instances. An AQ assessment for the construction phase would verify whether or not the operation phase of the project is the bounding or worst-case in terms of potential air quality effects. This would facilitate the proponent's development of measures to ensure that compliance with standards is achieved throughout these phases. An AQ assessment for the construction phase would also confirm that the magnitudes of various indicators stated in Table 11-3, in the air quality discipline, are properly characterized. The proponent states in Appendix F, Section 5.2.1, page 5-2 that fugitive dust emissions from the tailings management facility (TMF) have not been assessed due to the placement of control measures. In order to assess the potential health impacts from particulate matter and dust generated from the TMF, fugitive dust emissions should be included in the AQ assessment of emissions. The exclusion of fugitive dust emissions from the TMF may lead to an underestimation of the cumulative health risks posed by particulate matter. The response to this information request will assist the Agency in understanding changes to air quality caused by the project, in order to determine potential environmental effects to Aboriginal peoples resulting from the project.	c) Provide a table with the emission sources and modelling results for the construction phase air emissions, since the releases of NOx and particulate matter (TSP, PM10 & PM2.5) are the main issues in the site preparation and construction phase, and any exceedances, even short term, should be documented. If necessary, modify Table 11-3 to reflect the outcomes of the assessments described above. d) Include fugitive dust emissions from the TMF in the AQ assessment, with a control efficiency consistent with the proposed dust best management plan (DBMP).
AE1-4	Atmospheric Environment (including Air Quality)	Section 10.1.1, p. 28; Section 10.1.2, p. 29	Appendix F, Section 5.2.2, p. 5-3; Appendix F, Section 5.2.2, Tables 5-2 to 5-4, p. 5-5 to 5-7	The proponent states in Appendix F, section 5.2.2, page 5-3 that modelling in the AAQC assessment included emissions from mobile sources, while the O. Reg. 419/05 assessment considered stationary sources. It would be expected that the emission rates for the AAQC assessment should be different than O. Reg. 419/05 emission rates, but it appears that in Tables 5-2, 5-3 and 5-4 emission rates are the same for all the indicators under 3 different scenarios, whereas the modelled POI concentrations have different values.	a) Clarify whether the emission rates for the scenarios that are summarized in Tables 5-2, 5-3 and 5-4 are accurate.

				The response to this information request will assist the Agency in understanding changes to air quality caused by the project, in order to determine potential environmental effects to Aboriginal peoples resulting from the project.	
AE1-5	Atmospheric Environment (including Air Quality)	Section 3.2, p. 2; Section 9.1.2, p. 17; Section 10.1.1, p. 27; Section 10.1.2, p. 29	Appendix F, Appendix III, Tables III-1,III-3 and III-5	In Appendix F, Appendix III, Table III-1, the emission estimate calculations for generator sets are not clearly shown, and the estimates could not be verified as some of the data required for calculations are not provided. In Appendix F, Appendix III, Table III-3, the emission estimate calculations for material handling could not be verified as there is not enough information provided. No rationale is given for the assumption of 75% control efficiency for water spray or enclosed drop. In Appendix F, Appendix III, Table III-5, no rationale is given for the assumption of 85% control efficiency for road dust emissions. The response to this information request will assist the Agency in understanding changes to air quality caused by the project, in order to determine potential environmental effects to Aboriginal peoples resulting from the project.	a) Provide a detailed sample calculation for primary and secondary crushers and emission rate calculation for load haul truck (TSP, PM10 and PM2.5). Provide any assumptions made, operation hours, sulphur content in the fuel and equations used. Only use one generator set but include a sample calculation for each of the indicators. b) Provide a detailed sample calculation for emissions from material handling (TSP, PM10 and PM2.5), providing any assumptions made and operation hours. c) Provide a rationale for the assumption of 75% control efficiency for water spray or enclosed drop in material handling, and for the assumption of 85% control efficiency for road dust emissions.
AE1-6	Atmospheric Environment (including Air Quality) Human Health	Section 10.1.1, p. 28; Section 10.1.3, p. 30	Appendix F, Section 3.1.5, p. 3-5	The proponent indicates in Appendix F, Section 3.1.5, page 3-5 that "copper sulphate does not have a standard under O. Reg. 419/05, nor does it have an AAQC. A criterion of 20g/m^3 was established by a certified toxicologist to be protective of health." It is unclear how the criterion for copper sulphate was derived. The response to this information request will assist the Agency in determining potential effects of changes to the environment on Aboriginal peoples resulting from the Project.	a) Provide a rationale for the criterion of 20 g/m^3 for copper sulphate used in this report.
AE1-7	Atmospheric Environment	Section 11.1.1, p. 32	EIS Report, Section 10.2,	Environment Canada agrees with the proponent's commitment to develop a dust best management plan (DBMP) and other mitigation plans for greenhouse gases	a) Provide further information, addressing the points stated in the summary comment, for the DBMP,

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	(including Air Quality)		Table 10-1, p. 10-2 to 10-9; Appendix F, Section 6.0, p. 6-1 to 6-2; Appendix V, Section 1.1, p. 1-1	(GHG) and engine and vehicle maintenance. However, no details are provided in terms of: - objectives to be achieved through air quality mitigation measures; - listing of methods to be applied and the conditions that trigger mitigation measures; - best management plan for fugitive dust and planning measures aimed at reducing fuel and power consumption for the site. The response to this information request will assist the Agency in understanding proposed mitigation measures with relation to air quality, in order to determine potential environmental effects to Aboriginal peoples resulting from the project. In relation to information request AE1-7, see EC-76 in Annex 3 for references to codes of practice and regulations that are relevant to the development of air quality mitigation.	GHG emission plan, Engine Maintenance Program and other mitigation actions with relation to air quality, during the construction, operation and decommissioning phases.
AE1-8	Atmospheric Environment (including Air Quality)	Section 11.4, p. 34; Section 16, p. 40	Appendix F, Section 7.0, Table 7-1, p. 7-2; EIS Report, Section 16.0, p. 16-1 and Table 16-1, p. 16-3; Appendix Y, Table 4, p. 51	It is unclear whether ambient air quality monitoring will be conducted for PM10 and PM2.5 during construction and operation phases of the project. The monitoring measures in the EIS Report, Section 16.4, Table 16-1 and the Commitment Table in Appendix Y, Table 4 indicate that TSP, metals, NOx/SO2 will be monitored during construction and operation phases. It should be clarified in Appendix F, Section 7.0, Table 7-1, whether PM10 and PM2.5 will be monitored in the construction and/or operation phases. Environment Canada recommends that real-time ambient air monitoring should be undertaken during site preparation, construction and operation phase for TSP, PM10, PM2.5, metals and NOx/SO2 at a minimum. PM10 and PM2.5 should be included in the list of substances to monitor, since exceedances were predicted during the operation phase according to Appendix F, Section 5.2.3.2, p. 5-9. The response to this information request will assist the Agency in understanding	a) Provide a description of the final environmental monitoring plan for air quality in the construction and operation phases, including monitoring parameters, methods, sampling locations, applicable standards, duration and frequencies. These plans should clearly outline action levels that may trigger certain mitigations.

				proposed monitoring programs with relation to air quality, in order to determine potential environmental effects to Aboriginal peoples resulting from the project.	
GW1-1	Water Quality	9.1.2, 10.1.2	EIS Report, Sections 5.7, 5.10.4; 5.14.2, 6.0, 9.0 Appendix H Hydrogeology TSD	<u>Tailings Management Facility</u> IAMGold has provided limited information on the hydrostratigraphy of the area in the vicinity of the proposed Tailings Management Facility (TMF) and no cross-sections depicting the hydrostratigraphy and groundwater flow directions are presented for the TMF. Additionally, there are no diagrams depicting groundwater flow patterns near the TMF for baseline conditions (e.g. plan view diagram). The proponent plans to collect water seeping from the TMF to groundwater through the use of ditches and seepage collection ponds, however details on seepage collection are not provided. Specifically, the proponent has not provided information on the effectiveness of containment of tailings fluids in the TMF. This information is important to determine if there will be impacts to groundwater resulting from the construction and operation of the TMF. It is noted that groundwater modelling was not utilized to model baseline conditions or potential impacts to groundwater in the vicinity of the TMF. The proponent does not anticipate that water quality in the TMF will be poor, however predictions indicate that TMF water will contain residual cyanide, ammonia and metals (Cu) and there is the possibility that sewage sludge may also be disposed of in the TMF. Given these concerns, it seems reasonable that additional characterization of the groundwater regime and seepage be provided. <u>Open Pit</u> The proponent has presented a significant amount of baseline hydrogeological information for the area around the proposed open pit and Mine Rock Area (MRA), and has presented a detailed numerical 3D model predicting drawdown-related impacts to groundwater resulting from pit dewatering. This information is generally	a) Provide cross-sections through the location of the proposed TMF depicting the hydrostratigraphic units and groundwater flow directions (baseline case). b) Provide a plan view diagram of the proposed TMF, open pit area depicting groundwater flow directions and rates (baseline case). c) Conduct numerical groundwater modelling to better understand baseline hydrogeological conditions at the TMF, to characterize seepage from the TMF and to quantify potential impacts resulting from the TMF (i.e. changes to groundwater flow patterns and rates, and water quality impacts resulting from seepage). d) Provide details on the effectiveness of TMF containment to minimize seepage. (e.g. predicted seepage rates beneath the TMF and through the TMF dams and sides without dams). e) Provide information on the effectiveness of the project's proposed seepage collections measures. Specifically, how deep will seepage collection ditches or ponds be? What percentage of seepage will be collected? What will be the fate of seepage

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				sufficient and well presented. However, information on groundwater flow paths and rates for the baseline case and project case are lacking. There are no maps depicting groundwater flow directions and rates. It is important to understand the baseline flow regime and to predict how this regime may change as the pit is dewatered and then allowed to fill once mining has ceased. The proponent has modelled drawdown resulting from pit dewatering, but it has not modelled or considered how groundwater flow will change once the pit has filled following closure. If there is a significant change in groundwater flow regime, water from the filled open pit could be transported via shallow groundwater to surface water bodies, providing a conduit for potential contaminants present in the pit water. This information is requested as a clarification and to be able to determine potential environmental effects to water quantity and quality, and subsequently fish and fish habitat.	that is not collected? f) Provide a discussion of how the groundwater flow regime will change in the vicinity of the open pit as a result of the project. g) Provide a plan view diagram of the proposed open pit area depicting groundwater flow directions and rates (baseline case). h) Provide a discussion of how the groundwater flow regime will change in the vicinity of the open pit as the pit is allowed to fill following closure. i) Provide a discussion of potential effects to groundwater quality and surface water receptor quality resulting from groundwater pathways originating from the filled open pit.
GW1-2	Water Quantity	10.1.2	EIS Report, Section 5.10.3 (p. 5-22)	Details on freshwater to be obtained from groundwater for potable and other uses (e.g. truck washing) are not provided. Clarification is needed on the location of the well(s) to be used for this purpose and on the aquifer unit where the water will be obtained. Additionally, the total daily rate of water to be pumped is unclear. The proponent indicates that there are 6 wells within 15 km of the project site. However, NRCan was unable to find any discussion of how the project may affect the well users. This information is requested to determine if there is the potential for existing wells to be affected by project activities. This information is requested as a clarification and to be able to determine potential	a) Provide a map indicating the location of the freshwater wells to be used for potable water and other uses. Specify the aquifer unit. b) Clarify the total daily rate of water to be pumped. c) Provide a discussion on any potential impacts to well users resulting from the project's groundwater taking activities.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				impacts to potable well users and the environment resulting from the pumping.	
SW1-1	Water Quality	5.6, 5.7	EIS Report, Section 5.10.5, Section 5.10.6	The preferred final effluent discharge location in the downstream end of Bagsverd Creek at Neville Lake has been identified but the location of the pipeline from the polishing pond to the discharge location has not been explicitly identified in any figures. The response to this information request will assist the Agency in determining potential environmental effects on water quality and fish and fish habitat due to discharges to the environment.	a) Provide in a map or figure the location of the polishing pond and discharge pipeline at Bagsverd Creek.
SW1-2	Water Quality	5.6, 5.7, 6.0, 10.1	EIS Report, Sections 5.4, 5.5, 5.5.1, 5.5.1.2, 5.5.2, 5.7, 5.8.2, 5.10, 5.10.5, 5.10.6.1, 5.11, 5.16.2.3 Water Quality Technical Support Document (TSD)	The EIS states that engineered water management systems will be in place to collect surface drainage (runoff) and seepage from the TMF, MRA, low-grade ore stockpile, and other parts of the mine. The conceptual design of these systems has not been adequately described in the EIS. For example, the Water Quality TSD states: • "A series of 15 collection ponds (Mine Rock Storage Ponds; MRSPs) with connecting ditches are to be constructed around the perimeter of the MRA to collect runoff and toe seepage" • "Low-grade ore will be stockpiled to the north of the open pit and east of the processing plant, as shown on Figure 1-2. Approximately 2 km of water collection ditches and four storage ponds will be constructed to collect runoff and toe seepage at the perimeter of the stockpiles, with water pumped back to the mine water pond." • "Seepage losses from the TMF and runoff from the tailings dams will be collected at six Tailings Dam Seepage Ponds (TDSPs) and associated ditches located at the downstream toe of the tailings dams, with the collected seepage water pumped back to the reclaim pond." • "…runoff from the area of the processing plant and associated facilities will be directed to the mine water pond."	a) Provide conceptual designs and descriptions including figures and maps of the proposed water management systems to manage, contain, collect, and monitor surface drainage (runoff). b) Provide a quantitative assessment of the effectiveness of these measures for surface water runoff collection.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				Descriptions of the proposed mitigation measures, including but not limited to the above examples, should include the expected efficiencies of the various collection systems and structures, with details supported by an appropriate technical backdrop. The response to this information request will assist the Agency to determine whether the proposed water management measures are appropriate and effective for mitigation of the project's predicted water quality effects on fish and fish habitat.	
SW1-3	Water Quality	5.6, 5.7, 6.0, 10.1	EIS Report, Section 9.6.2.2	The EIS states that contact water is defined as "Contact water (i.e., water that has come into contact with mine rock, low-grade ore, the walls of open pit, or the tailings)." The definition of contact water is too limited and should be expanded to include water that comes into contact with overburden stockpiles, ore and waste rock haul roads, processing plant area and related maintenance buildings (with the potential to impact water quality, for example: truck washing), and explosives manufacturing areas. Water coming into contact with these areas of the project site may pick up contaminants prior to entering the waterways in the region. The response to this information request will assist the Agency to determine potential effects of the project on water quality and the efficacy of proposed water management measures used for mitigation.	a) Expand the definition of contact water in Section 9.6.2.2. b) Revise, if needed, the prediction of effects to the environment and Valued Components to reflect the updated definition of contact water. c) Report and adjust the water management and monitoring plans to reflect updated definition of contact water.
SW1-4	Water Quality	6.0, 11.1	EIS Report, Section 11.2.1, Table 11-3	The EIS states, in Table 11-3, that the only proposed mitigation measure during the construction phase for the indicator "Change in Water Quality" is Best Management Practices (BMPs). Be aware that the MMER requirements do apply during the construction phases of a mine. Recognizing that the use of BMPs in the early days of construction are the only	a) Provide a quantified prediction of effects to water quality as a result of project construction activities. b) Provide a discussion of any additional mitigation measures which may be put into place over the course of construction. c) Provide a discussion of expected environmental

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				practical means of managing surface drainage (runoff) water quality for the very short term, it is unclear why an engineered water management system is not considered as a mitigation measure during the later parts of the construction phase. As a result, it is unclear what the effects of erosion will be on surface water quality during the construction phase. The response to this information request will assist the Agency to determine effects of the project on water quality and the efficacy of proposed water management measures used for mitigation.	effects to water quality as a result of construction of the mine, taking into account the mitigation in place during construction. d) Revise Table 11-3 to include any additional mitigation measures which will be put in place prior to completion of the construction phase.
SW1-5	Water Quality	9.12, 10.1	EIS Report, Section 5.3.4	The EIS provides results of the mine rock characterization program in reference to Metal Leaching and compares these results to the O.Reg. 560/94 and Provincial Water Quality Objectives. For the Federal Environmental Assessment and specifically for determining the lethality of the leachate to aquatic life, a comparison should be made to the CCME *Canadian Water Quality Guidelines for the Protection of Aquatic Life* and to the Metal Mining Effluent Regulations. The response to this information request will assist the Agency to determine effects of the project on water quality, and fish and fish habitat.	Provide mine rock leachate comparisons to the MMER and to the CCME *Canadian Water Quality Guidelines for the Protection of Aquatic Life* in the EIS and in particular in Section 5.3.4.
SW1-6	Water Quality	9.12, 10.1	Water Quality Technical Support Document (TSD), Attachment II Water Quality Modelling Report	IAMGold indicates, on page 12 of the Water Quality Modelling Report, that "*Contact water loading rates from the MRA were derived from estimates of rock tonnage and the results of humidity cell testing. Expected tonnages of mine rock over the Project life-of-mine were provided by G Mining Services Inc. (G Mining 2013, pers. comm.) and AMEC (AMEC 2013, pers. Comm.). Lithology-specific loading rates were assigned based on the relative tonnage proportions of the different rock lithologies and the results of humidity cell testing of 14 rock samples (labeled HC-1 through HC-14) from the Project. AMEC provided loading rates (in mg/kg/week) for the 14 humidity cell test samples, as well as sample lithologies and leach test data. The loading rates*	a) Provide an explanation of why column tests using site-specific leaching rates were not conducted to provide loading measurement. b) Provide a comparison of the results of the humidity cell loadings with the results of the field cells for samples with similar sulphide and trace element content.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				from week 0 to week 20 were not included in the load calculations, as it was assumed that these represented "first flush" conditions and are not representative of longer term, "steady state" conditions. As such, loading rates from weeks 20 through 34 were used to derive the loading rates; noting that kinetic testing is ongoing and expected to continue beyond the date of this report. 34 weeks humidity cell testing is a short time to determine steady state. Based on NRCan's review, humidity cell loadings include weekly flushing that greatly exceeds site-specific drainage input. The first 20 weeks of humidity cell tests can provide some information on whether soluble sulphides exist initially in the sample and whether handling of the sample has led to some oxidation. The response to this information request will assist the Agency to determine effects of the project on water quality and subsequently fish and fish habitat.	c) Incorporate the first 20 weeks of the humidity cell tests into predicted loading with weighting based on portion of period of time being assessed. d) Provide an update on the humidity cell results. Indicate and discuss any changes that have occurred.
SW1-7	Water Quality	9.1.2, 10.1	Water Quality Technical Support Document (TSD), Attachment II Water Quality Modelling Report	The basis for the assumption that "other lithologies" comprise 7%, or 44 Mt, of the waste rock is not understood. Furthermore, it is not clear whether the humidity cell results of 4 lithologies is representative of "other lithologies" or the mine rock in general. Additionally, the method of "assigning the median loading rate of all lithologies, excluding higher arsenic diorite" to form the loading rates for the other lithologies category is unknown. Page 13 of Appendix J explains that "to formulate more reasonable humidity cell loading rate inputs, the cumulative percent frequency plot of arsenic concentrations (see AMEC 2013e) that were measured in the overall geochemistry dataset was analyzed versus the concentrations measured in the humidity cell samples. Using the corresponding arsenic concentrations measured in the humidity cells, it was	a) Provide examples of literature used to develop the method of determining the loading rates of the "other lithologies" presented in the water quality model. b) Provide evidence to support the assumption that the humidity cell results for the 14 lithologies represent the range of geochemical conditions of the "Other Lithologies", using ABA, especially sulphide, elemental and XRD data for humidity cells. c) Provide similar plots for each major lithology (e.g., tonalite, diorite, and diorite breccia) and include AP, MPA, Mod-NP, CO3-NP and copper.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				assumed that 95% of waste rock samples will have an arsenic concentration less than 5.8 µg/g. As such, the diorite samples were split into two lithologies: "higher arsenic" diorite (comprising 5% of the diorite tonnage) and "lower arsenic" diorite (comprising 95% of the diorite tonnage). This type of comparison is done for several parameters for waste rock as a whole in Figures 7-20 to 7-28". Finally, it is unclear what evidence was used in supporting the conclusion that "higher arsenic" diorite comprises 5% of the diorite tonnage. The response to this information request will assist the Agency to determine effects of the project on water quality and subsequently fish and fish habitat.	d) Provide evidence to support the conclusion that "higher arsenic" diorite comprises 5% of the diorite tonnage.
SW1-8	Water Quality And Mitigation	9.1.2, 10.1, 11	Water Quality TSD, Attachment II Water Quality Modelling Report EIS page 10-14 of Chapter10 Summary of Mitigation	The Water Quality TSD states: "During the post-closure phase, approximately 25% of the MRA will be covered; as such, it is assumed that 25% of the runoff from the MRA will have a non-contact (i.e., natural runoff) water quality and the remaining 75% will have a contact (i.e., interaction with mine rock) water quality." Water coming into contact with covered portions of the MRA may temporarily possess similar attributes to natural runoff but when that water flows to areas that are not covered it soon takes on the contact water quality. The approach of assuming 25% of the surface drainage (runoff) to have non-contact water quality is not appropriate and results should be provided for post-closure phase water quality modeling that does not utilize this approach. It is stated in Chapter 10 of the EIS that mine contacted water will be collected and managed, and mitigation measures will be provided for all project phases. However, management of collected water is only provided for the operations phase. Furthermore, The MRA is surrounded by natural water bodies with very little space for collection and diversion. The response to this information request will assist the Agency to determine effects	a) Provide a rationale for why assuming 25% of runoff from the MRA not having contact water characteristics is valid. b) Provide a discussion of how the effects predictions to water quality in closure and post closure would change if the assumption is not appropriate. c) Provide a description of mitigation measures for mine contact water for the closure and post closure phases of the project. d) Provide a discussion of the feasibility and efficacy of these proposed mitigation measures.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				of the project on water quality and subsequently fish and fish habitat.	
SW1-9	Water Quality, Geochemical Analysis of Mine Rock	9.1.2	Appendix J Attachment 2 - Water Quality Modelling Report January 31, 2014	On page 15 of the Water Quality Modelling Report it states, "On an average annual basis, the proportion of the surface that is flushed is 77%, assuming that some oxidation products are attenuated and release is delayed." Furthermore, because the particle size distribution of materials used in the kinetic test work are finer grained than typically observed in a mine rock pile, the scaled-up loading rates for mine rock were adjusted using a factor of 0.1. There appears to be some errors in Table 7 of the Water quality modelling report with respect to the fact that the some of the total adjustment factor were not derived using the described methodology. The response to this information request will assist the Agency to determine effects of the project on water quality and subsequently fish and fish habitat.	a) Provide an explanation of how the loading calculation handles the accumulation of oxidation products that are not flushed and that the continual accumulation of oxidation products that are not flushed increases future loading. b) Revise Table 7 to reflect correct total adjustment factors. NRCan requests that the proponent explain whether any of the lithologies (e.g. breccias, which are more likely to produce fines) require lower correction factors.
SW1-10	2.5.5 Tailings Management Facility Runoff and Seepage 2.5.5.1 Loading Rate Assumptions	9.1.2	Attachment 2 - Water Quality Modelling Report January 31, 2014	Tailings exposed in the reactive zone (i.e., the exposed beach area) of the TMF are subject to physical and chemical weathering over time. For the purposes of modelling, it is conservatively assumed that the thickness of the reactive zone of the beach tailings is 1 m. Based on federal reviewer's experience, the depth of weathering increases over time and will vary depending on the composition of the tailings. One important distinction is between tailings sand on the beach near the spigot point where the depth of weathering will eventually be much deeper and the finer tailings slimes where weathering may be relatively shallow. <u>Lithology of the Tailings:</u> Currently, there are no data on the geochemistry of the tailings. For the purposes of the water quality modelling, the tailings geochemistry, including metal leaching characteristics, is assumed to be similar to the mine rock. As such, the input	a) It is the view of federal reviewers that the lithology and geochemistry of the tailings should be different than the waste rock. Describe the tailings and explain why the loading rates should be kept the same or adjusted. b) Tailings have a finer particle size than the material in humidity cells so an adjustment factor of 0.1 is inappropriate. Remove the adjustment factor of 0.1 and provide updated loading rates for the tailings. c) Kinetic test work, like field cells and trickle leach columns, that includes the precipitation of secondary minerals can be used to address the process of adsorption onto solids in the subsurface.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				chemistry of the tailings runoff and seepage is assigned based on the lithology-specific loading rates, weighted by tonnage (as described in Section 2.5.3.1). <u>Reactive Surface Area of the Tailings</u>: The reactive surface area of pulverized materials used in the bench-scale kinetic test work (humidity cells) is expected to be different than the reactive surface area of the tailings. As such, the kinetic test work loading rates were up-scaled to account for the difference in the reactive surface area by using an adjustment factor of 0.1. Tailings have a finer particle size than the material in humidity cells so an adjustment factor of 0.1 is inappropriate. <u>Metal Concentrations (Copper):</u> It is assumed that the mass of copper in the seepage from the TMF will be reduced through the process of adsorption onto solids in the subsurface, as the seepage flows from the TMF to the seepage collection system. It is reasonable and conservative to assume that 25% of the mass of copper is adsorbed in the subsurface. Lund et al. (2008) carried out surface complexation modelling of copper (II) adsorption over a range of hydrous ferric oxide (HFO) and kaolinite mixture proportions, pH, ionic strength and sorbate/sorbent ratios. At neutral pH, the adsorption of copper on HFO and kaolinite was determined to be nearly 100%. This assumption is reasonable given that the model does not account for precipitation and co-precipitation mechanisms within, and downgradient of, the tailings. BP – Kinetic test work that includes the precipitation of secondary minerals can be used to address the process of adsorption onto solids in the subsurface. This could be equally valid for other elements (e.g. arsenic) and mine components (e.g. mine rock). The response to this information request will assist the Agency to determine effects of the project on water quality and subsequently fish and fish habitat.	Provide an explanation as to why the TMF and copper were singled out for consideration of adsorption onto solids in the subsurface.
SW1-11	Water Quality,	9.1.2	Appendix J	The EIS States that “The concentration of aluminum is assumed to be controlled by	a) Provide a rationale for why a correction factor was

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	Geochemical Analysis of Mine Rock		Attachment 2 - Water Quality Modelling Report January 31, 2014	the low solubility of aluminum hydroxides under near-neutral pH conditions. Solubility modelling was conducted using the geochemical speciation model PHREEQC (Parkhurst and Appelo 1999) to simulate the removal of a portion of mass of aluminum from solution due to solubility controls. A correction factor of 5% was applied to the aluminum concentration predicted for the contact water (i.e., it is assumed that only 5% of the aluminum remains dissolved and the remaining mass precipitates from solution)." It is unclear why a correction factor was applied instead of using the number obtained from solubility modelling. The response to this information request will assist the Agency to determine effects of the project on water quality and subsequently fish and fish habitat.	applied instead of using the number obtained from solubility modelling for predicting the concentration of aluminum.
SW1-12	Surface Water	9.1.2	Appendix J – Water Quality Baseline - Pg. 15	The proponent states, "For parameters where the criteria was dependent on one or more of pH, temperature, and hardness, an assumed pH of 7, temperature of 15^{o}C, and hardness of 30 mg/L as $CaCO_3$ was applied". It is unclear why these assumptions are necessary. It is assumed that the pH, temperature, hardness are known for the sampled sites given that they are reported in Appendix A of the Water Quality Baseline TSD. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	a) Provide a discussion as to why comparing a concentration of a contaminant to criteria derived from fixed values is valid, given the pH, temperature and hardness of the samples is known. b) Provide a summary of Baseline Water Quality Results using the criteria derived from data in Appendix A . c) Provide a discussion of how the description of the baseline water quality is affected by comparing to the criteria specific to samples.
SW1-13	Surface Water	9.1.2	Appendix J – Water Quality Baseline – Appendix D Pg. 1-6	The EIS indicates that there were 4 Quality Assurance and Quality Control (QA/QC) blanks with detectable parameters and/or values that were not within acceptable CWQG and PWQO ranges. Furthermore, the EIS indicates that there are 46 non-acceptable QA/QC blanks with	a) Provide the total number of QA/QC blanks taken. b) Provide a discussion of the implications of the reported non-acceptable QA/QC blanks on the data and subsequent conclusions.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				greater than 30% relative difference between the testing results and the control. It is unclear if these discrepancies are indicative of methodology or testing errors without knowing the number of QA/QC blanks taken for QA/QC purposes. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	
SW1-14	Surface Water	9.1.2	Appendix J – Water Quality Baseline	In the Water Quality TSD, Tables 4-1, 4-2, 4-3, 4-4, 4-5, 4-6, 4-7 and 4-8 only include minimum and maximum values despite the titles of these tables implying that average values are presented. The range of values is of little significance without the mean and the median to provide an indication of the type of spread found in the summarized data. Furthermore, Table 4-2 provides a prediction of water quality conditions at 2 separate receivers options, however the concentrations of cyanide at these locations is not predicted. Given the nature of the selected gold recovery process, it would be prudent to predict the concentrations of cyanide at these two receivers also. Finally, while total phosphorus is not itself toxic to aquatic organisms, excess phosphorus can create the conditions necessary for eutrophication which can be very damaging to aquatic ecosystems. Effects of eutrophication due to excess phosphorus found in the effluent, as predicted in the EIS, are lacking. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	a) Provide, where possible, the median and mean values for parameters in Tables 4-1, 4-2, 4-3, 4-4, 4-5, 4-6, 4-7 and 4-8. b) Include the concentration of cyanide as a predicted parameter in Table 4-2. c) Provide a discussion regarding potential effects to water quality, fish and fish habitat as a result of increased eutrophication due to release of effluent with phosphorus in concentrations above indicated parameters.
SW1-15	Sediment quality and	9.1.2, 10.1	Appendix N - Aquatic Biology	It is stated in Appendix N: "Predictions of potential effects on sediment quality, due to the Project, have not been completed…"	a) Provide a completed prediction of effects due to changes to sediment quality caused by project

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	Benthos		Technical Support Document – Pg. 6	On page 22 of the EIS Guidelines it reads: "the EIS will describe surface water quality, hydrology and sediment quality within the area of influence of the project. The baseline will provide the basis for the assessment of potential effects to surface water, presenting the range of water and sediment quality and surface water hydrology." This gap in the assessment needs to be completed, as sediment quality may adversely affect aquatic biota. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	activities. b) Provide, if necessary, appropriate mitigation measures to mitigate predicted effects of changes to sediment quality. c) Summarize any residual effects that may remain after mitigation due to changes to sediment quality. d) Provide a discussion of predicted effects to fish and fish habitat as a result of predicted changes to sediment quality.
SW1-16	Geochemistry of Pit Walls, Water Quality	9.1.2	Chapter 5, 5.16.3; Appendix J, Attachment II, Water Quality Modelling Report	Section 5 of the EIS states that, "*Following the removal of infrastructure and waste, as well as the revegetation of disturbed areas, the open pit will continue to flood. It is anticipated that this stage could last approximately 50 to 80 years*" (Post Closure Stage I). The pit walls may contain rock material with acid generating or metal leaching potential, which if left exposed for extended periods of time may affect water quality. Appendix E, Figure 6 suggests that mine lacks samples from around the upper edge of the pit, which may remain exposed post closure. Finally, the surface water quality modelling of the contact water in the open pit during closure assumes that there is a constant 1,924,856 m^2 exposed to the elements. Historically, rock collapse and raveling over the course of the closure phase will lead to a surface area greater than that of just the mine walls.	a) Provide information about characteristics of mine walls and talus as well as the lithology and geochemical characteristics of that material. b) Provide information about how much bedrock will remain exposed after flooding and the lithology and geochemical characteristics of that material. c) Provide a discussion of how the increased surface area from talus would impact predictions in the water quality model during closure and post closure d) Provide a discussion as to which wall lithologies are more likely to collapse.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	
SW1-17	Water Quality, Management of Mined Materials	11.1	Chapter 5	Section 5 of the EIS states that "*Considering the limited proportion of PAG samples identified, the overall low sulphide content of the rock, and the prevalence of non-acid generating rock to be produced as waste, the likelihood of net acid conditions occurring in the mine rock piles is considered to be very low. Therefore the inclusion of any PAG materials with the bulk of the waste will likely be an appropriate management method and segregation of any PAG materials does not appear to be necessary*". Although only 5% of the waste rock has a neutralization potential ratio of less than 2 and is classified as PAG, 5% of 850 million tonnes is 43 Mt. This is a large amount of material, capable of producing deleterious drainage depending on the details of its composition and how it is mixed into the non-PAG waste rock. Without an understanding of the location of the PAG material is located, (e.g. a block model), it is unclear how the proponent proposes to adequately mix the PAG material with material that has a net neutralizing potential to minimize the potential that pockets of PAG materials will form and potentially lead to areas of the waste rock pile generating low pH run-off. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	a) Provide additional details including: i. Where PAG samples were located, ii. The timing of the PAG material extraction during operation, iii. A geological explanation for their occurrence, iv. A description of their physical properties compared to non-PAG, v. The predicted maximum discrete volumes of PAG within the waste rock and low-grade ore stockpiles, and vi. A description of the measures that will be employed to ensure mixing with the non-PAG waste rock and prevent large discrete masses of PAG waste rock.
SW1-18	Water Quality, Geochemistry of the Low-Grade Ore Stockpile	8 Alternative Means	Chapter 5 5.16.2.3	The EIS proposes for the project to process all stockpiled low-grade run of mine (ROM) ore during the operations phase. Thus, reclamation of these stockpiles is not expected. If necessary, any residual stockpiled ore will be stabilized in the same fashion as the MRA.	a) Provide a contingency plan for managing low grade ore, in the event low-grade ore stock pile is not processed, including: i. An assessment of geochemical characteristics of low grade ore stockpiles.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				It is unclear whether or not there is a contingency plan for managing low grade ore in the event that it is not processed. Additionally, the proponent has indicated that "*results from ongoing exploration activities indicate that the ore may contain copper levels such that extraction of copper could be viable in the long term. It is therefore foreseen that, in the future, the ore processing plant may be expanded to include a copper recovery circuit*. However this copper recovery circuit is not included in the scope of the current Project when predicting environmental effects. Finally, it is unclear how it was determined to be reasonable to assume that mineralization and therefore loadings in low grade ore are equivalent to waste rock given the large mass of material which is classified as low-grade ore. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	ii. The maximum tonnage of the low-grade ore stockpile. iii. A description of potential environmental effects associated with the low-grade ore stockpile, mitigation measures that would be implemented to minimize impacts to the environment and residual effects. b) Provide a rationale for assuming that the mineralization of the low grade ore is equivalent to waste rock. c) Provide a discussion of the implications of locating the low-grade ore stockpile partially in former lake bed created by retention dam for Upper Three Duck Lakes (e.g. what are the implications for seepage, how will the placement impact potential metal leaching rates). d) Provide a discussion regarding how the predictions from the water quality model would change and the project's potential environmental effects if copper recovery does occur.
SW1-19	Water quality – Tailings	9.1.2	5.16.2.4	The EIS states that "*The closure concept for the TMF has been developed to promote long-term chemical and physical stability, minimize erosion, provide long-term environmental protection, and minimize long-term maintenance requirements. Initial assessment indicates that the tailings will be NAG. Additional geochemical test work is underway to confirm the geochemical characteristics of the tailings*". Based on the review of the EIS, the tailings results during test milling show the	a) Provide the results of humidity cell work on tailings samples from test milling to predict the rate of sulphide oxidation. b) Provide a description of the treatment options being considered (e.g., effluent treatment vs. tailings treatment) in the event that treatment should be

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				concentrations of total sulphur were generally low (<0.3%) ranged from 0.007% to 1.9%, with a median value of 0.07%., and predominantly occurring as sulphide. The maximum measured sulphide content was 1.9%. For the majority of samples (90 of 93 samples or 97%) the NPR was greater than two. Similarly 87 of 93 samples (94%) had a Carbonate NPR >2. Of the samples with NPR and Carbonate NPR <2, two and one samples respectively have NPR <1 (see Graphics 8-3 and 8-4). Furthermore, the EIS indicates that tailings test work is ongoing. The EIS has not provided information on the types of treatment that would be implemented, should it be required. It is understood that additional tailings test work is being conducted. The results of this test work will support future determinations of potential effects and conclusions. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	required. c) Provide a description of how different methods of processing impacted the test mill results and will impact geochemical effects during operation. d) Provide a description of the additional tailings test work that will be undertaken, including when it will be undertaken. e) Provide an explanation for the samples with 1.9% Sulphide content and a NPR < 1.
SW1-21	Water quality – Tailings	9.1.2	Appendix J	The EIS indicates that the tailings produced from ore processing, which will contain some residual cyanide and dissolved metals, will be directed to an in-plant cyanide destruction and precipitation circuit. Prior to discharge to the TMF, the process water and tailings will be treated at the process plant for cyanide, dissolved metals and potentially ammonia. The water quality of discharge will meet the provincial and federal effluent discharge limits. It is unclear what mitigation measures are being considered to ensure that dissolved metals and ammonia aren't exceeding the discharge limits. The response to this information request will assist the Agency to determine	a) Provide additional information regarding the mitigation measures that will be implemented to remove dissolved metals and ammonia.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				potential effects of the project on water quality and subsequently fish and fish habitat.	
SW1-22	Water Quality - Mine Rock Area Contact Water	9.1.2	Appendix J Attachment 2 - Water Quality Modelling Report January 31, 2014	In presenting the water quality model, the EIS states that, "A correction factor was applied to the MRA load to account for decreased reactivity over time as the MRA reaches a steady-state condition. Using arsenic as an analog, concentrations in the 14 humidity cells decreased between 9 and 60% over -weeks 1 through 34. It is assumed that it is reasonable to expect loading rates from the MRA to decrease 50% over the decades between the operations phase and the post-closure phase stage II. As such, a correction factor of 0.5 was applied to the lithology-specific loading rates in the post-closure phase stage II model to account for the decreased reactivity over time." There is empirical evidence that a build-up of oxidation products may increase loadings over time (E.g. Waste Rock monitoring at Equity Mine, B.C.) The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat. Reference: W.A. Price, M. Aziz and K. Bellefontaine. *Increase in Contaminant Concentrations Over Time From Waste Rock* - 2011 Review of 2010 Financial Security at Equity Silver Mine. Mine Closure Conference Lake Louise, Alberta (http://www.trcr.bc.ca/httpwww-trcr-bc-ca-publications/)	a) Provide evidence to support the assumption that the build-up of oxidation will not increase loadings over time, which may offset the assumption that loading rates from the MRA to decrease 50% over the decades between the operations phase and the post-closure phase stage II. b) Provide a discussion of how the fish and fish habitat effects predictions would change if the loading rates of the MRA do not decrease over time.
SW1-23	Water Quality - Process Water	9.1.2	Attachment 2 - Water Quality Modelling Report January 31, 2014	Section 2.5.6 states that, "No information exists as to the specific quality of the process water that will be produced by the processing plant; as such, assumed concentrations were derived from typical process water compositions observed at analogous sites and using professional judgment (with the exception of cyanide species, as discussed below). Table 10 presents the assumed process water	a) Provide details of the examples of analogous sites and evidence to support how the Cote Gold Project's process water quality will mimic the process water of the analogous sites mentioned in Section 2.5.6.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
			2.5.6 Process Water Quality	concentrations. The destruction of cyanide will create ammonia as a by-product. Based on total ammonia observed in tailings ponds at analogous sites, the cyanide destruction process is estimated to generate total ammonia concentrations in the process water of approximately 20 mg/L." However there is empirical evidence that total ammonia concentrations following cyanide destruction can greatly exceed 20mg/L. The concentration of ammonium at the Equity Mine in B.C. has reached 90 mg/L. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat. <u>Reference:</u> Price, W.A, and M. Aziz. 2012. *The Flooded Tailings Impoundment at the Equity Silver Mine*. 36th B.C. Mine Reclamation Symposium, Kamloops, British Columbia Sept 17th to 20th (http://circle.ubc.ca)	b) Provide a discussion of effects to fish and fish habitat should the ammonia concentrations differ from the predicted process water quality.
SW1-24	Water Quality - Modeling	9.1.2	Attachment 2 - Water Quality Modelling Report January 31, 2014 2.6 Key Model Limitations and Assumptions	Section 2.6 of Attachment 2 of Appendix J states that, "Screening-level static testing was not conducted on the rock samples selected for humidity cell testing and, as such, there is some uncertainty regarding the suitability (or the representativeness) of the existing humidity cell data to predict the drainage characteristics of the mine rock and pit walls. For the purposes of modelling, it is assumed that the available humidity cell test data is representative of the range of geochemical characteristics present in the mine rock, pit walls, and low-grade ore. Static test data for the humidity cell samples is partially available in Appendix E Section 7.5" Section 2.6 of Attachment 2 of Appendix J also states that, "No geochemistry data is available for the Project-specific tailings, as geochemical test work has not been	a) Provide a discussion of the environmental effects should the pit flood faster than predicted. b) Provide a discussion, using the partially available data in Appendix E, Section 7.5 regarding the validity of the assumption that the humidity test cell data is representative the range of geochemical characteristics present in the mine rock, pit walls, and low-grade ore. c) Provide an updated prediction using geochemical

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				completed on tailings samples. For the purposes of modelling, it is assumed that the available humidity cell test data collected from the 14 rock samples is representative of the range of geochemical characteristics present in the tailings. There is geochemical data for tailings available in Appendix E. " The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	data available in Appendix E and any other data that has become available to update their water quality predictions for tailings. d) Provide sample calculations for modelling results, including but not limited to calculations for arsenic and copper for the 'A' series of tables (predictions during operations).
SW1-25	Water Quality – Explosives Residues	9.1.2	Attachment 2 - Water Quality Modelling Report January 31, 2014 2.5.4 Residual Explosives Inputs	The EIS indicates in the Water Quality Modelling report in Appendix J, Attachment 2 that, "Residual explosives inputs are estimated to be: ANFO: 94%, NH4NO3, 6% Fuel Oil, Emulsion: 80% NH4NO3, 6% H2O, 6% Fuel Oil, 6% Mineral Oil, 1% Thiourea and 1% acetic acid." "An explosives usage rate (powder factor) of 0.30 kg per tonne mine rock and ore is assumed for the purposes of water quality modelling, assuming 70% ANFO use and 30% emulsion. The fraction of explosive residues remaining after blasting (i.e., "waste rate") is assumed to be 5%. The residual mass of nitrogen species by rock type is presented in Table 9. Half of the explosives waste is assumed to be contained within the MRA and low-grade stockpile, split based on the relative tonnages of each of the two (with the tonnage of waste rock and ore being 71.5% and 28.5% of the total mine rock tonnage, respectively). The other half is assumed to remain within the open pit. Loading rates were assigned assuming that 1% of the nitrogen is available per year, which is consistent with observations at mine site where studies have been completed on water quality effects due to residual explosive loading rates associated with mine rock (Ferguson and Leask 1988)." It is unclear how 50% of explosive waste would be left in the pit over the course of the mine life given that residual explosives waste will be extracted along with mine rock, ore and low-grade ore during the entire operations phase.	a) Provide an supporting evidence for why half of the explosives waste would remain in the pit. b) Provide a discussion of how the water quality effects predictions would change should more or less waste remain in the pit over the life of the mine. c) Provide a discussion of how water quality prediction changes would affect the fish and fish habitat effects predictions.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	
SW1-26	Assessment of Alternatives for Tailings Management Facility	Section 9.1.2	Appendix E Cote Gold Project Geochemical Characterization Report, December 2013 Mine Rock Characterization	The EIS indicates that 14 humidity cell tests were conducted on composite rock core samples from only 4 mine rock units (Tonalite, Magma Mixing Breccia, Diorite and Diorite Breccia). The other rock units such as quartz diorite and mafic dykes do not appear to have been run for humidity cell tests. So the humidity cell test results may not be representative of the entire mine rock mass. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	a) Provide a rationale for not including mine rock samples from quartz diorite and mafic dykes in humidity cell tests b) Provide a discussion of how incorporating other major lithologies (e.g., quartz diorite and mafic dyke lithologies into the humidity cell testing would alter the water quality modelling predictions and predictions of effects to fish and fish habitat.
SW1-27	Geochemical Characterization	Section 9.1.2	Appendix E Cote Gold Project Geochemical Characterization Report, December 2013 Mine Rock Characterization	The ML-ARD characterization program for tailings included static testing only. It appears that kinetic tests (both laboratory and field cell) were not conducted on the tailings samples. The response to this information request will assist the Agency to determine potential effects of the project on water quality and subsequently fish and fish habitat.	a) Conduct and provide the results of kinetic testing of tailings samples in order to determine the primary reaction rates of these materials under laboratory and field weathering conditions and understand the geochemistry of the resulting leachate in the context of potential for ML-ARD generation.
SW1-28	Water Quantity	9.1.2	EIS Report Figure 1-2,	As part of the channel realignment around the mine site, the EIS states that some lakes will gain water depth and others will lose water depth. Information has not	a) Provide an analysis of lake level changes including predictions for new flooded area, loss of existing

			Section 5.10.7.2, 5.10.7.3; Appendix I, Attachment I, Section 5.5, Table 12	been provided on how new water levels were predicted. Further, insufficient information was provided on the predicted range of new water body levels, which needs to take into account seasonal variations in flow and precipitation. A complete understanding of the range of water levels that may occur at various times of the year (i.e. spring flood, summer low flow) is key to understanding how changes to water body levels may impact the environment, level changes to assess impacts and determine any required mitigation (i.e. in relation to habitats, erosion, methyl mercury formation). The information (mapping) that is provided is also very unclear and of too small a scale to conduct an analysis of the potential impact. In addition, area calculations of areas of each water body to be flooded (or of wetted area loss) are not also provided. Such calculations would serve to quantify the predicted changes to surface water and habitats. The maps shown in Appendix I, Attachment I, Appendix C should clearly show locations where lakes are wetted now and where they will be wetted after channel realignments and damming. Areas of loss of wetted area and gain of wetted area should be calculated for each lake and watercourse. Subsequent loss and gain of each habitat type should also be calculated. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	wetted area, and changes in expected seasonal variations in lake level variations. b) Provide a description of how and the degree to which the new water course outlets will drain, including a description of approximate outlet levels that will control the new proposed lake levels.
SW1-29	Water Quantity	9.1.2	Appendix I Section 4.1.2	The quantification of impacts to surface water flow and mine water budget were predicted using average annual values. In order to assess the significance of impact, seasonality should be incorporated into the analysis. This analysis should include assessment of water flow changes and water takings during low flow periods for at	a) Provide an assessment of the impact of low flow periods on the ability to discharge water from the polishing pond to Bagsverd Creek and Neville Lake due to water quality issues.Provide an assessment

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				least fall, winter and summer. 840 m^3/day is provided as an estimate of daily water demand for mine operations and it is estimated at 1% of average annual of Mesomikenda Lake outflow. However substantial impacts could occur at seasonal low flows but not at average annual flows. The proposed extraction rate should be compared to seasonal low flows in order to assess the significance of the impact during this critical period. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	of the impact of water taking from Mesomikenda Lake during low flow periods. Seasonal low flow values (e.g. at least fall, summer and winter values) should be provided and a comparison made to the proposed water withdrawal for mine operations.
SW1-30	Water Quantity	9.1.2	Appendix I, Attachment I, Section 5.1.1, 6.1.1	Yearly water shortages for mine operations during low precipitation and high evaporation years do not appear to have been considered. With high evaporation and low precipitation years there may be no water excess for mine operations. Individual yearly evaporation rates may be significantly higher than the 400 - 600 mm average value cited in the EIS report. This may lead to higher than expected water taking needs and, in turn, increased water quality and aquatic habitat impacts. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	Provide an analysis of multiple years of high evaporation and low precipitation to ensure that appropriate contingencies are in place for mine operations and to assess the potential water quality and aquatic habitat impacts that may occur.
SW1-31	Water Quality and Water Quantity	9.1.2	EIS Report Section 5.7, 5.10.7, Appendix I	The EIS states that “natural channel design” will be used for significant lengths of channel realignment which are proposed to route water around the mine site. In order to ensure that excess channel erosions does not occur this will include construction of active channel (bankfull channel) and floodplain function of the new channel. The channel characteristics of a natural channel play an important part in attenuating flow to prevent erosion.	a) Provide a description of the channels to be constructed, including a description of characteristics such as roughness, energy dissipation in riffles and pools, channel length and sinuosity. b) Indicate whether these channels will be constructed

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				It is unclear whether both the active channel and floodplain will be constructed. The feasibility of the construction of these channels in the locations proposed was not provided. Large amounts of earth movement or significant construction of channel through Canadian Shield rock could be technically problematic and carry its own set of potential impacts. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	in such a manner that pre and post hydrographs are the same by maintaining natural channel characteristics mentioned in the description requested above. . c) Provide an assessment of soils and topography in the areas identified for new channel construction confirm that the channel construction and design are feasible.
SW1-32	Water Quantity	9.1.2	EIS Report Section 1.1.7, Appendix I	The proposed channel realignment will result in significant increases in flow to some natural sections of channel (e.g. channels connecting Unnamed Lake #2 and Unnamed Lake #1 to Bagsverd Creek, and channels connecting Little Clam Lake to Bagsverd Lake). The high amount of flow through the natural channels could result in substantial channel erosion. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	a) Provide a fluvial geomorphology assessment to ensure that the existing natural channels can handle additional flow without significant erosion. b) In the event erosion is determined likely, provide a description of the mitigation measures and monitoring plans in place to prevent erosion in the existing natural channels (e.g., modifications to the natural channels) c) Provide a discussion of potential effects to fish and fish habitat should unexpected erosion occur.
SW1-33	Water Quantity, Vegetation Communities	9.1.2	EIS Report Section 1.1.7, 5.16.4, Figure 5-	In the EIS, it is proposed that after closure of the mine and filling of the open pit with water that some of the channel realignments will be redirected so that water that had been redirected from Bagsverd Creek to the Mollie River during operation of the	a) Update the alternatives assessment to include the any technically or economically feasible option of leaving the flow regime in place. indefinitely

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
			5, Appendix I	mine will be redirected back to Bagsverd Creek, while connecting the pit lake to Three Ducks Lake. It is estimated to take approximately 80 to 100 years from the time that the realignment channels are constructed for the pit to fill with water. The realignment proposed in Mine Closure Phase II may have unanticipated and potentially adverse effects to the ecosystem that has reestablished itself to its new realignment. All post-closure options should be considered, such as leaving the flow regime as is or altering it, and the impacts of all options should be assessed with respect to changes and impacts to all social and ecological components. Further, long-term monitoring would be required to determine when the pit is finally filled with water. The flow conditions (and possibly habitats) that exist when the pit if filled will likely be quite different from what exists at the end of operations, and will need to be factored into any realignments that eventually do occur. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	following the operations phase. b) Provide a description of the predicted effects to the environment of altering the flow regime following closure for a second time.
SW1-34	Water Quantity	9.1.2	Appendix I Section 5.2.1	It is indicated that WSC gauge on the Mollie River and OPG Mesomikenda Lake Dam data will be used in the monitoring. However, if the aforementioned data is not available, it is important to have some contingencies and/or redundancy in the monitoring to ensure that mitigation is applied appropriately. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	Provide a description of the contingency plans for gathering of data for monitoring and follow-up should sources of data indicated in the EIS no longer be available.
SW1-35	Water Quantity	9.1.2	Appendix I, Attachment I, Section 4.2.2	Many of the rating curves have issues that make the curves relatively inaccurate. These issues include changes in control due to beaver dam construction, change of the culverts at the gauge site and ice conditions.	a) Provide a discussion regarding the validity of the rating curves based on data from current onsite flow monitoring stations.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
			and Appendix A	The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	b) Provide a discussion of how the prediction of effects may change if the rating curves derived from current flow monitoring stations are inaccurate.
SW1-36	Water Quantity	9.1.2	EIS Report Section 5, Section 8	In the EIS, it is proposed that water within the mine site will remain on the site using the mine rock pond, TMF and other ponds on site. Estimates of the volumes of the individual ponds in relation to high precipitation events do not appear to be provided. High precipitation events can result in higher than predicted water levels and inadequate storage. A purely qualitative description of management of excess water supply is provided in Section 8 of the EIS, however this is considered insufficient to determine whether or not it will mitigate the potential for environmental effects in the result of a high precipitation event. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	a) Provide the volumes and surface catchment areas for the various ponds used for the collection of water. b) Provide a more in depth discussion of how high precipitation events will be addressed, including a numeric description of the capacities of the collection ponds relative to their catchment areas. c) Provide a discussion of effects should any of the collection ponds overflow during high precipitation events.
SW1-37	Water Quantity	9.1.2	Appendix I, Attachment I, Table 14	The flow values in Table 14 would indicate that increases in flow are not proportional to watershed area; however no explanation was given for this. It is important to have relatively accurate flow values so that changes in flow due to channel realignment can be estimated and the impact can be assessed. The response to this information request will assist the Agency to determine potential effects of the project on water quality, water quantity and subsequently fish and fish habitat.	a) Provide upstream drainage area for each of the stations in Table 14 b) Provide a rationale if flow increases are not proportional to drainage area.
TL1-1	Surficial	9.1.2, 10.1,	Chapter 9 – p.	In the EIS it is stated that, “flooding of terrestrial vegetation for watercourse	a) Provide baseline information (from field work

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	Geology, Terrain and Soils, Water Quality (methyl mercury)	10.2	9-50, 9-53 Chapter 10 – p. 10-17 Chapter 11 – p.11-24, 11-44 Figure 5-3 Figure 6-2 Figure 6-6 Appendix E – Geochemical Report p. 3-1 Table 6-2 p. 7-1-7-3 Table 7-2 Chapter 5 Chapter 9 of the EIS- Section 9.9.2.1 (Construction Phase)	realignments may cause increased methyl mercury production which may reduce the usability of sport fish for recreation" (9-50) and, "it is possible that the decay of terrestrial vegetation will result in the production of methyl mercury that will be taken up by resident fish. This could reduce the value of recreational fishing within the watershed although it would not be expected to harm the fish themselves. The removal of vegetation prior to flooding will reduce the potential for methyl mercury production. There are currently fish consumption advisories for mercury in lakes within the local study area, (MOE, 2013) and therefore, the potential to affect the recreational value of these lakes would be minor". Further information could not be found in the EIS and supporting documents on methyl mercury and the composition of the organic and mineral horizons of the soils (i.e. mercury and carbon concentrations) to support the prediction "that flooding may cause increased methyl mercury production" or evidence to support the conclusion that removal of vegetation prior to flooding would be an effective mitigation measure. Given that the methyl mercury concentrations in water depend on several factors, including the composition of the organic and mineral horizons of the soils in the vicinity of an area that will be flooded, additional information is required. The response to this information request will assist the Agency in determining potential environmental effects to migratory birds, wildlife and wildlife habitat that support Aboriginal activities, and/or impacts to Aboriginal peoples as a result of the Project.	and/or literature review as applicable) on the mercury and methyl mercury levels in the project area, particularly in soils/terrains that will be flooded. As part of this, characterize the organic and mineral horizons of soils in terms of mercury and carbon concentrations in representative vegetation cover areas. b) Provide evidence to support the statement that removal of vegetation would mitigate the potential effect of increased methyl mercury in the environment; and, examples of other sites where this technique has been effective (if available).
TL1-2	Terrain and Soil, Vegetation communities and rare plants	9.1.2, 10.1.1, 11.1.1	EIS Report, Section 6.4.2; Appendix K;	The ambient soil chemistry in regard to trace elements and the ambient concentrations of trace elements in wetland and upland vegetation is not clear. In Appendix W, Table 4 presents the increase in the concentration of the identified parameters in soil as a result of project activities. Furthermore, Appendix W reports	a) Provide information on: the ambient concentrations of trace elements in soil and wetland and upland vegetation; an evaluation of the current baseline soil and vegetation (wetland and upland) concentrations at the project site and expected increases in

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	Human Health		Appendix W – HHRA TSD – Table 4; Section 2.2.1 and 2.2.3.2	that no parameters of potential concern were identified in surface soil hence no "unacceptable" risks from exposure. There is no discussion about current background soil concentrations and the total increase from background as a result of project activities. The total concentration should be compared to applicable health-based criteria and then screened for further assessment based on potential health effects and presented in the Human Health Risk Assessment (HHRA). To meet the requirements of the EIS guidelines, a complete HHRA examining all exposure pathways for pollutants of concern may be necessary to adequately characterize potential risks to human health. Furthermore, it is unclear whether there will be a monitoring program to assess impacts to human health as a result of changes to the trace element uptake in soils and in wetland and upland vegetation at mine closure, and where possible, during the mine life. The response to this information request will assist the Agency in determining potential environmental effects to migratory birds, wildlife and wildlife habitat that support Aboriginal activities, and/or impacts to Aboriginal peoples as a result of the Project.	concentrations as a result of project activities; and comparing health-based criteria in order to determine which contaminants of potential concern (COPCs) should be carried forward in the HHRA; and an update the HHRA as applicable. b) Clearly identify environmental effects, mitigation measures and residual effects, as well as potential impacts to Aboriginal peoples. c) Provide proposed commitments to monitoring programs for assessing trace element uptake in soils and vegetation.
TL1-3	Terrain and Soil Sediment Quality	3.2; 9.1.2	EIS Report, Section 6.4.2, Appendix K; Appendix M	It is unclear whether topsoil and overburden is suitable for use in re-vegetation of surface-disturbed areas. Based on the results of the terrain and soil surveys, it is unclear whether an assessment of terrain stability was conducted. Information on terrain and soil surveys and mapping should be used in the soil salvage, soil and surface sediment erosion control assessment, and preparation of the closure plan. This information is needed to ensure that re-vegetation as part of the reclamation process is sufficiently characterized for regional and local areas occupied by migratory birds, as well as wildlife and wildlife habitat that support Aboriginal activities (ex. hunting), and to determine the potential environmental effects and residual effects to migratory birds, as well as wildlife and wildlife habitat that support Aboriginal activities (ex. hunting),	a) Provide information on terrain stability and explain whether topsoil and overburden is suitable for use in re-vegetation of surface-disturbed areas, and if so, which topsoil and overburden, in what locations and for what types of re-vegetation. b) Provide information on how re-vegetation will mitigate effects to migratory birds and wildlife and wildlife habitat that support Aboriginal activities (ex. hunting).

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request

			EIS Report Section 11 Table 11-6 EIS Appendix N Table 3.1	potential environmental effects on fish and fish habitat as a result of the Project. In relation to information request FH1-2, see DFO-05 in Annex 3.	
FH1-3	Fish and Fish Habitat Hydrology	Section 11.1 pages 32 & 33	EIS Appendix N, page 22 and Table 4.8; page 19 and Table 4.1 EIS Appendix I Section 1.1.7 Page 4	It is not clear in the EIS if environmental effects are being fully mitigated by offsetting measures. When evaluating whether proposed offsetting measures, such as watercourse realignments, fully mitigate potential effects to fish and fish habitat, the lag time in the functioning of the offsetting measures should be factored in to the mitigation. This may require creation or enhancement of additional habitat. The response to this information request will assist the Agency in determining potential environmental effects on fish and fish habitat as a result of the Project. In relation to information request FH1-3, see DFO-06, DFO-07, and DFO-13 in Annex 3.	a) Quantify the habitat loss to determine effects to fish and fish habitat as a result of the watercourse realignments and other proposed changes to existing waterbodies. b) Indicate whether the watercourse realignments to be decommissioned upon mine closure are those that are to be constructed with fish habitat features as part of mitigation. If habitat created as mitigation is to be destroyed or permanently altered upon mine closure, then include how this subsequent loss of fish habitat will be mitigated. c) Indicate whether there is a lag time in functioning of the offsetting measures and if it is incorporated into the mitigation. If not, discuss the duration of potential adverse environmental effects and how the significance of adverse effects to fish and fish habitat may be affected.
FH1-4	Fish and Fish Habitat	Section 7.1.1 page 12	EIS Appendix N pages 7,9, & 19	Potential waterbodies and fish habitat sites that could be rehabilitated, restored or created for possible habitat gains to offset losses from the project must be identified, with considerations made to fish relocation and fish loss.	a) More information is required to assess the effects of the relocation and loss of fish. Include a justification for:

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				The response to this information request will assist the Agency in determining potential environmental effects on fish and fish habitat as a result of the Project. In relation to information request FH1-4, see DFO-08 in Annex 3.	• why it is anticipated that some fish will not be able to be relocated • any specific species or size of fish that is expected to be difficult to capture or relocate • the number of fish estimated to be lost • the number of fish to be relocated • effects of the fish relocations on existing fish populations in the waterbodies connected to the constructed habitats b) Update the Impact Assessment Matrix accordingly to reflect these potential effects and identify mitigation as applicable.
FH1-5	Fish and Fish Habitat Hydrology	Section 11.1 pages 32 & 33	EIS Appendix N page 23, page 10, Table 4.1 EIS Section 10 Table 10-2 page 10-19 EIS Appendix I Table 4.2 Table 4.3 Table 4.4 Table 4.5	Reductions in flows to Bagsverd Creek are anticipated to begin during operations and remain in perpetuity. Fish habitat may be affected. It is proposed to survey the stream morphology prior to construction to assess the potential for exposure of habitat and barriers to fish passage. Then, if required, the mitigation proposed is to modify the stream bed to ensure an adequate depth of water for fish to utilize habitat and allow for fish passage. Without defining the effects, it is unknown whether the proposed mitigation will be effective and whether it will completely mitigate potential adverse effects to fish and fish habitat. Appendix N of the EIS indicates that predicted changes in water flow have been considered in the assessment of potential effects to fish habitat, however the only water flow changes assessed in Table 4.1 are the changes to Bagsverd Creek. Some watercourses will experience an increase in flows greater than 100% of the pre-development flow. These watercourses are not all identified as the constructed watercourse realignments. It is noted the constructed alignments will be designed	a) Explain the effects to Bagsverd Creek as well as downstream effects (for example what will be the effects to Neville Lake). b) Evaluate the effects to fish and fish habitat arising from increased flows from mine activities, including effects related to increased erosion and sedimentation, high flows as a barrier to fish migration, and direct changes to habitat. c) Update the Impact Assessment Matrix accordingly to reflect these potential effects to fish and fish habitat and identify mitigation measures as applicable. d) Provide an analysis of the feasibility of the proposed mitigation, indicating the extent to which mitigation

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				for the expected flow, however the effects of increased flows to the existing watercourses (for example, Un-named Lake #2 Outflow) is not evaluated, and mitigation is not proposed. The response to this information request will assist the Agency in determining potential environmental effects on fish and fish habitat as a result of the Project. In relation to information request FH1-5, see DFO-10 and DFO-14 in Annex 3.	will offset the effects.
FH1-6	Fish and Fish Habitat	Section 10 page 29	EIS Appendix N Table 4.1	Effects have been considered post-mitigation in Appendix N, Table 4.1. However, all potential effects to fish and fish habitat, pre-mitigation, are unclear. For example, the impact of whole-lake destruction is not clear, including, for instance, but not limited to the use of the lake by Aboriginal people. The habitat offsets by building habitat into the watercourse diversions/realignments is a mitigation measure. Pre-mitigation there is the loss of either whole or parts of waterbodies and watercourses. The effects of the project need to be clearly stated, and then the mitigation applied. The response to this information request will assist the Agency in determining potential environmental effects on fish and fish habitat as a result of the Project.	a) Include all potential effects to fish and fish habitat (i.e. death of fish or destruction or permanent alteration of fish habitat), and evaluate them pre-mitigation. b) Update the Impact Assessment Matrix accordingly to reflect these potential effects to fish and fish habitat and identify mitigation measures.
FH1-7	Fish and Fish Habitat	Section 11.4 page 34	EIS Appendix N Section 5 EIS Section 16 Table 16-1 Table 16-2	Effects of blasting and reduced flows to watercourses, (particularly, but not limited to Bagsverd Creek) should be described in the monitoring outlined in Section 5 of Appendix N. Monitoring of blasting should confirm the EA predictions regarding the setbacks as well as monitor for effects to fish and fish habitat. It is not clear if this is covered in EIS Section 16, Table 16-1 under Noise and Vibration on page 16-6. Flow monitoring should also confirm the EA predictions as this will be important in determining the effects to fish and fish habitat in watercourses such as Bagsverd	a) Provide information on effects of blasting and reduced flows to watercourses in the monitoring plan. Provide details of how changes to fish population dynamics as a result of project activities will be monitored.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				Creek that may require offsetting. It appears this is covered in EIS Section 16, Table 16-1 under Hydrology and Climate on pages 16-8 and 16-9. EIS Section 16, Table 16-2 does not include monitoring of the functioning of habitats created to offset potential effects to fish and fish habitat. This monitoring is mentioned within Appendix N but should also be included in the Aquatic Biology section of Table 16-2. Monitoring should also consider potential changes to fish population dynamics as a result of the project activities. The response to this information request will assist the Agency in determining potential environmental effects on fish and fish habitat as a result of the project.	
FH1-8	Fish and Fish Habitat Metal levels in fish	9.1.2	EIS Report, Section 6.4.8.2, page 6-92 to 6-113; Section 6.4.8.3, page 6-113 to 6-114; Appendix N. Section 2.4.2; Section 3.0	In the EIS, baseline metal levels, particularly mercury and methyl mercury, in fish is not discussed. Methyl mercury is more toxic than total mercury. Furthermore, in Appendix N, baseline information on methyl mercury levels in fish is not described in sufficient detail to determine potential effects and residual effects and draw conclusions about bioaccumulation as a function of fish weight or length and chemical consumption limits. In addition, reference areas for fish and benthic invertebrate species studies were not found. For example, it is not clear if a reference area (i.e. area without mercury exposure) was used when studying mercury in fish tissue. No information on the total mercury in fish tissue in a reference area was found. This information is necessary for results and conclusions to be meaningful. In order to evaluate any changes in methyl mercury concentrations in fish, methyl mercury should be monitored as part of a fish monitoring program that captures the peak and subsequent decline in methyl mercury over time. The response to this information request will assist the Agency in determining potential environmental effects on fish and fish habitat as a result of the Project.	a) Provide a discussion on baseline information on metal levels in fish, particularly mercury, and provide an assessment of potential effects on fish related to changes in metal levels as a result of the project. b) Provide a description of fish tissue results, particularly in regards to mercury and methyl mercury, and how these results relate to fish consumption limits. c) Provide information on the mercury levels in fish for the reference area. Effects on fish usability should be evaluated by measuring concentrations of mercury from fish in the exposure and reference areas. d) Provide a fish monitoring program that includes methyl mercury.
MB1-1	Acoustic	9.1.1, 9.1.2	Appendix G –	Appendix G (Noise and Vibration Technical Support Document) presents an analysis	a) Provide a noise analysis, based on a 50 dBA

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	Environment/ Migratory Birds		Noise and Vibration Technical Support Document Appendix L – Wildlife	of construction (Fig. 7, Fig. 8) and operational noise (Fig. 12, Fig. 13, Fig. 14, Fig. 15), which focuses primarily on receptors that are a considerable distance from the mine footprint. As noted on Environment Canada's 'Incidental Take' website (http://www.ec.gc.ca/paom-itmb/default.asp?lang=En&n=8D910CAC-1#_01), migratory birds are typically adversely affected (disturbed) by sound levels exceeding 50 dBA. The EIS indicates that migratory birds/waterfowl could experience adverse effects due to noise levels (lowering reproductive success and predator detection); however predictions of the effects of increased noise levels have been made in the absence of a noise analysis to inform the effects predictions. For instance, Appendix L (Wildlife) states that, "upland migratory bird populations in the RSA are likely to have adapted to human-related sensory disturbance because human activities including forestry and mineral exploration have been carried out in the RSA since 1800. Also, changes in habitat quality from sensory disturbance do not necessarily result in demographic consequences to populations (Gill et al. 2001). Most of the effects from indirect changes in habitat quality may be related to a local shift in distribution with little influence on survival and reproduction rates." (Appendix L – Wildlife, page 52). Statements such as this should be substantiated by the calculation of areas of disturbance within the various habitat types within the greater than 50dBA zone, as well as the number of birds potentially affected by noise. The sound modelling has already been produced in the Appendix G -Noise and Vibration document, therefore it is possible to produce mapping of the 50dBA isopleth overlaid with the already mapped habitat types using GIS methods and calculate the disturbance areas. The response to this information request will assist the Agency in determining potential environmental effects on Species at Risk and migratory birds as a result of	threshold for determining the effect of the Project on local bird populations in the area. b) Provide a map which shows the area surrounding operations affected by 50 dBA or greater, overlaid on habitat types, as well as a table summarizing areas within this threshold by habitat type. In addition to an estimate of how many birds (by species) will be displaced by vegetation clearing within the mine footprint (as was provided for the proposed Transmission Line Alignments), provide an estimate of how many birds will be disturbed in the area which lies outside of this cleared footprint area and is within the area affected by 50 dBA or greater. For ease of reference, it is recommended that this disturbance estimate be based on mapping of the 50 dBA noise isopleth, and that the mapping be provided at a relatively large scale, for example, the figures cited above are at too small a scale to be sufficiently reviewed.

				the Project.	
MB1-2	Migratory Birds	9.1, 10.1	Appendix L – Technical Support Document: Wildlife, Attachment 1 – Terrestrial Baseline Report Section 4.4 - Breeding Bird Point Count Surveys	The Environment Canada document entitled, "EC Guidance on Baseline and Post-construction Surveys for Migratory Birds" became available to some mine proponents in June, 2011, and it seems these protocols were largely followed for the work presented in the EIS. For example, point count stations were placed at least 250 m apart, and 10-minute point counts were used (EIS, Sec. 6.4.3.1, p. 6-49, para. 8; Wildlife TSD Sec. 4.4, p. 13, para 4 and 5). However, it is unclear whether or not Environment Canada's 3-5-10 minute protocol was used when conducting the 10-minute point counts. This involves recording all birds seen or heard in the first 3 minutes, and separating all birds seen or heard for the first time in the next 2 minutes, and then in the final 5 minutes (i.e., so each bird is recorded only once). It is most important that a 10-minute point count was used, but breaking up the point count period in this manner makes the data more comparable to other point count data sets in order to determine the environmental effect on local bird populations. According to the EIS guidelines, the results of any baseline surveys and a description of the methodology are to be included in the EIS. If additional avian baseline data is collected, it is recommended that the point counts be conducted using the aforementioned protocol in order to meet Environment Canada's guidance requirements. The response to this information request will assist the Agency in determining potential environmental effects on Species at Risk and migratory birds as a result of the Project.	a) Identify if Environment Canada's 3-5-10 minute protocol was used when conducting the 10 minute point counts and if another protocol was used. If another protocol was used, provide details on this protocol and provide a rationale for why IAMGOLD believes the protocol used is adequate to assess the effects to migratory birds. If additional avian baseline data is collected, it is recommended that the point counts be conducted using Environment Canada's 3-5-10 minute protocol.
MB1-3	Migratory Birds	11.1	Appendix Y – EA Commitments Table, Appendix M – Terrestrial Biology for Transmission	Common Nighthawk is known to occur in the vicinity of the mine, and because this species is attracted to areas featuring exposed mineral soil and bedrock outcrops that exist naturally or from recent disturbances resulting in cleared habitat (forest fires, forest harvest, road construction or mine site construction), there exists the potential that more nighthawks may be found to occur in the LSA once mine construction commences, and for the years when the mine is operational. One aspect of nighthawk behaviour that should be considered is nightly resting on	a) Identify high-risk power line collision locations on a map where mitigation will be implemented accompanied with a rationale for their selection. b) If resting birds, such as the Common Nighthawk, are identified in the local or regional study area, provide mitigation as appropriate.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
			Line Alternatives Technical Support Document	patches of mineral soil (e.g., gravel roads). If this does happen on the mine site or along sections of mine access/haul roads with nightly vehicle traffic, then there will be potential effects to birds (i.e. road kill). It is not clear in the EIS if the effects to birds will be fully mitigated during the operation of the transmission line as the EIS states that IAMGOLD proposes to, "implement marker balls, bird diverters, or other strategies to reduce the likelihood of bird collisions with power lines in high-risk location such as near wetlands or other areas of topography." (Terrestrial Biology for Transmission Line Alternatives TSD, App M, Sec. 3.2.7, p. 3-51, para. 4, bullet 2; App M, Sec. 4.2.7, p. 4-53, para. 1, bullet 2). Specific high-risk locations are not identified on a map and a rationale for where this mitigation will be implemented is not provided. The response to this information request will assist the Agency in determining potential environmental effects on Species at Risk and migratory birds as a result of the Project.	c) There was no information on follow-up and monitoring for migratory birds, specifically Common Nighthawk. Provide a conceptual description of the follow-up and monitoring plans for migratory birds, including Common Nighthawk.
MB1-4	Species at Risk Migratory Birds	9.1.1; 9.1.2; 11.1; 11.4	EIS Report, Section 9.7.2; Section 10, Table 10-2; Section 11, Table 11-3	In the EIS, Species at Risk (SAR) are identified in the project area, however some species are reported to be found in the LSA whereas others in the RSA. A consistent approach that identifies SAR species in both the LSA and RSA is important for providing context and for determining effects. Furthermore, when removal of habitat is described as a percentage of suitable habitat, it is unclear at times if this is in reference to the LSA or RSA and how many hectares of habitat is removed in these areas. this actually accounts for. In Section 9.7.2, the environmental effects on SAR species are described, with the exclusion of the snapping turtle and the monarch. This section identifies that the Project will result in the removal of suitable habitat. General mitigation measures for wildlife and wildlife habitat is presented in Section 10, Table 10-2 of the EIS, however, it is unclear how the potential effects to individual SAR species will be mitigated. Furthermore, in Section 11, Table 11-3 of the EIS, residual effects and	a) Identify all SAR species listed under the *Species at Risk Act* known to date in the LSA and RSA that may be affected by the Project and provide baseline information for each SAR species in the LSA and RSA. b) Predict environmental effects for each SAR species and migratory birds as a result of changes to the environment from project activities and identify mitigation measures as appropriate. Note that EIS guidelines require that where mitigation measures have been identified in relation to species and/or critical habitat listed under the *Species at Risk Act*, the mitigation measures will be consistent with any

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
				monitoring are unclear. For example, in Chapter 9 of the EIS, it is mentioned throughout that, "effects from habitat loss and fragmentation are expected to be partially reversible with duration of greater than 15 years after project closure". However Table 11-3 determines the residual effects to wildlife as a result of the Project to be not significant and not likely. This seems contradictory. It is unclear what the residual effects will be after closure and how these residual effects will be monitored. The response to this information request will assist the Agency in determining potential environmental effects on Species at Risk and migratory birds as a result of the Project.	applicable recovery strategy and action plan. c) Provide information on residual effects for each SAR species and migratory birds in consideration of the proposed mitigation measures. d) For each SAR species and migratory birds, clearly draw conclusions based on the baseline, predicted effects, mitigation, and residual effects, and identify appropriate follow-up and monitoring plans.
AP1-1	Navigable Waters Aboriginal Peoples (including potential rights impacts, traditional use of lands and resources, cultural heritage resources)	3.4.2, 9.1.3, 10.1, 10.2	Executive Summary, pg 36; EIS Report, Section 9.16.3, pg 9-85; Appendix O, Land and Resource Use, Section 3.1.6, pg 3-16 Section 3.1.8, pg 3-20 Section 3.2.6, pg 3-24 Section 3.2.8, pg 3-25; Section 4.3.2.8, pg 4-23; Appendix P,	In the EIS it is unclear whether works involving dewatering, depositing, and/or infilling will occur in any waterways subject to NPA and if these works will result in potential environmental effects or impact navigation by Aboriginal peoples (including in the event that the IAMGOLD chooses to "opt-in"). Information about dewatering, depositing, and infilling of waterways will assist in predicting potential environmental effects, as well as predicting impacts on Aboriginal peoples and other users about their rights such as the potential loss or restriction of rights to access navigable water as a result of the project. The following comment applies for infilling/throwing/dewatering works and those works requested to be opted-in: Section 9.1.3 of the EIS Guidelines requires that the "in describing how the project may impede navigation, the EIS will identify any project components and a description of any activities (e.g., dredging, alteration of water bed and/or water banks, loss/realignment of waterbodies) that may affect waterways and water bodies and limit or access to those waterbodies (e.g. roads, trails, portage routes); describe any recreational uses of natural waters (i.e. swimming, canoeing, fishing); and provide information on current and/or historic usage of all waterways and waterbodies that will be directly affected by the project, including current Aboriginal uses, where available".	Specific information will be required to determine navigability of each waterway affected (see http://www.tc.gc.ca/eng/programs-622.html) and construction methodology for dewatering/infilling activities. a) If any waterways are deemed to be navigable, provide information on environmental effects of the works as well as impacts to Aboriginal peoples and their rights and other users as a result of the works, such as impacts of the loss to navigation (including socio-economic effects). b) Provide information of current and/or historic usage of all waterways and waterbodies that may be directly affected by the project, including current Aboriginal and other users.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
			Traditional Land and Resource Use	The response to this information request will assist the Agency in determining potential environmental effects and/or impacts to Aboriginal peoples as a result of the project.	c) Discuss whether these considerations change the conclusions in regards to any indicators (valued components) in the EIS.
AP1-2	Aboriginal Peoples (including potential rights impacts, traditional use of lands and resources, cultural heritage resources)	9.1.3, 9.2, 10.1, 10.2	EIS Report, Section 6.5.1.1, p. 6-115, 2nd paragraph; Section 6.5.1.2, p.6-119	In Section 6.5.1.1 of the EIS Report it is stated that, "requests for detailed information from the Ministry of Natural Resources (MNR) on bear hunting (licensed outfitters and harvest data), trapping (trapline holders and harvest data), and outfitters have been made and this information is outstanding." This information must be provided to access potential effects of the Project on hunting, trapping and outfitting by Aboriginal peoples. The response to this information request will assist the Agency in determining potential environmental effects and/or impacts to Aboriginal peoples as a result of the Project.	Provide information on traplines, along with a description of potential effects of the Project on current use of land and resources for traditional purposes by Aboriginal peoples. For each of the following, discuss on a community by community basis. a) Provide information on trapline locations in the Project area b) Generally identify Aboriginal and non-Aboriginal trapping rights and trapping holders in the Project area c) Discuss how potential effects of the Project on Aboriginal activities along or adjacent to the traplines such as trapping, hunting and gathering will impact Aboriginal peoples (current use of land and resources for traditional purposes; socio-economics; employment, human health, etc.) d) Discuss any ceremonial or other culturally significant practices identified by Aboriginal peoples in the Project area, including along or adjacent to traplines and discuss how the project will affect these practices

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
					e) Provide information on how effects to all trapline use will be mitigated f) Provide information on how effects to traplines will be mitigated, in consultation with Aboriginal trapline holders g) Outline if arrangements have been made to mitigate impacts to Aboriginal peoples as a result of effects to traplines, including loss of trapping, hunting and gathering, loss of ceremonial or other culturally significant practices, etc. h) Discuss whether these considerations change the conclusions in regards to any indicators (valued components) in the EIS.
AP1-3	Aboriginal (including potential rights impacts, traditional use of lands and resources, cultural heritage resources)	3.4.2, 3.4.3, 9.1.2, 9.2, 10.1, 10.2	EIS Report, Section 6.5.1.2, p. 6-119, 4th paragraph; Section 9.9.1, pg. 9-49, Section 9.9.2, pg. 9-52, pg. 9-54, pg. 9-56; Appendix N	Areas identified to be (or supporting) recreational or Aboriginal fisheries in potentially affected surface waters are not clearly identified and not sufficiently discussed. It is unclear from what source the information on fisheries, particularly Aboriginal fisheries, were obtained, and which water bodies in the local study area (LSA) and regional study area (RSA) are used for Aboriginal fisheries. The response to this information request will assist the Agency in determining potential environmental effects and/or impacts to Aboriginal peoples as a result of the Project.	a) Provide information on recreational and Aboriginal fisheries. Also discuss where information on fisheries was sourced. b) Identify Aboriginal and non-Aboriginal fisheries in the Project area c) Provide information on potential effects to fisheries, including potential effects to fish in these fisheries, and how these potential effects will impact Aboriginal and non-Aboriginal peoples (socio-

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
					economics, employment, human health, etc.) d) Discuss any socio-economic or cultural impacts to Aboriginal and non-Aboriginal peoples due to loss of access to existing fisheries e) Provide information on how effects to recreational and Aboriginal fisheries will be mitigated, in consultation with fisheries users f) Outline if arrangements have been made to mitigate impacts to Aboriginal peoples as a result of potential effects to Aboriginal fisheries. g) Outline if arrangements have been made to mitigate impacts to non-Aboriginal peoples as a result of effects to recreational fisheries h) Discuss offset plans in relation to compensation for Aboriginal peoples on a community by community basis i) Discuss whether these considerations change the conclusions in regards to any indicators (valued components) in the EIS.
AP1-4	Aboriginal (including potential rights impacts, traditional use	3.4.2, 9.1, 10.1, 10.2	EIS Report, Section 9.11.2.1, p. 9-63, 4th paragraph;	It is unclear in the EIS Report and in Appendix Q how Aboriginal traditional knowledge (ATK) informed the identification of built heritage resources, except for a mention in Section 6.5.2.2 of a portage route that was identified from the Mattagami and Flying Post TK/TLUs.	Provide information on built heritage resources, including portage routes. For each of the following, discuss on a community by community basis. a) Provide information on how ATK informed the

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	of lands and resources, cultural heritage resources)		6.5.3, p. 6-126 to 6-128; Section 6.5.2.2, p. 123, 2nd bullet; Appendix Q	The response to this information request will assist the Agency in determining potential environmental effects and/or impacts to Aboriginal peoples as a result of the Project.	identification of built heritage resources, including portage routes, in the local study area. b) Provide information on traditional use of portage routes by Aboriginal peoples and clearly identify these waterways c) Provide information on how loss of waterways in the Project area will impact Aboriginal peoples, specifically in relation to accessibility d) Provide information on how effects to portage routes will be mitigated, in consultation with portage route users e) Outline if arrangements have been made to mitigate impacts to Aboriginal peoples as a result of effects to portage routes f) Discuss whether these considerations change the conclusions in regards to any indicators (valued components) in the EIS.
AP1-5	Metals levels in Fish; Aboriginal (including potential rights impacts, traditional use	9.1, 10.1, 10.2, 12.1	EIS Report, Section 9.9.2.1; Section 5; Appendix W-Human and Ecological Risk Assessment	It is stated in Appendix N that, "the created fish habitat associated with the watercourse realignment will involve the flooding of some existing terrestrial habitats. It is possible that the flooding of vegetation within these water bodies will result in methyl mercury in production that may be taken up by fish and limit their ability for consumption. This could potentially impair their use for recreational fishing." The potential for methyl mercury production and the effects that this may have on ecological and social receptors, prior to mitigation, has not been quantified and assessed.	Assess and explain the potential for the watercourse realignments to result in increased methyl mercury in the environment (e.g. in fish tissue) and the potential impacts to Aboriginal and non-Aboriginal peoples (e.g. human health, socio-economic, employment, etc.). For each of the following, discuss on a community by community basis.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	of lands and resources, cultural heritage resources)		Pg. 2-20; Appendix N - Aquatic Biology Technical Support Document – Pg. 8; Appendix Y	It is further stated in Appendix W (Human and Ecological Risk Assessment) that, "there are currently fish consumption advisories for mercury in lakes within the study area, it is considered unlikely that project-related activities will have the potential to increase exposure to mercury for anglers in the area." However, an increase in mercury in fish tissue may have some impact on any advisories. For example, cause a reduction in the size of fish or number of meals of fish per month that are safe to eat, and may result in additional fish species added to the advisory. In addition, based on the 2013-2014 Guide to Eating Ontario Sport Fish, none of the water bodies (lakes, rivers) in the immediate vicinity of the site are listed as being under advisory for fish consumption. Not all anglers or subsistence fishers may be aware of and follow any advisories. In addition to environmental effects from increased methyl mercury, it is unclear what impact an increase in methyl mercury concentrations in fish would have on Aboriginal peoples in term of their consumption patterns and access to traditional fishing resources. Finally, if methyl mercury levels increases in fish, it is unclear what impacts may result in other species that consume fish and are subsequently consumed by Aboriginal peoples. For example, Aboriginal peoples consuming waterfowl that have been consuming fish with elevated levels of methyl mercury. The response to this information request will assist the Agency in determining potential environmental effects and/or impacts to Aboriginal peoples as a result of the Project.	a) Provide a list of the water bodies with fish consumption advisories b) Provide a prediction and characterization of the likely increase to methyl mercury production and implications to current consumption advisories c) Provide an assessment of environmental effects (e.g. wildlife that eats fish) and impacts to Aboriginal and non-Aboriginal peoples, including anglers, resulting from increased methyl mercury levels, prior to mitigation (considering all pathways when determining the environmental and human health risk assessment and update the findings, as appropriate) d) Provide an explanation of the methodology, rationale for mitigation measures, and effectiveness of the proposed mitigation (with alternative mitigation approaches as applicable), including residual effects e) Provide an explanation of how , increased methyl mercury levels may impact Aboriginal peoples, including: 1) Traditional food sources and country foods, including fish and other species that consume fish and are subsequently consumed by Aboriginal peoples. 2) Consumption patterns and access to traditional

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
					fishing resources by Aboriginal peoples. f) Indicate what arrangements the proponent is considering for mitigating impacts to Aboriginal peoples should methyl mercury levels increase g) Provide a fish monitoring program that includes methyl mercury and considers the fish species, size, type of tissue and sample preparation method that is representative of how (Aboriginal) people are most likely to consume the fish (e.g. fillet including skin vs. skinned fillet, raw vs. cooked, etc.) as per Health Canada guidance[1]. h) As applicable, note any changes to conclusions in the EIS in relation to work done in relation to the requests immediately above. i) Discuss whether these considerations change the conclusions in regards to any indicators (valued components) in the EIS.
AP1-6	Human Health – Country Foods Contamination	9.1; 9.2; 10.1; 10.2,	Appendix P – Traditional Land and Resource Use;	According to Appendix P, the project area is used for traditional activities, including blueberry picking and hunting. As there are uncertainties with the predicted future soil and surface water contaminant concentrations (which could contaminate future terrestrial and aquatic flora and fauna), the ingestion of contaminated country foods may have the potential to	Identify the country foods important to Aboriginal peoples on a community by community basis and make reference to the source of this information. In addition: a) Provide baseline information on country foods and

[1] Health Canada. 2010. Federal Contaminated Site Risk Assessment in Canada. Supplemental Guidance on Human Health Risk Assessment for Country Foods (HHRA). Prepared by Contaminated Sites Division, Safe Environments Directorate. October.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Sections	Reference to EIS / Supporting Documents	Summary of Comment / Rationale	Information Request
	Aboriginal (including potential rights impacts, traditional use of lands and resources, cultural heritage resources		Appendix W – HHRA TSD – Section 2.1.2 (Study Area and Potential Exposure Pathways); Appendix K	impact Aboriginal peoples. The list of exposure pathways identified in Appendix W (HHRA TSD) includes both the ingestion of fish and wild game and the ingestion of plants. These pathways are not discussed further in the HHRA. The EIS and supporting documents do not identify any baseline monitoring of country foods or recommend monitoring of country foods during operations. In order to evaluate pre-project country foods contaminant levels, it would be useful to collect baseline samples of specific country foods typically harvested in the area (including plants, berries, fish and game/waterfowl) and analyze them for the relevant COPCs, refer to Health Canada's Guidance on Human Health Risk Assessment for Country Foods, which can be found at the following link, http://www.hc-sc.gc.ca/ewh-semt/pubs/eval/environ_assess-eval/index-eng.php. The response to this information request will assist the Agency in determining potential environmental effects and/or impacts to Aboriginal peoples as a result of the Project.	discuss how country foods will be monitored during the Project phases to evaluate any changes to contaminant levels in country foods and confirm predictions of effects. Refer to Health Canada's guidance on human health risk assessment for country foods[1]. b) Evaluate and discuss the exposure pathways that result from ingestion of contaminated country foods in the HHRA and determine any potential environmental effects and/or impacts to Aboriginal peoples and non-Aboriginal peoples. c) If an exposure pathway is not evaluated in the HHRA, provide a rationale. d) Provide appropriate mitigation measures and identify residual effects. e) Outline if arrangements have been made to mitigate impacts to Aboriginal peoples as a result of effects from contaminants in soil and surface water that may affect country foods and vegetation species used in traditional activities. f) Discuss whether these considerations change the conclusions in regards to any indicators in the EIS.

Annex 2

Federal Requests for Summary Information on the Final Environmental Impact Statement (Draft Environmental Assessment Report) for the Côté Gold Mine Project

August 1, 2014

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
DFO - 03	Fish and Fish Habitat	9.1.2	EIS Appendix N, Table 3.1.	Walleye is not indicated as present in Cote Lake. Walleye should be indicated as present in Cote Lake, as it was found in surveys in 2010 by AMEC, as indicated in EIS Appendix N (Aquatic Technical Support Document), Appendix A, Section A.8.2. Other species which were found by AMEC in 2010 are included in the table with a footnote indicating "AMEC 2011".	None.
DFO-04	Fish and Fish Habitat	9.1.2	EIS Appendix N, Section 2.3 page 3 EIS Appendix N, Section 7.0, page 31	The EIS Report indicates that the included "*baseline reports together with existing information on the water bodies within the local study area (AMEC 2011) were used to define the existing conditions on which potential effects of the project could be considered*". For Aquatic Biology, the existing information in the form of the AMEC, 2011 report is not included in the EIS.	Provide the report "*AMEC (AMEC Americas Limited. Earth & Environmental Division). 2011. Phase II Baseline Aquatics Report Chester Project. Chester Township, District of Sudbury, Ontario. Prepared for Trelawney Mining and Exploration Inc., July 2011*." for DFO review.
DFO-09	Fish and Fish Habitat	7.1.1	EIS Appendix N page 7	The list of activities with potential to impair CRA fisheries within the LSA does not include decreased water availability to watercourses during operations or closure, due to realignments or refilling the lake, which can have impacts on fish habitat. This impact is discussed later in the report (i.e. EIS Appendix N, page 23) and therefore should be included in the discussion of activities with potential to cause serious harm to fish.	None.
HC-3	Human Health		Appendix W – HHRA TSD – Section 2.3.1.1	With respect to chromium (Cr), only Chromium II and III were discussed. The most toxic form of Cr is Cr VI (hexavalent chromium). It is unclear why the most toxic form of Cr was not discussed or evaluated in the HHRA.	HC suggests providing a discussion about why Cr VI was not evaluated in the HHRA.
HC-4	Human		Appendix W – HHRA TSD –	COPC-specific hazard quotients and ILCRs have been characterized for single COPCs only. HC advocates that for	HC suggests summing those substances which affect the same target organ(s) (non-carcinogens) and also for those that can

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
	Health		Tables 7 and 8	chemicals and pathways affecting the same target organ, the hazard quotients should be summed for non-carcinogens and for carcinogens, the ILCRs should be summed for the chemicals and pathways causing the same form of cancer.	result in the same types of cancer(s) (carcinogens).
HC-6	Human Health		Appendix W – HHRA TSD	In order to validate the conclusion that there are no elevated health risks, it would be useful to provide a risk calculation worked example for one carcinogen and one non-carcinogen.	HC suggests providing a risk calculation example for one carcinogen and one non-carcinogen.
HC-9	Human Health		Appendix W – HHRA TSD – Section 2.1.2 (Study Area and Potential Exposure Pathways)	In addition to the exposure pathways identified in the TSD, additional pathways could include: 1) Inhalation of airborne emissions, *including particulate matter;* 2) Deposition of emissions and dusts on vegetation and subsequent ingestion by human receptors; 3) Ingestion of potentially contaminated groundwater. If these pathways are not active, additional information is required in order to substantiate their absence.	HC suggests including all applicable exposure pathways and providing justification for the pathways not considered.
HC-14	Human Health		Appendix W – HHRA TSD – Section 2.2.1	The TSD states, "*in cases where drinking water guidelines were not available concentrations were compared to aquatic health benchmarks which are more conservative than drinking water guidelines*". There are no references for this statement or rationale to justify the accuracy of this statement.	HC suggests providing additional information to substantiate the statement that aquatic health benchmarks are more conservative than drinking water guidelines.
HC-15	Human Health		Appendix W – HHRA TSD – Section 2.2.2.1	With respect to the selection of the "Resident-Aboriginal", the TSD indicates that it was assumed that this receptor encompassed all life stages. It is unclear from this statement whether the composite receptor was evaluated for both carcinogenic and non-carcinogenic health risks. For non-carcinogens, the most sensitive receptor is the toddler, and for carcinogens, it is the composite lifetime receptor.	HC suggests providing a discussion about which life stage(s) were evaluated when calculating the health risks for carcinogens and non-carcinogens.
HC-16	Human		Appendix W –	For inhalation exposure, the TSD states that the exposure point	HC suggests providing a discussion about how site access will be

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
	Health		HHRA TSD – Section 2.2.3.1	concentrations were modelled for the receptors located at the maximum point of impingement outside of the Project site. There is no discussion in the EIS about how site access will be restricted to non-workers. As such, the most conservative assessment of exposure to air contaminants would be to evaluate exposure at the location of the highest predicted air contaminant concentrations.	restricted to non–workers, and if site access is not expected to be restricted, consider evaluating health risks using the highest predicted air contaminant concentrations (which may be on-site concentrations).
HC-17	Human Health		Appendix W – HHRA TSD – Table 6	In Table 6, zinc was converted from an oral MRL to an inhalation MRL using an adult receptor. Given that zinc is non-carcinogenic via the inhalation pathway, it would be more conservative to convert the oral value to an inhalation value using a toddler receptor.	When converting oral toxicity values to inhalation toxicity values, HC suggests using the characteristics of most sensitive receptor (e.g. body weight, inhalation rate, etc.)
HC-18	Human Health		Appendix W – HHRA TSD – Table 7	The HQs at the maximum POI exceed the acceptable HQ for PM10 and PM2.5. Given that site access is not expected to be restricted, it is unclear why these concentrations were not evaluated in the HHRA.	HC suggests providing a discussion about why the maximum POI was not evaluated in the HHRA given that site access will not be restricted.
HC-20	Atmospheric Environment		Appendix F-Air Quality TSD-Section 3.2.4 (Carbon Monoxide)	Section 3.2.4 of the TSD indicates that background concentration of CO was not provided as it is not considered a key pollutant from above-ground mining operation. It should be noted that CO may cause potential health impacts upon exposure and should be included in the background air quality analysis.	HC suggests including the background concentration of CO in the air quality modelling as it could contribute to the overall air quality.
HC-21	Atmospheric Environment		Appendix F-Air Quality TSD-Section 5.1(Construction Phase);5.3(Closure Phase)	No air quality modelling was undertaken for the construction phase of the project. The rationale for this provided by the proponent was that the operations phase represented the worst-case or bounding case, and therefore emissions from all other project phases would be lower. Given that there are different emission sources which would be located at different locations on the project site during construction and operation phases, it may not be appropriate to assume that the air quality modelling for the operations phase is representative of the	HC suggests modelling air emissions for the construction phase of the project.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
				emissions sources associated with the construction phase.	
HC-22	Atmospheric Environment		Appendix F-Air Quality TSD-Section 4.2.1 (Monitoring Networks); Section 2.1.1 (Regional Study Area)	Section 4.2.1 of the TSD indicates that air quality modeling was completed using CAPMoN however the proximity of the monitoring station to the project site was not specified. Thus Health Canada is unable to evaluate the background air quality data obtained from the CAPMoN.	HC suggests providing the distance of the CAPMoN to the project site and also provide a rationale for limiting regional study area for air monitoring to a 10 km radius from the project emission sources.
HC-23	Atmospheric Environment		Appendix F-Air Quality TSD-Section 3.1.5(Other parameters associated with ore mining and processing)	Section 3.1.5 of the TSD states that, "*Copper sulphate does not have a standard under O. Reg. 419/05, nor does it have an AAQC. A criterion of 20g/m^3 was established by a certified toxicologist to be protective of health*." Based on the information provided, it is unclear on how the criterion for copper sulphate was derived.	HC suggests providing a discussion about how the criterion of 20 g/m^3 was derived for copper sulphate.
HC-24	Atmospheric Environment		Appendix F-Air Quality TSD-Section 5.2.1 (Sources of Air Emissions);Section 5.2.3.2(Ambient air quality);	Section 5.2.1 of the TSD states that fugitive dust emissions from the TMF have not been assessed due to the placement of control measures. In order to assess the potential health impacts from particulate matter and dust generated from the TMF, fugitive dust emissions should be included in the quantitative assessment of emissions. The exclusion of fugitive dust emissions from the TMF underestimates the cumulative health risks posed by PM. Section 5.2.3.2 of the TSD indicates that total suspended	HC suggests including fugitive dust emissions from the TMF in the air quality modelling. Also include further details to support the assumptions made for characterizing cottagers as the most sensitive receptor for the human health risk assessment based on no access restrictions to the site.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
			Table 5-2	particulates (TSP), $PM_{2.5}$ and PM_{10} are predicted to exceed health based criteria at the project boundary. Given that there are no restrictions on access to the project site, it is unclear why the project site boundary without the presence of any sensitive receptors was selected as the worst-case scenario for air quality. In addition, some of the air contaminants identified as being elevated on-site (e.g. $PM_{2.5}$ and PM_{10}) are considered non-threshold substances, meaning that health effects may occur at any level of exposure. The International Agency on Cancer Research (IARC) has classified particulate matter as being carcinogenic to humans (Group 1)[2]. HC considers that the risk associated with fine particles, particularly $PM_{2.5}$, is higher than the health risks associated with coarse PM or TSP (which is a measure of total suspended particulates, including liquid and solid particles, without particle size differentiation). Therefore, using 30 $\mu g/m^3$ as a daily threshold is not in keeping with the full intent of the Canada-Wide Standard (CWS), which urges jurisdictions to take remedial and preventative actions to reduce anthropogenic emissions to the extent practicable in areas where ambient levels are below the CWS but still above levels associated with observable health effects.	
HC-25	Atmospheric Environment		Appendix F-Air Quality TSD-Section 5.2.3.2	Table 5-2 of the TSD presents the project emission rates for all COPCs from all sources (mobile and stationary), with a comparison to the Ontario AAQC. Inclusion of background concentrations to the predicted project concentrations is a more accurate representation of human exposure and provides for a better understanding of the exceedances of COPCs in	HC suggests including baseline plus project and cumulative concentrations for air quality monitoring for all COPCs. Also consider monitoring the same COPCs during all other project phases.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
			(Ambient Air Quality); Table 5-2	comparison to the AAQC. In addition, Health Canada encourages the inclusion of future project development to be included in the modelling of air emissions to adequately address cumulative effects from the project.	
HC-27	Acoustic Environment (including noise and vibration)		Appendix G - Noise and Vibration TSD - Section 2.6.1 (Noise Effects); Section 6.0 (Conclusions) Appendix G - Noise and Vibration TSD – Appendix II	Section 2.6.1 of the TSD indicates that noise modeling was completed using CadnaA model and provides a list of "factors" that are taken into account in the model. The specific factors that were used for this project were not identified, thus Health Canada is unable to evaluate the accuracy/conservativeness of the predicted noise model results. The noise baseline study was not included in Appendix II.	HC suggests presenting all of the model input parameters used in predicting noise levels in order to evaluate their appropriateness and assess the validity of the noise model results. In addition, HC suggests providing the noise baseline study.
HC-28	Acoustic Environment (including noise and vibration)		Appendix G- Noise and Vibration TSD - Section 3.1 (Construction Phase) Chapter 9 –	According to the TSD, the main construction activities are expected at the open pit, MRA and TMF areas and therefore, equipment anticipated for these locations along with the truck routes have been considered in the noise model. According to Section 9.10.2.1 of the EIS, the report states that cottagers along Highway 144 will notice increased traffic volumes on the highway during the construction phase.	HC suggests that all applicable noise sources be evaluated in the construction noise modelling or provide justification as to why they were excluded.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
			Section 9.10.2.1 (Construction Phase)	In the TSD, it does not appear that vehicle traffic to and from the site (e.g. worker vehicles and/or vehicles transporting supplies on-site and/or off-site) was included in the noise modelling. Given that the EIS states that traffic noise will be noticeable to nearby cottages, it is unclear why the increased vehicle traffic to and from the project site was not quantitatively evaluated in the noise modelling.	
HC-29	Acoustic Environment (including noise and vibration)		Appendix G – Noise and Vibration TSD - 3.1.2 (Nighttime Noise Level); Section 6.0 (Conclusions) Chapter 10 of EIS	The TSD indicates that for two receptors in the local study area (POR6 and POR9), predicted night-time construction noise levels will exceed 40 dBA. The TSD concludes that some night-time activities may require noise mitigation measures to address noise levels at the nearest receptors. In reviewing the proposed mitigation in Chapter 10 of the EIS, general mitigation measures are presented but none specifically related to night-time noise during construction.	HC suggests describing the specific mitigation measures that will be employed to reduce night- time construction noise levels at the nearest receptors (POR6 and POR9).
HC-30	Acoustic Environment (including noise and		Appendix G – Noise and Vibration TSD - Section 3.1.1 (Daytime Noise Level)	The TSD indicates that the noise associated with the construction of the transmission line was not included in the noise model, however, to reduce noise levels at nearby land users, a forest buffer will be retained to the extent practical. According to ISO9613-2:1996, vegetative buffers, such as trees, hedges, and vines, do not absorb much sound and thus do not make effective noise barriers.	HC suggests providing a discussion of other potential mitigative measures that would be considered in order to reduce noise levels in the event that they are unacceptable to nearby residents.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
	vibration)				
HC-31	Electric and Magnetic Fields		Chapter 5 of the EIS - Section 5.12 (Transmission Line and Power Supply)	According to Section 5.12 of the EIS, the project includes the construction and operation of a 120 km, 230 kV transmission line. In the event that concerns are expressed about EMF, additional information can be collected.	HC suggests that if concern is expressed, an assessment of EMF effects may be undertaken by considering the factors listed under section 5 of HC Useful Information for Environmental Assessments document, available at: http://www.hc- sc.gc.ca/ewh- semt/pubs/eval/environ_assess-eval/index-eng.php
NRCan-02	Surficial Geology (i.e. Terrain and Soil)	9.1.2	*EIS Report, Section 6 , Description of the Environment;* *Appendix E – Geochemical characterization;* *Appendix H Hydrogeology TSD*	The information provided on surficial geology was reviewed to assess whether the information provided about anticipated conditions for stripping or the removal of the overburden during the mining process was accurate. Baseline data for surficial geology and soils are complete. Sufficient information about overburden thickness and soil composition has been provided to characterize the affected environment.	None requested
EC-17	Groundwater Water Quality	9.12, 10.1	Hydrogeology TSD, Attachment II Groundwater Model Report	The Hydrogeology TSD states: “Contact water will be managed such that the majority of infiltration over the MRA will report to the adjacent Mine Rock Storage Ponds (MRSPs), rather than directly enter the water table (Golder 2013b). As such, infiltration that reports to or reaches the underlying groundwater	Provide a copy of the requested technical memorandum.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
				table is assumed to be small (50 mm/yr), and, with the exception of adding the three MSRPs closest to the open pit, no additional consideration is given to the implementation of the MRA in the model." The Proponent is requested to provide a copy of Golder 2013b – Technical Memorandum: Cote Gold Project – Mine Rock Storage Pond Seepage Analysis DOC008. 13-1118-0017 (11000). Submitted to IAMGOLD, September 20, 2013.	
EC-33	Consultation	2	Appendix D Consultation Record	Table D12-1 to Table D12-17 record the comments received and responses provided for each consultation session. However, references are not provided for the location in the EIS where responses are provided. For example, Table D12.2 Topic Tailings Impoundment, the proponent responded "The EA report will include further information regarding the Tailings Management Facility design and closure. Additionally, a malfunctions and accidents section will be included in the EA report, which will have specific details on potential emergencies with the tailings facility." But it is not clear where this information is provided.	EC requests that the proponent insert references for the EIS location in which the responses are provided to allow for proper cross referencing.
EC-34	Assessment of Alternatives for Mine Rock Disposal	8.1	Chapter 5, Appendix U1	It is stated in Chapter 5 that "Open pit mining will occur at a mining rate of aproximately 60,000 tonnes/day (tpd) of ore production. Extraction of the ore through pit development will result in the production of an approximately estimated 20 million tonnes (Mt) of overburden and 850 Mt of mine rock." In this case, the strip ratio is only 2.65, which is lower than industrial practice.	EC requests that the proponent provide clarification on the estimation of mine rock generation and verify the estimate of the Mine Rock footprint.
EC-39	Assessment of	8.1	Appendix U1, Mine Rock	The alternative assessment document is dated March 5, 2013 but the Draft Environmental Assessment Report is dated May	EC requests that the proponent revisit the alternatives assessment analysis and make sure that the conclusions of the analysis are

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
	Alternatives for Mine Rock Disposal		Area (MRA) Alternatives Assessment Report – Knight Piesold Consultants Table 2.1 Summary of Mine Rock Area Options Details	2014. In that regard, several discrepancies have been noted, namely and most importantly the fact that the conclusions of alternative assessment analysis does not reflect what is proposed in the draft EIS as the proposed MRA. For example: • The draft EIS indicates that the mine rock and overburden will be disposed of in only one area which is a slightly different version of option 1 without options 2 and 3 that were considered in the alternative assessment analysis. • On page 5-9 of the EIS (section 5.5.5.1 Mine Rock), it is stated that the mine rock and overburden will be disposed of in an estimated total area of 400 ha with an ultimate elevation of 490 masl. However, the alternative assessment document (section 2.2.1 MRA-1) states that the MRA-1 has an approximate footprint area of 372 ha with a final elevation of 481 masl and has the capacity to store 54% (240 Mm3) of the total planned mine rock production volume. The configuration and outline of MRA 1 as shown on Figure 2.1 of Appendix U1 does not match the configuration shown on Figure ES-2 in the Executive Summary. It should be noted that both MRA are almost the same in term of surface and height but seem to be quite different in storage capacity.	consistent with what it is proposed in the EIS documents. The proponent needs to address the discrepancies as listed in our comments..
EC-61	Assessment of Alternatives	8.1	Chapter 5, Appendix U3	The report states: "During the operations phase of the Project, ore will be fed to the mill at an average rate of approximately 55,000 tonnes per day";	EC requests that the proponent provide a projection of the tailings generation over the project life (by year), including storage of TMF, water content of tailings in the TMF and height of embankments/dams,

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
	for Tailings Management Facility			"The mine life is expected to be approximately 15 years"; "The initial evaluation recommended in-process thickened tailings (50% solids content) and it is carried forward for the options assessment.". Given this, the total ore to be processed is calculated around 300 Mt and the tailings generation is approximately 600 Mt. However, the proponent states in Appendix U3 that "Tailings will be managed in the tailings management facility (TMF). The TMF will need to store approximately 300 million tonnes of tailings, based on current reserves".	and verify the TMF footprint as well.
EC-83	Migratory Birds	9.1.1, 9.1.2	Appendix M – Terrestrial Biology Technical Support Document, Section 2.4.1.3 – Crepuscular Bird/Owl Surveys	In 2012, crepuscular surveys for Whip-poor-will and Common Nighthawk were conducted by Golder Associates between 9:30 pm and 3:20 am (Wildlife TSD, Att. 1, Sec. 5.8, p. 57, para. 2). Similar surveys were conducted by AMEC in 2012 following a Draft Whip-poor-will Survey Protocol obtained from the MNR District SAR biologist, although details were not provided as to the time of evening/night when the surveys started and ended (EIS, Sec. 6.4.3.1, p. 6-51, para. 5). In 2013, AMEC began surveys between 30 minutes after sunset and midnight in accordance with the specific survey protocol outlined in the Bird Studies Canada (BSC) *Whip-poor-will Roadside Survey Participant's Guide* (Terrestrial Biology TSD, App. I, Sec. 2.4.1.3, p. 2-7, para. 4). It should be noted that the BSC 2011 protocol, often used for Whip-poor-will *and* Common Nighthawk, is tailored more to Whip-poor-will. While the BSC 2011 protocol picks up some of the Common Nighthawk activity, it misses the peak calling/booming display activity for this species, which typically	Work is underway to develop an EC standard protocol for Common Nighthawk based on this recent work, which will be available in 2015.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
				occurs starting 30 minutes before sunset, whereas the BSC protocol recommends a start time of 30 minutes after sunset (as above). Since the BSC 2011 protocol is one of the standards used by many surveyors, EC does not expect the proponent to add another field season of surveys to fortify the Common Nighthawk data set. It is also noteworthy that EC began investigating appropriate timing for Common Nighthawk monitoring in 2011, and that this work is continuing to investigate how the timing or pattern of peak calling/booming may vary geographically across Canada's boreal. Work is underway to develop an EC standard protocol for Common Nighthawk based on this recent work, which will be available in 2015.	
EC-84	Migratory Birds	11.1	EIS – Section 10.2, Table 10-1 Appendix L – Wildlife Technical Support Document, Section 2.4 and 3.2.7	It is stated that, "Typically, clearing of vegetation will take place outside of the migratory bird nesting season (May 1 to August 1). When clearing must occur between May 1 and August 1, nest surveys will be completed by qualified individuals prior to commencing work and a mitigation/management plan will be developed in consultation with EC and the Ministry of Natural Resources (MNR) to address impacts to breeding birds." (EIS, Sec. 10.2, Table 10-1, p. 10-24; EIS, Sec. 10.2, Table 10-1, p. 10-23; Wildlife TSD, Sec. 2.4, Table 2-3, p. 10). The migratory bird breeding season is also defined in the documentation as occurring between April 1st and July 31st, and between May 9th and August 8th (Wildlife TSD, Sec. 2.4.2, p. 25, para. 5). It is further stated that, "If water levels are altered during the breeding/nesting season, then nest searches will be completed within a week of flooding activities in the areas with potential for	The points made in the previous column should be reflected in the EIS and relevant supporting documents.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
				flooding (Wildlife TSD, Sec. 2.4, Table 2-3, p. 19). With respect to dewatering, it is stated, "If construction and dewatering activities cannot be completed outside of the breeding and nesting period of migratory birds (May 9th to August 8th), then nest surveys will be completed by qualified individuals prior to commencing construction or dewatering work." (Wildlife TSD, Sec. 2.4.2, p. 25, para. 5). EC generally advises avoidance as the best approach to protecting migratory birds. The information on Incidental Take of Migratory Birds on our website has been updated with new guidance on how to determine when to clear vegetation and conduct construction activities (including flooding/dewatering work) to minimize risk to breeding migratory birds. http://www.ec.gc.ca/paom-itmb/default.asp?lang=En&n=C51C415F-1 We have also compiled core nesting periods (http://www.ec.gc.ca/paom-itmb/default.asp?lang=En&n=4F39A78F-1#_tab01) to help people get work done around the nesting period. This doesn't mean there won't be nesting birds outside of these periods, it just reduces the risk of encountering a nest. The proponent should refer to this document for the core breeding period for migratory birds in Bird Conservation Region (BCR) 8, as it differs from what is proposed. EC generally recommends against conducting nest searches to avoid affecting migratory birds. With the exception of a few circumstances (e.g., nests in open areas, when the birds nest on isolated trees, on man-made structures and/or in colonies),	

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
				EC does not recommend the use of nest surveys to determine whether nests are present. The risk of disturbing nests (which is a contravention of the *Migratory Birds Convention Act*) is high during nest surveys. Additionally, there is a high probability of obtaining false negatives during nest surveys (i.e., a survey will determine that there are no nests present when in actuality there are nests in the surveyed habitat). For forested habitats, EC considers "non-intrusive searching methods", such as using point counts placed along transects, more in line with our advice on determining whether nests are present in an area. These methods use singing territorial males as a proxy to establish whether the breeding season has started. Please refer to EC's technical document at http://ec.gc.ca/paom-itmb/default.asp?lang=EN&n=8D910CAC-1#_003 for additional details on EC's recommendations on determining the presence of nests. With respect to mitigation, buffers are generally only appropriate as an avoidance tool when nests are easily identified (such as nests in open areas, when the birds nest on isolated trees, on man-made structures and/or in colonies). It is unlikely that nest surveys will detect all nests and thus buffers will not be established around all nests that are actually in the habitat. In any case, EC has not developed species-specific buffers, mainly due to the differences in buffer sizes depending on the particular situation (e.g. type of nesting habitat, activities taking place in the surrounding area). Further, EC does not recommend marking active nests with flagging tape, painted	

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
				lath, or other similar material as this increases the risk of nest predation. Finally, with respect to ongoing maintenance of the transmission line infrastructure, it is stated that, "Periodic clearing of the ROW may cause relocation of species that prefer early succession vegetation." (Wildlife TSD, Sec. 3.2.7, p. 3-51, para. 1). It should be noted that the same timing considerations to reduce the risk to breeding migratory birds during vegetation clearing associated with construction (as above), should also be applied to maintenance activities involving vegetation clearing.	
EC-86	Species at Risk	9.1.1, 9.1.2	Appendix L – Wildlife Technical Support Document	Consistent with s. 79(2) of SARA, the Responsible Authority is responsible to identify, with support from the responsible jurisdiction and using best available information such as, but not limited to, action plans, recovery strategies, management plans (final or proposed versions), and COSEWIC reports, all the potential adverse effects of the project on listed wildlife species, which may be affected by the project. The Eastern Wolf (Special Concern) is a SARA listed species for which the proponent is to demonstrate how best to avoid or lessen all the adverse effects of the project on this species, and to monitor it. Eastern Wolf is managed by provincial jurisdiction; as such, it is advised to consult the Ontario Ministry of Natural Resources for their information, expertise and advice on this species.	We advise that MNR be consulted for their information, expertise and advise on provincially regulated non-migratory bird species at risk.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
EC-87	Species at Risk	9.1.2	Appendix L – Wildlife Technical Support Document	Canada Warbler, Common Nighthawk and Olive-sided Flycatcher are listed as Special Concern, (Wildlife TSD, Sec. 6.0, p. 74, bullet 1), whereas they are in fact listed as Threatened under SARA.	SARA status for Canada Warbler, Common Nighthawk and Olive-sided Flycatcher should be corrected in the Wildlife TSD and the EIS where appropriate.
EC-88	Migratory Birds	9.1.2	Appendix L – Wildlife Technical Support Document	The LSA and RSA are located in BCR 8, not 12, so some of the BCR 12 priority species, particularly those not typically occurring as far north as the LSA/RSA may not need to be analysed to the level that they have been in this version of the supporting documents.	The project is within BCR 8, not 12, thus the bird species list contains species that may not occur this far north.
EC-89	Migratory	9.1.2	Appendix L – Wildlife Technical Support Document	Eastern Towhee is listed as having been observed in the LSA (Wildlife TSD, Attach. I, Sec. 5.5, p. 47, para. 5); this seems spurious, since the species would be a couple hundred kilometers north of the northernmost records from the Ontario Breeding Bird Atlas. Also suspicious is the apparent association of this species with dense coniferous forest, whereas its typical habitat is mature deciduous forest.	Please confirm the sighting of Eastern Towhee.
EC-90	Migratory Birds	9.1.2	EIS Section 6.4.6.1	There appears to be an error in the description of the breeding bird point count survey methodology. It is stated that, “Observers listened for 10 minutes, recording observations within 50 m, beyond 100 m and flyovers.” (EIS, Sec. 6.4.6.1, p. 6-72, para. 6). EC presumes the wording should be, “within 50 m, from 50 m to 100 m, and flyovers”; please confirm this methodology was used by the consultants.	Confirm the methodology used for the breeding point count surveys.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS/Supporting Documents	Summary Comment/ Rationale	Information Request
EC-91	Vegetation Communities	9.1.2	EIS Section 6.4.5.2	The description of upland coniferous forests (EIS, Sec. 6.4.5.2, p. 6-70, para. 2) should read as follows: “Upland Coniferous forests are those dominated by coniferous tree cover, but may contain deciduous trees.”	Correct description of upland coniferous forests in EIS as noted in previous column.
EC-92	Vegetation Communities	9.1.2	EIS Section 6.4.5.2	The description of wetland deciduous swamp (EIS, Sec. 6.4.5.2, p. 6-70, para. 3) should read as follows: “The wetland deciduous swamp is dominated by Trembling Aspen with Black Spruce and Balsam Poplar.”	Correct description of wetland deciduous swamp in EIS as noted in previous column.
EC-103	Hydrology	3.5	Appendix I, Attachment I, Figure 6	There is no legend for the red graph on Figure 6 in Appendix I, Attachment I. A legend is required to read the graph.	Provide a legend for the red line on the graph.

Annex 3

Regulatory Related Information Requests and Comments on the Final Environmental Impact Statement (Draft Environmental Assessment Report) for the Côté Gold Mine Project

August 1, 2014

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS / Supporting Documents	Summary Comment / Rationale	Information Request
TC-1a	Navigable Waters	3.4.2, 9.1.3, 10.1, 10.2	EIS Report Table 2-1, pg 2-2	There are no waterways at the project site that are listed in the schedule to the Navigation Protection Act (NPA). However, Table 2-1 of the EIS Report indicates that works require approval under the NPA. The NPA includes an "opt-in" provision that allows owners of works in navigable waterways not listed in the schedule (i.e. non-scheduled waters) to request an assessment and review of the works under NPA. If IAMGOLD wants to request to opt-in, the waterway needs to be assessed for navigability and impacts, and additional information about the proposed works (e.g. construction methodology, location of work) and waterways (e.g. current/past use) are required. It appears that IAMGOLD is proposing to dewater a number of waterways. It is unclear whether any of these waterways (that are being dewatered, or those others if in the case of opting-in) are navigable. Refer to the Navigation Protection Program (http://www.tc.gc.ca/eng/programs-622.html) to determine if a waterway at the project area is navigable. If any of these waterways to be dewatered/infilled are determined to be navigable, an exemption by order through the Governor in Council will be required. The response to this information request will assist the Agency in determining whether the project requires a federal authority to exercise a power or perform a duty or function conferred on it under any Act of Parliament and is consistent with the definition of environmental effects in CEAA 2012; specifically in relation to subsection 5(2).	Please indicate whether or not IAMGOLD intends to "opt-in" any works in navigable waterways not listed in the schedule under NPA. If IAMGOLD will request to opt-in, provide additional information regarding which potential works (involving dewatering, depositing, and/or infilling) on which waterways would be included (i.e. dams, aerial cables, access roads, pipelines, intake and outfalls), taking into account available TK/TLU information, and consultation with other users such as cottagers, boaters, angular and hunters. Refer to the Navigation Protection Program (http://www.tc.gc.ca/eng/programs-622.html) to determine if a waterway at the project area is navigable.
TC-1b	Navigable Waters	3.4.2, 9.1.3, 10.1, 10.2	EIS Report Table 2-1, pg 2-2	In the EIS, it appears that IAMGOLD is proposing to dewater a number of waterways.	Submit a NPA Notice of Works to Transport Canada for all works involving dewatering, depositing, and/or infilling into navigable waters. To obtain the Notice form, and for other information and Q&As please

					visit: http://www.tc.gc.ca/eng/programs-623.html
TC-04	Aboriginal Consultation		Executive Summary, pg 36 Section 4.3.2.8, pg 4-23 Appendix O, Land and Resource Use Appendix P, Traditional Land and Resource Use	There are several water bodies that could be subject to the NPA, or are for sure subject to the NPA as long as they are deemed navigable. As such, decisions and more info is needed in order to determine the NPA regulatory requirements (see explanations provided by the NPP and EA groups within this table). Given that one of the information requirements in determining navigability is historical/past use, there may be an opportunity to utilize Traditional Knowledge and Traditional Land Use Studies to capture this type of information.	The proponent may wish to explore whether this information could be captured in the Traditional Knowledge/Traditional Land Use Studies; otherwise, it will need to be captured in some other way. It is recommended that this be done at as early as possible in order to avoid regulatory delays in the future. This information may have a significant impact on TC's level of involvement.
TC-05	Aboriginal Consultation Unit (ACU)		EIS Report, Section 4.3, page 4-11	The EIS notes that one of the goals of the consultation period between June 2013 and October 2013 is to *"meet all regulatory requirements for stakeholder consultation".* This is a potentially misleading statement, as neither TC nor the Agency have discussed NPA regulatory requirements with Aboriginal groups as yet.	

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS / Supporting Documents	Summary Comment / Rationale	Information Request
				Recommend changing the statement to something like this: *"meet regulatory requirements for stakeholder consultation, to the extent possible."*	
TC-07	EA general and Navigable Waters		EIS Report, pg 9-85, Section 9.16.3	This paragraph mentions 2 proposed works (watercourse realignments and retention dams) that could affect the common law right of navigation (in non-scheduled waters). However, there are more proposed works that could affect navigation in non-scheduled waters than just these two that are mentioned. A better list to address this comment is, for example, the list found under Section 9.16.1. So what's missing from Section 9.16.3 is: draining of Cote Lake; access road creek crossings; intake water pipes; and outflow water pipes. Also missing are works involving the depositing or throwing of materials that risk impacting navigation in navigable waterways or in any waters that flow into navigable waterways (NPA, section 22). Lastly, it seems that that any potential revisions to Section 9.16.3 could affect what is said (and perhaps assessed) in Section 9.17.2.	This section needs to be expanded upon to include all proposed works that could or will affect the common law right of navigation (in non-scheduled waters). The proponent needs to be made aware of the opt-in clause under the NPA and they are to decide if will opt-in or not (see Tania's comments above for NPA and opt-in explanations, etc). If opting-in AND the Minister approves the opt-in request, then all non-scheduled waters affected need to be assessed for navigability by the proponent, and all info is then to be provided to Transport Canada for review and acceptance, and if accepted as navigable then an NPA approval/permit is required. So perhaps the proponent can add to this Section an explanation and their decision to 'opt-in' or not to the NPA. Some proposed works (the depositing/throwing/dewatering of materials in navigable waterways or in any waters that flow into navigable waterways) is subject to the NPA regardless if the proponent opts-in or not, and regardless that such waters are non-scheduled.
TC-08	EA general and Navigable Waters		EIS Report, various sections.	Much of what could be said by NPP and by the EA group (i.e. in terms of regulatory advice; input about project effects; input about potential effects and mitigations; etc) all depends on whether the proponent is opting in or not, and whether NPA Sections 21-23 are applicable to the project or not.	The proponent needs to be made aware of the opt-in clause under the NPA and they are to decide if will opt-in or not (see Tania's comments above for NPA and opt-in explanations, etc). If opting-in AND the Minister approves the opt-in request, then all non-scheduled waters affected need to be assessed for navigability by the proponent, and all info is then to be provided to Transport Canada for review and acceptance,

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS / Supporting Documents	Summary Comment / Rationale	Information Request
					and if accepted as navigable then an NPA approval/permit is required. So perhaps the proponent can add to this Section an explanation and their decision to 'opt-in' or not to the NPA.
TC-09	EA general and Navigable Waters		EIS Report, Section 9.16.3 and possibly elsewhere	Section 9.16.3 mentions the "*Navigable Waters Protection Act*" (NWPA). The NWPA was amended and on April 1, 2014 the *Navigation Protection Act* (NPA) came into force. The NPA includes many changes and additions, and new definitions, etc. The proponent should familiarize themselves with the NPA and how it affects the project, and the EIS report.	Section 9.16.3 should be revised to reflect the new and correct NPA reference, and elsewhere in the EIS if applicable the NWPA should be replaced with NPA and all revisions should include revised EIS and project context/references with respect to the new act.
DFO-01	Fish and Fish Habitat	Section 9.1.2, page 22	EIS Appendix N, Section 2.4.2 page 6 EIS Report Section 9, Description of Project Effects, subsection 9.9, page 9-49.	The assessment of effects on commercial, recreational and Aboriginal (CRA) fisheries has been based on five fish species: northern pike, yellow perch, walleye, whitefish and smallmouth bass. Per DFOs *Fisheries Protection Policy Statement (October 2013)*, a fish is part of a CRA fishery if federal or provincial fisheries regulations apply to it, as well as those fish that can be fished by Aboriginal organizations or their members. In Ontario, a licence is required to fish, for any species. Species other than the five identified are fished for. A licence is also required to collect baitfish. Therefore, all species in the Côté Lake study area are part of a CRA fishery and the potential effects of the proposed project on all species needs to be understood. If using a few species as a surrogate for evaluating the impacts on all fish that are part of or support a CRA fishery, the fish chosen must be representative of all the fish species found in the Côté Lake study area, i.e. they represent the same habitat requirements, food requirements, life histories, etc.	Provide a rationale as to how the chosen fish species are representative of all fish species in the Côté Lake study area. If those five species are not representative of all species, add other species for the effects assessment.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS / Supporting Documents	Summary Comment / Rationale	Information Request
DFO-02	Fish and Fish Habitat Aboriginal	Section 9.1.2, pages 22 & 23	EIS Appendix N, Table 2.1, and page 19	Section 4 (Prediction of Effects) of Appendix N (Aquatic Technical Support Document) indicates that "*project activities with the potential to affect sport fish within the LSA were considered relative to the assessment indicators*". The assessment should not be limited to sport fish. As in comment DFO-01 above, the assessment should be on fish that are part of, or support, a commercial, recreational or Aboriginal fishery. The basis for a recreational fishery is described above in comment DFO-01. Section 6 of the EIS (Description of the Environment), pages 6-124 and 6-125, indicate species that are harvested by or considered important to First Nations and Métis. These species are found in the Côté Lake study area.	None – this should be covered by the Information Requested under comment DFO-01.
DFO-05	Fish and Fish Habitat Acoustic Environment		EIS Report Section 9.9.2.1, page 9-53 EIS Report Section 10 Table 10-2 page 10-18 EIS Report Section 11 Table 11-6 EIS Appendix N Table 3.1	Impacts from blasting in the open pit may affect fish habitat and spawning in the adjacent Clam Lake (south basin) during construction and the early years of operation. In the report, the area is described as deep (profundal) and as providing limited spawning habitat for resident fish, with the dominant fish identified as smallmouth bass with an abundance of spawning habitat for that species available. The report indicates effects are determined to be likely limited to individuals and not result in a community or population level effect. This effect is not included in the Impact Assessment Matrix, Table 11-6. However it is included in the "Mitigation Measures – Biological Environment Table 10-2" where it is indicated that the effects to spawning habitat within 238.5 m of the open pit will be included in the fish habitat offsetting (compensation) plan. This impact should be in the Impact Assessment Matrix, Table 11-6 if it has been identified as an effect requiring mitigation.	

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS / Supporting Documents	Summary Comment / Rationale	Information Request
				Burbot are present in Clam Lake, as indicated in Table 3.1: *Summary of fish species presence/absence in Côté Gold area lentic (lake) habitat*. Burbot are sensitive to noise, as they use vocalizations during spawning. As indicated in comment DFO-01, above, Burbot are a fish that are part of, and support, a CRA fishery. Should blasting impact their spawning over a period of several years there is the potential for impacts to productivity.	
DFO-06	Fish and Fish Habitat	Section 11.1 pages 32 & 33	EIS Appendix N, page 22 and Table 4.8	It is indicated that implementing the offsetting measures, being the watercourse realignments as well as other associated changes to existing water bodies, will result in only a minimal loss of habitat within the LSA. It is noted that this should not affect fish productivity. Per DFO's "*Fisheries Productivity Investment Policy*", benefits from offsetting measures must balance project impacts. It is not clear in the EIS if impacts are being fully counterbalanced by offsetting measures. It is recognized that impacts may be fully offset by the proposed channel realignments if a different approach is taken in calculating the losses and gains, such as the use of Habitat Units or some measure of productivity, however as it is currently portrayed in the EIS, a loss of habitat has been identified with no supporting information to demonstrate that the impacts of fisheries productivity is in fact fully offset by gains to productivity.	Provide an offsetting plan that demonstrates, at a conceptual level at minimum, that losses of fisheries productivity will be fully offset by gains in productivity.
DFO-07	Fish and Fish Habitat	Section 11.1 pages 32 & 33	Appendix N, page 19 and Table 4.1	It is anticipated that watercourse realignments and habitats that are constructed prior to mine operations may not be fully functional by the time the serious harm to fish occurs.	As part of the request in comment DFO-07, ensure that the decreased functioning of the constructed habitat in the first year been factored into the offsetting plan.

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS / Supporting Documents	Summary Comment / Rationale	Information Request
				When evaluating whether proposed offsetting measures fully offset serious harm to fish, the lag time in the functioning of the offsetting measures should be factored in to the offsetting plan. This may require creation or enhancement of additional habitat to offset the potential loss of productivity until the constructed habitats are fully functioning.	
DFO-08	Fish and Fish Habitat	Section 7.1.1 page 12	EIS Appendix N pages 7,9, & 19	Fish are to be collected and relocated from habitats that will be lost due to development of the mine. Fish are to be relocated to newly constructed habitats which connect various existing waterbodies. It is anticipated that some fish will be lost and not relocated.	More information is required to assess the impacts of the relocation and loss of fish. Why is it anticipated that some fish will not be able to be relocated; is there a specific species or size of fish that is expected to be difficult to capture or relocate? How many fish are estimated to be lost? What are the impacts of the fish relocations on existing fish populations in the waterbodies connected to the constructed habitats?
DFO-10	Fish and Fish Habitat Hydrology	Section 11.1 pages 32 & 33	EIS Appendix N page 23 EIS Section 10 Table 10-2 page 10-19	Reductions in flows to Bagsverd Creek are anticipated to begin during operations and remain in perpetuity. Fish habitat may be impacted. It is proposed to survey the stream morphology prior to construction to assess the potential for exposure of habitat and barriers to fish passage. Then, if required, the mitigation proposed is to modify the stream bed to ensure an adequate depth of water for fish to utilize habitat and allow for fish passage. Without defining the impact, it is unknown whether the proposed mitigation will be effective and whether it will completely offset the serious harm to fish.	Provide a detailed analysis of the impacts to Bagsverd Creek as well as downstream (for example what will be the impacts to Neville Lake). Provide an analysis of the feasibility of the proposed mitigation, indicating whether the mitigation will fully offset the impacts. When considering hydrology and impacts to fish habitat, use seasonal flows (as, for example, impacts to fish passage and habitat may be exaggerated at low flows), rather than the current approach which uses the average annual flow. Also, ensure that this is discussed in the offsetting plan (as in comment DFO-07).
DFO-13	Fish and Fish Habitat	Section 11.1 pages 32 &	EIS Appendix I	Channel realignments are to be constructed to provide fish habitat as offsetting for serious harm to fish. Upon mine closure, some channel	Indicate whether the watercourse realignments to be decommissioned upon mine closure are those that are to be constructed with fish habitat

Reference #	Ecosystem Topic	Reference to EIS Guidelines Section	Reference to EIS / Supporting Documents	Summary Comment / Rationale	Information Request
	Hydrology	33	Section 1.1.7 Page 4	realignments are to be changed to restore surface water flow paths similar to pre-development conditions.	features as part of the Offsetting Plan. If habitat created as offsetting is to be destroyed or permanently altered upon mine closure, then include how this subsequent loss of fish habitat will be offset in the Offsetting Plan (referenced in comment DFO-06).
DFO-14	Fish and Fish Habitat Hydrology	Section 11.1 pages 32 & 33	EIS Appendix I Table 4.2 Table 4.3 Table 4.4 Table 4.5 EIS Appendix N page 10	Some watercourses will experience an increase in flows greater than 100% of the pre-development flow. These watercourses are not all identified as the constructed watercourse reallignments. It is noted the constructed alignments will be designed for the expected flow, however the impacts of increased flows to the existing watercourses (for example, Un-named Lake #2 Outflow) is not evaluated, and mitigation is not proposed. The Aquatic Biology section of the EIS indicates that predicted changes in water flow have been considered in the assessment of potential effects to fish habitat, however the only water flow changes assessed in Table 4.1 are the changes to Basverd Creek (as above in comment DFO-10).	Evaluate the impacts to fish and fish habitat arising from increased flows from mine activities, including impacts related to increased erosion and sedimentation, high flows as a barrier to fish migration, and direct changes to habitat. Propose mitigation for potential impacts to fish and fish habitat, and if offsetting is required, include this in the Offsetting Plan.
EC-76	Atmospheric Environment (including Air Quality)	Section 11, Mitigation, p. 31-34	EIS Report, Section 10.2 Mitigation Measures and Table 10-1 pg. 10-1 to 10-9 Appendix F – Air Quality Technical Support	In EC's review of the proposed mitigation measures for air quality and greenhouse gases (GHGs), we feel that the proponent has provided some information and EC agrees with the proponent's commitment to develop a dust best management plan (DBMP) and other mitigation plans (GHG and Vehicle maintenance), but no details are provided in terms of: objectives to be achieved through air quality mitigation measures; listing of methods to be applied and the conditions that trigger mitigation measures; frequency and record keeping to demonstrate adoption of actions; and best management plan for fugitive dust and planning measures aimed at reducing fuel and power consumption for the site. The proponent should be advised that compliance with the following regulations and code of practice will help to ensure that emissions are	EC recommends that the proponent incorporate the regulations and code of practice, stated in previous column into their Best Management Plan for dust (DBMP), GHG emission plan, Engine Maintenance Program and other mitigation actions. EC requests that they then submit the BMP or other mitigation plan documents for review to EC and other regulatory agencies prior to commencing work for the construction phase.

Subject: Côté Gold Project - Draft EA - MOECC EASS review
Importance: High

Good morning Steve:

As per my voicemail, please find attached EASS review of the Draft EA document. I am more than happy to discuss my comments further and answer any questions you and your team may have. The major comments stem from the EA document format/structure, methodology and the consultation summary/record. Table 1 also includes comments received from our Aboriginal Affairs Branch.

MNRF and MOECC surface water review and comments are still outstanding. I have followed up with the reviewers and they require additional time (another week).

Thanks,

Cindy Batista | *Project Officer*

MEMORANDUM

TO: Steve Woolfenden
Manager, Corporate Environmental Assessments and Approvals
IAMGOLD Corporation

FROM: Cindy Batista
Project Officer
Environmental Approvals Branch

RE: Review of the Draft Environmental Assessment Report for the Côté Gold Project
EA FILE NO. 05-09-02

Thank you for submitting the draft Environmental Assessment (EA) for the Côté Gold Project (Project), which was received on June 9, 2014, by the Environmental Assessment Services Section (EASS).

The EASS has reviewed the above-noted draft EA in accordance with the requirements of the *Environmental Assessment Act* (EAA), its associated regulations, and the MOE's Code of Practice for Preparing and Reviewing Environmental Assessments in Ontario dated January 2014. Please find attached EASS comments for your consideration when finalizing the EA for formal submission.

The EASS is of the view that the additions and modification to the draft EA outlined in the attached tables should be undertaken. Should you have any questions, please contact me by phone at 416-314-7222 or by e-mail at cindy.batista@ontario.ca. Alternatively, you may contact Alex Blasko, EASS Supervisor, by phone at 416-314-7765 or by e-mail at alex.blasko@ontario.ca.

NORTHWATCH

July 2, 2014

Ellen Campbell
Project Manager
Côté Gold Mine Project
Canadian Environmental Assessment Agency
907-55 St. Clair Avenue East
Toronto, ON M4T 1M2

Sent by email MineCoteMine@ceaa-acee.gc.ca

Dear Ms. Campbell:

Re. **Northwatch Comments on Côté Gold Mine Project Environmental Impact Summary and Supporting Documentation**

On June 2, 2014 the Canadian Environmental Assessment Agency invited the public to comment on the potential environmental effects of the Côté Gold Mine Project and the proposed measures to prevent or mitigate those effects as described in a summary of the proponent's Environmental Impact Statement (EIS). The Canadian Environmental Assessment Agency is conducting a federal environmental assessment of the proposed Côté Gold Mine Project, located in northeastern Ontario, under the provisions of the provisions of the *Canadian Environmental Assessment Act, 2012* (CEAA2012).

IAMGOLD is proposing the construction, operation, and decommissioning of an open-pit gold mine and on-site metal mill with a mine and mill life of approximately 15 years. The proposed Côté Gold Mine Project, located 20 kilometers southwest of the community of Gogama in northeastern Ontario, would have an ore production capacity of 60,000 tonnes per day. The on-site metal mill would have an ore input capacity of 60,000 tonnes per day.

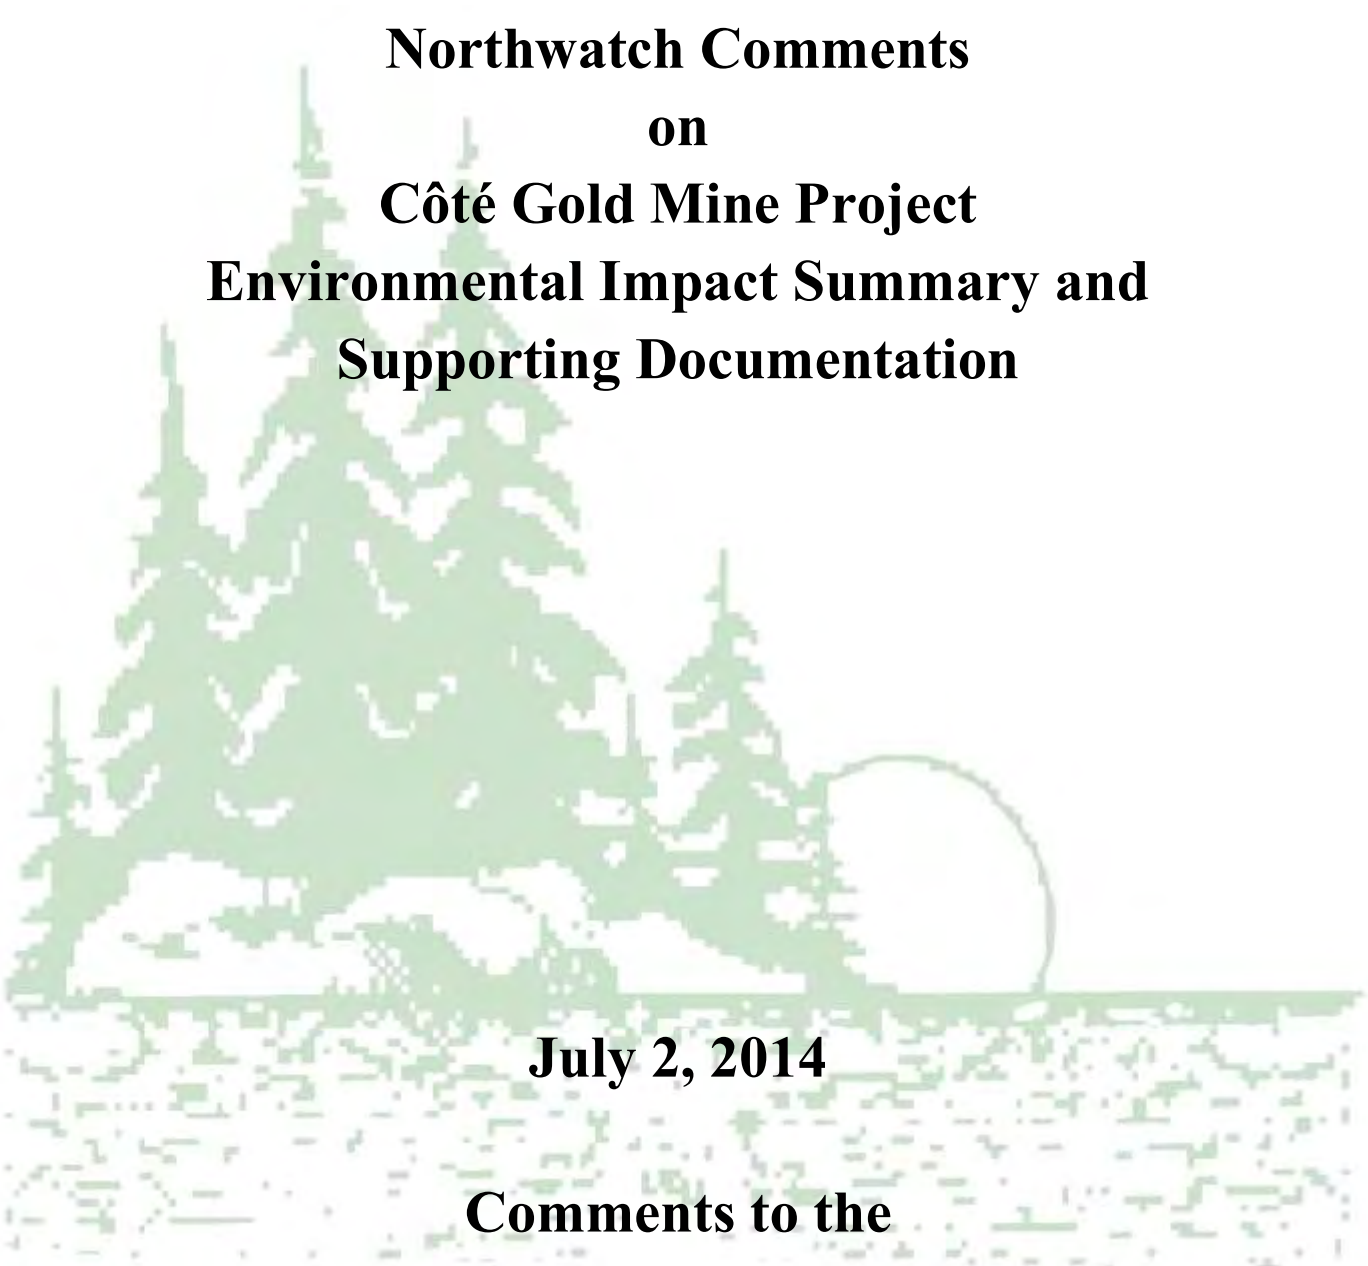
Northwatch's interest is in the environmental footprint of the proposed project, and the social and environmental costs that might be incurred as a result of the project, including lost opportunity costs. The Côté Lake Gold Mine Project will be a large lower-grade, high-tonnage project; projects of this nature have a large environmental footprint relative to the volume of gold production and are generally known to be marginal projects with a high potential for early closure, including unplanned closure prior to completion of closure activities. In particular, we are concerned about mining legacies already within the Project site and area, the intention to use natural water bodies for deposit of mining wastes, and the potential for acid generation and associated metal leaching.

We have reviewed the a summary of the proponent's Environmental Impact Statement (EIS) and various sections of the Environmental Impact Statement and EIS appendices

related to potential fisheries impacts and the potential for acid mine drainage related to this project. Our findings are outlined in the attached brief.

Thank you for your consideration of our comments and concerns. Please do not hesitate to contact me if you would like any additional detail or clarification. We look forward to contributing to future stages of this review, and to helping to ensure that if the Côté Lake Gold Mine Project is to proceed it will do so only in a manner which minimizes environmental impacts and maximizes social benefits for area residents and rights holders.

Sincerely,



[redacted]

Brennain Lloyd

Northwatch Comments
on
Côté Gold Mine Project
Environmental Impact Summary and Supporting Documentation

July 2, 2014

Comments to the
Canadian Environmental Assessment Agency

Box 282, North Bay ON P1B 8H2 | tel 705 497 0373 | northwatch@northwatch.org | www.northwatch.org

1. Introduction

Northwatch is a public interest organization concerned with environmental protection and social development in northeastern Ontario. Founded in 1988 to provide a representative regional voice in environmental decision-making and to address regional concerns with respect to energy, waste, mining and forestry related activities and initiatives, we have a long term and consistent interest in the mining sequence and its social and environmental costs and benefits, including mineral exploration, mine development, operation and closure, and metals processing.

On June 2, 2014 the Canadian Environmental Assessment Agency invited the public to comment on the potential environmental effects of the Côté Gold Mine Project and the proposed measures to prevent or mitigate those effects as described in a summary of the proponent's Environmental Impact Statement (EIS). The Canadian Environmental Assessment Agency is conducting a federal environmental assessment of the proposed Côté Gold Mine Project, located in northeastern Ontario, under the provisions of the provisions of the *Canadian Environmental Assessment Act, 2012* (CEAA2012).

IAMGOLD is proposing the construction, operation, and decommissioning of an open-pit gold mine and on-site metal mill with a mine and mill life of approximately 15 years. The proposed Côté Gold Mine Project, located 20 kilometers southwest of the community of Gogama in northeastern Ontario, would have an ore production capacity of 60,000 tonnes per day. The on-site metal mill would have an ore input capacity of 60,000 tonnes per day.

Northwatch's interest is in the environmental footprint of the proposed project, and the social and environmental costs that might be incurred as a result of the project, including lost opportunity costs. The Côté Lake Gold Mine Project will be a large lower-grade, high-tonnage project; projects of this nature have a large environmental footprint relative to the volume of gold production and are generally known to be marginal projects with a high potential for early closure, including unplanned closure prior to completion of closure activities. In particular, we are concerned about mining legacies already within the Project site and area, the intention to use natural water bodies for deposit of mining wastes, and the potential for acid generation and associated metal leaching.

We have reviewed the a summary of the proponent's Environmental Impact Statement (EIS) and various sections of the Environmental Impact Statement and EIS appendices related to potential fisheries impacts and the potential for acid mine drainage related to this project. Our findings are outlined in the following sections:

- Section 3. Review of Environmental Impact Statement Summary
- Section 4. Review of Acid Mine Drainage Potential
- Section 5. Review of Fisheries Impacts
- Section 6. Review of Social and Economic Factors, and
- Section 7. Conclusions

2. Context

The Côté Lake Gold Mine Project will be a large lower-grade, high-tonnage project; projects of this nature have a large environmental footprint relative to the volume of gold production and are generally known to be marginal projects with a high potential for early closure, including unplanned closure prior to completion of closure activities. In particular, we are concerned about mining legacies already within the Project site and area, the intention to use natural water bodies for deposit of mining wastes, and the potential for acid generation and associated metal leaching.

Northwatch's interest is in the environmental footprint of the proposed project, and the social and environmental costs that might be incurred as a result of the project, including lost opportunity costs.

We are familiar with the mine site and the previous operations of Trelawney Mining's "Chester Project" at the same location, having conducted a site visit in mid-2010. In 2013 we reviewed and commented on the IAMGOLD's project description for the Côté Gold Mine Project. In preparing those comments we reviewed:

- the Executive Summary of the Project Description as made available on the CEAA web site
- the project information available on the Major Project Management Office (MPMO) web site
- the project information available on IAMGOLD Corporation's web site
- the NI 43-101 Report dated October 2012 on the Côté Gold Mine Project as posted on the SEDAR web site
- Northwatch files and documents related to the Chester Project

Based on the information noted above, we identified the following as areas of environmental concern during our 2013 review:

- The Côté Lake Gold Mine will be a large lower-grade, high-tonnage project; projects of this nature have a large environmental footprint relative to the volume of gold production and are generally known to be marginal projects with a high potential for early closure, including unplanned closure prior to completion of closure activities
- at less than one gram per tonne in both the indicated and inferred resource estimates the project is extremely vulnerable to market fluctuations, and so at risk of unplanned and incomplete closure, as per the previous point
- There have been a series of mine development efforts on these same properties over many decades; in some cases, infrastructure has been developed without the project ever going to production; these types of projects carry additional environmental risk due to the potential for closure activities not being completed
- The infrastructure needs of this Project includes the development of a new transmission corridor as power supply; this extends the environmental footprint of the project over a very large area
- The proponent anticipates requesting to use a natural water body for the deposit of mining wastes; this will presumably trigger a review related to a request to amend Schedule 2 of the Metal Mining Effluent Regulation under the Fisheries Act, but serves as indicator of serious environmental impacts that will be result from the project

- While the Proponent is currently speculating that the waste rock and ore will not be acid generating, this has not yet been established; the potential for acid generation and associated metal leaching requires serious investigation, given the toxic and long lasting impacts of this phenomena
- Several water bodies inhabited by multiple fish species will be lost if this project were to proceed as currently proposed, including the entire loss of Côté Lake and Clam Creek, significant losses of sections or areas of Mollie River, Bagsverd Creek, Clam Lake and Three Ducks Lake, and impacts on two unnamed lakes, and on Bagsverd Lake, Little Clam Lake, Chester Lake and Mesomikenda Lake.
- The combination of production rate and mine life raise serious questions related to the social and economic benefits of the project as proposed, including questions about the comparative social and economic benefits of alternate means of carrying out the project
- The accumulation of mining properties in the immediate area by IAMGOLD requires a cumulative effects assessment be undertaken as part of evaluating the Côté Gold Project (the NI 43-101 Report dated October 2012 recommended "that work continue to be advanced, at the Côté Gold deposit, on the Chester Property, and on the other property groups"; we similarly recommended in our 2013 comments on the Project Description that these projects be bundled for a single environmental assessment and a thorough cumulative effects assessment)

All of the concerns persist in 2014; none of these concerns have been allayed by the information provided by IAMGOLD's EIS Summary of Environmental Impact Statement documents or appendices.

3. Review of Environmental Impact Statement Summary

On June 2, 2014 the Canadian Environmental Assessment Agency invited the public to comment on the potential environmental effects of the Côté Gold Mine Project and the proposed measures to prevent or mitigate those effects as described in a summary of the proponent's Environmental Impact Statement (emphasis added).

The Environmental Impact Statement (EIS) Summary is a 124 page document prepared for IAMGOLD by the consulting firm Amec and dated May 2014.[1] The document includes approximately 40 pages of text, tables, figures and images purportedly summarizing the project and an approximately 80 page long appendices which is comprised of a table titled "Impact Assessment Matrix for the Operations Phase". It does not include a table of contents, foot notes, references, or a glossary.

In general terms, we found the EIS Summary to be a weak document. In many instances the descriptions and statements included in the EIS Summary are either wholly inconclusive – it could be this or it could be that – or so very generalized that they read as generic descriptions which could be applied to almost all mine projects, and so tell the reader very little about the Côté Gold Mine Project in particular.

The following examples were selected to illustrate these failings. This section does not seek to catalogue the deficiencies, but simply to provide examples and discussion as support of the more generally stated criticism expressed in the previous paragraph.

The preliminary site layout (see Figure ES-2) proposes to place the required mine-related facilities in close proximity to the open pit, to the extent practicable, on lands that are leased and/or, on patented lands held fully and/or jointly by IAMGOLD [EIS Summary Page ES-3]

This description tells the reader little to nothing about the actual land ownership. The statement that facilities will be "in close proximity … to the extent practicable" is a wholly subjective statement. The description of land ownership offers all options and identifies none in terms of tenure / ownership arrangements.

Open pit mining operations will occur at a rate of approximately 60,000 tonnes of ore per day. Overburden, mine rock and low grade ore extracted from the open pit will be stockpiled in a nearby mine rock area (MRA). [EIS Summary Page ES-3]

The proposed production rate of 60,000 tonnes per day is high. No where in the EIS summary is there any discussion of why the proponent has set such a high production rate, or is there a discussion of alternatives means with respect to the production rate, i.e. extending the operating period of the mine with a lower production rate.

Excess site water will be discharged to Bagsverd Creek via a polishing pond and/or additional water treatment, if required. [EIS Summary Page ES-4]

[1] As posted at http://www.ceaa.gc.ca/050/documents/p80036/99310E.pdf

Again, this form of non-committal statement of two different options as if both are equally possible indicates that the Project is not yet sufficiently developed or designed to be moving through an evaluation process.

Such discharge will meet applicable Federal and Provincial effluent discharge requirements a nd will be protective of receiving water aquatic life.

This statement is completely uninformative, as it must surely apply to all mine projects equally. What mine proponent would propose that mine be designed and developed from the outset to NOT meet effluent discharge requirements, or to NOT be protective of the receiving water aquatic life.

Non-hazardous domestic solid wastes will likely be deposited in an on-site landfill, unless a suita ble off-site landfill with sufficient capacity is identified.

Another statement which is completely uninformative, as it must surely apply to all mine projects equally. Obviously solid waste will have to be dealt with, either on-site or off-site. To state that solid waste will be dealt with either on-site or off-site provides no actual information about the Project or its management.

The objective of closure is to reclaim the Project site area to as near a naturalized and productive condition as possible upon completion of mining.

Again, this statement is completely uninformative, as it must surely apply to all mine projects equally. This is a provincial requirement, albeit stated even more generally that the regulations.

The decision to proceed with construction will depend on the Project economics, which is based on the projected gold price.

There is no description or actual discussion of project economics in EIS summary, outside of the preceding statement about project economics being based on the projected price of gold. The poor economics of the project - resource estimated based on a $1600/oz gold but we are in a $1250/oz gold world - means the deposit as described is not likely to be mined in one continuous life-of-mine timeline, if at all.

Table ES-1 identifies two bats - Little Brown Myotis and Northern Myotis – as endangered species. E

Two endangered species were identified, but no protection strategy was described.

"…cultural resources that may be affected by the Project were identified, including a wildlife point (bald eagle nest), Portage
route, waterfowl hunting route and a waterfowl hunting point …

Other resources that may be used by the Mattagami and Flying Post First Nation in the Project area include pickerel, moose, ducks, partridge (grouse), and blueberries….Twelve cultural heritage landscapes and 19 built heritage resources were ide ntified within the regional study area. These landscapes are: five remnants of Culturally Modified Trees (CMT) that served as Aboriginal and early Euro Canadian trail markers; and seven remains of early trail systems, reflected today in open corridors through wooded areas. [EIS page ES-19]

The EIS summary identifies numerous cultural values that could be adversely impacted by the Project, but provides no discussion of protection or retention strategies.

High commodity prices have strengthened the regional study areas economy over the last decade, particularly in urban areas, which have also benefited economically from their role as regional service hubs. [EIS page ES-20]

The description of the regional and local economy appear to be wholly focused on the mining industry, rather than the whole economy. For example, the descriptions of the regional economy contain no discussion of the greatly diminished forest industry, and the shrinking effect that the collapse of the forest industry has had on the economy of northern Ontario.

From an overall perspective, the preferred alternative is to proceed with the Project in the near term. Although there is essentially no differences in environmental effects associated with the alternative of proceeding with the Project as planned versus timing commencement of the Project with improved market conditions. ES 22

Operating a mine at the economic margin can have serious environmental and social implications, and the various scenarios should be addressed in detail. For example, the current site layout is extremely broad brush, and gives no indicate that the tailings, waste rock and low grade ore stockpile would be designed to “grow” in stages, and accommodate non-continuous operations. In economically marginal mines, particular attention should be paid to the sequencing of operations. For example, potentially acid generating material should be identified and processed early in the operating life of the project, so when the "early shutdown" occurs, the material of concern is already located in a portion of the site where it can be encapsulated in non-acid generating material, or subject to other isolation and containment technologies. There is no indication that this is part of the operating strategy for this project, despite it being a clear candidate for every strategy that could be pro-actively applied in an economically marginal mine to minimize environmental impacts that could be associated with early or unplanned shutdowns.

Table ES 2: Summary of Alternative Methods for the Project (contd) GENERAL

The table lacks any substantive support, including references or actual data.

Additional Comments

- Like IAMGOLD's 2013 project description, the EIS summary included no mention of the extensive disturbance already on site, and the considerable infrastructure that was established by its predecessor Trelawney Mining, including the establishment of treatment ponds prior to any permit having been issued and the development of extensive mining infrastructure prior to even applying for advanced exploration permit (i.e. a closure plan for advanced exploration)
- Like IAMGOLD's 2013 project description, the EIS summary does not include any discussion or description of the historic mining activities on the properties and any related environmental legacies, including from production from the Young-Shannon, Murgold-Chesbar, and Jack Rabbit properties and as may be associated with the various optioned properties, such as the Sheridan Option
- Like IAMGOLD's 2013 project description, the EIS summary does not include discussion of the development known as "the Chester Property, including the "Chester 1 zone", or the several other contiguous m ining properties assembled by Trelawney and acquired by IAMGOLD, which – if to be developed – require consideration as part of a cumulative effects assessment of the Côté Gold Project

4. Review of Acid Mine Drainage Potential

Northwatch retained Mr. Wm. Paul Robinson to review the potential for acid mine drainage related to this project. The appropriate prediction and management of acid mine drainage is a key concern, given the long lasting impacts of acid generation and associated metal leaching. The following section outlines Mr. Robinson's findings, beginning with a summary identification of key concerns which are outlined in more detail later in this section:

- Sulfide minerals occur in most rock types that represent the bulk of material proposed for extraction at the Côté Lake project
- Concerns about adequacy of kinetic testing of acid generation potential
- Concerns about adequacy of acid generation sampling and analysis methods
- Humidity cell tests have not been conducted for all rock types with sulfide mineral content identified at the Côté Lake site.
- The humidity cell tests described in App E are not complete as tests of 34 week duration are not sufficient for a full test of long-term acid generation potential and data in App E was only reported for 30 weeks
- Rising trends for metal releases from Humidity Cell tests are not acknowledged or addressed in Draft EA
- IMG sampling for acid generation potential does not include samples from large portions of the proposed open pit
- Concerns about underestimating PAG material and lack of reasonable use of best management practices to isolate PAG materials from the environment
- The Draft EA fails to consider alternatives to the proposed scale of mining to be conducted as the current the price of gold is significantly less than the price that would support "reasonable prospects for economic extraction" as identified by IAMGOLD Consultants
- Cost and financial guarantee for chemical treatment of mine water identified as a contingency are not identified

The scope of the Côté Gold Mine Project addressed in the Draft Environmental Assessment (Draft EA) Project Description (Doc number 99215E) at p. 5-2 is:

> *"The current open pit design proposes a final pit measuring approximately 210 ha (2.1 km2) with a depth of approximately 550 m. Open pit mining will occur at a mining rate of approximately 60,000 tonnes/day (tpd) of ore production. Extraction of the ore through pit development will result in the production of an approximately estimated 20 million tonnes (Mt) of overburden and 850 Mt of mine rock. As currently proposed, open pit mining will occur over an approximate 15 year period."*

Based on this description, the project proponents propose to generate 850,000,000 tons of waste rock and 20,000,000 tons of overburden. As described, project proponents propose to generate roughly 300,000,000 tons of tailings as they operation at 60,000 tons/day for 15 years. (60,000 tons per mill throughput x 15 x 365 = 328,500,000 tons of tailings)

4.1 Sulfide minerals occur in most rock types that represent the bulk of material proposed for extraction at the Côté Lake project.

A wide variety of sulfide minerals have been identified in the waste and mineralized material at the Côté mine site.

The Draft Environmental Assessment for the Côté mine project (DEA) Appendix E – Geochemical Characterization Report (App E) p. 3-3 – reports that pyrite and chalcopyrite and other sulfide minerals occur in most rock types.

Pyrite, an iron sulfide mineral, and chalcopyrite, a copper iron sulfide mineral, are identified in most of the rock types listed in App E Section 3.4 (p. 3-1) including tonalite, breccias – including hydrothermal breccia, dioritic magmatic breccia, magmatic mixing breccia, and heterolithic quartz coarbonate breccia, diabase dykes, mafic dykes, intermediate and felsic dykes,

4.2 Concerns about adequacy of kinetic testing of acid generation potential

Kinetic testing of acid generation potential is critically important to acid generation potential investigation as it is the means for assessment of long-term acid drainage potential.

The acid drainage production guidance referenced in App E is "Prediction Manual for Drainage Chemistry from Sulphidic Geologic Materials," MEND/NEDEM, 2009 (MEND 2009). At p. 18-1, MEND 2009 reports that, "for sulphidic geologic materials, the well-flushed humidity cell is the recommended kinetic test for predicting primary reaction rates under aerobic weathering conditions."

App E states, at p. 22, that, "there are no criteria that are directly applicable to assess metal leaching data from kinetic tests such as humidity cells or field test cells. Kinetic test results must be interpreted and are informative in terms of rates of sulphide oxidation, neutralization potential depletion and metal leaching rates; site-specific PAG and NPAG thresholds; and interpreted timing of the onset of acidic conditions in PAG materials."

MEND 2009 provides criteria that are directly applicable to assessing metal leaching data from kinetic test such as humidity test and field test cells. No rationale for ignoring criteria identified in MEND 2009 particularly since that document is cited in App E.

MEND 2009 states:

> *"One of the major problems with humidity cell work in the past was the short duration of the tests. Kinetic tests should be operated until weekly rates become relatively stable. For humidity cells, this can require at least 40 weeks of testing and may require more than a year. In order to remove the effect of natural weekly variations, stable rates are arbitrarily defined as the average of the last five weeks of testing. Rates should be compiled into a table for ease of prediction and for reporting.*

> *"Calculations of the time to NP depletion and ARD onset include the inherent assumption that the measured "stable" rates will persist. This allows the results to be extrapolated into the future. Unfortunately, there is very little long term data to check this assumption.*
>
> *"Studies have indicated that stable rates from humidity cells can persist within a factor of two for at least five years (Day, 1994). Rates can not remain the same forever; however, if the mineralogical data shows the contributing minerals will not be exhausted, it can be assumed that the calculated rates, which will be used for predictions of drainage chemistry, will persist for decades. The accuracy of this assumption can be addressed by ongoing testing and monitoring." MEND 2009 p. 18-12, p. 486 of 579) (Emphasis added)*

In contrast to the length of humidity cell testing recommended in MEND 2009, the humidity cell test data described in App E was described as being compiled for a 34 week-long period (see App E p. 5-4) but reported as 30 week data in App E's Appendix B.

This length of time for data collection is inappropriately short for determination of acid drainage potential using humidity cell testing methods according to the guidance document cited in App E.

IAMGOLD should be required to report the results of continued humidity cell testing following the 34-week period addressed in App E and continue humidity cell testing for a period of 2 – 5 years, or until measured stable results persist.

4.3 Concerns about adequacy of acid generation sampling and analysis methods

IAMGOLD, in App E, provides only 14 humidity cell tests to represent more than 810,000,000 tons of mine rock, a sample density that does not provide for either spatial or mineralogical diversity in the mine rock.

App E at p. 5-3 says, "Humidity cell testing was conducted on fourteen composite samples selected by Knight Piésold. The humidity cells consisted of composite samples of 3 to 4 segments of half-core ranging from 2 to 6 m in length. The cells contain material from four lithological rock units, including tonalite, diorite, diorite breccia and magma mixing breccia."

One humidity cell test IAMGOLD determined was potentially acid generating in App E that says, "For HC5, the time to NP [neutralizing potential] depletion was calculated to be approximately 50 years." (App. E – p.7-11)

Given that the mine rock has been determined to have acidic generating potential and other major rock types in the mine rock contain sulfide minerals, too few humidity cell tests have been conducted to reflect the variety with the rock types at the project.

The mere 14 humidity cell test are not a sufficient number of tests to responsibly represent diversity within the rock types at the proposed project.

Of the 810,000,000 tons of mine rock proposed to be extracted at the project, IAMGOLD lists Tonalite is represented as 64% of in pit mine rock, Diorite as 20% of mine rock, diorite breccia as 7.9% and magma mixing breccia as 1.1% of mine rock (App E at p. 5-9). These 14 tests are represented as reflecting acid generating potential for up to 518,000,000 tons of tonalite, 162,000,000 tons of diorite, 64,000,000 tons of diorite breccia and 8,910,000 tons of magma mixing breccia.

4.4 Humidity cell tests have not been conducted for all rock types with sulfide mineral content identified at the Côté Lake site

Rock types with identified pyrite or chalcopyrite or other sulfide mineral content included Tonalite, Breccias – including hydrothermal breccia, dioritic magmatic breccia, magmatic mixing breccia, and heterolithic quartz carbonate breccia, diabase dykes, mafic dykes, intermediate and felsic dykes. Therefore humidity cells tests have not been conducted for all sulfide mineral containing rock types identified in the proposed pit including hydrothermal breccia, and heterolithic quartz carbonate breccia, diabase dykes, mafic dykes, intermediate and felsic dykes. See App E p. 3-1 – 3-13, P. 16 – 18

An additional suite of long-term humidity cell tests should be conducted to insure all rock types with identified sulfide mineral content at the Côté Lake project site are subject to long-term humidity cell tests and that the full range sulfide mineral content for each rock type are subject to representative long-term kinetic tests of acid generation potential.

4.5 The humidity cell tests described in App E are not complete as tests of 34 week duration are not sufficient for a full test of long-term acid generation potential and data in App E was only reported for 30 weeks

App E at p. 7-10, p. 58, says, "…"Fourteen humidity cell were initiated by Knight Piesold in December 2012 and 34 weeks of data has been collected and analyzed to date."

The graphics presented as figures in App B of App E, beginning at p. 169 of 666 of App E, show the humidity cell data shows only 30 weeks of data, more than 10% less than 34 weeks that reported on App E p. 7-10, p. 58. This difference is not acknowledged in App E or elsewhere in the Draft EA.

4.6 Rising trends for metal releases from Humidity Cell tests are not acknowledged or addressed in DEA

Humidity cell metal release rate data presented in App B of App E showed rising trends for six metals and other constituents loading in the 25th -30th week after start of humidity cell monitoring. These include rising trends for the following HC samples:

- HC-11 Diorite Breccia for Copper – Graphic B-14 (p. 197);

- HC-2 Tonalite for Molybdenum Graphic B-19 (202);
- HC-1 Tonalite, HC-2 Tonalite (and perhaps HC-7 Magma mixing Breccia) – Phosphorus graphic B-22, (P. 205);
- HC-11 Diorite breccia and HC-3 Tonalite for Lead Graphic B-23 (p. 206);
- HC-6 – Tonalite and other not identifiable for – Antimony Graphic B-24) p. 207;
- HC-1 Tonalite for Zinc Graphic B-36 (P. 219)

These examples of humidity cell test data with rising metal or other constituent concentration trends are identified for 6 of the 13 humidity cell samples other than the cell HC-5 that is acknowledged to have acid generation potential in App E.

As humidity cell tests are designed to study long-term rates of acid generation potential, the tests reported have not been conducted for a sufficient length of time to determine the acid generation potential of the mine rock at the Côté Lake project.

Trends indicating rising metal concentrations, or concentrations of other constituents of concern is not acknowledged in App E, much less considered for their implications for long-term acid drainage potential.

IAMGOLD should present all data gathered from humidity cell tests and identify data reflecting rising trends in release of metals from those tests.

4.7 IAMGOLD sampling for acid generation potential does not include samples from large portions of the proposed open pit

Figures 6 and 7 in App E at p. 136 and 137 of 666 show the location of samples used in the acid generation potential investigation by IAMGOLD. These figures show that large areas of the pit, particularly around the perimeter of the pit, have had no samples analyzed in the Geochemical Characterization Report – App E.

The Draft EA and Geochemical Characterizations Report should be revised to include data from samples that represent the full range of material to be encountered during the proposed project, not merely readily available samples from previous drilling activity. No figure are included that illustrate whether the sampling program described in App E includes all the rock types in the proposed pit as neither the DEA nor App E include plan or cross-sectional views that illustrate the distribute of rock types in the proposed pit.

4.8 Concerns about underestimating PAG material and lack of reasonable use of best management practices to isolate PAG materials from the environment

The DEA describes the acid generation potential at the Côté Lake Project as ranging from none to 8% of the mine rock projected for extraction.

At P. 5-43, the Draft EA PD states, “Current geochemical analyses indicate that mine rock is non-acid generating (NAG). “

The Draft EA at p. 5-18 states, ““In general, the majority of the rock analysed to date from the open pit area (92%) is not acid- generating and it is expected that the tailings will be non-acid generating; however, further testing is currently ongoing to better characterize the acid generating potential of the ore and the processed tailings.”

No information on the nature and scope of additional testing or when data from additional testing may be available for review and analysis.

Rising trends in metal releases from humidity cells other than HC-5 reported in App B of App E appears to show that a significantly larger fraction of the material tested may have acid drainage potential that acknowledged by IAMGOLD in the DRAFT EA.

The volume of potential acid generating material identified by IAMGOLD is large and should be should be managed using “best management practices” for prevention of acid generation in waste rock such as segregation or isolation of potentially acid generating material, rather that merely mixing that material in with other mine waste as is proposed in the DRAFT EA.

If the 92% non-acid generating assumption is correct, then on the order of 64 million tons of mine waste is acknowledged to have acid generating potential by IAMGOLD.

Sadly, the Draft EA propose no specific management practices for this material, as the DEA Project Description (PD) at p. 5-6 at p. 6 of 50 (and elsewhere):

“Considering the limited proportion of PAG samples identified, the overall low sulphide content of the rock, and the prevalence of non acid generating rock to be produced as waste, the likelihood of net acid conditions occurring in the mine rock piles is considered to be very low. Therefore the inclusion of any PAG materials with the bulk of the waste will likely be an appropriate management method and segregation of any PAG materials does not appear to be necessary.”

IAMGOLD fails to identify when the 64 million tons of potentially acid generating rock it has identified will be produced from the mine and where it will be placed in the waste rock and low grade stockpiles. Failing to propose methods for identifying and segregating potentially acid generating rock during the life of the mine should not be considered a best management practice. In the alternative, IAMGOLD should be required to identify and segregate potentially acid generating rock as it is removed from the pit for the life of the project.

Similarly the Draft EA fails to identify any increased cost associated with segregation of PAG material, encapsulation in low acid generating material, or any other methods to minimize potential for acid generation

Rising trends in metal releases from the 6 humidity cell tests indicate potential for significantly more acid generating rock at the project site than acknowledged in the DEA.

IAMGOLD's mine plan ignores the Precautionary Principle and fails to provide a management strategy to address the currently identified PAG, much less any PAG material that may be identified in future testing.

4.9 The Draft EA fails to consider alternatives to the proposed scale of mining to be conducted as the current the price of gold is significantly less than the price that would support "reasonable prospects for economic extraction" as identified by IAMGOLD Consultants

IAMGOLD considers "cost effectiveness" an important basis for it selection among Côté Lake project design alternatives without defining cost-effectiveness in an meaningful way, and without providing any detailed analysis of life cycle costs or other measures of cost effectiveness for facility units. See Section 7 Alternatives (99217E) at p. 7-4 that says, "Cost-effectiveness relates to the overall Project costs, including capital, operation, maintenance, and closure/reclamation costs."

Cost effectiveness is certainly a critical aspect of any commercial project and IAMGOLD has not addressed cost effectiveness in a serious, either quantitative or detailed, way in the consideration of alternatives.

Cost effectiveness of the Côté Lake Project as proposed appears to be in serious jeopardy as the current, mid-2014, gold price is well below the gold price used by IAMGOLD contractors to establish "reasonable prospects for potential extraction" of the mineral resources at the site prescribed in CIM NI43-101 Guidelines and reported in the Technical Report on the Côté Lake Project, Chester Township, Ontario, Canada
NI 43-101 Report, October 2012 (2012 TR).

The high cost of mining relative to the price of gold is identified in the 2012 NI43-101 Côté Lake Project Technical Report (2012 TR) conducted for IAMGOLD (IAMGOLD) identifies "reasonable prospects for economic extraction" based a gold price of $1600/oz. See 2102 TR p. 14-1, p. 133 of 207.

The stagnation of the gold price at less than $1400/oz for the past two years is likely to result in the need for consideration of alternatives for the project with a much more serious sense of "cost effectiveness " than that provided in the Draft EA.

IAMGOLD will, as a business matter, need to reconsider the project design, project scheduling and the projected operating capacity if it is to establish "reasonable prospects for economic extraction" anywhere near, much less, below recent gold prices.

The Draft EA fails to reflect the implications of current market conditions to the proposed Côté Lake project.

Project revisions are likely to include consideration of a smaller, high grade pit with "reasonable prospects for economic extraction" based on a gold price at or sufficiently below projected gold prices to attract investment in the project. Such a high grade pit design will change the distribution of rock types to be generated at the site and may increase the percent of mine rock that is potentially acid generating.

The reduction in size of the pit waste rock and tailings facilities and the high potential for intermittent - stop and start - operations that are market price-driven will result in very different conditions at the project that that proposed in the Draft EA however no alternative to the proposed scale of the project are identified or evaluated.

Due to the large difference between recent gold prices and the gold price that would support "reasonable prospects for economic extraction," IAMGOLD is likely to defer of construction and operation of the facilities proposed as long as gold prices continues below the price identified for "reasonable prospects for economic extraction" at Côté Lake.

Identification of the portions of the mineral deposit that would provide "reasonable prospects for economic extraction" at the property under current and reasonably foreseeable market conditions are likely to require elimination of the a significant volume of low grade material from extraction and processing through increasing the gold content cut-off grade for the material to processed by the project.

As the 2012 TR cutoff grade for "reasonable prospects for economic extraction" at $1600/oz was projected at 0.3 g/t, identification of portions of the deposit that might have "reasonable prospects for economic extraction" at current gold prices is likely to result in a higher cut-off grade than 0.3% and a substantial portion of the >0.3% g/t Au material being managed as waste rock or in the "low grade " stockpile.

As this additional waste material would be exposed to oxygen and moisture if the cut off grade is raised to limit processing to higher grade (and potentially lower cost per oz to produce Au) if should be subject to acid generation potential testing for as waste rock, not as process tailings. IAMGOLD eliminated all >0.3 oz/ton mineralized rock from humidity cell testing.

IAMGOLD should be required to conduct long-term humidity cells tests on 0.3 – 0.5 g/t and 0.5 – 0.7 g/t material eliminated from the humidity cell testing as noted at App E p. 5-2 as that material is likely to fractured in place and exposed to the elements or managed as waste rock or "low grade mill feed" whether in alternative pit configurations not considered in the Draft EA. The alternatives include a resized higher grade configuration of the pit, potential long-term stand-by conditions associated with start and stop operation cycle reflecting gold price constraints, or early termination of operations not in the DEA.

4.10 Cost and financial guarantee for chemical treatment of mine water identified as a contingency are not identified

Though IAMGOLD proposes no management practices to isolate or encapsulate potentially acid generating material, it does acknowledge the possibly that a chemical treatment plant for contaminated mine waters may be needed. The PD also provides that, at p 5-8,

> *"In the case of mine rock, provide for an optimal closure scenario for potential ARD/ML management using passive systems to the extent possible, but with a contingency arrangement for chemical treatment if and where required."*

The Draft EA fails to provide cost estimates for the chemical treatment system that may be required as a contingency or identify how this contingency will be incorporated into any financial guarantee associated with the project necessary to guarantee effective closure and post-closure actions at the site.

5. Review of Fisheries Impacts

Northwatch retained Mr. Muhammad Yamin Janjua to review the potential for fisheries impacts related to this project, particularly associated anticipated request to use a natural water body for the deposit of mining wastes and the anticipated loss of several water bodies inhabited by multiple fish species if this project were to proceed as currently proposed. The following section outlines Mr. Janjua's findings, beginning with a summary identification of key concerns which are outlined in more detail later in this section:

- The project activities have potential to affect fish, fish habitat and aquatic species that are covered by the Fisheries Act. Most of these activities and potential impacts are covered in the EIA report.
- Fish baseline survey methodologies are not consistent, sample size is small, and fish & habitat analysis were conducted in summer season only.
- Proper information on fish population dynamics, other value aquatic ecosystem components and productivity is lacking.
- Compensation plan is not available and information provided is insufficient to exhibit success in realignment and restoring aquatic resources as required by the Fisheries Act.

5.1 Baseline Information

The EIA document and additional information provided have indicated the possible effects of the development of a gold mine and related infrastructure components expected to affect fish communities and the habitat, and how those effects will be mitigated and compensated. The objective of habitat compensation measures associated with the project is to create habitat which achieves the biotic and abiotic habitat requirements of the resident fish species and minimizes the risk of adverse effects to the environment. It requires a detailed quantitative fish and fish habitat assessments of water bodies requiring compensation in order to assess the quality and extent of habitat that will potentially be lost. The Aquatic Biology Technical Support Documents (Appendix N), Aquatic Baseline Report (Appendix C) and Water Quality Technical Support Document (Appendix J) provides a database on which EIA for fish and fish habitat is based. The aquatic biology baseline survey methodology to study fish population dynamics is not standard and constant, and the sample size is very small.

Most of the baseline data was collected during the summer months only and no studies were done during the spawning season. Important information on fish population dynamics are lacking. Much of the information on fish biology and ecology is literature based and enough field studies were not done on other important aspects of fish biology. Some valued aquatic ecosystem

components are missing in baseline study. No clear information is provided about the productivity of these water bodies.

5.2 Specific Comments

Issue #1: Fish collection and estimation methods

Reference: Aquatic baseline report

Concern: Fishing equipment and techniques are provided in Table 2.2 (Appendix C, Appendix N). It appears that experimental gillnet used for survey were not of standard mesh sizes required for index gill netting. Maximum mesh size was 4". No detail of mesh size except minimum and maximum size is provided. Not using standard walleye index gillnets may have created a bias towards less abundance of walleye and whitefish. Standard index gill netting recommends 8 sites in a water body < 200 however, experimental gill netting was done on 2-3 sites in each water body except for Côté Lake. The duration of gillnet setting was not sufficiently long enough to catch representative number, if their abundance was low. There is no information on depth of gillnets or other fishing gears used per water body. Electrofishing details are also lacking (current used, settings). This inconsistency and lack of details will make it difficult for stakeholders to compare results across the sites, as a benchmark from which change can be quantified, compare the different project phases and be assured that the aquatic resources are restored as required by the Fisheries Act. Were the standards for index gill netting, electrofishing, and trapping followed? A rationale behind the methods and techniques, sample size, and frequency is lacking.

Issue # 2: Fish population dynamics

Reference: Aquatic Baseline Report (Appendix N, 6.2)

Concern: To monitor potential changes in fish populations resulting from physical, chemical, or biological stressors in the LSA, fish population attributes such as growth, reproduction, and survival need to be monitored. Fish baseline studies conducted to examine trends in abundance and population variables for key indicator fish species may be not enough. Length and age frequency data could be helpful in identifying the age or size classes potentially affected by stressors in the environment. However, no such data is available from the baseline study. Length was measured for selective subsamples only. Age studies were done for only 5 fish per water body (Appendix N, 2.2.4) and that was not the standard otolith age. This data is insufficient and cannot provide adequate baseline information on fish growth. Experimental gillnetting was conducted on 2-3 few sites in each water body for short duration and may not provide true

relative abundance (CPUE) for large bodied fish except for the Côté Lake. No proper data was collected on fish sex ratio, maturity and reproduction.

Issue # 4: Lack of seasonal information
Reference: Fish and Fish Habitat/ Aquatic Baseline Report
Concern: Base line survey and monitoring was not done every season and most of the sampling was conducted in July 2012, and June and September 2013. Therefore this baseline data may not represent the seasonal changes and conditions during fall, winter and spring. The document hasn't mentioned any survey conducted in spring or fall. One season information may not be enough to design proper compensation plan. Further field studies are required especially in the spawning season of large bodied fish.

Issue # 5: Fish Spawning Survey
Reference: Fish habitat
Concern: The EIA and Appendix C (6, Table 2.4, Table A1) provide some information about the spawning habitat requirements and locations of some large body fish species. However, the supporting document doesn't mention any survey in spring or fall, i.e. the spawning season of many large body fish species. The identified spawning locations are assumed on the basis of literature description. The document mentions that the created habitat will be designed to meet the spawning, rearing and overwintering requirements of the resident fish (Table 9.8). However it appears that no actual field observations on maturity and spawning were made. Therefore, there is uncertainty with the information provided, especially for lake whitefish and walleye, for whom spawning habitat is already limited and expected to be affected by the project activities. A special survey during spawning months may be useful in providing additional information.

Issue # 6: Impact of project activities on benthic invertebrates
Reference: Fish Habitat
Concern: Aquatic invertebrates are one of the most sensitive to environmental contaminants and are used as indicators of environmental degradation. Baseline study includes sampling and characterizing benthic invertebrates in all potentially impacted lakes and streams. Benthic invertebrate baseline data and indices are provided in Aquatic Baseline Report (Appendix C, 5.5). However, the assessment of potential impact of project activities on benthic invertebrates is missing in the EIA documents. Formulae for determining Simpson's evenness index is not provided. It may be useful to calculate Shannon-Weiner index as well, as it is generally more widely used in the literature and could be useful for comparisons.

Issue # 7: Other valued ecosystem components
Reference: Fish habitat
Concern: Other than macrophytes, fish, and benthic invertebrates, there is no information on the other valued aquatic ecosystem components. The EIA didn't not identify plankton as valued component of these aquatic ecosystems. Zooplankton are an important food chain component and environment change indicators. The presence of small-bodied fish in the study area indicates that zooplankton are available for young of year and juvenile fish. Inclusion of plankton in baseline study may be helpful in better evaluating lake productivity and comparisons.

Issue # 8: Productive capacity of water bodies
Reference: Fish Habitat
Concern: Fish in Côté Lake will be relocated to other identified water bodies. The EIA document states that the productive capacity of the lakes and streams is sufficiently high and the addition of Côté Lake fish in other water bodies should not impact the condition of the existing fish (Table 9.8). As a part of compensation, habitat will be created in other areas of the watershed to offset the loss of Côté Lake. It is a requirement under the Fisheries Act to provide equivalent productive capacity. The EIA report states that the watercourse realignments will be designed to ensure productive capacity within the LSA is maintained (Appendix N, 4.3). However, the EIA report and baseline study do not properly address the existing productive capacity of the water bodies being impacted by project, adjacent lakes and proposed rearing channels. Lake productivity is governed by many abiotic and biotic factors, both internal and external to lake ecosystems. DFO definition of productive capacity acknowledges the importance of food and trophic interactions. Existing baseline information is not enough and additional studies are required to establish productivity level of these water bodies.

Issue # 9: Lack of supporting data on food web and fish diet
Reference: Fish Habitat
Concern: EIA document states that the compensation/offsetting plans will consider not only the physical habitat requirements but also the biological requirements including food base (Appendix N, 4.2). However, no baseline information is provided on fish diet composition, their trophic interactions and important prey species and groups in the LSA. DFO definition of productive capacity acknowledges the importance of food and trophic interactions. This information is required to propose and evaluate proper habitat compensation plan.

Issue # 10: Lack of ecosystem approach

Reference: Fish habitat

Concern: When fish will be relocated in other lakes it may cause impacts on existing fish and other species in the recipient lakes and may disturb these aquatic ecosystems. No information is available to evaluate trophic interactions in these ecosystems. Baseline studies haven't identified the keystone texa or species in these ecosystems. Lake and food web productivity is regulated by not only the limiting nutrients and light for autotrophic production, but also by the efficiency of trophic energy transfers which are governed by the abundance and species composition of prey items at each trophic level. More information is required on prey items, other components and trophic interaction.

Issue # 11: Compensating natural lotic habitat with artificial lentic habitat

Reference: Fish Habitat

Concern: Based on the proposed watercourse realignments, it is anticipated that there will be a small reduction in the lotic habitat (1,900 m) and an increase in lentic habitat (29,000 m^2) within the Local Study Area (LSA) during operations and the first stage of post-closure (9.9.2.1). It is unclear whether this includes lentic habitat assumed to be available after pit flooding in 50 years to 100 year time after mine closure. During construction of the mine, as many fish as possible will be collected from Côté Lake and relocated from all habitats that will be lost due to the development of the mine. The constructed fish habitat associated with the watercourse realignments is expected to provide spawning, rearing and adult foraging habitat for the resident fish, particularly northern pike and yellow perch. Walleye and lake whitefish are not included in the species listed in the relocation plan. Compensating natural lotic habitat with artificial lentic habitat will probably develop a different aquatic community from the one lost and does not constitute a equitable "trade".

Issue # 12: Unavailability of fisheries habitat compensation plan

Reference: Fish Habitat

Concern: The project requires habitat compensation/offsetting plans in support of a Fisheries Act Authorization. EIA document has mentioned that with the compensation, the overall effect on fish habitat is predicted to be negligible. This is based on assumptions that compensation measures will be appropriate and fully effective. The water course realignment design will offset the loss of fish habitat within the adjacent lakes or streams, to maintain the existing fish communities and fisheries. The constructed fish habitat associated with the watercourse realignments is expected to provide spawning, rearing and adult foraging habitat for the resident

fish, particularly northern pike and yellow perch. The proposal raises questions about whether adequate habitat will be available to support smaller populations of walleye, smallmouth bass and lake whitefish which are present in few selective lakes only. At present, evaluation of habitat, productive capacity, watercourse realignment design, fisheries habitat compensation plan, and future monitoring plan are not available. Only the design concepts have been developed and offsetting design are not finalised. Due to unavailability of compensation design and plan, the overall impact of the project activities on fish habitat cannot be assessed.

Issue # 13: Missing Information on methodology
Reference: Fish and Fish Habitat Methodology
Concern: In the "description of the environment" portion of the document, aquatic biology (6.4.8) methodology doesn't include survey conducted in 2013. The list of the lakes included in the 2013 survey is also missing eg. Mesomikenda Lake (6.4.8.1). Mesomikenda Lake is an important component of this project from where water will be drawn and Tailing Management Facility (TMF) will discharge during the closure phase. This portion of the report should be updated.

Issue # 14: Inadequate number of samples
Reference: Fish and Fish Habitat:
Concern: Five large bodied fish and five forage fish were targeted in each water body for aging and fish tissue analysis (6.4.8.1, Appendix N 2.4.4). These tissues were analysed for total metals. Five samples for aging are not enough to show any trend, or for comparison among the lakes. The sample size should be increased in order to strengthen the rigour of analyses performed on individual parameters. Tissue sampling and analysis may be expensive. However, compromising it can put ecosystem health at risk for aquatic life and humans. Fish aging studies are also very important to study fish growth, age class structure and age at maturity. It appears that sample numbers were kept small to avoid fish mortality in these comparatively small water bodies. However 5 samples are not enough according to any standard. At least 15-20 samples are needed to be collected to achieve some statistical significance.

Issue # 15: Long term non-lethal effects of toxins
Reference: Fish / Aquatic toxity
Concern: Maximum copper, and zinc concentrations within the mixing zone are predicted to exceed water quality benchmarks and have the potential to effect fish and aquatic life at the predicted concentrations (9.9.2.2) Impacts on aquatic ecosystems occur at much lower

concentrations of toxics than those that cause acute lethality. Endocrine disruption may result in sub-lethal effects which are not limited to fish fecundity, but can include effects on reproductive behaviour. Zinc and copper can affect aquatic biota by a variety of mechanisms, including both acute and chronic toxic effects. Increases in dissolved copper above normal background levels can reduce productivity of key links in aquatic food. Sub-lethal and toxic levels of copper and zinc can damage gills and other tissues of fish. Copper is known to depress the immune system, and is lethal for most of the invertebrates. Such sub-lethal effects may not be expressed in immediate generations. EIA does not consider other non-lethal end-points that may have intense effects on fish. The proponent argues their runoff will not lead to bioaccumulation of metals and tainting in the downstream. These conclusions are based on models and assumptions. Apparently, proposed monitoring studies are not sufficiently detailed enough to detect long run health changes in fishes.

Issue # 16: Mesomikenda Lake Water Supply
Reference: Fish Habitat
Concern: Mesomikenda Lake is also expected to provide a potential source of make-up water for use in the ore processing plant, as needed. It is expected that 7,200 m^3 /d of freshwater will be taken from the Mesomikenda Lake which will be less than 1% of annual average stream flow at the Mesomikenda lake outflow (5.10.2. and 7.3.7.4). However, the document doesn't state the approximate number of days per year for which water will be drawn. The EIA report has mentioned that the fish communities or populations within Mesomikenda Lake are not expected to have any adverse effect. However, such withdrawal could have its effects during key times of year when flow is low and peripheral habitats are stressed. This water withdrawal from Mesomikenda Lake will definitely have impacts on downstream aquatic biology and habitat.

Issue # 17: The potential effects of failure of water management facilities
Reference: Fish and Fish Habitat/ Water quality
Concern: Communities and stakeholders are concerned with potential seepage from the Tailing Management Facility (TMF) into the ground water and accidental spill into the water bodies. The EIA document states that additional test work is currently ongoing to better characterize the acid generating potential of the ore and the processed tailings to confirm the geochemical characteristics of the tailings (5.10.4). Initial test results do mention low potential of metal leaching but these analyses are based on many assumptions. EIA needs to accurately characterize the tailings that can be expected from the milling of the ore and should include detailed information regarding the selection process. Mitigation measures do mention the use of liner of

early tailing dams and along the upstream face and areas where ponds are to be maintained within the TMF. But geo-membrane lining will not be done for all TMF. The EIA documents has mentioned that seepage through the tailing will occur and will be collected at collection ponds around the perimeter of TMF and pumped back into the TMF (5.7). But the document doesn't describe this risk empirically. A breach of the tailings dam is assessed in the EIA report (13.2.7). Although the chances of such an incident are very small, they are not insignificant. Water quality would deteriorate due to resulting slurry which may contain residual of cyanide, heavy metals and ammonia. TMF may contain large volume of water on closure which will not be pumped (Table 9.5). What would be the impacts of a TMF breach on downstream water quality and fish habitat?

Issue # 18: Open pit flooding upon closure
Reference: Fish habitat/ Water quality
Concern: As per plan, upon closure, the open pit will be flooded naturally or actively to form Côté Pit Lake. It will take 100 years to flood the lake naturally. Even enhanced flooding will take 50 years to fill the pit (7.4.4.1). Mine water is expected to contain suspended solids from general mining and earth moving activities, as well as ammonia and hydrocarbon residuals from ammonium-nitrate based explosives and heavy equipment operation. Leaching of the exposed bedrock within the open pit may also potentially contribute solid and dissolved phase metals to the mine water (5.4). The pit lake will be incorporated into the main water system in 50-80 years from the project closure. Even at this phase, monthly average concentration of major ions and metals are predicted to be greater than the baseline concentrations in adjacent lakes. Total phosphorus concentration will be greater than water quality guidelines (4.6). It is unclear how monitoring of Côté Pit Lake water chemistry will be assured by the management for such an extended period of time (80-100years).

6. Conclusions

As outlined above, there are numerous concerns with the Côté Gold Mine Project, both in terms of how it has been described and its environmental assessment documented in the documented, and in terms of its anticipated environmental performance, based on the information provided in these same documents. Indeed, in some instances it is difficult to separate the poor quality of the environmental assessment from expectations of poor environmental performance of this project.

Given all of the grave concerns noted, the Agency must make a determination that either the Project is not approve-able, or that the Environmental Assessment work that has been done in support of a request for approval has been inadequate. If the Agency determines that the former is the case, then there is no option but to deny project approval. If the Agency determines that the latter is the case, then a deficiency statement should be generated, and the proponent directed to address the deficiencies of the work to date, and a second phase of the EA review could be undertaken.

Subject: Côtè Gold Project - Draft EA
Importance: High

Hello:

Please find attached the final comments from our surface water engineer. I have also attached the preliminary comments, which you should have received already last month.

The ministry's hydrologist will also be providing comments, separate from the surface water. I have asked that they provide comments by the end of this week.

Thanks,

Cindy

Reference #	Reviewer Name and Position	Ecosystem Topic	Reference to EIS/EA	Page/Section of EA	Summary of Comment/ Rationale	Proposed Action
MOE-SW07	E. Snucins, MOECC Surface Water Specialist	Surface water	Chapter 5 – Project Description	5.5.1.1 Mine Rock 5.10.6.1 Preliminary Pond Designs	*The Mine Rock section mentions ditching will be designed to collect average annual precipitation and runoff, with storage capacity under all climatic conditions.* *The Preliminary Pond Design section mentions that seepage collection ponds will be designed to store and pump water during periods of high and low flow year-round. It also states that the TMF Pond and Polishing Pond will be designed with enough capacity to withstand the Environmental Design Flood and Inflow Design Flood.*	The design capacities of the ditching and ponds should be clearly stated.
MOE-SW08	E. Snucins, MOECC Surface Water Specialist	Surface water	Chapter 5 – Project Description	5.7 Tailings Management Facility	*Prior to development topsoil will be stripped from TMF area.* Not clear if this indicates that all organics will be removed.	Indicate whether or not all organics will be removed from TMF area prior to development. If organics to remain, predict interactions with geochemistry of the material to be deposited.
MOE-SW09	E. Snucins, MOECC Surface Water Specialist	Surface water	Chapter 5 – Project Description	5.9 Aggregates	*NAG mine rock will be used in construction.* Extensive testing following accepted protocols will be needed to ensure waste rock is accurately classified based on potential for release of contaminants.	The proponent should provide contingency plan in the event that the rock used in construction is found to be source of contamination to surface water.
MOE-SW10	E. Snucins, MOECC Surface Water Specialist	Surface water	Chapter 5 – Project Description	5.10.2 Water Supply for Ore Processing Plant Operations	*This section states that Mesomikenda Lake is potential source of water and that uptake would not exceed 20% of daily flow to occur seasonally when sufficient flow available.*	Define what is meant by “when sufficient flow available”. Quantify predicted impact of the proposed water-taking on lake level, aquatic ecology and other users of Mesomikenda Lake; include also the potential for impacts downstream of Mesomikenda Lake.
MOE-SW11	E. Snucins, MOECC Surface Water Specialist	Surface water	Chapter 5 – Project Description Chapter 9 – Description of Project Effects	5.10.7 Watercourse Realignments 9.4.2.2 Operations Phase Hydrogeology 9.5.2.2 Operations Phase Hydrology and Climate	*This section discusses fish habitat compensation plan in support of federal regulations and authorizations.* *These sections note: (a) 1m groundwater drawdown contour extends 1.4 km southwest of the open pit; and (b) Along a portion of Bagsverd Creek, average annual flow is predicted to decrease by 20% due to loss of watershed area from watercourse re-alignment and development of Tailings Management Facility.* Watercourse re-alignments and other water-taking (e.g. open pit dewatering) will require provincial Permit to Take Water (PTTW). Considerations include minimum flow and water level requirements to protect natural function of aquatic ecosystems and other uses of affected watercourses.	Quantify minimum water level and flow required to maintain natural function and avoid interference with other uses of lakes, streams and wetlands potentially affected by diversion and water-taking (e.g. open pit dewatering). A monitoring and contingency plan may be needed to ensure maintenance of water level and flow.
MOE-SW12	E. Snucins, MOECC Surface Water Specialist	Surface water	Chapter 7 – Description and Rationale for Alternatives	7.3.8.3 Preferred Water Discharge Alternative	*This section identifies Bagsverd Creek as the preferred alternative for effluent discharge, citing smaller mixing zone than Mesomikenda Lake alternative, benefit of effluent volume mitigating flow reductions in Bagsverd Creek, and fewer human users.*	Provide additional information about the evaluation of alternatives for discharge location. This includes mixing zone model inputs and outputs, model-predicted mixing zone sizes, predicted concentration gradients within the

						mixing zones, biology and other users within the mixing zones, and assessment of potential toxicity (acute and chronic) to aquatic biota within the mixing zones. The comparison of alternative effluent discharge locations should consider average and worst-case scenarios of effluent discharge (volume and concentration) and receiver discharge (e.g. 7Q20), seasonal changes in runoff and stream discharge, thermal stratification of lakes, and weather conditions that might affect effluent dispersion (e.g. wind direction and speed, ice cover).
MOE-SW13	E. Snucins, MOECC Surface Water Specialist	Surface water	Chapter 7 – Description and Rationale for Alternatives	7.3.14.5 Preferred Domestic Sewage Treatment	*This section states the preferred alternative for domestic sewage treatment is package plant.* The discharge location for treated domestic sewage is not given.	Provide evaluation of alternative discharge locations for treated domestic sewage effluent. This will require collection of low-level total phosphorus data from potential receivers and evaluation of the impact of nutrient loading on total phosphorus concentrations and cold water dissolved oxygen habitat in potential receivers.
MOE-SW14	E. Snucins, MOECC Surface Water Specialist	Surface Water	Chapter 9 – Description of Project Effects	Table 9-1	*Groundwater level is listed as physical effect indicator.* Not only groundwater level, but also chemistry of groundwater discharge will potentially interact with surface water.	Add to Table 9-1 Physical Effects: changes in quantity and quality of groundwater discharging to surface water.
MOE-SW15	E. Snucins, MOECC Surface Water Specialist	Surface Water	Appendix J – Water Quality	5.2.1 Surface Water	Collection of baseline data must provide sufficient samples to characterize seasonal and annual (multi-year) variability of water chemistry at exposure (i.e. potentially affected by future effluent discharges, groundwater seepages or surface drainage) and reference locations. The lakes that are potential receptors of treated effluent (Neville Lake, Mesomikenda Lake) have few water chemistry data and none collected during summer thermal stratification. More baseline data will be necessary to support development of receiver-based effluent criteria and future effects monitoring. Mesomikenda Lake sampling has not included the narrow bay that receives the discharge from Neville Lake. The chemistry of this bay may differ from the main basins of Mesomikenda Lake that have been sampled. There are few data from reference locations that will not be affected by mine development or operations.	Obtain additional baseline data at exposure and reference locations to support development of effluent criteria and future effects monitoring. Depth-stratified sampling of lakes should occur during the period of summer thermal stratification. Additional monitoring requirements may be identified as part of the provincial approvals process.
MOE-SW16	E. Snucins, MOECC Surface Water Specialist	Surface Water	Appendix J – Water Quality	5.2.3 Sediment	The baseline sediment characterization includes major ions, metals and other parameters, but not particle size, total N, total P, and cyanide.	Add to the sediment analysis: particle size, total N, total P, cyanide.
MOE-SW17	E. Snucins, MOECC Surface Water	Surface Water	Appendix J – Water Quality	Water Quality Baseline Report 4.3.2 Water Column Profiles	*Lake profiles were sampled at 1 m intervals except lakes deeper than 40 m were profiled at 3 m intervals.*	Sampling at 3 m intervals in lakes deeper than 40 m may be acceptable if the coarser sampling begins more than 5 m below the top of the

	Specialist				Profile data collected at 3 m intervals provides coarser resolution of thermocline depths than profile data collected at 1 m intervals. This could influence the calculation of the lake trout habitat criterion of Mean Volume Weighted Hypolimnetic Dissolved Oxygen.	hypolimnion (Quinlan et al. 2005).
MOE-SW18	E. Snucins, MOECC Surface Water Specialist	Surface Water	Appendix J – Water Quality	Water Quality Baseline Report Appendix B Water Column Profile Plots	All lake profiles are labelled Bagsverd Lake.	The correct lake and basin name should be provided for each lake profile plot.
MOE-SW19	E. Snucins, MOECC Surface Water Specialist	Surface Water	Appendix J – Water Quality	Water Quality Modeling Report 2.4 Modelled Parameters 2.6 Key Model Limitations and Assumptions	*Selection of parameters for modelling was based on humidity cell test data collected between 20 and 34 weeks; earlier results were excluded. The report notes there is uncertainty that the mine rock samples used in the humidity cell tests are representative.* Additional data may now be available from continued humidity cell testing. Examination of rock testing results may help identify additional parameters of potential concern.	Confirm the parameters of potential concern by examining all rock testing done to date.
MOE-SW20	E. Snucins, MOECC Surface Water Specialist	Surface Water	Appendix J – Water Quality	Water Quality Modeling Report 2.5.3.4 Pit Lake Water Quality	*This section mentions a model assumption for the fully-flooded open pit is the top 1/3 (188 m) will be well-mixed and the bottom 2/3 (376 m) will not mix with the shallow pit water due to chemical stratification.* Not discussed was the sensitivity of the open pit water quality model to the assumed chemical stratification depth.	The EA should present (a) the empirical data or modelling that was the basis for the assumed depth of open pit density boundary; and (b) the sensitivity of the open pit water quality model to the assumed open pit mixing depth.

September 11, 2014

Meeting Notes – DRAFT FOR REVIEW

AMEC, Mississauga

Project:	IAMGOLD Côté Gold Project
Purpose:	Review the proposed draft Consultation Chapter and Appendix Outline
Attendees:	
Emma Malcolm, IAMGOLD	
Krista Maydew, AMEC	
Cindy Battista, MOECC	

1. IAMGOLD provided a safety share related to concussions.
2. IAMGOLD presented the draft outline for the re-write of the EA Consultation Chapter (Chapter 4) and noted that the chapter and corresponding appendix (Appendix D) would contain records up to September 30, 2014. It was also noted that the records cut-off would be at minimum two months prior to final EA submission. CB confirmed acceptability of a cut-off date of September 30, 2014 and noted that proponents may be requested to provide another record of consultation for the period after September 30.
3. IAMGOLD noted that they currently provide Interim Consultation Reports to MNDM approximately 2-3 times per year. EM noted that CB's predecessor as well as CEAA were copied on these previous submissions. The reports focus only on MNDM identified communities. CB will advise the Minister of these other reports when she prepares the recommendation package to the Minister.
4. MOECC comments on the draft chapter outline:
    a. recognizes that communities choose to participate at different times during the EA process and therefore do not follow the prescribed timeline of activities (e.g., one community could be discussing the project description while others are engaging re: the draft EA)
    b. happy with chapter organization as long as it is easy to follow what happened at each milestone
    c. would like to see a reference in the text to the Notice of Commencement when discussing activities that occurred during EA prep
    d. the summary of comments and responses by community can contain only key comments and responses; it is suitable to refer readers to the appendix for the full records of comments and responses
    e. it is recognized that the government section of the report will not contain commitment/mitigation tables because discussions related to these will not occur prior to September 30; the section related to ongoing/further consultation will identify the plan to meet with regulatory agencies in October to discuss comments and responses on the draft EA
    f. CB noted that the chapter and appendix outline "looks great" and that the MOECC's legal analysts will focus primarily on the Aboriginal sections and their key comments and concerns

5. CB noted that if a community raises a significant issue between the ROC cut-off date (September 30) and the submission of the Final EA, the MOECC will expect to be informed.
6. IAMGOLD/AMEC confirmed that we would be responding to all of the individual comments that the MOECC had submitted on the Consultation Chapter. CB expressed that “noted” is not a sufficient response to comments and that if “noted” were to be used, it would need to be accompanied by a statement of how the comment would be addressed or why it would not be addressed.
7. General discussion regarding EA coordination (provincial and federal); CB noted that they would be open to having a timeline discussion about the project once IAMGOLD is closer to submitting the Final EA. CB noted that if the EA were to be submitted around Christmas, the review period would need to be extended by a week or two to accommodate the holiday period.
8. CB noted that Sherry Boodram at CEAA was familiar with the MOECC’s comments/questions on the Consultation Chapter.
9. CB asked if she could have a copy of the draft chapter table of contents and appendix table of contents. EM noted that these are draft and in writing the chapter may get reorganized slightly and so the preference is not to share at this point.

DRAFT

Agenda – Côté Gold Project
Canadian Environmental Assessment Agency, Ministry of the Environment, IAMGOLD Corp., AMEC

Meeting Date:	September 29, 2014	**Location:**	CEAA Boardroom 55 St. Clair Avenue East, Suite 907
Meeting Time:	10:00 am – 11:00 am	**Teleconference Dial-in Number:**	N/A
Organizer Contact Information	Name: Sherry Boodram Email: Sherry.Boodram@ceaa-acee.gc.ca		
Participants:	Sherry Boodram, CEA Agency Carl Johannson, CEA Agency Cindy Batista, MOE Alex Blasko, MOE Steve Woolfenden, IAMGOLD Stephan Theben, AMEC		

Item	Topic	Lead
1	**Welcome / Introductions / Review Agenda**	
2	**Clarification on the October 8th-9th meetings with IAMGOLD and government reviewers** - IAMGOLD's objectives and expectations - IAMGOLD's desired outcomes - Federal and provincial objectives and desired outcomes	**IAMGOLD/ AMEC** **CEAA/MOE**
3	**Next steps for IAMGOLD & timing for its responses to government comments** - Approach for response submission of federal information requests o Draft and/or formal responses specific to federal comments o Second round of meetings with reviewers o Time allowance for review of draft responses - Approach for addressing provincial comments o Draft and/or formal responses specific to provincial comments o Meetings with reviewers o Time allowance for review of draft responses	**IAMGOLD**
4	**EA Coordination – Federal and Provincial Process** o Where we are now o Alignment of Federal and Provincial EA process o Benefits of Alignment	**CEAA/MOE**
5	**Closing/Next Steps**	**All**
