1.0 INTRODUCTION

1.1 Introduction

The Côté Gold Project (the Project) is located in the Chester and Neville Townships, District of Sudbury, in Northeastern Ontario, approximately 20 km southwest of Gogama, 130 km southwest of Timmins, and 200 km northwest of Sudbury. Trelawney Mining and Exploration Inc. (Trelawney) had been exploring the Côté Gold property since 2009. IAMGOLD Corporation (IAMGOLD) acquired the property in 2012 with the objective of developing an open pit gold mine and mill. IAMGOLD has continued to explore mineral potential at the Project site and has undertaken or commissioned environmental, hydrogeological, geotechnical, mineralogical, engineering, logistics and economic studies related to potential property development.

IAMGOLD proposes to construct, operate and eventually rehabilitate a new open pit gold mine and is currently conducting engineering studies to further confirm and determine the technical and economic aspects of the Project. IAMGOLD currently owns and operates six mines in Canada and abroad and is in the process of developing four additional projects, one being the Côté Gold Project.

IAMGOLD recognizes the importance of consultation with stakeholders as an integral aspect of the Project. Stakeholder participation in consultation ensures an open and fair process, and strengthens the quality and credibility of the results. In a coordinated effort with the Federal and Provincial government agencies, IAMGOLD intends to prepare one knowledge base about the current environment and the potential effects of the Project on various aspects of the environment. This knowledge base will be used to populate the required environmental assessments (EAs). Combining and coordinating consultation efforts on the EAs, as much as possible, ensures that stakeholders are engaged in dialogue about the current environment, potential effects, and management measures at the same or similar time for all the EA processes. This Stakeholder Consultation Plan (Plan) provides a strategy for these coordinated consultation efforts. This Plan will be continually improved and changed based on the needs of and feedback from stakeholders.

This Plan was prepared to guide consultation activities associated with the Project EAs with interested parties to meet the statutory requirements of the Ontario *Environmental Assessment Act* and the *Canadian Environmental Assessment Act, 2012* (CEAA 2012).

1.2 Provincial EA and Consultation Plan Requirements

In consultation with the local regulatory agencies, IAMGOLD has entered into a Voluntary Agreement with the Ontario Ministry of the Environment (MOE) to conduct an EA for the Project in accordance with the requirements of the Ontario *Environmental Assessment Act*. The first step in preparing the EA is preparation and approval of a Terms of Reference (ToR) to guide what is to be assessed in the EA and an associated consultation plan that defines how stakeholders will be engaged. A draft of this Plan was issued with the Draft ToR that underwent a 30-day public comment period (May to June 2013). The draft Plan was revised to incorporate input received during the Draft ToR consultation.

The approach to consultation on the EA as part of the Provincial EA process will follow the MOE *Code of Practice: Consultation in Ontario's Environmental Assessment Process* (MOE, 2007) and IAMGOLD's best practices, procedures and policy as defined in the IAMGOLD Community Relations Handbook. The *Code of Practice* dictates that the consultation plan must:

- *Indicate how potentially interested and affected persons, including Aboriginal peoples, will be identified, notified and consulted (Sections 2.2, 3.2 and 3.3);*
- *Indicate how government agencies will be identified, notified and consulted (Sections 2.2, 3.2 and 3.3);*
- *Identify the points in the EA process when interested persons will be consulted (Section 3.2);*
- *Identify the methods that will be used to consult (Section 3.2);*
- *Identify the decisions that interested persons can provide input to and what role they can play when the proponent makes choices (Section 3.2); and*
- *Acknowledge and attempt to address concerns raised during the EA process (Section 2.5).*

According to the *Code of Practice: Preparing and Reviewing Terms of Reference for EAs in Ontario* (MOE, 2009) the Consultation Plan should outline:

- *General consultation methods proposed (Section 1.4);*
- *How input from interested persons will be obtained (Section 3.2);*
- *A description of key decision-making milestones during the preparation of the EA when consultation will occur (Section 3.2); and*
- *An issues resolution strategy (Section 2.5).*

1.3 Federal EA and Consultation Plan Requirements

The Canadian Environmental Assessment Agency (the Agency) has released guidance for inclusion of a consultation plan in the Project Description (CEAA, 2012). A Project Description is used by the Agency to conduct a screening of a designated Project which determines whether an EA is required. The Agency requires that the Project Description must include and overview of ongoing or proposed consultation activities.

IAMGOLD submitted the Project Description to the Agency on March 15, 2013. This Plan builds on what was prepared for the Project Description and is intended to meet these statutory consultation plan requirements.

The Agency has determined that the Project will require a Federal EA. Consultation with interested parties about projects undertaken by the Government of Canada is conducted for a variety of reasons including:

- creating improved working relationships with people affected;

- addressing new business and policy directions;
- meeting Section 35 of the *Constitution Act, 1982* requirements (for Aboriginal consultation);
- meeting statutory requirements; and
- meeting agreement/contractual requirements.

1.4 Responsibility for Plan Implementation

As outlined in Sections 1.2 and 1,3, Provincial and Federal government agencies have specific requirements for consultation as part of the EA process. IAMGOLD has prepared this Plan to guide this collective process for IAMGOLD only. The government agencies have a supporting and guiding role, and government-led consultation activities are not covered in this document.

Consultation is intended to identify concerns and relevant information that should be addressed in the EAs as well as to share information about the proposed Project. Meaningful consultation will address the concerns of all stakeholders regarding the Project and its potential effects. For consultation to be meaningful it must provide early notification and accessible information, be timely, encourage knowledge sharing, be sensitive to community or cultural values, present transparent results, and adapt to the needs of the stakeholders.

In preparing the EA, IAMGOLD will consult directly with potentially affected and interested persons as well as relevant government agencies. The responsibility of IAMGOLD for consultation is understood to be:

- consult with government agencies;
- identify potentially affected and interested persons;
- design and implement the consultation plan as part of the overall EA process;
- initiate meaningful consultation with interested persons to identify information needs and concerns early in the planning process;
- provide appropriate time for interested persons to review and comment on EA-related materials and documentation;
- identify issues and concerns received from stakeholders;
- document that issues and concerns received from stakeholders were considered;
- address and where possible, resolve concerns raised through the consultation process; and
- keep participants informed of decisions made and how the proponent addressed identified concerns or reasons that concerns were not addressed.

2.0 CONSULTATION APPROACH

2.1 Goals and Objectives

One of the objectives of IAMGOLD's Zero Harm policy is to demonstrate its commitment to fostering sustainable development in the communities in which it operates. To meet this objective IAMGOLD implements activities that help them to identify and consider stakeholder views, customs and cultures and take into account these aspects throughout the life cycle of the Project.

In recognition of the value of developing positive, mutually beneficial relationships, consultation with local communities and stakeholders was initiated in 2012 well before commencing the environmental approvals processes for the Project. The objectives during this early consultation period were to:

- identify potentially affected and interested persons;
- share information and raise awareness about the Project;
- promote an atmosphere of mutual respect and cultural awareness;
- identify and establish effective working relationships and build trust with stakeholders; and
- discuss preliminary Project plans and gather feedback from stakeholders about their issues and interests.

In 2013 and 2014, consultation efforts will focus on supporting the EA processes as IAMGOLD moves toward environmental approvals for construction, operation and closure of the Côté Gold Project.

2.2 Stakeholder Identification

Table 2-1 provides a list of the stakeholders that were identified during the early consultation activities for the Project. Stakeholders include:

- Business and community interests (including land/ resource users);
- Environmental non-government organizations;
- Non-government organizations; and
- Government (Municipal, Provincial and Federal).

Stakeholders were identified based on government agency guidance, experience, local knowledge and background research using the following criteria:

- proximity to the Project; if the stakeholders are resident in and/or have jurisdiction over the area in which the Project is proposed or has the potential to affect;
- past or current interest in similar projects or developments in the region; if the stakeholders have been involved in consultation processes in current or past projects in the region that are anticipated to have a similar interest in the Project; or
- a stake in potential biophysical and socio-economic environmental effects of the Project.

Table 2-1: Côté Gold Project Stakeholder List

Stakeholder Category	Stakeholder Name
Business and Community Interests (including land/ resource users)	Cambrian College Gogama Area Citizens Committee Gogama Area Chamber of Commerce Gogama Recreation Committee Gogama Snowmobile Club Greater Sudbury Chamber of Commerce Greater Sudbury Development Corporation Laurentian University Mesomikenda Lake Cottagers Northern College Ontario Wilderness Region Timmins Chamber of Commerce Timmins Economic Development Corporation Local land and resource users Adjacent or local mineral rights holders Local small business owners Local tourism operators
Environmental Non-government Organizations	Mining Watch Canada Northwatch Wildlands League (Chapter of CPAWS)
Non-government Organizations	Northern and Outdoor Tourism Ontario Ontario Mining Association Ontario Prospectors Association Porcupine Prospectors and Developers Association Sudbury Prospectors and Developers
Municipal Government	City of Greater Sudbury City of Timmins Gogama Local Service Board

Stakeholder Category	Stakeholder Name
Provincial Government	Mattagami Region Conservation Authority Ministry of Northern Development and Mines Ministry of the Environment Ministry of Natural Resources Ministry of Tourism, Culture and Sport Ministry of Transportation Ministry of Municipal Affairs and Housing Ministry of Labour Ministry of Infrastructure Ministry of Energy Ontario Power Authority Ontario Power Generation Ontario Provincial Police Ontario Parks
Federal Government	Canadian Environmental Assessment Agency Aboriginal Affairs and Northern Development Canada Environment Canada Fisheries and Oceans Canada Health Canada Natural Resources Canada Transport Canada

* Stakeholder list current to June 9, 2013

The number of stakeholders involved in the Project is expected to be dynamic. Interests and concerns may be addressed and a stakeholder may choose to drop out of a process. Conversely, interests or concerns may arise or stakeholders move and new stakeholders may enter the process at any time. IAMGOLD will request at public sessions, stakeholder meetings and through their website if there are other stakeholders that should be involved or aware of the Project. In this way, new stakeholders may be identified and engaged. To reflect and manage these changes, a record of stakeholders involved in the Project is maintained.

2.3 Corporate Expectations

IAMGOLD has a public and well developed international corporate social responsibility policy that guides its interactions in the communities it affects through mine development and operations. The company has developed a Community Relations Handbook (Finisie et. al., 2012) that “provides standards and best practices for community relations to provide guidance to its sustainability practitioners around the world” (Finisie et. al., 2012).

IAMGOLD takes a partnership model to its community relations approach. IAMGOLD believes that proactive communication facilitates direct consultation with local communities. IAMGOLD seeks to help communities maximize the benefits of mining locally. Whenever possible, IAMGOLD partners with governments and civil society to help deliver more effective and sustainable community development.

IAMGOLD believes that consultation is the foundation of positive community relations. Most importantly, IAMGOLD believes that consultation with all interested parties is based on principles of trust, respect and transparency.

IAMGOLD plans for consultation and this Plan will guide activities, track progress and establish accountability.

2.4 Participant Support

The Federal government has a Participant Funding Program that supports the participation of individuals, non-profit organizations and Aboriginal communities in the review and comment of technical Federal EA-related documents.

IAMGOLD bears the cost associated with providing information about the Project and the EA processes to stakeholders in a format that is accessible and for conducting any meetings or information sessions that build an understanding of the Project so that stakeholders may meaningfully participate in the Project and EAs.

2.5 Issues Tracking and Resolution

IAMGOLD is maintaining an electronic record (database) of its consultation activities for the Project. The system being used will track records of consultation that occur between IAMGOLD and stakeholders. This will be used to generate reports that include:

- who was engaged and consulted;
- when, where and by what method the activity took place;
- what issues/interests were shared and how are they were addressed; and
- follow-up actions or commitments arising from consultation activities.

Correspondence regarding the Project obtained by the Agency, MOE or other government agencies will not necessarily be included, and therefore, the database is a record of IAMGOLD-led consultation activities.

IAMGOLD recognizes the benefit of resolving issues early and to the mutual satisfaction of those involved. To this end, stakeholders bringing forward an issue of concern regarding the Project will receive a response containing information to help clarify and/or assist in issue resolution.

Input from interested parties will be obtained at open houses through discussions and written comments (i.e., comment forms) or through direct meetings with interested parties. All comments from stakeholders (written or verbal) as well as responses from IAMGOLD will be documented, and where applicable, will be considered in the EA processes. Depending on the magnitude and nature of any concerns, IAMGOLD will make every effort to address and resolve

the concern directly with the stakeholder. Some comments may not be addressed to a stakeholder's satisfaction. An issue may arise where agreement on a resolution cannot be reached; in these cases, IAMGOLD will continue to work to resolve the issue and, where necessary, involve third parties. Third parties may include provincial representatives, mediators or legal counsel depending on the nature of the dispute. Third parties will be asked to provide advice, facilitate discussion and provide guidance on approaches to resolving issues. The government will be notified of any outstanding issues and this will be documented in the Record of Consultation.

2.6 Plan Evaluation

IAMGOLD will evaluate consultation activities and the consultation process to ensure successful implementation. IAMGOLD is committed to continual improvement of this Plan and recognizes that it is a dynamic document that will be revised as the Project progresses. Evaluation of these activities will be solicited from participants at each event and will be used to improve/refine on-going activities as appropriate. Evaluations may be conducted using a variety of methods including targeted participant questionnaires, recording any verbal feedback from participants and through the Project website.

Evaluation criteria may be results-based and/or process-based and will be developed using best practices. Results-based criteria measure whether or not a defined objective or goal has been met. Process-based criteria measure how the consultation process was implemented. The types of evaluation criteria used will differ depending on the consultation activity.

3.0 CONSULTATION ACTIVITIES AND IMPLEMENTATION

Throughout the preparation and review of the Provincial and Federal EAs, stakeholders and the public will be asked to participate. Stakeholders and the public have been invited to discuss and comment on the Project Description, Draft ToR (including various Project alternatives) and draft Environmental Impact Statement (EIS) Guidelines. Key stakeholders will also be consulted on effects predictions and appropriate management measures. Stakeholders and the public will be consulted on the Draft and Final EA document.

Consultation that has occurred to date is documented in the Record of Consultation and was focused on review of the Draft Project Description (the Agency subsequently conducted consultation on a Summary of the Project Description), Draft ToR and Draft EIS Guidelines. During this time, the goal was to scope issues about the Project (generally) and potential environmental effects that should be addressed in the Provincial and Federal EAs.

Future consultation activities will focus on the preparation and review of the Draft and Final EA. These IAMGOLD-led consultation activities are described below and include:

- consultation purpose and objectives;
- consultation tools and activities; and
- notification requirements (for Provincial EA only, as Federal notices are the responsibility of the Agency).

3.1 Consultation Purpose and Objectives

The purpose of consultation in the preparation and review of the EA is to engage a wide range of stakeholders through various methods to gather feedback on the Project, baseline studies, the EA findings, potential effects, and discuss appropriate effects management measures before submission of the EA for government review. Submission of a draft EA for stakeholder review is preferred, to receive feedback and determine if there are any remaining issues or concerns that need to be addressed and should be resolved before the submission of the final EA to the government agencies for review.

Consultation objectives are to:

- ensure stakeholders have an appropriate opportunity to understand the proposed Project and identify potential environmental effects;
- review and gather feedback on the following:
  - results of baseline or other studies;
  - alternatives and evaluation methods;
  - final selection of criteria indicators;
  - results of the selection of the preferred alternative;
  - potential environmental effects and mitigation measures

  - proposed monitoring and management plans; and
  - decommissioning/closure plan;
- demonstrate and discuss how comments heard previously were addressed through Project designs or management practices to help to reduce or avoid any potential environmental effects;
- provide an explanation of why the proposed Project cannot be modified to reduce or avoid the effects;
- discuss appropriate ways that residual effects could be managed;
- document and respond to any issues or concerns raised by stakeholders; and
- meet all regulatory requirements for stakeholder consultation.

3.2 Consultation Tools and Activities

Table 3-1 outlines the consultation tools and activities that are planned to support the preparation and review of the EA and stated consultation purpose and objectives.

Table 3-1: Consultation Tools and Activities

Activity	Timing	Purpose	Distribution / Participants
Government agency meetings	Summer 2013 and on-going as needed	To plan and coordinate consultation activities related to the draft EA	Government Review Team (provincial and federal agencies)
Newsletters (Quarterly)	Summer 2013 Autumn 2013 Winter 2013 / 2014 Early Spring 2014	To update and inform stakeholders and Aboriginal communities about the Project status and progress on the EA(s) Newsletters will highlight information about upcoming public meetings, and to encourage feedback through the Project website, dedicated e-mail address, or through direct contact with IAMGOLD staff.	Mailed to Project mailing list including all stakeholders involved in the Project to date. Available on Project website and at meetings / open houses.
Plain Language Fact Sheet: Baseline Studies	Summer 2013	To provide plain language information about the Project's environmental baseline studies	Mailed to key stakeholders and Aboriginal groups. Available on Project website and at meetings / open houses.
Fact Sheet: EA Findings	Winter 2013 / 2014	To provide plain language information about the findings from the EA	Mailed to key stakeholders and Aboriginal groups. Available on Project website and at meetings / open houses.

Activity	Timing	Purpose	Distribution / Participants
Notices	Prior to community consultation events and for notice of commencement or submissions as required by regulation	To provide notice of public and Aboriginal community consultation events or as required to inform stakeholders and the public about the EA process (e.g., Notice of Commencement of an EA)	Posted in local newspapers and in Aboriginal communities. Mailed to Project mailing list including all stakeholders involved in the Project to date. Available on Project website.
Meetings or workshops	Autumn 2013	To provide an opportunity to discuss and gather feedback on effects predictions, mitigation and high level closure concepts.	Meetings with key stakeholders
Draft EA document review	December 2013 – January 2014	To provide an opportunity for review and comment on the Draft EA document	Copies of the Draft EA will be mailed/couriered/hand delivered to Aboriginal groups, key stakeholders and the Government review team. Copies of a Draft EA will be placed for review at public locations such as public libraries, Aboriginal community offices, IAMGOLD offices and government offices. The Draft EA will also be available for downloading from the Project website.
Open Houses and workshops	January / February 2014	To consult on the Draft EA and closure plan concepts	Aboriginal groups Key stakeholders Government review agencies Interested public (open houses planned for Timmins, Gogama and Sudbury)
Final EA document review	March / April 2014	To provide an opportunity for review and comment on the Final EA document	Copies of the Final EA will be mailed/couriered/hand delivered to Aboriginal groups, key stakeholders and the Government Review Team. Copies of a Final EA will be placed for review at public locations such as public libraries, Aboriginal community offices, IAMGOLD offices and government offices. The Final EA will also be available for downloading from the Project website.

3.3 Notification Requirements

IAMGOLD will advertise in local newspapers and post/distribute the following notices (in appropriate locations as outlined above):

- Notice of Commencement of the EA;
- Notices of Public Information Events/Open House;
- Notice of Submission of the EA;
- Notice of Completion of EA Review; and
- Notice of Minister's Decision

As a minimum, advertisements and posting are proposed for the same locations as used for the Draft and Proposed ToR, unless it is determined that the locations are not appropriate. There may be additional notifications from the government agencies.

4.0 ONGOING CONSULTATION

IAMGOLD is committed to ongoing consultation with interested persons as the Project progresses through construction, operation, and decommissioning/closure. IAMGOLD will develop plans for consultation based on evaluation of and in response to expressed interests.

1.0 INTRODUCTION AND BACKGROUND

1.1 Project Overview

The Côté Gold Project (the Project) is located in the Chester and Neville Townships, District of Sudbury, in Northeastern Ontario, approximately 20 km southwest of Gogama, 130 km southwest of Timmins, and 200 km northwest of Sudbury. Trelawney Mining and Exploration Inc. (Trelawney) had been exploring the Côté Gold property since 2009. IAMGOLD Corporation (IAMGOLD) acquired the property in 2012 with the objective of developing an open pit gold mine and mill. IAMGOLD has continued to explore mineral potential at the Project site and has undertaken or commissioned environmental, hydrogeological, geotechnical, mineralogical, engineering, logistics and economic studies related to potential property development.

IAMGOLD proposes to construct, operate and eventually rehabilitate a new open pit gold mine and is currently conducting engineering studies to further confirm and determine the technical and economic aspects of the Project. IAMGOLD currently owns and operates six mines in Canada and abroad and is in the process of developing four additional projects, one being the Côté Gold Project.

IAMGOLD recognizes the importance of consultation with Aboriginal people as an integral aspect of the Project. Participation in consultation ensures an open and fair process, and strengthens the quality and credibility of the results. In a coordinated effort with the Provincial and Federal government agencies, IAMGOLD intends to prepare one knowledge base about the current environment and the potential effects of the Project on various aspects of the environment. This knowledge base will be used to populate the required environmental assessments (EAs). Combining and coordinating consultation efforts in the preparation and review of the EAs, as much as possible, ensures that Aboriginal people are engaged in dialogue about the current environment, potential effects, and management measures at the same or similar time for all the EA processes. This Aboriginal Consultation Plan (Plan) provides a strategy for these coordinated consultation efforts. This Plan will be continually improved and changed based on the needs of and feedback from Aboriginal participants.

This Plan was prepared to guide consultation activities associated with the Project EAs with Aboriginal people to meet the statutory requirements of the Ontario *Environmental Assessment Act*, *Canadian Environmental Assessment Act, 2012* (CEAA 2012), and the Crown's obligations as set out in the *Constitution Act* (1982).

1.2 Provincial EA and Consultation Plan Requirements

In consultation with the local regulatory agencies, IAMGOLD has entered into a Voluntary Agreement with the Ontario Ministry of the Environment (MOE) to conduct an EA for the Project in accordance with the requirements of the Ontario *Environmental Assessment Act*. The first step in preparing the EA is consultation on and approval of a Terms of Reference (ToR) to guide on what is to be assessed in the EA and an Aboriginal Consultation Plan that defines how Aboriginal groups will be consulted on the EA. The draft Plan was issued with the Draft ToR and

underwent a 30-day public comment period (May to June 2013). The draft Plan has since been revised to incorporate input received during the Draft ToR consultation.

The approach to consultation on the EA as part of the Provincial EA process will follow the MOE Code of Practice: Consultation in Ontario's Environmental Assessment Process (MOE, 2007) and IAMGOLD's best practices, procedures and policy as defined in the IAMGOLD Community Relations Handbook. The Code of Practice dictates that a proponent's consultation plan must:

- *Indicate how potentially interested and affected persons, including Aboriginal peoples, will be identified, notified and consulted (Sections 3.1, 4.3 and 4.4);*
- *Indicate how government agencies will be identified, notified and consulted (see the Proposed Stakeholder Consultation Plan contained in Appendix D of the ToR);*
- *Identify the points in the EA process when interested persons will be consulted (Section 4.3);*
- *Identify the methods that will be used to consult (Section 4.3);*
- *Identify the decisions that interested persons can provide input to and what role they can play when the proponent makes choices (Section 4.3); and*
- *Acknowledge and attempt to address concerns raised during the EA process (Section 2.5).*

According to the Code of Practice: Preparing and Reviewing Terms of Reference for EAs in Ontario (MOE, 2009) the consultation plan should outline:

- *General consultation methods proposed (Section 2.1);*
- *How input from interested persons will be obtained (Section 4.3);*
- *A description of key decision-making milestones during the preparation of the EA when consultation will occur (Section 4.3); and*
- *An issues resolution strategy (Section 2.5).*

1.3 Federal EA and Consultation Plan Requirements

The Agency has determined that the Project will require a Federal EA (CEAA, 2012). Consultation with interested parties about projects undertaken by the Government of Canada is conducted for a variety of reasons including:

- creating improved working relationships with people affected;
- addressing new business and policy directions;
- meeting Section 35 of the *Constitution Act, 1982* requirements (for Aboriginal consultation);

- meeting statutory requirements; and
- meeting agreement/contractual requirements.

The Government of Canada has a duty to consult Aboriginal people and, where appropriate, to accommodate Aboriginal interests (First Nation, Métis and Inuit) with respect to federal programs that could infringe on constitutionally protected Aboriginal and/or Treaty Rights. *Aboriginal Consultation and Accommodation: Updated Guidelines for Federal Officials to Fulfill the Legal Duty to Consult* (AANDC, 2011) was referenced in the development of this Plan.

The Canadian Environmental Assessment Agency (the Agency) has recently released guidance for inclusion of a consultation plan in the Project Description (CEAA, 2012). Project Descriptions are used by the Agency to screen a designated project to determine whether an EA is required. The guidance states that the Project Description must include:

> *A consultation and information gathering plan that outlines the ongoing and proposed Aboriginal engagement or consultation activities, the general schedule for these activities and the type of information to be collected (or alternatively, an indication of why such engagement or consultation is not required). Include background information on Aboriginal groups' potential or established Aboriginal or treaty rights. Provide information on the impact area of the designated project and how it overlaps with uses by Aboriginal groups that have potential or established Aboriginal or treaty rights (CEAA, 2012).*

IAMGOLD submitted the Project Description to the Agency on March 15, 2013. This Plan builds on what was prepared for the Project Description and intends to meet these statutory consultation plan requirements.

1.4 Responsibility for Plan Implementation

As described in Sections 1.2 and 1.3, Provincial and Federal government agencies have specific requirements for consultation as part of the EA process. While the government has a role in supporting and guiding IAMGOLD in consultation planning and activities, this Plan is a guide for the activities and responsibilities of IAMGOLD. IAMGOLD is responsible for preparing the EA for the Project, preparing the associated consultation plan, and supporting EA consultation activities. The government-led consultation activities (such as posting notices on government websites) will not be outlined herein.

The responsibility of IAMGOLD for EA-related consultation is understood to be the following:

- consult with government agencies;
- identify and involve interested Aboriginal peoples, throughout the process including those likely to be directly affected and that may be potentially affected;
- design and implement an Aboriginal consultation plan as part of the overall EA process;

- implement the Crown-delegated procedural aspects of notification and consultation;
- initiate meaningful consultation with interested persons to identify information needs and concerns early in the planning process;
- provide adequate time and resources for Aboriginal people to review and comment on EA-related materials and documents;
- identify issues and concerns received from Aboriginal people;
- document that issues and concerns received from Aboriginal people were considered in the preparation of the EA;
- address and where possible, resolve concerns raised through the consultation process; and
- keep Aboriginal participants informed of decisions made and how IAMGOLD addressed identified concerns or reasons that concerns were not addressed.

2.0 ABORIGINAL CONSULTATION APPROACH

2.1 General Approach

Consultation will take place through the leadership of each Aboriginal community, or through delegated individuals or Tribal Councils. It is also important to involve members of these communities outside of these required activities. Consultation activities that seek to broadly engage the community will assist in identifying issues that are unknown to Aboriginal leadership or dissenting views amongst the community. Inclusive consultation also helps build support for the Project.

The focus of Aboriginal consultation activities will be primarily on those potentially affected Aboriginal communities. When requested by the Aboriginal community, interpretation and translation of presentation or printed materials into their language will be made available. Initial contact should be made with the highest levels of decision-making within each of the Aboriginal communities, which in the case of First Nations will be the Band Chief and Council or the Tribal Council. Where this has not been the case to date, future discussions or correspondence should include the First Nation Chief and Council unless directed otherwise by the Chief. Where consultation activities with the Métis in Ontario are concerned, consultation was initiated with the Métis Nation Ontario (MNO) and has subsequently focused with the region-specific consultation committee.

Consultation activities will be designed based on the needs of the communities. IAMGOLD will seek feedback on proposed consultation activities and adjust their approach accordingly. IAMGOLD will provide financial and technical support to communities to enable them to provide meaningful input and feedback. IAMGOLD will prepare and make available plain language documents to facilitate understanding of the various studies required in the EA.

2.2 Rights Recognition

First Nations and Métis people are recognized to have Aboriginal and treaty rights that are protected under Section 35(1) of the *Constitution Act, 1982.* An Aboriginal right is an activity which is an element of a custom, practice or tradition integral to the distinctive culture of the Aboriginal group claiming the right. Examples of treaty rights include such things as reserve lands, farming equipment and animals, annual payments, ammunition, clothing and certain rights to hunt and fish.

The Supreme Court of Canada has determined that the Crown has a duty to consult with First Nations and Métis peoples with respect to their Aboriginal and treaty rights when it has knowledge of an existing or asserted Aboriginal or treaty right, and contemplates conduct that may adversely affect these rights.

The source of the Crown's duty to consult and accommodate is grounded in the "honour of the Crown", and as such cannot be delegated to third parties. Legal responsibility for meeting any duty to consult with Aboriginal peoples will always rest with the Crown (*R. v. Taku River Tlingit*

First Nation). Third parties, such as IAMGOLD may be required to carry out procedural aspects of the duty to consult such as gathering information about how Aboriginal and treaty rights that may be impacted by a proposed project and consideration of ways in which the Aboriginal concerns can be accommodated. The Crown will maintain oversight over the consultation to ensure that potentially affected Aboriginal people have been fully informed about a proposed project, that meaningful attempts to solicit their input and feedback have been carried out, and attempts to resolve the concerns have been presented.

While the duty to consult in good faith rests with the Crown, IAMGOLD will seek to consult Aboriginal people, their governments, and organizations in a manner that advances their meaningful input on the Côté Gold Project. This consultation will be undertaken **without prejudice** to the treaty and titles relationships between the Government of Canada and the respective Aboriginal communities.

Furthermore, Provincial environmental regulators have recently changed their expectations with respect to consultation with Aboriginal groups. Provincial regulatory agencies overseeing EAs have delegated procedural aspects of consultation to proponents and have set out specific requirements for recording the activities that proponents undertake with respect to carrying out these obligations. CEAA 2012 requires that potential impacts to Aboriginal and treaty rights be documented on an ongoing basis as part of the EA process.

Because of the unique status of Aboriginal peoples, consultation with Aboriginal peoples must be given special attention in order to effectively manage potential Project risks associated with the fulfillment of the duty to consult. Furthermore, consulting effectively with Aboriginal communities and building long-term sustainable relationships is an important part of IAMGOLD's corporate commitments and policies, and therefore, is a critical component of the Project's success.

2.3 Corporate Expectations

IAMGOLD has a public and well-developed international corporate social responsibility policy that guides its interactions in the communities it potentially affects through Project development and operations. The company has developed a Community Relations Handbook (Finisie et. al., 2012) that "provides standards and best practices for community relations to provide guidance to its sustainability practitioners around the world" (Finisie et. al., 2012).

IAMGOLD takes a partnership model to its community relations approach. IAMGOLD believes that proactive communication facilitates direct consultation with local communities. IAMGOLD seeks to help communities maximize the benefits of mining locally. Whenever possible, IAMGOLD partners with governments and civil society to help deliver more effective and sustainable community development.

IAMGOLD believes that Aboriginal consultation is the foundation of positive community relations. Most importantly, IAMGOLD believes that Aboriginal consultation is based on principles of trust, respect and transparency.

IAMGOLD plans for consultation and this Plan will guide activities, track progress and establish accountability.

2.4 Participant Support

IAMGOLD is negotiating an impact benefit agreement with Mattagami and Flying Post First Nations. IAMGOLD has offered capacity support to these communities for technical review of EA documents and studies. IAMGOLD will also support participation of the Métis Region 3 Consultation Committee and their members in the EA document reviews. Consideration for further agreements and capacity support will be determined as consultation advances with other potentially affected First Nations and Métis.

IAMGOLD bears the cost associated with providing information about the Project and the EA processes to Aboriginal people that is in a format that is accessible and for conducting any meetings or information sessions that build an understanding of the Project so that Aboriginal participants may meaningfully participate in the Project and EAs.

2.5 Issues Tracking and Resolution

IAMGOLD is maintaining an electronic record (database) of its consultation activities for the Project. The system being used will track records of consultation that occur between IAMGOLD and Aboriginal groups. This will be used to generate reports that include:

- who was engaged and consulted;
- when, where and by what method the activity took place;
- what issues/interests were shared and how are they were addressed; and
- follow-up actions or commitments arising from consultation activities.

Correspondence regarding the Project obtained by the Agency, MOE or other government agencies will not necessarily be included, and therefore, the database is a record of IAMGOLD-led consultation activities.

IAMGOLD recognizes the benefit of resolving issues early and to the mutual satisfaction of those involved. To this end, Aboriginal participants bringing forward an issue of concern regarding the Project will receive a response containing information to help clarify and/or assist in issue resolution.

All comments from Aboriginal participants (written or verbal) as well as responses from IAMGOLD will be documented, and where applicable, will be considered in the EA processes.

Input from Aboriginal groups will be obtained at open houses, meetings, and personal contact through verbal and written comments (i.e., comment forms). Depending on the magnitude and nature of any concerns, IAMGOLD will make every effort to address and resolve the concern directly with the Aboriginal participant. Some comments may not be addressed to the participant's satisfaction. An issue may arise where agreement on a resolution cannot be reached; in these cases, IAMGOLD will continue to work to resolve the issue and, where necessary, involve third parties. Third parties may include provincial representatives, mediators, or legal counsel depending on the nature of the dispute. Third parties will be asked to provide advice, facilitate discussion, and provide guidance on approaches to resolving issues. The government will be notified of any outstanding issues and documented in the Record of Consultation.

2.6 Plan Evaluation

IAMGOLD will evaluate consultation activities and the consultation process to ensure successful implementation. IAMGOLD is committed to continual improvement of this Plan and recognizes that it is a living document that will be revised as the Project progresses. Evaluation of these activities will be solicited from participants in the process and will be used to improve/refine on-going activities as appropriate. Evaluations may be conducted using a variety of methods including targeted participant questionnaires, recording verbal feedback provided from participants and through the Project website.

Evaluation criteria will be developed prior to consultation events and may be results-based and/or process-based and will be developed using best practices. Results-based criteria measure whether or not a defined objective or goal has been met. Process-based criteria measure how the consultation process was implemented. The types of evaluation criteria used will differ depending on the consultation activity.

3.0 ABORIGINAL PARTICIPANTS

3.1 Identification of Aboriginal Group Participants

An understanding of the potential Aboriginal communities interested in the Côté Gold Project was developed through advice from the Ministry of Northern Development and Mines (MNDM) to Trelawney in a letter dated August 19, 2011 and through advice from the Agency based on information provided by Aboriginal Affairs and Northern Development Canada (AANDC). Considering the previous advice from regulators, the proposed footprint of the current Project and through discussion with local communities, IAMGOLD has made a preliminary assessment of potentially impacted Aboriginal communities.

IAMGOLD has received direction from both Federal and Provincial Crown agencies on the potentially impacted communities. On March 6, 2013 the Federal Crown (the Agency) informed IAMGOLD that the following communities should be consulted with respect to the Project:

- Mattagami First Nation;
- Flying Post First Nation;
- Brunswick House First Nation;
- Métis Nation – Region 3; and
- Algonquin Anishinabeg Nation Tribal Council.

They noted that as the Federal EA progresses, the Agency will notify the:

- Chapleau Ojibwe First Nation;
- Matachewan First Nation; and
- Beaverhouse First Nation.

IAMGOLD received direction from the Provincial Crown, through MNDM to consult the following communities on May 23, 2013:

- Mattagami First Nation;
- Flying Post First Nation;
- Brunswick House First Nation;
- Métis Nation – Region 3; and
- Matachewan First Nation.

The Côté Gold Project could potentially affect Métis harvesting rights. Most of the Métis peoples in Ontario are organized through the governance structure of the Métis Nation of Ontario (MNO), represented at the local level by MNO Charter Community Councils, located in Sudbury, Timmins and Chapleau.

The Algonquin Anishinabeg Nation Tribal Council had contacted IAMGOLD with respect to their interests in the Côté Gold Project. Subsequently, the Algonquin Anishinabeg Nation Tribal Council informed IAMGOLD that they will not be making an assertion for the Côté Gold Project. They recommended that IAMGOLD contact Wahgoshig and Abitibiwinni First Nations to confirm their non-participation status.

IAMGOLD contacted Wahgoshig First Nation; the First Nation identified that they have no comments on the Project and that the Project was not within their territory.

IAMGOLD contacted Abitibiwinni First Nation to determine their interests in the Project. To date, no response has been received regarding the Côté Cold Project, however IAMGOLD will be

following up with this initial contact. IAMGOLD is also in discussions with Abitibiwinni First Nation regarding a Quebec-based operation (unrelated to the Côté Gold Project).

M'Chigeeng First Nation and Serpent River First Nation from the Robinson Huron Treaty area contacted IAMGOLD to discuss their harvesting rights in relation to the Côté Gold Project. IAMGOLD has contacted these First Nations to set a mutually agreeable date for a meeting.

To-date, consultation has focused on Mattagami First Nation, Flying Post First Nation, and their governance organization, the Wabun Tribal Council. IAMGOLD has also begun to engage other Wabun Tribal Council members: Matachewan First Nation, Brunswick House First Nation, and Beaverhouse First Nation. IAMGOLD has met with the MNO, Region 3 Consultation Committee to discuss the Project and consultation protocols.

Subsequent Aboriginal Consultation activities will involve persons identified/delegated by the respective organizational decision-makers. IAMGOLD will remain open to hearing out additional assertions of claim over the areas potentially impacted by the Project.

Based on proximity, current advice from the Provincial and Federal Crown, and information gathered through consultation activities, the following groups shown in Table 3-1 may have Aboriginal or treaty rights or interests that could be impacted by the Côté Gold Project. Contact details for each group are also provided in Table 3-1.

Table 3-1: List of Aboriginal Communities

Aboriginal Group	Governance Organization	Brief Description	Contact Information
Conseil de la Première Nation Abitibiwinni (Abitibiwinni First Nation)	Algonquin Anishinabeg Nation Tribal Council	The Abitibiwinni is a First Nation located in Quebec. They are affiliated with the Algonquin Anishinabeg Nation Tribal Council. There are 999 members of the Abitibiwinni First Nation, 557 of whom live on reserve.	Chief Bruno Kistabish 45 Rue Migwan, Pikogan, QC J9T 3A3 Telephone: 819-732-6591 Fax: 819-732-1569
—	Algonquin Anishinabeg Nation Tribal Council	The Tribal Council provides support on aboriginal advice issues and assistance in advisory and technical services to its member communities. The Tribal Council represents Algonquin First Nations located in Quebec. They have asserted a rights claim that extends into Ontario.	Chief Alice Jerome 81 Kichi Mikan, Maniwaki, QC, J9E 3C3 Email: info@anishinabenation.ca Telephone: 819- 449-1225 Fax: 819-449-8064
Beaverhouse First Nation	Wabun Tribal Council	Beaverhouse First Nation is a small, non-status Indian settlement. They are affiliated with Wabun Tribal Council and are seeking Indian Band status and treaty rights.	Chief Marcia Brown Martel P.O. Box 1022 Kirkland Lake ON, P2N 3L1 Telephone: 705-567-2022 Fax: 705-567-1143
Brunswick House First Nation	Wabun Tribal Council	Brunswick House is a First Nation with an on-reserve population of 111. They are affiliated with the Wabun Tribal Council. They are signatories to Treaty #9. Their original community was on Missinaibi Lake.	Chief Andrew Neshawabin P.O. Box 1178, Chapleau, ON, P0M 1K0 Telephone: 705-864-0174 Fax: 705-864-1960
Chapleau Ojibwe First Nation	Wabun Tribal Council	Chapleau Ojibwe is a small First Nation with an on-reserve populatin of 33. They are affiliated with the Wabun Tribal Council and signatories to Treaty #9.	Chief Anita Stephens P.O. Box 279, Chapleau, ON P0M 1K0 Telephone: 705-864-2910 Fax: 705-864-2911

Aboriginal Group	Governance Organization	Brief Description	Contact Information
Flying Post First Nation	Wabun Tribal Council	Flying Post is a small First Nation with a population of 162, none of whom live on reserve. They are a signatory to Treaty #9. Their reserve is located near Smooth Rock Falls. They are affiliated with Wabun Tribal Council.	Chief Murray Ray Box 1027 Nipigon, ON, P0T 2J0 Email: flypost@shawbiz.ca Telephone: 807- 887-3071 Fax: 807-887-1138
M'Chigeeng First Nation	United Chiefs & Councils of Mnidoo Mnising	The M'Chigeeng have a registered population of 2,496 with 931 living on reserve. The M'Chigeeng are signatories to the Robinson Huron Treaty.	Chief Joseph Hare PO Box 333, 53 Hwy. 551, M'Chigeeng, ON, P0P 1G0 Telephone: 705-377-5362 Fax: 705-377-4980
Matachewan First Nation	Wabun Tribal Council	Matachewan is a signatory to Treaty #9. They are affiliated with the Wabun Tribal Council. They have a small population living on reserve (41) with a much larger population living off reserve (645).	Chief Alex "Sonny" Batisse P.O. Box 160 Matachewan, ON, P0K 1M0 Email: chief@mfnrez.ca Telephone: 705-565-2230 Fax: 705-565-2311
Mattagami First Nation	Wabun Tribal Council	The Mattagami First Nation is a signatory to Treaty #9. They are affiliated with the Wabun Tribal Council. Approximately 168 people live on reserve while a larger number live off reserve (350).	Chief Walter Naveau P.O. Box 99 Gogama, ON, P0M 1W0 Email: walternaveau@knet.ca Telephone: 705-894-2072 Fax: 705-894-2887
Métis Nation of Ontario	—	The Métis Nation is the governance organization that represents many Métis communities in the Province of Ontario. It is organized into regional councils that provide information on local rights, practices and interests.	Andy Lefebvre 347 Spruce Street South, Timmins, ON, P4N 2N2 Email: AndyL@metisnation.org Telephone: 705-264-3939
Serpent River First Nation	Mamaweswen, The North Shore Tribal Council Secretariat	The Serpent River First Nation is a signatory to the Robinson Huron Treaty.	Chief Isadore Day PO Box 14, 195 Village Road, Cutler, ON P0P 1B0 Telephone: 705-844-2418 Fax: 705-844-2757

Aboriginal Group	Governance Organization	Brief Description	Contact Information
—	Wabun Tribal Council	The Wabun Tribal Council is community driven and receives its direction from and is accountable to the Chiefs of Wabun's six First Nation communities, who make up the organization's Board of Directors. The Council also represents the communities' interests in dealings with municipal, provincial and federal government programs and initiatives, such as land use planning, Local Health Integration Networks (LHIN) and other issues as directed by the Chiefs of the communities.	Shawn Batise 313 Railway Street Timmins, ON, P4N 2P4 Email: sbatise@wabun.on.ca Telephone: 705- 268-9066 Fax: 705-266-4969
Wahgoshig First Nation	—	Wahgoshig First Nation are signatories to Treaty #9. They have 303 members with 131 living on reserve.	Chief David Babin P.O. Box 629, Matheson, ON P0K 1N0 Telephone: 705-273-2055 Fax: 705-273-2900

Note: — = not applicable

3.2 Aboriginal and Treaty Rights

The following potentially affected or interested First Nations are signatories to Treaty 9, also known as the James Bay Treaty signed in 1905:

- Brunswick House First Nation;
- Flying Post First Nation;
- Matachewan First Nation;
- Mattagami First Nation; and
- Wahgoshig First Nation.

The Wahgoshig First Nation was historically part of the Lake Abitibi Band and is considered a signatory to Treaty 9 of 1905. Their reserve is located in Ontario on the southern shore of Lake Abitibi.

The Treaty 9 area is comprised of approximately 233,000 km^2 of northern Ontario. At the time of signing, the land was occupied by Ojibwe and Cree peoples. Reserves were set aside for all of the signatories whose hunting grounds were within the treaty area. Signatories and their descendants retained “the right to pursue their usual vocations of hunting, trapping, and fishing throughout the tract surrendered”. Exceptions to these rights pertain to tracts of land that have been taken up “for settlement, mining, lumbering, trading and other purposes”.

The Algonquin Anishinabeg Nation Tribal Council (AANTC) have made assertions that they have never ceded their rights to a treaty or sold or lost their lands. They are interested in maintaining their rights to hunt, fish and gather and may assert that they retain their rights within their traditional territory. They have submitted a comprehensive claim with boundaries that extend into Ontario and in the vicinity of the Côté Gold Project. The boundaries of the claim are understood by AANDC as not firm, and it is unclear whether the Project site is within this asserted claim. IAMGOLD has contacted the AANTC about their interests in the Project. The AANTC have stated that they are not interested in being consulted on the Project. IAMGOLD will continue to provide updates about the Project and remain open to further discussions if requested. The AANTC recommended that IAMGOLD contact the Abitibiwinni First Nation (Conseil de la Première Nation Abitibiwinni) and Wahgoshig First Nation to determine their interest in the Project.

IAMGOLD has contacted the both Abitibiwinni First Nation and Wahgoshig First Nation to determine their interests in the Project.

IAMGOLD was contacted by the M’Chicheeng First Nation with respect to potentially affected harvesting rights under the Robinson Huron treaty to which they are a signatory. IAMGOLD is in discussions with M’Chigeeng about what, if any harvesting rights, may be affected by the Project.

IAMGOLD has also been contacted by the Serpent River First Nation with respect to harvesting rights in the Côté Gold Project area. IAMGOLD will meet with Serpent River First Nation to determine the potential effects on harvesting rights.

The Robinson Huron Treaty of 1850 provided that in consideration of the surrender of lands covered by the treaty, the Ojibwe would continue to hunt and fish over these lands. The treaty also provided for reserve lands and annuity payments. The boundary of this early treaty is parallel to the land between the Arctic watershed which flows north to Hudson Bay and the Great Lakes drainage system where waters flow south.

The Métis assert a right to harvest in large sections of Ontario. The provincial government has accommodated Métis rights on a regional basis within the Métis harvesting territories identified by the MNO. The interim agreement between the MNO and the Ministry of Natural Resources recognizes the MNO's Harvest Card system. A Métis Harvester's Certificate holder engages in traditional Métis harvesting activities. Further discussion with the MNO and community councils will determine if Métis harvesting will be affected by the Project.

4.0 CONSULTATION ACTIVITIES AND IMPLEMENTATION

In the preparation and review of the Provincial and Federal EAs, Aboriginal groups will be asked to participate throughout the preparation of the EA. Aboriginal groups have been invited to discuss and comment on the Project Description, Draft ToR (including various Project alternatives) and Draft Environmental Impact Statement (EIS) Guidelines. Aboriginal groups will also be consulted on effects predictions and appropriate management measures as well as on the Draft EA document. Aboriginal groups are encouraged and are supported by IAMGOLD to be involved in the collection of environmental baseline data.

Consultation that has occurred to date is documented in the Record of Consultation and was focused on review of the Project Description, Draft ToR and Draft EIS Guidelines. During this time, the goal was to scope issues about the Project (generally) and potential environmental effects that should be addressed in the EA. Future consultation activities will focus on the preparation and review of the Draft EA. These IAMGOLD-led consultation activities are described below and include:

- consultation purpose and objectives;
- consultation tools and activities; and
- notification requirements (for Provincial EA only, as Federal notices are the responsibility of the Agency).

4.1 Consultation Purpose

The purpose of consultation in the preparation and review of the EA is to engage a wide range of Aboriginal participants through various methods to gather feedback on the Project, the EA findings, and discuss appropriate effects management measures before submission of the EA for government review. Submission of a Draft EA for Aboriginal review is preferred, to receive feedback and determine if there are any remaining issues or concerns that need to be addressed and should be resolved before the submission of the Final EA to the government agencies for review.

4.2 Consultation Objectives

Consultation objectives are to:

- ensure the First Nation and Métis groups have an adequate opportunity to understand the proposed Project, identify potential environmental impacts, and review/verify assessed impacts to Aboriginal or Treaty rights and interests;
- review and gather feedback on the following:
  - results of baseline or other studies;
  - alternatives and evaluation methods;
  - final selection of criteria indicators;
  - results of the selection of the preferred alternative;

  - potential impacts and mitigation measures; and
  - decommissioning/closure plan concepts;
- demonstrate and discuss how comments previously heard were addressed through Project designs or management practices to help to reduce or avoid any identified impacts;
- if the proposed Project cannot be modified to reduce or avoid the impacts, provide an explanation;
- discuss appropriate ways that residual impacts could be managed or mitigated;
- discuss appropriate ways that the First Nation or Métis communities could be either accommodated or compensated for remaining impacts that cannot be avoided;
- document and respond to any issues or concerns raised by Aboriginal groups; and
- meet all regulatory requirements for Aboriginal consultation.

4.3 Consultation Tools and Activities

The following activities are planned to support the preparation and review of the EA and stated consultation objectives.

Table 4-1: Consultation Tools and Activities

Activity	Timing	Purpose	Distribution / Participants
Government agency meetings	Summer 2013 and on-going as needed	To plan and coordinate consultation activities related to the Draft EA	Government Review Team (provincial and federal agencies)
Newsletters (Quarterly)	Summer 2013 Autumn 2013 Winter 2013 / 2014 Early Spring 2014	To update and inform stakeholders and Aboriginal communities about the Project status and progress on the EA(s) Newsletters will highlight information about upcoming public meetings, and to encourage feedback through the Project website, dedicated e-mail address, or through direct contact with IAMGOLD staff;	Mailed to Project mailing list including all Aboriginal groups involved in the Project to date. Available on Project website and at meetings / open houses.

Activity	Timing	Purpose	Distribution / Participants
Plain Language Fact Sheet: Baseline Studies	Summer 2013	To provide plain language information about the Project's environmental baseline studies	Mailed to key stakeholders and Aboriginal groups. Copies to made available for community members if requested by leadership (such as copies placed in Band offices; or distributed to membership by mail). Available on Project website and at meetings / open houses.
Fact Sheet: EA Findings	Winter 2013 / 2014	To provide plain language information about the findings from the EA	Mailed to key stakeholders and Aboriginal groups. Copies to made available for community members if requested by leadership (such as copies placed in Band offices; or distributed to membership by mail). Available on Project website and at meetings / open houses.
Notices	Prior to community consultation events and for notice of commencement or submissions as required by regulation	To provide notice of public and Aboriginal community consultation events or as required to inform Aboriginal groups and other interested parties about the EA process (e.g., Notice of Commencement of an EA)	Posted in local newspapers and in Aboriginal communities. Mailed to Project mailing list including all Aboriginal groups involved in the Project to date. Available on Project website.
Meetings or workshops	Autumn 2013	To provide an opportunity to discuss and gather feedback on effects predictions, mitigation and high level closure concepts.	Meetings with Aboriginal group leadership, their technical advisors and communities if requested by leadership
Elders discussions	Autumn – Winter 2013 / 2014	To discuss specific Project and/or environmental issues with Aboriginal Elders if there is interest.	First Nation and Métis Elders
Youth discussions	Autumn – Winter 2013 / 2014	To discuss specific Project and/or environmental issues with Aboriginal youth if there is interest.	First Nation and Métis Youth

Activity	Timing	Purpose	Distribution / Participants
Draft EA document review	December 2013 – January 2014	To provide an opportunity for review and comment on the Draft EA document	Copies of the Draft EA will be mailed/couriered/hand delivered to Aboriginal groups, key stakeholders and the Government Review Team. Copies of a Draft EA will be placed for review at public locations such as public libraries, Aboriginal community offices, IAMGOLD offices and government offices. The Draft EA will also be available for downloading from the Project website.
Open Houses and workshops	January / February 2014	To consult on the Draft EA and closure plan concepts	Aboriginal groups Key stakeholders Government review agencies Interested public (open houses planned for Timmins, Gogama and Sudbury)
Final EA document review	March / April 2014	To provide an opportunity for review and comment on the Final EA document	Copies of the Final EA will be mailed/couriered/hand delivered to Aboriginal groups, key stakeholders and the Government Review Team. Copies of a Final EA will be placed for review at public locations such as public libraries, Aboriginal community offices, IAMGOLD offices and government offices. The Final EA will also be available for downloading from the Project website.

4.4 Notification Requirements

IAMGOLD will advertise in local newspapers and post/distribute the following notices (in appropriate locations as outlined above):

- Notice of Commencement of the EA;
- Notices of Public Information Events/Open House;
- Notice of Submission of the EA;
- Notice of Complete of EA Review; and
- Notice of Minister's Decision.

As a minimum, advertisements and posting are proposed for the same locations as used for the Draft and Proposed ToR, unless it is determined that the locations are not appropriate. There may additional notifications from the government agencies.

5.0 ONGOING CONSULTATION

IAMGOLD is committed to continuing consultation with interested persons as the Project progresses through construction, operation, and decommissioning/closure. IAMGOLD will develop plans for consultation based on evaluation and in response to expressed interests.

APPENDIX D-2
NEWSLETTERS

IAMGOLD® CORPORATION

MARCH 2013

Let's Talk:

The Côté Gold Project Community Newsletter

IAMGOLD proposes to construct, operate and eventually rehabilitate a new open pit gold mine in north central Ontario near Gogama – the Côté Gold Project. The company is currently conducting engineering studies to further confirm and determine the technical and economic aspects of the project as well as pursuing environmental approvals from both the provincial and federal governments. The company operates mines in Quebec, South America and West Africa. This is IAMGOLD's first proposed Ontario-based mine.

Côté Gold Project Location

Côté Gold Project Overview

The Côté Gold Project is located in north central Ontario about half way between two of Canada's best known mining camps in Timmins and Sudbury, approximately 20 km southwest of Gogama. This project overlaps with the traditional territory of Mattagami First Nation and Flying Post First Nation. Prospecting and exploration around the Côté Gold Project lands has occurred since 1900. The project area is accessed from Highway 144.

IAMGOLD is committed to involving Aboriginal people, governments, local communities and other stakeholders in the Côté Gold Project. IAMGOLD has met and will continue to meet regularly with its First Nation and Métis neighbours to discuss and actively involve them in the Côté Gold Project. IAMGOLD has an exploration agreement with the Mattagami First Nation and the Flying Post First Nation.

IAMGOLD acquired the Côté Gold Project from Trelawney Mining and Exploration Inc. in June 2012. Since then, IAMGOLD has advanced exploration drilling, engineering and environmental baseline studies to learn more about the gold deposit and to determine the best way to construct, operate and (eventually) close a mine in this location.

The mine site would include an open pit, mill, mine rock, overburden and low-grade ore stockpiles, tailings storage facility, power transmission line, work camp and office buildings. A "Pre-Feasibility Study" is being prepared and will provide a high-level development plan for the Côté Gold Project. It is estimated that the open pit gold mine could:

- Operate for 15 years
- Process 60,000 tonnes of rock per day
- Employ 1,200 workers during the construction phase (approximately 2 years)
- Employ 500 full-time personnel over the 15-year operating time

There are currently about 70 people working at the Côté Gold Project in such areas as exploration and geotechnical analysis, environmental services, health and safety, site administration and site infrastructure.

IAMGOLD is committed to applying international best practices with regards to protection of the environment.

Environmental Assessments

In keeping with IAMGOLD's goals, we take our stewardship of mining assets very seriously and meet or exceed all national and local legislation that applies to them.

Due to the size of the Côté Gold Project, a Project Description was prepared to conform to the federal *Canadian Environmental Assessment Act, 2012*. This Project Description will help the Canadian Environmental Assessment Agency (the Agency) determine if a Federal environmental assessment is required for the Côté Gold Project. It was submitted to the Agency on March 15, 2013 for review. A summary of the Project Description is available for public review between March 26 and April 15, and may be accessed from the Agency's website at http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=87329

An environmental assessment will also be required under the Ontario *Environmental Assessment Act*. Therefore, IAMGOLD has volunteered to complete an Individual Environmental Assessment for the project. IAMGOLD will be consulting with stakeholders, governments and Aboriginal groups on a draft Terms of Reference for the environmental assessment in the spring of 2013.

IAMGOLD is also preparing a Closure Plan to meet requirements under the *Ontario Mining Act*.

As part of the Environmental Assessment processes, IAMGOLD will be holding public meetings and information sessions, and welcomes feedback on the project plans. If you are unable to attend one of the project's open houses, please contact us to share your thoughts on the proposed Côté Gold Project. See back page for local IAMGOLD contact details.

Project Schedule

The current schedule aims for gold production to start in late 2016 or early 2017 and is dependent on the completion of the environmental assessment processes.

Community Open House

To date, IAMGOLD has held several community open houses. Each of these open houses provided a great opportunity to meet and ask questions of the IAMGOLD staff and project representatives. Open houses were held on:

- November 8, 2012 in Gogama
- February 13, 2013 for members of Flying Post First Nation
- February 20, 2013 for members of Mattagami First Nation
- February 26, 2013 in Timmins
- February 27, 2013 in Gogama
- February 28, 2013 in Sudbury

First Nation and Métis Consultation

IAMGOLD is committed to involving Aboriginal people, governments, local communities and other stakeholders in the Côté Gold Project. IAMGOLD has met and will continue to meet regularly with its First Nation and Métis neighbours to discuss and actively involve them in the Côté Gold Project. IAMGOLD has an Exploration Agreement with the local First Nations.

Attendees at the open houses indicated that they look forward to having job and business opportunities in the region as a result of the project. Attendees also identified concerns related to potential impacts of the project on water, noise levels, wildlife, land use, as well as visual impacts. IAMGOLD is taking the comments and concerns from the communities into consideration as part of the project planning. Future community open houses are being planned. If you would like to be added to the project mailing list for future invites, please contact us (see back page for local IAMGOLD contact details). We look forward to your continued participation!

Gogama Open House, November 8, 2012

IAMGOLD Overview

IAMGOLD is a leading, mid-tier gold mining company whose head office is in Toronto. Although the Côté Gold Project is IAMGOLD's first Ontario mining asset, IAMGOLD also operates open-pit and underground mines in Quebec, South America and Africa.

All of IAMGOLDs operations and actions are governed by a 'Zero Harm' approach. This means that all of IAMGOLD's operations meet the highest standards in health and safety; work to minimize their environmental footprint; and partner with their host communities to share benefits and build capacity.

Zero Harm Framework

What: Provide your input on the summary of the Project Description for the Federal Environmental Assessment which includes more project details and options for the project

When: Between March 26 and April 15, 2013

Where: Accessible from the CEAA website at http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=87329 and on our website at http://www.iamgold.com/English/Operations/Development-Projects/Cote-Lake-Ontario/default.aspx

What: Provide your input on the draft Terms of Reference for the Provincial Environmental Assessment

When: Timing will be mid-April to late May 2013

Where: Accessible from the Provincial Environmental Registry, project website and other public locations. Watch for notices in your local newspaper or on the website.

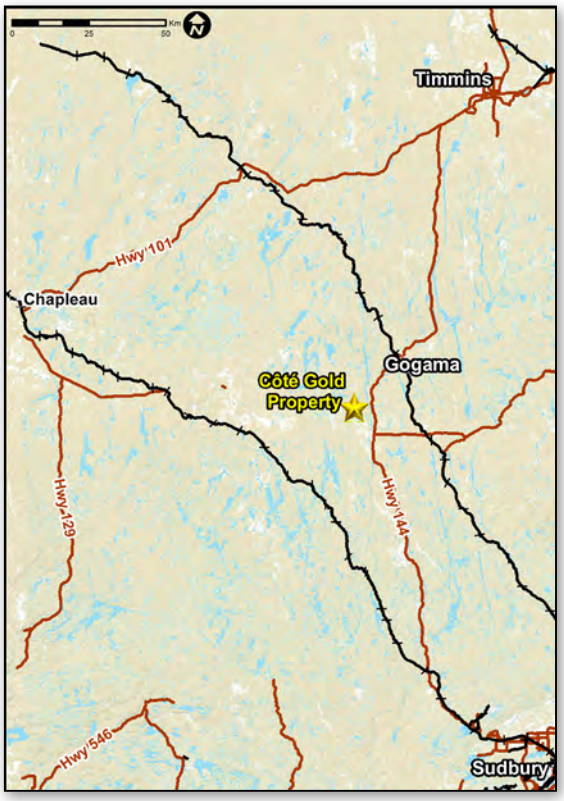
IAMGOLD CORPORATION



JULY 2013

Let's Talk:

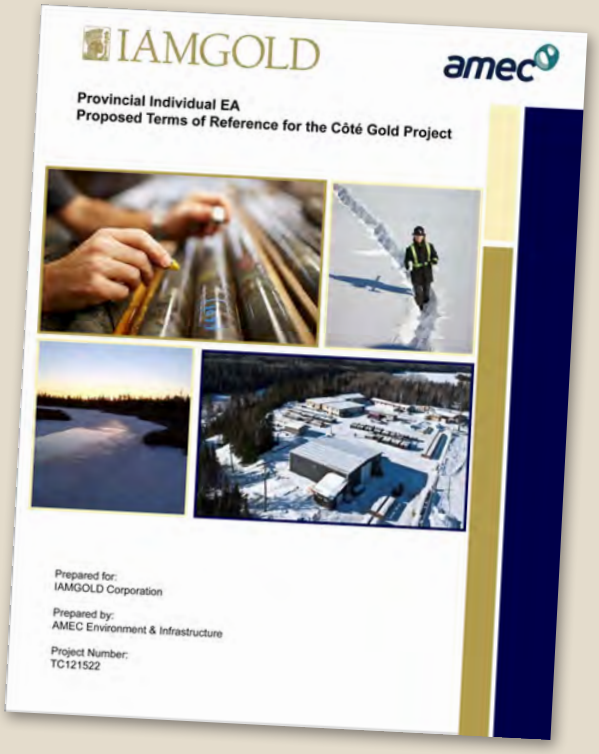
The Côté Gold Project Community Newsletter

IAMGOLD proposes to construct, operate and eventually rehabilitate a new open pit gold mine in northeastern Ontario, near Gogama – the Côté Gold Project. The company is currently conducting engineering studies to further confirm and determine the technical and economic aspects of the Project as well as pursuing environmental approvals from both the Provincial and Federal governments. The company operates mines in Quebec, South America and West Africa. This is IAMGOLD's first proposed Ontario-based mine.

Côté Gold Project Location

Côté Gold Project Update

Since our last newsletter (March 2013), IAMGOLD has been busy preparing submissions for the Federal and Provincial environmental assessments (EAs).



Federal EA Process

IAMGOLD submitted a Project Description to the Canadian Environmental Assessment Agency (the Agency) on March 15, 2013. The Agency used the Project Description to determine if a Federal EA is required under the *Canadian Environmental Assessment Act, 2012* (CEAA 2012). Based on the Project Description, comments received during the 20-day comment period and the possibility that the Project could have the potential to cause adverse environmental effects, the Agency determined that a Federal EA is required and released a Notice of Environmental Assessment Determination to the public on May 13, 2013.

In May 2013, the Agency provided draft Environmental Impact Statement (EIS) Guidelines for public review, which prescribe the scope of the Federal EA for the Project. Comments received on the draft EIS Guidelines will be considered before issuing the final EIS Guidelines to IAMGOLD. This comment period ended on June 12, 2013.

Provincial EA Process

IAMGOLD entered into a Voluntary Agreement with the Ontario Ministry of the Environment on May 3, 2013 to conduct a Provincial Individual EA for the Project. This is the most comprehensive type of EA that can be conducted in Ontario and is intended to cover all aspects of the Project.

The first step in the Provincial process was to prepare a Terms of Reference (ToR). IAMGOLD voluntarily issued a Draft ToR on May 10, 2013 for a 30-day public review and comment period which ended on June 9, 2013. Accompanying the Draft ToR was the Record of Consultation. The Record of Consultation documents all engagement and consultation activities completed to date.

Comments received on the Draft ToR have been incorporated, as appropriate, into the Proposed ToR and Record of Consultation. Both documents were submitted in July 2013 to the Ontario Ministry of the Environment. There is a government-led public review period that runs from July 19 to August 19, 2013. If approved by the Minister, the ToR will provide the framework and requirements for the preparation of the EA.

Proposed Project Schedule

Construction of the Project is expected to commence in early 2015, after the necessary environmental approvals and permits are complete. The proposed gold mine would begin operation in 2017.

Public and Aboriginal Consultation Activities

IAMGOLD has been and will continue to engage and consult with stakeholders, governments and Aboriginal groups on the Project and the EA.

IAMGOLD held open houses in May 2013 to provide an opportunity for the public to learn more about the Project and comment on the Draft ToR. The open houses were also a good way to meet Project representatives and discuss concerns, ask questions and learn more about what is happening at the Project site. Future community open houses are being planned.

If you were unable to attend one of the Project's open houses, and you want to discuss the Project with us, please contact us! Our contact details are on the back of the newsletter.

The open houses were held on:

- May 21, 2013 in Sudbury
- May 22, 2013 for members of Mattagami First Nation
- May 22, 2013 in Gogama
- May 23, 2013 in Timmins
- May 28, 2013 for members of Flying Post First Nation

What We Heard

Attendees at the open houses indicated that they look forward to having work and business opportunities in the region as a result of the Project. Attendees also identified concerns related to the potential impacts of the Project on water (quality and quantity), noise levels, fish and wildlife, land use, the location of Project components as well as visual impacts. IAMGOLD is taking the comments and concerns from our neighboring communities into consideration as part of the Project planning.

Gogama Open House, November 8, 2012

What's Next

This summer, IAMGOLD will continue to conduct studies to understand and describe the local and regional environment which will be used to prepare the EA and make refinements to Project designs. Check out our fact sheet on the baselines studies under the Documents section on our Project website.

We are also preparing a Pre-Feasibility Study that will help us in our Project planning.

The Proposed ToR was submitted to the Ontario Ministry of the Environment in July 2013. There will be a 30-day public review and comment period. Watch for the Notice of Submission in local newspapers. Members of the public who have joined the Project Mailing List will receive the notice directly.

If you would like to be added to the Project Mailing List for future invites, please contact IAMGOLD. IAMGOLD looks forward to your continued participation!

IAMGOLD CORPORATION

OCTOBER 2013

Let's Talk:

The Côté Gold Project Community Newsletter

IAMGOLD is proposing the construction, operation and eventual closure of a new open pit gold mine in northeastern Ontario, near Gogama – the Côté Gold Project (the Project). We are currently conducting engineering studies to further confirm and determine the technical and economic aspects of the Project as well as pursuing environmental approvals from both the Provincial and Federal governments.

Côté Gold Project Location

Côté Gold Project Update

Since our last newsletter (July 2013), IAMGOLD has been busy preparing submissions for the Federal and Provincial environmental assessments (EAs). As part of this process, we have been working hard to collect data for our baseline studies which will provide a foundation for assessing the potential effects the Project could have on the physical, biological and human environment surrounding the Project area.

Baseline Studies

Physical environment baseline studies describe the physical conditions and characteristics in the Project area. These studies focus on assessing the current state of the physical environment within and around the Project site. The physical environment baseline studies look at current levels of air quality, noise, hydrology, climate, surface conditions and groundwater quality. The biological environment baseline studies describe the biological conditions and characteristics around the Project site, including: soils; vegetation; wildlife and aquatic biology of the area; an estimation of the Project area's biodiversity; and finally, a description of any protected areas near the Project site. Lastly, human environment baseline studies have been conducted to describe the socio-economic conditions within and near the Project site. These studies are focused on assessing local land and resource uses in the Project area, Aboriginal communities traditional use of the land, archeological and heritage sites of significance and the socio-economics of the local and regional areas.

IAMGOLD produced and posted a Baseline Studies Fact Sheet Booklet to the Project website in the summer of 2013. The Booklet provides readers with a thorough description of all the baseline studies that have been completed or are currently underway, and describes some of the preliminary findings.

Effects Prediction

In preparation of the Environmental Assessment, it has been important for IAMGOLD to try and accurately predict the number of potential effects the Project could have on the local physical, biological and human environment and the extent to which these effects could potentially alter the state of the local area.

Understanding these effects will allow IAMGOLD to make the best decisions regarding environmental management measures that can be taken to avoid or minimize potential Project effects on the environment. Our commitment to this process is in line with our ZERO Harm framework that guides and underpins all of the work undertaken by the company. In addition, IAMGOLD will seek input from Aboriginal communities, government agencies and the general public to determine what measures can and should be taken to help enhance and distribute the benefits of the Project (such as job and business opportunities).

Aboriginal Traditional Knowledge and Traditional Land Use Studies

Aboriginal Traditional Knowledge and Traditional Land Use Studies are two of the baseline studies that are being conducted in the Project area. These studies describe the current Aboriginal (First Nation and Métis) traditional land and resource uses that could potentially be affected by the Project. These baseline studies describe activities practiced by Aboriginal peoples in the Project area, such as fishing, hunting, plant harvesting and cultural and ceremonial practices, and the resources that are required in order for Aboriginal communities to continue engaging in these activities.

Archaeological Work Underway at Project Site

Proposed Project Schedule

Construction of the Project is expected to commence in early 2015, after the necessary environmental approvals and permits are complete. The proposed gold mine would begin operation in 2017.

Consultation and Community Engagement

Over the summer, IAMGOLD participated in a number of local events. During July, IAMGOLD joined the Gogama Fire Department for a Community BBQ, and hosted Elders and community members from Mattagami First Nation on Site for a Cultural Heritage Day. Throughout August, IAMGOLD participated in the Wabun Golf Tournament, a Mattagami First Nation Pow Wow, the Timmins Heart and Stroke Great Canadian Kayak Race, the Westree Centennial Fundraiser to support local needs for fire equipment and continued supporting Right to Play events in Mattagami First Nation. IAMGOLD will continue to build relationships with local community members, and appreciates the ongoing involvement the local communities warmly extend to us.

IAMGOLDs Fall (2013) consultation will be primarily focused on sharing the results of our baselines studies and effects prediction with Aboriginal Chief's and Council's, local stakeholders and government agencies. As part of this process, we will be seeking your input regarding our proposed mitigation strategies to ensure that our plan for managing potential effects provides the most optimal outcome for all stakeholders involved in the Project, to the extent practicable.

IAMGOLD will be hosting an open house in Gogama on November 13th at 7pm. For more information on this event, please contact us! Our contact details are on the back of this newsletter.

IAMGOLD uses these events as an opportunity to share information about the Project, and to take your comments and concerns into consideration as part of the Project planning. If you are unable to attend this event, but want to discuss the Project with us, please contact us! You can also contact us to request to be added to our Project mailing list for future invites to our consultation events and to receive key updates on the Project.

Pow Wow at Mattagami First Nation

What's Next

Over the next couple of months, IAMGOLD will be working towards submitting the draft Environmental Assessment and the Environmental Impact Statement (EIS), as part of the respective Federal and Provincial Environmental Assessment processes.

IAMGOLD is grateful for, and looks forward to your continued participation!

IAMGOLD® CORPORATION

MARCH 2014

Let's Talk:

The Côté Gold Project Community Newsletter

IAMGOLD is proposing the construction, operation and eventual closure of a new open pit gold mine in northeastern Ontario, near Gogama – the Côté Gold Project (the Project). We are currently conducting the environmental assessment to evaluate the potential environmental effects and determine mitigation measures should be incorporated into the Project plans.

Côté Gold Project Location

Côté Gold Project Update – Terms of Reference Approval

Since our last newsletter (October 2013), IAMGOLD has been working on preparing the Draft Environmental Assessment (EA) for the Project, following approval of the Terms of Reference (ToR) for the EA granted by the Minister of Environment on January 14, 2014. The Minister's letter of approval of the ToR is available here:

http://www.iamgold.com/files/operations/CoteGold/Notice%20of%20ToR%20approval.pdf

Receiving approval on the Terms of Reference marks a major milestone in the EA process for IAMGOLD. In essence, receiving approval on the ToR means that the Minister has accepted IAMGOLD's proposal of what we will evaluate (the scope of the assessment and alternatives, and the justification of our approach for the assessment) in the EA. It also means that as part our EA, IAMGOLD will continue to administer our commitments for consultation and engagement with stakeholders, and on-site environmental monitoring.

Effects Prediction, Assessment and Mitigation Strategies

As part of the EA preparation process, IAMGOLD identified and mapped all of the potential effects the Project could have on the biological, physical and human environments in the Project area.

Predictions of the Project's effects were developed by completing an assessment of the baseline conditions in the Project area and then using scientific methods in combination with best professional judgement, considering how, and to what extent, the Project could alter the state of the local area. Understanding these effects will allow IAMGOLD to make the best decisions regarding environmental management measures that can be taken to avoid or minimize potential Project effects on the environment.

During the Fall (2013), IAMGOLD sought input from First Nations, Métis and local communities on the potential effects and proposed management strategies, to determine what measures can, and should be taken to help mitigate potentially negative effects and what should be done to enhance and distribute the benefits of the Project (such as job and business opportunities).

Côté Gold Employee Spotlight

At IAMGOLD, we believe that empowering people leads to extraordinary performance. Our Côté Gold Project has, and continues to focus on sourcing employees and suppliers from local and Aboriginal communities.

Cole Clearwater, is one of many extraordinary employees at the Côté Gold Project site. He works as an Environmental Technician on-site, providing support to the Environmental team by completing data input of field notes, assisting environmental consultants during field visits and by ensuring compliance with environmental procedures for field sampling.

Cole is originally from Nipigon, Ontario, and is a member of Flying Post First Nation. Cole studied Aboriginal and Canadian Relations, and was also enrolled in the Environmental Technician program at Confederation College. He gained practical experience in the field working with the Ministry of Natural Resources during the summer. Shortly after graduation, Cole joined IAMGOLD as a summer student, and has since stayed on to work in his current role.

When asked, Cole can cite a number of reasons why he enjoys working at IAMGOLD. He believes IAMGOLD provides a great environment for individuals to work on their team building skills, attributed largely to the fact that he is part of a very diverse group of employees, and a corporate culture that is focused on the safety of their employees and developing strong relationships with, and making positive contributions to, its local communities.

He hopes to grow at IAMGOLD by continuing to participate in and learn about the environmental management of mining projects from the early planning stages into the development of large scale gold mine operations. He hopes to become a manager in the environmental field by harnessing his contribution to the ongoing environmental program along with bringing strong communication skills and effectively contributing to the team. To read more about future employment opportunities at Côté Gold, please see our Career and Employment Opportunities Fact Sheet:

http://www.iamgold.com/files/doc_downloads/IAMGOLD%20Factsheet-Employment2013.pdf

Consultation and Community Engagement

IAMGOLDs Spring (2014) consultation will be primarily focused on reviewing the draft EA with relevant Aboriginal groups, government agencies and local communities. As part of this process, we will be seeking your input regarding alternatives that have been assessed in the EA, proposed Project related infrastructure and facilities (e.g. transmission line, watercourse realignments), and mitigation strategies for minimizing the effects of the Project on the local physical, biological and human environments.

IAMGOLD is committed to regular community consultation events, and uses them as an opportunity to share information about the Project, and take your comments and concerns into consideration as part of the Project planning. IAMGOLD will inform stakeholders of our Spring (2014) consultation schedule by placing notices in local newspapers, community halls and on our Project website.

If you are unable to attend one of our upcoming events in the Spring (2014), but want to discuss the Project with us, please contact us! Our contact details are listed below. You can also contact us to request to be added to our Project mailing list for invites to our future consultation events and to receive key updates on the Project.

Mattagami First Nation Kid's Celebrate Christmas with IAMGOLD

Visual rendering of what the Project will look like in the summer

Over the next couple of months, IAMGOLD will be working towards submitting the draft Environmental Assessment and Environmental Impact Statement (EIS), as part of the respective Federal and Provincial Environmental Assessment processes. As mentioned above, once these documents are submitted, we will begin consultation on them. Following IAMGOLDs consultation with Aboriginal groups, local communities and government agencies, IAMGOLD will finalize the EA materials and the Canadian Environmental Assessment Agency will prepare their own summary EA report and proceed with consultation on their report with Project stakeholders. IAMGOLD has also committed to developing an EA Findings Fact Sheet to ensure that all stakeholders have a broad overview of the EA, prior to the commencement of the consultation activities described above.

IAMGOLD is grateful for, and looks forward to your continued participation!

IAMGOLD CORPORATION

JUNE 2014

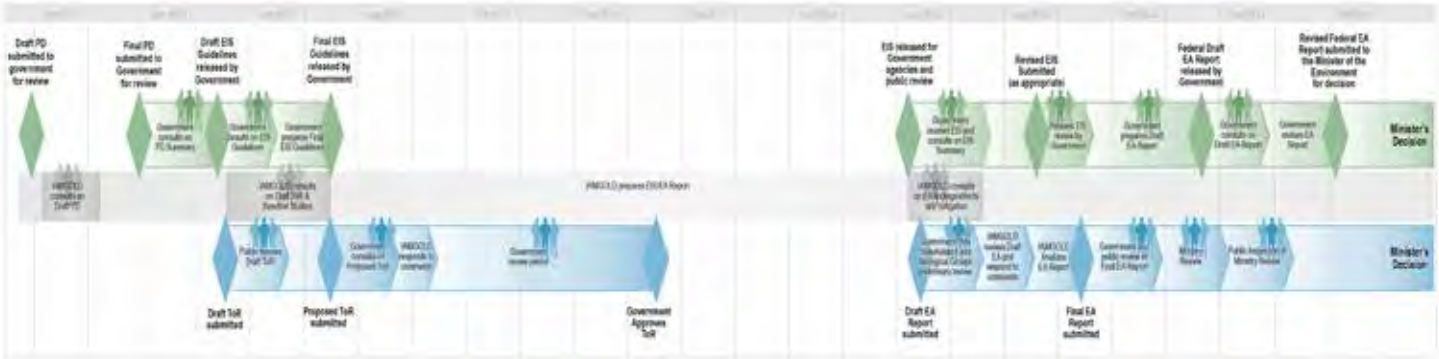
Let's Talk:

The Côté Gold Project Community Newsletter

IAMGOLD is proposing to construct, operate and eventually close the Côté Gold Project (the Project) – a new open pit gold mine near Gogama in northeastern Ontario... We are currently conducting engineering studies to further confirm and determine the technical and economic aspects of the Project and are pursuing environmental approvals from both the Provincial and Federal governments.

Environmental Assessment (EA) Process – Refresher

An Environmental Assessment (EA) is a planning and decision-making process used to identify potential project-related environmental effects and to propose ways to lessen or manage adverse environmental effects. EAs also identify if significant adverse environmental effects from a Project are expected after mitigation measures are put in place. An EA may also include a follow-up program to confirm the accuracy of the EA and the effectiveness of mitigation measures.



Côté Gold Project Location

The Provincial EA process is managed by the Ontario Ministry of Environment (MOE) in accordance with the Environmental Assessment Act. The Federal EA process is guided by Environmental Impact Statement (EIS) guidelines, issued by the Canadian Environmental Assessment Agency, as per the Canadian Environmental Assessment Act, 2012.

In keeping with IAMGOLD's efforts to coordinate the Federal EIS timeline with the Provincial EA process, one body of documentation entitled the Draft EA/EIS was developed, the Draft EA / EIS was developed to satisfy both of these processes.

You can learn more about the Environmental Assessment process for the Côté Gold Project here:

http://www.iamgold.com/files/doc_downloads/Environmental%20Assessment%20Process%20Factsheet%20-%20web.pdf

Côté Gold Project Update – Submission of Draft Environmental Assessment / Environmental Impact Statement

Since our last newsletter (March 2014), IAMGOLD has been working on preparing the Draft EA / EIS for the Project.

On May 9, 2014 IAMGOLD submitted an Environmental Impact Statement (EIS) to the Canadian Environmental Assessment Agency (the Agency) for conformity review. On May 20, 2014 the Agency informed IAMGOLD that the Report satisfies the EIS guideline requirements. The official Federal review of the Côté Gold Project Environmental Impact Statement subsequently commenced on June 2, 2014. The comment period on the Draft Environment Assessment Report for the Provincial government will run from July 13 to July 14, 2014.

Printed copies of the draft Environmental Assessment Report are being made available for public review and comment beginning June 13, 2014 during regular business hours at the following locations:

Gogama		***Timmins***
IAMGOLD Corporation Côté Gold Project 3 Mesomikenda Lake Road P.O. Box 100 Gogama, ON P0M 1W0 T: 705-269-0010	Gogama Public Library 3 Low Avenue P.O. Box 238 Gogama, ON P0M 1W0 T: 705-894-2448	Timmins Public Library 320 Second Avenue Timmins, ON P4N 8A4 T: 705-360-2623
Toronto		***Sudbury***
IAMGOLD Corporation 401 Bay Street, Suite 3200 P.O. Box 153 Toronto, ON M5H 2Y4 T: 416-360-4710	Ministry of the Environment Environmental Approvals Branch 2 St. Clair Ave. West, Floor 12A Toronto, ON M4V 1L5 T: 416-314-8001/1-800-461-6290	Greater Sudbury Public Library 74 Mackenzie Street Sudbury, ON P3C 4X8 T: 705-673-1155

The Draft Report is also be available for download at: http://www.iamgold.com/CoteGold-DraftEAEISReport and for review at local Aboriginal offices.

Written comments about the Draft EA Report are requested by July 14, 2014. Comments should be directed to:

Steven Woolfenden
Manager, Corporate Environmental Assessments and Approvals
IAMGOLD Corporation
401 Bay Street, Suite 3200, P.O. Box 153
Toronto, ON M5H 2Y4
T: 416-594-2884
E-mail: cotegold@iamgold.com

IAMGOLD will host several consultation and community engagement events in June 2014 to share information about the EA / EIS and invite comments on the Report. See the Consultation and Community Engagement section of this newsletter for more information about events and dates.

PLAY – Promoting Life-Skills in Aboriginal Youth – A Partnership Program with Côté Gold, Right To Play and Mattagami First Nation

In the fall of 2012, IAMGOLD Côté Gold and Mattagami First Nation partnered with Right to Play to introduce the PLAY program into the community of Mattagami First Nation. The PLAY program ramped up in the spring of 2013, led by a local Community Mentor. The PLAY program encourages life and leadership skill development in youth ages 4-13 through the facilitation of fun and educational activities.

An important part of the program is providing youth with a space to learn and play after school 3 times a week. During this time, youth are encouraged to plan activities they are interested in implementing, helping them to cultivate leadership and time management skills, and a positive approach to work. The activities have a unique cultural spin on them, providing a space for youth in the community to learn about their history while strengthening the capacity of their own generation. For instance, in January of 2014, youth (ages 9-13) in the PLAY program, hosted a 'Youth and Elders' event that focused on traditional knowledge and activities. The PLAY program is also looking to develop a homework club in the community, to provide a space where students can mentor one another to improve their studies in and outside of the classroom.

With support from IAMGOLD, the PLAY program has expanded to 39 First Nation communities across the province of Ontario. You can learn more about the PLAY program, and how your community can be involved here:

http://www.righttoplay.ca/Learn/ourstory/Pages/PLAY-Program.aspx

Gogama Annual Canada Day Celebration

IAMGOLD is pleased to be collaborating again this year with the Gogama Volunteer Fire Department to host a Canada Day Celebration for our local community members in Gogama. The event will take place at the Gogama Community Centre on July 1, 2014, and is expected to draw around 500 people from Gogama and the surrounding areas.

IAMGOLD welcomes opportunities to work with the Gogama Volunteer Fire Department who are committed to the safety of their local community and cottagers residing nearby. The Canada Day celebration offers a time to for the Fire Department to provide some fire safety training for residents, while offering exciting activities for the kids. Please join IAMGOLD for a BBQ, fireworks and tons of great activities to celebrate Canada's 147th birthday!

Consultation and Community Engagement

IAMGOLD will host a consultation series in June 2014 to review the draft EA / EIS with local Aboriginal groups, government agencies and regional communities. As part of this process, we will be seeking your input regarding alternatives that have been assessed in the EA, proposed Project related infrastructure and facilities (e.g. transmission line, watercourse realignments), and strategies for minimizing the potential Project related effects on the local physical, biological and human environments.

IAMGOLD is committed to regular community consultation events. We see public open houses as an opportunity to share information about the Project and to take your comments and concerns into consideration as part of Project planning.

Community Open Houses are scheduled as follows:

June 23, 2014 – Timmins, 3-8 PM
Days Inn & Conference Centre

June 24, 2014 – Sudbury, 3-8 PM
Radisson Hotel

June 25, 2014 – Gogama, 4-8 PM
Gogama Community Centre

IAMGOLD will provide further details of the scheduled events by placing notices in local newspapers, community halls and on our Project website.

If you are unable to attend one of our upcoming events, but want to discuss the Project with us, please contact us! Our contact details are listed below. You can also contact us to request to be added to our Project mailing list for invites to future consultation events and to receive key updates on the Project. A comment form will also be available from June 13 to July 14, 2014 on our website.

IAMGOLD is grateful for, and looks forward to your continued participation!

What's Next

Following consultation on the Draft EA / EIS, IAMGOLD will work to address comments received during the June 2014 comment period to ensure that questions and concerns have been answered and considered in the final EA Report. The final EA Report will then be submitted to the Provincial Ministry of the Environment.

The Canadian Environmental Assessment Agency will also prepare their own EA report, based on the findings outlined in the Environmental Impact Statement and comments the Agency receives during their published comment period.

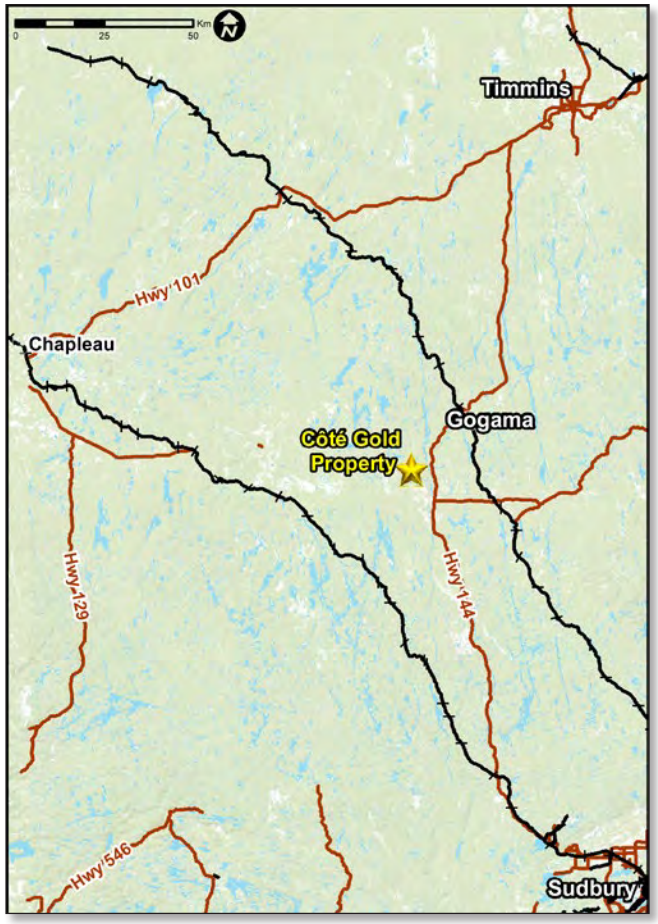
APPENDIX D-3
FACT SHEETS

IAMGOLD CORPORATION

September 2013



Côté Gold Project

Frequently Asked Questions

Where is the Côté Gold Project located?

The Côté Gold Project, a proposed open pit gold mine, is located in northeastern Ontario, approximately 20 kilometres (km) southwest of Gogama and approximately 200 km northwest of Sudbury and 130 km south of Timmins.

Project Location

Who owns the Côté Gold Project?

IAMGOLD acquired the Project as part of the purchase of Trelawney Mining and Exploration Inc. in 2012. IAMGOLD holds a 92.5% interest in the Côté Gold Project. The remaining 7.5% is owned by a range of other investors.

When would the mine start producing gold?

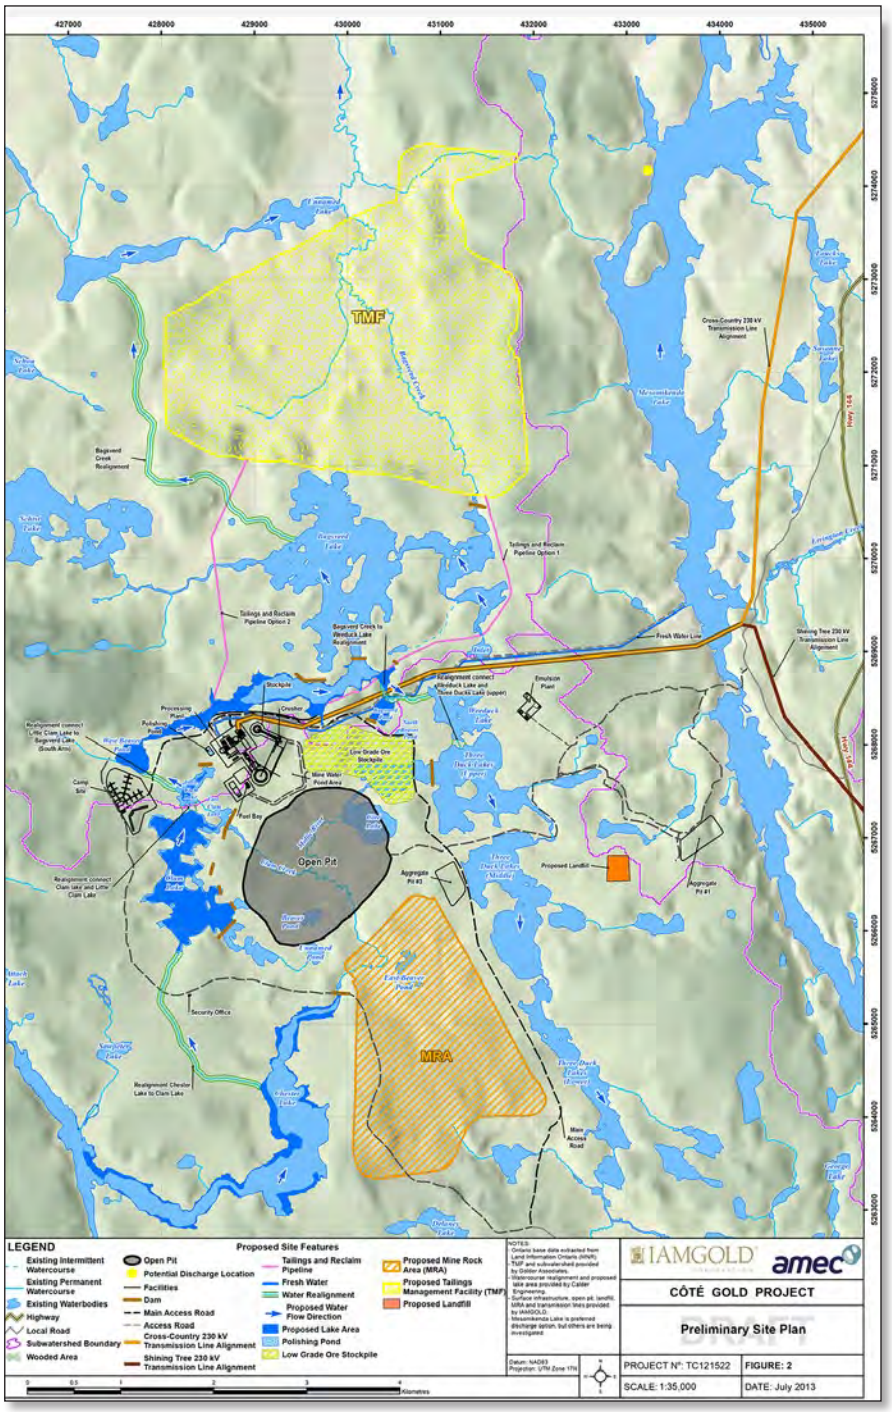
Based on the current schedule, we expect construction would begin in 2015 after the necessary environmental approvals and permits have been obtained. Approvals will take approximately two years to complete. The proposed gold mine would begin operations in 2017. The Project is expected to operate for approximately 15 years.

Proposed Project Schedule

2013
Environmental Assessment commencement
Engagement with Aboriginal peoples & Stakeholders

2013-2014
Environmental Assessment completion
Engagement with Impacted Aboriginal peoples & Stakeholders

2015
Construction activities expected to commence
Engagement with Aboriginal peoples & Stakeholders



cotegold@iamgold.com

www.iamgold.com

What would the Project look like?

The proposed Project site would include an open pit mine, an ore processing plant, a mine rock area (MRA), a tailings management facility (TMF), an accommodations complex, an administration complex and other related buildings and infrastructure. The planned open pit would cover an area of approximately 210 hectares, with a depth of 650 metres. It is anticipated that processing would occur at a rate of approximately 60,000 tonnes per day. Power requirements would necessitate the construction of a 230 kV transmission line from Timmins to the Project site.

The preliminary site layout is presented in Figure 2 of the Proposed Terms of Reference and presented below.

Preliminary Site Plan

What is Zero Harm?

Zero Harm is our commitment to work continuously towards ensuring excellence in human health, minimizing our environmental impact and working collaboratively with our host communities. In short, it is our commitment to look after each other and the environment. Accountable mining is at the core of who we are and we strive to empower everyone who has a stake in our success to play their part.

IAMGOLD ZERO HARM | DAÑO | INCIDENT | SCHADE | KGOBALO

How does gold mining work?

Ore (i.e., material containing marketable quantities of gold) and mine rock (i.e., rock without or insufficient concentrations of gold) are extracted from either an open pit (as is the case at the Côté Gold Project) and/or an underground mine.

The ore is then processed to remove the gold. Ore processing occurs at a processing plant and goes through a number of steps including:

- crushing and grinding of the ore;
- gravity separation;
- chemical separation of the gold from the crushed rock; and
- smelting and pouring the gold for further processing (at another location).

Where would the gold be processed?

We are proposing the construction and operation of an ore processing plant at the Project site.

Would cyanide be used?

The Côté Gold Project proposes the use of cyanide. Cyanide is a technically proven and cost-effective reagent used for the recovery of gold from gold-bearing ores, and its use is standard practice throughout the industry.

The 'cyanide leaching' process would be designed using industry best practices to meet all conditions for responsible management and use of cyanide. This requires high-grade equipment and handling procedures, transportation, storage, the mixing and use of the reagent in the ore processing plant and the final destruction of cyanide prior to pumping it to the tailings management facility (TMF).

Residual cyanide in the tailings (consisting of crushed rock and process water from the ore processing plant) would be destroyed through an in-plant cyanide destruction/metal precipitation industry standard process. This destruction process breaks down the cyanide into stable compounds, at concentrations below effluent criteria, and allows the metals to precipitate in the TMF with the tailings solids, for safe long-term storage.

What would happen when the mine closes?

The Ontario Mining Act and its associated regulations and codes would govern closure of the Côté Gold Project. The Mining Act requires that a closure plan be filed for the Project before it is undertaken, and that financial assurance is provided prior to substantive development to ensure that funds are in place to carry out the closure plan.

Our closure objective would be to naturalize the Project site. The term 'naturalize' means to rehabilitate the site, including removal of infrastructure (unless otherwise requested/negotiated), so that it is capable of supporting plant, wildlife and fish communities, and other applicable land uses.

What does IAMGOLD do to protect the environment?

As a mining company, we are aware that our activities have an environmental impact. Our job is to challenge ourselves constantly to minimize, eliminate and offset those impacts whenever possible. We do this by:

- working within rigorous environmental frameworks – internal (IAMGOLD's Sustainability Framework) and external (ISO 14001, Towards Sustainable Mining);
- financially supporting environmental protection through environmental monitoring, ISO certification, employing environmentally-conscious people and properly managing our tailings and wastes;
- complying with all environmental regulatory requirements and permits; and
- minimizing risk through emergency response and crisis management planning.

What environmental work is IAMGOLD doing at the Côté Gold site?

We entered into a Voluntary Agreement with the Ontario Ministry of the Environment (MOE) to conduct a Provincial Individual Environmental Assessment (EA) for the Côté Gold Project that will meet the requirements of the Ontario Environmental Assessment Act. In addition, the design of the Côté Gold Project, as currently conceptualized, will require a Federal EA, pursuant to the Canadian Environmental Assessment Act, 2012 (CEAA 2012). We are working with the Provincial and Federal agencies to integrate the EA processes to meet the needs of each Act.

An EA provides an assessment of potential environmental effects – positive or negative - that a designated project could have on the biological, physical and human environments. The EA outlines the mitigation measures that will be taken to avoid, minimize or manage potential negative effects.

The following studies of current conditions in the area (baseline studies) have been conducted to support the EA:

- Physical Environment Studies: air quality, noise, hydrology (lakes, rivers, etc.) and climate, hydrogeology (groundwater), geochemistry and geology, and surface and groundwater quality;
- Biological Environment Studies: soils, vegetation, wildlife and aquatic biology of the area, as well as estimating the area's biodiversity and describing any nearby protected areas; and
- Human Environment Studies: land and resource use, Aboriginal traditional knowledge and land use, archaeology, visual aesthetics and socio-economics.

Please refer to our Baseline Studies Fact Sheet Booklet for further details.

The EA document will include:

- Baseline Studies describing the biological, physical and human environments;
- Consultation Activities;
- Effects Prediction and Mitigation Strategies;
- Impact Assessment; and
- Proposed Monitoring Plans.

Other environmental approvals and permits at the Provincial and Federal levels are anticipated for Project construction and other activities. These permits are being, or will be prepared, parallel to or after approval of the EA report.

How could the Project affect lakes and streams?

As part of the proposed development of the open pit, Côté Lake would need to be drained. Sections of other water bodies and watercourses are proposed to be realigned to allow for the development and operation of the Project facilities.

The Project has the potential to have an effect on the water quality and quantity of local water bodies. Dust

generated from Project activities, as well as effluent discharge to the environment, can also have an effect on water quality. These potential effects will be assessed in the EA Report along with mitigation measures.

Water would be used from neighbouring water sources (to be determined) to supply Project processes and activities at the start-up of operations, and as needed, when sufficient flow is available. Water used during operations from the start-up onwards would be recycled as much as possible to minimize water intake.

Excess water from Project activities and components, if compliant with the applicable regulations and standards, would be released to the environment. All excess water from the ore processing plant would be retained in the tailings management facility for treatment, and monitored to meet applicable regulations and standards, before being released to the environment.

A water balance study is underway to determine the more detailed use of, and potential impacts on, water quantity and quality. A plan would be developed to mitigate and offset potential impacts to water bodies and watercourses, in consultation with stakeholders, Aboriginal communities and government agencies.

How would workers access the Project site?

Project personnel and authorized persons would have access to the Project site by road. Currently, the Project site is accessed from Highway 144 to the east via the Mesomikenda Lake access road. Access to the Project site in the future would be through the Sultan Industrial Road to the south of the Côté Gold Project site.

Would I still be able to use this area for hunting, fishing or other recreational activities?

For safety reasons, during the construction, operation and closure of the Côté Gold Project, the Project site would be inaccessible to the general public. The area surrounding the Project site, unless specified and excluded for safety reasons, would be accessible for hunting, fishing and other recreational activities.

How many jobs would there be and what types of jobs would be available?

Employment and contracting opportunities would be available throughout the various stages of the Project.

Currently, the Project employs 50 people, most of who live in Gogama and the surrounding communities. Local contracts are in place for services such as hauling, brush clearing, road construction, pipe fusing, core box construction, and carpentry.

The Project would need workers to fill a wide range of positions that support mining operations, including mining and mineral processing, administration, finance, communications, human resources, and information technology. It is estimated that the construction phase would employ approximately 1,200 workers and that the operations phase would employ approximately 500 workers.

Please refer to the IAMGOLD Côté Gold Employment Fact Sheet for more information on opportunities and contacts.

How do I apply for a job at Côté Gold?

As the Project progresses, we will be looking for outstanding professionals who share our aspirations, want to be part of the Project and that recognize our commitment to Zero Harm.

For information on opportunities and who to contact, please visit our Careers page at http://www.iamgold.com/files/careers/default.html

How can I get involved in the Project?

Join our Project mailing list to be kept informed about the Project and any upcoming events by sending an email to CoteGold@iamgold.com. Visit the Project website for additional information and updates at:

http://www.iamgold.com/English/Operations/Development-Projects/Cote-Lake-Ontario/default.aspx

Where can I get information about Côté Gold's procurement and business opportunities?

During the construction phase, we would require many services and supplies of material. Many large equipment packages would be destined for specialized suppliers, but a considerable amount of supplies would be sourced locally. The installation of industrial equipment would also require several trades and specialized labour related to installation of industrial equipment. If you have interest in either supplying or installing industrial equipment, or building for the Côté Gold Project, please contact Éric Deslaurier, Procurement & Logistics Coordinator, Engineering & Construction at: Eric_Deslauriers@iamgold.com.

IAMGOLD® CORPORATION

Côté Gold Project

Career and Employment Opportunities Fact Sheet

The Côté Gold Project is a proposed open pit gold mine with related processing facilities and infrastructure, located in northeastern Ontario, about 20 kilometres southwest of Gogama. IAMGOLD is currently seeking the necessary environmental approvals and permits needed to build and operate this proposed gold mine.

Employment Approach

At IAMGOLD we believe that empowering people leads to extraordinary performance. Our Côté Gold Project will focus on sourcing employees and suppliers from local communities.

IAMGOLD's core values will guide the Côté Gold Project's employment practices:

- We are driven to excellence in everything we do
- We are accountable and operate with transparency
- We conduct ourselves with respect and embrace diversity
- We grow with teamwork, learning and innovation

IAMGOLD has received public recognition many times for the way our Zero Harm approach is enriching the lives of individuals and communities around the world. Zero Harm is our commitment to strive for excellence in human health and safety, minimize our impact on the environment, and to work co-operatively with host communities.

IAMGOLD ZERO®

HARM | DAÑO | INCIDENT | SCHADE | KGOBALO

Project Phases

The Côté Gold Project will offer an estimated 19 years of employment throughout the construction, operations and closure phases. This is in addition to the work currently happening on-site.

Diverse Opportunities to Work and Grow with the Côté Gold Project

The Côté Gold Project will offer a variety of careers in the areas of Mining, Mineral Processing, Engineering and Geology, and Administration and Support. Each of these areas will offer career opportunities requiring a variety of education, training and skills, including: entry-level, trade, technical and professional.

Entry-Level
- Generally requires a high school education
- Occupations include Labourers, Technicians, Assistant Surveyors

Trades
- Requires a provincial or red seal trade certification
- Occupations include Heavy Equipment Operators, Mechanics, Electricians

Technical
- Requires a college diploma or university degree
- Occupations include Instrumentation Technicians, Surveyors, Safety Supervisors

Professional
- Generally requires a university degree
- Occupations include Mining Engineers, Geologist, Accountants, Metallurgist, IT Specialists

IAMGOLD's Côté Gold Project offers competitive compensation and benefit programs, and seeks to reward outstanding performance.

On-site accommodations will be built to house the construction and operations workforces. These accommodations will offer a range of amenities and comforts to support workers while on-site.

Are you considering a career in mining?

A mining project requires a diverse workforce. Over the coming years we will look to hire people from various disciplines, with distinct skills and backgrounds. Why not consider a career in mining!

How to Apply for Jobs

To learn more about currently available jobs at Côté Gold and IAMGOLD, as well as our approach to employment, student internships, and opportunities for graduates, visit the career section of our website: www.iamgold.com

If you are good at:	You might want to consider a career as a(n):
Working with equipment, working outdoors	Heavy Equipment Operator, Diesel Mechanic, Surveyor, Labourer
Working with equipment, attention to safety, details	Welder, Electrician, Instrumentation Technician
Analytical work, science, math, problem solving	Engineer – mining, process, environmental Technologist – mining, process, environment
Analytical work, problem-solving, staying calm under pressure	Control Room Operator
Attention to detail, analysis	Assay Lab Technician, Metallurgist
Communicating, training, organizing	Health & Safety, First Aid, Safety Supervisor
Leading people, organizing, planning	Supervisor, Trainer
Planning, testing	Maintenance Planner, Technician
Organizing, budgeting	Purchasing Officer, Accountant

IAMGOLD CORPORATION

Côté Gold Project

Baseline Studies Fact Sheet Booklet

Baseline Studies Overview

IAMGOLD Corporation (IAMGOLD) is planning to develop the Côté Gold Project (the Project) located approximately 20 kilometres (km) southwest of Gogama, 130 km southwest of Timmins, and 200 km northwest of Sudbury.

This booklet provides information on the baseline studies being carried out for the Project.

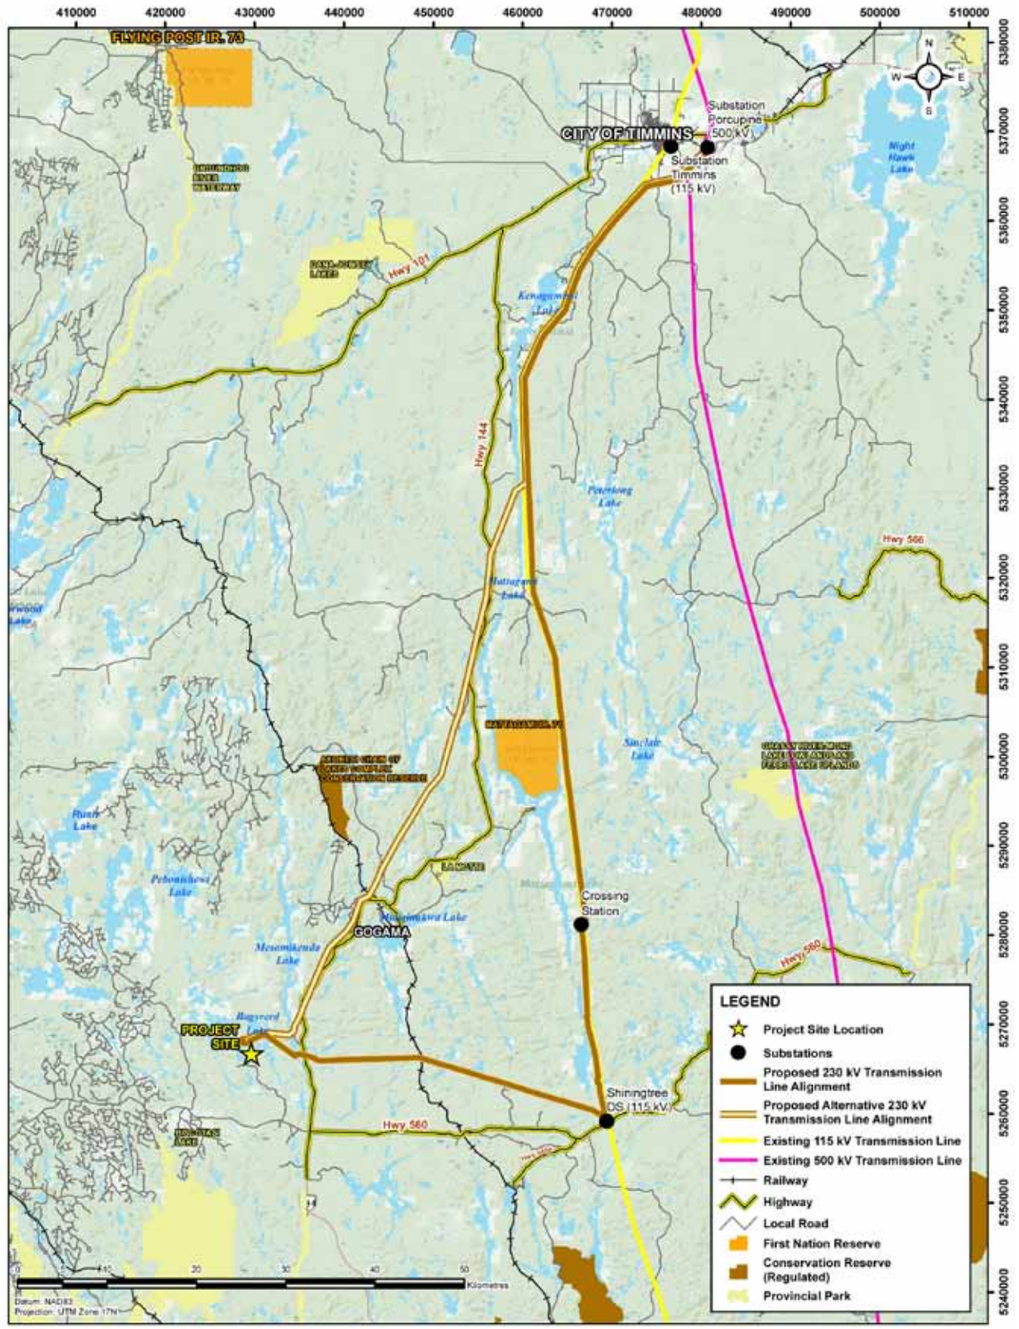
What is a baseline study?

A baseline study is prepared by a project proponent (or their hired consultants) to describe the current physical, biological and human environment conditions at a project site and surrounding area prior to the development of a project. The Côté Gold Project study area, defined separately for each discipline, generally includes the Project site and the immediate surrounding area that may be affected by the Project (local study area), as well as additional selected areas as it applies to the Project (regional study area).

Why is it important for the Côté Gold Project?

Baseline studies support the environmental assessment process. Understanding the current conditions, challenges and future plans of an area related to the Project provides a basis against which potential effects of the Project can be assessed. These assessments assist in decisions on the design and management of the Project to reduce those potential effects.

Physical Environment



The physical environment baseline studies describe the physical conditions and characteristics in the defined study area around and within the Project site. These studies include air quality, noise, hydrology (lakes, rivers, etc.) and climate, hydrogeology (groundwater), geochemistry and geology and surface and groundwater quality.

Biological Environment

The biological environment baseline studies describe the biological conditions and characteristics in the defined study area around and within the Project site, by describing the soils, vegetation, wildlife and aquatic biology of the area, as well as estimating the area's biodiversity and describing any nearby protected areas.

Human Environment

The human environment baseline studies describe the socio-economic conditions in the defined study area around and within the Project site. The studies include describing land and resource use, Aboriginal traditional knowledge and land use, archaeology visual aesthetics and socio-economics.

PHYSICAL ENVIRONMENT BASELINES

Air Quality

What is an air quality baseline study?

The air quality baseline study documents the air quality in a defined study area around and within a project site prior to the development of a project. The study assesses the presence and quantity of particulate matter, metals and other compounds.

How is air quality information gathered?

An air quality monitoring station is operated at the Project site to obtain first hand information prior to major construction and operations activities. The data collected by the air monitoring station will be supplemented and compared to monitoring data obtained from the Ontario Ministry of the Environment and Environment Canada for similar areas.

What are the preliminary baseline study findings?

- Air quality data has been obtained in the study area around and within the Project site. The results of these measurements are not yet available.

Meterological and Air Quality Monitoring Stations

www.iamgold.com cotegold@iamgold.com

Noise

What is a noise baseline study?

Like the air quality baseline, this study describes noise levels in particular locations in relation to a project site. There are three classes of acoustical (sound) environment under the Ontario Ministry of the Environment Guidelines (NPC 205/232) – Class 1 Area (major population centres), Class 2 Area (combination of the typical noise environment under Class 1 and 3 Areas), and Class 3 Area (rural areas and small communities).

How is noise information gathered?

Information generated by previous studies and publicly available information and data (internet, books, published articles, etc.) is reviewed to determine existing noise levels in the defined study area. Additional information can be obtained by means of instruments such as calibrated sound level meters (SLMs) and ground-sensing data loggers.

What are the preliminary baseline study findings?

- The background sound levels in the defined study area around and including the Project site are expected to be typical for rural environment noise levels (Class 3 Area).

Ambient Noise Monitoring Equipment

Côté Gold Project

PHYSICAL ENVIRONMENT BASELINE

Hydrology and Climate

What is a hydrology and climate baseline study?

Climate describes the weather conditions over a region, while hydrology is the study of the Earth's surface water, especially its movement in relation to the land. The baseline study describes the current climate and water conditions in a defined study area around and including a project site that could potentially be affected by a project. This includes describing rainfall, temperature, where water flows, mapping of watersheds, lakes and rivers, storm events and drainage analyses and seasonal variation in climate and surface water levels.

How is hydrological and climate information gathered?

Available public information and data (from government agencies, public archives, etc.) is reviewed. Additional information is obtained from the study area by means of meteorological stations and hydrological monitoring stations installed in lakes and rivers.

What are the preliminary baseline study findings?

- The Project site and study area is characterized by long, cold winters and short, warm summers with an annual water surplus (i.e., no drought conditions).
- The annual averages indicate total annual precipitation ranges from 800 millimetres (mm) to 900 mm, with about a third of it falling as snow. The annual average temperature in the region ranges from 1.3 degrees Celsius (°C) to 3.7°C; the coldest daily temperatures occur in January and the highest daily temperatures in July. Winds are primarily from the south or southwest during the summer months and from the north and northwest during the winter months.
- The Project site is located in the Mollie River and the Neville Lake watersheds.
- Surface water level and flow monitoring in the study area, as well as climate monitoring, is ongoing.

Meteorological Station at the Côté Gold Project

Hydrogeology

What is a hydrogeology baseline study?

Hydrogeology refers to a part of geology that deals with the occurrence, distribution and effect of water beneath the ground surface (groundwater). It is a study that describes the current hydrogeological conditions in a defined study area around and including a project site that will most likely be affected by a project. This includes determining how fast water flows through soil and rock, soil characterization, groundwater level and direction of flow, groundwater pressure and quality.

How is hydrogeological information gathered?

A preliminary review of available public information is conducted (from internet sources, published books and studies, etc.), including information provided by IAMGOLD. This provides a framework for the study and information gaps are identified. Experts then complete the study by gathering first-hand information in the field through various methodologies, including drilling holes and installing wells, to test how fast water flows through the rock.

What are the preliminary baseline study findings?

- The Project site area is relatively flat, with soil and till covering bedrock. Rainwater filters down through the soil and becomes groundwater, which in turn flows towards local surface water bodies (e.g. lakes and rivers). The groundwater flow is generally in a north/northeast direction.
- The flow of water through soil varies but generally follows the slope of the land. Groundwater dependent features, such as wetlands and aquatic habitat, are present. Groundwater is not the main supply for water features in the study area.
- The Ontario Ministry of the Environment's Water Well Records indicate there are six water wells within 15 km of the Project site. These wells are outside the potential extent of effects.

Capped Groundwater Monitoring Well

Côté Gold Project

PHYSICAL ENVIRONMENT BASELINE

Geochemistry and Geology

What is a geochemistry and geology baseline study?

Geochemistry is the study of the chemical make-up of the Earth, rocks and minerals, while geology is the study of the Earth's structure and composition, its history and processes. Geochemical and geological characterization studies describe the conditions of a defined study area around and within a project site. This includes the mineral characterization of rocks, sediment and surface water, determination of potential for acid rock drainage (ARD), metal leaching, and description of the area's structural and superficial geology (information on ground stability, potential for landslides, earthquakes, etc.).

How is geochemical and geological information gathered?

Geological information is gathered from government geological surveys as well as specific geological and related investigations of the study area, including aerial photographs and satellite imagery. Geochemical data is obtained from chemical analysis of rock and soil samples gathered in the defined study area, with extensive sampling carried out in the area proposed for mining.

What are the preliminary baseline study findings?

- Preliminary results suggest that the geological conditions in the study area around and including the Project site are stable and typical for this part of the Canadian Shield.
- Geochemical results suggest that the mine rock and tailings have a low risk of acid generation and metal leaching.

Stacks of Cores

Marking Cores

Surface Water and Groundwater Quality

What is a surface water and groundwater quality baseline study?

These studies collect water samples for testing over a period of one to two years, to measure the current quality of surface water and groundwater in a defined study area around and within a project site prior to the development of a project. This study takes into account findings of other baseline studies and includes a review of annual trends and seasonal changes in water quality. The water quality data is compared to federal and provincial water quality standards and objectives, such as the Canadian Water Quality Guidelines for the Protection of Aquatic Life, Provincial Water Quality Objectives and the Ontario Drinking Water Standards.

How is surface water and groundwater quality information gathered?

Surface water and groundwater samples are collected from the monitoring stations and wells located within the study area. The sampling methods that are used follow widely accepted sampling guidelines. Once the water samples are collected, they are submitted to a certified laboratory for testing to obtain water quality data.

What are the preliminary baseline study findings?

- Water quality samples have been collected from 21 surface water locations and 37 groundwater locations.
- Water quality parameters that have been analyzed include: pH, hardness, alkalinity, major ions, nutrients, metals, and organics (oil and grease).
- Preliminary surface water and groundwater quality results show that most of the tested parameters fall below the federal and provincial water quality standards and objectives. In some samples parameters were greater than water quality standards and objectives, including some metals and nutrients. Further study is ongoing to determine if this is a natural condition.

Surface Water Sampling at the Côté Gold Project

www.iamgold.com Côté Gold Project

BIOLOGICAL ENVIRONMENT BASELINES

Soils

What is a soils baseline study?

A soils study aims to characterize the soil conditions in a defined study area around and within a project site. Mapping of soil types is complemented by mapping of soil depth, and a characterization and analysis of the metal content of the soil.

How is soil information gathered?

Most of the soil mapping is done through the use of publicly available information and previous studies conducted in the area. The resulting maps are checked with a visual evaluation of the area and pits are used to classify soils. Soil samples are obtained for laboratory analysis (typical chemical parameters and metals) and the results are compared to the Canadian Council of Ministers of the Environment Soil Quality Guidelines for reference.

What are the preliminary baseline study findings?

- In general, the composition of soil in the study area consists of an organic layer (mainly peat), overlying silt and/or sand. Till has been occasionally detected.
- Soil depth varies on average from 0 metres (m) (exposed bedrock) to 22 m in the study area, though it is mainly composed of shallow silt-textured soils (less than 2 m depth to bedrock).
- Soil pH is primarily neutral, ranging from 6.8 to 7.3.

Vegetation

What is a vegetation baseline study?

This baseline study describes the existing conditions of the plants in a defined study area around and within a project site and, in the case of the Côté Gold Project, additional study areas for a proposed transmission line to the Project site. The study includes mapping of the plant cover (habitat map), listing of plant types (species) and identification of habitat with the potential for supporting plant species at risk.

How is vegetation information gathered?

The existing plant information is gathered from databases maintained by the Ontario Ministry of Natural Resources and the Natural Heritage Information Centre, and publicly available information. This is used to determine if there are any biological concerns and describe the potential occurrence of Provincially Significant Wetlands, Areas of Natural and Scientific Interest, wildlife habitat and listed species occurrences. Other relevant information sources, such as the *Species at Risk Act*, Committee on the Status of Endangered Wildlife in Canada, and Species at Risk in Ontario under the provincial *Endangered Species Act*, are also consulted. The study area is mapped using aerial photographs and satellite imagery, and checked with a visit to the study area to identify and collect plants to confirm the accuracy of the mapped information and plant identification.

What are the preliminary baseline study findings?

- A total of 105 plant species were identified in the study areas. No sensitive plant communities, species listed as endangered, of special concern or threatened under the *Species at Risk Act* or other listings were observed in the study area.
- Based on the Forest Ecosystem Classification (FEC) system for northeastern Ontario, the plant communities within the study areas are typical of the Lake Abitibi Ecoregion (3E-5), within which the Project is located.

Trees at the Côté Gold Project

Côté Gold Project

BIOLOGICAL ENVIRONMENT BASELINE

Wildlife

What is a wildlife baseline study?

The wildlife baseline study describes the terrestrial animals, their habitat use, and relative abundance and distribution in a defined study area around and within a project site and, in the case of the Côté Gold Project, additional study areas for a proposed transmission line to the Project site. Species at Risk are identified as those designated by Species at Risk in Ontario under the provincial *Endangered Species Act* (ESA), the *Species at Risk Act* (SARA), and others. Sensitive wildlife habitats, such as wintering areas, are also described.

How is wildlife information gathered?

A review of existing public records, databases and studies specific to the study area is carried out to determine the historical wildlife use. Current information is obtained by means of aerial and ground surveys using standard surveying methods appropriate to each species class (mammals, birds, reptiles, and amphibians) during appropriate seasons.

What are the preliminary baseline study findings?

- Terrestrial animals within the study area are typical of the Lake Abitibi Ecoregion (3E-5), within which the Project is located.
- The presence of four of the 18 wildlife species at risk with potential to occur within the study areas was confirmed through field surveys. These species include:
  - bald eagle (Special Concern, ESA);
  - olive-sided flycatcher (Threatened, SARA; Special Concern, ESA);
  - Canada warbler (Special Concern, SARA; Special Concern, ESA); and
  - rusty blackbird (Special Concern, SARA).
- Animal activity in the transmission line study areas is greater, especially along the existing 115 kV transmission line corridor from the City of Timmins to the Shiningtree Distribution Substation, which is likely opportunistically used as a wildlife corridor.

Black Bear During Aerial Survey

Aquatic Biology

What is an aquatic biology baseline study?

The aquatic biology baseline study describes and characterizes the current biology of water bodies, such as lakes and rivers, in a defined study area around and within a project site – especially fish and benthic invertebrate (bugs such as dragon flies and caddisflies) habitat and population. Fish are compared to the species listed under the Committee on the Status of Endangered Wildlife in Canada, the *Species at Risk Act* or Species at Risk in Ontario, among others.

How is aquatic biology information gathered?

Publicly available information and previous studies are reviewed. Sampling is conducted in areas downstream and upstream of the Project site and in a reference area. Standard habitat evaluation procedures, such as visual inspections of water bodies by foot and boat, are used. Fish communities are assessed with standard collection methods that do not kill or harm the fish (e.g. temporarily shocking fish for catch and release, seine nets, etc.). Fish tissue samples are taken from some fish to assess metal concentrations (if any). Sediment samples are collected from the bottom of a lake or river by coring and/or by a grab sampling device. Benthic invertebrates are also collected with a grab sampling device.

What are the preliminary baseline study findings?

- Of the 15 water bodies surveyed, 10 supported one or more species of sport fish (mostly northern pike and yellow perch). The other water bodies contained small-bodied fish species (minnows). Fish populations were estimated to be within the range typical for lakes of similar size and geographic setting.
- No water bodies were found to support species listed as endangered, threatened or of special concern.
- Overall, the water bodies did not appear to contain habitat considered to be regionally limited or uncommon.

Aquatic Sampling

Aquatic Sampling

www.iamgold.com cotegold@iamgold.com 13

Côté Gold Project

BIOLOGICAL ENVIRONMENT BASELINE

Biodiversity and Protected Areas

The biodiversity and protected areas baseline study describes the variety of plant and animal species, and protected and conservation areas established by federal, provincial and municipal jurisdictions near a project site, based on the findings of other biological baseline studies.

How is biodiversity and protected areas information gathered?

Information on biodiversity and protected areas near the Project site are collected primarily from information obtained from publicly available records. Additional information is collected during vegetation, wildlife and aquatic biology baseline studies.

What are the preliminary baseline study findings?

- Biodiversity indices such as relative species abundance and richness indicate values typical of the Lake Abitibi Ecoregion (3E-5).
- No ecological reserves or conservation areas exist within the biology baseline study areas.
- No National or Regional Parks have been identified within the biology baseline study areas.
- Two provincial parks have been identified near the Project site (more than 20 km from the Project site to the nearest park border): Spanish River/Biscotasi Lake Provincial Park and La Motte Lake Provincial Park.

Moose During Aerial Survey

Raptor Stick Nest During Aerial Survey

www.iamgold.com cotegold@iamgold.com 13

HUMAN ENVIRONMENT BASELINES

Land and Resource Use

What is a land and resource use baseline study?

A land and resource use baseline study describes how people use the land and the resources within a defined study area around and within a project site. Examples of land and resource use include hunting, fishing, farming, forestry, plant harvesting, snowmobiling, camping, and boating.

How is land and resource use information gathered?

A review of publicly available information and databases is conducted, including information from government agencies such as the Ontario Ministry of Natural Resources. Additional information is gathered directly from local land users and other stakeholders through interviews or surveys.

What are the preliminary baseline study findings?

- The study area is used for activities such as forestry, mineral exploration, hunting, trapping, and fishing.
- Land and resource use in the study area is managed by several land use policies for recreation and tourism, timber production, mineral exploration and development and trapping. There are many trout lakes in the area designated for lake trout management.
- A large portion of the study area is under active mining claims or mining leases.

Ice Fishing

Aboriginal Traditional Knowledge

What is an Aboriginal traditional knowledge baseline study?

These baseline studies describe the current Aboriginal (First Nation and Métis) traditional land and resource uses in a defined study area around and within a project site that could be affected by a project. The activities practiced by Aboriginal peoples considered in the baseline study include hunting, fishing, harvesting of plants and cultural and ceremonial practices. The resources that are needed to continue these uses are also described.

How is Aboriginal traditional knowledge information gathered?

Documented traditional land and resource use information available through previous studies and anthropological reports is reviewed, as well as information provided by First Nations, Métis, provincial and/or federal governments. Knowledgeable community members and current land users are identified and interviewed to obtain additional and current information. Traditional knowledge information is only collected under consent from both the community and the individuals and sensitive information that the community may wish to keep private is protected. Traditional land use is mapped and may be checked by visiting the study area.

What are the preliminary baseline study findings?

- The study is ongoing and the results are not yet available.

Conducting interviews

HUMAN ENVIRONMENT BASELINE

Visual Aesthetics

What is a visual aesthetics baseline study?

A visual aesthetics baseline study characterizes the existing landscape and view from locations near a proposed project site. This is done by taking photographs from a variety locations that have the potential to view certain components of a project during the various project phases.

How is visual aesthetics information gathered?

Visual aesthetics information is gathered in the areas that have the potential to be affected by the Project. These areas are potentially influenced by the size of the Project's components, existing topography and landscape as well as the location of receptor locations (such as cottages). Photographs from these receptor locations are taken to characterize the landscape in the winter and summer seasons.

What are the preliminary baseline study findings?

- Approximately 20 receptors locations were identified and visited during the winter 2013 site visit. A summer 2013 site visit will also be conducted.
- The landscape of the area is typical of Northern Ontario: thick forest, lakes and rivers.

AMEC Conducting Winter Visual Aesthetic Survey

Côté Gold Project

HUMAN ENVIRONMENT BASELINE

Archaeology

What is an archaeology baseline study?

An archaeological baseline study is undertaken by a licensed archaeologist who identifies material cultural, physical features and sites, that may have historical or cultural value or interest for Aboriginal and non-Aboriginal communities and society, within or near a proposed project site.

How is archaeological information gathered?

Previous background studies, property inspections, and archaeological field studies or surveys conducted in the area around the Project site are reviewed. If areas with a high probability that archaeological sites and features are identified, additional fieldwork is conducted using shallow test pits. Full digs of certain areas may be conducted to uncover and further characterize archaeological sites if appropriate.

What are the preliminary baseline study findings?

- The studies have numerous sites and features, including portages, ancient trails, and pre-contact (Aboriginal) archaeological sites.
- Additional fieldwork will be carried out at the historic and pre-contact archaeological sites.

Conducting Archaeological Field Studies

Socio-Economics

What is a socio-economic baseline study?

This baseline study describes the current socio-economic conditions in a defined study area around and within a project site that may likely be affected by a project. Socio-economic conditions include: regional community population size and demographics (such as age, gender), the economy, and community services and infrastructure (such as education, health care, utilities, transportation systems).

How is socio-economic information gathered?

Publicly available information and census data is reviewed. Interviews and discussions with local community representatives and stakeholders provide current information and identify trends, future plans and challenges. Interviews are generally conducted one on one or in groups, by phone or in person. Surveys are also typically used to collect information from local residents in the defined study area.

What are the preliminary baseline study findings?

- The region in the defined study area (including Timmins, Gogama, and Sudbury, as well as First Nations reserves near the Project site) has a long history of mining.
- Timmins and Sudbury are important service areas for the region and have a well-developed mining services sector.
- The population is stable in Timmins and Sudbury, but the average age is older than for the provincial population. In smaller communities and rural areas, population numbers are declining.
- Unemployment rates in the study area are higher than in the province.
- All communities in the study area are accessible by road and have access to a wide range of community services including education, health care and other services.

Côté Gold Project

Environmental Assessment Process Fact Sheet

Overview

An Environmental Assessment (EA) is a process to determine and manage the environmental effects of proposed projects before they are carried out. It identifies potential environmental effects and proposes measures to mitigate adverse environmental effects. The EA predicts whether there will be significant adverse environmental effects after mitigation measures are implemented. An EA will include a follow-up program to verify the accuracy of the EA and the effectiveness of the mitigation measures.

Federal and Provincial EAs in Ontario may be coordinated so that a single EA meets the legal requirements of both jurisdictions. The Ontario Ministry of the Environment (MOE) leads this process in Ontario pursuant to the *Environmental Assessment Act*. Federally, the Canadian Environmental Assessment Agency (the Agency) leads this process pursuant to the *Canadian Environmental Assessment Act, 2012* (CEAA 2012).

For mineral development projects, the Ministry of Northern Development and Mines (MNDM) under the 'One Window' Coordination Process coordinates the activities of the various parties, including the Proponent (i.e., IAMGOLD), involved in mineral development permitting and approvals and defines a framework outlining the roles, responsibilities, and expectations of those parties.

This information sheet provides an overview of the anticipated process and the documents produced for the Federal and Provincial EA processes. The information is colour-coded to reflect Provincial and Federal components.

Terms of Reference (ToR)

The ToR is the framework for the preparation and review of the EA. The ToR describes:

- the purpose and alternatives for undertaking the Project;
- the potential effects of the Project on the environment that will be assessed (such as water, air, land use, wildlife);
- how these effects will be assessed; and
- the means by which the Aboriginal communities, public, and stakeholders will be engaged and consulted.

The Minister of the Environment must approve the ToR (Approved ToR) prior to the commencement of the EA study.

Approximate timelines:

May-June 2013: Draft ToR will be available for a 30-day public review period

July-August 2013: Proposed ToR 30- day public review period following submission to the MOE

August-November 2013: Approved ToR

Consultation activities:

Aboriginal communities, stakeholders and the general public are consulted during the preparation of the ToR.

To gather feedback on environmental issues that should be considered in the EA, proponents may voluntarily issue a Draft ToR document. Comments gathered on the Draft ToR are considered in finalizing and submitting the Proposed ToR to the MOE for a formal public 30-day review (30-day review period).

A Record of Consultation must be submitted with the ToR. The Record of Consultation provides an overview of all consultation activities and summary of comments received during the preparation of the ToR.

Project Description (PD)

The PD is developed by a Proponent to provide the Agency with the necessary details to evaluate whether or not a designated Project requires a Federal EA.

The Agency has 45 days from the time the complete PD information is received to determine if a Federal EA is required. This decision is based on potential for adverse environmental effects defined by CEAA 2012, public comments received, and information for any relevant regional studies.

If an EA is required, a Notice of Commencement will be posted on the Registry website.

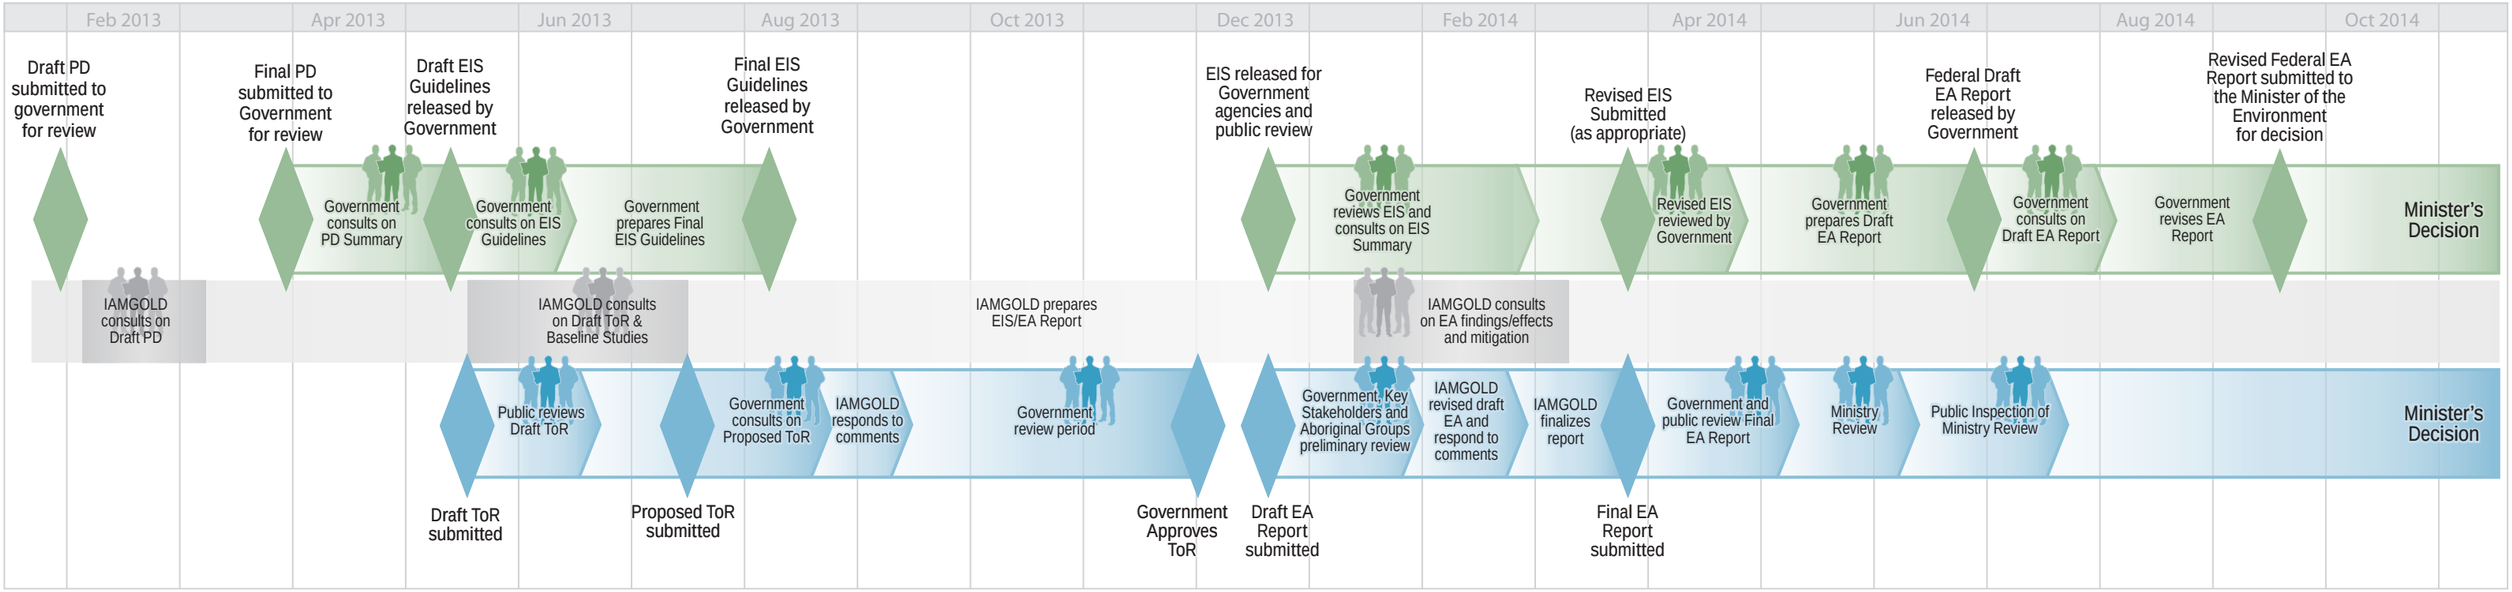
Approximate timelines:

March 25, 2013: Final PD submitted to the Agency

April 2013: Agency consults on the PD during a 20-day public comment period

Consultation activities:

Within this 45 day time limit, there is a 20-day period for public comment on a summary of the PD.



Environmental Impact Statement (EIS) Guidelines

The EIS Guidelines are developed by the Agency to identify the information required in the preparation of the EIS.

A Draft EIS Guidelines are issued for public review through publication of the Notice of comment on Draft EIS Guidelines (typically this notice is released at the same time as the Notice of Commencement of the Federal EA).

The Agency considers Aboriginal communities', public, and stakeholder comments, including comments from Federal departments and even the proponent themselves in the preparation of the final EIS Guidelines. The final EIS Guidelines are sent to the Proponent and posted to the Registry.

Approximate timelines:

May-June 2013: Agency consults on the draft EIS Guidelines during 30-day comment period

Consultation activities:

The Agency posts a draft EIS Guidelines on the Registry website for a 30-day public comment period on the aspects of the environment that may be affected by the proposed Project and what should be examined during the EA.

Baselines Studies - Provincial Individual EA & Federal EA

Baseline Studies are conducted to determine the existing conditions in a local and regional study area. A comprehensive understanding of the physical, biological, and human environment provides the foundation for an EA.

Specialized studies are conducted in the areas of:

Physical Environment

- Air quality, noise
- Hydrogeology
- Hydrology and climate
- Geochemistry and geology
- Water quality
- Geotechnical

Biological Environment

- Aquatics
- Vegetation
- Wildlife
- Soil

Human Environment

- Socio-economics
- Visual Aesthetics
- Land use
- Archaeology
- Aboriginal Traditional Land Use

Information for the baselines is gathered from literature reviews, scientific field work, Aboriginal knowledge, interviews, and public comments.

The information gathered for the baseline is used to determine possible Project impacts and identify methods to reduce potentially adverse environmental impacts, or how to enhance positive impacts.

Environmental Assessment (EA) Report - Provincial Individual EA

Approximate timelines:

December 2013-January 2014: Consultation on the EA findings, including effects and mitigation

March-May 2014: Submission of the Final EA with a 7-week public review period

June-July 2014: Public inspection of the Ministry Review (5 weeks)

July-October 2014: Notice of completion of Ministry Review

Consultation activities:

Consultation on the EA can include a variety of approaches such as, involvement in baseline studies, meetings, workshops, site tours and interviews. Information about the EA and consultation opportunities are distributed broadly using news paper ads, newsletters, and websites.

The EA Report must be completed in accordance with the Approved ToR. The EA Report includes:

- a description of the Project;
- a description of the environmental management measures that will be taken to avoid or minimize Project effects on the environment (such as land, air, water, animals, plants, and communities);
- a description of the measures that will be taken to enhance the benefits of the Project (such as job and business opportunities);
- a description of the significance of residual effects after these management measures have been applied; and
- a description of how input from Aboriginal communities, stakeholders and the general public were considered in the EA.

The completed EA Report is submitted to the Minister of the Environment for public comment, detailed technical review and consideration for approval.

www.ceaa.gc.ca
To view:

- The CEAA Registry

Visit the IAMGOLD website:
www.iamgold.com

Environmental Impact Statement (EIS) - Federal EA

The EIS is developed by the Proponent based on the Agency's EIS Guidelines. The EIS will identify and assess the environmental effects of the proposed Project and the proposed mitigation measures for those effects.

The Proponent submits the EIS to the Agency for review of adequacy and accuracy. The EIS Summary, in both official languages, is posted by the Agency to the CEAA Registry website. In addition, IAMGOLD will make the complete EIS/draft EA available for review as part of the coordinated EA process.

The public is invited to comment on the potential environmental effects of the Project and the proposed measures to prevent or mitigate those effects.

If necessary, the Proponent will revise and resubmit the EIS Report based on the Agency's review and input from the public.

Approximate timelines:

December 2013: EIS submitted to the government

March-April 2014: Government releases the EIS Summary for a 30-day public comment period

April-May 2014: Revised EIS submitted to government

Consultation activities:

Aboriginal communities, the public, and stakeholders are invited to comment on the EIS Summary (specifically on the potential environmental effects and the proposed measures to prevent or mitigate those effects). The EIS Summary is made available in both official languages.

EA Report - Federal EA

The EA Report is developed by the Agency. The EA Report includes:

- conclusions about the potential environmental effects of the proposed Project;
- mitigation measures that were taken into account;
- the significance of the residual adverse environmental effects; and
- follow-up program requirements.

The Agency finalizes the EA Report after seeking comments from Aboriginal communities, public and stakeholders. The finalized EA Report is used by the Minister of the Environment to support a conclusion on the potential for significant adverse environmental effects and the development of enforceable conditions to be included in the decision report.

Approximate timelines:

June-July 2014: Draft EA Report released by the government for a 30-day public comment period

July-September 2014: Revised EA Report submitted to Minister of the Environment

Consultation activities:

Aboriginal communities, the public, and stakeholders are invited to comment on the draft EA Report.

June 2014

Côté Gold Project

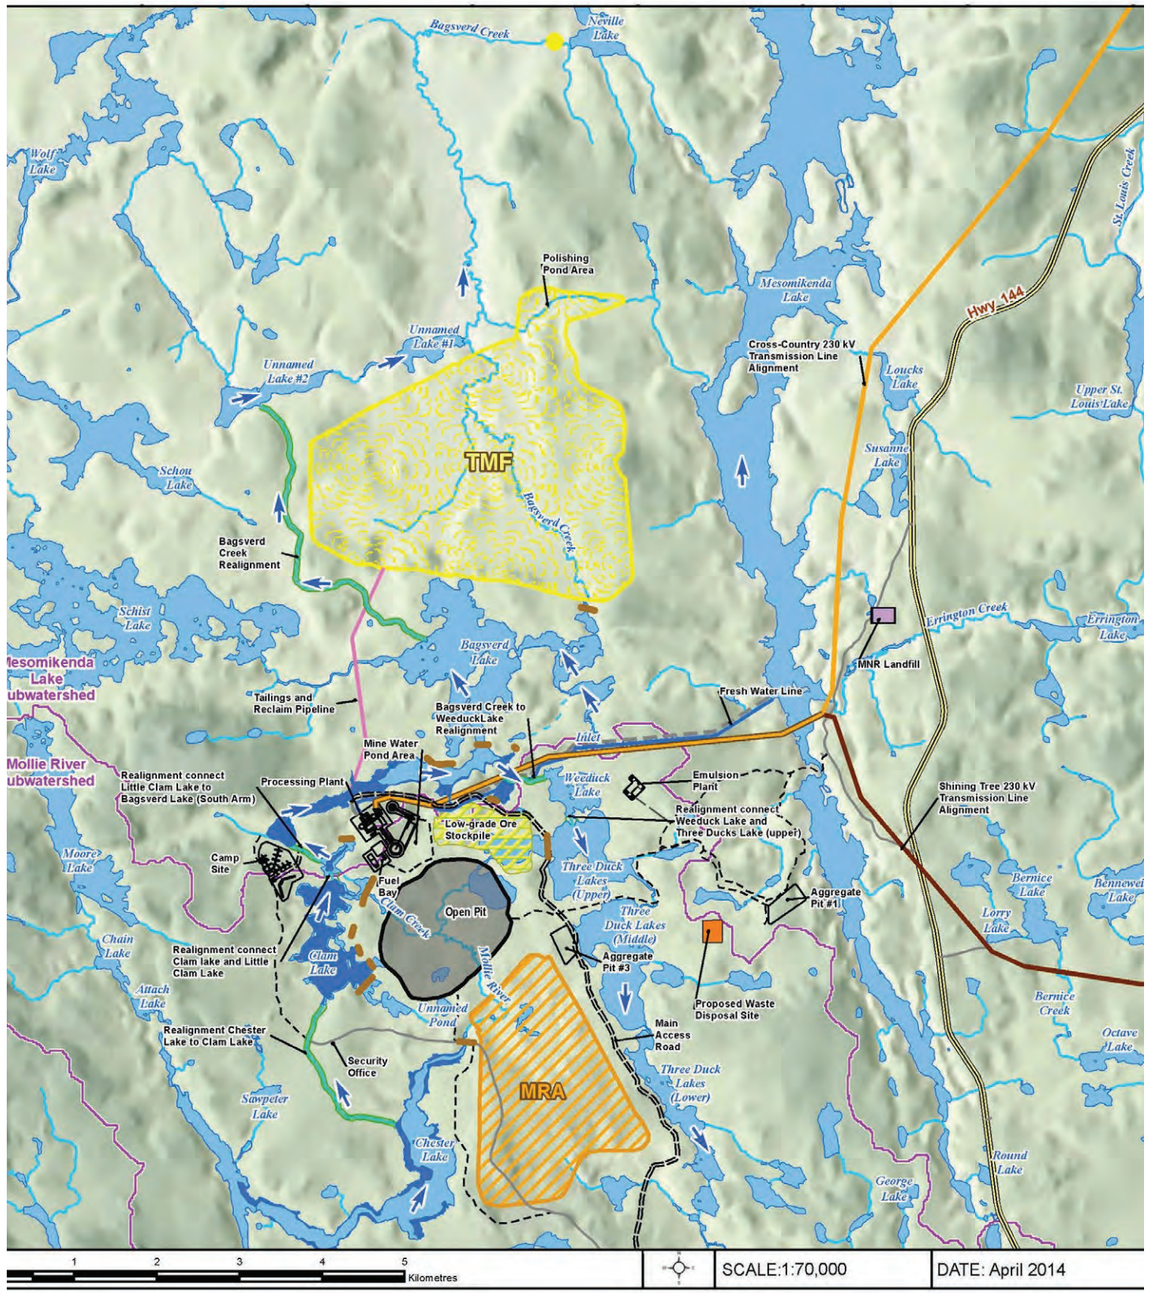
Environmental Assessment Findings Fact Sheet

This Fact Sheet highlights relevant aspects of the Côté Gold Project and findings of the environmental assessment that have been identified as key areas of interest to Aboriginal communities and local stakeholders. For more in depth information, please consult the draft Environmental Assessment report, available on IAMGOLD's website.

What is "the Project"?

IAMGOLD Corporation is planning to develop, construct, operate and eventually close the Côté Gold Project (the Project), a new open pit gold mine. The Project is located approximately 20 km southwest of Gogama, 130 km southwest of Timmins and 200 km northwest of Sudbury in the Chester and Neville Townships. The Project is expected to operate for 15 years and employ approximately 1,500 workers during the construction phase and 600 workers during the operations phase.

What is an environmental assessment?



An Environmental Assessment (EA) is a process used to determine and manage the environmental effects of proposed projects before they are carried out. It identifies potential environmental effects and proposed measures to mitigate adverse environmental effects. An EA may include a follow-up program to verify the accuracy of the EA and the effectiveness of the mitigation measures.

In an effort to avoid duplication, IAMGOLD has prepared a single body of documentation that meets the requirements of the Provincial EA process, and the Federal Environmental Impact Statement (EIS) requirements. IAMGOLD submitted the draft EA/EIS to the Provincial and Federal governments in early June 2014.

What are baseline studies?

Baseline studies were conducted by IAMGOLD to determine the current physical, biological and human environment conditions at, and around the Project site. Information for baseline studies was gathered from literature reviews, scientific field work, Aboriginal knowledge, interviews and public comments.

The baseline studies carried out for the Project include:

Physical Environment	Biological Environment	Human Environment

• Air quality;
• Noise and vibration;
• Geochemistry and geology;
• Hydrogeology;
• Hydrology and climate;
• Surface and groundwater quality (including sediment quality)
	• Terrestrial biology:
	  • Vegetation
	  • Wildlife
	• Aquatic biology
		• Land and resource use;
		• Aboriginal traditional knowledge and land use;
		• Built heritage resources;
		• Archaeology;
		• Visual aesthetics; and
		• Socio-economics.

The information collected provides a foundation of knowledge for IAMGOLD, government regulators and local stakeholders to better comprehend and develop mitigations measures and to predict the effects the Project could have. Baseline studies allow for the development of management strategies to reduce negative effects, and enhance positive effects or benefits of the Project.

What are the predicted residual effects of the Project?

Potential effects are determined by predicting how the Project will alter the baseline conditions at, and around the Project area. For each potential effect, a series of mitigation measures are proposed to minimize the effects of the Project on the environment. Residual effects are described here.

What are residual effects?

Residual Effects: environmental effects that are expected to remain after mitigation measures have been applied.

Air Quality

The current air quality in the Project area is typical or rural areas without industrial activities. Predictions indicate that the Project will affect the local air quality but will not exceed applicable standards.

Noise and Vibration

It is not expected that the Project will exceed any noise regulations. It is also predicted that noise levels during the daytime will be similar to existing noise levels. However, it is possible that nighttime noise levels may be louder than existing conditions.

It is possible that some vibrations may be felt in some areas near the Project, however, this will not affect building structures.

Geochemistry and Geology

IAMGOLD has completed an extensive number of studies to assess the potential for acid generation from mine rock. The results from these studies indicate that the likelihood of net acid generation occurring in the mine rock piles and tailings is very low as the vast majority of the rock that will be mined is determined to be non-acid generating.

Hydrogeology (Ground Water)

Given that the type of rock near the open pit limits groundwater movement, the development of the Project is not expected to have an effect on the groundwater levels or neighbouring lake levels.

Hydrology (Surface Water)

On the Project site, surface water flows through the Mollie River and Mesomikenda Lake before it discharges to the Minisinakwa Lake and ultimately the Mattagami River. The water quality in this area is typical of water bodies in the Canadian Shield.

While the Project will have an extensive footprint within the local watersheds and require some realignment of watercourses, the Project has been designed in such a way to minimize potential negative effects to local surface waters. Part of this design includes ensuring that the Project is able to recycle as much water as possible, helping to minimize water intake and effluent discharges.

Surface Water and Groundwater Quality

Water at the Project site will be managed to minimize release to the environment. Any water discharged will meet applicable criteria, which is protective of aquatic species. Lake and river water quality is expected to remain close to baseline conditions.

Terrestrial Biology - Vegetation

The vegetation in the Project area is very typical of the mixed boreal forest region on Northern Ontario. The baseline studies for vegetation identified that there are no provincially or federally listed rare species in, or surrounding the Project area.

Given the scale of construction and infrastructure required for the Project, there will be a direct loss of habitat. However, this effect is not expected to result in a change in abundance and distribution of vegetation communities in the region.

Terrestrial Biology - Wildlife

There is a significant amount of wildlife diversity in the Project region, which is attributable to the high quality of diverse habitat.

It is expected that some wildlife habitat will be disturbed as a result of habitat loss resulting from Project and transmission line construction. However, it is not expected that this would result in changes to populations levels, since suitable habitat quantity and quality will be still be available within the region.

Aquatic Biology

The Project will involve the draining of Cote Lake, and the development of a number of watercourse realignments which are needed to facilitate mining and placement of Project infrastructure. Subsequently, IAMGOLD has designed these watercourse realignments to minimize the effects to fish and maintain or potentially improve the quality and abundance of existing fish habitat.

Land and Resource Use and Aboriginal Traditional Knowledge and Land Use

Currently, the area around the Project site is primarily being used for resource development, such as mineral exploration and forestry, and outdoor recreation activities such as trapping, hunting and fishing are also important uses. There are cottagers that use the area throughout the year.

The Project area overlaps the traditional territory of Mattagami First Nation and Flying Post First Nation. These communities conducted a Traditional Knowledge and Land Use Study as part of the Environmental Assessment to determine how they have historically engaged with the land, and their current use. They identified a bald eagle nest, portage route and waterfowl hunting route and hunting point as being significant to their relationship with the Project site.

Some community members of the Métis Nation of Ontario – Region 3 may also be using the land to gather mushrooms and berries and for fishing trout, pike, walleye and whitefish.

While the Project will affect some areas used for traditional and non-traditional land uses, such as fishing and hunting, these activities will remain accessible to local community members within the region.

Built Heritage Resources

Around the Project area, there are a total of 12 cultural heritage resources, and 19 built heritage resources. Effects are anticipated to be insignificant as these cultural heritage and built heritage resources are not in close enough proximity to Project activities to be affected.

Built Heritage:

a place or infrastructure that gives evidence of historical human activity or has spiritual or cultural meaning, and potentially historic value.

Archaeology

As part of the EA, IAMGOLD is required by the Ministry of Tourism, Culture and Sport to identify any archaeological sites and features located within the Project property. During this process, archaeologists discovered a total of 37 archaeological sites and 31 features. It was concluded in the baseline that some of these archaeological features will overlap the Project footprint. Following the initial archaeological studies to identify potential site, detailed studies and excavations were completed on sites within the Project footprint.

Archaeological sites outside the Project boundaries will be protected and the Ministry of Tourism, Culture and Sport will review the submitted reports and findings to determine the extent of the sites' significance. While the Project development will affect some sites during the construction of the Project, it is not anticipated that following the completed, approved excavations, that the Ministry will determine the sites to have further significance.

Visual Aesthetics

The Project will have an effect on some local residents' view of the landscape, as the Mine Rock Area, Tailings Management Facility and low-grade ore stockpile will be visible from some locations around the Project. Although these components will be visible, visual modelling indicates that this should not limit local residents' ability to continue enjoying the landscape around them.

Socio-Economics

The area around the Project site is populated by the communities of Mattagami First Nation, Flying Post First Nation, Brunswick House First Nation and Gogama, Timmins, Sudbury, the Unorganized North Sudbury Subdivision and Unorganized Timiskaming West.

The economy in the Project area has historically been influenced by the mining industry, and is well supported by local infrastructure.

It is predicted that the Project will have an effect on the socio-economic structure of the region, but not to the extent that it will require community or government investment to manage changes. For example, some communities may experience a slight population increase, but it is anticipated that the existing infrastructure will be sufficient to support the increase.

It is expected that the majority of effects from the Project to local communities will be positive. The Project will bring a number of employment and business opportunities to the region and will generate federal and provincial revenues.

How could other activities in the area magnify the effects of this Project?

Several projects of varying scope and scale related to mining and exploration, forestry, and to a lesser degree, transportation, electricity and municipal development, are in the vicinity of the Project. The assessment of potential interactions determined that no other Project will facilitate an accumulation of adverse effects in conjunction with the Côté Gold Project.

Has IAMGOLD considered alternatives to the Project?

As part of the Environmental Assessment process, IAMGOLD committed to consider potential alternatives to Côté Gold Project development. Subsequently, IAMGOLD has identified three potential alternatives for the Project including:

1. Proceed with the Project in the near term, as planned by IAMGOLD
2. Delay the Project until circumstances are more favourable
3. The "do-nothing" alternative (development of the Project is cancelled)

Overall, the preferred alternative is alternative Number 1; to proceed with the Project in the near-term. From an environmental perspective, there is no difference in environmental effects associated with the alternative of proceeding with the Project as planned versus delaying the Project.

IAMGOLD also committed to consider alternative methods of carrying out the proposed Project. The following alternatives have been considered:

- Mining method;
- Minewater management;
- Mine rock and overburden management;
- Ore processing plant;
- Process effluent treatment;
- Tailings management facility;
- Water supply;
- Water discharge;
- Watercourse realignments;
- Site infrastructure positioning;
- Aggregate supply;
- Solid waste management and domestic sewage treatment;
- Power supply and routing; and
- Mine closure.

The preferred alternatives were selected based on the best consideration of environmental, economic aspects of the Project and inputs from various consultation activities. In other words, the selected alternatives are those that minimize disturbance to the environment, and make the Project financially feasible for IAMGOLD.

Who Has IAMGOLD been talking to about the Project? What has the feedback been on the Project?

Seeking input about the Project from local communities has been an important part of the Environmental Assessment process. In order to meet the consultation requirements of the EA, IAMGOLD has actively informed, engaged and responded to the concerns of potentially impacted Aboriginal groups, local municipalities, government agencies and other interested stakeholders about the Project design, EA process, Project effects predictions and planned mitigation strategies.

Engagement of Aboriginal communities, local land users and community members, businesses and community organizations and government agencies is ongoing. Activities to date include, holding meetings, hosting open houses, conducting site visits and developing and issuing plain language materials (fact sheets, newsletters, etc.). IAMGOLD is committed to continued discussions with Aboriginal communities and other stakeholders about potential Project effects and appropriate mitigation strategies.

- Key concerns about the Project raised by Aboriginal communities and other interested stakeholders included:
- Potential for Acid Rock Generation
- Potential for Noise Effects on Adjacent Land Users
- Business, Employment and Training Opportunities
- Mine Closure Planning
- Location of Mine Rock Areas and the Tailings Management Facility

- Potential Effects on Water Resources, Water Quality and Water Bodies
- The need for Traditional Knowledge, Land Use and Project Agreements
- Transmission Line Alignments
- Waste Management Alternatives

What kind of risks does the Project present to local people and the environment?

IAMGOLD completed an ecological and human health risk assessment to determine whether or not the Project would pose any unacceptable risks to populations in the Project area. Through this assessment, IAMGOLD was able to confirm that the Project and all Project-related emissions and discharges do not pose unacceptable risk to local communities, wildlife or fish communities.

What kinds of accidents could happen on-site? How will IAMGOLD prevent accidents from occurring?

Potential accidents and malfunctions that could affect the environment, should they occur at the Project, were identified to aid the preparation of emergency response and contingency plans for the Project. The accidents and malfunctions considered consist of Project structures failures, accidental spills or releases of contaminants, vehicular accidents and Project-related fires.

Eachpotential accident and malfunction identified was subjected to a risk assessment to determine its likelihood of occurrence and measure of environmental consequence. With the appropriate mitigation strategies in place, no accidents and malfunctions were found to be of high risk.

IAMGOLD is committed to operate the Project, should it be approved, to the highest standards of operation, security and health and safety.

Who should I contact if I need further information?

Card of thanks

TRAMONTINI, Ilio - Robert, Betty Jane and Paul Tramontini wish to express our most sincere appreciation and thanks for the consideration and kindness shown to our family regarding the passing of Ilio.

His last 14 months were spent at the Walford on the Park in Copper Cliff. Thank you to Betty Meigs, Andrea, Tammy, Allison, Sue, and the rest of the staff and residents for their care, attention and friendship that made his stay so enjoyable.

A special thank you to Ilio's family doctor Paul Gibb, for his care, concern and advice. Ilio always looked forward to his visits.

Thank you to Louise McNabb and the staff at St. Joseph's Continuing Care Centre. Their efforts allowed us to say our final good-byes. Also, thank you to CCAC and Home Instead Senior Care for all their help.

Thank you to Catherine Coe from the Lougheed Funeral Home for her professional and valued assistance to our family.

Deputy Police Chief Des Walsh, left, and Chief John Gauthier spoke to city council this week.

Cost of policing in Timmins goes up

By LEN GILLIS
len.gillis@sunmedia.ca

Nearly one dollar in every five dollars raised in municipal taxes in Timmins goes to pay for the local police service. That figure is expected to climb in the coming years, as the cost of police wages, benefits and pensions also climbs.

That was one of items revealed this week as the Timmins Police Service (TPS) presented its budget estimates for 2013. TPS is asking Timmins City Council to approve a 2.45 per cent budget increase for 2013.

The Timmins Police Services Board approved the new police budget estimates Monday afternoon. The budget estimates were then presented to Timmins city council, Tuesday evening for discussion and consideration.

In 2012, the TPS budget was $12.5 million. Actual spending was a bit higher at 12.7 million

Deputy Police Chief Des Walsh told the board Monday the projected increase of 2.45 per cent came at the direction of city hall. That would bring the 2013 TPS budget to $13.1 million.

"Originally when we started deliberations over the 2013 budget, when we started working on it, the chief and I were directed to, if at all possible, to keep the budget increase below three per cent," said Walsh.

"Most of the increase, as a matter of fact the vast majority of the increase, is as a result of salary increases," said Walsh. Timmins Police Association officers are currently working on their old contract and are awaiting arbitration to determine the increase in their new contract. The new contract will be retro-active to January 1, 2012.

While it is not known how much of an increase might be awarded through arbitration, the TPS senior officers were awarded a 2.5 per cent increase in each year of 2011, 2012 and 2013 in an arbitration decision. That award was provided last spring.

Arbitration awards in general, in Ontario, have been more generous than contract agreements with municipalities.

Walsh said that in order to bring in a budget increase of less than three per cent, the police service decided to cut back on some its capital spending for 2013.

"We are actually reducing the number of vehicles in our fleet and we are making our vehicles last a little bit longer, with regular maintenance, which at the end of the day saves us a lot of dollars," said Walsh. He said there are roughly 30 vehicles in the fleet, including motorcycles, ATVs and snowmobiles.

Return of the Mac

Legendary California rockers release Super Deluxe Edition of Rumours

★ ★ ★ ★ 1/2

Fleetwood Mac

Rumours: Super Deluxe Edition

erday's gone, Fleetwood omised in 1977. They've ating those words ever since. nan 35 years after releasir magnum opus, the Cali-ockers still can't escape *rs*. Nor can we. The album d 45 million copies over cades, and was already led for reissue back in 2004.

But since the Mac are hitting the road again — and without a new album — it's back again. And kitted out with even more goodies in a $100 Super Deluxe Edition housed in a slipcover box. Along with CD and gatefold-vinyl versions of the album — a frankly revealing document of the bandmembers' soap-operatic romantic trials and tribulations — the box includes:

- Two CDs of intriguing demos and outtakes, including a stripped-down *Dreams*, early versions of *Planets of the Universe* and plenty more (one of the discs was included in that 2004 reissue);
- Another CD of energized live recordings from their 1977 tour, which will remind (or inform) you how hard the Mac used to rock at times;
- A DVD featuring a 30-minute 1978 documentary with six live performances;
- A 20-page booklet with the usual assortment of liner notes, track-by-track reminiscences, photos, and whatnot.

Sure, it's mostly second-hand news. But there's no denying it's the definitive version of a '70s classic — until the 40th anniversary edition in 2017, anyway. After all, if the Mac have taught us anything, it's never to stop thinking about tomorrow.

st of the Rest

More of the new music available this week

y Long ★ ★ ★ ★

e

new British invasion continues. er product of London's folk scene, -guitarist Long is a young man n old soul and weathered pipes. erve him well on his compelling more set of raw-boned roots-rock rthy southern soul.

Frightened Rabbit ★ ★ ★ ★

Pedestrian Verse

Misery loves company. Or at least accompaniment. Misanthropic Scottish singer-guitarist Scott Hutchison lightens up his fourth disc with life-affirming lyrics — and inventively idiosyncratic indie-rock anthems penned with his band for once. Feel the love.

The Virginmarys ★ ★ ★ ★

King of Conflict

Rock is dead, they say. Long live rock, reply this hard-hitting U.K. power trio. And they're as good as their word on this explosive debut, noisily fusing '60s blues-based bombast and '90s grunge intensity with today's feisty indie mayhem. Worship at their altar.

The View ★ ★ ★ 1/2

Cheeky for a Reason

Cheeky, yes. Prompt, no. The scrappy Scottish lads' fourth full-length came out in the U.K. last summer — but for those who haven't savoured their clanging, melodic and exuberantly shaggy brand of Arctic Monkeys-style rock, there's no reason to delay.

■ **FRASER REPORT:** Annual breakdown of province's education system shows there's still room for improvement

Schools better, but not good enough

SIMON KENT
EDUCATION

Could do better.

Three words under-achievers dread to hear most neatly summarizes the progress — or lack thereof — measured in 28.4% of student test scores administered by the Education Quality and Accountability Office (EQAO) for 2012.

They are included in the Fraser Institute Elementary School Report Card 2013 and revealed here for the first time.

Despite all the earnest talk of Dalton McGuinty about being the self-described 'education premier,' there is plenty of contrary evidence to challenge that claim in this annual survey of Ontario's elementary schools.

Of course there are some standout results amongst the 2,714 schools covered.

Over the last five years, Grade 3 reading and writing has shown steady statistical improvement. So has Grade 6 in the same areas.

Still, it is that stubborn 28.4% of test scores coming in below provincial standards that should be the focus of attention, according to Peter Cowley.

He is the co-author of this report and is cautious to add that those students in the subset are not defined as failures. Rather, they are falling below the standard set by the EQAO itself and he acknowledges the figure has been improving by small increments for the most recent past five years.

"If you took all the tests written in all the schools in the report card and all marked with EQAO levels and sorted them, you'd see that 28.4% did not reach the provincial standard.

"The figure shows lower performance rates are lessening but there are schools and students who could still could do better," Cowley said.

The most important question is how do schools that are demonstrably struggling improve and get more students passing more standardized tests. What this report card does best is show parents and students how their school is doing compared to all the other schools in the report.

"To have student tests revealing flatline performance in some disciplines will be a concern," Cowley said. "We accept these are relative ratings and that not all schools can be No. 1, but at the same time we have to ask why some do better than others by such a wide margin.

"The challenge for the province is to deliver a plan that addresses what to do about it."

It's not as if schools can plead lack of funding.

School Board funding projections (excluding capital programs) estimates more than $21 billion will be put toward the province's 73 school board districts in the current 2012-13 school year.

This, in a province with a projected deficit of close to $11.9 billion under the Liberals, is a fair slice of the funding pie.

Doretta Wilson, of the Society for Quality Education, said harder questions have to be asked of the teachers themselves for poor performance in some school board areas.

"Who is teaching the teachers and how are they doing it?" Wilson said. "I sometimes get the feeling new teachers are being taught how to be good unionists and be aware of all their rights and remedies under the Act, but clearly they seem to be less than able to get more from their students.

"Elementary school sets up a child for their entire educational experience. They deserve the best and at the moment in Ontario successive education ministers have thrown money at the problems of education in the hope that things will somehow magically improve.

"The unions encourage this profligacy because they see their members gain by more jobs and more high-paying benefits, but it should be about the students in the end — the teachers can fend for themselves in the job market. The children haven't even gotten there yet."

Last year's Drummond Report into deficit-reduction strategies for Ontario recommended cutting non-teaching staff by 12% or about 10,000 positions. This includes social workers, speech language pathologists, psychologists and educational assistants working with special-needs students.

Drummond revealed non-teaching ranks have shot up by an extra 14,000 in the last decade and they need to be cut back.

Premier Kathleen Wynne must quickly decide if she will address those recommendations and at the same time end such big-ticket Liberal education policies as full-day kindergarten and class size caps to meet the Drummond-recommended 1% cap on spending growth for education.

When and if those recommendations are implemented across the province, there will be even more pressure on teachers to deliver results without the perceived help they have been used to.

simon.kent@sunmedia.ca

DAVE ABEL QMI Agency

Jennifer Glenn teaches her Grade 1 class at Munns Public School in Oakville, one of the Top 10 schools in Halton, according to the Fraser Institute Elementary School Report Card 2013.

"Who is teaching the teachers and how are they doing it? I sometimes get the feeling new teachers are being taught how to be good unionists."

Doretta Wilson of the Society for Quality Education

In memoriam

BARBE (Freeland), Margaret Elizabeth -
who passed away February 21, 2010

We often sit & think of her
when we are all alone.
For memory is the only friend
that grief can call it's own.
Like ivy on the withered oak,
when all other things decay,

Michael Doody, left, and Mike Barker.

Professional Engineers in Timmins and other parts of Northeastern Ontario will soon be celebrating National Engineering Month to help raise awareness of the profession and to raise interest among students. March 2013 was proclaimed as Engineering Month in Timmins at city hall with acting mayor Mike Doody, left, signing the proclamation with Mike Barker, representing Porcupine-Kapuskasing Chapter of the Professional Engineers of Ontario (PEO). The engineering group will have several events in March to observe the month. This includes a partnership event with Science Timmins hosting the Annual Software Engineering Competition at the Timmins Public Library on March 4th. On March 5th, Porcupine-Kapuskasing PEO chapter will host a special dinner event at the Porcupine Dante Club. For tickets, please contact Andrew Sandrasagra at 705 465-1829. On March 8th, the engineerings will launch their 4th annual PEO Porcupine-Kapuskasing Chapter Scholarship Program with registration forms located in all eligible schools in the region to provide financial assistance to two successful candidates to attend a university engineering program.

More accolades for Timmins Hockey products. Brandon St. Denis returned from the Canadian Native Midget Hockey Championships with a Silver medal. His team, team Ontario made it to the playoff round after a slow start to the Championships.

Brandon had six points in six games, including a Hat Trick in the crucial quarter final win for Ontario. For his strong effort in that game he was rewarded with the game MVP. By all accounts Brandon was a force for Team Ontario and used his size and skill quite effectively. Congratulations Brandon on a job well done.

Mark Katic was in Monday to show me his German Elite League Gold Medal that his Berlin club won a few weeks back. After spending most of the season mid-pack, Mark's team got on a roll come playoff time and never let off the gas on the way to the league championship.

The final game of the season was played before 20,000 plus fans. If you check out Mark's point totals in the playoffs he is missing at least three assists (that somehow were overlooked) including a beautiful assist to set up a game winner, where he had control of the puck for about 30 seconds before making a perfect pass to set up the goal.

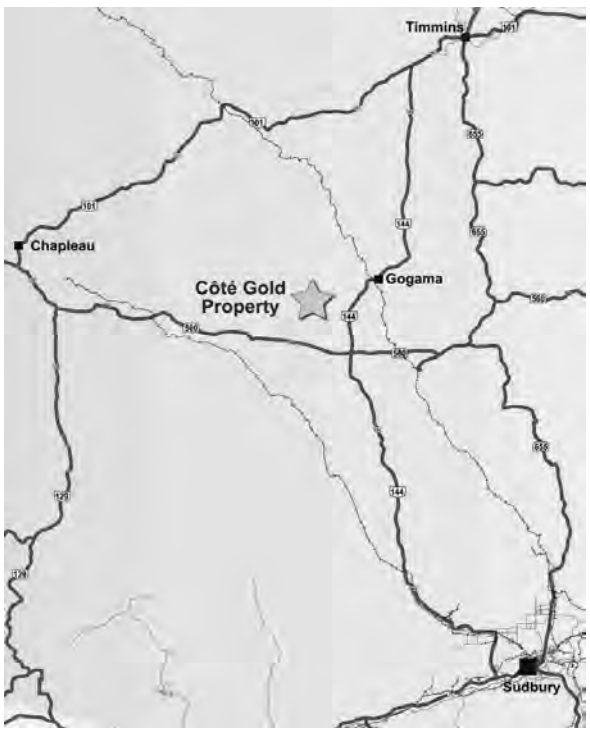
Unfortunately the two reps from the NOJHL (North Bay and Soo) failed to make the finals of the Dudley Hewitt Cup hosted by North Bay. The Minnesota Wilderness knocked off the St.Mike's Buzzers in O/T to advance to the Royal Bank National Jr. A Championships. A number of local hockey fans where in attendance as the NOHA annual meetings were taking place at the same time in North Bay.

I have to admit that the Islanders have surprised me with their play so far against the Penguins. Not to take anything away from the Islanders great play so far, but Pittsburgh's play in their own end is atrocious and too many pucks from bad angles are finding their way through for goals. And they better sharpen up on that soon.

Don't know if I can remember so much fracas as game three between Montreal and Ottawa. It definitely was not a game for the faint of heart. Looked like the Habs just totally melted down. By the time this column comes out we will know if Montreal bounced back to play the way they can.

I know that a team I once coached was hammered 7-1, and had a couple of fights where we did not fair too well. We were totally humiliated as a group and had to play the next day (on the road) in game seven. The team bounced back to grab a 2-1 win to take the series. And this was a group of teenagers. Not established pros like the Habs.

Later Skater



IAMGOLD CORPORATION

Notice of Commencement of Terms of Reference

Côté Gold Project

IAMGOLD Corporation has initiated a study under the Ontario *Environmental Assessment Act* for the development and operation of the Côté Gold Project. The Côté Gold Project is a proposed open pit gold mine with related processing facilities and infrastructure, to be developed approximately 20 kilometres southwest of Gogama, Ontario.

The Project is anticipated to be a significant contributor to the local economy and will provide employment opportunities. Consultation on the Côté Gold Project was initiated by IAMGOLD in 2012.

The Process:
The first step in the Provincial environmental assessment process is the preparation of a Terms of Reference. A draft Terms of Reference has been prepared and is being issued by IAMGOLD for public comment. It sets out the framework and work plan for addressing the *Environmental Assessment Act* requirements when preparing the environmental assessment, including such things as the alternatives that will be considered, how environmental effects will evaluated, and the proposed public consultation activities.

A final proposed Terms of Reference will be submitted to the Ministry of the Environment (the Ministry) and will be issued for a formal comment period coordinated by the Ministry. This document will consider comments received on the draft Terms of Reference. If approved by the Minister, the proposed Terms of Reference will provide the framework and requirements for the preparation of the environmental assessment.

This Provincial environmental assessment process is one of two environmental assessment processes anticipated to be required for approval of the Côté Gold Project. A Federal environmental assessment is also expected to be needed pursuant to the *Canadian Environmental Assessment Act*. IAMGOLD is working with the Ministry and the Canadian Environmental Assessment Agency to develop a coordinated environmental process, including coordinated public consultation opportunities wherever possible in order to reduce duplication of effort.

Consultation:
Members of the public, agencies and other interested persons are encouraged to actively participate in the planning process by attending consultation opportunities or contacting IAMGOLD directly with comments or questions. Consultation opportunities will occur throughout the planning process, including this opportunity to provide comments on the draft Terms of Reference. All consultation events will be advertised in Gogama as well as Timmins and Sudbury, posted within local First Nation and Métis offices and published on www.iamgold.com.

Beginning **May 10, 2013**, the draft Terms of Reference will be available for download at: www.iamgold.com. You may inspect the draft Terms of Reference during normal business hours at the following locations:

IAMGOLD Corporation has initiated a study under the Ontario *Environmental Assessment Act* for the development and operation of the Côté Gold Project. The Côté Gold Project is a proposed open pit gold mine with related processing facilities and infrastructure, to be developed approximately 20 kilometres southwest of Gogama, Ontario.

The Project is anticipated to be a significant contributor to the local economy and will provide employment opportunities. Consultation on the Côté Gold Project was initiated by IAMGOLD in 2012.

The Process:

The first step in the Provincial environmental assessment process is the preparation of a Terms of Reference. A draft Terms of Reference has been prepared and is being issued by IAMGOLD for public comment. It sets out the framework and work plan for addressing the *Environmental Assessment Act* requirements when preparing the environmental assessment, including such things as the alternatives that will be considered, how environmental effects will evaluated, and the proposed public consultation activities.

A final proposed Terms of Reference will be submitted to the Ministry of the Environment (the Ministry) and will be issued for a formal comment period coordinated by the Ministry. This document will consider comments received on the draft Terms of Reference. If approved by the Minister, the proposed Terms of Reference will provide the framework and requirements for the preparation of the environmental assessment.

This Provincial environmental assessment process is one of two environmental assessment processes anticipated to be required for approval of the Côté Gold Project. A Federal environmental assessment is also expected to be needed pursuant to the Canadian Environmental Assessment Act. IAMGOLD is working with the Ministry and the Canadian Environmental Assessment Agency to develop a coordinated environmental process, including coordinated public consultation opportunities wherever possible in order to reduce duplication of effort.

Consultation:

Members of the public, agencies and other interested persons are encouraged to actively participate in the planning process by attending consultation opportunities or contacting IAMGOLD directly with comments or questions. Consultation opportunities will occur throughout the planning process, including this opportunity to provide comments on the draft Terms of Reference. All consultation events will be advertised in Gogama as well as Timmins and Sudbury, posted within local First Nation and Métis offices and published on www.iamgold.com.

Beginning **May 10, 2013**, the draft Terms of Reference will be available for download at: www.iamgold.com. You may inspect the draft Terms of Reference during normal business hours at the following locations:

NHL PLAYOFFS: Pittsburgh 4, New York 0

Vokoun leads Pens to series lead

CHRIS STEVENSON
QMI Agency

PITTSBURGH — It wasn't greeted as big news back in early June when the Pittsburgh Penguins acquired goaltender Tomas Vokoun from the Washington Capitals for a seventh-round draft pick.

It's looking like a little bigger news now.

Vokoun stopped 31 shots for the shutout as he took over the Penguins' blue paint from squirrely Marc-Andre Fleury and the Penguins just played a much better team game in a 4-0 win over the New York Islanders, good for a 3-2 series lead in their best-of-seven opening round series.

The Penguins can win their first playoff series in two years and just their second since winning the Stanley Cup in 2009 when the series moves to Nassau Veteran Memorial Coliseum Saturday.

After Tyler Kennedy scored on a breakaway and Islanders goaltender Evgeni Nabokov misplayed a harmless wrister by Pens defenceman Douglas Murray into a goal a minute and 22 seconds later, Penguins captain Sidney Crosby scored about as a good a goal as you will see in these playoffs.

He took a pass from Jarome Iginla at the Islanders blue line, cut between New York defencemen Lubomir Visnovsky and Thomas Hickey, brushing Hickey aside, and then bore down on Nabokov. He snapped a shot to the stick side to make it 3-0 at the 14-minute mark.

It was fitting that Penguins owner Mario Lemieux was looking on because the goal looked a bit like the goal Lemieux scored on the Minnesota North Stars in the 1991 final.

HOCKEY: Continued

Teams from across Canada

FROM B1

Edging Alberta in the semis punched Team Ontario's ticket to the final where they went toe to toe with Team British Columbia.

British Columbia edged Team Ontario 4-3 to win the gold medal.

Brandon assisted on Ontario's second goal, but it wasn't enough.

"We carried the play for most of the game, but their goalie was standing on his head and we couldn't bury our chances," said Brandon.

Team Ontario kept the game close despite only playing with seven forwards due to suspensions and injuries.

St. Denis will eligible to suit up for the squad next year if the coaching staff wants him back.

"I can be re-evaluated next year and if I'm asked back, I will go back," he said.

Brandon's mother, Gina, came away form the tournament touched by the pride displayed by the players, not only for their First Nation, but their province, she said.

"It was awesome to see them be proud of who they are and where they play."

Teams represented each province at the tournament, which brought together the best Aboriginal bantam and midget hockey players from across the country.

IAMGOLD CORPORATION

Notice of Commencement of Terms of Reference

Côté Gold Project

IAMGOLD Corporation has initiated a study under the Ontario *Environmental Assessment Act* for the development and operation of the Côté Gold Project. The Côté Gold Project is a proposed open pit gold mine with related processing facilities and infrastructure, to be developed approximately 20 kilometres southwest of Gogama, Ontario.

The Project is anticipated to be a significant contributor to the local economy and will provide employment opportunities. Consultation on the Côté Gold Project was initiated by IAMGOLD in 2012.

The Process:
The first step in the Provincial environmental assessment process is the preparation of a Terms of Reference. A draft Terms of Reference has been prepared and is being issued by IAMGOLD for public comment. It sets out the framework and work plan for addressing the *Environmental Assessment Act* requirements when preparing the environmental assessment, including such things as the alternatives that will be considered, how environmental effects will evaluated, and the proposed public consultation activities.

A final proposed Terms of Reference will be submitted to the Ministry of the Environment (the Ministry) and will be issued for a formal comment period coordinated by the Ministry. This document will consider comments received on the draft Terms of Reference. If approved by the Minister, the proposed Terms of Reference will provide the framework and requirements for the preparation of the environmental assessment.

This Provincial environmental assessment process is one of two environmental assessment processes anticipated to be required for approval of the Côté Gold Project. A Federal environmental assessment is also expected to be needed pursuant to the *Canadian Environmental Assessment Act*. IAMGOLD is working with the Ministry and the Canadian Environmental Assessment Agency to develop a coordinated environmental process, including coordinated public consultation opportunities wherever possible in order to reduce duplication of effort.

Consultation:
Members of the public, agencies and other interested persons are encouraged to actively participate in the planning process by attending consultation opportunities or contacting IAMGOLD directly with comments or questions. Consultation opportunities will occur throughout the planning process, including this opportunity to provide comments on the draft Terms of Reference. All consultation events will be advertised in Gogama as well as Timmins and Sudbury, posted within local First Nation and Métis offices and published on www.iamgold.com

Beginning **May 10, 2013**, the draft Terms of Reference will be available for download at: www.iamgold.com You may inspect the draft Terms of Reference during normal business hours at the following locations:

Under the *Freedom of Information and Protection of Privacy Act* and the *Environmental Assessment Act*, unless otherwise stated in the submission, any personal information such as name, address, telephone number and property location included in a submission will become part of the public record files for this matter and will be released, if requested, to any person.

LAW: Quebec anti-corruption unit arrests 37 in connection with alleged crime ring run out of Laval City Hall

MARTIN ALARIE QMI Agency files

Gilles Vaillancourt, former mayor of Laval, Que., was arrested Thursday as part of a massive raid by Quebec's anti-corruption unit. The former mayor was one of 37 people arrested in what officials allege was one of the largest criminal organizations ever run out of a city hall in Canada.

Ex-mayor accused of gangsterism

JEAN-LOUIS FORTIN, FELIX SEGUIN and ANDREW McINTOSH
QMI Agency

MONTREAL — Quebec's anti-corruption unit, UPAC, carried out the biggest raids in its history Thursday, arresting 37 people including Gilles Vaillancourt, the former mayor of suburban Laval, Que.

The group faces dozens of charges including fraud, conspiracy, breach of trust and gangsterism, which would make it the largest alleged criminal organization ever run out of a city hall in Canada.

> **"Today's operation is a testimony of the magnitude of the corruption phenomena we are facing. All means are put forward in order to investigate, detect and prevent corruption and collusion in our public system."**
>
> *Robert Lafreniere, corruption commissioner*

Laval, a sprawling Montreal suburb of 400,000 people, is Quebec's third-largest city.

"These are extremely serious allegations," UPAC commissioner Robert Lafreniere told a news conference.

He said 120 officers carried out 70 search warrants on Thursday, adding that roughly 30,000 conversations were wiretapped and $438,000 was seized.

"Today's operation is a testimony of the magnitude of the corruption phenomena we are facing. All means are put forward in order to investigate, detect and prevent corruption and collusion in our public system."

The alleged collusion in awarding municipal contracts first came to light beginning in 2010 in a series of investigative reports by QMI Agency which showed that Vaillancourt's administration had awarded more than $25 million in untendered deals since 1998 to Dunton Rainville, a major law firm that employs a political operative close to Vaillancourt.

The law firm's offices are directly across the street from Laval City Hall.

QMI Agency also reported that the City of Laval assigned a municipal property evaluation to the Dunton Rainville office building in Laval that remained below the building's 1990 sale price for more than 17 years, while assessments for other Laval ratepayers soared.

Vaillancourt was Laval mayor for 23 years, usually facing no opposition. He resigned from the post last November saying he was "deeply hurt" by accusations levelled against him at Quebec's corruption commission.

SUN NEWS ONLINE POLL

What you said ...

Q Natural Resources Minister Joe Oliver defended Canada's environmental record after former U.S. vice-president Al Gore called Canada's oilsands a "resource curse." Who is more credible on Canadian energy?

Oliver 96%

Gore 4%

just the facts ...

In an interview with the *Globe and Mail*, former U.S. vice-president Al Gore said Alberta's oilsands amount to a "resource curse" that is adding pollution to the Earth's atmosphere as though it is an "open sewer."

Natural Resources Minister Joe Oliver (above) panned the Academy Award recipient's view of Canada on Wednesday.

"He doesn't know the facts about Canada obviously," Oliver said about Gore's speaking stop in Toronto on Tuesday in which he declared there's no such thing as ethical oil.

"He's raising the rhetoric, perhaps because he's getting increasingly concerned about what the (U.S.) presidential decision will be in respect to the oilsands."

LAW: FBI arrests third suspect in New York

Via terror suspects mulled poisoning air, water: Docs

JESSICA MURPHY
QMI Agency

WASHINGTON, D.C. — Two of the Via Rail terror suspects allegedly contemplated poisoning the air or water before settling on the plot to target a passenger train, according to newly released U.S. court documents.

The fresh details came to light Thursday as American authorities revealed an FBI sting operation scooped up a third man in connection to the foiled plot to derail a train between Toronto and New York.

Ahmed Abassi, a Tunisian citizen who previously lived in Canada, has been charged with two counts of knowingly making false statements in an application to immigration

> **"As alleged, Mr. Abassi came to the United States to pursue terrorist activity and support others in the same shameful pursuit. What Mr. Abassi didn't know was that one of his associates, privy to the details of his plan, was an undercover FBI agent."**
>
> *FBI assistant director-in-charge George Venizelos*

Hazardous waste day scheduled for May 25

The City of Timmins Municipal Hazardous and Special Waste Day is scheduled to take place on May 25th from 8 a.m. to 2 p.m. at the Archie Dillon Sportsplex parking lot. This initiative will be conducted through a partnership between the City and Stewardship Ontario.

"This is a great opportunity for residents of the City to dispose of their hazardous household waste and keep the materials from entering the landfill sites. By properly disposing of these products we are protecting our environment by keeping the chemicals from potentially entering our water table" said Mayor Tom Laughren. "Just as importantly, the Hazardous Waste Day allows the City to increase its diversion rates at the Deloro Landfill Site."

Residents can bring paint, batteries, acids, oxidizers, base, glycol, pesticides, pharmaceuticals, flammables, aerosol cans, small propane cylinders, bulk fuel, sharps, light bulbs, fluorescent light tubes and electronic devises. Industrial or commercial waste will not be accepted.

Provincial funding of the Hazardous Waste Day has allowed the City of Timmins to offer the disposal service free of charge to its residents.

A voluntary "tipping fee" benefitting Timmins Minor Hockey Association will be accepted.

For more information, or if you have any questions about the City of Timmins Household Hazardous Waste Day, contact the City of Timmins Public Works office at 360-2646 or visit www.timmins.ca

$1.65

Prime Minister Stephen Harper says he is not worried by soaring consumer debt. Canadian households now owe $1.65 for every dollar earned, a record level that has raised alarm among policymakers.

■ **ANALYSIS:** Stock-market fluctuations are sometimes a risk you have to live with when you're saving for your retirement

How to avoid being left short

DOUG RIDING
Special to QMI Agency

If you are saving for retirement and find that you are glued to the radio or TV when the stock market is experiencing wild and volatile movements, you may find yourself asking "why am I taking a risk by investing and not just saving in a bank account or a GIC?"

It is at times like 2001 and 2009 when we saw huge shifts of capital move from the stock market to the safety of GIC's that cement our understanding that fear of losing far outweighs our desire to gain.

The reason we invest is because we know we have to save for retirement and, in many cases, we need a decent return on our savings to achieve our goals. There were times when interest rates were so high that we could easily reach our targets with a GIC or savings account, but the days of double-digit interest rates are far behind us and they may not return for the foreseeable future.

Right now, you are lucky to get a savings rate of about 1.65%, and locking your money up for five years in a GIC can get you about 2.5% per year. These historically low rates really hit home when you go on the Bank of Canada website and see that they aim to keep inflation between 1% and 3%.

Let's face it, $50,000 a year today is not what it used to be and, in the future, it won't be what it is today. According to the "Rule of 72" a 3% inflation rate means that your costs of living will double every 24 years (72 divided by 3 is 24).

With 3% inflation, $50,000 today has the same purchasing power of $25,000 24 years ago and, if you are retiring in 24 years with the same inflation rate, you will need $100,000 per year to generate what $50,000 would buy today.

While inflation is relatively low at this time, we are constantly reminded by the Bank of Canada that it will become a significant factor down the road and interest rates will subsequently rise. If your savings target requires a return that is not keeping up with or beating inflation, then you may need to take on more risk and get used to the ups and downs of the stock market.

CANADIANS FEEL PINCH OF 'FOOD INFLATION': POLL

Rising food prices are making Canadians cut back on other expenses and contributing to a generally negative outlook on the economy, an RBC study has found.

Consumers are feeling the "food inflation" of the past few years, which saw an increase of 2.4% last year following increases of 3.8% and 1.4% in 2011 and 2010, respectively, RBC said. It also predicts last year's drought conditions in the U.S. could send food prices up another 3-4% this year.

More than half of those surveyed (57%) said they comparison shop for food more than they used to, and 43% said they spend less on other things in order to afford the cost of groceries.

The Consumer Outlook Index also found an eight-point drop across the country in economic confidence — the first decrease in nearly two years. Just a quarter of Canadians polled (26%) said they think the economy will improve in the next year, while 30% believe it will worsen.

Ipsos Reid conducted the online survey of 3,024 respondents April 2-15. It's considered accurate within two percentage points.

TELUS AGREES TO BUY MOBILICITY FOR $380M

Telus Corp. said on Thursday it will pay $380 million for debt-laden Mobilicity, testing the resolve of a government committed to opening the market to smaller players.

The deal, already backed by some Mobilicity debt holders, must now wind its way though a regulatory obstacle course involving several agencies and approval is far from certain.

You're Invited...

To come out to one of our community events to learn more about the Côté Gold Project and the Provincial Individual EA process.

IAMGOLD has volunteered to complete an Individual Environmental Assessment (EA) process for the Côté Gold Project, a proposed open pit gold mine, located 20 kilometres southwest of Gogama, Ontario.

IAMGOLD is hosting community open houses to share information and meet with interested residents and stakeholders about the Draft Terms of Reference. The Terms of Reference sets out the framework and work plan for completing the Individual EA process under the Ontario *Environmental Assessment Act*. The review period for the Draft Terms of Reference started on May 10, 2013 and ends June 9, 2013.

IAMGOLD is keen to hear your thoughts about the project and EA process.

A copy of the Draft Terms of Reference will be available for viewing at the open houses and can be downloaded from our website (www.iamgold.com). Information about the other viewing locations is also on our website.

To ask questions or provide comments about the Côté Gold Project please contact:

Private sector buys into Timmins2020 Strategic Plan with cash on the table

By LEN GILLIS
len.gillis@sunmdia.ca

The Timmins 2020 Strategic Plan process got a boost this week when community partners voluntarily stepped forward, and contributed financially to two of the local initiatives.

The Timmins Family YMCA is giving money to the Culture, Tourism and Recreation Master Plan, while La Caisse Populaire de Timmins is giving money to the local Housing Strategy.

In both cases, the contributions will reduce the amount of public taxpayers' money that has been set aside for the projects, which arfe both part of the Timmins2020 plan. The overall strategic plan is being piloted by the Timmins consulting firm, Clear Logic.

Clear Logic consultant Andrea Griener said these community partnerships are encouraging because it shows the Timmins2020 plan is not a city hall plan, or strictly a municipal plan; she said it is a community plan.

"People are starting to recognize that the issues we identified during the planning process and the strategies and tactics that were identified; people are recognizing that these are community issues and there is not one partner that will solve those problems. It's going to be a group effort," said Griener.

"Really it's going to be all hands on deck and multiple partners to make things happen. So it's really exciting to see people stepping forward and wanting to be part of the solution, and putting their money on the table," she added.

Mayor Tom Laughren said he was pleased with the partnerships and the fact that both local organizations are freely spending money to contribute to the overall success of the 2020 Plan.

Laughren said the housing issue is especially important because no matter what business he visits, he continually hears that employers are not only struggling to find new workers, but also to find housing for those workers.

"Even though in some instances we are successful in attracting somebody here, the second issue becomes where do they live. This is something that is not an easy fix," said the mayor.

Laughren said when it comes to solving such an issue, city hall cannot be expected to do it alone. He said community partners are definitely required and it also eases the burden on taxpayers.

Laughren also praised the Timmins YMCA not only for supporting the CTR Master Plan, but also for being an outstanding community partner with so many recreational initiatives to benefit young people in the city.

YMCA executive director Wayne Bozzer said the contribution made sense from his corner, because on the national level, YMCA is implementing a new initiative called Plan-Y.

"We thought what a great fit. Healthy lifestyles for kids, more youth activities. We know there's a need in Timmins so we just thought it's good, good timing, but also just a good strategic fit." said Bozzer.

He said the Timmins YMCA is the youngest in the country and getting more involved in the community is "part of the evolution" for the local organization Bozzer said.

"You know what, we can't be just known as child care. Now we're evolved into camps. Now we've got to get more like the bigger YMCAs. And I think we were afraid of that in the past, but as we gain more confidence, more traction, this is starting to be, again, a perfect fit," he said.

Timmins Caisse Populaire president Anne Vinet-Roy said the housing strategy was the right fit for her organization which works everyday to find practical solutions for its clients.

"It's for the community. That's where we work and that's where we live in, and our community is very important to us, to see it flourish and being well supported," said Vinet-Roy.

She said despite the economic ups and downs that have occurred in Timmins in recent generations, the community has always been financially stable.

"That's what is great about Timmins. There' s always something new, something going on, and this housing project is one of the keys to making it liveable and making people to keep wanting to come here," she said.

Consultant Griener said she was pleased with the actions of the YMCA and Caisse Populaire because it proves that the community is buying in to the plan overall and seeing that the benefits are not just going to accrue to one group or organization, but to the entire community.

IAMGOLD CORPORATION

Notice of Submission of Terms of Reference

Côté Gold Project

As part of the planning process for the **Côté Gold Project**, the Proposed Terms of Reference is being submitted to the Ministry of the Environment for review as required under the *Environmental Assessment Act*. If approved by the Minister of the Environment, the Terms of Reference will serve as the framework for the preparation and review of the Environmental Assessment for the proposed undertaking.

The Côté Gold Project is a majority owned Project held by a subsidiary of **IAMGOLD Corporation** (IAMGOLD), and consists of a proposed open pit gold mine with related processing facilities and infrastructure. The Project is located in northeastern Ontario, approximately 20 kilometres southwest of Gogama.

The Project is anticipated to be a significant contributor to the local economy and will provide employment opportunities. Consultation on the Côté Gold Project was initiated by IAMGOLD in 2012.

The Proposed Terms of Reference is available for review during regular business hours at the following locations:

Gogama
IAMGOLD Corporation

Alleged snuff video posted 'in public interest,' court told

TONY BLAIS
QMI Agency

EDMONTON — Edmonton webmaster Mark Marek claims he posted Luka Magnotta's alleged snuff video on his bestgore.com website in the "public interest," court heard Thursday.

Defence lawyer Guy Doyon told a judge during a bail hearing that Marek, 38, had put a disclaimer on the website, saying it seemed "fake" and asking if the video was "real," and was seeking to have someone verify it.

Once a website viewer from Minnesota suggested the video — which allegedly shows the shocking killing and dismemberment of Chinese undergraduate student Jun Lin, 33 — appeared to be real, Marek contacted police in Ontario about it, Doyon said.

"He said the police, in Mr. Marek's words, blew them off," Doyon said, adding that Marek took down the video from the website five days later, which was five days before the authorities told him to remove it.

"He is saying he posted it in the public interest and, once that was done, it was taken down," Doyon said. "He put it up to see if it was fake or real. Once it was determined it could be real, it was taken down."

Marek was granted bail and was expected to be released once he posted $7,500 cash and satisfied a bail supervisor regarding some conditions, including where he will live.

He must also remain in Alberta and is forbidden from accessing the Internet, going to Internet cafes or possessing any electronic devices, including cellphones, which are able to connect to the Internet.

The webmaster, who is a Canadian citizen, but originally from Slovakia, spoke with an accent as he briefly told court about having just one passport and not having dual citizenship.

He tried to speak about his website, but was quickly cut off by Doyon and the judge.

Marek is facing a rarely used charge of "corrupting morals," although Crown attorney Julie Roy told court he might face additional charges once investigators finish going through his seized files.

Edmonton police began looking into Marek's website shortly after Magnotta was arrested and charged with first-degree murder in the June 2012 death of Lin.

However, Marek left Canada and spent six months in Asia before returning July 11.

Once he landed in Vancouver, he was stopped by border services, who notified Edmonton police and seized all his computer equipment.

Marek was then contacted by police when he landed in Edmonton and interviewed on Tuesday.

Marek is slated to be back in court on Aug. 1.

IAMGOLD CORPORATION

Notice of Commencement Environmental Assessment

Côté Gold Project

IAMGOLD Corporation (IAMGOLD) has initiated an Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* for the **Côté Gold Project**.

The **Côté Gold Project** is a majority owned Project held by a subsidiary of IAMGOLD, and consists of a proposed open pit gold mine with related processing facilities and infrastructure. The Project is located in northeastern Ontario, approximately 20 kilometers southwest of Gogama.

The Process

The Provincial Ministry of the Environment approved the Terms of Reference for the **Côté Gold Project** on January 14, 2014. A copy of the approved Terms of Reference is available at:

http://iamgold.com/English/Operations/Development-Projects/Cote-Lake-Ontario/Documents/default.aspx

The approved Terms of Reference is also available during business hours at the following IAMGOLD offices:

Gogama
IAMGOLD Corporation
3 Mesomikenda Lake Road
P.O. Box 100
Gogama, ON P0M 1W0
T: 705-269-0010

Toronto
IAMGOLD Corporation
401 Bay Street, Suite 3200
P.O. Box 153
Toronto, ON M5H 2Y4
T: 416-360-4710

The study will be carried out according to the approved *Terms of Reference* and the requirements under the Ontario *Environmental Assessment Act*. Results from this study will be documented in an EA report, which will be submitted to the Ontario Ministry of Environment for review. At that time, Aboriginal groups, the public and other interested persons will be informed when, and where the EA report can be reviewed and where comments be sent on the Draft report. IAMGOLD will also conduct community open houses to provide an overview of the Draft EA and to receive feedback from interested persons.

This Provincial Environmental Assessment process is one of two environmental assessment processes required for approval of the Côté Gold Project. A Federal environmental assessment is also required pursuant to the *Canadian Environmental Assessment Act, 2012*. The scope of the Federal Environmental Assessment is guided by the Environmental Impact Statement Guidelines issued to IAMGOLD on July 9, 2013 by the Canadian Environmental Assessment Agency.

Consultation

IAMGOLD is working with the Canadian Environmental Assessment Agency and the Ontario Ministry of the Environment to develop a coordinated environmental assessment process, including coordinated public consultation opportunities wherever possible, to reduce duplication of effort.

Members of Aboriginal communities, the public and other interested persons are encouraged to actively participate in the Environmental Assessment process by attending consultation events, or by contacting IAMGOLD directly with information, comments or questions. Consultation has, and will continue to occur throughout the EA process. All upcoming consultation events will be advertised in local papers and published at: http://www.iamgold.com/English/Operations/Development-Projects/Cote-Lake-Ontario/Community-Engagement/default.aspx.

PREVENT FROZEN WATERLINES!

Within hours before a water service to a building freezes most occupants have noticed the water turning a yellow or rust colour.

IF YOU NOTICE THE WATER FROM YOUR TAP TURNING A YELLOW OR RUST COLOUR LEAVE YOUR TAP RUNNING AND CALL PUBLIC WORKS 705-360-2646

The colour in the water may be a sign of your water service is near to freezing. Public works will advise you if it may be freezing and should be left running or if it is a result of a watermain break or fire hydrant use in your area.

IAMGOLD CORPORATION

Notice of Consultation Opportunity
Draft Environmental Assessment

Côté Gold Project

As part of the planning process for the **Côté Gold Project**, the **IAMGOLD Corporation** (IAMGOLD) has compiled the draft Environmental Assessment Report for the Côté Gold Project.

The **Côté Gold Project** is a majority owned Project held by a subsidiary of IAMGOLD, and consists of a proposed open pit gold mine with related processing facilities and infrastructure. The Project is located in northeastern Ontario, approximately 20 kilometres southwest of Gogama.

The Process

The **Côté Gold Project** requires approval under two environmental assessment processes: a Federal environmental assessment under the *Canadian Environmental Assessment Act, 2012* and a Provincial environmental assessment pursuant to the Ontario *Environmental Assessment Act*. The Provincial Environmental Assessment will be carried out according to the Terms of Reference approved by the Provincial Minister of the Environment on January 14, 2014. IAMGOLD voluntarily agreed to prepare a draft Environmental Assessment Report to provide sufficient opportunity for review and comment from Aboriginal groups, government agencies and the general public prior to submission of the final Report.

Consultation

Members of the public, Aboriginal communities and other interested persons are encouraged to actively participate in the environmental assessment process by attending consultation opportunities, or contacting IAMGOLD directly with information requests, comments or questions. Consultation opportunities will continue throughout the planning process including this opportunity to provide comments on the draft Environmental Assessment Report. All upcoming consultation events will be advertised in local papers and published at: www.iamgold.com

Printed copies of the draft Environmental Assessment Report are being made available for public review and comment from **June 13, 2014 to July 14, 2014** during regular business hours at the following locations:

Gogama
IAMGOLD Corporation
Côté Gold Project
3 Mesomikenda Lake Road

In Memoriams | In Memoriams

HOLLICK, Peter - In loving memory of a dear Husband who passed a way one year ago, June 5th 2013.

A million times I've needed you
A million times I've cried.
If love could have saved you
You never would have died.
Things we feel most deeply
Are the hardest things to say.
My dearest one, I loved you.
In a very special way.
If I could have one lifetime wish
One dream that could come true,
I'd pray to God with all my heart
For yesterday and you.

– Lovingly remembered by your Wife Violet and family.

Administrative Office | **Administrative Office** | **Administrative Office**

Ross Pope LLP CPAs

Ross Pope LLP is a dynamic professional firm providing a wide range of services in the areas of accounting, computer consulting and training, IT and bookkeeping to a large client base throughout Northern Ontario. We are looking for an energetic, service oriented team player to join our Timmins office in the following capacity:

CLERICAL SPECIALIST
FINANCIAL STATEMENTS AND FILE MANAGEMENT

This position requires an individual to utilize specialized software programs with intricate word processing, file archiving and data management attributes, to produce and process financial statements and other information. Other administrative support duties are also required. Training will be provided.

Requirements:

- Diploma in office/business administration or equivalent experience
- Excellent word processing and other computer skills in a Microsoft environment
- Detail oriented, with excellent verbal, written and punctuation skills
- Ability to read and understand financial statements
- Experience with electronic data file management
- Ability to work in a demanding, fast paced environment with strict deadlines
- Accounting experience an asset

We offer competitive wages and benefits. If you possess these qualities, and wish to utilize them in an exciting business environment, please send your resume with references, and salary expectations by Wednesday, June 25th, 2014 to: jobs@rosspope.com

or

APPENDIX D-5
OPEN HOUSE PRESENTATIONS

IAMGOLD and the Cote Gold Project

November 2012

Welcome

TSX: IMG **NYSE:** IAG

Cautionary Statement

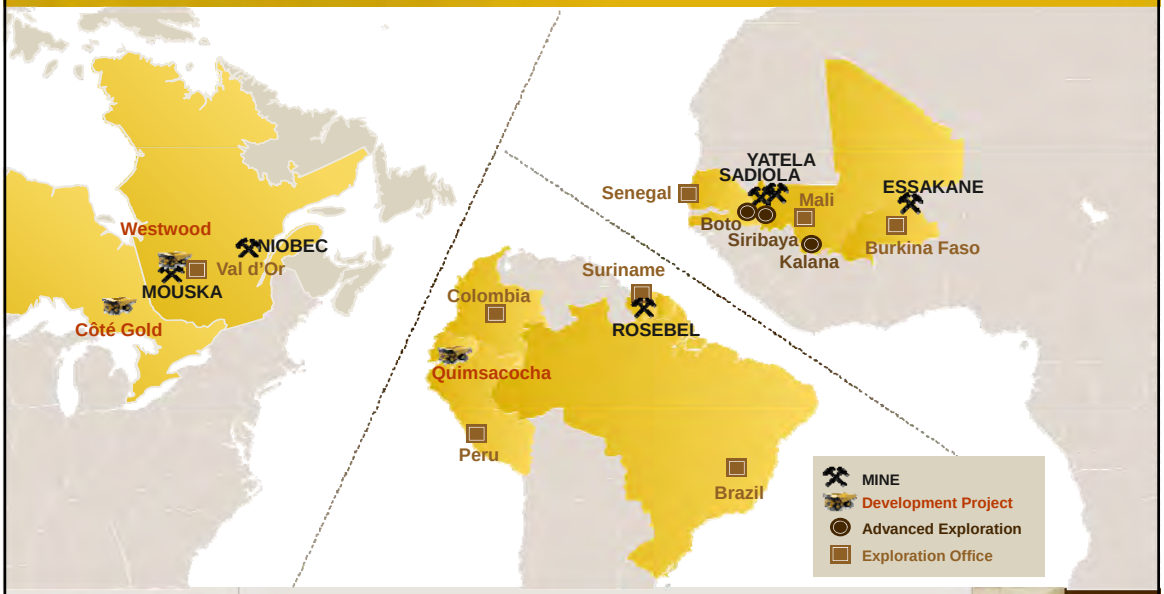
This presentation contains forward-looking statements. All statements, other than of historical fact, that address activities, events or developments that the Company believes, expects or anticipates will or may occur in the future (including, without limitation, statements regarding expected, estimated or planned gold and niobium production, cash costs, margin expansion, capital expenditures and exploration expenditures and statements regarding the estimation of mineral resources, exploration results, potential mineralization, potential mineral resources and mineral reserves) are forward-looking statements. Forward-looking statements are generally identifiable by use of the words "may", "will", "should", "continue", "expect", "anticipate", "estimate", "believe", "intend", "plan" or "project" or the negative of these words or other variations on these words or comparable terminology. Forward-looking statements are subject to a number of risks and uncertainties, many of which are beyond the Company's ability to control or predict, that may cause the actual results of the Company to differ materially from those discussed in the forward-looking statements. Factors that could cause actual results or events to differ materially from current expectations include, among other things, without limitation, failure to meet expected, estimated or planned gold and niobium production, cash costs, margin expansion, capital expenditures and exploration expenditures and failure to establish estimated mineral resources, the possibility that future exploration results will not be consistent with the Company's expectations, changes in world gold markets and other risks disclosed in IAMGOLD's most recent Form 40-F/Annual Information Form on file with the United States Securities and Exchange Commission and Canadian provincial securities regulatory authorities. Any forward-looking statement speaks only as of the date on which it is made and, except as may be required by applicable securities laws, the Company disclaims any intent or obligation to update any forward-looking statement.

The United States Securities and Exchange Commission (the "SEC") permits mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. We use certain terms in this presentation, such as "mineral resources" , that the SEC guidelines strictly prohibit us from including in our filings with the SEC. U.S. investors are urged to consider closely the disclosure in the IAMGOLD Annual Report on Form 40-F. A copy of the 2010 Form 40-F is available to shareholders, free of charge, upon written request addressed to the Investor Relations Department.

Total Resources includes all categories of resources unless indicated otherwise.

All currency numbers are in US$ unless otherwise stated.

Who is IAMGOLD Corporation?
Conduct Governed by Zero Harm Framework



IAMGOLD CORPORATION

Highest standards of corporate social responsibility

3

IAMGOLD's Global Mining Operations

IAMGOLD CORPORATION

Operates in Canada, South America and Africa

4

IAMGOLD's Social Partnerships

IAMGOLD's approach to community investment is to develop partnerships with local, regional and national stakeholders, recognizing the need for local insight, sustainability, transparency and quality.

Across Quebec, Ontario, Burkina Faso, and Suriname, IAMGOLD maintained 50 partnerships with government and civil society organizations. Canadian partners include: Relay for Life, Canadian Cancer Society, CIDA, Plan Canada, Right to Play, and United Way.

Economic Contributions where we operate

Economic contribution

IAMGOLD's most significant economic contributions are delivered as taxes, royalties, in-country purchasing and employee compensation (payroll including income taxes). Globally these contributions totaled $939 million.

IAMGOLD revenues and operating costs

	Canada	Suriname	Burkina Faso	Mali
Revenue	$ 230,046,000	$ 608,165,000	$ 590,087,000	$ 235,195,000
Operating costs	$ 180,922,000	$ 308,245,000	$ 277,027,000	$ 154,758,000
Retained earnings	$ 220,039,000	$ 236,965,000	$ 279,262,000	$ 110,132,000
Payments to capital providers	–	$ 7,282,000	–	–

	Canada	Suriname	Burkina Faso	Mali
Employee compensation (national payroll including taxes)	$ 86, 835,395	$ 44,260,064	$ 26,003,595	$ 10,368,270
Income taxes	$ 17,298,100	$ 111,120,000	$ 50,660,000	$ 37,462,000
Royalties	$ 904,000	$ 35,715,000	$ 30,243,000	$ 14,101,000
National/local purchasing	$ 160,083,331	$ 143,387,597	$ 128,803,282	$ 67,857,902
Total national contribution	**$ 265,120,826**	**$ 334,482,661**	**$ 209,706,282**	**$ 129,789,172**

Côté Gold Project: Overview

- **Previously owned by Trelawney; purchased by IAMGOLD in June 2012.**
- **Located in Chester Township, 25 km southwest of Gogama, 130 km south of Timmins and 170 km north of Sudbury.**
- **Prospecting/exploration in this area since 1900.**
- **Mine site would include the open pit, mill, mine rock piles, tailings storage facility, camp and office buildings.**
- **Currently preparing a Pre-feasibility Study. It is estimated that the open pit gold mine could:**
  - Operate for 15 years
  - Produce 400,000 - 500,000 ounces annually
  - Process 50,000 - 55,000 tons per day

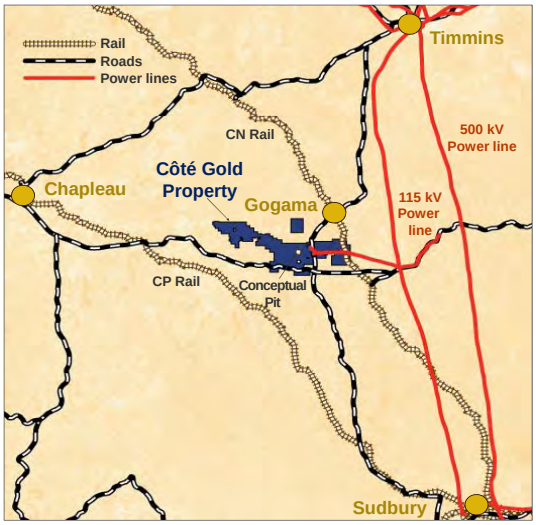
IAMGOLD CORPORATION

7

Côté Gold Project: Well Established Infrastructure

ENERGY
- 5 km to 115 kV power line
- 75 km to 500 kV transmission line

ROAD
- Close to Hwy 144, 130 km to Timmins, 170 km to Sudbury



RAIL
- 25 km to CN Rail siding in Gogama
- 70 km to CP Rail crossing

VENDORS & SUPPLIERS
- Located in the heart of one of Canada's premier mining camps

WATER
- Ample supply to develop and operate a mine

Canada Exploration Projects

- Cote Lake: 516 km² land package
- Quebec projects total 813km²: Abitibi /James Bay / Niobec areas
- Earn-In Option on Virginia's Lac Pau
- Right to an Earn-in Option in the Niobec area - DIOS
- Royalties held on various projects

Côté Lake Exploration Potential

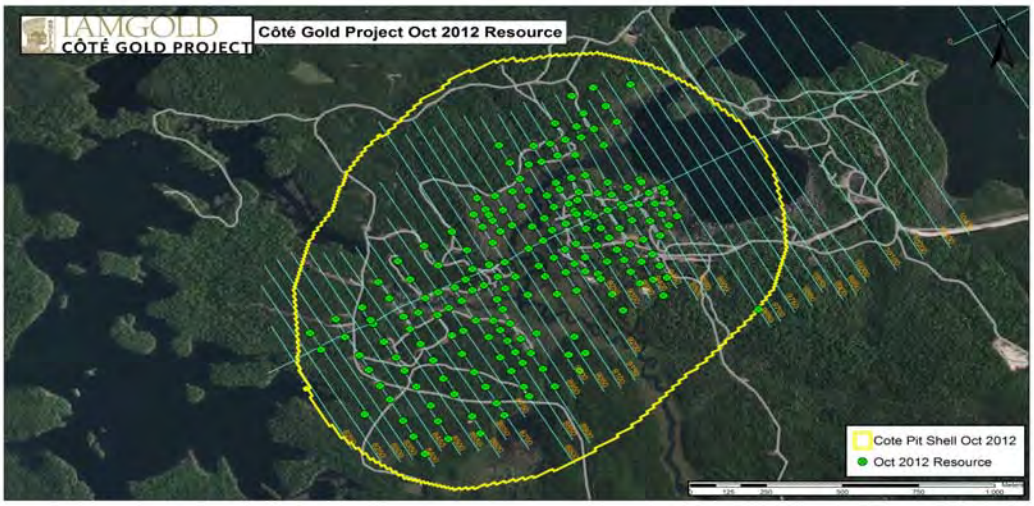
- 516 km² land package: favorable geological setting; major structural zone, Timiskaming sediments and late porphyry intrusions
- Potential for orogenic and intrusion-related gold systems

Côté Gold – Indicated Resource Increases 274% with Updated Mineral Resource Estimate

- October 4th resource estimate reports 274% increase in indicated resource.
- Percentage of resource in indicated category increases to 44% from 14% in previous estimate.
- Attributed to aggressive in-fill and step-out drilling since previous estimate.
- Updated resource estimate based on a total of 208 holes (110,722 metres).
- Mineralization defined over a strike length of 1,300 m, widths between 100 m–300 m and to a depth of 900 m.
- Deposit open along strike and at depth.
- Drilling continues with intent of converting more inferred resources to indicated for year-end R&R statement.

Mineral Resource Estimate
Effective October 4, 2012

	Tonnes (millions)	Grade (g/t)	Contained Ounces (million ozs)
Indicated			
0.25g/t Au cut-off	136	0.82	3.61
0.30g/t Au cut-off	**131**	**0.84**	**3.56**
0.40g/t Au cut-off	116	0.91	3.39
0.50g/t Au cut-off	97	1.00	3.12
Inferred			
0.25g/t Au cut-off	172	0.85	4.73
~~0.30g/t Au cut-off~~	~~165~~	~~0.88~~	~~4.66~~
0.40g/t Au cut-off	144	0.96	4.43
0.50g/t Au cut-off	122	1.05	4.12



Source: Updated Resource Estimate for Côté Gold, effective October 4, 2012. NI 43-101 Technical Report to be filed on SEDAR on or before October 24, 2012.
Note: CIM Definition Standards were followed for Mineral Resources. Mineral resource stated on a 100% basis at the 0.3g/t Au cut-off grade assuming a gold price of $1600 and process recovery of 93.5%. Mineral Resources are constrained within a conceptual pit generated using reasonable assumptions for economic and technical parameters. High assays are capped at 20 g/t Au. Bulk density ranges from 2.71 t/m³ to 2.79 t/m³ depending on rock type. Mineral Resources are not Mineral Reserves and do not yet have demonstrated economic viability. Numbers may not add due to rounding. The estimate includes all validated drill results as at August 1, 2012.

IAMGOLD CORPORATION

Pre-feasibility study commenced Q4 2012

Côté Gold Project - Drilling Included in 2012 RPA Resource Estimate

IAMGOLD CORPORATION

12

Côté Gold Project: Local Partnerships and Employment

- **Exploration Agreement with local First Nations.**
- **Employs 50 people at the Cote Gold Project site; half of whom live in Gogama and surrounding communities.**
- **Local contracts in place for services such as: hauling, clearing brush, making roads, pipe fusing, making core boxes, and carpenters.**

IAMGOLD CORPORATION

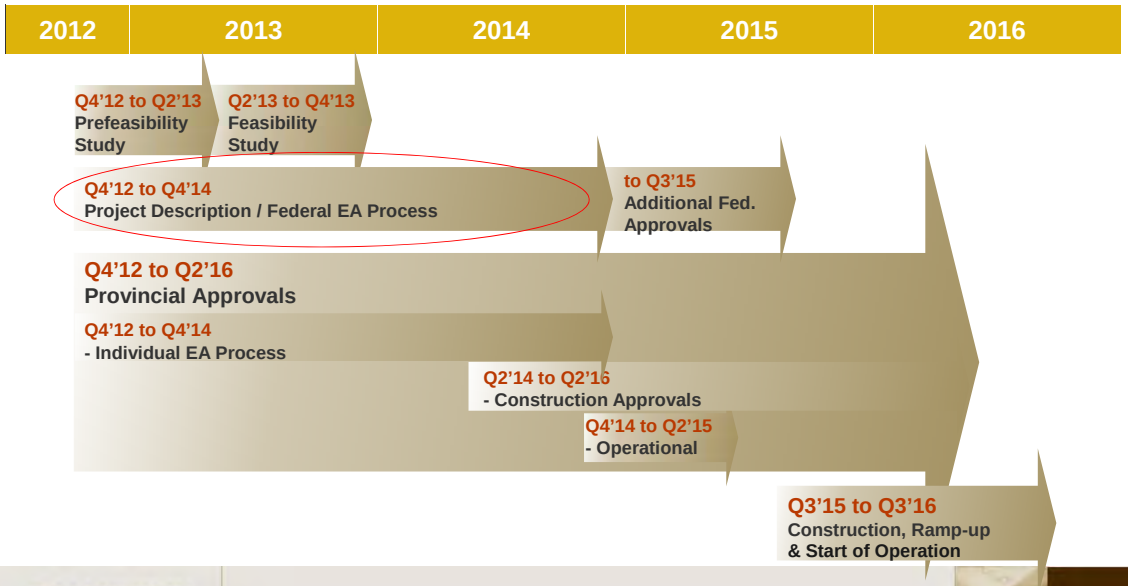
13

Côté Gold Project: Current Activities on Site

- **Drilling**
  - Continuing to define the resource
  - Drill program is winding down from a peak of 13 drills and projected to continue into the winter with a limited number of drills
- **Environmental Baseline Work**
  - Aquatics /Terrestrial Baseline Studies
  - Water Diversion and Compensation
  - Geo Chemistry Waste Rock and Tailings
  - Surface and Ground Water Monitoring
  - Hydrology Monitoring Program
  - Archaeological (Phase 2 and 3 field studies completed for this year but will expand next year as the project evolves.)
  - Socio-economics
  - Aboriginal traditional knowledge and land use

IAMGOLD CORPORATION

14



Côté Gold Project: Future Activities

- **Starting Environmental Assessments**
  - Preparing a Project Description for federal government agencies
  - May require federal environmental assessment under CEAA 2012
  - May require provincial environmental assessment for a 230 kV power line
  - Many things still in consideration including:
    - Location of facilities
    - Size of pit (boundaries)
    - Location of tailings storage facility
    - Water management options
    - Size of workforce
    - Power requirements/options
- **Continued Exploration Drilling over the winter 2012/2013**
- **Early consultation with regional communities, Aboriginal people and stakeholders**

IAMGOLD CORPORATION

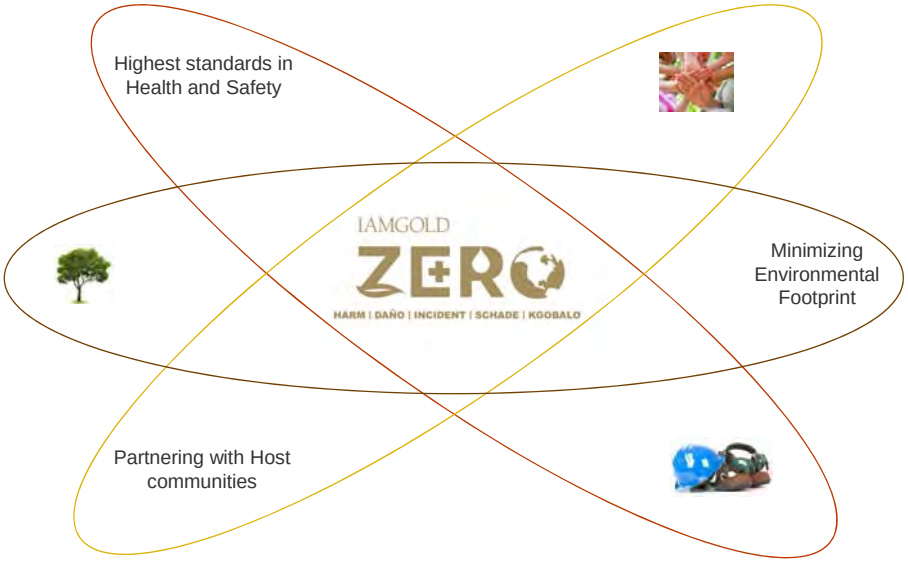
IAMGOLD's CÔTÉ GOLD PROJECT

(NOTE: presentation amended April 2013 to correct some photograph captions)



Welcome

TSX: IMG **NYSE:** IAG

Purpose of our Open House

- **Provide an overview of:**
  - Project components (preliminary)
  - Potential environmental effects
  - How and when we would involve you in the environmental assessment
- **Hear and record your thoughts on the above**
- **Consider your feedback for incorporation into a final "Project Description" report for submission to the Canadian Environmental Assessment Agency in March 2013**
- **The Province (Ministry of Northern Development and Mines and other agencies) will also review the Project Description and use it to determine what type of Provincial Environmental Assessment is required**

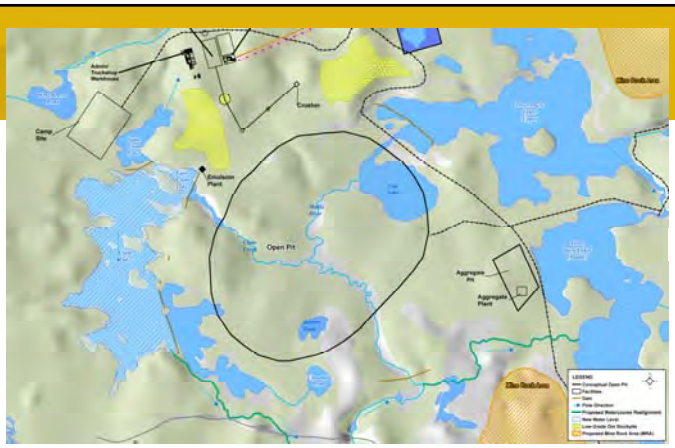
Engagement with impacted Aboriginal peoples & Stakeholders

Early 2015
Construction activities expected to commence



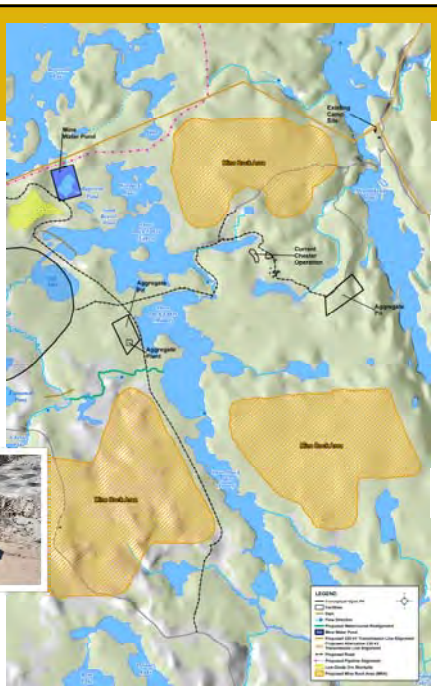
IAMGOLD CORPORATION

7

Preliminary Site Plan

Open Pit

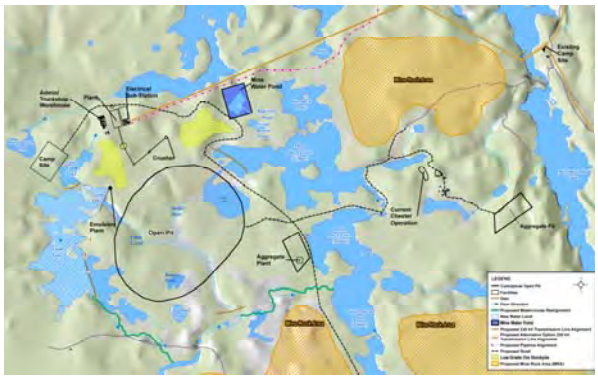
- **Estimated Dimensions**
  - Depth: approx. 650 metres deep
  - Surface area: approx. 210 hectares
- **Expected Production**
  - Open pit mining rate is expected to be 60,000 tonnes per day
- **How would it be mined?**
  - The benches in rock would be developed by blasting
  - Conventional shovel and truck type operation
  - Ore, mine rock and overburden removed from the open pit would be trucked to the surface
  - May include an In-pit Crushing and Conveying (IPCC) system
    - Involves the use of crushing machinery that can be relocated to minimize the vertical haulage component carried out by the haul trucks



Typical haul truck

Rio Tinto, Palabora Open Pit

Mine Rock Areas



- **Project development is expected to generate:**
  - Mine rock: 850 million tonnes
    - 730 hectares by up to 100 metres high
  - Overburden: 20 million tonnes
    - 150 hectares by up to 100 metres high
- **Use:**
  - About 40 million tonnes of mine rock would be used in Project site construction and maintenance (i.e., dams and roads)
  - Some overburden would be used in final reclamation
  - Unused overburden and mine rock would be managed on the site
- **Environmental Impacts – Rock Analysis**
  - 70% not acid-generating, 10% potentially acid-generating, 20% uncertain
  - Further testing is underway to better characterize the rock
  - Any potentially acid-generating rock would be managed appropriately

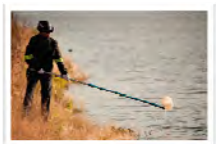
Accommodations Complex
1,200 workers during construction
500 full-time personnel during operation



Source for all images: Detour Gold

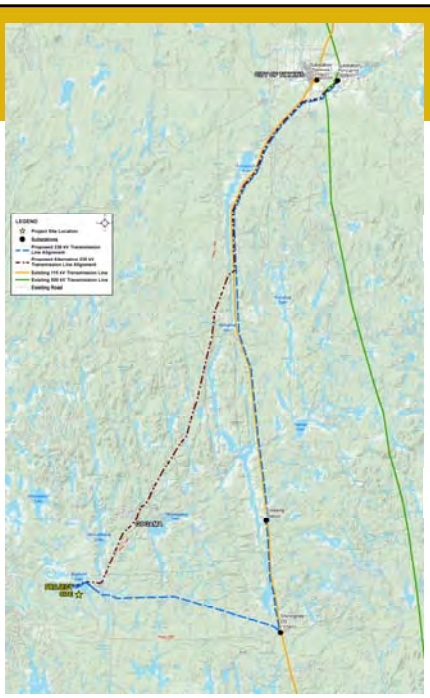
Tailings Management Facility (TMF)

- **What are tailings?**
  - Tailings are the materials left over after removing the valuable fraction (i.e., gold)
- **What is the TMF?**
  - Facility constructed to manage the tailings
  - Size: approx. 900 hectares
  - Storage capacity: approx. 330 million tonnes of tailings
  - Dams: constructed rockfill dams and naturally high bedrock surface
    - Dam heights (maximum): 45 to 50 metres above ground surface
  - Water: a large portion of the excess water in the TMF would be recycled for process water
    - Remaining water would be discharged through a polishing pond to surface water and would meet applicable Federal and Provincial effluent discharge standards
  - Closure: the TMF would be rehabilitated (for example re-vegetated) at closure based on the Ministry of Northern Development and Mines approved Closure Plan

Examples of Tailings Management Facilities

Water Management Facilities

- **Purpose:**
  - Maximize water reclaimed/recycled to the ore processing plant
  - Minimize the effluent discharge points and amount discharged
  - Optimize effluent quality so as to not adversely affect natural water systems
- **Site water flows that would be managed include:**
  - mine water from the open pit
  - water associated with the treated tailings effluent, as well as precipitation collected within the Tailings Management Facility
  - water from truck wash bays and other minor sources
  - runoff collected at the mine rock areas and low-grade ore stockpiles
  - overburden seepage from pit perimeter ditch
  - treated domestic sewage water
  - general site area runoff and seepage



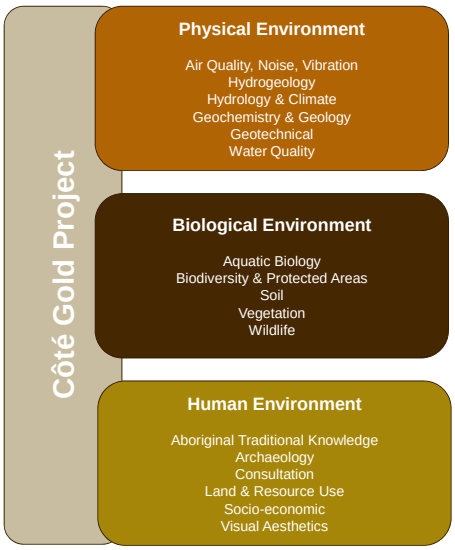
Example of water management structure

Power Transmission Line

- **Power for Project operations would be powered by a new 230 kilovolt transmission line connected to the existing HydroOne Network in Timmins at the Porcupine Substation**
- **Proposed alignment**
  - First segment, approx. 120 kilometres long, would parallel an existing 115 kilovolt transmission line from Timmins to Shining Tree
  - Second segment, approx. 40 kilometres long, would be constructed within an existing right-of-way from the Shining Tree Substation to the Project site
- **Proposed alternative alignment**
  - More direct (shorter) route (cross-country) is being evaluated and may be incorporated into the environmental assessment if the evaluation looks promising

Source: Detour Gold

Environmental Assessment



- **What is an environmental assessment?**
  - It is a planning and decision-making tool. The objectives of an environmental assessment are to:
    - minimize or avoid adverse environmental effects before they occur
    - incorporate environmental factors into decision making
  - Consultation is an important aspect of the environmental assessment process. Members of the public can participate at various stages of the environmental assessment process.
- **Project anticipated to require a Federal environmental assessment under the *Canadian Environmental Assessment Act, 2012*.**
  - The Federal "Regulation Designating Physical Activities" identifies the physical activities that make up the designated projects that could require a Federal environmental assessment
  - For more information on the Federal environmental assessment visit the Canadian Environmental Assessment Agency website http://www.ceaa-acee.gc.ca/
- **Several aspects of the Project are anticipated to require completion of Provincial environmental assessment(s) including:**
  1. Construction and operation of a 230 kilovolt transmission line
  2. Potential disposition of Crown resources

IAMGOLD CORPORATION

15

Managing Environmental Effects

- **The environmental assessment will be based on the proposed Project, existing environmental conditions, regulatory requirements and proposed mitigation measures**
- **Evaluation of Project effects in the physical, biological and human environments**
- **Includes the following steps:**
  - Prediction of the effects of the Project on the physical and biological environment , effects on Aboriginal peoples as well as the socio-economic conditions
  - Evaluation of Project alternatives, management practices and mitigation measures which would avoid or minimize adverse Project effects and enhance positive effects
  - Determination of the level of significance of each potential effects that remains after the application of the proposed mitigation measures

IAMGOLD CORPORATION

16

Côté Gold Project: Consultation

Aboriginal, Stakeholders and Government

- First Nation and Métis groups (as identified by Federal and Provincial governments)
- Gogama and other regional communities (Sudbury, Timmins)
- Provincial and federal governments
- Neighbours and adjacent land owners (Mesomikenda cottagers, mining interests, trappers, hunters)
- Interested stakeholders (Economic development agencies, businesses, forestry companies,
- Non-governmental environmental organizations (Northwatch, Mining Watch Canada)

Consultation Activities and Information Sources

- Meetings and open houses
- Site tours
- Newsletters/Newspaper notices
- Project website (www.iamgold.com)

Côté Gold Project: Local Partnerships and Employment

- **Exploration Agreement with local First Nations**
- **Currently employs 50 people at the Côté Gold Project site; half of whom live in Gogama and surrounding communities**
- **Local contracts in place for services such as: hauling, clearing brush, making roads, pipe fusing, making core boxes, and carpenters**
- **IAMGOLD anticipates to employ approx. 1,200 workers during the construction phase and approx. 500 workers during the operations phase of the Project**

Côté Gold Project: Current Activities on Site

- **Drilling**
  - Continue to define the resource
  - Drill program is down from a peak of 13 drills and will continue through the winter with a limited number of drills
- **Additional Baseline Work**
  - Aboriginal traditional knowledge and land use
  - Air Quality
  - Archaeology
  - Aquatics and Terrestrial
  - Geochemistry
  - Groundwater and Surface Water
  - Socio-economics
  - Visual Aesthetics

IAMGOLD CORPORATION

19

Côté Gold Project: Future Activities

- **Environmental Assessments**
  - Federal environmental assessment
    - Draft Project Description submitted to federal government agencies on February 1, 2013
    - Final Project Description is to be submitted to federal government agencies in March 2013
  - Provincial environmental assessment for a 230 kilovolt transmission line
    - Coordinating with the provincial representatives to determine which process will be followed
    - Anticipating commencement of an Individual Environmental Assessment in March 2013
  - Several things still in consideration including:
    - Location of facilities
    - Water management
    - Transmission line
- **Continue exploration drilling over the winter of 2013**
- **Engage and consult with Aboriginal people, regional communities and stakeholders**

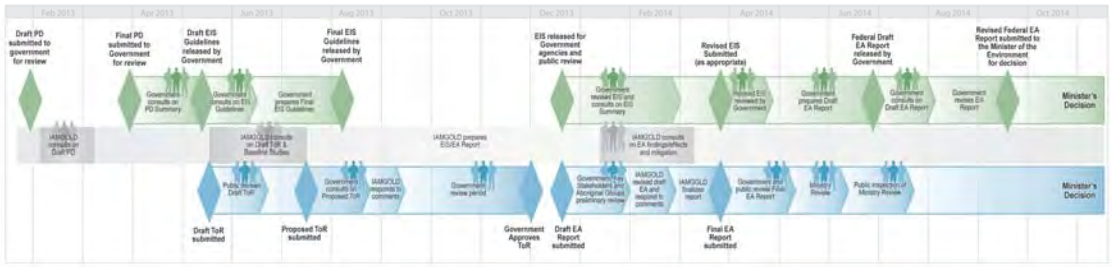
Construction activities expected to commence



Côté Gold Project: Local Partnerships and Employment

- Exploration Agreement with local First Nations
- Currently employs 50 people at the Côté Gold Project site; half of whom live in Gogama and surrounding communities
- Local contracts in place for services such as: hauling, clearing brush, making roads, pipe fusing, making core boxes, and carpenters
- IAMGOLD anticipates to employ approx. 1,200 workers during the construction phase and approx. 500 workers during the operations phase of the Project

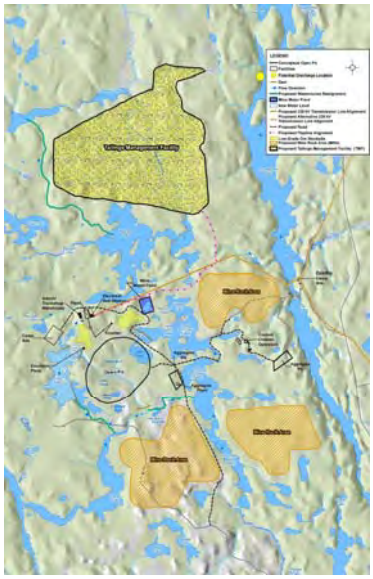
Côté Gold Project: Environmental Assessments Timeline

Côté Gold Project: Terms of Reference (ToR) Overview

- **The ToR tells the government, the public and Aboriginal communities how the provincial environmental assessment will be prepared**
- **The ToR describes:**
  - the purpose and description of the Côté Gold Project
  - the purpose and alternatives for undertaking the Project; and how they will be evaluated
  - the potential impacts of the Project on the environment; and how their significance will be assessed
  - the approach by which the Aboriginal communities, public, and stakeholders will be engaged and consulted in the preparation of the environmental assessment
- **The Minister of the Environment must approve the ToR prior to the proponent preparing the environmental assessment**

Côté Gold Project: Terms of Reference Alternatives Assessment

Water Supply



Alternatives	Assessed in the EA?	Rationale
Mesomikenda Lake	Yes	Method for meeting fresh water needs that cannot be met by on-site water recycling
Other area watercourse(s), lake(s) and pond(s)	Yes	
Groundwater well(s)	Yes	

Watercourse Realignments

Alternatives	Assessed in the EA?	Rationale
Realignment of Bagsverd Creek around the Tailings Management Facility	Yes	Watercourse realignments are dependent on the location of Project components and will be modified to minimize impacts to receiving waters and aquatic species
Realignment of portions of Three Duck Lakes, Chester Lake and the Mollie River system around the open pit and mine rock areas	Yes	

Aggregate Supply

Alternatives	Assessed in the EA?	Rationale
Overburden and mine rock	Yes	Needs being defined – Potential quantities and sources will be identified and assessed
Dedicated on-site aggregate pits	Yes	
Commercial off-site aggregate pits	Yes	

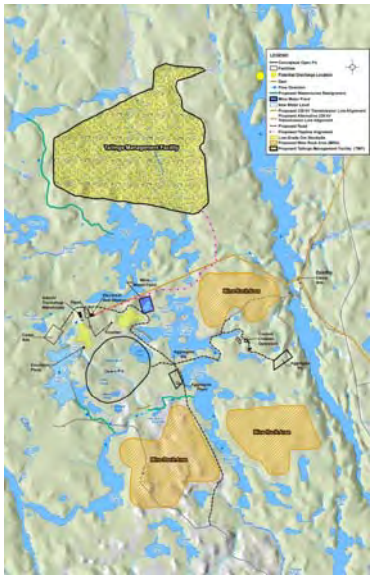
Site Infrastructure

Alternatives	Assessed in the EA?	Rationale
Maintenance garage, warehouse and administration complex	Yes	Various Locations Optimal location reviewed and refined as Project design continues
Accommodation complex	Yes	
Fuel and lube bay	Yes	
General laydown areas and temporary storage facilities	Yes	

Water Discharge Location

Alternatives	Assessed in the EA?	Rationale
Mesomikenda Lake	Yes	Discharge locations will be evaluated based on receiving water hydrological conditions, the water balance and the water quality model
Bagsverd Creek	Yes	

IAMGOLD CORPORATION



Côté Gold Project: Terms of Reference Alternatives Assessment

Process Effluent Treatment

Alternatives	Assessed in the EA?	Rationale
In-plant cyanide recycling and destruction using SO_2/Air process	Yes	Commonly used process where surface water and people would be severely impacted in the event of accidental tailings release
Process effluent discharge to Tailings Management Facility with natural degradation for cyanide destruction, with supplemental hydrogen peroxide	Yes	Hydrogen peroxide destruction of residual cyanide – lower cost than SO_2/Air process, but may carry environmental risks
Process effluent discharge to Tailings Management Facility with natural degradation for cyanide destruction	No	Presents a greater overall environmental risk

Mine Water Management

Alternatives	Assessed in the EA?	Rationale
Integrate with Tailings Management Facility operations	Yes	Best suited for Project objective: on-site water recycling
Separate mine water system	No	Against Project objective of recycling on-site water

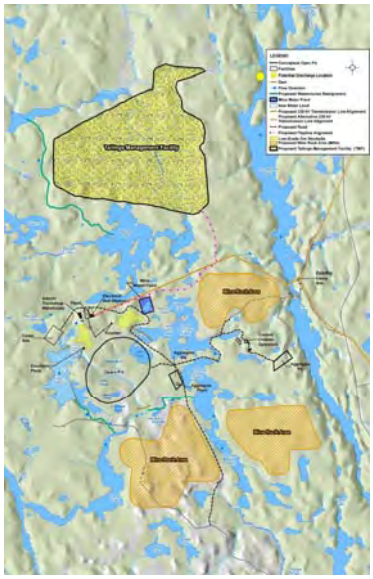
Mine Rock and Overburden Management

Alternatives	Assessed in the EA?	Rationale
Stockpile(s) adjacent/proximal to the open pit	Yes	Common to place mine rock and overburden as close to the pit as practical Minimizing mine rock management cost
Temporary stockpile(s) location, retaining mine rock and overburden in pit during operations and/or returning to pit at closure	No	Excessive transportation costs that would render the Project not economically viable

Gold Recovery

Alternatives	Assessed in the EA?	Rationale
Combination of non-cyanide and cyanide recovery methods – selected alternative	Yes	Partial recovery through gravity separation Finer gold fraction would require cyanide leaching
Non-cyanide recovery methods	No	No viable industrial scale application alternative available
Cyanide recovery methods	No	Applied when gold is extremely fine and gravity separation is ineffective

IAMGOLD CORPORATION



Côté Gold Project: Terms of Reference Alternatives Assessment

Tailings Management

Alternative	Assessed in the EA?	Rationale
Tailings slurry and thickening	Yes	Most commonly used deposition method in cooler climates – most suitable for the Project
Thickened tailings (60% solid content)	No	Thickening is costly Only carried out where water availability is limited (dry climates)
Paste thickened tailings (68% solid content)	No	

Tailings Management Facility

Alternative	Assessed in the EA?	Rationale
Tailings Management Facility located north of the open pit, overprinting a portion of Bagsverd Creek	Yes	Result of alternatives assessment narrowed the Tailings Management Facility location to the area north of the open pit

Mining

Alternative	Assessed in the EA?	Rationale
Open pit mining – selected alternative	Yes	Ore body is high tonnage and relatively low grade Gold finely disseminated in ore body Deposit near surface
Underground mining	No	Ore body not suitable for underground mining
Combined open pit and underground mining	No	Ore body not suitable for this method Underground operation not anticipated to be economically viable

Terms of Reference – Method to Describe Effects

- **The environmental assessment will describe environmental effects in terms of their:**
  - Direction (is it a positive or negative effect?)
  - Magnitude (how big is the effect?)
  - Geographic extent (distance the effect goes?)
  - Frequency (how many times will the effect occur over a period of time?)
  - Duration (how long does the effect happen?)
  - Reversibility (can the effect be reversed?)
  - Likelihood (how likely is it that this effect will occur?)
- **The environmental assessment will assess cumulative effects (i.e., effects of the Project plus the effects of other projects/activities in the region)**
- **The environmental assessment will include a plan for preventing accidents and/or malfunctions**
- **The environmental assessment will assess effects of the environment (e.g., climate change) on the Project**

Côté Gold Project: Consultation

- **Stakeholders and Governments**
  - First Nation and Métis groups (as identified by federal and provincial governments)
  - Gogama and other regional communities (Sudbury, Timmins)
  - Provincial and federal governments
  - Neighbours and adjacent land owners (Mesomikenda cottagers, mining interests, trappers, hunters)
  - Interested stakeholders (economic development agencies, businesses, forestry companies, environmental organizations)
- **Consultation Activities and Information Sources**
  - Meetings and open houses
  - Site tours
  - Newsletters/Newspaper notices
  - Project website (www.iamgold.com)
  - Direct mail/e-mail to Project mailing list

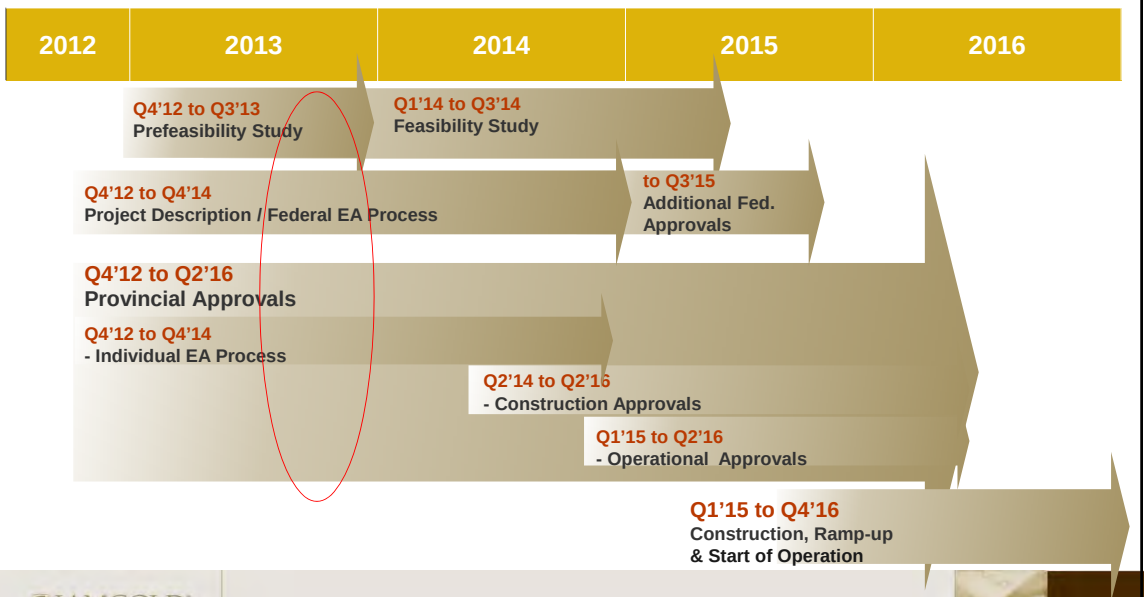
IAMGOLD's CÔTÉ GOLD PROJECT

Fall 2013 Update

TSX: IMG **NYSE:** IAG

Cautionary Statement

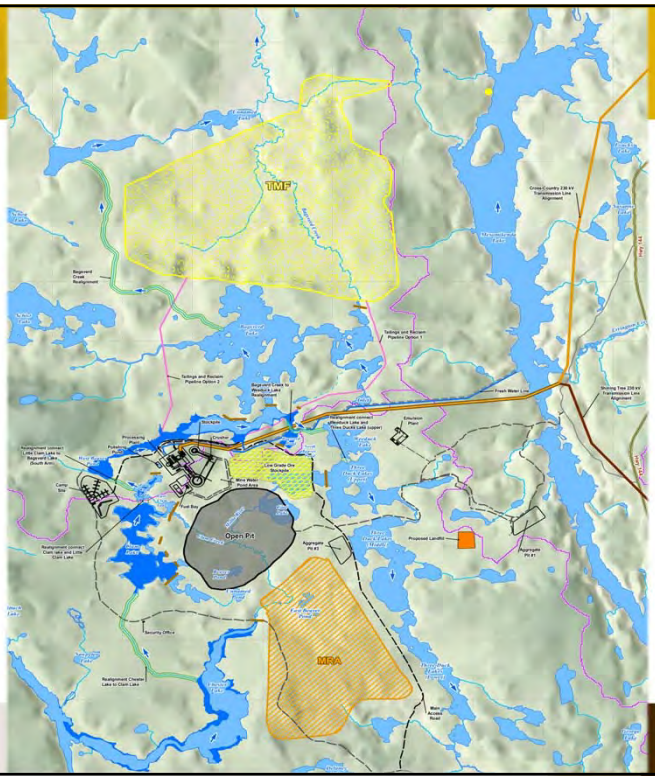


This presentation contains forward-looking statements. All statements, other than of historical fact, that address activities, events or developments that the Company believes, expects or anticipates will or may occur in the future (including, without limitation, statements regarding expected, estimated or planned gold and niobium production, cash costs, margin expansion, capital expenditures and exploration expenditures and statements regarding the estimation of mineral resources, exploration results, potential mineralization, potential mineral resources and mineral reserves) are forward-looking statements. Forward-looking statements are generally identifiable by use of the words "may", "will", "should", "continue", "expect", "anticipate", "estimate", "believe", "intend", "plan" or "project" or the negative of these words or other variations on these words or comparable terminology. Forward-looking statements are subject to a number of risks and uncertainties, many of which are beyond the Company's ability to control or predict, that may cause the actual results of the Company to differ materially from those discussed in the forward-looking statements. Factors that could cause actual results or events to differ materially from current expectations include, among other things, without limitation, failure to meet expected, estimated or planned gold and niobium production, cash costs, margin expansion, capital expenditures and exploration expenditures and failure to establish estimated mineral resources, the possibility that future exploration results will not be consistent with the Company's expectations, changes in world gold markets and other risks disclosed in IAMGOLD's most recent Form 40-F/Annual Information Form on file with the United States Securities and Exchange Commission and Canadian provincial securities regulatory authorities. Any forward-looking statement speaks only as of the date on which it is made and, except as may be required by applicable securities laws, the Company disclaims any intent or obligation to update any forward-looking statement.

The United States Securities and Exchange Commission (the "SEC") permits mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. We use certain terms in this presentation, such as "mineral resources" , that the SEC guidelines strictly prohibit us from including in our filings with the SEC. U.S. investors are urged to consider closely the disclosure in the IAMGOLD Annual Report on Form 40-F. A copy of the 2010 Form 40-F is available to shareholders, free of charge, upon written request addressed to the Investor Relations Department.

Total Resources includes all categories of resources unless indicated otherwise.

All currency numbers are in US$ unless otherwise stated.



Côté Gold Project: Planning and Approvals Schedule

IAMGOLD CORPORATION

3

The Site Layout

IAMGOLD CORPORATION

4

Open Pit

Typical haul truck and Open pit

- **Estimated Dimensions**
  - Depth: approx. 550 metres deep
  - Surface area: approx. 210 hectares
- **Expected Production**
  - Open pit mining rate is expected to be 60,000 tonnes per day
- **How would it be mined?**
  - The benches in rock would be developed by blasting 5 times per week
  - Conventional shovel and truck type operation
  - Ore, mine rock and overburden removed from the open pit would be trucked to the surface
  - May include an In-pit Crushing and Conveying (IPCC) system
    - Involves the use of crushing machinery that can be relocated to minimize the vertical haulage component carried out by the haul trucks

Rio Tinto, Palabora Open Pit

Rio Tinto, Palabora Open Pit

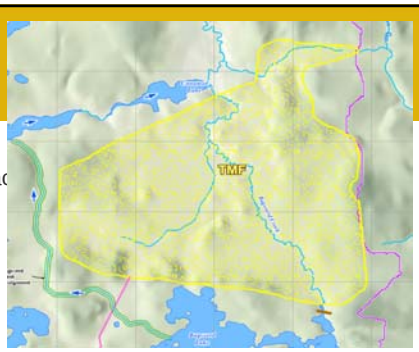
Mine Rock Area

- **Project development is expected to generate:**
  - Mine rock: 850 million tonnes
    - 730 hectares by up to 150 metres high
  - Overburden: 20 million tonnes
    - 150 hectares by up to 100 metres high
- **Use:**
  - About 40 million tonnes of mine rock would be used in Project site construction and maintenance (i.e., dams and roads)
  - Some overburden would be used in final reclamation
  - Unused overburden and mine rock would be managed on the site
- **Geochemistry**
  - Preliminary Results – mine rock is <u>not</u> potentially acid-generating
  - Further testing is underway to better characterize the rock
  - Any potentially acid-generating rock would be managed appropriately

Ore Processing Plant, Work Camp and Other Buildings

Accommodations Complex
1,200 workers during construction
500 full-time personnel during operation

Ore Processing Plant
Area where gold is recovered from ore using metallurgical techniques

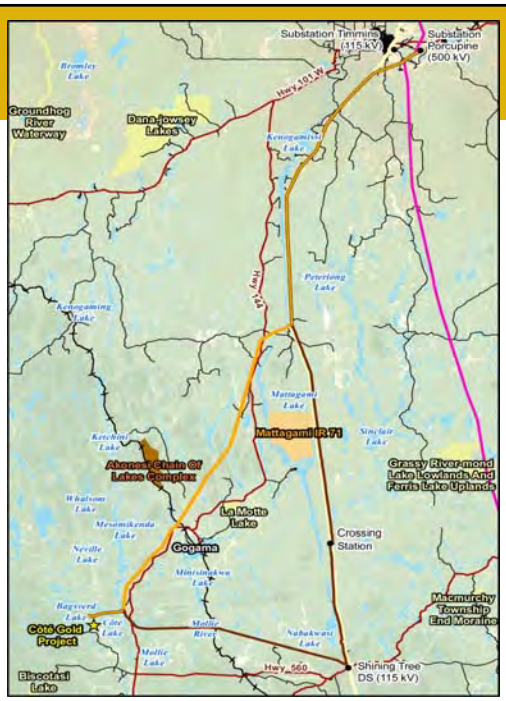


Source for all images: Detour Gold

Tailings Management Facility (TMF)

- **What are tailings?**
  - Tailings are the materials left over after removing the valuable frac (i.e., gold)
- **What is the TMF?**
  - Facility constructed to manage the tailings
  - Size: approx. 900 hectares
  - Storage capacity: approx. 330 million tonnes of tailings
  - Dams: constructed rockfill dams and naturally high bedrock surface
    - Dam heights (maximum): 45 to 50 metres above ground surface
  - Water: a large portion of the excess water in the TMF would be recycled for process water
    - Remaining water would be discharged through a polishing pond to surface water and would meet applicable Federal and Provincial effluent discharge standards
  - Closure: the TMF would be rehabilitated (for example re-vegetated) at closure based on the Ministry of Northern Development and Mines approved Closure Plan

Typical TMF Dam and Monitoring



Source for all images: Detour Gold

Power Transmission Line

- **Power for Project operations would be provided by a new 230 kilovolt transmission line connected to the existing Hydro One Network in Timmins at the Porcupine Substation**
- **Proposed alignment**
  - First segment, approx. 120 kilometres long, would parallel an existing 115 kilovolt transmission line from Timmins to Shining Tree
  - Second segment, approx. 40 kilometres long, would be constructed within an existing right-of-way from the Shining Tree Substation to the Project site
- **Proposed alternative alignment**
  - More direct (shorter) route (cross-country) is being evaluated and may be incorporated into the environmental assessment if the evaluation looks promising

IAMGOLD CORPORATION

9

Conceptual Closure

IAMGOLD CORPORATION

10

Summary of Findings – Physical Environment

- **Physical Environment**
  - Air/Noise – several proximal receivers (cottagers) may be impacted by noise, may require relocation
  - Hydrology – Headwater systems are predominately regulated by spring runoff
    - small flow rates throughout most of the year
  - Hydrogeology – potential for seepage from MRA and TMF
    - seepage loss can be intercepted and managed
  - Water Quality – potential receivers are extremely sensitive to mine discharge
    - further work is required to rework water balance and model impacts to receivers.

Summary of Findings – Biological Environment

- **Aquatic**
  - Significant channel realignment work is required to maintain the ecological integrity of the systems
    - Nature Channel Design principles will be used mitigate losses in fish habitat
  - Further work pending reconfiguration of water balance and discharge point selection is required to assess the biological impacts to aquatic life in receiving waterways. – Significant impacts are not anticipated based on preliminary assessments

- **Terrestrial and Vegetation**
  - Impact is primarily resulting from loss of habitat due to the mine footprint
  - Mitigation measures with respect to Little Brown Bat habitat may be required
  - Closure plans will be developed to restore the site to a productive state

Summary of Findings – Socio-Economic Effects

- **Effects on Local Communities**
  - Maintenance or improvement of local economic opportunities
  - Potential for increased employment and local income levels
  - Potential for adverse health and safety effects
  - Increased traffic
  - Improved health, education and other community infrastructure services
- **Effects Management Strategies**
  - Hiring policy that encourages Aboriginal candidates
  - Implementing a procurement process that supports Aboriginal businesses
  - Provide education and training opportunities

Summary of Findings – Human Environment

- **Effects on hunting, fishing and commercial operations**
  - Potential reduced access to forest or aggregate resources
  - Improves industrial facilities in the region (eg. Transmission Line)
  - clearing of wildlife habitat / wilderness areas
  - creation of noise and air emissions decreasing wilderness aesthetic and experience
  - could potentially effect water quality and associated fisheries resources
- **Mitigation measures**
  - Noise and air emissions are contained within 5 km of the site
  - Mine staff will be subject to hunting and fishing policies and provincial regulations
  - Mine effluents and runoff will be treated and managed to applicable federal and provincial standards

Source: Paul Hennan

Summary of Findings – Cultural Heritage - Traditional land use

- **Effects on resource harvesting**
  - Loss of local plants used for traditional purposes
  - Displacement of wildlife traditionally hunted and trapped
  - Fishing areas may be impacted reducing abundance and quality of fish
- **Mitigation measures**
  - Water effects are mitigated through effluent treatment, extensive water recycle, runoff collection and regulatory compliance
  - Noise emission limits will be met within project boundaries
  - Cultural awareness training for workers
  - Hunting and fishing policies for project workers and contractors

Summary of Findings – Visual Effects

- **Effects on viewscapes**
  - Modification of the visual landscape for nearby receptor locations
- **Mitigation measures**
  - Mine rock area located at a distance from receptor locations
  - Design of the mine rock area limited to 150 m
  - Closure plan includes vegetation of the visible slopes of the mine rock area

Examples of Visual Renderings for Winter and Summer

The Côté Gold Project – Archeological Effects

- **Sixteen pre-contact archaeological sites, nine historic archaeological sites and six ancient trails and portages were located and recorded for a total of 37 archaeological sites and heritage features located**
- **Effects on archeological resources**
  - No physical effects on known sites outside project infrastructure
  - If site is likely impacted by project activities, then Stage 3 and Stage 4 archaeological assessments are required.
    - **Stages 3 and 4**: Advanced site-specific archaeological mitigation through excavation, documentation or avoidance, if recommended.
  - Project may affect archaeological sites through the disturbance and/or removal of soils during construction and / or operation which potentially contain the remains of archaeological sites
- **Mitigation measures**
  - All archaeological sites are required to be protected by no work buffers and monitoring buffers.
  - No sub-surface disturbance, or artifact removal is permitted on or within 20 metres of a registered site, plus there is an additional 50m monitoring zone
  - Excavations can only proceed with the engagement of First Nations

Thank you!

Presentation Objective

Present a summary of the Côté Gold Project and key findings of the Environmental Assessment (EA)

IAMGOLD CORPORATION

3

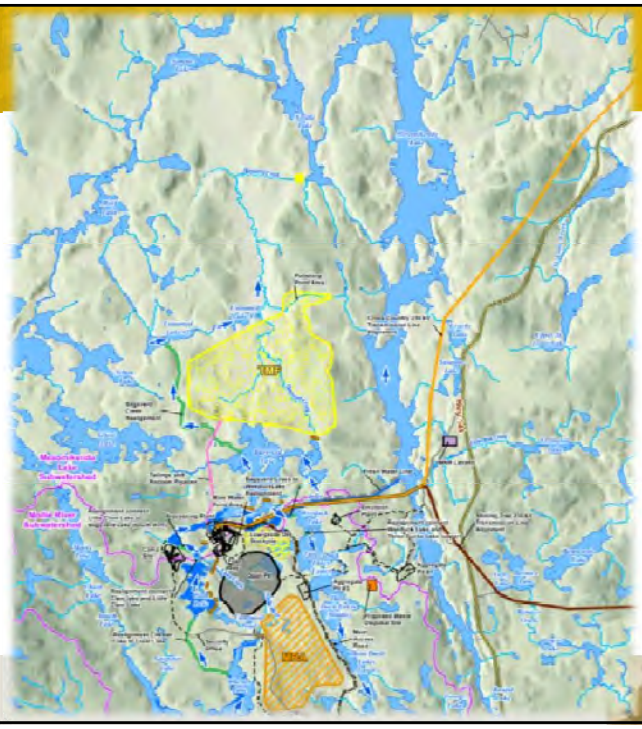
Project Overview

TSX: IMG **NYSE:** IAG

IAMGOLD CORPORATION

4

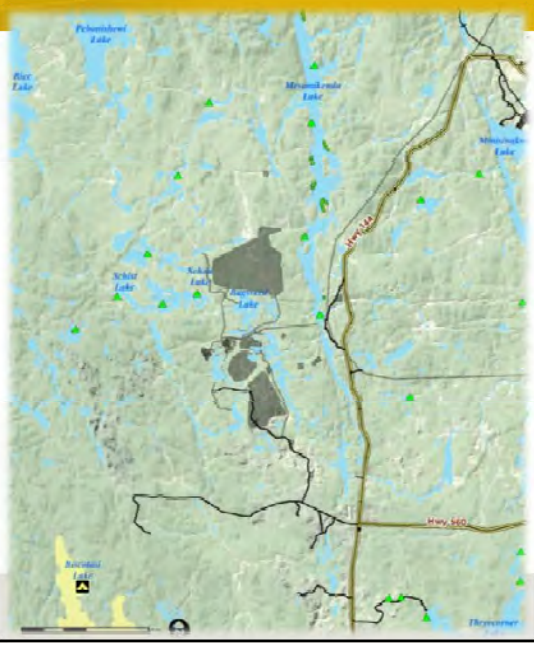
The Côté Gold Project



- **Project Overview**
  - located in Neville and Chester Townships
  - 20 km southwest of Gogama; 130 km southwest of Timmins and 200 km northwest of Sudbury
  - open pit gold mine
  - operate for 15 years
  - process 60,000 tonnes per day of ore
  - employ ~1,500 during construction
  - employ ~600 during operations
  - includes new 230 kV transmission line from South Porcupine
- **Governed by IAMGOLD's Zero Harm Framework**

IAMGOLD CORPORATION

5



Site Layout

IAMGOLD CORPORATION

6

Cottages near the Project

Open Pit

- **Estimated Dimensions**
  - depth: 550 metres
  - surface area: 210 hectares
  - protected by retention dams
- **Expected Production**
  - 60,000 tonnes per day of ore
- **How would it be mined?**
  - blasting 5 times per week
  - conventional shovel and truck type operation
  - ore, mine rock and overburden removed from the open pit would be trucked to the surface

Mine Rock Area (MRA)

- **Project development is expected to generate**
  - mine rock: 850 million tonnes
    - 400 ha, up to 150 m high
  - overburden: 20 million tonnes
    - integrated into the MRA
  - series of collection ponds around the MRA
- **Use**
  - About 40 million tonnes of mine rock would be used in Project site construction and maintenance (i.e., dams and roads)
  - Some overburden would be used in final reclamation
  - Unused overburden and mine rock would be managed on the site

Results of the Environmental Assessment

Effects Prediction and Mitigation

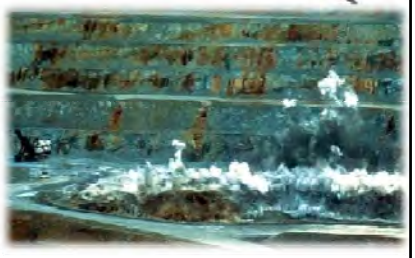
- **Physical Environment**
  - air quality
  - noise and vibration
  - hydrogeology
  - hydrology
  - geochemistry
  - water quality
- **Biological Environment**
  - terrestrial biology – vegetation
  - terrestrial biology – wildlife
  - aquatic biology
- **Human Environment**
  - land and resource use, traditional knowledge and land use
  - archaeology and built heritage
  - visual aesthetics
  - socio-economics
- **Human and Ecological Health Risk Assessment**

Key EA Conclusions

- **Mitigation and effects prediction – integrated and iterative process**
- **No residual significant impacts**
- **Employment and economic benefits of the Project**

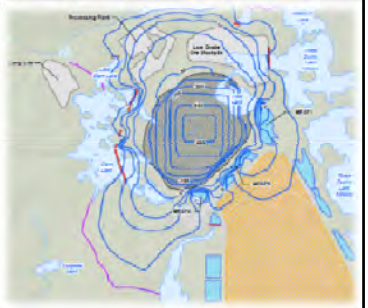
Air Quality

- **Existing Conditions**
  - typical for rural area without industrial activities
- **Mitigation**
  - detailed site-wide dust management plan
  - blasting under suitable conditions
  - dust collection
- **Residual Effects**
  - concentrations of substances released by the Project are predicted to be above existing conditions and below applicable standards
  - 0.17% of Ontario's GHG emissions and 0.04% of Canada's GHG emissions

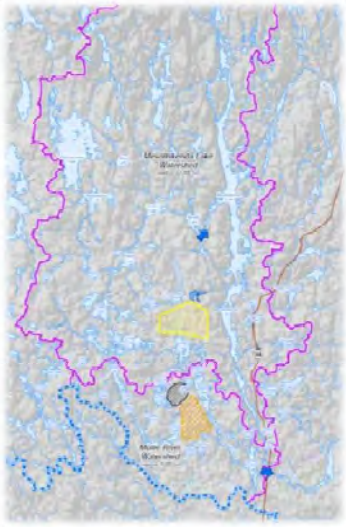


Noise and Vibration

- **Existing Conditions**
  - typical for rural area without industrial activities
- **Mitigation**
  - operational limitations at nighttime or purchase of neighboring properties
  - well-maintained modern equipment
  - housed-in ore processing plant
  - blast sizes will be designed to prevent damage to structures
- **Residual Effects**
  - noise and vibration levels are predicted to be below applicable standards and guidelines
  - daytime noise levels at or below existing conditions
  - noise at night may be above existing conditions at some locations
  - blasting vibration levels may be perceptible at some receptor locations



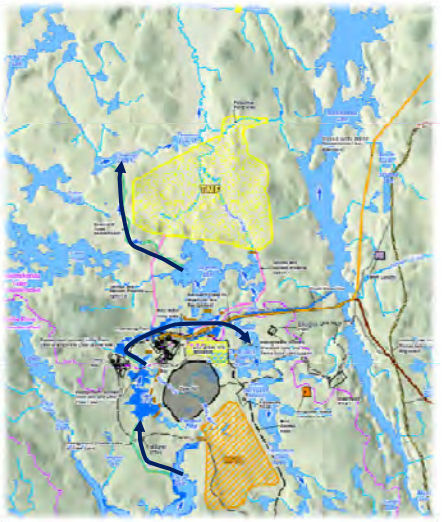
Hydrogeology



- **Existing Conditions**
  - undulating topography, with limited overburden in topographic highs and up to 20 m thick overburden in topographic lows
  - 150 boreholes, 62 monitoring wells, 260 test pits
  - groundwater flow and level monitoring
  - granular materials are main flow paths
- **Mitigation**
  - dams in low lying areas to minimize inflows to open pit
  - surface water realignments to avoid surface water features in proximity to open pit
- **Residual Effects**
  - very limited extent of drawdown
  - open pit not expected to change lake water levels

Hydrology

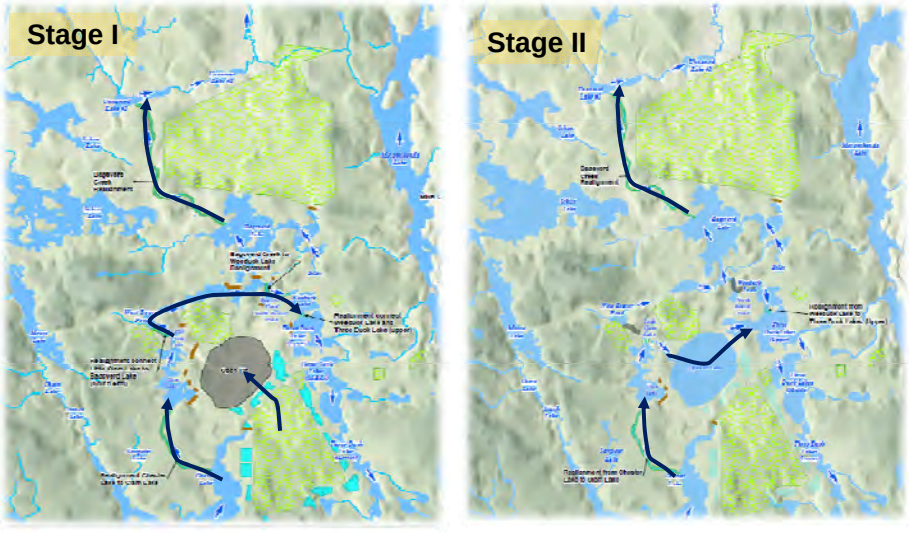
- **Existing Conditions**
  - close to the James Bay/Great Lakes Watershed Divide
  - part of the Mattagami River headwaters, which flows north through Timmins
  - part of the Mattagami Region Source Protection Area
  - flows and levels measured in creeks and rivers
  - lake depth data collected
  - continuous precipitation, temperature, wind data
- **Mitigation**
  - watercourse realignments designed to maintain the integrity of the existing watersheds
  - internal process water recycling and site water collection system
  - minimize freshwater withdrawal
- **Residual Effects**
  - very limited flow changes in most creeks and rivers
  - up to 20% flow reduction in Bagsverd Creek



IAMGOLD CORPORATION

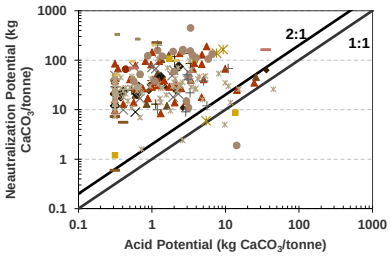
9

Hydrology – Operations Phase



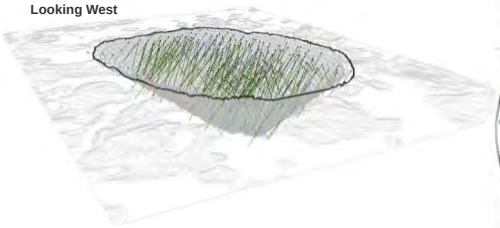
IAMGOLD CORPORATION

10

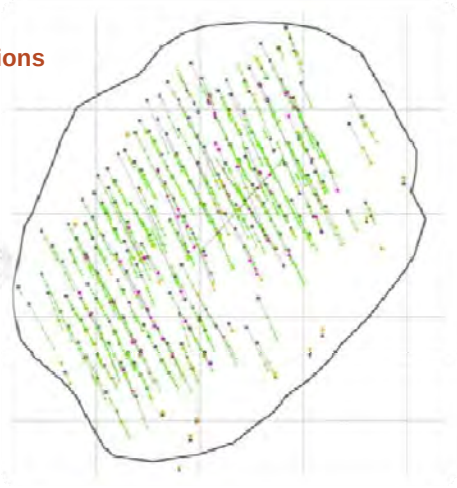


Hydrology – Post-Closure Phase

Geochemistry



- **Existing Conditions**
  - gold is evenly distributed in the deposit
  - low sulphur rock with widespread carbonates
  - over 1,300 samples so far
  - continued long-term testwork
- **Mitigation**
  - Inclusion of low sulphur rock within the mine rock area
- **Residual Effects**
  - project not predicted to release acid or metals to receiving waters
  - results are used for the water quality effects prediction



Geochemistry

- Open Pit Mine Rock Sample Locations

Water Quality

- **Existing Conditions**
  - naturally occurring metals in the surface water
  - generally, water meets water quality guidelines
  - elevated parameters in some samples include aluminum, arsenic, copper, iron, total phosphorous, uranium and zinc
  - 22 watercourse stations, 12 lake profile stations, 37 monitoring wells
- **Mitigation**
  - cyanide destruction and additional water treatment, if required
  - no direct discharge from tailings management facility
  - seasonal discharge to Bagsverd Creek
  - surface and seepage runoff collection systems
- **Residual Effects**
  - discharge meets regulatory limits
  - lake and river water quality close to existing conditions

Terrestrial Biology – Vegetation

- **Existing Conditions**
  - 33 communities, 152 species
  - no federal or provincial SAR
  - no provincially rare vegetation communities or rare species recorded
  - history of forestry
- **Mitigation**
  - compact project layout
  - clear only minimum area required
  - avoid placement of transmission line structures in low-lying areas
  - revegetation at closure
- **Residual Effects**
  - direct loss of habitat due to the Project footprint
  - revegetation during closure will restore many communities
  - no measurable effect on the abundance and distribution of vegetation communities in the region

IAMGOLD CORPORATION

15

Terrestrial Biology – Wildlife

- **Existing Conditions**
  - 95 bird species, 17 mammals (not including mice + shrews), 7 amphibians, 2 reptiles
  - 7 SAR recorded: Bald Eagle, Canada Warbler, Olive-sided Flycatcher, Common Nighthawk, Whip-poor-will, Rusty Blackbird, Little Brown Bat
  - habitat suitable for raptors, moose and amphibians
- **Mitigation**
  - compact Project layout
  - clear vegetation outside of breeding seasons
  - no hunting for Project personnel
  - staff training and awareness
- **Residual Effects**
  - suitable habitat quality & quantity will remain in the region
  - no population level effects expected within the region for any species
  - predation & hunting pressures on Moose may occur along transmission line right-of-way and access roads, and may affect local Moose, but not expected to affect population levels

IAMGOLD CORPORATION

16

Aquatic Biology

- **Existing Conditions**
  - no endangered, threatened or special concern fish species
  - mostly northern pike and yellow perch, but also walleye, white sucker, lake whitefish
  - smallmouth bass in a few lakes
  - small-bodied fish: blacknose shiner with fewer spottail shiner and Iowa darter
- **Mitigation**
  - discharge treatment to prevent effects on fish
  - watercourse realignments designed to maintain fish communities and functions
  - modify Bagsverd Creek, if needed, to address flow loss
- **Residual Effects**
  - water quality changes will not affect fish species
  - similar amount and quality of habitat available

Land and Resource Use, Traditional Knowledge and Land Use

- **Existing Conditions**
  - area primarily used for resource development (mineral exploration, forestry)
  - cottaging, canoeing, trapping, hunting and fishing
  - some traditional cultural resources:
    - bald eagle nest
    - portage route
    - waterfowl hunting route and a waterfowl hunting point
    - other resources that may be used by FN in the area include pickerel, moose, ducks, partridge (grouse), and blueberries
- **Mitigation**
  - IAMGOLD will consult with canoe route users to facilitate navigation during construction and operations
  - activities will be limited to the site, as much as possible, to minimize effects on exploration, forestry, cottaging, trapping, hunting and fishing
- **Residual Effects**
  - Project may affect areas used for traditional and non-traditional land uses but is not expected to limit the ability to carry out those activities in the area

Archaeology and Built Heritage

- **Existing Conditions**
  - 37 archaeological sites and 31 features identified, located and recorded within the Project site
  - including 18 pre-contact archaeological sites
  - 11 historic archaeological sites and 8 ancient trails and portages
  - no built heritage resources in the local study area
- **Mitigation**
  - completed archaeological assessments
  - buffer zones are established, as required
- **Residual Effects**
  - sites within the Project footprint assessed and will be cleared in accordance with the *Heritage Act*

IAMGOLD CORPORATION

19

Visual Aesthetics

- **Existing Conditions**
  - landscape typical of northern Ontario
  - densely populated coniferous and deciduous trees, rivers and lakes
  - landscapes from receptor sites during winter and summer present a natural setting with views of lakes and/or rivers, trees and natural forest clearings
- **Mitigation**
  - removal of MRA closest to receptors
  - MRA height limited to 150 m
  - revegetation program on MRA and TMF
- **Residual Effects**
  - perceptible change in landscape, which does not affect enjoyment of the view

Examples of Visual Renderings for Winter and Summer

IAMGOLD CORPORATION

20

Socio-Economics

- **Existing Conditions**
  - region is hub for mining, education and health services
  - Gogama area has seen population decrease and ageing demographic
  - FN reserves have younger populations and have seen population growth
- **Mitigation**
  - support and/or implement measures for local capacity building, employment and procurement
  - onsite camp to limit effects on housing market, transportation
- **Residual Effects**
  - within the normal range of variability and are not substantive enough to require government or community investment
  - economic benefits related to employment and business opportunities
  - will generate federal and provincial government revenues

Human and Ecological Health Risk Assessment

- **Human Health Risks**
  - no increased risk identified due to changes in water quality and soil quality
  - potential infrequent exposure to changes in air quality at the immediate property boundary
  - no unacceptable health risks are expected to occur as a result of the Project
- **Ecological Health Risks**
  - no increased risk identified due to changes in soil quality and air quality
  - modelling identifies potential exceedances in aquatic health benchmarks
  - compared to risk-based reference values, no unacceptable ecological health risks are expected due to emissions or discharge

Key EA Conclusions

- Mitigation and effects prediction – integrated and iterative process
- No residual significant impacts
- Employment and economic benefits of the Project

APPENDIX D-6
OPEN HOUSE COMMENT FORMS

IAMGOLD CORPORATION

COMMENT FORM
draft Project Description, Côté Gold Project

Your comments on the proposed Côté Gold Project are important to us and will be used in the planning and development of this proposed Project.

1. Which Open House did you attend?

☑ Timmins (February 26, 2013) ☐ Gogama (February 27, 2013) ☐ Sudbury (February 28, 2013)

2. How did you hear about this Open House?

☐ Newspaper advertisement ☑ Invitation ☐ Website
☐ From a neighbour / friend ☐ Other: _____

3. How would you rate the following about this Open House (circle number)?

	Poor ← → Excellent					Comments
Location of the Open House	1	2	3	(4)	5	
Time of day it was held	1	2	3	(4)	5	
Length of the session	1	2	3	(4)	5	
Information provided	1	2	3	4	(5)	
Your opportunity to comment/be heard	1	2	3	4	(5)	
Your opportunity to have your questions answered	1	2	3	(4)	5	

4. Do you have any comments, interests or suggestions related to the Côté Gold Project in general?

5. Do you have information that might be relevant about the environment in or adjacent to the proposed mine area?

AS A RECLAMATION CONTRACTOR, WE WOULD LIKE TO BE INVOLVED IN YOUR SEEDING, PLANTING, EROSION CONTROL AND LAND RECLAMATION PROJECTS

6. Additional questions or comments (if you would like a reply please provide your contact information below)?

7. Do you want to be added to our mailing list for future information about the Project?

COMMENT FORM
draft Project Description, Côté Gold Project

Your comments on the proposed Côté Gold Project are important to us and will be used in the planning and development of this proposed Project.

1. Which Open House did you attend?

☒ Timmins (February 26, 2013) ☐ Gogama (February 27, 2013) ☐ Sudbury (February 28, 2013)

2. How did you hear about this Open House?

☒ Newspaper advertisement ☐ Invitation ☐ Website
☐ From a neighbour / friend ☐ Other: _____

3. How would you rate the following about this Open House (circle number)?

	Poor ← → Excellent					Comments
Location of the Open House	1	2	3	4	(5)	
Time of day it was held	1	2	3	4	(5)	
Length of the session	1	2	3	4	(5)	
Information provided	1	2	3	4	(5)	STILL PRELIMINARY SO NOT A LOT OF DETAIL YET → SEE *NOTE BELOW
Your opportunity to comment/be heard	1	2	3	4	(5)	
Your opportunity to have your questions answered	1	2	3	4	(5)	

4. Do you have any comments, interests or suggestions related to the Côté Gold Project in general?

*IT IS STILL EARLY IN THE PROJECT SO THERE IS NOT A LOT OF DETAIL IN THE SLIDES (TIME LINE, STAKEHOLDERS CURRENTLY ACTIVE, etc.) THAT IN ITSELF PROVIDED ME WITH INFO ABOUT WHEN MY INVOLVEMENT MAY BEGIN.

5. Do you have information that might be relevant about the environment in or adjacent to the proposed mine area?

I'VE NEVER BEEN TO THE AREA — I'M LOOKING FORWARD TO A SITE VISIT.

6. Additional questions or comments (if you would like a reply please provide your contact information below)?

THERE WAS A LOT OF SLIDES AND I'M HOPING THIS INFO IS AVAILABLE ON THE WEBSITE (THERE WAS NO CLEAR INDICATION OF THAT.) IF I CANNOT FIND IT, I WILL CONTACT CHERYL NAVEAU.

7. Do you want to be added to our mailing list for future information about the Project?

[redacted]

Thank you for your input!

Completed forms can be left with a member of our team or faxed/mailed to:

5. Do you have information that might be relevant about the environment in or adjacent to the proposed mine area?

6. Additional questions or comments (if you would like a reply please provide your contact information below)?

I have questions regarding effluent discharge into Mesomikenda Lake, an OPG managed reservoir, and the impact, if any, it may have on the Mattagami River System Water Management Plan (other mining projects have required minimum flow regimes from control dams for effluent dilution.)

2. How did you hear about this Open House?

☑ Newspaper advertisement ☐ Invitation ☐ Website
☐ From a neighbour / friend ☐ Other: _____

3. How would you rate the following about this Open House (circle number)?

	Poor ← → Excellent					Comments
Location of the Open House	1	2	3	(4)	5	Overall good open house
Time of day it was held	1	2	3	(4)	5	opportunity to ask questions
Length of the session	1	2	3	(4)	5	Still much to be
Information provided	1	2	(3)	4	5	discovered and learned
Your opportunity to comment/be heard	1	2	3	(4)	5	about site, especially
Your opportunity to have your questions answered	1	2	3	(4)	5	water management quality & quantity

4. Do you have any comments, interests or suggestions related to the Côté Gold Project in general?

→ biggest challenge from a aquatic perspective will be to manage the collective disturbance to the landscape to manage water quality & quantity & preserve existing productivity

5. Do you have information that might be relevant about the environment in or adjacent to the proposed mine area?

Have a good understanding of aquatic productivity of lakes rivers and streams in the Timmins area

- Suggest initial focus be on preserving catchment areas of existing watersheds.

6. Additional questions or comments (if you would like a reply please provide your contact information below)?

Would be very interested in seeing more information on aquatic inventories for the proposed project area.

7. Do you want to be added to our mailing list for future information about the Project?

COMMENT FORM
draft Project Description, Côté Gold Project

Your comments on the proposed Côté Gold Project are important to us and will be used in the planning and development of this proposed Project.

1. Which Open House did you attend?

   ☐ Timmins (February 26, 2013) ☑ Gogama (February 27, 2013) ☐ Sudbury (February 28, 2013)

2. How did you hear about this Open House?

   ☐ Newspaper advertisement ☐ Invitation ☐ Website
   ☐ From a neighbour / friend ☑ Other: mail out

3. How would you rate the following about this Open House (circle number)?

	Poor ← → Excellent					Comments
Location of the Open House	1	2	3	(4)	5	
Time of day it was held	1	2	(3)	4	5	
Length of the session	1	2	3	(4)	5	
Information provided	1	2	(3)	4	5	
Your opportunity to comment/be heard	1	2	3	(4)	5	
Your opportunity to have your questions answered	1	2	(3)	4	5	

4. Do you have any comments, interests or suggestions related to the Côté Gold Project in general?

I was hoping to get more information about jobs starting sooner than 2017

5. Do you have information that might be relevant about the environment in or adjacent to the proposed mine area?

6. Additional questions or comments (if you would like a reply please provide your contact information below)?

I was hoping you were excepting applications.

7. Do you want to be added to our mailing list for future information about the Project?

Name: _____

Organization or Affiliation (if applicable): _____

Street Address: _____

Municipality: _____

Postal Code: _____

Phone: _____

Email: _____

Thank you for your input!

Completed forms can be left with a member of our team or faxed/mailed to:

2. How did you hear about this Open House?

☐ Newspaper advertisement ☑ Invitation ☐ Website
☐ From a neighbour / friend ☐ Other: _____

3. How would you rate the following about this Open House (circle number)?

	Poor ← → Excellent					Comments
Location of the Open House	1	2	(3)	4	5	Chelmsford would be a good location
Time of day it was held	1	2	3	(4)	5	
Length of the session	1	2	3	(4)	5	
Information provided	1	2	3	(4)	5	
Your opportunity to comment/be heard	1	2	3	(4)	5	
Your opportunity to have your questions answered	1	2	3	(4)	5	

4. Do you have any comments, interests or suggestions related to the Côté Gold Project in general?

In the information provided, it is written that the project is "about 170km by road northwest of Sudbury." I'm assuming this distance is taken from Sudbury's downtown as opposed to communities within the City of Greater Sudbury that may be most affected such as Chelmsford, Dowling, Levack/Onaping, etc. Those communities are located right on Hwy 144 and still within the Greater Sudbury municipal boundary. ~~It should perhaps be noted~~ The distance from the ~~edge of the~~ Northwest edge of the City (ie. Levack/Onaping) should perhaps be noted in the information provided.

5. Do you have information that might be relevant about the environment in or adjacent to the proposed mine area?

6. Additional questions or comments (if you would like a reply please provide your contact information below)?

We look forward to the opportunity to be consulted on the socio-economic information.

Thanks.

7. Do you want to be added to our mailing list for future information about the Project?

COMMENT FORM
Draft Terms of Reference for the
Provincial Individual Envirionmental Assessment
Côté Gold Project

1. Which Open House did you attend?

   ☐ Sudbury (May 21, 2013) ☑ Gogama (May 22, 2013) ☐ Timmins (May 23, 2013)

2. What are your questions or comments related to the assessment of alternatives for the Côté Gold Project?

3. What are your comments or concerns about the potential effects of the Côté Gold Project on the physical environment (e.g., air quality, noise, water quality) features?

   There will be a hole in the middle of our land.

4. What are your comments or concerns about the potential effects of the Côté Gold Project on the human environment (e.g., land use, communities, the economy) features?

   It would stop people by enjoying the land, such as fishing, camping, hunting, etc.

5. What are your comments or concerns about the potential effects of the Côté Gold Project on the biological environment (e.g., wildlife, fish) features?

   Creates migration problems for birds, fish, moose, bears. The whole area will be affected. Spawning beds will be ruined. Bird migrations will be altered.

6. Would you like to be provided with any other information about the Côté Gold Project?

7. Do you have any information that might be relevant for the proposed Project/Project area?

8. How would you like to be involved in the environmental assessment process?
Already involved by attending the open houses. Also, through employment.

9. Are there other people or stakeholders that you believe would be interested in the Côté Gold Project?
   - ☐ Yes (who?_____)
   - ☑ No

10. How would you like to receive future information about the Côté Gold Project?
   - ☐ Open Houses
   - ☐ Website
   - ☐ News Media
   - ☐ Direct Mail
   - ☐ Email
   - ☐ In-person discussions with IAMGOLD representatives
   - ☐ Other: Already on the mailing list.

IAMGOLD CORPORATION

COMMENT FORM
Draft Terms of Reference for the
Provincial Individual Envirionmental Assessment
Côté Gold Project

1. Which Open House did you attend?

   ☐ Sudbury (May 21, 2013) ☐ Gogama (May 22, 2013) ☒ Timmins (May 23, 2013)

2. What are your questions or comments related to the assessment of alternatives for the Côté Gold Project?

   I AM COMFORTED BY THE IN-DEPTH NATURE OF THE ASSESSMENT. MY CONFIDENCE THAT THE PROJECT WILL CAUSE ZERO-HARM HAS BEEN STRENGTHENED.

3. What are your comments or concerns about the potential effects of the Côté Gold Project on the physical environment (e.g., air quality, noise, water quality) features?

   I FISH, HUNT & CAMP IN THE AREA. I LIKE WHAT I'VE READ ABOUT IAMGOLD'S CULTURE OF ZERO HARM. I NEED REASSURANCE THAT THESE ARE NOT HOLLOW WORDS - THAT THERE IS A PLAN TO MEASURE THE EFFECTS AND A CONTINGENCY TO CORRECT ANY PROBLEMS.

4. What are your comments or concerns about the potential effects of the Côté Gold Project on the human environment (e.g., land use, communities, the economy) features?

   AS AN EMPLOYEE OF WESTBURNE, I AM INTERESTED IN PARTNERING WITH IAMGOLD TO SUPPLY ELECTRICAL PRODUCTS AND KNOWLEDGE. I AM INTERESTED IN THE ECONOMIC ASPECT OF THE PROJECT.

5. What are your comments or concerns about the potential effects of the Côté Gold Project on the biological environment (e.g., wildlife, fish) features?

   SAME AS ANSWER ABOVE (QUESTION #3).

6. Would you like to be provided with any other information about the Côté Gold Project?

   PLEASE CONTINUE PROVIDING ME WITH INFO BY EMAIL AS YOU HAVE DONE IN THE PAST.

7. Do you have any information that might be relevant for the proposed Project/Project area?

8. How would you like to be involved in the environmental assessment process?

IF WILDLIFE SAMPLES ARE COLLECTED (eg: FROM FISHING & HUNTING) FOR LAB TESTING (eg: TOXIN LEVELS, SIZE VS. AGE, etc.), I WOULD BE WILLING TO DONATE PORTIONS OF MY CATCH.

9. Are there other people or stakeholders that you believe would be interested in the Côté Gold Project?

❑ Yes (who?_____) ☒ No

10. How would you like to receive future information about the Côté Gold Project?

❑ Open Houses ❑ Website ❑ News Media

❑ Direct Mail ❑ Email ❑ In-person discussions with IAMGOLD representatives

☒ Other: I AM ALREADY ON YOUR MAILING LIST FROM THE 1ST OPEN HOUSE – I RECEIVE INFO BY EMAIL.

APPENDIX D-9
ABORIGINAL RECORDS

APPENDIX D-9a
ABORIGINAL RECORDS – CONTACT RECORDS

Table D-9a: Records of Contact - Conseil de la Première Nation Abitibiwinni

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
192	Phone Call	05/27/2013	On 2013-05-16, IAMGOLD phoned Matachewan, Chapleau Ojibway, Beaverhouse, and Abitiwiini First Nations to inform them of opportunities to be involved including review of the Draft Terms of Reference (ToR) and to discuss how/if they would like to be consulted moving forward. All First Nations were unavailable, IAMGOLD left a voicemail and attempted to call back later in the day. IAMGOLD followed up on 2013-05-27 to the same First Nations, including Brunswick House First Nation. A voicemail message was left with contact information.	Jimi Maurer (Beaverhouse First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Unknown Unknown (Conseil de la Première Nation Abitibiwinni)	Aaron Steeghs (IAMGOLD Corporation)
295	Phone Call	07/26/2013	IAMGOLD called the Chief of the Abitibiwinni First Nation on 2013-07-26 and left a voice mail requesting that she contact IAMGOLD to discuss the need for further consultation on the Project.	Alice Jérôme (Conseil de la Première Nation Abitibiwinni)	Aaron Steeghs (IAMGOLD Corporation)
During EA Preparation (January 15, 2014 to September 30, 2014)					
449	Letter	06/04/2014	IAMGOLD issued a letter to the leadership of the Project's Aboriginal communities to inform them of the submission of the Draft Environmental Assessment/Environmental Impact Statement Report. The letter provided information on upcoming consultation opportunities where they could participate in the review of the Draft Report and provide comments on the Project.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Kevin Tangie (Brunswick House First Nation), Isadore Day (Serpent River First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Elenore Hendrix (Matachewan First Nation), Bruno Kistabish (Conseil de la Première Nation Abitibiwinni), Joseph Hare (M'Chigeeng First Nation), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)

Table D-9a: Records of Contact - Beaverhouse First Nation

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
184	Letter	05/13/2013	The Canadian Environmental Assessment Agency (the Agency) sent (mailed and email) a Notice of Determination that an Environmental Assessment (EA) is required for the Côté Gold Project to the Chapleau-Ojibwe, Matachewan, and Beaverhouse First Nations. The Agency also sent the notice and invitation to review and provide comments on the draft Environmental Impact Statement Guidelines to Flying Post, Mattagami, and Brunswick House First Nations, the Métis Nation of Ontario, and the Algonquin Anishinabeg Nation Tribal Council.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Andrew Neshawabin (Brunswick House First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	
192	Phone Call	05/27/2013	On 2013-05-16, IAMGOLD phoned Matachewan, Chapleau Ojibway, Beaverhouse, and Abitiwiini First Nations to inform them of opportunities to be involved including review of the Draft Terms of Reference (ToR) and to discuss how/if they would like to be consulted moving forward. All First Nations were unavailable, IAMGOLD left a voicemail and attempted to call back later in the day. IAMGOLD followed up on 2013-05-27 to the same First Nations, including Brunswick House First Nation. A voicemail message was left with contact information.	Jimi Maurer (Beaverhouse First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Unknown Unknown (Conseil de la Première Nation Abitibiwinni)	Aaron Steeghs (IAMGOLD Corporation)
202	Phone Call	05/27/2013	IAMGOLD contacted Beaverhouse First Nation (BEFN) to determine how they wanted to be informed or consulted on the Côté Gold Project. BEFN responded that they have a newly completed consultation package for proponents that they will send to IAMGOLD and from there decide the best way to move forward.	Jimi Maurer (Beaverhouse First Nation)	Aaron Steeghs (IAMGOLD Corporation)
255	Letter	07/03/2013	IAMGOLD received the consultation and engagement package from Beaverhouse First Nation (BEFN) that outlined their traditional territory on 2013-05-30. IAMGOLD sent a letter on 2013-07-03 following up on a discussion which determined that the Project is located outside their traditional territory and was therefore unlikely to affect the First Nation's rights and interests. Both parties confirmed that no consultation will be needed but IAMGOLD committed to continue to share Project updates.	Marcia Brown Martel (Beaverhouse First Nation)	Aaron Steeghs (IAMGOLD Corporation)

Table D-9a: Records of Contact - Beaverhouse First Nation

ROC	Event Type	Date	Event Summary	Stakeholders	Team
289	E-mail	07/22/2013	IAMGOLD received an email on 2013-07-19 from Beaverhouse First Nation's (BEFN) Lands and Resource Coordinator to thank IAMGOLD for their acknowledgment of BEFN in the Project's consultation process. BEFN confirmed that they do not wish to make an assertion on the Project as it does not fall within their traditional territory. BEFN requested to be kept informed about, and considered for, any employment opportunities that may arise because of the Project. IAMGOLD responded on 2013-07-22 that many employment opportunities would become available and intend to inform BEFN of potential Project benefits.	Jimi Maurer (Beaverhouse First Nation)	Aaron Steeghs (IAMGOLD Corporation)
During EA Preparation (January 15, 2014 to September 30, 2014)					
440	Letter	05/22/2014	The Canadian Environmental Assessment Agency (the Agency) sent a letter to Chief's of Aboriginal communities that were identified by the Agency as having the potential to be affected by the Project, to inform them that the Environmental Impact Statement (EIS) prepared by IAMGOLD for the Project passed the Agency's conformity review process, and that technical review of the EIS would commence shortly.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Wesley Wright (Ontario Ministry of the Environment), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	Steve Woolfenden (IAMGOLD Corporation)
449	Letter	06/04/2014	IAMGOLD issued a letter to the leadership of the Project's Aboriginal communities to inform them of the submission of the Draft Environmental Assessment/Environmental Impact Statement Report. The letter provided information on upcoming consultation opportunities where they could participate in the review of the Draft Report and provide comments on the Project.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Kevin Tangie (Brunswick House First Nation), Isadore Day (Serpent River First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Elenore Hendrix (Matachewan First Nation), Bruno Kistabish (Conseil de la Première Nation Abitibiwinni), Joseph Hare (M'Chigeeng First Nation), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)
450	E-mail	06/09/2014	On 2014-06-09, Beaverhouse First Nation's Mining Support/Cultural Monitoring Worker contacted IAMGOLD to identify that their Chief had received a letter from IAMGOLD informing them of submission of the Draft Environmental Assessment/Environmental Impact Statement Report. The individual also requested that they be added to the Project mailing list for future Project updates. The same day, IAMGOLD responded to inform the individual that they had been added to the Project mailing list and should they had any further questions, IAMGOLD would be happy to address them.	Linda McMartin (Osisko - Beaverhouse First Nation)	Cheryl Naveau (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
59	Letter	11/26/2012	IAMGOLD issued a letter to Brunswick House First Nation (BHFN) to provide information about the Côté Gold Project, IAMGOLD, and Aboriginal consultation. IAMGOLD further suggested meeting with BHFN.	Andrew Neshawabin (Brunswick House First Nation)	Aaron Steeghs (IAMGOLD Corporation)
99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Shawn Batise (Wabun Tribal Council), Andrew Neshawabin (Brunswick House First Nation), Kevin Tangie (Brunswick House First Nation), Charmaine Saunders (Brunswick House First Nation), Marjorie Tangie (Brunswick House First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Natalie Gaudette (IAMGOLD Corporation)
114	E-mail	03/27/2013	The Canadian Environmental Assessment Agency (the Agency) emailed Brunswick House First Nation (BHFN) to identify that the Agency is seeking input from BHFN on the proposed Côté Gold mine development and its potential effects on the environment by Monday, April 15. The email provided a letter seeking input from BHFN and links to the Project Description (PD) and PD Summary. Hardcopies of the letter and PD were also sent to BHFN.	Dawn-Ann Metsaranta (Ontario Ministry of Northern Development and Mines), Andrew Neshawabin (Brunswick House First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Regent Dickey (Natural Resources Canada)	Steve Woolfenden (IAMGOLD Corporation)
110	Letter	04/03/2013	IAMGOLD sent a letter to Brunswick House, Flying Post, and Mattagami First Nations providing advance notice that IAMGOLD is preparing a Draft Terms of Reference (ToR) and will be seeking their input on the Draft. IAMGOLD would like to offer capacity funding to the Wabun Tribal Council and the member communities to have their selected experts review and comment on the documents.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Andrew Neshawabin (Brunswick House First Nation)	Aaron Steeghs (IAMGOLD Corporation)
184	Letter	05/13/2013	The Canadian Environmental Assessment Agency (the Agency) sent (mailed and email) a Notice of Determination that an Environmental Assessment (EA) is required for the Côté Gold Project to the Chapleau-Ojibwe, Matachewan, and Beaverhouse First Nations. The Agency also sent the notice and invitation to review and provide comments on the draft Environmental Impact Statement Guidelines to Flying Post, Mattagami, and Brunswick House First Nations, the Métis Nation of Ontario, and the Algonquin Anishinabeg Nation Tribal Council.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Andrew Neshawabin (Brunswick House First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	
192	Phone Call	05/27/2013	On 2013-05-16, IAMGOLD phoned Matachewan, Chapleau Ojibway, Beaverhouse, and Abitiwiini First Nations to inform them of opportunities to be involved including review of the Draft Terms of Reference (ToR) and to discuss how/if they would like to be consulted moving forward. All First Nations were unavailable, IAMGOLD left a voicemail and attempted to call back later in the day. IAMGOLD followed up on 2013-05-27 to the same First Nations, including Brunswick House First Nation. A voicemail message was left with contact information.	Jimi Maurer (Beaverhouse First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Unknown Unknown (Conseil de la Première Nation Abitibiwinni)	Aaron Steeghs (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
256	Phone Call	06/19/2013	IAMGOLD left two voicemails with Brunswick House First Nation (BHFN) on 2013-06-04 and 2013-06-19 in an effort to provide them with information regarding the progress and timeline of the Project and to inquire about whether or not BHFN would like to set up a consultation meeting.	Kevin Tangie (Brunswick House First Nation)	Aaron Steeghs (IAMGOLD Corporation)
272	Phone Call	07/03/2013	On 2013-07-03, IAMGOLD contacted the Brunswick House First Nation (BHFN) Lands and Resource Coordinator to provide an update on the status of the Project. Discussions related to the fact that the Project does not fall within BHFN's traditional territory. However, it was agreed that IAMGOLD would continue to keep them informed about the status of the Project, and would provide them with an opportunity to have a meeting with Chief and Council should they request it. BHFN responded that they would let IAMGOLD know if they wish to arrange a meeting with Chief and Council.	Kevin Tangie (Brunswick House First Nation)	Aaron Steeghs (IAMGOLD Corporation)
288	Letter	07/04/2013	IAMGOLD sent a letter to the Chief of Brunswick House First Nation (BHFN) on 2013-07-04 to confirm that they no longer wish to be consulted on the Project at this time. IAMGOLD mentioned that they would continue to consult with BHFN with respect to the Augen claims.	Andrew Neshawabin (Brunswick House First Nation)	Aaron Steeghs (IAMGOLD Corporation)
282	Phone Call	07/22/2013	IAMGOLD attempted to contact the Lands and Resource Coordinator from Brunswick House First Nation on 2013-07-15, 2013-07-16 and 2013-07-22 to inquire as to whether they still wish to be consulted on the Côté Gold Project. IAMGOLD left voice messages on each occasion asking to connect with them further on this issue.	Kevin Tangie (Brunswick House First Nation)	Aaron Steeghs (IAMGOLD Corporation)
293	Phone Call	07/26/2013	IAMGOLD called and left voice mails for the Lands and Resource Coordinator at Brunswick House First Nation on 2013-07-24, 2013-07-25, and 2013-07-26 asking him to contact IAMGOLD.	Kevin Tangie (Brunswick House First Nation)	Aaron Steeghs (IAMGOLD Corporation)
During EA Preparation (January 15, 2014 to September 30, 2014)					
440	Letter	05/22/2014	The Canadian Environmental Assessment Agency (the Agency) sent a letter to Chief's of Aboriginal communities that were identified by the Agency as having the potential to be affected by the Project, to inform them that the Environmental Impact Statement (EIS) prepared by IAMGOLD for the Project passed the Agency's conformity review process, and that technical review of the EIS would commence shortly.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Wesley Wright (Ontario Ministry of the Environment), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	Steve Woolfenden (IAMGOLD Corporation)

Table D-9a: Records of Contact - Brunswick House First Nation

ROC	Event Type	Date	Event Summary	Stakeholders	Team
445	E-mail	05/27/2014	On 2014-05-21, the Brunswick House First Nation Chief contacted IAMGOLD to identify their interest in scheduling a meeting at the Project site to discuss the Project and the environmental assessment. On 2014-05-26, IAMGOLD inquired whether or not the Chief would like representatives from the Canadian Environmental Assessment Agency to participate in the meeting. The Chief responded requesting only IAMGOLD's participation. On, 2014-05-27, IAMGOLD and Brunswick House First Nation agreed on hosting the meeting at the Project site on 2014-06-05.	Kevin Tangie (Brunswick House First Nation)	Cheryl Naveau (IAMGOLD Corporation)
449	Letter	06/04/2014	IAMGOLD issued a letter to the leadership of the Project's Aboriginal communities to inform them of the submission of the Draft Environmental Assessment/Environmental Impact Statement Report. The letter provided information on upcoming consultation opportunities where they could participate in the review of the Draft Report and provide comments on the Project.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Kevin Tangie (Brunswick House First Nation), Isadore Day (Serpent River First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Elenore Hendrix (Matachewan First Nation), Bruno Kistabish (Conseil de la Première Nation Abitibiwinni), Joseph Hare (M'Chigeeng First Nation), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)
453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Kevin Tangie (Brunswick House First Nation), Bruce Golden (Brunswick House First Nation), David Flood (Independent Environmental Consultant)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation), Alan Smith (IAMGOLD Corporation), Sylvain Morissette (IAMGOLD Corporation)
475	Open House	08/19/2014	IAMGOLD hosted an open house in Brunswick House First Nation for interested community members to hear a presentation about the Project and ask questions or raise concerns about the Project. There were 9 attendees. Comments generally focused on environmental mitigations, and Project design.	Kevin Tangie (Brunswick House First Nation), Marjorie Tangie (Brunswick House First Nation), Bruce Golden (Brunswick House First Nation), Jeremy Naveau (Brunswick House First Nation), Chris Venedam (Brunswick House First Nation), Bev Perreault (Brunswick House First Nation), Carl Perreault (Brunswick House First Nation), Unknown Unknown (Brunswick House First Nation)	David Brown (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)
474	E-mail	08/26/2014	Following the 2014-08-19 open house at Brunswick House First, a member of the community provided IAMGOLD with questions they would like answered. IAMGOLD provided responses to the questions in an email on 2014-08-26.	Jeremy Naveau (Brunswick House First Nation)	Emma Malcolm (IAMGOLD Corporation)
473	Site Visit	09/03/2014	IAMGOLD hosted Brunswick House First Nation's Environmental Assessment Coordinator for a site visit. The tour included a visit to Chester #1, the proposed open pit area, 2 Pike Point, proposed Tailings Management Facility, and proposed Polishing Pond area.	Bruce Golden (Brunswick House First Nation)	David Brown (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
483	E-mail	09/03/2014	On 2014-07-02, IAMGOLD received a request from Brunswick House First Nation's Environmental Assessment Coordinator for a site visit and for some posters with the Project's site layout map. On 2014-07-07, IAMGOLD responded noting that they will prepare the posters as requested and have them sent to the Coordinator. IAMGOLD also informed the Coordinator of proposed date of 2014-08-11 for a site visit. The Coordinator confirmed this date and also requested a community meeting to provide members of the First Nation with an opportunity to hear about and ask questions regarding the Project. This community meeting was set for 2014-08-19. Following a series of site visit cancellations from the Coordinator, the site visit took place on 2014-09-03.	Bruce Golden (Brunswick House First Nation)	Cheryl Naveau (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)

Pre-EA Preparation (prior to January 14, 2014)					
36	Meeting	05/09/2012	IAMGOLD met with Flying Post First Nation (FPFN) regarding the Project and general timelines for the Project Description and permitting.	Murray Ray (Flying Post First Nation)	Robert Carreau (IAMGOLD Corporation)
135	Workshop	09/05/2012	IAMGOLD, Flying Post, Mattagami First Nation and AMEC attended a Cross-cultural Training Seminar at the Enaahtig Healing Lodge and Learning Centre in Victoria Harbour, Ontario sponsored by IAMGOLD.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation), Leonard Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation), Juanita Luke (Mattagami First Nation), Tracy Harnack (Mattagami First Nation), Murray Ray (Flying Post First Nation), Richard Ray (Flying Post First Nation)	Caroline Burgess (AMEC Environment & Infrastructure), Sandra Witt (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Robert Carreau (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Bruce Peters (IAMGOLD Corporation), Lauren Joseph (IAMGOLD Corporation)
18	Conference	10/29/2012	IAMGOLD invited the Flying Post First Nation (FPFN) and Mattagami First Nation (MFN) as well as IAMGOLD corporate staff to attend an Aboriginal Mining Summit in Thunder Bay to learn more about mining projects affecting First Nation communities, First Nation business ventures and what is available to projects. There was ongoing dialogue, communications and understanding with both First Nations. The focus of the summit was on supporting Aboriginal businesses.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation), Murray Ray (Flying Post First Nation)	Cheryl Naveau (IAMGOLD Corporation), Robert Carreau (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Bruce Peters (IAMGOLD Corporation), Benjamin Little (IAMGOLD Corporation)
11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Caroline Burgess (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
28	Meeting	11/08/2012	Second Meeting on the Impact Benefit Agreement (IBA) between IAMGOLD, Wabun Tribal Council (WTC) and Mattagami First Nation (MFN). Participants reviewed the draft IBA and discussed IAMGOLD's consultation strategy moving forward.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Jennifer Constant (Mattagami First Nation), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation)
41	E-mail	12/01/2012	IAMGOLD issues the draft amendment to the Exploration Agreement (2012-11-01) to Flying Post First Nation (FPFN), Mattagami First Nation (MFN), and Wabun Tribal Council (WTC).	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
62	Drop-in Visit/Casual Meeting	12/11/2012	IAMGOLD paid a social visit in the community of Flying Post First Nation (FPFN). IAMGOLD representative discussed education, youth and elders with FPFN Chief.	Murray Ray (Flying Post First Nation)	Cheryl Naveau (IAMGOLD Corporation)
384	Meeting	01/28/2013	On 2013-01-28, IAMGOLD met with the Chiefs from Flying Post and Mattagami First Nations and the Executive Director of Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. The details of this meeting are confidential as per the agreement of all parties involved.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
During EA Preparation (January 15, 2014 to September 30, 2014)					
418	E-mail	03/20/2014	On 2014-03-11, IAMGOLD contacted the Flying Post First Nation Chief to inquire about IAMGOLD hosting a Youth and Elder Discussion with community members in the Spring (2014). The Chief recommended that IAMGOLD contact the First Nation's Economic Development Officer to set a date. IAMGOLD subsequently sent a request for a date to host these meetings. On 2014-03-20, IAMGOLD followed up to determine if a date had been selected. The Economic Development Officer responded that through discussions with the Chief, they had mutually decided that Flying Post First Nation would defer the opportunity to have Youth and Elder discussions at this time.	Murray Ray (Flying Post First Nation), Angie McLeod (Flying Post First Nation)	Cheryl Naveau (IAMGOLD Corporation)
440	Letter	05/22/2014	The Canadian Environmental Assessment Agency (the Agency) sent a letter to Chief's of Aboriginal communities that were identified by the Agency as having the potential to be affected by the Project, to inform them that the Environmental Impact Statement (EIS) prepared by IAMGOLD for the Project passed the Agency's conformity review process, and that technical review of the EIS would commence shortly.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Wesley Wright (Ontario Ministry of the Environment), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	Steve Woolfenden (IAMGOLD Corporation)
449	Letter	06/04/2014	IAMGOLD issued a letter to the leadership of the Project's Aboriginal communities to inform them of the submission of the Draft Environmental Assessment/Environmental Impact Statement Report. The letter provided information on upcoming consultation opportunities where they could participate in the review of the Draft Report and provide comments on the Project.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Kevin Tangie (Brunswick House First Nation), Isadore Day (Serpent River First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Elenore Hendrix (Matachewan First Nation), Bruno Kistabish (Conseil de la Première Nation Abitibiwinni), Joseph Hare (M'Chigeeng First Nation), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)
463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Shawn Batise (Wabun Tribal Council), Corey Dekker (Canadian Environmental Assessment Agency), Murray Ray (Flying Post First Nation), Robert (Bob) McLeod (Flying Post First Nation), Richard Ray (Flying Post First Nation), Lynn Ray (Flying Post First Nation), Susan Baril (Flying Post First Nation), Unknown Unknown (Flying Post First Nation), Rosie Ray (Flying Post First Nation), Penny Ann Robinson (Flying Post First Nation), Valerie Bull (Flying Post First Nation), Cole Clearwater (Flying Post First Nation), Cathy Ray (Flying Post First Nation), Roy A. Ray (Flying Post First Nation), Stephanie Ray (Flying Post First Nation), Sherry Boodram (Canadian Environmental Assessment Agency (CEAA)), Paul Jordan (Ministry of the Environment), Budsy Manilla (Flying Post First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation), Sylvain Morissette (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
465	Meeting	07/08/2014	IAMGOLD held a meeting with Wabun Tribal Council, the Canadian Environmental Assessment Agency (the Agency) and representatives from the Ministry of the Environment to discuss Wabun Tribal Council's Technical Reviewer comments on the Draft Environmental Assessment/Environmental Impact Statement Report. The Technical Reviewer provided a presentation that described a summary of issues that would be formally presented in the submission of comments on the Report. Following the presentation, the Chiefs of Mattagami and Flying Post First Nations each noted that irrespective of the scientific environmental assessment completed, they believe that given the size of the Project's footprint on the environment, the Project has significant environmental impacts. It was explained that their understanding of the significance of the Project would be provided to the Agency vis-à-vis comments submitted by Wabun's Technical Reviewer on the Report.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Corey Dekker (Canadian Environmental Assessment Agency), James Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation), Murray Ray (Flying Post First Nation), Robert (Bob) McLeod (Flying Post First Nation), Denis Durocher (Ontario Ministry of the Environment), Richard Ray (Flying Post First Nation), Lynn Ray (Flying Post First Nation), Steven Momy (Ontario Ministry of the Environment), Larry Naveau (Mattagami First Nation), Bruce McKay (Mattagami First Nation), Rick Hendricks (Wabun Tribal Council), Carla Brekhart (Canadian Environmental Assessment Agency), Suzanne Barreel (Flying Post First Nation), Angula Puvananathan (Canadian Environmental Assessment Agency)	Aaron Steeghs (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation)

Table D-9a: Records of Contact - Matachewan First Nation

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
26	E-mail	11/06/2012	IAMGOLD provided email introductions to Wabun Tribal Council's (WTC) Mineral Development Advisor.	Dianne Tookenay (Matachewan First Nation)	Aaron Steeghs (IAMGOLD Corporation)
27	Phone Call	11/06/2012	IAMGOLD provided introductions to Wabun Tribal Council (WTC).	Dianne Tookenay (Matachewan First Nation)	Aaron Steeghs (IAMGOLD Corporation), Lauren Joseph (IAMGOLD Corporation)
54	Phone Call	11/06/2012	Wabun Tribal Council (WTC) called to set up site visit with IAMGOLD.	Dianne Tookenay (Matachewan First Nation)	David Brown (IAMGOLD Corporation)
42	Meeting	11/22/2012	IAMGOLD conducts a meeting and site tour with Wabun Tribal Council (WTC) Mineral Advisor.	Dianne Tookenay (Matachewan First Nation)	David Brown (IAMGOLD Corporation)
61	Letter	11/26/2012	IAMGOLD issued a letter to Matachewan First Nation (MTFN) to provide information about the Côté Gold Project. An introduction about IAMGOLD, the Project and about Aboriginal consultation is provided in this letter. IAMGOLD further suggests meeting with MTFN.	Alex "Sonny" Batisse (Matachewan First Nation)	Aaron Steeghs (IAMGOLD Corporation)
184	Letter	05/13/2013	The Canadian Environmental Assessment Agency (the Agency) sent (mailed and email) a Notice of Determination that an Environmental Assessment (EA) is required for the Côté Gold Project to the Chapleau-Ojibwe, Matachewan, and Beaverhouse First Nations. The Agency also sent the notice and invitation to review and provide comments on the draft Environmental Impact Statement Guidelines to Flying Post, Mattagami, and Brunswick House First Nations, the Métis Nation of Ontario, and the Algonquin Anishinabeg Nation Tribal Council.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Andrew Neshawabin (Brunswick House First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	
192	Phone Call	05/27/2013	On 2013-05-16, IAMGOLD phoned Matachewan, Chapleau Ojibway, Beaverhouse, and Abitiwiini First Nations to inform them of opportunities to be involved including review of the Draft Terms of Reference (ToR) and to discuss how/if they would like to be consulted moving forward. All First Nations were unavailable, IAMGOLD left a voicemail and attempted to call back later in the day. IAMGOLD followed up on 2013-05-27 to the same First Nations, including Brunswick House First Nation. A voicemail message was left with contact information.	Jimi Maurer (Beaverhouse First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Unknown Unknown (Conseil de la Première Nation Abitibiwinni)	Aaron Steeghs (IAMGOLD Corporation)
280	Phone Call	07/22/2013	IAMGOLD attempted to contact the Chief of Matachewan First Nation on 2013-07-15, 2013-07-16 and 2013-07-22. IAMGOLD left messages on each occasion indicating that they would like to discuss proceeding with consultation on the Côté Gold Project.	Elenore Hendrix (Matachewan First Nation)	Aaron Steeghs (IAMGOLD Corporation)
294	Phone Call	07/25/2013	IAMGOLD called and spoke with the Chief of Matachewan First Nation on 2013-07-25 and scheduled a tentative meeting with Chief and Council for 2013-08-12 to discuss further consultation with Matachewan for the Project.	Elenore Hendrix (Matachewan First Nation)	Aaron Steeghs (IAMGOLD Corporation)

Table D-9a: Records of Contact - Matachewan First Nation

ROC	Event Type	Date	Event Summary	Stakeholders	Team
328	Phone Call	08/07/2013	IAMGOLD spoke with the Chief of Matachewan First Nation with the objective of setting up a meeting for Chief and Council and community consultation to introduce the Project. The Chief responded that she had been unable to schedule a date due to a death in the community.	Elenore Hendrix (Matachewan First Nation)	Cheryl Naveau (IAMGOLD Corporation)
332	E-mail	09/09/2013	On 2013-08-27, IAMGOLD emailed the Chief of Matachewan First Nation in an effort to reschedule a preliminary meeting with Chief and Council and the community to introduce the Project. To follow-up, IAMGOLD called and spoke with the Chief on 2013-09-09 and scheduled and confirmed a meeting for 2013-10-01.	Elenore Hendrix (Matachewan First Nation)	Cheryl Naveau (IAMGOLD Corporation)
360	Phone Call	09/30/2013	IAMGOLD spoke with the Executive Director of the Wabun Tribal Council to discuss a date for fall consultation with Matachewan First Nation. The Executive Director from the Wabun Tribal Council cancelled the meeting scheduled for 2013-10-01, and asked IAMGOLD to settle a date with the Band Manager for Matachewan First Nation the following week.	Shawn Batise (Wabun Tribal Council), Pam Cormier (Matachewan First Nation)	Aaron Steeghs (IAMGOLD Corporation)
381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Pam Cormier (Matachewan First Nation), David Flood (Matachewan First Nation), Leahan Parrott (Matachewan First Nation), Cathy Yandeau (Matachewan First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation), Sylvain Morissette (IAMGOLD Corporation)
During EA Preparation (January 15, 2014 to September 30, 2014)					
440	Letter	05/22/2014	The Canadian Environmental Assessment Agency (the Agency) sent a letter to Chief's of Aboriginal communities that were identified by the Agency as having the potential to be affected by the Project, to inform them that the Environmental Impact Statement (EIS) prepared by IAMGOLD for the Project passed the Agency's conformity review process, and that technical review of the EIS would commence shortly. ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
37	Meeting	06/18/2012	IAMGOLD met with Mattagami First Nation (MFN) at the Côté Gold Project Site. Each group gave their vision for the Project.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation)	Aaron Steeghs (IAMGOLD Corporation), Robert Carreau (IAMGOLD Corporation), Gordon Stothart (IAMGOLD Corporation)
38	Site Visit	07/23/2012	IAMGOLD conducted a site visit with Mattagami First Nation (MFN). The visit of the site included the proposed pit area.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
119	Meeting	08/22/2012	IAMGOLD and Woodland Heritage Services Limited met with Mattagami First Nation (MFN) representatives to discuss hiring of field crew from MFN for archaeology field work. Information was provided to MFN on Stage 3 site excavation and a map and description of sites located to date.	James Naveau (Mattagami First Nation), Leonard Naveau (Mattagami First Nation)	John Pollock (Woodland Heritage Services Ltd), Cheryl Naveau (IAMGOLD Corporation)
135	Workshop	09/05/2012	IAMGOLD, Flying Post, Mattagami First Nation and AMEC attended a Cross-cultural Training Seminar at the Enaahtig Healing Lodge and Learning Centre in Victoria Harbour, Ontario sponsored by IAMGOLD.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation), Leonard Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation), Juanita Luke (Mattagami First Nation), Tracy Harnack (Mattagami First Nation), Murray Ray (Flying Post First Nation), Richard Ray (Flying Post First Nation)	Caroline Burgess (AMEC Environment & Infrastructure), Sandra Witt (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Robert Carreau (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Bruce Peters (IAMGOLD Corporation), Lauren Joseph (IAMGOLD Corporation)
2	Meeting	09/24/2012	Reviewed Traditional Knowledge (TK)/Traditional Land Use (TLU) package that was delivered to James Naveau in August by Cheryl Naveau and John Pollock including: TLU power point presentation outlined possible study approach; proposed TLU/TK Questions; and proposed TLU/TK Data Sharing Agreement	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation), Leonard Naveau (Mattagami First Nation)	Caroline Burgess (AMEC Environment & Infrastructure), John Pollock (Woodland Heritage Services Ltd), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
12	Meeting	10/02/2012	IAMGOLD met with Mattagami First Nation (MFN) and Woodland Heritage Services Ltd (WHS) to discuss the Traditional Knowledge/Traditional Land Use (TK/TLU) agreement and questionnaire, the consultation process, current property use, and Impact Benefit Agreement (IBA).	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation), Leonard Naveau (Mattagami First Nation)	Caroline Burgess (AMEC Environment & Infrastructure), John Pollock (Woodland Heritage Services Ltd), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
18	Conference	10/29/2012	IAMGOLD invited the Flying Post First Nation (FPFN) and Mattagami First Nation (MFN) as well as IAMGOLD corporate staff to attend an Aboriginal Mining Summit in Thunder Bay to learn more about mining projects affecting First Nation communities, First Nation business ventures and what is available to projects. There was ongoing dialogue, communications and understanding with both First Nations. The focus of the summit was on supporting Aboriginal businesses.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation), Murray Ray (Flying Post First Nation)	Cheryl Naveau (IAMGOLD Corporation), Robert Carreau (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Bruce Peters (IAMGOLD Corporation), Benjamin Little (IAMGOLD Corporation)
16	Letter	10/30/2012	IAMGOLD received Mattagami First Nation (MFN) letter of formal support and authorization for Wabun Tribal Council's (WTC) Mineral Development Advisor to conduct site visits on Mattagami traditional lands. IAMGOLD sent confirmation of receipt of letter.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), James Naveau (Mattagami First Nation)	Aaron Steeghs (IAMGOLD Corporation)

Table D-9a: Records of Contact - Mattagami First Nation

ROC	Event Type	Date	Event Summary	Stakeholders	Team
11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Caroline Burgess (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
19	Open House	11/08/2012	IAMGOLD conducted an open house in Gogama on 2012-10-08 to introduce themselves and the Project to the community. Poster boards included updates on the status of the Project. There were 73 community members in attendance. Attendees were provided opportunities to ask questions of the Project team, offered comment forms and asked if they would like to be added to the Project mailing list.	Walter Naveau (Mattagami First Nation), Andrea Beaton (Unknown Individual), Jean Guy Constantin (Individual - GP), Rick Constantin (Individual - GP), Gordon Hotchkiss (S+ G Development), Irene Lamontagne (Individual - GP), Gail Ballak (Ontario Ministry of Natural Resources), Kelly Lamontagne (Aboriginal Women in Mining), Edmond Chenier (Gogama Chamber of Commerce)	Caroline Burgess (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Bruce Peters (IAMGOLD Corporation), Rob Hobbs (IAMGOLD Corporation), Albert Nelmapius (IAMGOLD Corporation), Philippe Carron (IAMGOLD Corporation)
28	Meeting	11/08/2012	Second Meeting on the Impact Benefit Agreement (IBA) between IAMGOLD, Wabun Tribal Council (WTC) and Mattagami First Nation (MFN). Participants reviewed the draft IBA and discussed IAMGOLD's consultation strategy moving forward.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Jennifer Constant (Mattagami First Nation), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation)
41	E-mail	12/01/2012	IAMGOLD issues the draft amendment to the Exploration Agreement (2012-11-01) to Flying Post First Nation (FPFN), Mattagami First Nation (MFN), and Wabun Tribal Council (WTC).	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
384	Meeting	01/28/2013	On 2013-01-28, IAMGOLD met with the Chiefs from Flying Post and Mattagami First Nations and the Executive Director of Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. The details of this meeting are confidential as per the agreement of all parties involved.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
93	Meeting	02/04/2013	IAMGOLD met at Mattagami First Nation Band Office to discuss Exploration Drilling program and the Ministry of Northern Development and Mines permitting application. IAMGOLD reported that nothing has changed with the Exploration Drilling Program.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation)	Cheryl Naveau (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
92	Phone Call	02/05/2013	IAMGOLD confirmed that no support letter is required from Mattagami First Nation for the submission of the Exploration Permit application.	James Naveau (Mattagami First Nation)	David Brown (IAMGOLD Corporation)
96	Mass Mailout	02/07/2013	IAMGOLD mailed a copy of the draft Project Description (PD) to Mattagami First Nation (MFN).	Walter Naveau (Mattagami First Nation)	Aaron Steeghs (IAMGOLD Corporation)
77	Phone Call	02/19/2013	IAMGOLD called Mattagami First Nation (MFN) to obtain clarification on process to be followed for off-reserve band members' notifications.	Juanita Luke (Mattagami First Nation)	Cheryl Naveau (IAMGOLD Corporation)

Table D-9a: Records of Contact - Mattagami First Nation

ROC	Event Type	Date	Event Summary	Stakeholders	Team
184	Letter	05/13/2013	The Canadian Environmental Assessment Agency (the Agency) sent (mailed and email) a Notice of Determination that an Environmental Assessment (EA) is required for the Côté Gold Project to the Chapleau-Ojibwe, Matachewan, and Beaverhouse First Nations. The Agency also sent the notice and invitation to review and provide comments on the draft Environmental Impact Statement Guidelines to Flying Post, Mattagami, and Brunswick House First Nations, the Métis Nation of Ontario, and the Algonquin Anishinabeg Nation Tribal Council.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Andrew Neshawabin (Brunswick House First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	
196	Open House	05/22/2013	IAMGOLD held an Open House in Mattagami First Nation on 2013-05-22 to present the Draft Terms of Reference. There were 20 people in attendance.	James Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation), Tracy Harnack (Mattagami First Nation), Milisa Hendry Naveau (Mattagami First Nation), Stephen Naveau (Mattagami First Nation), Norman Naveau (Mattagami First Nation), Jason Hooysma (Mattagami First Nation), Larry Naveau (Mattagami First Nation), Richard Gagnon (Mattagami First Nation), Bruce McKay (Mattagami First Nation), Deanna Heyde (Mattagami First Nation), Carole Gagnon (Mattagami First Nation), Grayson Luke (Mattagami First Nation), Curtis Fowler (Mattagami First Nation), Isaac Naveau (Mattagami First Nation), Ethan McKay (Mattagami First Nation), Nolan Naveau (Mattagami First Nation), Ashley Gignac (Mattagami First Nation), Maggie Gignac (Mattagami First Nation), Carol McKay (Mattagami First Nation), Unknown Unknown (Mattagami First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Natalie Gaudette (IAMGOLD Corporation)
199	Open House	05/23/2013	IAMGOLD held an Open House in Timmins 2013-05-23 to present the Draft Terms of Reference. There were 43 people in attendance. A Project Manager from the Mattagami Region Conservation Authority sent in a comment form on 2013-05-24 to IAMGOLD.	Please refer to the “Additional Stakeholder Information” provided at the end of this table for a complete list of participating stakeholders.	Cheryl Naveau (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Catherine Stothart (IAMGOLD Corporation)
387	Meeting	06/10/2013	On 2013-06-10, IAMGOLD met with the Chiefs from Flying Post and Mattagami First Nations and the Executive Director of Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. The details of this meeting are confidential as per the agreement of all parties involved.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
278	Report	07/11/2013	On 2013-07-11, IAMGOLD's locally hired Mattagami First Nation researcher sent AMEC a socio-economic data collection report. The information will be used in the socio-economic baseline report found in the Environmental Assessment.	Deanna Heyde (Mattagami First Nation)	Cheyenne Martin (AMEC Environment & Infrastructure)
331	Phone Call	07/11/2013	IAMGOLD contacted Mattagami First Nation requesting information on their land use policies. Mattagami First Nation were unaware of any policy and would follow up with their consultant to confirm. IAMGOLD followed up with Mattagami First Nation's consultant who confirmed on 2013-08-22 that there were no formal land use policies.	James Naveau (Mattagami First Nation), Chris McKay (W.C. McKay Consulting Services)	Cheryl Naveau (IAMGOLD Corporation)

Table D-9a: Records of Contact - Mattagami First Nation

ROC	Event Type	Date	Event Summary	Stakeholders	Team
327	Site Visit	07/23/2013	On 2013-07-23, IAMGOLD provided members and elders of Mattagami First Nation a tour of the Project site, and a tour of one of the active archaeological sites around the Project area called 3 Duck Lake. IAMGOLD updated the visitors on the Project, current archaeological work underway in and around the Project area, and the status of the Traditional Knowledge and Traditional Land Use studies.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation), Chris McKay (W.C. McKay Consulting Services), Bruce McKay (Mattagami First Nation)	John Pollock (Woodland Heritage Services Ltd), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation)
300	E-mail	07/29/2013	On 2013-07-29, AMEC contacted a representative from Mattagami First Nation to request information related to cultural and recreational infrastructure on the First Nation reserve. The representative provided the information on 2013-07-29.	Deanna Heyde (Mattagami First Nation)	Cheyenne Martin (AMEC Environment & Infrastructure)
388	Meeting	07/31/2013	On 2013-07-31, IAMGOLD met with the Chiefs from Flying Post and Mattagami First Nations and the Executive Director of Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. The details of this meeting are confidential as per the agreement of all parties involved.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
372	Letter	08/20/2013	On 2013-08-20, IAMGOLD sent a letter to a representative from Mattagami First Nation outlining that IAMGOLD has approved their request for a financial contribution to the 3rd Annual Mattagami Pow Wow.	Dayna McKenzie (Mattagami First Nation)	Cheryl Naveau (IAMGOLD Corporation)
329	E-mail	08/22/2013	On 2013-08-22, IAMGOLD contacted McKay Consulting Services requesting information about whether or not Mattagami First Nation had any land use policies in place. The same day, on behalf of Mattagami First Nation (MFN), McKay Consulting Services confirmed to IAMGOLD that there are no current land use policies for MFN.	Chris McKay (W.C. McKay Consulting Services)	Cheryl Naveau (IAMGOLD Corporation)
389	Meeting	08/29/2013	On 2013-08-29, IAMGOLD met with the Chiefs from Flying Post and Mattagami First Nations and the Executive Director of Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. The details of this meeting are confidential as per the agreement of all parties involved.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Jennifer Constant (Mattagami First Nation), Larry Naveau (Mattagami First Nation), Chris McKay (W.C. McKay Consulting Services), Bruce McKay (Mattagami First Nation), Rick Hendricks (Wabun Tribal Council)	Cheryl Naveau (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Suzanne Morissette (IAMGOLD Corporation)
400	Presentation	11/14/2013	On 2013-11-13 and 2013-11-14, cross-cultural training was offered to all Côté Gold Project employees as well as some corporate IAMGOLD employees . The training was run by two members of Mattagami First Nation.	Leonard Naveau (Mattagami First Nation), Chad Boissonneau (Mattagami First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation)

402	Meeting	12/11/2013	IAMGOLD met with representatives from Flying Post and Mattagami First Nations and Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. Details of the negotiation are confidential as agreed upon by the respective Parties.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
During EA Preparation (January 15, 2014 to September 30, 2014)					
451	Meeting	05/07/2014	IAMGOLD held a meeting at Mattagami First Nation to bring together Youth and Elder perspectives about the Project. This session provided an opportunity for these groups to share their thoughts, concerns and issues about the Project in a more intimate setting and provided them with a chance to get to know IAMGOLD employees on a more personal basis.	Walter Naveau (Mattagami First Nation), Leonard Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation), Stephen Naveau (Mattagami First Nation), Norman Naveau (Mattagami First Nation), Daisy Naveau (Mattagami First Nation), Morris Naveau (Mattagami First Nation), Frank McKay (Mattagami First Nation), Junior Hooysma (Mattagami First Nation), Richard Naveau (Mattagami First Nation), Jane Luke (Mattagami First Nation), Arthur Constant (Mattagami First Nation), Sydney Constant (Mattagami First Nation), Melissa Ethier (Mattagami First Nation), Mary Luke (Mattagami First Nation), Harris Luke (Mattagami First Nation), Nancy Naveau (Mattagami First Nation), Mike Naveau (Mattagami First Nation), Steven Naveau (Mattagami First Nation), Joyce Luke (Mattagami First Nation), Bernice Naveau (Mattagami First Nation)	Cheryl Naveau (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Guy Clement (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation), Sylvain Morissette (IAMGOLD Corporation)
440	Letter	05/22/2014	The Canadian Environmental Assessment Agency (the Agency) sent a letter to Chief's of Aboriginal communities that were identified by the Agency as having the potential to be affected by the Project, to inform them that the Environmental Impact Statement (EIS) prepared by IAMGOLD for the Project passed the Agency's conformity review process, and that technical review of the EIS would commence shortly.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Wesley Wright (Ontario Ministry of the Environment), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	Steve Woolfenden (IAMGOLD Corporation)
449	Letter	06/04/2014	IAMGOLD issued a letter to the leadership of the Project's Aboriginal communities to inform them of the submission of the Draft Environmental Assessment/Environmental Impact Statement Report. The letter provided information on upcoming consultation opportunities where they could participate in the review of the Draft Report and provide comments on the Project.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Kevin Tangie (Brunswick House First Nation), Isadore Day (Serpent River First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Elenore Hendrix (Matachewan First Nation), Bruno Kistabish (Conseil de la Première Nation Abitibiwinni), Joseph Hare (M'Chigeeng First Nation), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)
466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Please refer to the "Additional Stakeholder Information" provided at the end of this table for a complete list of participating stakeholders.	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation), Alan Smith (IAMGOLD Corporation), Sylvain Morissette (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
465	Meeting	07/08/2014	IAMGOLD held a meeting with Wabun Tribal Council, the Canadian Environmental Assessment Agency (the Agency) and representatives from the Ministry of the Environment to discuss Wabun Tribal Council's Technical Reviewer comments on the Draft Environmental Assessment/Environmental Impact Statement Report. The Technical Reviewer provided a presentation that described a summary of issues that would be formally presented in the submission of comments on the Report. Following the presentation, the Chiefs of Mattagami and Flying Post First Nations each noted that irrespective of the scientific environmental assessment completed, they believe that given the size of the Project's footprint on the environment, the Project has significant environmental impacts. It was explained that their understanding of the significance of the Project would be provided to the Agency vis-à-vis comments submitted by Wabun's Technical Reviewer on the Report.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Corey Dekker (Canadian Environmental Assessment Agency), James Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation), Murray Ray (Flying Post First Nation), Robert (Bob) McLeod (Flying Post First Nation), Denis Durocher (Ontario Ministry of the Environment), Richard Ray (Flying Post First Nation), Lynn Ray (Flying Post First Nation), Steven Momy (Ontario Ministry of the Environment), Larry Naveau (Mattagami First Nation), Bruce McKay (Mattagami First Nation), Rick Hendricks (Wabun Tribal Council), Carla Brekhart (Canadian Environmental Assessment Agency), Suzanne Barreel (Flying Post First Nation), Angula Puvananathan (Canadian Environmental Assessment Agency)	Aaron Steeghs (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation)
458	E-mail	07/09/2014	On 2014-07-08, IAMGOLD contacted a Mattagami First Nation Councillor to follow-up on a 2014-07-07 conversation. The follow-up was to confirm a date for a preliminary discussion with Mattagami First Nation women. On 2014-07-09, the Councillor confirmed the date of 2014-07-15.	Jennifer Constant (Mattagami First Nation)	Emma Malcolm (IAMGOLD Corporation)
468	Workshop	07/21/2014	On 2014-07-15, IAMGOLD held a preliminary discussion with some women from Mattagami First Nation to discuss how input from the women can better be incorporated into community feedback on the Project. The discussion was held in advance of an 'official meeting' that will be determined at a date presented by the community. On 2014-07-21, as a follow-up to the meeting, IAMGOLD provided a Mattagami First Nation councillor with a list of topics the women may want to consider discussing with IAMGOLD in the first meeting with the women's group.	Jennifer Constant (Mattagami First Nation), Jessica Echum (Mattagami First Nation), Daisy Naveau (Mattagami First Nation), Deanna Heyde (Mattagami First Nation), Unknown Unknown (Mattagami First Nation), Melissa Ethier (Mattagami First Nation), Betty Naveau (Mattagami First Nation)	Krista Maydew (AMEC Environment & Infrastructure), Sophie Bertrand (AMEC Environment & Infrastructure), Emma Malcolm (IAMGOLD Corporation)
454	Phone Call	08/11/2014	On 2014-07-31, a Mattagami First Nation Elder requested IAMGOLD assistance in coordinating a water ceremony at the Project site. On 2014-09-07, IAMGOLD attempted to follow-up with the Elder determine if there was any support that IAMGOLD could provide. On 2014-08-11, IAMGOLD called the Elder again and was informed that due to internal discussions with Chief and Council, members of Mattagami First Nation and leadership decided to delay hosting the water ceremony until a later date. IAMGOLD reassured the Elder that they are open to hosting a ceremony at a time that is agreeable with the whole community.	Daisy Naveau (Mattagami First Nation)	Emma Malcolm (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
301	E-mail	08/01/2013	On 2013-07-29, IAMGOLD contacted the Chief of Serpent River First Nation to follow up and see if their committee had made a decision to meet with IAMGOLD. The Interim Chair of the Coordinating Committee on Resource Development and Benefits, from M'Chigeeng First Nation, responded to IAMGOLD and proposed a meeting date of 2013-08-14. IAMGOLD responded on 2013-08-01 to confirm the date for that meeting.	Isadore Day (Serpent River First Nation), Kevin Eshkawkogan (M'Chigeeng First Nation)	Cheryl Naveau (IAMGOLD Corporation)
281	Meeting	08/14/2013	On 2013-03-05, the M'Chigeeng First Nation informed IAMGOLD of concerns related to potential Project impacts on hunting and fishing rights under the Robinson Huron Treaty. On 2013-03-13, IAMGOLD invited the M'Chigeeng First Nation to discuss concerns and to share if any members are exercising harvesting rights in the Project area to discuss mitigation measures. Between 2013-03-13 and 2013-08-00 a series of emails discussed meeting logistics. On 2013-08-14 a meeting was held.	Kevin Eshkawkogan (M'Chigeeng First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation)
377	Meeting	11/14/2013	On 2013-10-30, IAMGOLD contacted a representative from M'Chigeeng First Nation to follow-up on previous consultation efforts with Robinson Huron Treaty First Nations. On 2013-11-05, IAMGOLD reached out to try and schedule a teleconference with the representative. On 2013-11-07, the representative responded and proposed 2013-11-11. On 2013-11-08, IAMGOLD confirmed the date of this meeting. A teleconference meeting was held on 2013-11-11, during which IAMGOLD discussed and inquired about the level of continued engagement that M'Chigeeng First Nation and other Robinson Huron First Nations would like to have. IAMGOLD promised to provide a more detailed map outlining the Project to the representative and some more detail on Project location. The representative informed IAMGOLD that they would share the information with other interested parties and would contact IAMGOLD to schedule a future discussion with them related to consultation for the Project. On 2013-11-14, IAMGOLD sent the map and information to the representative.	Kevin Eshkawkogan (M'Chigeeng First Nation)	Cheryl Naveau (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)
403	E-mail	12/09/2013	IAMGOLD contacted the M'Chigeeng First Nation Lands and Resource Coordinator to follow-up and determine if they had heard from the Robinson Huron Regional Chief or other Councillors from M'Chigeeng First Nation about their interest in the Project. IAMGOLD identified that they are available for information-sharing at the Coordinator's request.	Kevin Eshkawkogan (M'Chigeeng First Nation)	Emma Malcolm (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
137	Phone Call	04/22/2013	Chief of the Serpent River First Nation (SRFN) contacted IAMGOLD to discuss SRFN's harvesting rights regarding the Côté Gold Project.	Isadore Day (Serpent River First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation)
149	E-mail	04/30/2013	IAMGOLD sent email to Chief of Serpent River First Nation to schedule a conference call to further discuss an update on the Côté Gold Project.	Isadore Day (Serpent River First Nation)	Cheryl Naveau (IAMGOLD Corporation)
274	E-mail	05/13/2013	IAMGOLD contacted Chief of Serpent River First Nation to request a conference call or meeting to discuss the Côté Gold Project.	Isadore Day (Serpent River First Nation)	Cheryl Naveau (IAMGOLD Corporation)
261	E-mail	06/26/2013	IAMGOLD sent a follow-up email on 2013-06-26 to the Chief of Serpent River First Nation requesting to schedule a time to discuss the Project.	Isadore Day (Serpent River First Nation)	Cheryl Naveau (IAMGOLD Corporation)
301	E-mail	08/01/2013	On 2013-07-29, IAMGOLD contacted the Chief of Serpent River First Nation to follow up and see if their committee had made a decision to meet with IAMGOLD. The Interim Chair of the Coordinating Committee on Resource Development and Benefits, from M'Chigeeng First Nation, responded to IAMGOLD and proposed a meeting date of 2013-08-14. IAMGOLD responded on 2013-08-01 to confirm the date for that meeting.	Isadore Day (Serpent River First Nation), Kevin Eshkawkogan (M'Chigeeng First Nation)	Cheryl Naveau (IAMGOLD Corporation)
310	Phone Call	08/26/2013	IAMGOLD had a teleconference with the Regional Chief of Serpent River First Nation. The purpose of the phone call was to provide the Regional Chief with an overview of the Project and IAMGOLD's consultation efforts with Aboriginal communities to date. The Regional Chief was informed by IAMGOLD that the Project falls above the Arctic/Atlantic watershed divide. The Regional Chief agreed to review the site location map and agreed to inform IAMGOLD should any other follow-up consultation be required. IAMGOLD sent a link via email to the Project Description on IAMGOLD's website and PowerPoint that included an overview of the Project and a copy of the site location map to the Robinson Huron Committee.	Isadore Day (Serpent River First Nation), Charlotte Commanda (Lake Huron Regional Committee)	Aaron Steeghs (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
132	Phone Call	04/19/2013	IAMGOLD followed up on the Algonquin Anishinabeg Nation Tribal Council (AANTC) phone conversation by contacting the Wahgoshig First Nation to confirm their non-participation status. The Wahgoshig Chief was unavailable; however, IAMGOLD relayed the details of the AANTC to the Impact Benefit Agreement (IBA) coordinator and requested to speak with the Chief when appropriate.	Unknown Unknown (Wahgoshig First Nation)	Aaron Steeghs (IAMGOLD Corporation)
178	Phone Call	04/29/2013	IAMGOLD called Wahgoshig First Nation to speak with the Chief who was unavailable. IAMGOLD left a message with the Impact Benefit Agreement coordinator.	Dave Babin (Wahgoshig First Nation), Sharon Plourde (Wahgoshig First Nation)	Aaron Steeghs (IAMGOLD Corporation)
182	E-mail	05/10/2013	Wahgoshig First Nation informed IAMGOLD that they have no comments on the Draft Terms of Reference (ToR) or the Côté Gold Project and recognize that the Project is not within their Territory. Wahgoshig First Nation expressed interest in providing competitive bids for employment opportunity during construction and operational phases.	Sharon Plourde (Wahgoshig First Nation)	Aaron Steeghs (IAMGOLD Corporation)
During EA Preparation (January 15, 2014 to September 30, 2014)					
No contacts were made during this period.					

Table D-9a: Records of Contact - Métis Nation of Ontario

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
20	Meeting	07/05/2012	Meeting between IAMGOLD and Consultation and Community Relations Coordinator of Métis Nation of Ontario (MNO). IAMGOLD discussed generalities about the Project (location) and timelines for the Project Description (PD).	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
23	E-mail	11/07/2012	IAMGOLD provided the Métis Nation of Ontario (MNO) with coordinates for the proposed open pit location for the Côté Gold Project, in order for the MNO to initiate their internal process (leading to their consultation protocol) of deciding which MNO groups would be affected.	Andy Lefebvre (Métis Nation of Ontario), Mark Bowler (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
73	E-mail	02/12/2013	Email correspondence between Métis Nation of Ontario (MNO) and IAMGOLD to schedule a meeting for IAMGOLD to present the draft Project Description (PD) to the regional consultation committees.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
98	Mass Mailout	02/12/2013	IAMGOLD mailed a copy of the draft Project Description (PD) to the Métis Nation of Ontario (MNO).	Andy Lefebvre (Métis Nation of Ontario), Mark Bowler (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
85	Meeting	02/22/2013	IAMGOLD met with the Consultation Committee from the Métis Nation of Ontario (MNO) to present the draft Project Description (PD) and gather their feedback. IAMGOLD expressed that they would provide support to the MNO to conduct a Traditional Knowledge and Land Use Study as soon as possible to ensure that the information obtained in the Study would be considered in the Draft Environmental Assessment / Environmental Impact Statement. The MNO stated that they were not interested in beginning work on a Traditional Knowledge and Land Use Study until IAMGOLD signed a Memorandum of Understanding with the Committee.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario), David Hamilton (Chapleau Métis Council), Urgel Courville (Northern Lights Métis Council), Alain Lefebvre (Métis Nation of Ontario)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation)
112	E-mail	03/26/2013	The Canadian Environmental Assessment Agency (the Agency) emailed Métis Nations of Ontario (MNO), Region 3 to identify that the Agency is seeking input from MNO, Region 3 on the proposed Côté Gold mine development and its potential effects on the environment by 2013-04-15. The email provided a letter seeking input from the MNO and links to the Project Description (PD) and PD Summary. Hardcopies of the letter and PD were also sent to the MNO.	Andy Lefebvre (Métis Nation of Ontario), Dawn-Ann Metsaranta (Ontario Ministry of Northern Development and Mines), Ellen Campbell (Canadian Environmental Assessment Agency), Regent Dickey (Natural Resources Canada)	Steve Woolfenden (IAMGOLD Corporation)
100	E-mail	04/03/2013	IAMGOLD emailed the Métis Nation of Ontario (MNO) following up on list of permits and providing notice that the Draft Terms of Reference (ToR) will be coming out for review in April/May 2013. IAMGOLD said they will follow-up at a later time.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation), Catherine Stothart (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
116	Letter	04/03/2013	IAMGOLD sent a letter to the Métis Nation of Ontario (MNO) providing advance notice that IAMGOLD is preparing a Draft Terms of Reference (ToR) and will be seeking the MNO's input on the Draft. IAMGOLD would be pleased to arrange for meetings and/or sessions with IAMGOLD's technical experts on specific subjects within the reports and would like to offer capacity funding to the MNO to have their selected experts review and comment on the documents.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
155	E-mail	04/04/2013	Métis Nation of Ontario (MNO) acknowledged having received Project updates sent by IAMGOLD on permitting and a notice that the Environmental Assessment (EA) Draft Terms of Reference (ToR) document will be sent for their review. Meeting logistics of the EA ToR review were discussed.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
184	Letter	05/13/2013	The Canadian Environmental Assessment Agency (the Agency) sent (mailed and email) a Notice of Determination that an Environmental Assessment (EA) is required for the Côté Gold Project to the Chapleau-Ojibwe, Matachewan, and Beaverhouse First Nations. The Agency also sent the notice and invitation to review and provide comments on the draft Environmental Impact Statement Guidelines to Flying Post, Mattagami, and Brunswick House First Nations, the Métis Nation of Ontario, and the Algonquin Anishinabeg Nation Tribal Council.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Andrew Neshawabin (Brunswick House First Nation), Alex "Sonny" Batisse (Matachewan First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	
210	Meeting	05/30/2013	IAMGOLD presented the Draft Terms of Reference (ToR) to Métis Nation of Ontario (MNO) and discussed next steps, timelines and MNO review to the Consultation Committee. IAMGOLD reminded the MNO that the window of opportunity to the Traditional Knowledge and Land Use Study incorporated into the Draft Environmental Assessment / Environmental Impact Statement was closing. The MNO assured IAMGOLD that they would pass along a draft copy of their proposed Memorandum of Understanding as soon as possible.	Andy Lefebvre (Métis Nation of Ontario), David Hamilton (Chapleau Métis Council), Urgel Courville (Northern Lights Métis Council), Liliane Ethier (Temiskaming Métis Council)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Natalie Gaudette (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation)
448	E-mail	08/30/2013	On 2013-08-07, the Métis Nation of Ontario (MNO) presented IAMGOLD with a draft Memorandum of Understanding (MOU). On 2013-08-14, IAMGOLD confirmed receipt of the MOU. On 2013-08-28, IAMGOLD contacted the MNO's Mineral Development Advisor to notify him that IAMGOLD would like to set up a meeting to discuss the MOU. On 2013-08-30, the MNO's Mineral Development Advisor notified IAMGOLD that he would provide dates for a possible meeting with IAMGOLD as soon as possible.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)

Table D-9a: Records of Contact - Métis Nation of Ontario

ROC	Event Type	Date	Event Summary	Stakeholders	Team
339	E-mail	09/09/2013	On 2013-09-04, the Mineral Development Coordinator from the Métis Nation of Ontario (MNO) emailed IAMGOLD to provide information about the anticipated timelines for the Traditional Knowledge and Traditional Land Use Studies being conducted for IAMGOLD. In addition, he inquired about IAMGOLDs timeline for expecting to receive the final study. On 2013-08-06, IAMGOLD informed that the studies inclusion in the Environmental Assessment is not mandatory, verifying that the MNO's proposed timeline was fine.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
340	Phone Call	09/09/2013	IAMGOLD and the Métis Nation of Ontario (MNO) agreed to meet on 2013-09-18 to discuss the proposed Memorandum of Understanding and a strategy for fall consultation.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
380	Meeting	10/03/2013	On 2013-10-03, IAMGOLD met with two representatives from the Métis Nation of Ontario (MNO) to discuss a draft Memorandum of Understanding (MOU) that was proposed by the MNO to IAMGOLD on 2013-08-07. The draft MOU covers various potential aspects of the relationship between IAMGOLD and the MNO including: future consultation efforts, an environmental technical review of the Environmental Assessment, a Traditional Knowledge and Traditional Land Use study, the potential for future agreements between the respective parties and a proposed budget to cover the cost of these activities. The meeting also served as an opportunity to provide a basic overview of the Project and a status update on the permitting process, and to highlight the need for future consultation between the Company and community. On 2013-10-31 IAMGOLD spoke with a representative from the MNO to provide them with suggested edits to various aspects of the document.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
376	E-mail	11/01/2013	IAMGOLD set a tentative date for a meeting with two representatives from the Métis Nation of Ontario (MNO) to discuss the Memorandum of Understanding being negotiated between the MNO and the IAMGOLD, the scope of the Project and potential community consultation. The meeting was tentatively scheduled to be held on 2013-11-26.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario)	Cheryl Naveau (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
446	Meeting	11/26/2013	IAMGOLD held a meeting with the Métis Nation of Ontario (MNO) Consultation Committee to discuss the proposed Memorandum of Understanding (MOU) between IAMGOLD and the MNO. The purpose of the meeting was to discuss the suggested IAMGOLD revisions to the original MOU. IAMGOLD noted that they would be happy to provide funding to initiate work on the Traditional Knowledge Study as soon as possible. The meeting concluded that IAMGOLD would further discuss some of the aspects of the proposed agreement before sending a second version back to the MNO. Further details of this meeting are confidential as per the agreement of both Parties.	Andy Lefebvre (Métis Nation of Ontario), Mark Bowler (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario), David Hamilton (Chapleau Métis Council), Urgel Courville (Northern Lights Métis Council), Liliane Ethier (Temiskaming Métis Council), Alain Lefebvre (Métis Nation of Ontario)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation)
398	E-mail	12/13/2013	On 2013-12-09, a representative from the Métis Nation of Ontario requested that that IAMGOLD consider signing a letter of support for the MNO to access government funding to increase the presence of Métis youth in the trades. IAMGOLD agreed, and provided the requested letter of support on 2013-12-13.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
399	E-mail	12/16/2013	On 2013-11-27, a representative from the Métis Nation of Ontario (MNO) Consultation Committee contacted IAMGOLD to offer thanks for IAMGOLD's participation in recent negotiations on the Memorandum of Understanding (MOU). The individual also requested a copy of IAMGOLD's version of the MOU so that they could ensure they have all necessary revisions. On 2013-11-28, IAMGOLD responded and provided the requested document. The MNO representative responded and suggested that the two Parties need to work on improving their communication with one another. On 2013-12-05, IAMGOLD responded and proposed a lunch meeting to have a more informal opportunity to connect in an effort to improve communication between the two Parties. On 2013-12-09, the MNO representative responded and agreed. IAMGOLD offered to fund travel for another representative from the MNO to join the lunch meeting. The representative from the MNO agreed and the two Parties settled on having a meeting on 2013-12-19.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)

394	Meeting	12/19/2013	IAMGOLD met with two representatives from the Métis Nation of Ontario (MNO) Consultation Committee to discuss the general relationship between the Committee and the Company. Both parties agreed to work together to improve the general relations and engagement with one another to help expedite negotiations on the Memorandum of Understanding and to make their meetings more productive moving forward. It was agreed upon that moving forward; the best option would be to have an in-person, all-day session where key representatives from each Party go through the Memorandum of Understanding section by section. Both IAMGOLD and the representatives from the MNO Consultation Committee agreed to try and meet sometime in early 2014.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
During EA Preparation (January 15, 2014 to September 30, 2014)					
395	Meeting	01/15/2014	On 2014-01-14, IAMGOLD met with the two lead negotiators from the Métis Nation of Ontario Consultation Committee to discuss and revise the Memorandum of Understanding (MOU). The Parties reviewed the agreement in its entirety and made a significant number of revisions. The revisions were generally agreed on by both Parties. On 2014-01-15, IAMGOLD sent the draft of the MOU that had been revised since the meeting the day before to the Consultation Coordinator and Manager of Natural Resources and Consultation for review.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
397	Phone Call	01/23/2014	IAMGOLD spoke with a representative from the Métis Nation of Ontario (MNO) Consultation Committee to get an update on the status of signing the Memorandum of Understanding. The representative mentioned that they were for internal comments from another member of the Committee. They assured IAMGOLD that they will be recommending moving forward with it internally in the near-future.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
396	E-mail	02/05/2014	On 2014-02-04, a representative from the Métis Nation of Ontario (MNO) sent a request to IAMGOLD to participate in and present at the Métis Collaborative Mining Forum on 2014-02-26. On 2014-02-06, IAMGOLD responded and identified they would be happy to participate. IAMGOLD also asked for an update on the status of the Memorandum of Understanding. The representative from the MNO responded that the agreement was in their internal approval process and that it was progressing through the process.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
410	E-mail	02/24/2014	IAMGOLD emailed the Métis Nation of Ontario (MNO) representative request an update on the status of the Memorandum of Understanding. The MNO's Consultation Coordinator responded, noting that they intended to meet with the MNO's Manager of Natural Resources and Consultation in the upcoming days to discuss the administrative and legal review of the document.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
392	Presentation	02/26/2014	IAMGOLD presented to community members from the Métis Nation of Ontario (MNO) - Regions 3 and 4 at the MNO Collaborative Forum in Toronto. The presentation introduced the Project to community members and outlined some of the Project's potential effects, proposed mitigation strategies and potential benefits. Overall, the Project was well received by participants. IAMGOLD committed to setting a date for another consultation session with MNO Region 3 members and other interested stakeholders in the near future.	Andy Lefebvre (Métis Nation of Ontario), Unknown Unknown (Métis Nation of Ontario3), James Wager (Métis Nation of Ontario)	Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
393	Meeting	02/26/2014	IAMGOLD met with two representatives from the Métis Nation of Ontario (MNO) Consultation Committee to review the MNO's comments on the latest version of the draft Memorandum of Understanding (MOU). IAMGOLD expressed the importance in getting comments on the draft MOU from the MNO as soon as possible, so that the MOU could be implemented and that work on the Traditional Knowledge and Land Use Study could begin. An MNO representative requested that IAMGOLD to follow-up with them if they had not received comments within a week.	Andy Lefebvre (Métis Nation of Ontario), James Wager (Métis Nation of Ontario)	Steve Woolfenden (IAMGOLD Corporation)
411	Phone Call	03/04/2014	IAMGOLD contacted the Métis Nation of Ontario (MNO) to request a status update on their revision of the Memorandum of Understanding. The MNO stated that they were still working through some of the changes, and that if IAMGOLD did not receive an update soon that they should contact them again. IAMGOLD also indicated that they would like to begin work on the Traditional Knowledge and Land Use Study as soon as possible.	James Wager (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
441	E-mail	03/14/2014	IAMGOLD emailed the lead negotiators on the Memorandum of Understanding (MOU) from the Métis Nation of Ontario's (MNO) Consultation Committee to inform them that IAMGOLD had reviewed the latest draft of the MOU and proposed clarification on a few key issues. IAMGOLD is interested in a partnership with the MNO regardless of the level of impacts on their traditional land and land uses. IAMGOLD's intention is to move forward with the MNO to negotiate an Impact and Benefit Agreement. IAMGOLD reinstated their support for immediate funding for a Traditional Knowledge and Land Use Study and interest in having the MOU signed at the nearest date possible to continue moving their relationship with the MNO forward.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario), James Wager (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation)

Table D-9a: Records of Contact - Métis Nation of Ontario

ROC	Event Type	Date	Event Summary	Stakeholders	Team
427	E-mail	03/31/2014	On 2014-03-06, IAMGOLD emailed the Métis Nation of Ontario (MNO) negotiation representatives to request a status update on the Memorandum of Understanding (MOU). IAMGOLD noted that they would like to provide funding and begin work on the Métis Traditional Knowledge and Land Use (TK/TLU) Study as soon as possible. On 2014-03-07, the MNO representative responded with the MNO's most recent comments. The MNO expressed concerns that IAMGOLD had suggested that negotiating an Impact Benefit Agreement (IBA) was contingent on the MOU identifying regional impacts of the Project, and felt that IAMGOLD should negotiate an IBA with the MNO, even if the community does not identify potential impacts. On 2014-03-14, IAMGOLD responded that they had accepted most of the MNO's comments on the draft MOU and proposed few revisions. IAMGOLD stated that they are committed to negotiating an IBA with the MNO in the future, and hope that the TK/TLU Study will help to further clarify potential impacts. On 2014-03-31, IAMGOLD contacted the MNO to follow-up.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario), James Wager (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation)
434	Letter	04/08/2014	IAMGOLD provided the Wabun Tribal Council's Executive Director and Technical Advisor as well as to the Métis Nation of Ontario's Consultation Coordinator with a letter noting that IAMGOLD was submitting the Environmental Impact Statement for the Project to the Canadian Environmental Assessment Agency in the near-term. To provide adequate time for review, IAMGOLD also provided electronic copies (USB stick) of the Project baseline studies to assist with review of the Draft Environmental Assessment/Environmental Impact Statement in advance of the commencement of the official comment period.	Shawn Batise (Wabun Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)
436	Phone Call	04/09/2014	IAMGOLD contacted the Métis Nation of Ontario (MNO) Consultation Coordinator to request an update on the status of the Memorandum of Understanding (MOU). The Consultation Coordinator advised IAMGOLD to contact the MNO's Manager of Natural Resources and Consultation to discuss the MOU. IAMGOLD contacted the MNO's Manager of Natural Resources and Consultation and provided revisions to a section in the MOU discussed in the conversation. IAMGOLD then sent the revisions to the MNO. The MNO responded and committed to making the changes in the MOU document and move it through the MNO's internal approvals process.	Andy Lefebvre (Métis Nation of Ontario), James Wager (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)

Table D-9a: Records of Contact - Métis Nation of Ontario

ROC	Event Type	Date	Event Summary	Stakeholders	Team
435	E-mail	05/05/2014	IAMGOLD contacted the Métis Nation of Ontario (MNO) Consultation Coordinator to request an update on the status of the Memorandum of Understanding (MOU). IAMGOLD expressed that they had worked out previous issues with the MNO's legal team and that they were keen to sign the MOU as soon as possible given that IAMGOLD is very close to submitting the Draft Environmental Assessment/Environmental Impact Statement. IAMGOLD also asked for feedback on how the MNO Consultation Committee wishes to be consulted on the Draft Environmental Assessment/Environmental Impact Statement.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
437	Phone Call	05/06/2014	On 2014-05-05, IAMGOLD contacted the Métis Nation of Ontario (MNO) Manager of Natural Resources and Consultation to request a status update on the Memorandum of Understanding (MOU), and to see if there was anything IAMGOLD could do to assist with finalizing the process. IAMGOLD connected with the Manager, and the Parties resolved a couple of points in the MOU that needed clarification. IAMGOLD then proceeded to send an email to the MNO Consultation Coordinator to share the details of that conversation, and ask how and when the MNO would like to be consulted on the Draft Environmental Assessment/Environmental Impact Statement Report. On 2014-05-06, the Coordinator responded to IAMGOLD noting that they would figure out a plan for consulting on the Report.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario), James Wager (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
442	E-mail	05/16/2014	On 2014-05-05, IAMGOLD contacted the Métis Nation of Ontario (MNO) Manager of Natural Resources and Consultation to request a status update on the progress of finalizing the Memorandum Of Understanding (MOU). On 2014-05-12, the Manager identified that the MNO was conducting one final review of the MOU and would be returning it to IAMGOLD shortly. On 2014-05-13, the Manager provided a final version of the document to be signed by IAMGOLD. On 2014-05-16, IAMGOLD returned a signed version of the MOU to the MNO.	Corey Dekker (Canadian Environmental Assessment Agency), Andy Lefebvre (Métis Nation of Ontario), Dawn-Ann Metsaranta (Ontario Ministry of Northern Development and Mines), Marcel Lafrance (Métis Nation of Ontario), James Wager (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
440	Letter	05/22/2014	The Canadian Environmental Assessment Agency (the Agency) sent a letter to Chief's of Aboriginal communities that were identified by the Agency as having the potential to be affected by the Project, to inform them that the Environmental Impact Statement (EIS) prepared by IAMGOLD for the Project passed the Agency's conformity review process, and that technical review of the EIS would commence shortly.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Wesley Wright (Ontario Ministry of the Environment), Alex "Sonny" Batisse (Matachewan First Nation), Kevin Tangie (Brunswick House First Nation), Ellen Campbell (Canadian Environmental Assessment Agency), Anita Stephens (Chapleau Ojibwe First Nation)	Steve Woolfenden (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
447	Phone Call	05/27/2014	On 2014-05-27, IAMGOLD contacted the Métis Nation of Ontario (MNO) Mineral Development Advisor to inquire about potential dates the Consultation Committee would be available for IAMGOLD to consult on the Draft Environmental Assessment/Environmental Impact Statement (EA/EIS) Report. IAMGOLD also inquired as to whether or not the MNO would prefer IAMGOLD consult directly with MNO Region 3 members on the Draft EA/EIS or the Consultation Committee alone. MNO confirmed they would prefer a meeting with the Consultation Committee and promised to get back to IAMGOLD with a proposed date for the meeting. IAMGOLD again offered any support to help move the Memorandum of Understanding through the MNOs internal review process at a more efficient pace.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)
449	Letter	06/04/2014	IAMGOLD issued a letter to the leadership of the Project's Aboriginal communities to inform them of the submission of the Draft Environmental Assessment/Environmental Impact Statement Report. The letter provided information on upcoming consultation opportunities where they could participate in the review of the Draft Report and provide comments on the Project.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Kevin Tangie (Brunswick House First Nation), Isadore Day (Serpent River First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Elenore Hendrix (Matachewan First Nation), Bruno Kistabish (Conseil de la Première Nation Abitibiwinni), Joseph Hare (M'Chigeeng First Nation), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)
481	E-mail	06/12/2014	On 2014-05-05, IAMGOLD sent an email to the Métis Nation of Ontario (MNO) Mineral Development Advisor to determine when the MNO would be available to participate in consultation on the Draft Environmental Assessment/Environmental Impact Statement Report (the Report). IAMGOLD also asked whether the MNO would prefer that IAMGOLD meet with the Region 3 community, or just the Consultation Committee. IAMGOLD followed up on this logistical request on 2014-06-02 with proposed dates. The MNO responded on 2014-06-11 with a proposed date of 2014-06-27, and noted that the meeting would be held only with the Consultation Committee. IAMGOLD confirmed this date on 2014-06-12, and provided an overview of the objectives of this meeting.	Andy Lefebvre (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)
464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Corey Dekker (Canadian Environmental Assessment Agency), Andy Lefebvre (Métis Nation of Ontario), Steven Momy (Ontario Ministry of the Environment), Marcel Lafrance (Métis Nation of Ontario), Urgel Courville (Northern Lights Métis Council), Liliane Ethier (Temiskaming Métis Council), James Wager (Métis Nation of Ontario), Alain Lefebvre (Métis Nation of Ontario), Charles Gauthier (Environment Canada), Carl Johansson (Canadian Environmental Assessment Agency)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
479	E-mail	07/04/2014	Following a phone call with the Métis Nation of Ontario (MNO) Mineral Development Advisor, where the individual requested to know the anticipated completion date of the feasibility study for the Project, IAMGOLD sent an email to inform the individual that the feasibility study was anticipated to be completed by the first quarter of 2016.	Andy Lefebvre (Métis Nation of Ontario)	Emma Malcolm (IAMGOLD Corporation)
456	E-mail	07/08/2014	On 2014-07-08, IAMGOLD fulfilled an obligation to the Métis Nation of Ontario (MNO), as outlined in the signed Memorandum of Understanding, and provided the MNO with a French and English Project summary to be sent out to MNO Region 3 community members. IAMGOLD also expressed that they would be happy to add any interested members to the Project mailing list so that they can receive all public mailouts, and directed the MNO to the Project website for further information about the Project.	James Wager (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)
476	E-mail	09/04/2014	IAMGOLD received an email from the Métis Nation of Ontario (MNO) Manager of Natural Resources and Consultation with an attached letter outlining that the MNO wish to negotiate an Impact and Benefit Agreement with IAMGOLD. The letter noted that the MNO would provide a draft for IAMGOLD's review at a near date. The details of this letter are confidential as per the agreement of both parties. The Manager of Natural Resources also noted that the MNO have selected a consultant for the Traditional Knowledge and Land Use Study and intend to commence work on it shortly.	Andy Lefebvre (Métis Nation of Ontario), Marcel Lafrance (Métis Nation of Ontario), David Hamilton (Chapleau Métis Council), Urgel Courville (Northern Lights Métis Council), Liliane Ethier (Temiskaming Métis Council), Alain Lefebvre (Métis Nation of Ontario), Aly Alibhai (Métis Nation of Ontario)	Aaron Steeghs (IAMGOLD Corporation)

Pre-EA Preparation (prior to January 14, 2014)					
6	Letter	09/13/2012	The Algonquin Anishinabeg Nation Tribal Council (AANTC) sent IAMGOLD a letter indicated that the Côté Gold Project operates in territory belonging to the people of Algonquin Anishinabeg Nation and that IAMGOLD has an obligation to consult and accommodate Aboriginals. AANTC invited IAMGOLD to contact them to arrange to meet and discuss how to work closely and to set up a protocol agreement.	Alice Jerome (Algonquin Anishinabeg Nation Tribal Council)	Aaron Steeghs (IAMGOLD Corporation), Robert Carreau (IAMGOLD Corporation), Stephen Letwin (IAMGOLD Corporation)
15	Phone Call	10/26/2012	IAMGOLD phoned the Grand Chief of Algonquin Anishinabeg Nation Tribal Council (AANTC) to discuss the Project. IAMGOLD committed to sending the Project Description (PD) when it becomes available and arranging a meeting with AANTC.	Alice Jerome (Algonquin Anishinabeg Nation Tribal Council)	Aaron Steeghs (IAMGOLD Corporation), Robert Carreau (IAMGOLD Corporation)
115	E-mail	03/26/2013	The Canadian Environmental Assessment Agency (the Agency) emailed Algonquin Anishinabeg Nation Tribal Council (AANTC) to identify that the Agency is seeking input from AANTC on the proposed Côté Gold mine development and its potential effects on the environment by 2013-04-15. The email provided a letter seeking input from AANTC and links to the Project Description (PD) and PD Summary. Hardcopies of the letter and PD were also sent to AANTC.	Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Dawn-Ann Metsaranta (Ontario Ministry of Northern Development and Mines), Ellen Campbell (Canadian Environmental Assessment Agency), Regent Dickey (Natural Resources Canada)	Steve Woolfenden (IAMGOLD Corporation)
107	Letter	03/28/2013	IAMGOLD sent a letter following up on a 2012-09-13 letter (ROC006) sent from Grand Chief of The Algonquin Anishinabeg Nation Tribal Council (AANTC) regarding businesses operating within the Algonquin territory. The letter introduced in detail the Côté Gold Project and the Environmental Assessment (EA) requirements for Project approval. IAMGOLD invited AANTC to discuss any questions or concerns pertaining to the Project.	Alice Jerome (Algonquin Anishinabeg Nation Tribal Council)	Aaron Steeghs (IAMGOLD Corporation)
108	Phone Call	04/03/2013	IAMGOLD spoke with Chief Jerome of the Algonquin Anishinabeg Nation Tribal Council to explain that the next step would be to present the Project Description in person either 2013-04-17 or 2013-04-22.	Alice Jerome (Algonquin Anishinabeg Nation Tribal Council)	Aaron Steeghs (IAMGOLD Corporation)
127	Phone Call	04/10/2013	IAMGOLD spoke with the Algonquin Anishinabeg Nation Tribal Council (AANTC) who stated that there was agreement amongst the 7 community Chiefs' of AANTC that they were not going to make an assertion on the Côté Gold Project. AANTC provided IAMGOLD with the Wahgoshig First Nation and Abitibiwinni Band Council contact information to follow up and confirm their non-participation status. IAMGOLD committed to following up with AANTC with a letter confirming the details of the conversation.	Alice Jerome (Algonquin Anishinabeg Nation Tribal Council)	Aaron Steeghs (IAMGOLD Corporation)
154	Letter	04/11/2013	IAMGOLD sent a letter confirming details of a phone conversation between IAMGOLD and the Algonquin Anishinabeg Nation Tribal Council (AANTC) (ROC 127). As requested by the AANTC, IAMGOLD committed to contacting Wahgoshig First Nation to determine their level of interest in the Project.	Alice Jerome (Algonquin Anishinabeg Nation Tribal Council)	Aaron Steeghs (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
24	Phone Call	16/05/2012	Phone call between IAMGOLD and Wabun Tribal Council (WTC). IAMGOLD discussed their view on building projects and commitment to ZERO HARM as well as high-level timelines around permitting and consultation.	Shawn Batise (Wabun Tribal Council)	Aaron Steeghs (IAMGOLD Corporation)
16	Letter	30/10/2012	IAMGOLD received Mattagami First Nation (MFN) letter of formal support and authorization for Wabun Tribal Council's (WTC) Mineral Development Advisor to conduct site visits on Mattagami traditional lands. IAMGOLD sent confirmation of receipt of letter.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), James Naveau (Mattagami First Nation)	Aaron Steeghs (IAMGOLD Corporation)
11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Caroline Burgess (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
144	Meeting	11/05/2012	IAMGOLD discussed the contract and service opportunities, and bidding process for work to be done on Chester Road with Miller Paving.	Jason Batise (Wabun Tribal Council)	Bruce Peters (IAMGOLD Corporation)
3	Phone Call	11/08/2012	IAMGOLD called Wabun Tribal Council (WTC) to discuss joint ventures and hiring policies used with other mining companies.	Jason Batise (Wabun Tribal Council)	Cheryl Naveau (IAMGOLD Corporation)
28	Meeting	11/08/2012	Second Meeting on the Impact Benefit Agreement (IBA) between IAMGOLD, Wabun Tribal Council (WTC) and Mattagami First Nation (MFN). Participants reviewed the draft IBA and discussed IAMGOLD's consultation strategy moving forward.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Jennifer Constant (Mattagami First Nation), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation)
41	E-mail	12/01/2012	IAMGOLD issues the draft amendment to the Exploration Agreement (2012-11-01) to Flying Post First Nation (FPFN), Mattagami First Nation (MFN), and Wabun Tribal Council (WTC).	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
384	Meeting	28/01/2013	On 2013-01-28, IAMGOLD met with the Chiefs from Flying Post and Mattagami First Nations and the Executive Director of Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. The details of this meeting are confidential as per the agreement of all parties involved.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
95	Mass Mailout	02/07/2013	IAMGOLD mailed a copy of the draft Project Description (PD) to the Wabun Tribal Council (WTC).	Shawn Batise (Wabun Tribal Council)	Aaron Steeghs (IAMGOLD Corporation)
68	Meeting	13/02/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Robert (Bob) McLeod (Flying Post First Nation), Richard Ray (Flying Post First Nation), Lynn Ray (Flying Post First Nation), Susan Baril (Flying Post First Nation)	Sandra Witt (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
69	Open House	13/02/2013	IAMGOLD hosted an open house session for the Flying Post First Nation (FPFN) community where they presented an overview of the draft Project Description using a PowerPoint presentation and poster boards. The presentation was attended by 33 community members.	Shawn Batise (Wabun Tribal Council), Lynn Ray (Flying Post First Nation), Unknown Unknown (Flying Post First Nation), Kevin Robinson (Flying Post First Nation), Crystal Ray (Flying Post First Nation)	Sandra Witt (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation)
71	Meeting	20/02/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Leonard Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation)	Caroline Burgess (AMEC Environment & Infrastructure), Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation)
79	Letter	26/02/2013	IAMGOLD sent a letter to the Wabun Tribal Council (WTC) seeking the Council's input in upcoming environmental assessment (EA) documents. IAMGOLD offered assistance in the reviewing process by offering to arrange meetings between IAMGOLD's technical experts and the Council's representatives and by providing additional capacity funding.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation)
123	Letter	26/02/2013	IAMGOLD sent a letter to Wabun Tribal Council (WTC), Flying Post First Nation (FPFN), and Mattagami First Nation (MFN) to inform them that IAMGOLD will be preparing a series of reports that describes the Côté Gold Project and is seeking input from the WTC and its member communities; FPFN and MFN. IAMGOLD offered capacity and financial support to these communities for the review and comment on these reports and environmental studies.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation)
120	E-mail	19/03/2013	On 2013-03-18, Wabun Tribal Council (WTC) replied to AMEC concerning the TK/TLU questionnaire. WTC shared that it will conduct their own study and ensure it meets IAMGOLD/AMEC's needs for the Environmental Assessment. AMEC responded to WTC on 2013-03-19 supporting the approach and suggested a meeting take place to discuss the questionnaire and other study parameters.	Shawn Batise (Wabun Tribal Council)	Caroline Burgess (AMEC Environment & Infrastructure)
385	Meeting	26/03/2013	On 2013-03-26, IAMGOLD met with the Chiefs from Flying Post and Mattagami First Nations and the Executive Director of Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. The details of this meeting are confidential as per the agreement of all parties involved.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)
99	Meeting	27/03/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Shawn Batise (Wabun Tribal Council), Andrew Neshawabin (Brunswick House First Nation), Kevin Tangie (Brunswick House First Nation), Charmaine Saunders (Brunswick House First Nation), Marjorie Tangie (Brunswick House First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), Natalie Gaudette (IAMGOLD Corporation)
153	E-mail	28/03/2013	IAMGOLD emailed signed copies of the Flying Post and Mattagami First Nations Traditional Knowledge and Traditional Land Use Sharing Agreements to the Wabun Tribal Council.	Shawn Batise (Wabun Tribal Council)	Caroline Burgess (AMEC Environment & Infrastructure), Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)

369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Robert (Bob) McLeod (Flying Post First Nation), Richard Ray (Flying Post First Nation), Lynn Ray (Flying Post First Nation), Susan Baril (Flying Post First Nation), Rick Hendricks (Wabun Tribal Council)	Cheryl Naveau (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Suzanne Morissette (IAMGOLD Corporation)
370	Meeting	15/10/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Jennifer Constant (Mattagami First Nation), Larry Naveau (Mattagami First Nation), Chris McKay (W.C. McKay Consulting Services), Bruce McKay (Mattagami First Nation), Rick Hendricks (Wabun Tribal Council)	Cheryl Naveau (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Suzanne Morissette (IAMGOLD Corporation)
391	Meeting	15/10/2013	On 2013-10-15, IAMGOLD met with the Economic Development and Technical Services Advisor from Wabun Tribal Council and the Lands and Resources Manager from Mattagami First Nation to discuss negotiations on the Impact Benefit Agreement. The details of this meeting are confidential as per the agreement of all parties involved.	Jason Batise (Wabun Tribal Council), Chris McKay (W.C. McKay Consulting Services)	Stephen Crozier (IAMGOLD Corporation)
368	Phone Call	28/10/2013	IAMGOLD left a voice mail for the Wabun Tribal Council Executive Director to inform him that IAMGOLD had scheduled a meeting with the Matachewan First Nation Chief and Council on 2013-10-30.	Shawn Batise (Wabun Tribal Council)	Aaron Steeghs (IAMGOLD Corporation)
414	Site Visit	11/12/2013	IAMGOLD hosted a site visit for Wabun Tribal Council's Technical Advisor. The Technical Advisor was shown the 2 Pike Point archaeological site, the proposed Tailings Management Facility area and the areas of the proposed water course realignment. IAMGOLD also reviewed the details of the Terms of Reference, the site plan, provided an overview of the local geology, explanation of the alternative assessments process, and decisions on site-layout.	Rick Hendricks (Wabun Tribal Council)	Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Steve Woolfenden (IAMGOLD Corporation), Alan Smith (IAMGOLD Corporation)
402	Meeting	12/11/2013	IAMGOLD met with representatives from Flying Post and Mattagami First Nations and Wabun Tribal Council to discuss negotiations on the Impact Benefit Agreement. Details of the negotiation are confidential as agreed upon by the respective Parties.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation)

Table D-9a: Records of Contact - Wabun Tribal Council

ROC	Event Type	Date	Event Summary	Stakeholders	Team
During EA Preparation (January 15, 2014 to September 30, 2014)					
406	Meeting	16/01/2014	IAMGOLD met with representatives from Wabun Tribal Council to discuss all of IAMGOLD's exploration permits in relation to Wabun communities' respective territories. The purpose of the meeting was to determine which permits could be covered under the existing Exploration Agreement and which permits would require new agreements. IAMGOLD left a map of the areas with Wabun Tribal Council to review with the respective community Chiefs.	Shawn Batise (Wabun Tribal Council)	Aaron Steeghs (IAMGOLD Corporation), Stephen Crozier (IAMGOLD Corporation), Alan Smith (IAMGOLD Corporation)
407	Meeting	16/02/2014	IAMGOLD met with a representative from Wabun Tribal Council to discuss Impact Benefit Agreement negotiations. The details of this meeting are confidential as per the agreement between the respective Parties.	Shawn Batise (Wabun Tribal Council)	Stephen Crozier (IAMGOLD Corporation)
413	E-mail	20/03/2014	On 2014-03-18, IAMGOLD contacted the Wabun Tribal Council Executive Director to discuss Spring consultation activities for Wabun communities as well as their technical advisors. IAMGOLD noted that they feel it is important to hold community sessions in the First Nation communities of Mattagami, Flying Post, Matachewan and Brunswick House. IAMGOLD also noted that they felt it was important to provide an overview of the Impact and Benefit Agreement to the communities of Mattagami and Flying Post First Nations as part of these consultation sessions. IAMGOLD suggested that Wabun provide input on the format of these sessions. IAMGOLD inquired if Wabun had any concerns about the timelines for Wabun's Technical Advisor and representatives review of the Draft Environmental Assessment Report and supporting documents. On 2014-03-20, the Executive Director responded that the timeline will work for them, and agreed to hosting community sessions in the four proposed communities, as well as providing a high-level overview of the Impact Benefit Agreement to the communities of Mattagami and Flying Post First Nations.	Shawn Batise (Wabun Tribal Council)	Aaron Steeghs (IAMGOLD Corporation)
434	Letter	04/08/2014	IAMGOLD provided the Wabun Tribal Council's Executive Director and Technical Advisor as well as to the Métis Nation of Ontario's Consultation Coordinator with a letter noting that IAMGOLD was submitting the Environmental Impact Statement for the Project to the Canadian Environmental Assessment Agency in the near-term. To provide adequate time for review, IAMGOLD also provided electronic copies (USB stick) of the Project baseline studies to assist with review of the Draft Environmental Assessment/Environmental Impact Statement in advance of the commencement of the official comment period.	Shawn Batise (Wabun Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)

Table D-9a: Records of Contact - Wabun Tribal Council

ROC	Event Type	Date	Event Summary	Stakeholders	Team
449	Letter	06/04/2014	IAMGOLD issued a letter to the leadership of the Project's Aboriginal communities to inform them of the submission of the Draft Environmental Assessment/Environmental Impact Statement Report. The letter provided information on upcoming consultation opportunities where they could participate in the review of the Draft Report and provide comments on the Project.	Walter Naveau (Mattagami First Nation), Marcia Brown Martel (Beaverhouse First Nation), Shawn Batise (Wabun Tribal Council), Murray Ray (Flying Post First Nation), Alice Jerome (Algonquin Anishinabeg Nation Tribal Council), Andy Lefebvre (Métis Nation of Ontario), Kevin Tangie (Brunswick House First Nation), Isadore Day (Serpent River First Nation), Anita Stephens (Chapleau Ojibwe First Nation), Elenore Hendrix (Matachewan First Nation), Bruno Kistabish (Conseil de la Première Nation Abitibiwinni), Joseph Hare (M'Chigeeng First Nation), Rick Hendricks (Wabun Tribal Council)	Steve Woolfenden (IAMGOLD Corporation)
463	Open House	18/06/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Shawn Batise (Wabun Tribal Council), Corey Dekker (Canadian Environmental Assessment Agency), Murray Ray (Flying Post First Nation), Robert (Bob) McLeod (Flying Post First Nation), Richard Ray (Flying Post First Nation), Lynn Ray (Flying Post First Nation), Susan Baril (Flying Post First Nation), Unknown Unknown (Flying Post First Nation), Rosie Ray (Flying Post First Nation), Penny Ann Robinson (Flying Post First Nation), Valerie Bull (Flying Post First Nation), Cole Clearwater (Flying Post First Nation), Cathy Ray (Flying Post First Nation), Roy A. Ray (Flying Post First Nation), Stephanie Ray (Flying Post First Nation), Sherry Boodram (Canadian Environmental Assessment Agency (CEAA)), Paul Jordan (Ministry of the Environment), Budsy Manilla (Flying Post First Nation)	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation), Sylvain Morissette (IAMGOLD Corporation)
466	Open House	26/06/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	"Additional Stakeholder Information" provided at the end of this table for a complete list of participating stakeholders.	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation), Alan Smith (IAMGOLD Corporation), Sylvain Morissette (IAMGOLD Corporation)
465	Meeting	07/08/2014	IAMGOLD held a meeting with Wabun Tribal Council, the Canadian Environmental Assessment Agency (the Agency) and representatives from the Ministry of the Environment to discuss Wabun Tribal Council's Technical Reviewer comments on the Draft Environmental Assessment/Environmental Impact Statement Report. The Technical Reviewer provided a presentation that described a summary of issues that would be formally presented in the submission of comments on the Report. Following the presentation, the Chiefs of Mattagami and Flying Post First Nations each noted that irrespective of the scientific environmental assessment completed, they believe that given the size of the Project's footprint on the environment, the Project has significant environmental impacts. It was explained that their understanding of the significance of the Project would be provided to the Agency vis-à-vis comments submitted by Wabun's Technical Reviewer on the Report.	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Corey Dekker (Canadian Environmental Assessment Agency), James Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation), Murray Ray (Flying Post First Nation), Robert (Bob) McLeod (Flying Post First Nation), Denis Durocher (Ontario Ministry of the Environment), Richard Ray (Flying Post First Nation), Lynn Ray (Flying Post First Nation), Steven Momy (Ontario Ministry of the Environment), Larry Naveau (Mattagami First Nation), Bruce McKay (Mattagami First Nation), Rick Hendricks (Wabun Tribal Council), Carla Brekhart (Canadian Environmental Assessment Agency), Suzanne Barreel (Flying Post First Nation), Angula Puvananathan (Canadian Environmental Assessment Agency)	Aaron Steeghs (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation)

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
148	Meeting	05/02/2013	IAMGOLD met with Chief and Council of Mattagami First Nation (MFN), along with their Crisis Team and provided assistance in fixing MFN's road washout. IAMGOLD worked with MFN to fix the road.	Walter Naveau (Mattagami First Nation), James Naveau (Mattagami First Nation), Leonard Naveau (Mattagami First Nation), Jennifer Constant (Mattagami First Nation), Halina Naveau (Kunuwanimano Child and Family Services), Larry Naveau (Mattagami First Nation), Bruce McKay (Mattagami First Nation), Darlene Naveau (Mattagami First Nation), Eileen Boissonneau (Mattagami First Nation), Amanda Ryan (Mattagami First Nation)	Cheryl Naveau (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Bruce Peters (IAMGOLD Corporation)
168	E-mail	05/16/2013	AMEC, on behalf of IAMGOLD, sent a request to the Kunuwanimano Child and Family Services for an interview concerning the socio-economic effects for the proposed Côté Gold Project.	Micheal Miller (Kunuwanimano Child and Family Services)	Cheyenne Martin (AMEC Environment & Infrastructure)
259	E-mail	06/05/2013	AMEC sent an email request to conduct an interview the Executive Director of Kunuwanimano Child and Family Services concerning the socio-economic effects of the proposed Project.	Micheal Miller (Kunuwanimano Child and Family Services)	Don Charette (AMEC Environment & Infrastructure)
During EA Preparation (January 15, 2014 to September 30, 2014)					
466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Please refer to the "Additional Stakeholder Information" provided at the end of this table for a complete list of participating stakeholders.	Cheryl Naveau (IAMGOLD Corporation), Aaron Steeghs (IAMGOLD Corporation), David Brown (IAMGOLD Corporation), Stephan Theben (AMEC Environment & Infrastructure), Steve Woolfenden (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation), Alan Smith (IAMGOLD Corporation), Sylvain Morissette (IAMGOLD Corporation)

Table D-9a: Records of Contact - Lake Huron Regional Committee

ROC	Event Type	Date	Event Summary	Stakeholders	Team
Pre-EA Preparation (prior to January 14, 2014)					
310	Phone Call	08/26/2013	IAMGOLD had a teleconference with the Regional Chief of Serpent River First Nation. The purpose of the phone call was to provide the Regional Chief with an overview of the Project and IAMGOLD's consultation efforts with Aboriginal communities to date. The Regional Chief was informed by IAMGOLD that the Project falls above the Arctic/Atlantic watershed divide. The Regional Chief agreed to review the site location map and agreed to inform IAMGOLD should any other follow-up consultation be required. IAMGOLD sent a link via email to the Project Description on IAMGOLD's website and PowerPoint that included an overview of the Project and a copy of the site location map to the Robinson Huron Committee.	Isadore Day (Serpent River First Nation), Charlotte Commanda (Lake Huron Regional Committee)	Aaron Steeghs (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)
336	E-mail	09/11/2013	On 2013-09-04, IAMGOLD contacted the Lake Huron Regional Director to follow-up on a previous meeting, to see if there was anything else IAMGOLD could do to facilitate community relations with the Robinson Huron Treaty Nations. After not receiving a response, IAMGOLD emailed the Director on 2013-09-11 to follow-up. The same day, the Director responded that at this time, no further action was required, and that they would be in touch should there be any updates. IAMGOLD thanked the director for their correspondence.	Charlotte Commanda (Lake Huron Regional Committee)	Emma Malcolm (IAMGOLD Corporation)
During EA Preparation (January 15, 2014 to September 30, 2014)					
438	Phone Call	05/14/2014	IAMGOLD called and left a message for the Robinson Huron Treaty First Nations' Regional Director to determine if there had been any further interest from Serpent River and M'Chigeeng First Nations in the Project. IAMGOLD requested that they connect at the nearest possible time to discuss their potential interest in an assertion on the Project.	Charlotte Commanda (Lake Huron Regional Committee)	Aaron Steeghs (IAMGOLD Corporation), Emma Malcolm (IAMGOLD Corporation)

Table D-9a: Records of Contact - Aboriginal Communities
Additional Stakeholder Information

ROC	Stakeholders
Pre-EA Preparation (prior to January 14, 2014)	
199	Glenn Seim (Ontario Ministry of Northern Development and Mines), Paul & Laurie Leavitt (Mesomikenda Lake Cottage Owner), Denis Durocher (Ontario Ministry of the Environment), Dawn-Ann Metsaranta (Ontario Ministry of Northern Development and Mines), Jay Cornelson (Canadian Trade-Ex), Micheal Mayhew (Stratum Group), Pat Bamford (City of Timmins), Frank Giorno (Mining Life and Exploration News Magazine), Tony Godin (Individual - Timmins), Joe Evers (Mattagami Region Conservation Authority), Daniel Giroux (College Boreal), Robert Calhoun (Ontario Ministry of Northern Development and Mines), Gary Richards (Westburne), Jason Denis (ReadyQuip), Sue Prince (Mattagami First Nation), Heather Boyer (Ontario Ministry of Northern Development and Mines), Rory Dredhart (Unknown Individual), Michael Seim (Unknown Individual), Larry Sorochan (Individual - Timmins), John Rothel (Individual - Timmins), Joel Michaud (Individual - Timmins), Erich Koroschetz (Individual - Timmins), John Taylor (Unknown Individual), Scott Syner (Individual - Timmins), Tanner Parcey (Individual - Timmins), Jean-Pierre Nadon (Individual - Timmins), Mélanie Dufresne (Individual - Timmins), George Hughes (Individual - Sudbury), Danielle Talbot-Lariviere (College Boreal), Brenda Camirand (Individual - Timmins), Pamela Reid (Individual - Timmins), Dana Lajeunesse (Individual - Timmins), Tom Parisi (Individual - Timmins), Bev Osterberg (Individual - Timmins), Sylvain Payeur (Unknown Individual), Dan Charbonneau (Individual - Timmins), Joel Leclerc (Individual - Timmins), Garfield Bowker (Individual - Timmins), Royal Lafleur (Unknown Individual), Kyle Doherty (ABB), Paul Boutin (Individual - Timmins), Kashmir Singh (ABB)
During EA Preparation (January 15, 2014 to September 30, 2014)	
466	Walter Naveau (Mattagami First Nation), Shawn Batise (Wabun Tribal Council), Corey Dekker (Canadian Environmental Assessment Agency), Leonard Naveau (Mattagami First Nation), Carroll Leith (Ontario Ministry of the Environment), Unknown Unknown (Unknown Individual), Dawn-Ann Metsaranta (Ontario Ministry of Northern Development and Mines), Steven Momy (Ontario Ministry of the Environment), Candice Andress (Mattagami First Nation), Glenn Naveau (Individual - GP), Halina Naveau (Kunuwanimano Child and Family Services), Norman Naveau (Mattagami First Nation), Geri Andress (Individual - Gogama), Daisy Naveau (Mattagami First Nation), Larry Naveau (Mattagami First Nation), Lawrence Naveau (Mattagami First Nation), Robert Calhoun (Ontario Ministry of Northern Development and Mines), Darlene Naveau (Mattagami First Nation), Deanna Heyde (Mattagami First Nation), Rick Hendricks (Wabun Tribal Council), Stacy Naveau (Individual - GP), Samantha Chookomolin (Mattagami First Nation), Charles Gauthier (Environment Canada), Junior Hooysma (Mattagami First Nation), Nancy Naveau (Mattagami First Nation), Joyce Luke (Mattagami First Nation), Carl Johansson (Canadian Environmental Assessment Agency), Betty Naveau (Mattagami First Nation), Gladys Naveau (Mattagami First Nation), Francis Naponse (Mattagami First Nation), Kory Wheesk (Mattagami First Nation)

APPENDIX D-9b
ABORIGINAL RECORDS – COMMENTS AND RESPONSES ON EIS / DRAFT EA REPORT

APPENDIX D9b

RESPONSES TO COMMENTS FROM ABORIGINAL GROUPS ON THE EIS / DRAFT EA REPORT

This document provides a summary of comments received on the Environmental Impact Statement (EIS) / Draft Environmental Assessment (EA) Report from Aboriginal Groups. Aboriginal groups that provided comments, dates received and assigned comment numbers are provided below:

- Brunswick House First Nation Open House (June 5, 2014; Comments #1 to 16);
- Flying Post First Nation Open House (June 18, 2014; Comments #17 to 23);
- Mattagami First Nation Open House (June 26, 2014; Comments #26 to 38);
- Métis Nation of Ontario Meeting (June 27, 2014; Comments #39 to 57);
- Betty Naveau and other members of Mattagami First Nation (July 4, 2014; Comment #62); and
- Wabun Tribal Council (July 20, 2014; Comments #170 to 324).

Comments were also received from the Métis Nation of Ontario in October 2014. As these comments were received during finalization of the Amended EIS / Final EA Report, IAMGOLD was not able to formally respond to the comments within the Amended EIS / Final EA Report. IAMGOLD will respond to these comments, along with any other comments received on the Amended EIS / Final EA Report.

Table 1 provides all comments received from Aboriginal groups on the EIS / Draft EA Report up to September 30, 2014. The table also lays out IAMGOLD's response to each comment, as well as any changes made to the EA as a result of the comment.

Table 1: Responses to Comments on the EIS / Draft EA Report

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
1	Brunswick House First Nation	Where does Bagsverd Creek flow to?	Bagsverd Creek flows to Neville Lake and then to Mesomikenda Lake, which is part of the Mattagami River watershed. The Mattagami River Watershed has headwaters to the south at the James Bay / Great Lakes watershed divide and flows north for approximately 420 km to a confluence with the Moose River, which subsequently flows to James Bay.	None.	n/a
2	Brunswick House First Nation	So will the water continue to flow south then? Will the realignments change the flow / the direction of the water flow?	As part of the proposed development of the Project, several water features will be fully or partially overprinted. These include Côté Lake and Beaver Pond, portions of Upper Three Ducks Lake, Clam Lake, Clam Creek, the Mollie River and Bagsverd Creek. In order to accommodate the Project components, the Mollie River will be realigned to flow north from Chester Lake into Clam Lake, where it will continue northward through Little Clam Lake into West Beaver Pond and the South Arm of Bagsverd Lake and then will be redirected southeast into Weeduck Lake. From there it will flow south, back into its original watershed in Upper Three Ducks Lake. Additionally, Bagsverd Creek will be realigned to flow west of the Tailings Management Facility (TMF) and connect to Unnamed Lake #2, where it will flow east into Unnamed Lake #1 and then back to Bagsverd Creek, as it continues flowing northward to Neville Lake.	None.	n/a
3	Brunswick House First Nation	Will Bagsverd Creek be diverted?	Yes, Bagsverd Creek will be realigned to flow west of the TMF and connect to Unnamed Lake #2, where it will flow east into Unnamed Lake #1 and then back to Bagsverd Creek, as it continues flowing northward to Neville Lake.	None.	n/a
4	Brunswick House First Nation	What is the rate of flow from Bagsverd? When you dam and reroute, how will the flow change? – I am trying to understand from an ecological perspective – will the realignment hurt, harm or enhance aquatic species in the area?	According to the Hydrology baseline, the current flow in Bagsverd Creek at the outflow ranges from 190 to 3,610 L/s, with an average of 1,101 L/s. There will be a decrease to the annual flow in Bagsverd Creek between 13 to 16% due to the watercourse realignments as well as due to the loss of footprint from the TMF. The watercourse realignments have been designed in such a way to maintain or, wherever possible, enhance the integrity of the aquatic ecology of the area.	None.	n/a
5	Brunswick House First Nation	What is the proposed channel width for the realignments?	The channel width for the proposed watercourse realignments will be approximately 60 metre overall top-width. The actual channel width will be specific to each watercourse realignment, and dependent on location and depth of cut (excavation). The intent of the watercourse realignments is to ensure that the channel's physical shape will vary and comprise a meandering low flow section and wider marshy overbank area: slopes on the channel banks will extend upwards to match existing topography. The deeper the cut (excavation) the wider the overall top-width.	None.	n/a
6	Brunswick House First Nation	Who are the proposed contractors / engineers being considered to design the watercourse realignments?	To date, Calder Engineering has been supporting the design of the watercourse realignments. Contractors / engineers to carry out the design have yet to be selected. Once the feasibility study is completed, IAMGOLD Corporation (IAMGOLD) would be happy to accept bids from local contractors for the development of these realignments.	None.	n/a
7	Brunswick House First Nation	We would like to understand from an aerial perspective how the watercourse realignments will look. Are there pictures that show this from an aerial perspective in the Environmental Assessment.	IAMGOLD has done helicopter tours with government regulators previously, and this is something that IAMGOLD would consider doing again with leadership from local Aboriginal communities. The maps presented in the Amended EIS / Final EA Report show the planned future watercourse realignments from an aerial perspective.	None.	n/a
8	Brunswick House First Nation	Do you have a diagram in the Environmental Assessment outlining what waters will be collected and realigned?	Yes, Figures 5-2 to 5-5 of the EA report present the various stages of the watercourse realignments.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
10	Brunswick House First Nation	We are concerned about tailings ponds leaking out to Bagsverd Creek.	Seepage collection ponds will be placed along or contained by natural topography. Dams / berms will be aligned in low-lying areas. Six collection ponds are proposed around the TMF's northern and southern boundaries and two seepage collection ponds west of the polishing pond dam. Seepage collection ponds will be designed to collect runoff and seepage. They will be designed with enough storage capacity to allow for storage and pumping water to the mine water pond during periods of high or low flow year-round. Seepage collection ponds along the TMF and polishing pond will return water to their respective Project components. The TMF has been designed in such a way that the risk of spills to other water bodes is minimal. There have also been safeguards developed in our accidents and malfunction plan to ensure that there is a plan of action in place for immediate implementation should anything of this nature occur.	None.	n/a
11	Brunswick House First Nation	We've experienced problems with Detour Gold – like highways being shut down during construction and stuff – this makes us realize with a Project such as this, you have a Project footprint, a Water footprint and a footprint of externalities. It is important for us to consider the impact of all of these.	The effects of the Project on traffic and surrounding communities are considered in the socio-economic prediction of effects.	None.	n/a
12	Brunswick House First Nation	I am still trying to get an idea of the impact on flow and the tailings ponds – I will get back to you with more questions about this.	n/a	None.	n/a
13	Brunswick House First Nation	Are there any plans to use staging camps during construction?	At this point IAMGOLD has not begun to fully assess the logistics of the Project during the construction phase. If using staging camps would create less of an interruption to local communities during Project construction, it is something that IAMGOLD could consider.	None.	n/a
14	Brunswick House First Nation	We would like to see as many local suppliers used as possible to avoid traffic and shut downs on highways during the construction phase of the Project.	It is IAMGOLD's intent to use local suppliers, as appropriate, during Project development as this may help to mitigate traffic impacts and provide benefits to local businesses. IAMGOLD does not currently anticipate a need for any shut downs on the Highway during construction. The Project is well supported by local infrastructure.	None.	n/a
15	Brunswick House First Nation	Will you be milling ore and gold here?	IAMGOLD will process the ore at the site with the final product being doré gold bars.	None.	n/a
16	Brunswick House First Nation	What waters will be collected, is there a diagram?	Yes, Figures 5-2 to 5-5 of the Amended EIS / Final EA Report present the various stages of the watercourse realignments.	None.	n/a
17	Flying Post First Nation Open House	Is there an expiry date on an approved environmental assessment?	There is no expiration date on the approval. The Canadian Environmental Assessment Agency (CEA Agency) is looking at including conditions to the approval such that if the Project were to change considerably, the approval would no longer be valid.	None.	n/a
18	Flying Post First Nation Open House	So once the engineering design and feasibility studies are done – and if any big changes are made – will another Environmental Assessment be required?	The approval would be granted for the Project described and assessed in the EA. If a major change to the design was made (i.e., relocation of the TMF) IAMGOLD would likely need to carry out another EA or revise the existing EA. Also, any permits submitted would have to be changed or resubmitted.	None.	n/a
19	Flying Post First Nation Open House	To confirm, as one of the mitigations, IAMGOLD will not allow Project staff to hunt or fish on site?	Correct. Project staff will not be allowed to hunt and/or fish on site during the construction, operations and closure phases of the Project.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
20	Flying Post First Nation Open House	Since your last presentation, what in terms of the Project design has changed?	IAMGOLD has changed the design of the Mine Rock Area (MRA). Previously IAMGOLD planned for three smaller MRAs, but the current design now has the mine rock placed in one location. This was done to reflect community feedback, and because creating only one MRA will reduce the Project footprint and reduce water and noise effects. Project effluent will be discharged to Bagsverd Creek. The EA revealed that the effect on the environment to Bagsverd is actually smaller compared to Mesomikenda Lake – this is generally because the lack of flow in and out of Mesomikenda. IAMGOLD has also worked to develop a closed-loop on-site water management system to reduce freshwater intake and effluent, which only requires seasonal discharge. IAMGOLD has also selected the Cross-Country Alignment as the preferred alternative for the power supply to the Project. Additionally, there is now only the tailings pipeline on the west of the TMF, the east option no longer exists.	None.	n/a
21	Flying Post First Nation Open House	What is the intake of water per day for the mine?	Although at this time the freshwater removal rate is not expected to be greater than 20% of the process water demand at the ore processing plant, the maximum freshwater removal rate will be determined during the Permit to Take Water application phase. Freshwater will be taken in accordance with conditions associated with the Permit to Take Water, when approved. The water removal is intended to supplement recycled site water and provide for truck washing, potable and fire reserve requirements.	None.	n/a
22	Flying Post First Nation Open House	When I think of non-miners in this community, I don't think they can fully conceptualize the size of the open pit. It would be useful if we could see some images of Projects of a comparable size. It would be a useful tool for the average person.	IAMGOLD understands these concerns and is committed to work closely with Aboriginal communities to maximize Project-related benefits to potentially affected communities. Throughout consultation activities IAMGOLD has made efforts to show comparable examples and IAMGOLD is committed to continue these efforts.	None.	n/a
23	Flying Post First Nation Open House	I think it is important that we think carefully of future generation. With a Project of this size hurting so much of the environment, it is important that it is at least offset with jobs and progress. And while this Project may bring a lot of progress, it has to be worth it, and that can be difficult to judge.	IAMGOLD understands these concerns and is committed to work closely with the First Nations to maximize the benefits to the First Nations communities.	None.	n/a
26	Mattagami First Nation Open House	Is this considered consultation or an information session?	There is not just one event that is 'consultation'. Rather, anytime information is shared with you from either the proponent or the government, it should be considered consultation – it is very much an ongoing process.	None.	n/a
27	Mattagami First Nation Open House	The water has a lot of spiritual importance for us. I would like to continue a dialogue with IAMGOLD that is based on trust. It is important that we develop a relationship that will support our generation and those that will come after us.	IAMGOLD is very supportive of this dialogue and will actively pursue activities that will aim at deepening the relationship with the local First Nations.	None.	n/a
28	Mattagami First Nation Open House	You have not yet talked about us as a species at risk – if you are taking away our fish and mushrooms away from us – you are putting us at risk. We need to think very carefully about how we move forward.	IAMGOLD understand these concerns. It is not expected that the Project will have a measurable effect to the abundance and distribution of plants in the region.	None.	n/a
29	Mattagami First Nation Open House	I am pleased to accept the tobacco that IAMGOLD has offered to us, on the condition that IAMGOLD continues to treat our community with respect.	The comment has been noted. No response required.	None.	n/a
30	Mattagami First Nation Open House	There was a poster put up in the community requesting input from people who wanted to participate in a TK/TLU study. The poster requested that our information about the land and our uses be specific to the IMG Project area. I would like to inform you that we cannot provide information in the format you are requesting because we use the land beyond the perimeter of the IMG property. I would also like to note as a mother, and as a woman, that we have a responsibility to the water – without water we would not survive, it is very sacred – subsequently, I am requesting that a full ceremony take place at Cote Lake immediately – and I am happy to coordinate that.	IAMGOLD is not involved in the Traditional Knowledge (TK) / Traditional Land Use (TLU) study being conducted by Wabun Tribal Council. IAMGOLD previously provided funding for a TK / TLU specific to the proposed Project and the results of this study were incorporated into the draft EA. IAMGOLD is committed to working with Mattagami First Nation and other Aboriginal communities to honour requests for traditional ceremonies at the Project site and will follow-up on the request for a water ceremony as well as a request that was received for a traditional pipe ceremony.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
31	Mattagami First Nation Open House	What is IAMGOLD going to do about the Eagle's nest? Q: Is the Ministry of Natural Resources aware of this nest?	As committed to during the presentation provided to the community, IAMGOLD will remove the eagle's nest. However, the environmental assessment (EA) studies have identified that the local Eagle population as a whole will not be impacted, as there is sufficient suitable habitat in the region to support the population. As explained in the presentation, during the comment period, all relevant Provincial and Federal ministries were invited to provide comments on the EIS / Draft EA Report.	None.	n/a
32	Mattagami First Nation Open House	Is there a biodiversity report on Cote Lake? Has Chief and Council seen this Report?	IAMGOLD has completed substantial reports on wildlife and vegetation communities in the Project area. Notice of public review of the EIS / Draft EA Report was provided to the community along with a copy of the EIS / Draft EA Report on June 13, 2014.	None.	n/a
33	Mattagami First Nation Open House	I also agree that women need to stand together to provide a dialogue to men with our input in the Project. Our female elders, and other women of the community want to give more guidance and direction on the Project. Traditionally, water ceremonies are led by women – that is the way the process is to be done. You need women's input on the Project – you need to talk to women in the community.	IAMGOLD followed-up with Mattagami First Nation and held a preliminary brainstorming session on July 15, 2014 with interested women from the community. IAMGOLD committed to meeting again with the women of the community at their request to continue discussions.	None.	n/a
34	Mattagami First Nation Open House	How is elders knowledge being incorporated into the EA? For what purpose are you using our elders knowledge?	IAMGOLD funded a TK / TLU study to identify traditional land and resource uses by Aboriginal people at the Project site or adjacent areas. The independent consultant hired to conduct the study interviewed elders from Mattagami First Nation and Flying Post First Nation. As part of the EA, effects were assessed on plant harvesting, hunting, fishing, canoeing, and cultural, spiritual or ceremonial sites for all phases of the Project (construction, operations, closure and post-closure). A youth and elders meeting was also held in May 2014 to identify particular areas of concern and answer questions about the Project.	None.	n/a
35	Mattagami First Nation Open House	The way this material is being presented is inaccessible to non-miners.	IAMGOLD has shared EA-related information in various formats, including an executive summary, a plain language fact sheet of key EA findings, presentations and one-on-one discussions. IAMGOLD will also be available after this presentation to discuss these issues one-on-one with interested individuals.	None.	n/a
36	Mattagami First Nation Open House	Do we have a 100% guarantee that our water will not be affected? If not, then what? What about seepage?	During the presentation, IAMGOLD explained all mitigations and components of Project design that will be implemented to ensure that water quality remains well below criteria and guideline limits.	None.	n/a
37	Mattagami First Nation Open House	I think it is important that IAMGOLD seek information from groups other than just elders. I also use the land, and I've learned traditional practices from my elders that I would like to share	IAMGOLD is committed to effective consultation and information sharing throughout the Project. IAMGOLD is open to feedback from everyone.	None.	n/a
38	Mattagami First Nation Open House	I don't think it is possible to run a mine for 15 years and have it return to the same way it was before. It is going to take a very long time for this land to be healed. I want the land to be protected for my grandchildren – and my concern is for the health of the land- how much rehabilitation can really be done?	IAMGOLD will submit permit applications and will demonstrate financial assurance before proceeding with the development of the Project. Closure permits require that IAMGOLD has the capacity to rehabilitate the land to a productive state. IAMGOLD has committed to revegetate and bring the land back to as natural a state as possible. It should be noted that the open pit will take approximately 50-80 years to fill.	None.	n/a
40	Métis Nation of Ontario	The duty to consult is primarily required in the EA process – whereas once a company moves into the permitting phase, it is much more about monitoring impacts to Métis rights – so that is why we are so concerned about identifying our rights.	The comment has been noted. No response required.	None.	n/a
41	Métis Nation of Ontario	What is the role of other Federal authorities in the EA process?	Response by C Dekker (CEA Agency): Other agencies will advise on EA decisions throughout the EIS comment period, and then later will work on permits with IAMGOLD. During the EA process, CEA Agency will act as the lead regulatory agency.	None.	n/a
42	Métis Nation of Ontario	We would like to see a list of potential permits that will need to be obtained by IAMGOLD in the future and what government authorities are involved in the decision-making around those permits.	Please see Tables 2-1 and 2-2 of the Amended EIS / Final EA Report for lists of required Federal and Provincial environmental approvals, respectively.	None.	n/a
43	Métis Nation of Ontario	What is MNO's timeline to provide TK into the EA – we need to make sure that we get traditional Métis knowledge into EA	IAMGOLD provided a deadline of September 1, 2014 for submission to ensure that the TK study could be incorporated into the EA.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
44	Métis Nation of Ontario	What are the absolute numbers for GHG emissions that will come from the Project?	It has been calculated that the greenhouse gas emissions, based on conservative estimates and including an estimation of greenhouse gases associated with the electricity required by the Project would be approximately 285,818 tonnes of CO_2 equivalent per year, as a maximum.	None.	n/a
45	Métis Nation of Ontario	What is the percentage of GHG emissions that will come from the Project for the region in which we harvest?	This information is not available and therefore IAMGOLD cannot calculate this number.	None.	n/a
46	Métis Nation of Ontario	Will the blasting affect the fish?	An assessment of the potential effects of blasting on fish is included in the EA. For the most part, the only fish that will be affected are ones that are already in lakes that have been damned. The area potentially affected will either be overprinted by the construction of dams or is largely profundal (deep) and provides limited spawning habitat for the resident fish within this lake. Having said that, IAMGOLD will keep this potential impact in mind as it moves forward with planning the development of the water channel realignments.	None.	n/a
47	Métis Nation of Ontario	How many kilometres of new channel realignment will be developed?	The proposed watercourse realignments will total approximately 7.9 km.	None.	n/a
48	Métis Nation of Ontario	What is the relevance of the few samples that seem to have an acid generating potential?	The geology at the site is consistent; there are very low levels of sulphur in the rock. Additionally, there is a fair amount of carbonate and IAMGOLD is confident about the very low net potential to generate acid. More test work is ongoing to further increase the level of confidence in these findings.	None.	n/a
49	Métis Nation of Ontario	How will you know if you build a water realignment in an area where the rock is high in sulphur?	A testing and sampling program has been carried out to ensure that the watercourse realignments will be constructed in ground that is non-acid generating.	None.	n/a
50	Métis Nation of Ontario	So is it your understanding that all elevated levels of elements in the water are a result of purely natural sources?	Yes, this is IAMGOLD's understanding.	None.	n/a
51	Métis Nation of Ontario	Do the studies assess where specific vegetation communities grow? Or, do they just list the vegetation communities in the area? I anticipate that this information is something that will come out of our Traditional Knowledge study.	Plant community mapping was initially completed as a desktop exercise using information acquired from the Forest Resource Inventory. Existing information was used to identify habitats with potential to support plant species at risk (SAR). Preliminary desktop mapping of upland and wetland plant communities were ground-truthed and detailed plant species inventories were completed.	None.	n/a
52	Métis Nation of Ontario	In the forestry industry, there is a requirement to leave a buffer zone around any raptors nests. Do those same requirements apply to the mining industry?	Such a buffer zone requirement does not apply to the development of the Project. IAMGOLD will be required to remove one eagle's nest. This removal will take place outside of the breeding season. It is expected that the eagle will relocate to other available nests in the area.	None.	n/a
53	Métis Nation of Ontario	What policies will be in place (if any), when/if animals invade the Project site?	If animals invade the Project site, both employee health and safety, and animal wellbeing need to be considered. Employee health and safety training will include awareness training for moose, black bear, wolf and other potentially dangerous animals that are likely to be encountered near the mine. Appropriate personal protective equipment will be provided to employees that may be exposed to wildlife. An Emergency Response Plan will be developed for mine operations and will include procedures for incidents involving aggressive wildlife. Wildlife that enter the mine area will be left alone to the extent practicable. There will be temporary suspension of surface blasting if moose, black bear, wolf and other wildlife are observed within the danger zone identified by the blast supervisor. Mitigation measures for wildlife are provided in Table 10-2 of the final Amended EIS / Final EA Report. If a nuisance animal such as a habituated black bear is encountered at the mine site then IAMGOLD will contact the Ministry of Natural Resources and Forestry (MNRF) for guidance.	None.	n/a
54	Métis Nation of Ontario	When you refer to 'suitable habitat', what are you describing, quality and quantity?	Both quality and quantity are considered when referring to suitable habitat.	None.	n/a
55	Métis Nation of Ontario	In the archaeological assessment, was there any distinction made between Métis and First nation pre-contact archaeological sites?	The archaeologist indicated that there are no Métis pre-contact archaeological sites. The later sites are all early mining camps. None of the archaeological sites appear to relate to the Métis peoples settlement.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
56	Métis Nation of Ontario	What are you referring to when you use the term 'risk-based reference' value?	This means that the water quality is compared to the actually species in the water and the use of the water. The Project will then be designed to meet or fall below these values.	None.	n/a
57	Métis Nation of Ontario	Currently, your EIS is void of descriptions of any impact to the Métis – you suggest there are no residual effects – but you do not know what the impact to the Métis. Until we can identify impacts, we need to assume that these impacts are significant.	IAMGOLD is keen to incorporate the Métis TK study into the EA if the information is received in a timely manner. IAMGOLD feels confident that the conclusion that effects on Métis peoplewill not be significant, without the TK information, remains valid. IAMGOLD has considered impacts on Aboriginal people (First Nations and Métis) within the EA. Certainly if the TK study provides information about the use of the site that IAMGOLD is not currently aware of it, it will be given the appropriate level of consideration. As of September 30, 2014 the Métis Tradition TK / TLU study has not been received and therefore its findings and conclusions / recommendations have not been included in the Amended EIS / Final EA Report.	None.	n/a
62	Betty Naveau and other members of Mattagami First Nation	How would you like to be involved in the environmental assessment process of the Côté Gold Project? By my voice and genuine concerns to be heard and taken seriously. We teach our young through our teachings passed on from generations and would like our land for generations to come!	The comment has been noted. IAMGOLD is taking all comments seriously and is willing to continue a dialogue with Mattagami First Nation to understand specific concerns about the Project.	None.	n/a
170	Wabun Tribal Council	G-1. Project Definition. The Côté Gold Project has undergone several changes over the past couple of years further to consultations undertaken by the Proponent to optimize its layout and design. As a result of this process, the Project has been improved but there are some inconsistencies in the Project design between documents within the EIS, likely as a result of component studies having been completed earlier than the EIS. In other cases, there appear to remain some opportunities for further optimization or further clarity is required to determine the optimal approach.	Your comment has been noted. Detailed responses are provided for the specific comments below.	None.	n/a
171	Wabun Tribal Council	G-2. Aquatic Environment. Overall, the Proponent has appropriately sited the Project activities to minimize the footprint and aquatic disturbance of what is a very large project. Our main concerns relating to the assessment of the effects on the aquatic environment are the need for a more complete and better-described baseline data set. This would include more consistent sampling of reference and potentially affected waters and addressing missing baseline data (i.e. mercury in fish tissue, zooplankton, phytoplankton and periphyton). The Proponent has not presented or summarized data for specific water bodies, but has provided descriptive statistics for populations of lakes, ponds and streams and uses these as input to predictive models. Baseline data and interpretation for geochemistry are not well elaborated. The lack of clarity regarding the points of effluent discharge and the water management plan do not provide high confidence in the impact assessment, which contains uncertainties that go unaddressed.	Your comment has been noted. Detailed responses are provided for the specific comments below.	None.	n/a
172	Wabun Tribal Council	G-3. Terrestrial Environment. In general, the existing environment conditions are well-described from the perspective of potentially affected flora and fauna. We have some concerns regarding survey methods used, completeness of the assessment of the avian communities, and a lack of wildlife population/density data, which limits the ability to assess potential adverse effects on populations. In particular, we are concerned with the amount of effort expended within the area of the actual Project footprint. Impact to numbers of harvestable resources is an important consideration for regional ecology and for First Nations' harvesting. Potential impacts to Species at Risk and related mitigation measures have been poorly addressed. Finally, almost no effort has been expended on a functional assessment of effects to the terrestrial environment, and there is almost no quantification of effects on flora and fauna.	Your comment has been noted. Detailed responses are provided for the specific comments below.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
173	Wabun Tribal Council	G-4. Human Environment. Our review of the materials presented in the EIS respecting the human environment focused on the potential socio-economic and land use implications of the proposed Project for the FPFN and MFN. The Proponent has identified many of the appropriate valued components and indicators for assessing the potential implications of the proposed Project for First Nation socio-economic conditions. However, for reasons that are not always explained in the EIS, the relevant information is often not provided or unavailable for the potentially affected First Nations. As a result, impact pathways are not fully developed, ultimately limiting the predictive value of the assessment, the identification of appropriate mitigation and enhancement measures as well as the design of socio-economic effects management. Recommendations are made for further discussion between the affected First Nations, the Proponent and relevant government departments.	For information within the scope of this assessment best efforts have been made to collect data from potentially affected First Nations. Data available during preparation of the EA was incorporated to the extent practicable. In addition, IAMGOLD hired a local member of Mattagami First Nation to conduct key informant interviews in Mattagami First Nation to inform the socio-economic baseline studies. A local member of Flying Post First Nation was also hired to conduct socio-economic key informant interviews within Flying Post First Nation to inform socio-economic baseline studies. IAMGOLD is of the opinion that the socio-economic impact assessment, including the identification of assessment indicators is fully developed and of a level suitable to identify the socio-economic impacts of the Côté Gold Project. IAMGOLD will work with potentially affected Aboriginal groups to develop a socio-economic / community management plan to address potential Project-related socio-economic / community effects identified through the EA process and/or at later stages of the Project.	None.	n/a
174	Wabun Tribal Council	G-5. Aboriginal Consultation. In general, the information provided in the EIS has not addressed the requirements of the EIS Guidelines, particularly in relation to Aboriginal and Treaty Rights and key comments and concerns. Clarity is sought from the Proponent and the Provincial and Federal Agencies concerning the delegation of consultation responsibilities, and suggestions are provided to assist the Proponent in meeting the requirements of the EIS Guidelines.	Your comment has been noted. Detailed responses are provided for the specific comments below.	None.	n/a
175	Wabun Tribal Council	WTC-IR#1: Waste Disposal, Chapter 1, Section 1.2 "Non-hazardous domestic solid wastes will likely be deposited in an on-site landfill, unless a suitable off-site landfill with sufficient capacity is identified." (p.1-3) The alternative means analysis suggests that an off-site landfill has been identified. Please confirm the expected approach to dealing with non-hazardous wastes.	The Amended EIS / Final EA Report has been revised to properly reflect the preferred alternative.	The following wording in Section 1.2: "Non-hazardous domestic solid wastes will likely be deposited in an on-site landfill, unless a suitable off-site landfill with sufficient capacity is identified." has been replaced with: "Non-hazardous domestic solid waste will likely be deposited in the existing nearby MNRF Landfill (see Figure 1-2)."	Section 1.2
176	Wabun Tribal Council	WTC-IR#2:Transmission Line Route and Rehabilitated Mine Hazards, Chapter 4, Section 4.4.4.3 "Stakeholders have expressed some concerns about how AMIS or mine hazards will be identified and assessed in the Environmental Assessment. AMIS or Mine Hazards are existing features primarily related to other sites, although these sites do have the potential to affect the ultimate transmission line route. However, IAMGOLD has identified that assessing alternative methods for mitigating these features is not within the scope of the Environmental Assessment for the Project. IAMGOLD will however, assess alternative methods for mitigating these features in the Project planning and contingency plans." (p.4-32) AMIS or mine hazards are existing features of the environment and since they have the potential to affect the ultimate transmission line route are therefore appropriately assessed as part of the effects of the environment on the Project. a) Please explain how AMIS or mine hazards have the potential to affect the ultimate transmission line route, making reference to any specific known mine hazards and their locations. b) Please assess the alternative methods for mitigating the effects of the mine hazards as part of the consideration of the effects of the environment on the Project.	So far, during the baseline work carried out, no rehabilitated hazards have been identified that would be disturbed by construction and operation of the transmission line. As such, there is no need for mitigation of mine hazards on the transmission line or vice versa. Should any previously rehabilitated mine features be discovered during further Project planning, authorization will be sought and mitigations measures will be developed, as necessary.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
177	Wabun Tribal Council	WTC-IR#3: Mine Closure, Chapter 4, Section 4.4.4.5 "IAMGOLD must file Closure Plans and post financial assurance with Provincial authorities so the funds are available for closure and reclamation, if required. Current closure plans are to return the Project site to a naturalized state at closure, however IAMGOLD is interested in Aboriginal communities providing insight into the management objectives of the closure plan." (p.4-32) With respect to insight into the management objectives of the closure plan, the mine closure objectives for Be Beers' Victor Diamond Project were developed collaboratively between De Beers Canada and the Attawapiskat First Nation (AttFN) and are as follows: a) Prevent, reduce or mitigate the adverse environmental effects associated with each phase of the Project, including closure and post-closure phases; b) Provide for the reclamation of all affected sites and landscapes to a stable and safe condition; c) Provide for the return of all affected ecosystems to health and sustainable functioning; d) Provide for reclamation and re-vegetation research activities in order to identify the optimal growing conditions and best species for re-vegetation; e) Establish conditions that permit productive use of the affected sites and the natural resources of the area including the possibility of carrying out traditional harvesting activities by aboriginal peoples, similar to its original use or an alternative as developed by De Beers in consultation with AttFN and Ministry of Northern Development and Mines; f) Reduce the need for long-term monitoring and maintenance by designing for closure and instituting progressive reclamation; g) Provide for long-term monitoring and maintenance of the sites affected by the Project; h) Provide estimated costs for completing the work under the Closure Plan; i) Provide appropriate mechanisms for financial assurances; and j) Provide for mine closure using the most current available proven technologies in a manner consistent with sustainable development. The overall intent of the Closure Plan is to achieve the AttFN's desire for site restoration to a high ecological land value; to maximize the potential for its use by the AttFN; and maximizing other benefits and opportunities to the AttFN. a) Please provide the draft table of contents, and draft proposed objectives for the Côté Gold Project Closure Plan. b) Please indicate the form(s) of financial assurance being contemplated by IAM Gold for closure of the proposed Côté Gold Project.	IAMGOLD is committed to complying with all applicable Acts and regulations for closure, as well as consideration of Aboriginal communities, to yield a naturalized area compliant with best industry practices for future enjoyment and/or use of the land. The conceptual closure plan is presented in Section 5.16. The Closure Plan needs to be filed and approved prior to Project construction. IAMGOLD is committed to consulting on the Closure Plan prior to approval by the Ministry of Northern Development and Mines.	None.	n/a
178	Wabun Tribal Council	WTC-IR#4: Mine Rock Areas, Chapter 4, Section 4.4.4.6 "Based on public comments received, technical suitability, cost and environmental effects two mine rock areas close to Mesomikenda Lake have not been removed from the proposed Project." (p.4-33) Please confirm that the above statement is correct as it appears to be at odds with Figure 1-2, which shows only a single mine rock area, and no areas located adjacent to Mesomikenda Lake.	Reference to multiple mine rock areas near Mesomikenda Lake has been removed.	The wording in Chapter 4 has been updated to remove reference to multiple mine rock areas.	Chapter 4

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
179	Wabun Tribal Council	WTC-IR#5: Tailings Management Facility, Chapter 4, Section 4.4.4.7 "While the final design of the TMF is still in progress IAMGOLD is committed to recycling as much water as possible to reduce demands on water systems and releases." (p.4-33) The above phrase is unclear. Are major changes to the TMF still anticipated? Please clarify how the TMF could still change during final design in relation to the volume, footprint, treatment efficacy, discharge location, polishing pond design, capacity, water management and any other matters relevant to the consideration of environmental effects.	Final design of the TMF is focused on the optimization of the design. This optimization will not affect the preferred configuration or location as major changes are not anticipated. The effects prediction and assessment consequently will not change.	None.	n/a
180	Wabun Tribal Council	WTC-IR#6: Transmission Line Alignment, Chapter 4, Section 4.4.4.9 "Stakeholders have expressed some concerns about the construction of a new 230 kV transmission line in the Project area. Subsequently, IAMGOLD is addressing these concerns in the EA by outlining the potential effects on wildlife and potential increase in traffic in the area. Furthermore, IAMGOLD has taken these concerns into consideration by proposing that the transmission line would be removed at closure to rehabilitate the site, unless otherwise negotiated with Aboriginal groups and local communities." (p.4-34) Elsewhere in the EIS at Section 5.16.2.9, the following is noted: The off-site portion of the 230 kV transmission line will be evaluated at the end of the Project for transfer to the local utility for care and maintenance and/or potential reuse. Should the transfer to the local utility prove itself not feasible it will be dismantled. Rehabilitation would include removal and recycling/reuse of electrical equipment. Poles would be removed or cut at grade, and either reused or disposed of. The two proposals are not the same. Please clarify the fate of the transmission line following mine closure and whether it will be removed and, if so, under what conditions.	As described in the EA it is assumed that IAMGOLD will remove the transmission line, unless otherwise transferred to another operator as needed to service regional needs. This will be determined in consultation with stakeholders near the end of the operations phase. The Amended EIS / Final EA Report has been revised to be consistently worded.	Wording referring to closure options for the transmission line has been removed from Chapter 4. Section 5.16.2.9 has been revised for consistency.	Chapter 4, Section 5.16.2.9
181	Wabun Tribal Council	WTC-IR#7, Project footprint, Chapter 5, Section 5.1 "The preliminary site plan showing the proposed Project site is shown in Figure 1-2, and the proposed Project footprint will cover approximately 1,700 ha (17 km^2) during operations, without the transmission line alignment footprint." (p.5-1) The footprint area is not an accurate reflection of the area that will no longer be available for traditional uses, considering additional areas around and between the actual project footprint that will be unusable or unused due to issues of safety, air quality, noise and other ongoing effects of the proposed Project. This “effective” footprint will be larger than the physical footprint of the infrastructure. a) Please indicate on a revised version of Figure 1-2 the extent of the effective project footprint including considerations for safety, access, human health, noise and other factors that will inhibit Aboriginal traditional land use. b) Justify the effective footprint established in part a)	a) As described in the impact assessment provided in Chapter 11, no additional areas outside the Project footprint would likely be rendered unavailable for traditional uses. However, some areas around the Project footprint may require controlled access and traditional uses may continue dependent on Project activities in the area. b) The preliminary site plan showing the proposed Project site is shown in Figure 1-2, and the proposed Project footprint will cover approximately 1,700 ha (17 km^2) during the operations phase, without the transmission line alignment footprint. The Project is designed to: ▪ respect the interests of other land uses and users in the area; ▪ use well-known, conventional and environmentally sound mining and processing technologies commonly used in northern Ontario, based on IAMGOLD’s experience with other gold mining operations; ▪ minimize the overall footprint and associated potential effects; ▪ manage water effectively and efficiently; ▪ mitigate or compensate for effects on fish and fish habitat; and ▪ accommodate effective planning for final closure and site abandonment, rendering the site suitable for other compatible land uses and functions.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
182	Wabun Tribal Council	WTC-IR#8: Open Pit Design, Chapter 5, Section 5.3.1 "Alternative means for pit dewatering, such as perimeter and in-pit wells and drainage holes in the pit walls, may also be investigated." (p.5-2) Alternative means for pit dewatering could substantially change the volume of water being managed on site and could have very different implications for nearby groundwater/surface water interconnections as well as water quality. These alternative means need to be assessed in the EIS. In our opinion, this is a requirement of section 5.6 of the EIS Guidelines: ▪ A description, including a diagram, of the overall water management system including all water management facilities (all of the proposed measures to control, collect and discharge surface drainage and groundwater seepage to the receiving environment from all key components of the mine infrastructure {see section 6 – Scope of Project}). Please provide an assessment of the alternative means of dewatering the open pit.	Section 5.10.6 details water management structures for the Project, and the proposed water management system is shown in Figure 5-2 - an open pit sump will be installed to pump water to the mine water pond. Seepage and perimeter runoff collection has been considered in Appendix H (Hydrogeology TSD) and Appendix I (Hydrology TSD) for modelling purposes and effects assessment. An assessment of alternatives for dewatering the open pit is not warranted as the method for dewatering is already determined and no suitable alternative exists given the rock conditions at the site. The text referred to in the comment provides some text allowing for optimization of the dewatering techniques, which could potentially be identified during ongoing engineering studies. The means of dewatering the pit are not anticipated to substantially change the rate of water pumping and water management volumes. As described in Section 5.4.2.2 of the Amended EIS / Final EA Report and Appendix H, the predicted groundwater inflow rate to the pit will stabilize with progressive deepening of the pit. The primary pathway for groundwater inflow continues to occur through the shallow flow system (overburden and upper 50 m of rock mass), with limited inflow from the deep flow system.	None.	n/a
183	Wabun Tribal Council	WTC-IR#9: Makeup water requirements, Project Description, Section 5.10 "Mesomikenda Lake is also expected to provide a potential source of makeup water for use in the ore processing plant, as needed. This uptake would not exceed 20% of the daily flow, and would occur seasonally when sufficient flow is available. (p.5-20) Freshwater will be taken from Mesomikenda Lake via a single-walled HDPE freshwater pipeline to a tank located in the ore processing plant. This freshwater pipeline intake will be designed to meet applicable Federal guidelines so as to prevent the impingement and entrainment of fish." (p.5-23) It is unclear how "sufficient flow" would be defined and determined on a day-to-day basis. We have been unable to locate in the EIS sufficient information concerning the timing, seasonality, frequency and extent of water taking that are proposed from Mesomikenda Lake or an assessment of the potential environmental effects of this activity. a) Please describe how "required flow" would be determined and how the takings would be related to 20% of required flow. b) Please indicate the location in the EIS where the potential effects of water taking from Mesomikenda Lake are assessed, or complete and provide the assessment.	a) Although at this time the freshwater removal rate is not expected to be greater than 20% of the process water demand at the ore processing plant, the maximum freshwater removal rate will be determined during the Permit to Take Water application phase. Freshwater will be taken in accordance with conditions associated with the Permit to Take Water, when approved. The water removal is intended to supplement recycled site water and provide for truck washing, potable and fire reserve requirements. b) The predicted change to flow and water level in Mesomikenda Lake are assessed under operational conditions in Appendix I (Hydrology TSD). An Addendum to Appendix I has been prepared which includes the sensitivity of Mesomikenda Lake to various climate and removal scenarios.	Addendum to Appendix I prepared to address sensitivity of Mesomikenda Lake to various climate and removal scenarios.	Appendix I
184	Wabun Tribal Council	WTC-IR#10: Domestic and Industrial Waste Management, Chapter 5, Section 5.14 "A burn area may be established at the Project site subject to environmental approvals for seasonal open air burning of clean wood packaging and similar materials that are not returned to the vendor or reused, to help preserve landfill capacity. "(p.5-34) Please provide further details concerning potentially suitable locations for the burn area, the anticipated frequency of burning, the seasonal timing of burning and the duration of burning.	Upon review, it is currently not anticipated that any burning will likely occur during the construction and operations phases of the Project.	The following text about burning has been removed: "A burn area may be established at the Project site subject to environmental approvals for seasonal open air burning of clean wood packaging and similar materials that are not returned to the vendor or reused, to help preserve landfill capacity."	Section 5.14, second paragraph

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
185	Wabun Tribal Council	WTC-IR#11: MRA Revegetation, Chapter 5, Section 5.17 and Appendix S, Section 4.3.2 "For the MRA, its exterior slopes will be graded and stabilized, if/where required, to ensure long-term stability and drainage, once the maximum height is reached. Flat surfaces of the MRA will be partially covered with a layer of overburden and partially vegetated to expedite the growth of indigenous plants and trees. It is expected that progressive rehabilitation of the MRA will be carried out during operations as the final configuration is reached to minimize the amount of rehabilitation effort required at the time of closure." (p.5-49) "During the closure phase, mitigation inherent in the Project design includes partial vegetation of the MRA, especially on the faces of the MRA which will be seen by receptors. The revegetation will improve the look of the MRA and in turn will become part of the natural landscape. " (p.4-3) Members of the affected First Nations have expressed concerns about the ultimate conditions at the site following mine closure. a) Please comment on the nature and extent of vegetation expected to be present on the MRA 50 years following mine closure based on similar mine rock areas located in the region. b) Please provide aerial and ground photos of these similar mine rock areas that have been revegetated in the manner contemplated for the proposed Project.	a) It is expected that within approximately 50 to 70 years post-closure, the vegetation quality will be of comparable productivity to baseline conditions. b) There are no projects of similar size and scope that have implemented a similar closure scenario 50 years ago. However, recent projects have approved closure plans with comparable closure concepts. These projects are still in development or operation.	None.	n/a
186	Wabun Tribal Council	WTC-IR#12: Climate Change, Chapter 8, Section 8.4 "Climate change over the course of the life of the Project could potentially result in shifts in weather conditions (temperature, precipitation levels) and/or the frequency of extreme weather events (droughts or floods). These changes could increase the risk of environmental effects due to malfunctions and/or accidental events, however, any such changes in the climate would be minor relative to the Côté Gold Project timelines." (p.8-9) In this section of the EIS and elsewhere, the Proponent makes reference to the "Project timelines". However, the mining of additional resources in the immediate area and processing of this additional ore in the proposed processing plant could extend the Project timelines. Please provide the range of the potential extension to the operational timeline for the proposed Project (in years) based on current information about potential additional mineral resources in the region.	a) It is expected that within approximately 50 to 70 years post-closure, the vegetation quality will be of comparable productivity to baseline conditions. b) There are no projects of similar size and scope that have implemented a similar closure scenario 50 years ago. However, recent projects have approved closure plans with comparable closure concepts. These projects are still in development or operation.	None.	n/a
187	Wabun Tribal Council	WTC-IR#13: TMF Dam Failure, Chapter 13, Section 13.2.7 and Chapter 1, Figure 1-2 "Under extreme or unlikely circumstances, a breach of the TMF dam, even if only partial, could result in the release of tailings solids and effluent to the surrounding environment. Based on the TMF's location, the water bodies at risk would be the Bagsverd Creek, Unnamed Lake #1 and #2, and the planned Bagsverd Creek watercourse realignment proposed to the east of the TMF. Bagsverd Lake and Mesomikenda Lake are considered to be at a sufficient distance from the TMF to evade any potential effects in the event of a breach of the TMF dam." (p.13-10) Figure 1-2 appears to show a dam across Bagsverd Creek directly south of the TMF. Failure of this dam or failure of the TMF along its southern boundary would result in release of tailings into Bagsverd Lake. Please clarify why Bagsverd Lake is considered to be at a sufficient distance from the TMF to evade any potential effects in the event of a breach of the TMF dam.	The text has been revised to clarify that if there is a breach of the tailings dam along the southern boundary there is a potential for an accidental release to Bagsverd Lake. This change will not alter the impact assessment conclusions. Due to recent sensitivity on the topic of tailings dam breaches, additional information on accidents and malfunctions with regards to potential tailings dam breaches has been added to Chapter 13 of the Amended EIS / Final EA Report.	Chapter 13 has been revised to include Bagsverd Lake in the list of water bodies at risk during a potential release of tailings. The text has been corrected to state that the Bagsverd Creek realignment is located to the west of the TMF, rather than the east. Additional details on design and operational safeguards for the TMF have been added.	Chapter 13

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
188	Wabun Tribal Council	WTC-IR#14: Insufficient data for Impact Assessment, Appendix J, Attachment I – Water Quality Baseline Report and Appendix J – Technical Support Document: Water Quality Page 5 of the Water Quality Baseline Report states: "monthly or quarterly sampling is ongoing and will continue throughout the EA review process". Baseline surface water quality data presented in the EIS does not encompass two years of multi-seasonal data. A representative baseline is not possible within a period of less than two years, since this increases the uncertainty associated with the water quality measurements. The following is a sample of water features that may be impacted by the Project (e.g. seepage, runoff, discharge of treated effluent) and the number of times they have been sampled (as inferred from the baseline report): - Neville Lake, 4 times; - Mesomikenda Lake, 1 time; - Chester Lake, 1 time; - Clam Lake, 1 time; - Bagsverd Lake, 1 time; - Three Duck Lake, 1 time; - Delaney Lake, 1 time; - Dividing Lake, 1 time; and - Un-named Lake 1, 0 times. Insufficient data has been used to document baseline conditions and evaluate project impacts. Please update the baseline report to include two (2) years of baseline data for all water features that may be affected by the proposed Project (from construction, operations, closure, and post-closure activities).	The water quality baseline report presents data up to May 2013, as there was a need to finalize the water quality baseline report prior to the initiation of the effects predictions for the EA. This resulted in the water quality baseline report presenting fewer sampling rounds for some stations in the EA. Baseline surface water quality monitoring has continued since May 2013 and is still ongoing in order to develop receiver-based effluent criteria as part of the permitting process. Nonetheless, the data presented in the water quality baseline report is considered to be sufficient for the purposes of the EA, of which the objective is to assess the potential for effects on water quality with respect to the environment and human health. To date, a multi-year dataset is available from 2011 to present at all key surface water quality stations. Many stations have been sampled on a quarterly to monthly basis during this time period to provide a dataset that well covers the various seasons over multiple years. Sampling at lake stations now covers periods of thermal stratification and lake turnover. Furthermore, the surface water quality dataset includes multi-year and seasonal data from reference stations that are located upstream of the Project, such as: Somme River, Wolf Lake, Schist Lake and the lower basins of Mesomikenda Lake (which are separated from the Project by a watershed divide). It is anticipated that additional reference stations would be added to the surface water quality monitoring network prior to construction of the Project. The collection of baseline water quality data included sampling at lake outflows and lake stations (water column profile locations). Some of the sampling events identified in the reviewer's comment were for the lake stations and not the lake outflows that also represent lake water quality. Other lakes that are mentioned in the reviewer's comment refer to lakes that were added after the original baseline monitoring program had commenced and which have subsequently been sampled monthly or quarterly. For clarity, details of the sampling program as it relates to the above mentioned lakes are summarized below: Monthly sampling at the outflows of Neville Lake and Mesomikenda Lake was initiated in January 2013 and was conducted monthly until May 2014, at which time the frequency was reduced to quarterly throughout 2014. Lake stations in Neville Lake and Mesomikenda Lake have been sampled quarterly since May 2013 and sampling is ongoing. The outflows of Chester Lake and Clam Lake were sampled monthly from January 2012 through May 2014, at which time the frequency was reduced to quarterly throughout 2014. The lake station in Clam Lake has been sampled quarterly since May 2013 and sampling is ongoing. The lake station in Chester Lake was sampled quarterly between May 2013 and February 2014 and has since been discontinued due to its shallow depth; noting that the outflow of Chester Lake is still being sampled. The outflow of Bagsverd Lake was sampled monthly from March 2012 until May 2014, at which time the frequency was reduced to quarterly throughout 2014. The lake station was sampled quarterly since May 2013 and sampling is ongoing. The outflow of Three Duck Lakes was sampled monthly from February 2012 until May 2014, at which time the frequency was reduced to quarterly throughout 2014. The two lake stations in Three Duck Lakes have been sampled quarterly since May 2013 and sampling is ongoing. The outflows of Delaney Lake and Dividing Lake were sampled quarterly beginning in spring 2014. Sampling at Dividing Lake is ongoing, while sampling at Delaney Lake has been discontinued due to its shallow depth. Due to their close proximity and small size, Un-named Lake #1 is expected to have similar chemistry to Un-named Lake #2, for which the outflow was sampled monthly from March 2012 until April 2014, at which time the frequency was reduced to quarterly throughout 2014. Response continues on next page.	An updated statistical summary of baseline water quality results to May / June 2014 is provided in the Addendum to Appendix J (Water Quality TSD).	Addendum to Appendix J

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
188 cont	See previous page.	See previous page.	An updated statistical summary of the baseline water quality results to May / June 2014 are provided in the Addendum to Appendix J (Water Quality TSD). The baseline water quality data is used for two main purposes in the water quality effects assessment: ▪ to develop a single set of benchmark values that represent the upper limit of baseline to be used as part of the magnitude designation as part of the impact assessment; and ▪ to develop a natural runoff water quality input for the water quality model. As part of the Addendum to Appendix J (Water Quality TSD), the updated statistical summary (to May / June 2014) is compared to the statistics that were originally presented in the Water Quality TSD (to May 2013); the comparison shows that it is clear that the additional year of data does not materially change the water quality effects assessment based on data up to May 2013. The baseline water quality data presented in the Water Quality TSD serves well the above two purposes, and is sufficient to assess potential water quality effects as part of the EA.	See previous page.	See previous page.
189	Wabun Tribal Council	WTC-IR#15: Lack of historical data, Appendix J, Attachment I – Water Quality Baseline Report, Section 5.2 No historical data were presented. As a water body within the Project's local study area is downstream of a previously existing plant to treat mine water from the dewatered Chester Mine, historical monitoring data should exist for the location. However, no studies or information gathered by Chester Mine in regards to monitoring of this site were included in the baseline study. Historical data would add to the baseline study, providing greater information on the current state of water quality, past impacts and potential impacts of future mine activity on water quality. Please provide data collected by previous studies and/or surveys conducted on water features within the local study area.	The water quality effects assessment is intended to evaluate potential environmental effects through predictions of change to the existing water quality during the construction, operation, closure, and post-closure phases of the Project. The baseline water quality data collected at the surface water monitoring location MP (as presented in Appendix J (Water Quality TSD), Attachment I, Appendix A), which is situated downstream of the former treatment plant associated with the Chester Mine dewatering, was considered during the effects assessment. Monitoring station MP is upstream of the northern basin of Three Duck Lakes; as such, any ongoing effects to water quality due to the former Chester Mine would be captured in the baseline characterization of Three Duck Lakes and therefore captured as part of the water quality effects assessment.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
190	Wabun Tribal Council	WTC-IR#16: No measures for methylmercury, Appendix J, Attachment I – Water Quality Baseline Report, Section 4.3 and Appendix J, Attachment I – Water Quality Baseline Report, Appendices A and C Methylmercury was not measured in baseline water samples. Methylmercury is a toxin that may be transformed from mercury naturally present at the site runoff as a result of flooding of wetlands, soils and vegetation - activities that are proposed for the Côté Gold Project. To model and predict the impact the Project will have on methylmercury concentrations, and to provide a baseline for future comparisons it is important to know the current concentrations in local waters and sediment. Please update the baseline report with methylmercury information. If no methylmercury information exists, collect additional samples to improve upon baseline data collection.	As noted in the aquatic impact assessment, potential effects associated with methyl mercury production due to flooding are expected to be very limited because currently the areas that will be flooded (i.e., Chester Lake and parts of the south arm of Bagsverd Lake) are inundated seasonally. Generally, any methyl mercury production associated with flooding of shallow areas, such as those proposed for the Côté Gold Project, is realized within 2 to 3 years of flooding and does not represent long-term issues as observed at large reservoirs (Bodaly et. al, 1997; Canada-Manitoba Governments, 1987). Therefore, the seasonal flooding of the areas of concern are not expected to significantly contribute to methyl mercury production upon development of the Project. Additional information regarding methyl mercury production at the Project site has been added in the Addendum to Appendix N (Aquatic Biology TSD). The key issue with methyl mercury is the increase in tissue concentrations of fish that reside in the lakes where flooding of terrestrial areas is expected. It is important to note that fish within the local area are currently restricted for consumption due to regionally elevated mercury levels. Thus, if any small increases in methyl mercury occurred in fish tissues, these increases will not likely change the consumption restriction on the fish. More information on fish tissue concentrations are discussed in Appendix W (HEHRA) as they relate to the possible impacts associated with human consumption of fish. Methyl mercury that is generated from inorganic mercury that is sequestered by terrestrial vegetation from the atmosphere typically occurs at very low total concentrations (i.e., nanograms per litre). The generation of methyl mercury depends upon the development of favourable geochemical conditions (i.e., sulphate reducing) to allow for sulphate reducing bacteria to transform the inorganic mercury to organic mercury. The rate of the microbial-induced methylation of the mercury depends on a number of factors including: distribution and concentrations of inorganic mercury in biodegradable organic matter, geochemical conditions (pH, redox, temperature), presence of compounds that can complex with inorganic mercury (e.g., dissolved organic carbon and sulphide), and presence and activity of sulphate-reducing bacteria (Benoit et al., 2003). Uncertainties associated with the source term, geochemical conditions and microbial communities, compounded with uncertainties associated with modelling exposure pathways and bioaccumulation in fish, makes modelling trace-level concentrations and the overall effect of potential methyl mercury production very challenging and carries a range of uncertainty that is likely to be significantly greater than the range of the predicted magnitudes. Therefore, modelling methyl mercury does not provide value in the context of this EA, and would not eliminate the need to follow through with the proposed mitigation and monitoring commitments that are discussed below. Although methyl mercury production is not expected to be a concern, IAMGOLD is committing to remove terrestrial vegetation within the small areas that are expected to experience flooding prior to the construction of watercourse realignments (Chapter 10, Table 10-2). The mitigation commitments have been expanded to include the removal of shallow organic-rich soils in the small areas expected to become flooded due to the watercourse re-alignments. The removal of the terrestrial vegetation and organic-rich soils in these areas will further reduce the potential for methyl mercury production (Windham-Myers et al., 2009). Furthermore, low-level total mercury and methyl mercury have been added as parameters to the baseline water quality sampling, including interstitial water of the near-surface sediments in the flooded areas, and fish tissue monitoring as part of the overall monitoring commitments for the Côté Gold Project.	Additional information on methyl mercury production has been provided in the Addendum to Appendix N. Mercury and Methyl Mercury have been added as parameters for water quality monitoring.	Addendum to Appendix N, Chapter 16, Table 16-1 Appendix J, Section 5.2.1; Appendix Y

191	Wabun Tribal Council	WTC-IR#17: No measures of free cyanide concentrations, Appendix J, Attachment I – Water Quality Baseline Report, Section 4.3.3.1 Only total cyanide concentrations were measured in surface water samples. The Provincial Water Quality Objective (PWQO) and the Canadian Environmental Quality Guideline (CWQG) for cyanide is for free (WAD) cyanide, as it is the most toxic form of this element. To properly model and predict the impact of the Project on free cyanide concentrations, the baseline concentrations should have been monitored. Please provide free cyanide concentrations for surface water samples.	The surface water quality baseline program did include measurements of free cyanide concentrations. In 2013, the surface water baseline program included 12 water column profile stations within select lakes to collect near-lakebed ("bottom") and near-surface ("top") samples. The water column profile stations are located on Bagsverd Lake, Neville Lake, Mesomikenda Lake, Chester Lake, Clam Lake, Three Duck Lakes, Delaney Lake and Dividing Lake. Free cyanide concentrations measured at the water column profile stations in May 2013 are presented in Appendix J (Water Quality TSD), Attachment I. Free cyanide concentrations were measured in 22 samples. Free cyanide concentrations were less than the MDL of 0.002 mg/L in 20 of 22 samples. Free cyanide concentrations were measured above the MDL in Clam Lake (0.003 mg/L) and Three Duck Lakes (lower) 0.021 mg/L during May 2013. The May 2013 result for Three Duck Lakes (lower) is considered to be an outlier. In analyses on samples collected subsequent to May 2013, the free cyanide concentration in Clam Lake was below the MDL in 8 of 8 samples and the free cyanide concentration in Three Duck Lakes (lower) was below the MDL in 8 of 8 samples. Total cyanide is monitored at all baseline water quality monitoring locations. Total cyanide concentrations are below detection limits at most outflow and lake stations. Total cyanide concentrations were measured above the MDL in P-5 in May 2012 (0.003 mg/L), P-4 in May 2012 (0.003 mg/L), Schist Lake in May 2012 (0.004 mg/L), the Clam Lake station in May 2013 (0.003 mg/L), the Three Duck Lakes station in May 2013 (0.021 mg/L), the Somme River in January 2012 (0.003 mg/L), Little Clam Lake in July 2012 (0.053 mg/L), Schist Lake in May 2012 (0.004 mg/L). With the exception of the detected concentrations in Three Duck Lakes and Little Clam Lake, which are considered to be outliers, the detected concentrations of total cyanide are low and near the MDL of 0.002 mg/L. Therefore, given that total cyanide is generally below the MDL, the free cyanide concentrations would also be below the MDL and the use of total cyanide concentrations as part of the effects predictions are valid. It is agreed that free cyanide is the key cyanide species with respect to toxicity. However, it is important to note that free cyanide is not equivalent to weak acid-dissociable cyanide. The measurement of weak acid-dissociable cyanide includes cyanide species that can be liberated in an acidic solution buffered at a pH of 4.5; therefore, weak acid-dissociable cyanide includes metallo-cyanide complexes (e.g., CuCN, $Zn(CN)_2$) as well as free cyanide (CN- + HCN). As described in Appendix Y, IAMGOLD has committed to monitor cyanide species (total cyanide, free cyanide and weak acid dissociable cyanide) as part of the surface water and groundwater quality monitoring to be able to understand the speciation of cyanide within the mine site and in the receiving environment.	None.	n/a

192	Wabun Tribal Council	WTC-IR#18: No interpretation and summarization of water quality data, Appendix J, Attachment I – Water Quality Baseline Report, Section 5.0 The Côté Gold Project EIS Guidelines (CEAA 2013) state: The EIS will describe surface water quality, hydrology and sediment quality within the area of influence of the project. The baseline will provide the basis for the assessment of potential effects to surface water, presenting the range of water and sediment quality and surface water hydrology. Furthermore, the EIS will describe: ▪ The delineation of drainage basins, at appropriate scales; ▪ The assessment of hydrological regimes; ▪ Flows or design peak flows for selected periods for the project area; ▪ Any local and regional potable surface water resource; ▪ Seasonal water quality field and lab analytical results and interpretation at several representative local stream and lake monitoring stations established at the project site. Surface water quality, water column profile, and ground water data were not summarized and interpreted in such a way as to characterize the water bodies of the local study area. To adequately describe baseline conditions, baseline data must be evaluated and interpreted spatially and temporally. General summary statistics – i.e. number of samples, minimum, maximum, mean, standard deviation, 25th percentile, median, and 75th percentile – for each sampling station sampled should be included in the baseline report. These provide an illustration of water chemistry as well as information that can be used later to model Project impacts. a) Please describe surface water quality, sediment quality and groundwater quality within the area of influence of the proposed Project, including seasonal and spatial patterns. b) Please provide general summary statistics for each sampling station included in the baseline report.	The baseline water quality summary was presented to provide an overview of the results in order to assess the impacts of the Project on site water quality as a whole. The baseline data for each lake was presented in Appendix J (Water Quality TSD), Attachment I, Appendix A, with parameter concentrations screened against Aquatic Health Benchmarks and Human Health Benchmarks. It is important to note that the approach of the effects assessment is to evaluate changes in overall water quality due to the Project, and not to necessarily conduct effects assessments on individual lakes. That said, the requested statistics have been provided in table format in the Addendum to Appendix J (Water Quality TSD). Figures have also been provided which show the average concentrations and one standard deviation of selected parameters in lakes across the Mollie River and Mesomikenda Lake Watersheds. The average baseline levels do not differ considerably; as such, the influence of minor seasonal variations within individual lakes and minor spatial variations within each watershed are not important with respect to evaluating the effects and do not change the conclusion of the impact assessment.	The requested statistics have been calculated and are provided in table format in the Addendum to Appendix J (Water Quality TSD). Plots of spatial and temporal trends are provided in the Addendum to Appendix J.	Addendum to Appendix J
193	Wabun Tribal Council	WTC-IR#19: Dissolved metal concentrations missing in appendix, Appendix J, Attachment I – Water Quality Baseline Report, Section 4.3.3.1, Appendix J, Attachment I – Water Quality Baseline Report, section 4.3.3.3 and Appendix J, Attachment I – Water Quality Baseline Report, Appendices A and C Sections 4.3.3.1 2012-2013 Surface Water Sampling and 4.3.3.3 2012 Groundwater Sampling Program do not indicate if total and/or dissolved metal concentrations were measured in all samples. Neither appendices A nor C contain dissolved metal concentrations. Appendix D indicates that both total and dissolved metal concentrations were measured. Dissolved metals are required for the project baseline and to inform any future development of Site Specific Water Quality Objectives (SSWQOs). a) Please amend method sections 4.3.3.1 and 4.3.3.3 to indicate that total and dissolved metal concentrations were measured. b) Please provide dissolved metal concentrations in appendices.	Both dissolved and total metals have been measured for surface water and groundwater samples. For the groundwater quality data presented in Appendix J (Water Quality TSD), Attachment I, Appendix C, the metal concentrations are presented as dissolved concentrations rather than total concentrations. The dissolved concentrations are more relevant to groundwater because total metal concentrations in groundwater samples include the proportion of metals within the solids that are present within the groundwater samples collected from wells that may experience silting and thus are not representative of groundwater quality. Since solids are not transported through the subsurface, except perhaps in karst environments, total concentrations are not relevant for the purposes of characterizing baseline groundwater quality. For the surface water quality data presented in Appendix J, Attachment I, Appendix A and Appendix J, Attachment I, Appendix B, the metal concentrations are presented as total concentrations rather than dissolved concentrations, with the exception of aluminum, for which the relevant water quality guidelines and objectives require comparison to aluminum measured in clay-free samples. Comparison of total metal concentrations in surface water to relevant water quality guidelines and objectives is a conservative approach and accounts for the dissolved portion of the total metal concentration. Furthermore, surface water quality guidelines apply to total concentrations and not dissolved concentrations. Therefore, presentation of dissolved metal concentrations does not add value for the purposes of characterizing the baseline surface water quality in the EA. However, note that the dissolved metal concentrations were used as part of the quality assurance / quality control evaluation of the site data in Appendix J, Attachment I, Appendix D.	None.	n/a

194	Wabun Tribal Council	WTC-IR#20: Inconsistent methodologies in lake column profiles, Appendix J, Attachment I – Water Quality Baseline Report, Appendix B On two occasions, three data points were collected for water column data in May 2013, however only one data point was collected for the same site in August 2013. The discrepancies in monitoring techniques make it impossible to compare seasonal differences at these two locations. To permit within-lake comparisons, consistent methodologies are required. Please amend section 4.3.2 to provide a rationale for changes in water column profile methodologies, and clarify limitations in interpretation.	The water column profile locations were established to evaluate the thermal and chemical stratification trends in the lakes and potential for turnover. The two occasions that are referenced above are for the stations located in Chester Lake and Delaney Lake; these lakes are discussed below. In Chester Lake, a very shallow lake, measurements were taken every 1 m in May 2013 over a total measured depth of approximately 2 m. In August 2013, only one measurement was taken 1 m below surface, as the total depth was measured to be less than 2 m at this time. In Delaney Lake, a very shallow lake, measurements were taken every 0.5 m in May 2013 over a total measured depth of approximately 1.5 m. In August 2013, only one measurement was taken 1 m below surface, as the total depth was measured to be less than 1.5 m at this time. Due to the very shallow, well-mixed nature of Chester Lake and Delaney Lake, thermal and chemical stratification trends that can be derived from water column profile data are not important for these lakes. The profile data collected at these two lakes were simply presented along with the other profile data for completeness. As such, water column profile sampling data for Chester Lake and Delaney Lake has little relevance and profile sampling at these lakes has been discontinued. The profile sampling program is ongoing with a continued focus on deeper lakes where stratification and turnover need to be better understood.	None.	n/a
195	Wabun Tribal Council	WTC-IR#21: Sampling date discrepancies, Appendix J, Attachment I- Water Quality Baseline Report, Section 4.2 and Appendix J, Attachment I- Water Quality Baseline Report, Appendix C In section 4.2, it is indicated that all stations sampled for groundwater were sampled three times yearly. However, BH12-6 and DH12-TMF-16 were only sampled once, in May and June 2012, respectively. Furthermore, DH12-TMF-23A, DH12-WD-12A and DH12-WD-12B were not sampled in November/December of 2012. To understand limitations of data and to have a clear understanding of the report, consistency is necessary. Please amend section 4.2 Table 2 to indicate sample period discrepancies.	The established groundwater sampling frequency stated in the summary tables is thrice yearly. Although all monitoring wells are sampled according to that schedule, there have been changes to the monitoring program due to well condition, weather conditions or Project design that have resulted in certain wells being sampled fewer than three times in a given year. BH12-6 was damaged by earth moving equipment in 2012 and was not sampled after May 2012. DH12-TMF-16 was sampled in June 2012 and in June 2013; this location was sampled twice on an annual basis over two years and the frequency is not three times yearly. The groundwater quality baseline monitoring locations were originally established in early 2012; the groundwater monitoring wells were installed at locations based on the 2011 proposed mine design and in the vicinity of potential TMF and MRA alternatives. As the Project design was refined, the number of wells sampled was reduced to focus on the areas adjacent to the preferred TMF and MRA and some wells that were slated for thrice yearly monitoring were removed from the monitoring program. DH12-TMF-23A was removed from the program in late 2012. DH12-TMF-12A and DH12-TMF-12B were not sampled in November 2012 due to the wells being frozen, but were subsequently sampled three times in 2013. Although the above mentioned wells may have been removed from the ongoing monitoring program due to changes to the Project design, the available analytical results are included in the baseline monitoring record.	None.	n/a
196	Wabun Tribal Council	WTC-IR#22: Incorrect titles, Appendix J, Attachment I – Water Quality Baseline Report, Appendix B and Appendix J, Attachment I – Water Quality Baseline Report, Appendix C In Appendix B, all water column profile plots have the same figure title (BAG-LS1). Lake profiles cannot be differentiated between the various lakes. Please amend Appendix B to ensure water column profiles have the correct water body name in figure titles.	The figure titles in Appendix J (Water Quality TSD), Attachment I, Appendix B have been corrected to reflect the actual lake profile station names. The titles of the tables presenting the groundwater quality data in Appendix J, Attachment I, Appendix C have been corrected to reflect their actual location within Appendix C rather than Appendix B.	Corrected the figure titles in lake profile plots.	Appendix J, Attachment I, Appendix B (Water Column Profile Plots)
197	Wabun Tribal Council	WTC-IR#23: Incorrect appendix title, Appendix J, Attachment I – Water Quality Baseline Report, Appendix C At the top of each page in Appendix C the title reads, “Appendix B 2012 Groundwater Quality Results”. At the end of Appendix C the table notes are labelled “Appendix A Table Notes for Surface Water Quality Results”. Please amend Appendix C to indicate the correct appendix in the title and table notes.	Appendix J (Water Quality TSD), Attachment I, Appendix C has been revised to include the correct titles.	Corrected header titles in baseline groundwater quality tables.	Appendix J, Attachment I, Appendix C (Groundwater Quality Results)

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
198	Wabun Tribal Council	WTC-IR#24: Quality Assurance Quality Control protocol, Appendix J, Attachment I – Water Quality Baseline Report, Appendix D. A relative percent difference (RPD) of ≤30% was deemed acceptable between replicate samples. The industry standard is 20%. Sample blanks were compared to Canadian Water Quality Guidelines (CWQG) and Provincial Water Quality Objectives (PWQO). Blank samples are normally also compared to the method detection limits (MDLs) to assess sample contamination. Blanks with concentrations 5 times greater than the detection limit may indicate sample contamination during collection, transport and/or handling. Blank samples should not have values greater than guidelines or objectives, as this would indicate gross contamination during the sampling/handling/transport process. It was not indicated how samples with high concentrations were handled. a) Please amend Appendix D and use of ≤20% as the acceptable limit for RPD between duplicate samples. b) Please amend Appendix D by comparing blank samples to method detection limits, and investigate incidences where blank concentrations are 5 times greater than the MDL to ensure samples have not been contaminated.	As requested, a table has been provided in the Addendum to Appendix J (Water Quality TSD), which details the concentrations of samples and blind duplicates for which the relative percent difference (RPD) was greater than 20%. In addition, a table has also been provided in the Water Quality TSD addendum that compares the concentrations to the RPD for each parameter. The blank samples were compared to the MDL and the concentrations of the following parameters were greater than 5 times the MDL in the 17 surface water blanks collected between November 2011 and March 2013: calcium in 3 samples, sodium in 11 samples, aluminum in 3 samples, molybdenum in 1 sample and zinc in 2 samples. As concentrations approach the MDL, the analysis sensitivity degrades and there is greater potential for outliers in the dataset. In the analysis of the baseline dataset and use in the effects predictions, suspect laboratory results were flagged, identified to the analytical laboratory and not included in the calculations to derive inputs for the water quality model. Therefore, the reassessment of the RPD of duplicate sets and the comparison of field blanks to MDLs does not change the effect predictions.	Provided a table that shows samples with RPD greater than 20% in Addendum to Appendix J (Water Quality TSD).	Addendum to Appendix J
199	Wabun Tribal Council	WTC-IR#25: Guideline determination, Appendix J, Attachment I- Water Quality Baseline Report, Section 5.1 Guidelines dependent on temperature, pH and hardness were calculated with an assumed temperature of 15 ˚C, a pH of 7 and a hardness of 30 mg/L. Temperatures as high as 26 ˚C were recorded in some lakes, pH ranged from 6.07 to 8.48, and hardness measured as $CaCO_3$ ranged from 11.8 to 60.4 mg/L among water features. These fluctuations in field parameters will have a large influence on guideline concentrations. To have a true representation of parameter concentrations above guidelines, physical field and hardness data collected at the time of sampling and in the specific water body sampled must be used to calculate guidelines. This comparison between measured values and calculated guidelines will assist in determining appropriate parameters to be modeled and will also determine significant differences between baseline conditions and predicted Project impacts. Please amend guideline values dependent on temperature, pH and hardness (e.g. un-ionized ammonia, aluminum copper, cadmium, beryllium, nickel) by calculating guideline values for each water feature for each date sampled to help determine important parameters to be modeled.	For parameters that have guidelines dependent on the value of other parameters, the predicted Project impacts need to be assessed by assigning water quality guidelines that reflect the predicted water chemistry of the surface water environment, not the water chemistry under existing conditions; this is particularly important for parameters that have guidelines that depend on variables such as hardness that will vary from existing conditions due to the predicted changes in water quality. The only parameter that has a water quality guideline that depends on temperature is dissolved oxygen, and dissolved oxygen is not expected to be decreased to below guideline values based on the predicted concentrations of nutrients in the receiving surface water environment. Un-ionized ammonia concentrations depend on temperature, but the Provincial Water Quality Objective (PWQO) and Canadian Water Quality Guideline (CWQG) for un-ionized ammonia are fixed at 0.020 mg/L and 0.019 mg/L, respectively; noting that the water quality model calculated the un-ionized ammonia concentrations from the total ammonia concentrations for each time step using varying measured temperature data throughout the year. The only parameter that has a water quality guideline that depends on pH is aluminum. Based on the geochemistry of the mine rock and tailings (i.e., the non-acid generating nature of the mine rock and tailings), the surface water receiving environment is expected to have pH values that are circum-neutral. The use of the water quality guideline for aluminum based on circum-neutral pH is therefore valid. Predicted hardness concentrations for the assessment locations, which can be derived from the predicted calcium and magnesium concentrations, range from 23 to 70 mg/L as $CaCO_3$. Using a hardness of 30 mg/L as $CaCO_3$ to derive the water quality guidelines for purposes of comparison to predicted concentration is a scientifically sound approach given that 30 mg/L as $CaCO_3$ is at the low end of the predicted hardness concentration range; this conservative approach was taken recognizing that assessment locations with hardness concentrations greater than 30 mg/L as $CaCO_3$ may be incorrectly flagged as being over the PWQO or CWQG.	Provided clarification in text regarding why a fixed pH of 7.0 and hardness concentration of 30 mg/L as CaCO3 were applied to determine the PWQO and CWQG values (for parameters with guidelines that depend on pH or hardness) used compare to the baseline water quality results.	Appendix J, Attachment I, Sections 5.1 and 5.2; Appendix J, Attachment II, Section 3.1.2 and 3.2

200	Wabun Tribal Council	WTC-IR#26: Ambiguous symbols used in appendix tables, Appendix J, Attachment I – Water Quality Baseline Report, Appendix A and Appendix J, Attachment I – Water Quality Baseline Report, Appendix C In appendices A and C, dashed lines (--) and blank cells are used to describe parameter concentrations. The meaning of these symbols is not explained in the report and may confuse the reader. If the parameters have been addressed in the report and indicated as measured, any missing values should be explained and justified. Please amend appendices A and C to indicate the meaning of these symbols to provide clarity to the reader.	A note has been added to Appendix J (Water Quality TSD), Attachment I, Appendices A and C to indicate that "--" means no value is available. Any blank cells have been replaced with "--".	Defined "--" in table notes.	Appendix J, Attachment I, Appendix A and Appendix C
201	Wabun Tribal Council	WTC-IR#27: Water Management – Closed loop system between reclaim pond and process plant, Appendix J, Attachment II – Côté Gold Water Quality Modelling Report, Section 2.2.1.1, Appendix J, Attachment II – Côté Gold Water Quality Modelling Report, Figure 3 and Chapter 5, Section 5.10 Section 2.2.1.1 under Mine Water Pond and Polishing Pond: A water management strategy has been designed to maintain a closed-loop between the processing plant and the reclaim pond; that is, the water from the reclaim pond does not report to the polishing pond, but rather is recycled back to the processing plant to reduce the requirements for freshwater make-up. As such, the water quality model assumes that the treated effluent discharge from the site does not contain cyanide from the processing plant, or any constituents generated by the cyanide leaching or destruction process. (p.19) Chapter 5: The polishing pond receives excess water from the water management pond. (p.5-22) Excess water accumulating in the mine water pond will be transferred to the TMF pond via a dedicated pipeline. (p.5-24) Mine water from the open pit sump will be pumped to the mine water pond at a rate of approximately 270 m^3/h [=6480 m^3/day] during normal operations. (p.5-23) Under typical, average annual operations, it is expected that 48,800 m^3/d of recycled water will be derived from the mine water pond and from the TMF pond, and 7,200 m^3/d of freshwater from the Mesomikenda Lake (total ore processing plant water demand of 56,000 m^3/d). (p.5-21) The TMF pond will have an emergency overflow spillway to discharge volumes exceeding its design capacity to Lake Mesomikenda. (p.5-24) Water and other Provincially-approved dust suppressants will be used, as appropriate, to control fugitive dust emissions (an estimated 3,290 m^3/d of water from the mine water pond will be used for dust control purposes throughout the Project site). (p.5-34) The Operations Phase Flow Schematic (Figure 3) in the Côté Gold Water Quality Modelling Report shows that water from the process plant will be directed to both the Tailings Management Facility (TMF) and the Mine Water Pond (MWP). Excess water from the MWP is directed to the polishing pond, which may be discharged to Bagsverd Creek and/or Mesomikenda Lake (if not recycled for use at the plant or directed to the reclaim pond).	Figure 3 of Appendix J (Water Quality TSD), Attachment II has been corrected to remove an erroneous arrow denoting flow from the processing plant to the mine water pond. The water that reports to the mine water pond, and therefore the polishing pond, does not include an input from the TMF reclaim pond (i.e., the TMF reclaim pond has been designed to not discharge water to neither the mine water pond nor the polishing pond). The components of the water balance that are relevant to the addition to, or removal of, water (including process water) from local watersheds are described in Appendix I (Hydrology TSD). These water balance components that influence the lake and river system were simulated under operations and closure conditions and varying climate scenarios as described in Appendix I. The TMF will be designed and constructed in accordance with the *Lakes and Rivers Improvement Act* and the designated Hazard Potential Classification associated with the facility. This will include a provision for storage of severe events above the normal operating water level range. In addition, an Operations, Maintenance and Surveillance Manual will be developed in accordance with Mining Association of Canada guidelines; this document will describe operating procedures and personnel roles and responsibilities. Mine water pond water will be used for dust suppression in areas that drain towards the open pit or the MRA collection ponds. Should dust suppression be required in other areas IAMGOLD would either use other dust suppression measures or fresh water.	The figures have been corrected. The erroneous arrows denoting flow from process plant to the mine water pond have been removed.	Chapter 5, Figure 5-2, Appendix J, Attachment II, Figure 3

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
203	Wabun Tribal Council	WTC-IR#28: Construction phase impact predictions, Appendix J, Attachment II – Côté Gold Water Quality Modelling Report, Section 1.1.7 During the construction phase, several water bodies will be realigned and Côté Lake will be drained. Changes to receiver water body chemistry should be anticipated, both from introductions of new water sources and the potential for introduction of entrained TSS during the final stages of dewatering. a) Please screen water chemistry from water bodies to be realigned or drained with water chemistry of receiver water bodies to describe any impacts b) Please describe mitigation measures to be used to prevent any significant effects on receivers during dewatering.	As part of the proposed development of the open pit, Côté Lake will be drained and portions of Three Duck Lakes, Clam Lake, Bagsverd Creek and the Mollie River system will be dammed and/or require realignment. Any concerns with water quality effects would be related to total suspended solids that is generated from sediment disturbance during the later stages of de-watering of Côté Lake. As detailed in Chapter 10 – Mitigation Measures, IAMGOLD has committed to implement best management practices for erosion and sediment control during the construction phase to mitigate potential concerns with respect to discharge of total suspended solids. Details are presented in Table 10-1 of the Amended EIS / Final EA Report. As detailed in Chapter 5 – Project Description, Section 5.10.7.1, the drainage of Côté Lake will require the construction of multiple dams to isolate it from connected water bodies. Côté Lake will be drained following the completion of these dams. The Côté Lake water will be drained to an appropriate receiver in the Mollie River system, which will be determined in consultation with appropriate authorities, local communities, Aboriginal groups and stakeholders. As detailed in Chapter 5 – Project Description, Section 5.10.7.2, Chester Lake currently feeds into the Mollie River, but the realignment will have the outflow of Chester Lake directed to Clam Lake. The average baseline concentrations from the updated Chester Lake and Clam Lake datasets are very similar (see table in the Water Quality Addendum); as such, the input from Chester Lake is not expected to significantly change the water quality in Clam Lake. As detailed in Chapter 5 – Project Description, Section 5.10.7.3, Clam Lake and Little Clam Lake currently flow into the proposed open pit, but the realignment will have the outflow diverted into the West Beaver Pond and the south end of Bagsverd Creek. The average baseline concentrations from the updated Little Clam Lake and West Beaver Pond (P-6) datasets are very similar (see table in the Water Quality Addendum); as such, the input from Little Clam Lake is not expected to significantly change the water quality in the West Beaver Pond. As detailed in Chapter 5 – Project Description, Section 5.10.7.4, Three Duck Lakes will no longer receive flow from Côté Lake. In order to maintain water flow through the Mollie River watershed, channels will be constructed to connect Bagsverd Lake (South) to Weeduck Lake and Weeduck Lake to Upper Three Duck Lakes. The average baseline concentrations from the updated Bagsverd Lake and Weeduck Lake datasets are very similar (see table in the Water Quality Addendum); as such, the input from Little Clam Lake is not expected to significantly change the water quality in the West Beaver Pond. As detailed in Chapter 5 – Project Description, Section 5.10.7.5, Bagsverd Creek will be realigned in order to maintain the connection between Bagsverd Creek and Bagsverd Lake following the construction of the TMF. The realignment will be constructed between Bagsverd Lake and Unnamed Lake #2. The average baseline concentrations from the updated Bagsverd Lake and Unnamed Lake #2 datasets are very similar (see table in the Addendum to Appendix J; Water Quality TSD) with the exception of average iron and concentrations, which are an order of magnitude higher in Unnamed Lake #2 than Bagsverd Lake. The input from Bagsverd Lake is not expected to significantly change the water quality in Unnamed Lake #2, and the iron concentration in Unnamed Lake #2 is expected to decrease with the addition of flow from Bagsverd Lake.	Provided discussion and results summaries that compare baseline water quality of water features to be connected during realignment in the Addendum to Appendix J (Water Quality TSD).	Addendum to Appendix J

204	Wabun Tribal Council	WTC-IR#29: Model parameter inputs, Appendix J, Attachment II – Côté Gold Water Quality Modelling Report, Section 2.5 and Appendix J Technical Support Document: Water Quality, Section 4.1 In Ontario, it is standard practice to use 75th percentile effluent and receiver concentrations for predictive water quality modeling. The Côté Gold Water Quality Modelling Report does not provide the input modeling data for any of the receivers modelled (e.g. Neville Lake, Mesomikenda Lake, Clam Lake, Bagsverd Lake, etc.). For the receivers where less than two years of data are available (see IR# HESL 1), there is insufficient data to adequately undertake any receiver water quality modeling. Section 4.1 states that predicted or simulated water quality results were compared to upper limit (95th percentile concentrations) of existing conditions. The report is not clear, but it appears as though the 95th percentile concentrations are based on the combined data set for all baseline data (all events, sites, and seasons) collected in the local study area. Assessing predicted water quality for specific features (e.g. Neville Lake, Mesomikenda Lake) against 95th percentile local study area concentrations dismisses the sensitivity of specific water features – this inadequately assesses the potential impacts from the Project on receivers. The impact from the Project on water quality for a specific water feature needs to be evaluated against water quality of that specific feature, as this is standard practice. a) Please provide receiver input data used for modeling. b) Update the baseline report with additional sampling conducted through 2013/2014 to obtain sufficient data to calculate 75th and 95th percentile concentrations for receivers. c) Update modelling using 75th percentile concentrations for receiver and effluent concentrations. d) Compare predicted water quality for each feature to its 95th percentile concentrations, not the 95th percentile concentrations for the entire baseline dataset.	The receiver input data (i.e., natural runoff and processing plant runoff) used for the water quality modeling is provided in Appendix J (Water Quality TSD), Attachment II, Section 2.5. The natural runoff water quality input is based on the average concentrations derived from the baseline surface water dataset; this is a reasonable assumption because the variability of the geology across the local study area is limited and therefore the natural runoff quality would be expected to be similar across the local study area. Statistical summaries that include the baseline surface water quality data to May / June 2014 are provided in the Addendum to Appendix J (Water Quality TSD). Concentrations of effluent from the Project site are predicted for every time step in the model. The predicted effluent concentrations are a combination of the drainage from the various facilities (i.e., open pit, TMF, MRA, low-grade stockpile) as per the flow logic within the Project site. As described in Section 2.1 of Appendix J, Attachment II, the water quality model integrates the site water quality predictions with the receiving environment predictions and accounts for variable hydrological conditions within and outside of the site; therefore, a statistical assumption (i.e., 75th percentile) of the effluent concentrations is not needed, as the effluent concentrations will not be static and will depend on hydrological conditions. For comparison purposes, a set of baseline concentrations that represent the upper limit of baseline were derived to assist with the water quality effects assessment, in particular to assist with providing a basis for the magnitude aspect of the impact assessment; the upper limit of baseline was calculated for each parameter using the 95th percentile concentrations. Statistical procedures that have been used to define the upper limit of background include the upper 95% confidence limit, and the 90th or 95th percentile, among others (BCMELP 1997; Hill et al. 2006, Roe et al. 2006). The approach of using the 95th percentile concentrations to define the upper limit of background concentrations is consistent with the Canadian Council of Ministers of the Environment (CCME) background concentration procedure (CCME, 2003). Furthermore, the 95th percentile concentrations were calculated to derive a single set of upper limit baseline concentrations to use as a magnitude benchmark for all assessment locations. A single set of upper baseline concentrations, rather than individual sets of baseline concentrations for each assessment location, were applied to provide a consistent assessment between the assessment locations and to avoid discrepancies when determining the magnitude level (i.e., Level I, II or III). It is recognized that deriving lake specific 95th percentile concentrations would provide more accurate comparisons with respect to determining if concentrations were predicted to be greater than baseline conditions. However, using a single set of concentrations that represent the upper limit of baseline is conservative for the purpose of the magnitude assessment because, if a single concentration at a single water quality effect location was above the upper limit of baseline, then the overall magnitude of effect for water quality would be classified as a Level II; this approach, although perhaps less accurate, is more conservative, and the conservative nature of the approach negates the uncertainty associated with using a single set of concentrations to represent the upper limit of baseline rather than lake-specific concentrations. Therefore, deriving the upper limit baseline concentrations for individual assessment locations would not change the outcome of the magnitude assessment, as a Level II magnitude was assigned for all Project phases and the Level III magnitude requires that the concentration be greater than both the 95th percentile concentration and the water quality guidelines, where applicable. Therefore, for the purposes of this EA, the baseline water quality calculated using the 95th percentile concentrations is appropriate for comparisons to the predicted water quality as part of the water quality effects assessment. In a dataset of many lakes and watercourses of varying size and depth sampled over various seasons, as is the case for the Côté Gold Project, the 75th percentile does not account for naturally occurring concentrations in samples between the 75th and 95th percentiles. Calculation of the upper limit of baseline water quality using the 75th percentile would exclude a significant percentage of samples and does not encompass the full range of naturally occurring conditions that have been measured in the surface water environment (i.e., 25% of samples would be expected to exceed the 75th percentile).	Provided updated statistical summary of baseline water quality results to May / June 2014 in the Addendum to Appendix J (Water Quality TSD).	Addendum to Appendix J

205	Wabun Tribal Council	WTC-IR#30: Sewage Effluent Modeling, Appendix J, Attachment II – Côté Gold Water Quality Modelling Report, Section 2.1 The effects of discharging treated sewage to the environment were not modeled and the point of discharge has not been identified. Even if federal and provincial sewage effluent limits are met, discharging treated effluent to the environment may increase nutrients and reduce dissolved oxygen concentrations in the receivers. These impacts were not considered in the effects assessment, inadequately assessing the impacts of the proposed Project on the environment. Please indicate effluent receiver (or point of discharge) and include treated sewage effluent in model inputs using 75% of effluent concentrations.	During the construction and operation phases, the camp site sewage system is expected to be located upstream of Bagsverd Lake (south). Domestic sewage will be treated using a Waterloo Biofilter ® Model 4 Bedroom system. The system contains a patented synthetic, absorbent filter medium that is configured as a free-draining, attached growth biological trickling filter to treat sewage. The system provides aerobic, anaerobic and anoxic environments for biological treatment. Bacteria colonize the filter medium surfaces and degrade and oxidize organic pollutants in the sewage (i.e., nitrate, ammonia and phosphorus). The Waterloo Biofilter ® Model 4 Bedroom system has been employed at comparable-sized operations in northern Ontario. Data from the treated side of the system at an analogous site was provided for review (Canadian Shield Consultants, personal communication, 2014). Data from the analogous site were used as inputs to the water quality model to predict the effect of the proposed septic system on downstream receivers. Concentrations of nitrate, nitrite, total ammonia and total phosphorus measured monthly over a period of three years were averaged, and an attenuation factor of 25% was applied to the total phosphorus concentration to account for mass attenuation in the subsurface between the septic tile bed and the groundwater flow system. Studies by Ptacek (1998) and Robertson et. al. (1998) observed that phosphorus attenuation in the vadose zone ranged from 50% to 80%. Furthermore, based on data from a sampling port installed under the area bed at the analogous site, the concentrations of total phosphorus decreased by an order of magnitude from the treated side of the biofilter to the sampling port (Canadian Shield Consultants, personal communication, 2014). Therefore, an attenuation factor of 25% is reasonable and conservative, in particular because the purpose of releasing the sewage effluent through a septic tile system is to attenuate some of the mass load within the vadose zone prior to reaching the water table. It would be expected that further degradation would occur along the groundwater flow path prior to entering the surface water environment; however, additional degradation was conservatively ignored in the water quality modelling. The daily design sewage flow for the Waterloo Biofilter ® Model 4 Bedroom system is 146,000 m^3/year. The actual flow has been noted to be less than the design flow by 30 to 40% (Canadian Shield Consultants, personal communication, 2014). The model assumes that the anticipated actual flow is 70% of the design flow (i.e., 102,200 m^3/year). An attempt was completed to use the Lakeshore Capacity Model to simulate the lakes downstream of the sewage effluent discharge; however, it was determined that these lakes were not a good fit for the Lakeshore Capacity Model approach (for more information see the Addendum to Appendix J; Water Quality TSD). Therefore, a combination of GoldSim and PHREEQC was used to predict the phosphorous concentrations in lakes downstream of the sewage effluent discharge. The total phosphorus concentrations were predicted in Bagsverd Lake (south) and Three Duck Lakes (lower); the results are presented in tables which can be found in the Addendum to Appendix J. Solubility controls were applied to the predicted concentration of total phosphorus under each climatic condition using in the equilibrium geochemical speciation / mass transfer model PHREEQC to account for geochemically creditable phases that are known to control phosphorus concentrations in the natural environment. Predicted concentrations are compared to PWQO in table format in the Addendum to Appendix J. The predicted total phosphorus concentration in Bagsverd Lake (south) and Three Duck Lakes (lower) is lower than the PWQO. Based on the predicted concentrations for total phosphorous, concentrations are therefore expected to be at levels below those that would result in a change to the trophic status of the lakes downstream of the treated sewage effluent discharge. Response continues on next page.	Provided discussion and results summaries that compare baseline water quality of water features to be connected during realignment in the Addendum to Appendix J (Water Quality TSD).	Addendum to Appendix J

205 cont	See previous page.	See previous page.	The predicted nitrate, nitrite and total ammonia concentrations for Bagsverd Lake (south) and Three Duck Lakes (lower) for average, 1:25-year dry and 1:25-year wet climatic conditions are presented in table format in the Addendum to Appendix J. The predicted annual average concentrations are compared to the PWQO and CWQG, where applicable. The predicted average annual nitrate concentrations in Bagsverd Lake (south) and Three Duck Lakes (lower) are below the CWQG of 13 mg/L (there is no PWQO for nitrate). The predicted average annual nitrite concentrations in Bagsverd Lake (south) and Three Duck Lakes (lower) are below the CWQG of 0.06 mg/L (there is no PWQO for nitrite). The predicted average annual un-ionized ammonia concentrations in Bagsverd Lake (south) and Three Duck Lakes (lower) are below the PWQO and the CWQG. Therefore, the results of adding the sewage effluent to the water quality model do not change the results of the water quality effects assessment.	See previous page.	See previous page.
206	Wabun Tribal Council	WTC-IR#31: Regional Study Area, Appendix J, Technical Support Document: Water Quality, Section 2.2 According to EIS Guidelines, a regional study area must be defined. A regional study area was not defined in the EA for water quality, only a local study area. Concentrations of several parameters were modelled to be above the 95th percentile baseline conditions at the limits of the local study area (Mollie River Watershed and the Mesomikenda Lake Watershed) indicating the influence of the project will go beyond the defined local study area. Project effects have not been adequately assessed as potential impacts outside of the local study area have not been assessed. a) Please define the regional study area and implement a water quality monitoring program to document the RSA. b) Please model water quality effects in the RSA to determine impacts from the project outside of the local study area.	The predicted concentrations in Mesomikenda Lake (upper) and Dividing Lake are very close to the 95th percentile baseline concentrations, and well below water quality guidelines. Any small deviations above the upper limit of baseline concentrations are expected to be localized near the downstream end of the local study area. Furthermore, no significant effects were identified within Mesomikenda Lake or Dividing Lake. Therefore, no significant effects on water quality are expected beyond the local study area. However, surface water monitoring will be completed downstream of the local study area to confirm the water quality model predictions; monitoring commitments have been revised accordingly	Revised water quality monitoring commitments to add monitoring downstream of local study area.	Chapter 16, Table 16-1 Appendix J, Section 5.2.1 Appendix Y
207	Wabun Tribal Council	WTC-IR#32: Calculation of the 95th Percentile Baseline Concentrations, Appendix J, Attachment II- Côté Gold Water Quality Modelling Report, Section 3.1.2 Aquatic Health Benchmarks were derived using the upper limit of the background (95th percentile baseline concentration). However, these calculations are not defined in the report and it is not indicated whether they are based on the collection of data for several water features or calculated for each individual body of water. These numbers are also not included in the baseline report, nor is the use of the upper limit explained or justified as to why its use was deemed appropriate. a) Please clearly explain the 95th percentile calculation used in the baseline report and provide a rationale for its use. b) Please provide 95th percentile parameter concentrations for individual, potentially affected water bodies.	The requested 95th percentile concentrations for each lake, using the updated baseline dataset available to date, are presented in table format in Addendum to Appendix J (Water Quality TSD). For the purposes of deriving a set of baseline concentrations to assist with the water quality effects assessment, in particular to assist with providing a basis for the magnitude aspect of the impact assessment, the upper limit of baseline was calculated for each parameter using the 95th percentile concentrations. Statistical procedures that have been used to define the upper limit of background include the upper 95% confidence limit, and the 90th or 95th percentile, among others (BCMELP 1997; Hill et al. 2006, Roe et al. 2006). The approach of using the 95th percentile concentrations to define the upper limit of background concentrations is consistent with the CCME background concentration procedure (CCME, 2003). Furthermore, the 95th percentile concentrations were calculated to derive a single set of upper limit baseline concentrations to use as a magnitude benchmark for all assessment locations. A single set of upper baseline concentrations, rather than individual sets of baseline concentrations for each assessment location, were applied to provide a consistent assessment between the assessment locations and to avoid discrepancies when determining the magnitude level (i.e., Level I, II or III). Deriving the upper limit baseline concentrations for individual assessment locations would not change the outcome of the magnitude assessment, as a Level II magnitude was assigned for all Project phases and the Level III magnitude requires that the concentration be greater than both the 95th percentile concentration and the water quality guidelines, where applicable. Therefore, for the purposes of this EA, the baseline water quality calculated using the 95th percentile concentrations is appropriate for comparisons to the predicted water quality as part of the water quality effects assessment.	Provided discussion in the Addendum to Appendix J (Water Quality TSD).	Addendum to Appendix J

208	Wabun Tribal Council	WTC-IR#33: Predicting dissolved concentrations, Appendix J, Attachment II – Côté Gold Water Quality Modelling Report, Sections 2.5 and Appendix J, Attachment II – Côté Gold Water Quality Modelling Report, Sections 2.6 Modeling results are presented as dissolved metals concentrations. In section 2.5 it is not indicated if dissolved or total concentrations were used as input values. For a cohesive model, it is important to use the same data type for input values as those used for output data values. Furthermore, predicting total concentrations is the standard accepted method as it provides a conservative assessment and water quality guidelines are given in total concentrations. a) Please clarify what data type was used for input data. b) Please provide a rationale for why there was a deviation from standard protocol and what such alterations mean in terms of impact assessment.	For the input data described in Appendix J (Water Quality TSD), Attachment II, total or dissolved concentrations were used as input values depending on the specific source of the water quality data. For example, the natural runoff and process plant area runoff input (as described in Section 2.5.1) was derived from the surface water quality baseline dataset and used total metals concentrations; the model, therefore, assumes that the total concentrations are equal to dissolved concentrations for this model input. The use of total metal concentrations to derive runoff water quality inputs is conservative, as the total concentrations are greater than the dissolved concentrations. The open pit groundwater seepage input (as described in Section 2.5.2) was derived from the groundwater quality baseline dataset and used dissolved metal concentrations. The dissolved concentrations are more relevant to groundwater because suspended solids are not transported through the subsurface, except perhaps in karst environments. Therefore, it is not relevant to use total concentrations for groundwater quality model inputs. Despite using a combination of total and dissolved concentrations as inputs to the water quality model, the water quality model is considered to simulate “dissolved” concentrations that are conservatively transported through the modelled system; that is, the model does not holistically account for solubility controls and therefore does not remove the mass that precipitates from solution and falls out of the water column through sedimentation processes. As such, the model simulates the water quality as if no mass is lost as it moves through the system, whether the mass is transported through the subsurface or surface water environments. In reality, mass is lost along subsurface and surface water flow pathways through adsorption / complexation, co-precipitation, precipitation, and solid-solution substitution reactions. The water quality modelling approach taken as part of the water quality effects assessment is a standard, well-recognized, and conservative approach that does not deviate from “standard protocol”.	None.	n/a
209	Wabun Tribal Council	WTC-IR#34: Model assumptions – geochemistry, Appendix J, Attachment II – Côté Gold Water Quality Modelling Report, Section 2.6 and Chapter 5, Section 5.3.4 Screening-level static testing was not conducted on rock samples and no geochemistry data is available for Project-specific tailings. Assumptions have been made despite this lack of data. To fully understand the implications of these decisions, evaluation by a geochemist is required. The geochemistry section provides various descriptions of sulfur and sulphide content and various classifications of Potential Acid Generating materials for lake sediments, mine work and overburden with no clear definition of what the criteria and thresholds are for PAG materials. a) Please provide a rationale for the lack of a complete geochemical assessment, a schedule for submission and an explanation for its implications to the EIS. b) Please provide a consistent criterion, with rationale, for the classification of PAG materials from the site, and a description of how PAG materials would be identified during construction and operations. We recommend review of the geochemical characterisation by a qualified geochemist.	a) A comprehensive investigation and evaluation of the metal leaching / ARD characteristics of waste rock and tailings has been completed and documented in Appendix E (Geochemistry TSD). This work included static testing of a set of 236 mine rock samples from drill core by full acid base accounting analysis. The work further included a proxy analysis of an additional 912 samples of archived rock pulp samples using total carbon and total sulphur to assess the acid generating nature of the mine rock. In addition, 93 simulated tailings samples were analysed by standardized acid base accounting test procedures. This static testing was supplemented by the initiation of kinetic tests in the form of mine rock humidity cells and field cells. Additional work not available at the time of this report including humidity cell testing of simulated tailings produced by metallurgical testing is underway. In addition, operation and analysis of existing mine rock humidity cells and mine rock field cells is continuing. b) In accordance with accepted practice and guidance in MEND Report 1.20.1 (2009) an NPR of <2 has been identified as potentially acid generating (PAG) for the purposes of mine rock management planning. Interpretation of the anticipated behaviour of the rock with respect to potential for acid generation is further supported by the proxy analysis of a larger set of samples using Leco C and S data to derive an NPR based on maximum potential acidity. Investigations carried out on the Project to date indicate that PAG rock (on the basis of an NPR <2) is present as small isolated volumes that are distributed randomly through the significantly greater mass of the Non-PAG mine rock. These PAG materials likely represent occasional clusters of sulphides that occur within the mineralized area of the Côté gold deposit. Further the PAG rock tends to be composed of low sulphide (mean = 0.36% S) material with lower contents of minerals that provide acid neutralization capacity. The Non-PAG rock is also low sulphide but contains much higher concentrations of minerals that neutralize acidity. In fact the Non-PAG rock contains an excess of acid neutralization capacity. A mass-balance comparison of the net acid generation capacity of the PAG rock compared to the net acid neutralization capacity of the Non-PAG rock suggests that the overall acid neutralization capacity of the Côté mine rock is approximately 120 times greater than the acid generation capacity. Therefore the potential for net acidic conditions to occur in the Côté mine rock is considered to be extremely small. On this basis it has been identified that segregation of PAG rock during operations would not only be challenging, but is not expected to be necessary or beneficial.	None.	n/a

210	Wabun Tribal Council	WTC-IR#35: Fate of PAG and Metal Leaching Materials, Chapter 5, Section 5.5 "In the case of mine rock, provide for an optimal closure scenario for potential ARD/ML management using passive systems to the extent possible, but with a contingency arrangement for chemical treatment if and where required" (p.5-8) This would appear to contradict the previous geochemistry section, which concluded that general mixing with waste rock would neutralize any PAG as its general occurrence is low. How can PAG and metal leaching be managed if the source materials are blended in with all other rock? a) Please describe the contingency systems for management of PAG and metal leaching rock at closure. b) Please indicate how these could be implemented if the source materials were blended throughout the waste rock piles. c) Please provide a rationale for NOT segregating PAG and metals leaching waste materials to allow direct management and mitigation if needed.	The Côté Gold Project is a low sulphide low metal mineral deposit with a very low probability of ARD occurrence. The high neutralization capacity of the rock coupled with the low sulphide content will insure net acid consuming conditions within the mine rock pile resulting in no acidic drainage and low rates of metal leaching. Therefore no specific management of PAG and/or metal leaching rock is required. Evidence to date suggests that the occurrence of PAG materials will be as small isolated volumes of limited extent. These small isolated PAG volumes will be mixed with and surrounded by large volumes of non-PAG rock with large amounts of excess neutralization capacity. Identification, isolation and segregation of these small volumes would be cost prohibitive and provide no environmental benefit. An adaptive management approach will be applied to manage the surface and seepage water should monitoring results identify a need to treat the effluent for ARD or metal leaching. Contingency measures to be used will be dependent on the technologies available during the closure period.	None.	n/a
211	Wabun Tribal Council	WTC-IR#36: Lack of impact assessment, Chapter 11, Table 11-3 Drainage of Côté Lake into another water body and realignment of other water features may cause changes in water quality. These activities were not included as having possible impacts on the aquatic environment during the construction phase of the Project. Please assess the potential impact on water quality of drainage of Côté Lake water to another water body and realignment of other water features, and describe mitigation or address why these activities are not considered concerns.	Côté Lake is currently draining to Three Duck Lakes. The water quality of Côté Lake and Three Duck Lakes is similar. Therefore, draining Côté Lake to Three Duck Lakes in the early stages of construction will not negatively affect the water quality in Three Duck Lakes. Similarly, the realignments will establish a connection between water bodies that have similar water quality. A comparison of the water quality of the various water features is provided in the Addendum to Appendix J (Water Quality TSD).	Provided comparison of water quality for lakes affected by re-alignment in Addendum to Appendix J (Water Quality TSD).	Addendum for Appendix J
212	Wabun Tribal Council	WTC-IR#37: Predicted total phosphorus concentrations, Chapter 9, Section 9.9.2.2 and Appendix J, Appendix B, Section 2.5.1 Section 9.9.2.2 states: Total phosphorus may be overstated in the predictions due to elevated baseline analytical results. Thus, no effects to aquatic life are expected in the Mollie River associated with water quality. (p.9-54) The elevated concentrations of phosphorus predicted by the model are suggested to be due to elevated baseline analytical results. However, as outlined in Appendix J, Appendix B, and Section 2.5.1, phosphorus input data were based on measurements that were obtained with a lower than originally used method detection limit (Samples were originally collected at a sdl of 0.02 mg/L, then resampled at a dl of 0.006 mg/L - we note that commercial labs can obtain a dl of 0.002 mg/L). Therefore, high phosphorus concentrations cannot be the result of analytical issues. In addition, baseline data with high concentrations do not necessarily result in high predictions in the modelling exercise, and the explanation presented (high baseline) does not adequately rule out effects to aquatic life. Please correct the statement in Chapter 9 section 9.9.2.2, repeat the assessment using good phosphorus data, or clarify if there has been a misunderstanding.	The reviewer is correct in that the total phosphorus baseline concentrations that were analyzed via spectrophotometer (lower level detection limit) are solely used for the water quality model inputs to calculate baseline surface water loading rates. However, source-term loading rates that use the humidity cell data were conservatively estimated from humidity cell leachate that was analyzed via Inductively Coupled Plasma Mass Spectrometry. Furthermore, the water quality model allows for the mass load for all parameters, including total phosphorous, to be transported through the modelled system without accounting for geochemical controls. This approach is conservative because: i) conservatively high leachate concentrations from humidity cell tests were applied to calculate total phosphorous loading rates from the mine rock, and ii) the water quality model does not account for attenuation / sequestration of total phosphorous along the surface water flow paths. Given the conservative approach used in the modelling, it is likely that predicted total phosphorous concentrations are overstated. The statement in Chapter 9 – Description of Project Effects, Section 9.9.2.2 was meant to reference the geochemical baseline data; this assumption will be revised to specifically reference the kinetic test results. The predicted annual average total phosphorus concentrations for Neville Lake and Mesomikenda Lake were completed using the Lakeshore Capacity Model and are presented in table form in the Addendum to Appendix J (Water Quality TSD). The average baseline total phosphorus concentrations presented in table for Neville Lake and Mesomikenda Lake were analyzed via the colourmetric method to a detection limit of 0.006 mg/L. A revised PWQO for each lake was calculated by increasing the average baseline total phosphorus concentration by 50%, in accordance with Section 2.2 of MOE et al. (2010). The predicted annual average total phosphorus concentration in Neville Lake and Mesomikenda Lake are below the revised PWQO. Any changes in phosphorus concentrations are not expected to result in a meaningful change in dissolved oxygen concentrations relative to the resident biota nor cause a shift in the productivity of the lakes.	Revised reasoning for high phosphorous in the receiving waters; provided revised phosphorous predictions in the Addendum to Appendix J (Water Quality TSD).	Chapter 9, Appendix N (Aquatic Biology TSD); Addendum to Appendix J (Water Quality TSD)

213	Wabun Tribal Council	WTC-IR#38: Water quality impact assessment for operations phase, Chapter 11, Table 11-4 and Appendix J The magnitude level assigned to changes in water quality is II. This may be incorrect for several reasons. First, phosphorus was above the aesthetic guideline, immediately suggesting a designation of Level III would be more appropriate. Second, guidelines that are based on pH, temperature or hardness were calculated using averages instead of on an individual basis - and this would bias the assessment. Thus, it is possible that other parameters exceeded guidelines as well, but were never detected due to miscalculated guidelines. Third, treated sewage effluent was not included in model input data. The addition of treated wastewater to the environment could further increase nutrient concentrations. Fourth, changes in general parameters including pH, alkalinity, dissolved oxygen, temperature and total suspended solids were not predicted. High nutrient levels may cause an increase in production, causing a decrease in dissolved oxygen. Dissolved oxygen levels may drop below guideline values. Fifth, model predictions were based on input values. The values used for input parameters were the averages of data from several water features. Use of a regional value instead of a value specific to the receiving water body as an estimate of baseline may not provide adequate protection to the specific receiving waters. Finally, The maximum values predicted were the maximum of the average and not a true gauge of possible elevated concentrations in specific water bodies. Additionally, the average values were from various water features (including creeks, lakes and ponds) and the number of samples per water body ranged from 0 to 22. The large range in sample sizes between would bias the results toward more frequented sample sites unless the averages were weighted, and there is no indication that this was done. The spectrum of water features sampled would increase the variance in parameter concentration and make it less likely to determine if changes in concentrations due to the Project were significantly greater than background conditions. Please reanalyze the impact the Project may have on water quality during the operations phase using data specific to potentially impacted water bodies, or provide rationale as to why the current methods were used and how they are more stringent or protective than the use of data that are specific to the water body being assessed.	As part of addressing comments on the EA, the predicted concentrations of phosphorous were re-evaluated by accounting for solubility controls and/or following the MOECC recommended guidance to use the Lakeshore Capacity Model approach (MOE et al., 2010); these results are provided in the Addendum to Appendix J (Water Quality TSD). Based on these calculations, any changes in phosphorus concentrations are not expected to result in a meaningful change in dissolved oxygen concentrations relative to the resident biota nor cause a shift in the productivity of the lakes. The average pH, temperature and hardness values were used to calculate guideline values that depend on these parameters, which were evaluated versus the predicted water chemistries to confirm that the approach was scientifically sound. This approach is taken to develop a single set of benchmarks, which allows a transparent and consistent evaluation of the baseline water quality data and prediction of Project effects for all assessment locations. For parameters that have guidelines dependent on the value of other parameters, the predicted Project impacts need to be assessed by assigning water quality guidelines that reflect the predicted water chemistry of the surface water environment, not the water chemistry under existing conditions; this is particularly important for parameters that have guidelines that depend on variables such as hardness that will vary from existing conditions due to the predicted changes in water quality. Treated sewage effluent was included in the water quality model and the predictions to the receiving surface water environment were re-simulated; these results are provided in the Addendum to Appendix J (Water Quality TSD). The added nutrient load to the Mollie River Watershed is not predicted to change the magnitude levels, and therefore does not change the impact assessment conclusions. Potential changes to pH, alkalinity, dissolved oxygen, temperature and total suspended solids were qualitatively assessed and considered as part of the effects assessment. The pH, alkalinity and temperature of the surface water environment is expected to not materially change from the baseline conditions. In response to comments regarding the potential effects on total suspended solids concentrations, conservative calculations were completed to assess the effect that total suspended solids discharged from the polishing pond would have on receiving surface water quality; these results are presented in the Addendum to Appendix J. The discharge of total suspended solids at conservatively high concentrations (i.e., maximum permissible effluent total suspended solids concentration) from the polishing pond is predicted to have limited effect on the receiving surface water concentrations and not change the magnitude assessment. Nutrient levels have been predicted as part of the EA. Based on the predicted concentrations of nutrients, the trophic status of the lakes is not expected to change and concentrations of dissolved oxygen are not expected to drop below guideline values. The effects prediction methodology is considered to be protective of the aquatic environment. It is scientifically sound to average baseline water quality data across several water features for the purposes of deriving a natural runoff water quality input for the water quality model because their baseline levels do not differ in a material way with respect to evaluating the effects. The maximum water quality values that are presented in Appendix J are the maximum monthly average concentrations. Use of the maximum monthly average concentrations is a scientifically sound approach for comparison to the guideline values. The maximum water quality values presented in Appendix N (Aquatic Biology TSD) are the absolute maximum concentrations. Therefore, the absolute maximum concentrations, and their duration, have been considered for the prediction of effects on the aquatic environment, where these type of results are more appropriately discussed.	Provided revised phosphorous predictions and analysis of potential total suspended solids effects in the Addendum to Appendix J (Water Quality TSD).	Addendum to Appendix J

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
214	Wabun Tribal Council	WTC-IR#39: Update Report text and Table 1 re: Surface Water Sampling Frequency, Appendix J, Attachment I – Water Quality Baseline Report, Section 4.1.1 Surface water quality sampling was initiated in October 2011 at selected sites, and additional sites were added in 2012 and 2013. It is not clear from the report when the sampling events occurred and how many times or when each site was sampled. Table 1 – Summary of Surface Water Quality Monitoring Program provides the date in which the first samples were first collected from each site, and the sampling frequency for ongoing monitoring and data collection (e.g. monthly, quarterly), but does not provide the number of times each site was sampled (N) or when it was sampled (e.g. July 2012). The report text does not clearly describe when baseline sampling events occurred, and the timeframe for baseline data is included in the baseline report (as monitoring is ongoing). This information is important to assess the adequacy of the water quality sampling program used to document baseline conditions and evaluate the potential effects in the environmental assessment. This material may be available in appendices but does not provide the needed summary for the main body of the report. a) Please update the text in section 4.1.1 to include the events in which surface water quality was monitored for the report (as provided in section 4.2 Groundwater Monitoring). b) Please update Table 1 – Summary of Surface Water Quality Monitoring Program to include the events (e.g. October 2011, July 2012…) and number of events (e.g. N=3) at each station that was sampled and included in the baseline report.	Although not summarized in Table 1 in Appendix J (Water Quality TSD), Attachment I, the analytical data and sampling dates are provided in Appendix J, Attachment I, Appendix A. As requested, an updated summary table is provided in the Addendum to Appendix J (Water Quality TSD). The new summary table details the specific sampling dates and number of events.	Provided table that summarizes baseline water quality program in the Addendum to Appendix J (Water Quality TSD).	Addendum to Appendix J
215	Wabun Tribal Council	WTC-IR#40: Lack of reference sites, Appendix N – Appendix C Schist Lake was sampled as a potential reference lake for future studies. However the benthic communities in both the shallow and deep stations proved to be quite different and it is not recommended that it be used in future studies. (p.iii) The benthic community within Bagsverd Creek was very different than Errington Creek in density, taxon richness, Simpson's Evenness and community composition. Despite that Errington Creek represented a similar size water course and upstream watershed size, was located within the same watershed as Bagsverd Creek and appeared to be a good reference, the benthic communities were very different and it is therefore recommended that Errington Creek not be used as a reference in the future for Bagsverd Creek. (p.iii) Reference locations are needed during the construction and operations phases to provide a comparable dataset and allow for spatial comparisons in the future. The east arm of Schist Lake was the only reference area deemed to be an appropriate reference for fish. Both the lentic (Schist Lake) and lotic (Errington Creek) benthic invertebrate reference sites were considered inappropriate because of the natural differences in community assemblage between these sites and potentially impacted sites. Please provide alternate lentic and lotic reference sites for benthic invertebrates and lentic reference sites for fisheries.	At the time of the baseline field studies, Schist and Errington Creek were selected as possible reference locations based on their location within the watershed, size and structure. When in the field Errington Creek looked very similar yet smaller than Bagsverd Creek. However, as noted the benthic communities in the proposed areas differed. A survey will be undertaken before mine development to locate appropriate reference areas for all identified mine exposure areas. This will require field observations and sampling prior to effluent discharge.	None.	n/a
216	Wabun Tribal Council	WTC-IR#41: Benthic invertebrate sampling in Mesomikenda Lake, Appendix N, Section 5 Mesomikenda Lake is a possible effluent discharge site; however benthic invertebrate samples were not taken from this location. There is therefore a) no predevelopment baseline for future comparisons and b) no means to assess the baseline sensitivity and resilience of the aquatic community in the lake. Please provide benthic invertebrate community results for Mesomikenda Lake. If no further sampling is expected please provide justification for the lack of samples from this location.	Benthic samples were not collected in the north end of Mesomikenda Lake as water quality modelling had indicated that the preferred location for discharge was Bagsverd Creek and as such benthic sampling was not conducted up and downstream of the proposed Mesomikenda discharge location. If the Mesomikenda location is ultimately selected as the preferred discharge location, then benthic sampling will be conducted prior to site construction.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
217	Wabun Tribal Council	WTC-IR#42: Lack of periphyton, phytoplankton and zooplankton data, Appendix N Periphyton, phytoplankton and zooplankton do not appear to have been sampled during the characterization of baseline conditions. These biota provide important information regarding food sources for higher trophic levels, food web dynamics and they are all effective biomonitoring tools due to well-studied habitat requirements, especially those related to changes in nutrients. They are also a requirement of the EIS Guidelines. Please provide baseline periphyton, phytoplankton and zooplankton data for water bodies or a commitment to collect these data prior to any site disturbance.	Periphyton, phytoplankton and zooplankton monitoring was not conducted as part of the baseline studies. Secchi depth and nutrient concentrations were measured as an indicator of lake productivity. Periphyton, zooplankton and phytoplankton were assessed as monitoring tools for mining impact assessment as part of the Aquatic Effects Technology Evaluation (AETE) Program (St-Cyr et. al. 1997). The AETE program was used to assess and recommend the most appropriate monitoring tools for the Federal Environmental Effect Monitoring program for the mining sector in Canada. These measures (periphyton, zooplankton and phytoplankton) were not included in the environmental effects monitoring (EEM) program due to their temporal variability and limited use in assessing conditions over time. Zooplankton, phytoplankton and periphyton communities can change due to numerous habitat factors (e.g., weather, water temperature, light). So that the ability to control for these factors and standardize monitoring results is extremely difficult (St-Cyr et al. 1997, APHA 1998, Lewis and McCutchan 2010, McIntire 1966, Jowett and Biggs 1997, Biggs et al. 1998, Bourassa and Cattaneo 1998, Barbour et al. 1999, Arnon et al. 2007, Wetzel 1983). Furthermore, standardization in laboratory identification of periphyton cannot be demonstrated and thus identified taxa can vary between laboratories. Thus, the sampling of the plankton and periphyton communities was not deemed appropriate as a long term measure of conditions in mine exposed water bodies. Benthic invertebrates were selected as a biomonitor for the Côté Gold Project as they are excellent for assessing potential effects of the chemical condition of water and sediment on the health of aquatic systems (Barbour et al. 1999, Feltmate and Fraser 1999) because they: are good indicators of localized conditions (they generally have limited migration patterns or a sessile mode of life); integrate the effects of short-term environmental variations over the longer-term; reflect the community level of organization, including a range of trophic levels and pollution tolerance, providing numerous useful assessment endpoints; are relatively easy to identify to family and many taxa can be identified to lower taxonomic levels with ease; and serve as an important direct or indirect food source for fish.	None.	n/a
218	Wabun Tribal Council	WTC-IR#43: Fish tissue results, Appendix N, Appendix C, Section 6 and Appendix N, Appendix C, Appendix F Fish tissue contaminant results are presented in Appendix F but not discussed in the text. Please provide a description of fish tissue results and how these results relate to fish consumption guidelines.	While fish tissue results are not presented in the HEHRA, fish consumption is acknowledged and addressed as a potential exposure pathway. This exposure pathway was evaluated through an examination of predicted changes in surface water quality obtained through modelling. Predicted concentrations of contaminants of concern during each of the phases of the Project were compared to Human Health benchmarks. The benchmarks used are considered protective of all exposure pathways relevant to surface water including direct ingestion, dermal contact during swimming and indirect ingestion of fish. Comparison of the predicted concentrations to human health benchmarks indicated no exceedances; therefore, it was concluded that there would be no incremental risks attributable to the Côté Gold Project from fish consumption in the Project area. Further information is available in Appendix W (HEHRA), Section 2.2.3.3.	None.	n/a
219	Wabun Tribal Council	WTC-IR#44: Fish tissue results, Appendix N – Appendix C, Appendix F Fish tissue was not analyzed for methylmercury. The decomposition of flooded organic matter in soils and vegetation will occur at the Côté Gold Project and this enhances the methylation of mercury to the bioavailable and toxic form, which can biomagnify within the food chain. Please provide a commitment and procedure to collect baseline methylmercury concentrations in forage and predator fish and water prior to site disturbance.	It is true that methyl mercury represents the biologically available form of mercury accumulated by fish in their tissue. Therefore, the mercury concentrations measured in fish tissue represent methyl mercury (Grieb et al. 1990) and it does not need to be analyzed as methyl mercury. Total mercury (representing methyl mercury) has been analyzed in forage and sport fish from most water bodies within the study area.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
220	Wabun Tribal Council	WTC-IR#45: Mark-recapture population estimates, Appendix N, Appendix C, section 6.2.2 Mark-recapture studies designed to estimate fish population size were performed in Côté Lake and Unnamed Lake #1 but not in any other water bodies. Population sizes of northern pike, white sucker and walleye were assessed against appropriate comparisons to indicate the general productivity of the two lakes but it is unclear why these two lakes were the only ones selected. We assume that these two lakes will be removed during site construction and, if so, this would provide the needed rationale as population estimates are required to develop habitat compensation plans. Please provide rationale for the selection of Côté Lake and Unnamed Lake #1 as the locations for the mark-recapture estimates.	When the baseline work was initiated in 2012, the final location for the TMF was not selected and there was a potential that Unnamed Lake 1 would be lost. Therefore, mark-recapture studies were conducted in Côté and Unnamed Lake 1 to assess the lakes potentially lost due to the Project development.	None.	n/a
221	Wabun Tribal Council	WTC-IR#46: Site selection, Appendix N – Appendix C, Section 2, p. 7 There were no standardized methodologies used to determine an appropriate number of sample sites to characterize fish and benthic invertebrates in each water body. Five sites were sampled in each water body regardless of surface area or homogeneity of benthic habitat. Please provide justification for the number and location of sample sites and indicate if benthic invertebrate sites were chosen in equal proportion to the type of benthic habitat.	The number of benthic samples collected from each lake was established to take within-area variability into account and to allow for comparisons among lakes. Assuming Environment Canada's minimum criterion for risk of type 1 (alpha or false positive) and type 2 (beta or false negative) errors of 10% (0.1; Environment Canada 2012), and having a goal of detecting differences between areas of ± two times the reference area standard deviation, then a minimum number of five stations per area is required to provide adequate statistical power. Stations were standardized to the extent possible for habitat factors (i.e., depth, substrate, position relative to the thermocline) to reduce variability among lakes and allow for more meaningful comparisons.	None.	n/a
222	Wabun Tribal Council	WTC-IR#47: Benthic invertebrate sampling depth, Appendix N – Appendix C, section 2, p. 7 Collection of benthic invertebrates at various depths was justified through the examination of dissolved oxygen concentrations. The benthic invertebrate community was not very diverse and contained a high proportion of tolerant species, likely because of habitat limitations. Collection of species from the littoral zone might have increased diversity and included less tolerant species that could be more readily impacted in the future and thus act as more sensitive biological indicators. Please consider the collection of littoral benthic invertebrates to increase taxa diversity and the sensitivity of the aquatic bioassessment.	While it is true that benthic invertebrate richness (number of taxa) would be expected to be higher closer to shore, metals from mining activities tend to partition to the sediments through the adsorption onto fine particulate materials that eventually settle to the bottom (Ongley 1996, McKay et al. 2001, DiToro et al. 2005) and thus effects from mining are generally observed in the depositional zone of lakes and streams. Thus baseline monitoring targeted depositional habitats downstream of proposed mining activity.	None.	n/a
223	Wabun Tribal Council	WTC-IR#48: Aquatic species at risk, Appendix N – Appendix C, Section 6 and Appendix N – Appendix C – Appendix A Fish habitat was described in great detail but was not assessed in accordance with the habitat requirements of any provincially or federally listed Species at Risk. Fish communities were assessed for the presence COSEWIC listed endangered, threatened or special concern but not COSSARO (Committee on the Status of Species at Risk in Ontario) species. a) Please characterize fish habitat in terms of habitat requirements for provincially and federally listed Species at Risk. b) Please determine the presence of any COSSARO listed species.	a) As of May 2014, a total of 159 fish species have been placed into the 5 Committee on the Status o f Endangered Wildlife in Canada (COSEWIC) risk categories. Of these 56 are endangered, 40 are threatened and 54 are listed of special concern (COSEWIC 2014). Five of the endangered species listed are found in Ontario, however none of these are within the vicinity of the Côté Gold development. Of the 40 threatened fish species, 7 are observed in Ontario, however all of these species can only be found in southern Ontario. None of the 11 special concern species are found within the vicinity of the Côté Gold development. Thus characterization of habitat for these species is not applicable. b) The only Committee on the Status of Species at Risk in Ontario listed fish species found in the Sudbury region is the lake sturgeon. The southern Hudson Bay / James Bay population is listed as special concern and the Northwestern Ontario and Great Lakes-Upper St. Lawrence River populations are listed as threatened. Mesomikenda Lake is part of the headwaters of the Moose River Basin. In the Moose River Basin, lake sturgeon are found throughout many of the larger rivers and their tributaries, however are mostly absent from the most southern Canadian shield portions of the basin where the Côté Gold Project lies (Ministry of Natural Resources 2008). Lake sturgeon preferred habitat is larger lakes and river, with soft bottoms of mud, sand or gravel. They are usually found at depths from 5 to 20 m. Spawning habitat is typically found in relatively shallow, fast flowing water with gravel and boulder substrate, however they will spawn in deeper water or on open shoals.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
224	Wabun Tribal Council	WTC-IR#49: Fish habitat surface area, Appendix N – Appendix C, Section 6 and Appendix N – Appendix C – Appendix A Water bodies and fish habitat sites were not identified that could potentially be rehabilitated, restored or created to offset losses from the proposed Project. Please provide potential water bodies and fish habitat sites that could be utilized in the future to offset losses from the proposed Project.	The Project will result in changes in fish habitat through the loss of Côté Lake and parts of Bagsverd Creek, Upper Three Duck Lake, Clam Lake and the Mollie River. These losses will be off-set by the construction of the realignment channel that will connect Bagsverd Lake to Unnamed Lake #2, the realignment channel from Chester Lake to Clam Lake, the increase in water level in Chester Lake and the south arm of Bagsverd Lake (Figure 1.2 Appendix N). In addition, at closure the open pit will be allowed to fill and will be reconnected to Upper Three Duck Lake which will provide additional fish habitat, although this habitat was not considered in the impact assessment as it will take more than 50 years for the pit to fill following closure.	None.	n/a
225	Wabun Tribal Council	WTC-IR#50: Fish habitat surface area, Appendix N – Appendix C, section 6 The resilience of fish species to potential impacts was not discussed. Please discuss the resilience of resident fish species to potential impacts.	The predominant fish species found in the local study area are northern pike and yellow perch. Both northern pike and yellow perch are known for their tolerance to broad water temperature ranges and low dissolved oxygen concentrations (Inskip 1982, Krieger et al. 1983). The occurrence of northern pike over a broad latitudinal belt in North America demonstrates their adaptability to a variety of thermal regimes and conditions (Inskip 1982). In addition to northern pike and yellow perch, walleye, white sucker and lake whitefish were also common and varied in abundance depending on lake habitat. White sucker are highly adaptable fish species found in both lake and river habitat over a broad range (Twomey et al. 1984, Scott and Crossman 1998). Walleye are generally not located within areas that will be lost due to the mine development and lake whitefish were only found within Côté Lake (very low abundance) and potentially use the habitat within the arm of Upper Three Duck Lake. Walleye are tolerant of a wide range of environmental conditions but are generally most abundant in moderate-to-large lacustrine (>100 ha) or riverine systems characterized by cool temperatures, shallow to moderate depths, extensive littoral areas, moderate turbidities, extensive areas of clean rocky substrate and mesotrophic conditions (McMahon et al. 1984). Lake whitefish are widely distributed in Ontario and typically inhabit deep inland lakes. In its northern distribution whitefish will live in streams flowing into Hudson Bay and regularly descend into brackish water. It is not anticipated that many walleye or lake whitefish will require relocation from lost habitat areas. As for changes in habitat within lakes where these species do reside, it is anticipated that water levels will generally not be altered greater (up or down) than 1.2 m. Little Clam Lake is the only water body that will fall outside this where water level may decrease by 2.4 m. Neither walleye nor lake whitefish are present within this lake.	None.	n/a
226	Wabun Tribal Council	WTC-IR#51: Fish statistics, Appendix N, Appendix C, section 6, figures 6.1 – 6.5 The relationship between fish statistics (age, length and weight) was only displayed visually through a scatterplot. A linear regression would allow for better incorporation of these relationships into future assessments and a statistical detection of change. Please provide results of a linear regression between fish statistics (age, length and weight).	The length and weight relationship for fish data was only displayed visually through a scatter plot in the baseline report. The objective of this figure was to demonstrate that the growth was similar in all the lakes surveyed within the local study area. The distribution of data, sample sizes and range of data available for each lake varied greatly, therefore the data was displayed in this fashion as some samples sizes are insufficient to apply a linear regression. Linear regressions were applied to length at age relationships where age data was observed in greater than three age classes. All raw data is available for future comparisons.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
227	Wabun Tribal Council	WTC-IR#52: Statistical assumptions for ANOVA, Appendix N – Appendix C, section 2 ANOVA and post-hoc tests were used during the evaluation of benthic macroinvertebrate communities. When statistical assumptions could not be met, a non-parametric (i.e. Tamhane's) post-hoc test was utilized, but ANOVA requires a variety of statistical assumptions as well. Please amend section 5 to indicate if the non-parametric equivalent of ANOVA (i.e. Kruskal Wallis Test) was used when the statistical assumptions for ANOVA could not be met.	The method section of the baseline report (Appendix N) states the statistical methods used in the benthic analysis as follows: All benthic endpoints were summarized by separately reporting mean, median, minimum, maximum, standard deviation, standard error and sample size for each sampling area (Environment Canada 2012). Differences between areas were tested using Analysis of Variance and post-hoc Bonferroni comparisons. Data were transformed as necessary to satisfy assumptions of normality and homogeneity of variance. In instances where variances could not be homogenized by transformation, post-hoc tests not requiring this assumption (Tamhane's) were used instead of Bonferroni comparisons. Statistical tests and plots were generated using SPSS Version 12.0 (SPSS Inc., Chicago, IL). The above describes how IAMGOLD elected to deal with both parametric and non-parametric data. Although the Kruskal Wallis test could have been used it would not have changed the outcome of the results (stats re-run with the Kruskal Wallis test to assess the implications of using this method and no difference in key metrics was found). Basically, the Kruskal Wallis test is a non- parametric version of an Analysis of Variance. It is an extension of the Mann-Whitney U where more than two samples can be compared. A Mann-Whitney will only compare two samples like a t-test. Tamhane's test is different than the Kruskal Wallis – a Tamhane test will compare all sites and identifies the differences between all sites, where a Kruskal Wallis test will only determine whether the samples within the test are the same or they are different (same as an Analysis of Variance). There is not a single non parametric comparison test to conduct after the Kruskal Wallis test to determine this, unless you run a number of Mann-Whitney U tests.	None.	n/a
228	Wabun Tribal Council	WTC-IR#53: Statistics, Appendix N – Appendix C – Appendix E The level of significance assigned during ANOVA was p<0.1 instead of the commonly accepted p<0.05, promoting the potential for statistically significant differences between benthic invertebrate populations. Please provide justification for the selection of p<0.1 during the calculation of ANOVAs.	A p value of > 0.1 was used for determining significant statistical differences to be consistent with the protocols established by Environment Canada for the national EEM program (Environment Canada 2012).	None.	n/a
229	Wabun Tribal Council	WTC-IR#54: Fish communities, Appendix N, Section 2.4.2 A number of fish species were selected and assessed for future impacts based on their potential to support recreational opportunities and a subsistence food base. The updated *Fisheries Act* includes protection for fish that support these commercial, recreational and Aboriginal fisheries and contribute to productivity, but they are not discussed in the impact assessment. Please include an assessment of future impacts on fish that support commercial, recreational and Aboriginal fisheries.	In the Aquatic Baseline report, the habitat requirements of forage fish is described together with a description of the existing habitat for these species in each water body assessed. In the impact assessment, the protection of forage fish is indirectly addressed through the assessment of water quality to a standard of the protection of fish and aquatic life; and the assessment of loss of habitat which incorporates habitat for both sport and forage fish.	None.	n/a
230	Wabun Tribal Council	WTC-IR#55: Baseline phosphorus and zinc concentrations, Appendix N, Section 3.0 "It is possible that baseline phosphorus and zinc concentrations may be overstated due to analytical procedures that yielded higher than targeted method detection limits." (p.11) Low level detection is needed to properly characterize baseline conditions and set future targets. The conclusion that there will be no effects from phosphorus because current results might be overstated as a result of elevated reportable detection limits is not supportable. Phosphorus is an "aesthetics" guideline. Elevated phosphorus concentrations have the potential to reduce dissolved oxygen concentrations through increased decomposition rates and shift food webs through increased production. The fact that the guideline value is not based on toxicology does not reduce its importance in relation to aquatic communities. Please re-examine samples at lower detection limits, or, if samples exceed recommended holding times, collect new samples.	As of 2014, analytical methods were modified to ensure lower MDLs for phosphorus. The initial results indicate baseline phosphorus concentrations of less than 0.015 mg/L which is less than the PWQO of 0.020 mg/L (lakes) and 0.030 mg/L (rivers).	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
231	Wabun Tribal Council	WTC-IR#56: Magnitude levels for fish, Appendix N, Table 4.1 and Appendix N, Section 4.2 "During construction of the mine, as many fish as possible will be collected and relocated from all habitats that will be lost due to the development of the mine. However, it will not be possible to collect and move all fish and therefore, some individuals will likely be affected during construction" (Table 4.1). Individual fish will be lost during development due to lost habitat but the magnitude of this impact is only deemed level 1. A more detailed analysis is needed to make this conclusion. Please provide a more detailed analysis of population estimates and targeted relocation numbers to support the argument that project activities will not impact fish communities or populations, and that the magnitude is not level 2.	The criteria for level 1 impact to commercial, recreational and Aboriginal fish was "There is no measurable effect to sport fish communities or populations". Based on experience at other sites, IAMGOLD expects the relocation of fish to be successful such that it will result in the salvage of fish of all year classes of all resident species. It is likely that thousands of fish will be moved but it is not possible to capture every fish and as a result some individual fish will be lost. However, the losses of individuals are not expected to have a measurable effect on the community or population and hence the assignment of a level 1 impact.	None.	n/a
232	Wabun Tribal Council	WTC-IR#57: Fish habitat description, Appendix N, Table 4.1 and Appendix N, Section 4.2 "Blasting from the open pit may affect fish habitat and spawning in adjacent water bodies during construction and the early years of operation (Table 4.1). … However, the area potentially affected will either be overprinted by the construction of dams or is largely profundal (deep) and provides limited spawning habitat for the resident fish within this lake." It is stated that the area affected by blasting is primarily profundal habitat and of limited value for spawning. Additional description of this habitat would be useful for determining its importance, not only for spawning, but also for other sensitive life processes. The rationale for blasting impacts only to profundal (vs. littoral) habitat was not provided. Please provide a rationale for the habitat types and additional habitat description of the areas affected by blasting and its potential importance for all sensitive fish life processes.	Blasting has been predicted to have effects to fish spawning at a distance of 238.5 m from the pit during construction and at 349 m during operations. These distances overlap the south eastern portion of Clam Lake (see Figure 4.1 from the Aquatic Biology TSD). The dominant species found in this lake are smallmouth bass which typically spawn within the first meter of water over and around cobble, gravel and sandy bottoms. All the other species found within Clam will typically use the first two meters for spawning substrate. Of all the species found in Clam, only smallmouth bass, burbot and johnny darter use sandy, rock substrate for spawning. All other species spawning substrate are associated with the presence of vegetation. Minimal vegetation is present within the area affected by the blasting. The habitat present is largely cobble, rock, sand and silt substrate which is abundantly present in Clam Lake. During construction, the shoreline perimeter affected by the blasting will be approximately 240 m and 892 m during operations. The predominant area affected during operations falls in water depths greater than two meters of water, therefore it is anticipated that the area affected for spawning will be minimal when taking the entire area of the lake into consideration and the habitat present.	None.	n/a
233	Wabun Tribal Council	WTC-IR#58: Amelioration of impacts, Appendix N, Section 4.0, pp.16, 28 Water hardness, pH and DOC are expected to ameliorate potential future effects of copper, iron and zinc. At the minimum, these mechanisms need to be described with accompanying references, or these relationships should be quantified through future modelling scenarios. Please describe mechanisms for amelioration of impacts of copper, zinc and iron, with references, or quantify these relationships with modelling scenarios.	Relationships have been established through substantial research, between some metals and modifying factors which reduce toxicity. For example, water hardness has been documented to reduce zinc toxicity (Chapman et al., 1980, Brinkman and Woodling 2005, Minnow 2008, Environment Canada 2008) such that as water hardness increases, zinc toxicity has been observed to decrease. Similarly, copper toxicity has been well documented to be reduced with increasing concentrations of dissolved organic carbon. The reduction in toxicity is associated with the competition between copper and dissolved organic carbon for binding sites (Playle 1993) and forms the basis for the biotic ligand model. The biotic ligand model is accepted by MOECC as an appropriate method to develop a Site Specific Water Quality Objective (SSWQO). Similarly, iron solubility (e.g., bioavailability) is related to ambient pH concentrations (Morel 1983). While these relationships have been proved in various environments, they will need to be fully considered in the context of effluent characteristics and conditions within the receiving environment at the Côté Gold Project site. It is expected that if acceptable SSWQO can be developed, they will be established and approved prior to the permitting of the mine. However, the mine has committed that if SSWQO cannot be established, then further effluent treatment will be employed to ensure acceptable concentrations within the effluent plume. Thus, the EA can assess that concentrations will be acceptable (i.e., protective of aquatic life) without completing the SSWQO process.	None.	n/a
234	Wabun Tribal Council	WTC-IR#59: Site Specific Water Quality Objectives, Appendix N, Section 4.1 "The opportunity for reduced toxicity in the mixed zone should be explored through the development of Site Specific Water Quality Objectives" (p.16) If Site Specific Water Quality Objectives (SSWQO) are proposed as a mitigation for potential project effects (mixing zone toxicity) then they must be presented in the EIS to substantiate the prediction or modify the predicted impact. Please develop SSWQO in the EIS as a rationale for predictions of the impacts to site water quality in the mixing zone.	As noted above (Comment #233), SSWQO do not need to be developed within the EA because the mine has committed that if SSWQO cannot be established, then further effluent treatment will be employed to ensure acceptable concentrations within the effluent plume. Thus, the EA can assess that concentrations will be acceptable (i.e., protective of aquatic life) without completing the SSWQO process.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
235	Wabun Tribal Council	WTC-IR#60: Best Management Practices for erosion control, Appendix N, Section 4.2 "It is expected that through the implementation of best management practices for erosion control and timing of the construction periods relative to life history stages of resident fish, potential effects will be largely mitigated, and no residual effects to fish communities and populations are expected (Table 4.2). Monitoring of the effectiveness of these mitigation measures will be required (see Section 5.0)." (p.19) It is stated that best management practices (BMPs) for erosion control will mitigate residual impacts on fish, but specific BMPs are not discussed, nor is the resilience of various fish species to the potential impacts. The effectiveness of BMPs as mitigation cannot be assessed in the absence of descriptions of their operation and use. Please explain what BMPs will be used for erosion control and how these will mitigate residual impacts. Discuss the resilience of fish species present to the potential impacts.	Best management practices are described in the mitigation section (Chapter 10) of the EA document. The EA identifies the mitigation for erosion as "Best Management Practices (BMPs) and engineering design to limit soil erosion and mobilization/transport of sediments from disturbed areas" These best management practices are described as follows; "During construction, operations and closure phases, BMPs for erosion and sediment control include: design of physically stable mine rock and tailings storage facilities, the use of earthwork methods to minimize slope length and grade, ditching, sediment ponds / traps, channel and slope armoring, use of natural vegetation buffers, vegetation of disturbed soil, and runoff controls (i.e., sediment fencing and small check dams). During post-closure, erosion and sediment control would be focused on monitoring the success of closure activities".	None.	n/a
236	Wabun Tribal Council	WTC-IR#61: Duration of effects, Appendix N, Section 4.2, p.19 Impacts to fish will be pronounced in the first year of operations because watercourse realignments and constructed habitats may not be functional, but effects are expected to be short (i.e., one season). The duration of effects should be assessed in terms of impacted species and their life spans, not the lifespan of the mine, and more specific timing for the introduction of offsetting habitat should be presented. a) Please evaluate the duration of effects in terms of impacted species. b) Please provide more detail on the specific timing for introducing offsetting habitat.	a) The levels of duration described in Chapter 11 are somewhat related to the duration of each Project phase, however, the prediction of effects on aquatic species does consider the actual expected duration of each effect. b) Details on the specific timing of offsetting measures will be developed as part of the Fisheries Authorization. Ideal timing windows for minimizing fish and egg stranding during watercourse realignments will be considered. Timing of spawning for all fish found within the local study area indicated that the optimal window for all species will be later summer, early fall (attached Table 1). By August all species young-of-the-year should be large enough to catch and transfer. Only golden shiner spawn into August. Since their spawning window is quite large, it is not anticipated that the entire year class would be lost or that the species could not spawn in the new area they are transferred too. It is proposed that the transplanting of vegetation, benthic invertebrates and forage fish be carried out to expedite the establishing of compensatory habitat. Minnow Environmental (Minnow) has previously implemented this approach at another site (Agrium Kapuskasing Phosphate Operations 2006) and results were quite effective (e.g., no loss in year class of any of the fish species relocated to the newly constructed lake). In areas where aquatic vegetation was transplanted, the coverage and expansion of colonization was much larger and quicker than in areas that were not transplanted providing cover for juvenile fish and decreasing erosion from construction and wind. Transplanting activities will be sequenced to allow for the best opportunity for the successful transfer of fish from lost areas to the newly constructed channels and therefore reduce lag times. Transplanting activities will likely include the transplantation of macrophytes (aquatic plants), benthic invertebrates, and the relocation of small-bodied fish (forage fish) and of large-bodied fish. The sequence of transfers will take into account spawning and incubation periods of the dominant species found within the systems to ensure successful transfer of young-of-the-year fish. The objectives of these transplants will be to accelerate the establishment of the ecosystem and food chain within the newly constructed areas prior to the placement of the key fish species, thus reducing lag times. Therefore, it is expected that the lag time within the functioning habitat created to be minimal.	None.	n/a

237	Wabun Tribal Council	WTC-IR#62: Transplanting of species, Appendix N, Table 4-2 and Appendix N, Section 4.2 Transplanting of forage fish and benthic invertebrates is to be carried out to expedite the establishment of compensatory habitat, but no details on this activity are provided. What are the source areas? How will the transplants impact source populations? Will this activity be any faster or better than allowing for natural recolonization? Please provide details on the transplanting of forage fish and benthic invertebrates and how this will promote the establishment of constructed habitat.	It is proposed that the transplanting of vegetation, benthic invertebrates and forage fish be carried out to expedite the establishing of compensatory habitat. The source areas for these transplantations will be the areas to be lost within the same watershed. Therefore the transplant activities will not impact the source areas as they are to be lost with the construction of the mine site. Minnow has previously implemented this approach at another site and results were quite effective (e.g., no loss in year class of any of the fish species relocated to the newly constructed lake). In areas where aquatic vegetation was transplanted, the coverage and expansion of colonization was much larger and quicker than in areas that were not transplanted providing cover for juvenile fish and decreasing erosion from construction and wind. As for natural colonization of the benthic community, sedentary taxa would take much more time to colonize in the constructed areas if they were not transplanted. Forage fish will also be relocated from areas to be lost with the constructed mine site. This will promote a food base for the sport fish. Fish will be relocated within the same watershed. Transplanting activities will be sequenced to allow for the best opportunity for the successful transfer of fish from lost areas to the newly constructed channels. They will likely include the transplant of macrophytes (aquatic plants), benthic invertebrates, plankton, and the relocation of small-bodied fish (forage fish) and of large-bodied fish. The sequence of transfers will take into account spawning and incubation periods of the dominant species found within the systems to ensure successful transfer of young-of-the-year fish. The objectives of these transplants will be to accelerate the establishment of the ecosystem and food chain within the newly constructed areas prior to the placement of the key fish species.	None.	n/a
238	Wabun Tribal Council	WTC-IR#63: Mercury concentrations, Appendix N, Section 4.2 "There are currently fish consumption advisories for mercury in lakes within the local study area, (OMOE 2013) and therefore the potential to affect the recreational value of these lakes would be minor. (p.20) Fish tissue monitoring for mercury should also be conducted on all lakes where water levels are going to increase as a result of watercourse realignments. "(p.26) Fish consumption guidelines are not static and if mercury concentrations increase in fish in these waterbodies, the guidelines will reflect the increased concentrations, that in turn limit recreational opportunities. Consumption guidelines will not protect wildlife or waterfowl. The fish tissue mercury results are not presented or discussed in the baseline report of impact assessment. In addition to completing fish tissue monitoring on all lakes where water levels are going to increase, monitoring should also occur on downstream waterbodies that will be affected by elevated mercury concentrations. a) Please provide more emphasis on the fish tissue mercury results by discussing them in the baseline report of impact assessment. b) Please add fish tissue monitoring to downstream water bodies that will be affected by elevated mercury concentrations. c) Please provide a full discussion on the likelihood of mercury methylation and increase, and the duration of any changes.	a) Additional discussion on the fish tissue mercury results at baseline has been included in the Addendum to Appendix N (Aquatic Biology TSD). b) Agreed. Fish tissue monitoring for mercury is a component of the proposed monitoring program. c) As noted in the aquatic impact assessment, effects associated with methyl mercury production due flooding are expected to be very limited as areas that will be flooded (i.e., Chester Lake and parts of the south arm of Bagsverd Lake) are currently inundated seasonally and do not represent terrestrial soils and vegetation which would contribute to methyl mercury production. The areas to be flooded which are currently terrestrial are small and will have vegetation and organic soil removed prior to the implementation of water course realignments. Fish within the watershed are currently restricted for consumption due to regionally elevated mercury levels, thus it is not likely that there will be any significant change in methyl mercury exposure.	Fish tissue consumption benchmarks and fish tissue concentrations relative to the benchmarks have been provided in the Addendum to Appendix N (Aquatic Biology TSD). Chapter 16 and Appendix Y have been updated with additional details on fish tissue monitoring.	Addendum to Appendix N. Chapter 16 and Appendix Y

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
239	Wabun Tribal Council	WTC-IR#64: Effluent mixing zone, Appendix N, Section 6.0 "Within the Neville-Mesomikenda Lake watershed, potential effects are restricted to the initial effluent mixing zone where maximum concentrations of several substances (aluminum, arsenic, calcium, cadmium, copper, iron, magnesium, total phosphorus, strontium, uranium, vanadium, zinc) are expected to exceed water quality benchmarks. Predicted concentrations of most of these substances are less than short-term CWQG or toxicity thresholds (Table 4.7b)." (p.28) The extent of the effluent mixing zone has not been defined or described and therefore it is difficult to assess the magnitude of effluent enrichment and extent of impacts spatially. Please calculate the expected extent of the mixing zone and centerline concentrations of key effluent parameters.	The two potential treated effluent discharge options are described in Appendix J, Section 2.7 and shown on Figure 2-4. The scenarios that were modelled to simulate surface water quality conditions resulting from treated effluent discharge to the environment were as follows: 1) The downstream end of Bagsverd Creek − it is assumed that the lower basin of Neville Lake will be used as a mixing zone, with the downstream end of the mixing zone being the Neville Lake outflow; and 2) The upper-middle basin of Mesomikenda Lake − it is assumed that the upper-middle basin of Mesomikenda Lake will be used as a mixing zone, with the downstream end of the mixing zone being the outflow to the upper basin of Mesomikenda Lake. Based on the water quality modelling of each of the potential effluent receivers, it was determined that discharge to the downstream end of Bagsverd Creek is preferred due to the lesser predicted effect on the overall mixing zone water quality. For the purposes of the EA, the extent of the mixing zone is therefore expected to be the lower basin of Neville Lake, as depicted in Figure 2-4. The extent of the mixing zone within Neville Lake (lower basin), including prediction of centerline concentrations, will be further defined using hydrodynamic mixing modelling as part of the ECA application process following the EA approval.	None.	n/a
240	Wabun Tribal Council	WTC-IR#65: Fish and egg stranding, Appendix N, Section 6.0 "Some potential effects have been identified for fish, primarily during construction: ▪ potential for elevated TSS, ▪ loss of individual fish during fish relocation from habitat that will be removed, ▪ reduced functionality of constructed fish habitat in the first year, ▪ potential for terrestrial vegetation decay and methyl mercury production in some small areas (e.g., the south arm of Bagsverd Lake) where terrestrial lands will be inundated, ▪ potential for entrainment and impingement of fish in the freshwater intake structure and ▪ effects from blasting on spawning habitat during construction and the early years of operation." (p.29) A considerable amount of effort was expended to determine what fish species are resident throughout the study area. Given this information, it should be possible to calculate ideal timing windows for minimizing fish and egg stranding during watercourse realignments. Please provide details on optimal time periods for watercourse realignments that will minimize fish and egg stranding.	A detailed response on the optimal time periods for watercourse realignments that will minimize fish and egg stranding has been provided in the Addendum to Appendix N (Aquatic Biology TSD).	Spawning windows for resident fish relative to fish relocation plans have been added to the Addendum to Appendix N (Aquatic Biology TSD).	Addendum to Appendix N (Aquatic Biology TSD)

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
241	Wabun Tribal Council	WTC-IR#66:HHRA – Methylmercury, Chapter 12, Section 12.3.2 "As mercury is not expected to be present in process elements in appreciable quantities, exposure to this contaminant was not evaluated. It is noted, however, that the construction of the watercourse realignments will result in the flooding of former terrestrial lands. While the areas to be inundated are prone to flooding under existing conditions, it is possible that the decay of terrestrial vegetation would result in the production of methyl mercury that could be taken up by resident fish. However, the removal of vegetation prior to flooding will eliminate the potential for methyl mercury production." (p.12-6) It appears that the only inundated areas considered in the assessment of the potential for release of methylmercury into the environment were those in the areas of the realignments. Inundated regions of Clam Lake, Chester Lake and elsewhere do not appear to have been considered. The clearing of vegetation is generally acknowledged to have minimal benefits in terms of reducing peak methylmercury concentrations, on the order of 10%-15%. In order to have more meaningful effects, the soil must also be thoroughly removed, which can usually only be done at considerable cost. a) Please clarify that the environmental and human health risk assessment considered all pathways for potential release of methylmercury into the environment, and update the findings of the assessment, as appropriate. b) Please update the text to acknowledge the limitations to the proposed vegetation clearing mitigation in reducing levels of methylmercury in the environment.	a) The HEHRA (Appendix W) considered all relevant pathways for the potential release of methyl mercury into the environment. Additional text has been added for clarification as appropriate. b) The text has been will be updated to indicate that vegetation and the top layer of organic soils will be removed to limit methyl mercury production.	The following text has been added to Appendix W (HEHRA) Section 2.1.3.3: "As mercury is not expected to be present in process elements in appreciable quantities, exposure to this contaminant was not evaluated. It is noted however, that the construction of the watercourse realignments will result in limited flooding of former terrestrial lands (i.e., in the vicinity of Chester Lake and parts of the south arm of Bagsverd Lake). While the areas to be inundated are prone to flooding within the baseline condition, it is possible that the decay of terrestrial vegetation will result in the production of methyl mercury that will be taken up by resident fish. The removal of the top layer of organic soil and vegetation prior to flooding will reduce the potential for methyl mercury production and will be undertaken prior to construction. As there are currently fish consumption advisories for mercury in lakes within the study area, the potential to affect exposure to mercury is considered minor."	Appendix W, Section 2.1.3.3
242	Wabun Tribal Council	WTC-IR#67: Duration of impacts, Chapter 11, Section 11.4.1 and Chapter 11, Table 11-1 The levels of the duration assessment were established in relation to the life of the Project. Duration of impacts should be assessed in relation to life stages of fish and ultimately it should be determined whether the impacts diminish the ability of fish to carry out one or more life processes. Please determine the levels of the duration assessment in relation to life stages of fish, and their ability to carry out one or more life processes.	The levels of duration described in Chapter 11 are somewhat related to the duration of each Project phase, however, the prediction of effects on aquatic species does consider the actual expected duration of each effect. Specific details in relation to life stages of fish will be developed as part of the *Fisheries Act* Authorization.	None.	n/a
243	Wabun Tribal Council	WTC-IR#68: Numbers of fish for relocation, Chapter 11, Table 11-3 "Relocate fish (representative numbers of the community) to established habitats." (Table 11-3, p.11-24) It is difficult to determine the number of fish that will be collected because of various logistics, but at the least, targets based on mark-recapture studies and population estimates should be determined, or best efforts should be quantified. Please establish fish collection targets based on mark-recapture studies and population estimates.	A population estimate for Côté Lake is presented in Appendix N (Aquatic Biology TSD), Appendix C, Section 6.2.2. As many fish as practically achievable using best efforts will be moved during the relocation. The *Fisheries Act* authorization will take into consideration the best efforts employed to maximize fish relocation. In practice the amount of fish that are relocated is typically close to the estimated population.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
244	Wabun Tribal Council	WTC-IR#69: Fish habitat protection, Chapter 11, Table 11-3 "Spawning habitat within the waterbodies affected will be included in the *Fisheries Act* authorization for the site as a loss of habitat and will be addressed through the compensation plan. " (Table 11-3, p.11-24) The *Fisheries Act* includes the protection of nursery, rearing, food supply and migration habitats, in addition to spawning habitat. These different habitats have been discussed in general terms in the baseline report, but also should be included in the compensation plan. Any of these habitats that occur in potentially impacted areas should be measured to ensure that future offsets can adequately mitigate future impacts. Please incorporate consideration of fish habitat used for nursery, rearing, food supply and migration into the compensation plan, in addition to spawning habitat, and measure any of these habitats that occur in potentially impacted areas.	All habitat within the waterbodies affected will be included in the *Fisheries Act* authorization for the Project as a loss of habitat. IAMGOLD is currently working with Fisheries and Oceans Canada (DFO) to outline the analysis of how the in-kind habitat creation measures proposed will offset the serious harm to fish. IAMGOLD in discussions with DFO, is now using habitat suitability indices to complete a more detailed prediction of potential effects on the commercial, recreational, and Aboriginal fisheries. This method uses all pertinent habitat suitability indices from the literature to document optimal habitat for all life stages of each of the species included in the assessment. In consultation with DFO, it was agreed that the same guild of five species used in the EIS / Draft EA Report (northern pike, yellow perch, walleye, lake whitefish and smallmouth bass) are considered representative of the commercial, recreational, and Aboriginal fisheries and supporting species within the Project area. This information is provided in the addendum to Appendix N (Aquatic Biology TSD). This additional detail does not changes the results of the effects prediction presented in Chapter 9 of the Amended EIS / Final EA Report, nor does it change the impact assessment results presented in Chapter 11.	None.	n/a
245	Wabun Tribal Council	WTC-IR#70: Loss of habitat in Three Ducks Lake, Chapter 11, Table 11-3, p.11-24 Loss of habitat due to construction should include Three Ducks Lake because of the proposed location of the low grade ore stockpile as presented in Figure 1.2 Has this loss of lentic habitat been factored into the habitat calculations? Please include Three Ducks Lake as lentic habitat affected by loss of habitat due to construction.	The loss of habitat in Three Duck Lakes is considered in the effects prediction on aquatic species. Table 11-3 has been amended to add Three Duck Lakes to the lentic habitat affected.	Three Duck Lakes has been added to affected lentic habiat in Tables ES-3 and 11-3.	Tables ES-3 and 11-3 ("Aquatic Biology", "Loss of Aquatic Habitat")
246	Wabun Tribal Council	WTC-IR#71: Identification of habitat, Appendix B, Appendix B-2, #24 and Section 1.4 Wetlands and habitats of provincially or federally listed SAR and other sensitive areas are not identified in Section 1.4 Please provide a description of wetlands, potential habitat of provincially and federally listed SAR, and any other sensitive areas, found within the Project area.	No wetlands and habitats of Provincially or Federally listed SAR and other sensitive areas have been identified in the Project area.	None.	n/a
247	Wabun Tribal Council	WTC-IR#72: List of Environmental Effects Indicators, Appendix B, Appendix B-2, #67 and Section 9.1.1 Since the *Fisheries Act* provides protection for fish that support recreational, commercial and Aboriginal fisheries, these support fish species should be included in the List of Environmental Effects Indicators in Table 9-1 of Section 9.1.1. Aquatic species at risk should also be included in these indicators. It is important to consider potential effects to these species. Please include fish that support recreational, commercial and Aboriginal fisheries, and aquatic species at risk, in the list of environmental effects indicators and provide an assessment of potential project effects to these.	The EA indicators identified and used for the aquatics effects prediction encompass the gamut of Project effects on the aquatic environment. An effects prediction for the protection of forage fish is indirectly addressed through the assessment of water quality to a standard of the protection of fish and aquatic life and the assessment of loss of habitat. This incorporates and is representative of habitat for both commercial, recreational, and Aboriginal fisheries and forage fish. IAMGOLD in discussions with DFO, is now using habitat suitability indices to complete a more detailed prediction of potential effects on the commercial, recreational, and Aboriginal fisheries. This method uses all pertinent habitat suitability indices from the literature to document optimal habitat for all life stages of each of the species included in the assessment. In consultation with DFO, it was agreed that the same guild of five species used in the EIS / Draft EA Report (northern pike, yellow perch, walleye, lake whitefish and smallmouth bass) are considered representative of the commercial, recreational, and Aboriginal fisheries and supporting species within the Project area. This information is provided in the Addendum to Appendix N (Aquatic Biology TSD). This additional detail does not change the results of the effects prediction presented in Chapter 9 of the Amended EIS / Final EA Report, nor does it change the impact assessment results presented in Chapter 11.	Additional information regarding commercial, recreational and Aboriginal fisheries is provided in the Addendum to Appendix N (Aquatic Biology TSD).	Addendum to Appendix N

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
248	Wabun Tribal Council	WTC-IR#73: Sampling methodology of aquatic species, Appendix B, Appendix B-2, #127 and Appendix L It is not clear how sampling locations were selected for basking turtle surveys (Appendix L). In addition, the low sampling effort for amphibian surveys (only one year of data at only 4 locations over 4 nights) diminishes the ability to draw robust conclusions about amphibian populations in the Project area. a) Please clarify how sampling locations were selected to ensure comprehensive and representative coverage of basking turtles. b) Indicate how the low sampling effort for amphibian surveys will be addressed or justify why it is sufficient to characterize amphibian populations in the Project area.	a) Sampling locations were selected based on potential for the habitat to be affected by the Project, results of the 2012 habitat assessment, results of the 2012 basking surveys and comments provided by the MNRF. Two surveys were completed in 2012 with an objective of assessing habitat potential and identifying the presence or absence of basking turtles. The first survey was completed from May 8 to 13, 2012, and the second survey was completed from June 6 to 9, 2012. During these surveys a total of 42 basking turtle surveys were completed at 32 locations. A technical memorandum was submitted to the MNRF to provide a summary of the habitat observations and basking turtle observations recorded during the 2012 surveys. The technical memorandum was discussed with the MNRF and their comments and direction were incorporated into the 2013 basking survey work plan. b) In Central Ontario amphibian survey #1 can be completed from April 15 to 30, survey #2 can be completed from May 15 to 30 and Survey #3 can be completed from June 15 to 30. Historic calling dates provided by the Marsh Monitoring Program indicates that all mid and late season frog species known to be in the region containing the local study area are typically calling in early June. Air temperatures recorded during the June 5 to 8 surveys ranged from 12 °C to 18°C. Based on the historic calling dates and the range of air temperatures recorded during the surveys it is anticipated that the majority of the mid and late season breeding frog species present on the site would have been recorded during the June 5 to 8 survey period. Additionally, amphibian species occurring in the region containing the study area are well documented in publically available literature and a comparison of the collected data to the list of amphibian species known to occur in the region indicated that the species observed are typical of the region. Given the objective of the amphibian survey program was to generate a species list for the study area it was not necessary to increase the survey effort. If a species is well documented to have a range that overlaps with the study area, but was not recorded during the field surveys, a conservative approach was taken and it is assumed that the species is present within the study area.	None.	n/a
249	Wabun Tribal Council	WTC-IR#74: Impact assessment on aquatic species at risk, Appendix B, Appendix B-2, #165 and Section 11.0, Tables 11-3 to 11-6 There is no assessment of the impacts on aquatic species at risk (SAR), presumably because none were found in the Project area. However, their absence from surveys does not rule out the possibility that SAR occur here, as suitable habitat exists for them in the area (e.g., lake sturgeon, Blanding's turtle). The Guidelines indicate that a precautionary approach should be taken when documenting the analyses included in the EIS. An assessment of the impacts on potential aquatic SAR is thus warranted. Please include an evaluation of the environmental effects of the Project on potential SAR and habitat likely to occur in the Project area.	The purpose of baseline studies is to establish a thorough understanding of species existing in the study areas as well as the condition of their habitat. It is not common practice to predict effects on species that have not been identified in the study areas. However, IAMGOLD has investigated the potential for the existence of lake sturgeon in the local study area. Mesomikenda Lake would be the only water body in the local study where lake sturgeon could potentially be found. No reports have been identified confirming the presence of lake sturgeon in Mesomikenda Lake. Should future monitoring identify any SAR species, or should the catalogue of SAR species change to include SAR species in the study area, then IAMGOLD would adapt its management strategies, as appropriate	None.	n/a
250	Wabun Tribal Council	WTC-IR#75: Identification of natural heritage features, Appendix B, Appendix B-2, #177 and Appendix U17 Appendix U17 indicates that no natural heritage features have been identified at the site, but no details are given on how natural heritage features are defined or evaluated Please provide an explanation of how natural heritage features are defined and evaluated within the Project Area to support the conclusion that no natural heritage features have been identified at the site.	Alternatives to the Project were assessed in Chapter 7 of the Amended EIS / Final EA Report in accordance with the MNRF Class EA Environmental Screening Criteria for Resource Stewardship and Facility Development Projects (see Section 7.2.2). In Table 3.1 of these criteria, natural heritage features and areas are defined as areas of natural and scientific interest, Provincially significant wetlands. Section 6.4.7 of the EA summarizes the assessment of significant wildlife habitat, rare vegetation communities and specialized habitat for species of conservation concern, among others, presented in detail in Appendix K (Vegetation TSD), Appendix L (Wildlife TSD) and Appendix M (Terrestrial Biology TSD). Desktop studies of existing information from various sources and literature indicated the potential for significant wildlife habitats, and other natural heritage features, to occur in the vicinity of the Project. Fieldwork did not identify or confirm any such habitats or other natural heritage features. It should be noted that the assessment developed in Appendix U17 is an a priori evaluation, and this methodology has been successfully used by AMEC Environment & Infrastructure (AMEC) in other recently submitted EAs.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
251	Wabun Tribal Council	WTC-IR#76: Statistical evaluation of baseline data, Appendix B, Appendix B-2, #194 and Section 16-4 "The monitoring design must include a statistical evaluation of the adequacy of existing baseline data to provide a benchmark against which to test for project effects, and the need for any additional preconstruction or pre-operational monitoring to establish a firmer project baseline." Required statistical evaluation of existing baseline data is lacking. Please provide statistical evaluation of the adequacy of existing baseline data to provide a benchmark, and to identify the need for additional baseline monitoring.	Within technical disciplines, collected baseline data is routinely statistically evaluated, as required. As an example, the use of the 95th percentile for the assessment of effects on water quality is based on a statistical analysis of existing data.	None.	n/a
252	Wabun Tribal Council	WTC-IR#77: Detection of effects, Appendix B, Appendix B-2, #195 and Section 16-4 "…include a schedule indicating the frequency and duration of effects monitoring. This schedule is to be developed after an evaluation of the length of time needed to detect effects given estimated baseline variability, likely magnitude of environmental effect and desired level of statistical confidence in the results" The monitoring schedule does not indicate how the frequency and duration of effects monitoring reflects an evaluation of the length of time needed to detect effects, given estimated baseline variability, likely magnitude of environmental effects, and desired level of statistical confidence in results. Please revise the monitoring schedule to incorporate length of time needed to detect effects, based on required variables.	The monitoring tables, presented in Chapter 16, indicate the time and frequency of proposed monitoring based on when the potential effects are predicted. These frequencies and timeframes have been selected by the EA team such that they would allow a suitable length of time to detect effects on the respective parameters. The monitoring program includes the principle of adaptive management (i.e., programs may be revised and/or adjusted based on results or field experience).	None.	n/a
253	Wabun Tribal Council	WTC-IR#78: Degree of scientific uncertainty, Appendix B, Appendix B-2, #212 and Section 11-2 No indication is given of what degree of uncertainty exists related to the data and methods that may affect the determination of the significance of adverse environmental effects. Please discuss the degree of uncertainty relating to the data and methods that may affect interpretation of significance of effects.	The EA is a planning exercise. As such, a certain level of uncertainty in data and predictions is inherent. Uncertainty is discussed within the report, as applicable. To mitigate this uncertainty, data interpretation and effects predictions throughout the EA follow a precautionary approach. Selection of levels of magnitudes are made in a very conservative manner, such that it is expected that actual effects should be less than the ones predicted in the EA.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
254	Wabun Tribal Council	WTC-IR#79: Upland Breeding Bird Survey Methods, Appendix L, Section 4.4, Appendix L, Figure 7 and Appendix L, Figure 8 Inventory of upland breeding birds was undertaken for the local and regional study area using the point count method where all birds heard or seen in a 50 m radius were recorded. The breeding bird methodology used to assess the impact of the project footprint and 2 km buffer is scientifically inappropriate for fieldwork aimed at inventorying species present, especially Species at Risk. The point count method selected is used for long-term monitoring and population estimates as part of an aggregated database that uses hundreds of point counts together. For example, the breeding survey conducted for an individual station in a forested area likely samples an area of approximately 10 ha, compared to the project foot print which covers 1,700 ha. Though it is acknowledged that some 30 point count stations were undertaken within the local study area (sampling 300 ha or 17% of the foot print) the appropriate survey methodology for an area that is to be cleared of vegetation would have been a roving survey such that most areas of the property were approached to within 100 to 200 m. This would have sampled over 60% the site and likely revealed over 90% of the species present. It is most probable that the roving survey would have identified the presence of SAR, like Canada Warbler, to occur in with the areas or the Project footprint. Marsh birds were surveyed using the Marsh Bird Survey Monitoring Protocol, which included play back of calls. While this is an effective survey method for secretive species, only 7 sites were surveyed for local study area. This is insufficient sampling effort for such a large area. Waterbird (ducks, loons, mergansers) were surveyed by 17 point count locations and by eight 500 m long canoe transects. These survey methods are less than ideal for establishing waterbird species and numbers. A more appropriate survey method, which is used by the Canadian Wildlife Service for waterfowl surveys, is low flight surveys with fix-winged aircraft or helicopter. Based on the survey methods used to assess the avian community in the Local Study Area, it is our opinion that species occurrence and distribution have been under documented for the study. Please clarify how the Canadian Wildlife Service and/or the MNR were consulted to determine the most appropriate survey methods and level of effort required to provide the data base for the assessment of potential impacts to the avian communities for the three project areas, project foot print, Local Study Area and Regional Study Area.	The point count methodology that was selected for this Project is consistent with other recently completed effects assessments and direction provided in the document titled “Mining Project Baseline Desktop Assessment and Survey Requirements” (Environment Canada 2014). Upland breeding bird surveys were completed to describe species occurrence, relative abundance, and habitat use of songbirds and other bird species that nest in terrestrial / riparian habitat. A total of 75 point count surveys and acoustic monitoring surveys were completed at different locations within the local study area and were pre-selected to be representative of the proportion of land cover types identified in the regional study area. Results of the breeding bird surveys were supplemented with relevant existing data such as the Ontario Breeding bird Atlas (Cadman et al, 2007) and reports providing summaries of surveys previously completed in the study area. Marsh bird surveys are habitat based and were completed to identify the presence / absence of focal species (i.e., Virginia rail [*Rallus limicola*], sora [*Porzana Carolina*], least bittern [*Ixobrychus exilis*], common moorhen [*Gallinula chloropus*], American coot [*Fulica Americana*] and pied-billed grebe [*Podilymbus podiceps*]). Marsh bird surveys were only completed at locations where the habitat was assessed as having potential to support the focal species. As a result the marsh bird surveys are considered representative of the suitable habitat that is available in the local study area. Non-focal marsh bird species were also recorded during the waterbird surveys, basking turtle surveys and breeding bird point count surveys which provided for greater coverage of the study area. The MNRF was contacted prior to initiating baseline surveys in 2012 to identify SAR with potential to occur on the site and discuss survey protocols. The MNRF was also contacted prior to initiating the 2013 baseline surveys to discuss the 2012 baseline survey results and identify additional survey effort that was required in 2013. The protocols selected for the Project were consistent with comments provided by the MNRF and with guidance provided by Environment Canada on similar projects that Golder Associates (Golder) has recently completed. Statistical analysis of the collected data was used to determine if the appropriate level of effort was expended to assess the effects of the Project on upland breeding birds. Although the species accumulation curve for the regional study area did not reach an asymptote the results from the species accumulation curve indicated that sampling was adequate to assess the effects of the Project on upland breeding birds.	None.	n/a
255	Wabun Tribal Council	WTC-IR#80: Assessment of Alternatives for Project Components, Chapter 7, Section 7.3.9 Watercourse Realignments In this section it is suggested that minimizing impacts to water flow and fish habitat would also address minimizing disturbance to existing terrestrial flora and fauna. A direct correlation between disturbance to fish habitat and terrestrial flora and fauna has not been established and it seems that the alternatives assessment did not directly consider the realignment impacts on local fauna, particularly larger mammals such as moose, deer and bear. Please provide alternatives assessment for the watercourse with respect to impacts to the terrestrial fauna.	As discussed in the EA, IAMGOLD plans to implement a natural channel design approach to the watercourse realignments. This approach will include natural design components intended to offset impacts to fish habitat. Additionally these features will provide suitable habitat for larger mammals. Therefore no additional alternatives assessment with respect to terrestrial fauna is warranted.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
256	Wabun Tribal Council	WTC-IR#81: Assessment of Alternatives for Project Components, Chapter 7, Section 7.3.15 and Appendix U9 The assessment considered two alternatives, the Shining Tree Alignment and the Cross-Country Alignment. Elements of the Shining Tree Alignment will utilise existing transmission line corridors, while the Cross-Country Alignment will include a new greenfield corridor for 68 km. For the detailed assessment of these two alternatives we are directed to Appendix U9. The analysis for the effects on Terrestrial Species and Habitat is general, not specific to groups of wildlife, and uses wording such as “some” and “likely”. As the Cross-Country Alternative will remove existing habitat and result in greater fragmentation of the existing habitat, more detailed assessment of the impacts of this alternative should have been provided. Please provide a discussion on the alternatives assessment with respect to the weighting of the impact of habitat removal and fragmentation for the two transmission line alignment alternatives.	It is acknowledged that the Cross-Country alignment results in fragmentation effects. However, the effects predictions found no significant impacts from the development of this alignment on wildlife. As the Cross-Country alignment is significantly shorter is will result in substantially less vegetation required to be cleared comparison to the alternative Shining Tree alignment. Also, further widening of the Shining Tree alignment in addition to the existing transmission line corridor would further expose wildlife to predators and widen the fragmentation along this corridor.	None.	n/a
257	Wabun Tribal Council	WTC-IR#82: Assessment of Alternatives for Project Components - Cross-Country Alignment, Chapter 7, Section 7.3.15.2 "This proposed route has been sited to facilitate access for maintenance requirements, while locating it in remote areas to minimize potential effects to the environment and any nearby residents. … Potential physical and biological environment effects would occur during the construction phase. This alternative would disturb more wildlife habitat, but potential effects to the biological environment are largely expected to be similar and, in some cases, less than the Shining Tree TLA alternative due to its shorter length." (p.7-37) The analysis does not provide detail to support the statement that locating the Cross-Country Alignment in undisturbed remote areas will minimize potential effects on the environment, specifically the terrestrial environment. The effect of the removal of undisturbed habitat for the Cross-Country Alignment is not limited to the construction phase of the Project. The edge effect of the new green field corridor on interior forest nesting birds will continue throughout the operations phase and closure phase. In addition, the impacts of new access for hunting will also not be limited to the construction phase. The analysis does not provide sufficient detail to support the claim that the Cross-Country Alignment may in some cases have less impact. Please provide a more detailed analysis of the effects of the two power supply alignments on the terrestrial environment.	As described in the response to Comment #256 less habitat would have to be removed for the Cross-Country alignment. The potential for habitat fragmentation and edge effect associated with this alignment is acknowledged. In summary neither alignment is predicted to result in significant impacts on wildlife species. It should also be acknowledged that fragmentation and access already exists in the area that the Cross-Country route would be developed in. It should also be noted that, based on the field investigation carried out along both alignment routes, the potential for effects on avian SAR is considered higher along the Shining Tree alignment. The decision to prefer the Cross-Country alignment is not only based on the effects on wildlife, but considers many other factors, as detailed in Appendix U9 (Transmission Line Alignment Alternatives Assessment). All the criteria and indicators used in the assessment combined have led to the decision that the Cross-Country alignment is the preferred alternative.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
258	Wabun Tribal Council	WTC-IR#83: Study Areas For Assessment of Project Effects on the Terrestrial Environment, Chapter 9, Section 9.1.2.2 Local Study Area The local study area for the assessment of potential effects related to air quality, noise and vibration is identified as the area where most of the noise and vibration effects of the Project are expected to occur. Based on this, the local study area is defined as an area that extends approximately 5 km from the main Project noise sources. For terrestrial biology, the local study area encompasses a 2 km buffer around the Project footprint and extends to the southwest to include Chester Lake. As discussed in the EIS, noise can impact on the use of an area by mammals, particularly larger mammals such as moose, bear, wolf, and birds, particularly birds of prey, marsh birds and waterfowl. Given that noise impacts to the terrestrial environment are identified as a project effect, it would seem that the local study area for the terrestrial environment should encompass the same area as the air, noise and vibration study area. It is for the transmission line alignment, a 1 km buffer on either side the line. Please provide a justification as to why the Terrestrial Environmental study area is not 5 km from the main Project noise sources, at least for specific animal groups.	The justification for the extent of each study area is provided in Section 9.1.2 of the Amended EIS / Final EA Report. The selection of the study area does not limit the scope of the prediction of effects. If the analysis were to show that certain wildlife species are affected by noise within a 5 km radius, then this effect would be considered in the impact assessment. Table 2-3 in Appendix L (Wildlife TSD) includes noise effects on wildlife that are considered in the analysis. Therefore these effects are carried forward to the Amended EIS / Final EA Report and Chapter 11 assesses these impacts. Specifically Tables 11-3 and 11-4 look at effects on Ungulates and Furbearers, including noise (i.e., 'general disturbance) and it is concluded that these effects potentially extend into the regional study area.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
259	Wabun Tribal Council	WTC-IR#84: Terrestrial and Traditional Land Use Assessment Study Areas, Chapter 9, Section 9.1.2.3 and Chapter 14, Section 14.1 "Terrestrial Biology for the Site The terrestrial biology regional study area is defined as a 30 km buffer from the boundary of the local study area (see Figure 9-6). This area is large enough to contain all or most individuals that comprise the seasonal and annual populations of American marten, beaver, upland breeding birds, waterbirds and raptors that inhabit the area. The regional study area is expected to be large enough to contain most of the plant populations and communities that may be influenced by the Project and other developments, and to provide confident and ecologically relevant effects predictions on vegetation. At this scale, changes to vegetation and associated wildlife habitat from human development can be also used to predict effects to the abundance and distribution of wildlife populations. Terrestrial Biology for the Transmission Line The transmission line terrestrial biology regional study area considered during baseline studies and for predicting Project effects for the transmission line alignment include the area within 2 km from the centerline of the transmission line alignment (see Figure 9-7). (p.9-10) Traditional Knowledge and Land Use The traditional knowledge and land use regional study area is defined by potential for effects of the Project on site-specific and nearby traditional land and resource uses such as use or knowledge of culturally important sites. Similar to land use, depending on the type of land or resource use, the study areas for terrestrial or aquatic biology disciplines were used (see Figures 9-6 to 9-8). (p.9-11) [Cumulative Effects] The spatial boundaries considered for predicting cumulative effects include the following: ▪ biological local study area: as per the baseline studies, areas within 1 km from the centerline of each side of the proposed transmission line alignment and areas within 2 km from proposed Project facilities (see Figure 14-1); ▪ biological regional study area: areas within 2 km from the centerline of each side of the proposed transmission line alignment and within 32 km from proposed Project site facilities (see Figure 14-1); and ▪ the general area between Timmins and Sudbury within close proximity to the Project: it is believed that the municipalities of Timmins and Sudbury may experience socioeconomic cumulative effects, and the cumulative effects analysis may extend to projects located beyond the physical boundaries of the biological regional study area." A biological basis is provided for the selection of the terrestrial biology regional study area. However, a similar justification is not provided for the terrestrial biology regional study area for the transmission line. With respect to traditional knowledge and land use, while there is some biological basis for basing this regional study area on the terrestrial biology study area, no cultural basis is provided. In general, the regional study area for assessment of effects on traditional land use should encompass the traditional land use activities as these are carried out across the territory (or, at minimum across the territory used by the affected land users) in order to place the significance of the environmental effects in the appropriate context. A territory wide assessment area is also relevant to the assessment of cumulative environmental effects. Please provide a justification for the selected regional study areas for the terrestrial and traditional land use assessments.	The justification for the extent of each study area is provided in Section 9.1.2 of the Amended EIS / Final EA Report. The selection of the study area does not limit the scope of the prediction of effects. This is supported by the fact that many effects on terrestrial species along the transmission line are considered to 'extend into the regional study area' (see Table 11-3, Chapter 11). The traditional study area was provided to IAMGOLD by the First Nations in a study that was developed by a consultant selected by the Wabun Tribal Council. IAMGOLD provided Wabun Tribal Council's selected consultant with a list of criteria for completing the study. This included a request for a rationale for the selected study area to ensure transparency in the final TK / TLU study. No rationale was provided to IAMGOLD for the selected study area. Therefore it was and is IAMGOLD's understanding that this study area is accepted by Wabun Tribal Council is reflective of the First Nations' land use.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
261	Wabun Tribal Council	WTC-IR#85: Effects On Wetlands, Chapter 9, Section 9.7.2.1 Construction Phase – Wetlands "The shorelines around Chester Lake and the south arm of Bagsverd Lake are expected to increase due to the establishment of the watercourse realignments, inundating the adjacent communities. Consequently, a small area of wetland is expected to become lake habitat (i.e., 45 ha; 0.3% of existing wetland habitat)." (p.9-34) Wetlands associated with the shorelines of lakes often provide critical or unique habitat for fauna. Therefore the loss of 45 ha of this habitat in the local study area may have more of an effect than just the physical loss of wetland area. Please provide additional assessment of potential impacts of the loss of lake shore wetlands for terrestrial fauna.	In the waterbird analysis, potential breeding habitat was considered to be wetlands, treed fen within 200 m of wetlands and water bodies, and shorelines of large lakes (100 m buffer). There was predicted to be a 0.7% (208 ha) loss of potential waterbird breeding habitat from the 2012 Baseline case to the Application case. When the 43 hectare loss of wetland habitat is accounted for, there is predicted to be 251 hectare loss of potential waterbird breeding habitat due to the Project, or 0.8% change from the baseline to the Project. The loss of habitat may result in the displacement or removal of a few individuals; however, effects are not anticipated to be measurable at the population level.	None.	n/a
262	Wabun Tribal Council	WTC-IR#86: Project Effects on Moose, Chapter 9, Section 9.7.2.1 Construction Phase – Ungulates: Moose and Appendix L Attachment 1 – 2013 Terrestrial Baseline Study, including Figure 14 Significant Natural Features in Regional Study Area "However, the local changes in habitat quantity and quality from the Project are anticipated to have no measurable effect on the abundance and distribution of the moose population." (p.9-35) Chapter 9 and Appendix L provide various discussions on moose. However, an assessment of numbers of individuals occurring in the local study area, or numbers/density in the regional study area is not provided. Knowing the number of moose or moose carrying capacity of the habitat that may be impacted within 5 km of the Project site would provide informative information as to potential local impacts. It is noted that carrying capacity assessment for moose habitats within the two transmission line alternatives was provided in the AMEC study (Appendix M, Figures 5,6,7). Why is this level of information not provided in the Wildlife TSD – Appendix L? There are a number of occasions where the statement is made is that "the moose population is increasing in Ontario". What is the population status in the regional study area? With regard to the above noted quotation, that changes to habitat quantity and quality will not have a measureable effect, Figure 14 shows the distribution of moose aquatic feeding habitat occurring in the local and regional study areas, and it would seem that the local study area supports the highest concentration of this very important summer habitat. Has the loss of these feeding areas within the local study area been appropriately addressed? Are there seasonal movements to these aquatic feeding areas in the summer? a) Please provide estimates on moose population numbers/carrying capacity of the study areas. b) Please provide a more detailed assessment of the distribution, importance and impact of the loss of /loss of access to moose aquatic feeding areas in the local study area.	An accurate and unbiased estimate of the number of individuals in the local and regional study areas is not possible with the type and amount of data that are available for the study areas, nor is this essential for this EA, as outlined below. Moose can travel long distances and have high seasonal rates of movement. As such, a few aerial or ground surveys in the local and regional study areas may miss individuals that use these study areas because individuals may be in other parts of their home ranges that are outside the study areas. The determination of the number of individuals and home ranges that overlap the study areas would require using methods that can determine home range size and individual movement patterns (e.g., satellite collars). Although an estimate of the number of moose in the local and regional study areas would support the analysis it will not change the impact classification or the confidence in the effects predictions. The number of moose in the Spanish Forest that is presented in the Spanish Forest Management Plan was estimated from aerial surveys in four adjacent wildlife management units and was 0.18 individuals/km^2 (MNR and Domtar 2010). The Spanish Forest is estimated to contain 2% of the total moose population in Ontario (MNR and Domtar 2010). Moose density in the Spanish Forest is not uniform, and densities are lower in the northwest portion of the forest than in the southeast; this distribution was similar over time (i.e., from 1975 to 1979 and from 1990 to 1995; MNR and Domtar 2010). The Project is located in the northwest portion of the Spanish Forest. Although the carrying capacity for moose in the vicinity of the Project, as determined in 2006, was some of the highest estimated for the Spanish Forest, there were no areas of unusually high concentrations of moose identified in the Spanish Forest (MNR and Domtar 2010). The Project may displace a few individuals in the population, but changes to the carrying capacity of the environment near the Project are not anticipated to be measurable at the population level. There are 3,891 moose aquatic feeding areas in the Spanish Forest (MNR and Domtar 2010). There are 14 moose aquatic feeding areas in the local study area, which is 0.4% of the total moose aquatic feeding areas in the Spanish Forest. There are an additional 35 moose aquatic feeding areas in the regional study area. Moose are a highly mobile species (Hoffman et al. 2006), especially in the summer (Vander Wal and Rodgers 2009) when aquatic feeding areas are the most important. As such, moose that use aquatic feeding areas in the local study area are anticipated to be able to use other aquatic feeding areas in the regional study area. Although the Project will remove moose aquatic feeding areas, it is unlikely that the moose population will be negatively affected because recruitment and survival rates may remain similar to current levels (Bohm et al. 2013). Moose can use many different habitat types and consume many different types of forage (Stewart et al. 2010). In summary, the Project is expected to affect some moose individuals in the population, however, effects are not anticipated to be noticeable at the population level.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
263	Wabun Tribal Council	WTC-IR#87: Project Effects on Furbearers: Black Bear, Eastern Wolf, American Marten, and Beaver, Chapter 9, Section 9.7.2.1 Construction Phase - Furbearers and Appendix L As with Moose, Chapter 9 and Appendix L provide various discussions on Furbearers. However an assessment of numbers of individuals of each species occurring in the local study area, or numbers/density in the regional study area are not provided. An important information source of abundance could be gained from a review of data from active trap lines in the area, but this data source does not seem to have been acquired/reviewed. Knowing the numbers, even estimates that may be impacted within 5 km of the Project site would provide informative data to allow for the assessment of potential local impacts. Please provide population estimates for furbearers and additional assessment of effects on population numbers at the local study area level.	Trapping data for the local and regional study areas was requested from the MNRF but IAMGOLD did not receive this information. As such, estimates of the potential number of furbearers in the local study area and regional study area could not be provided. Although an estimate of the number of furbearers in the study areas would provide support for the analysis, it would not change the impact assessment and confidence in the effects predictions. One beaver lodge was observed in the regional study area during field surveys in 2012 and 2013. The low abundance of beaver observed near the Project during baseline surveys is likely due to natural limited availability of quality habitat in the local study area and regional study area. The regional study area was predicted to contain 13% suitable beaver habitat under the reference condition. Although there was predicted to be a high amount of suitable marten habitat in the regional study area (88% under the reference condition and 77% under the baseline condition) there were only five marten tracks observed during winter track count surveys in 2013. The discrepancy between the predicted amount of suitable habitat and the relative activity level of marten in the regional study area may be because marten habitat is influenced by habitat characteristics that cannot be determined from the ecological land classification (e.g., amount of downed logs, percent canopy closure, stand age [Bowman and Robitaille 2005]). The Project is anticipated to affect a small number of beaver and marten individuals that inhabit or use the local study area. The effect on a few individual is not anticipated to have a measurable influence on the population of marten and beaver in the region.	None.	n/a
264	Wabun Tribal Council	WTC-IR#88: Terrestrial Biology for the Transmission Line, Section 9.8.2.1 Construction Phase - Ungulates (Moose) "In a local context, the removal of this habitat is notable but no population level effects are expected for Moose within the regional study area." (p.44) Effects on local population numbers may not be significant at a larger landscape level. However, as a harvestable resource, declines in local population numbers could be a significant effect. It is not clear what “notable” means in this statement. Please clarify potential “notable” effects on the local moose population.	From a habitat perspective the distribution and abundance of these habitats are common throughout the local and regional study areas and Moose will be able to use these features during the life of the Project. The Project is not anticipated to significantly affect the availability of suitable habitat for moose and in some circumstances may enhance habitat quality through the provision of early successional or browse species. However increases in predation / hunting rates on local moose may occur under the right-of-way creation and associated access road network as accessibility by humans and predators will be facilitated. The impact assessment in Chapter 11 concludes that with the mitigation included in Chapter 10 there will be no measurable residual effect to population abundance and distribution, therefore making this a not significant impact. The extent to which these potential increases in harvest would affect moose at the local or population level depends on the rate of change, the timing of change (i.e., in calving season versus the rutting or over-wintering period) and/or the length of time the new right-of-way would be accessible. At least one study focusing on moose use of transmission line found that increases in mortality due to the use of right-of-ways were not significant at the population level (Richard and Doucet, 1999). Therefore reductions in the density of moose through increased predation of hunting rates may occur at a local scale along the right-of-way depending on several factors outlined above but it is not anticipated that these effects would occur at the population level. These effects would occur during the life of the Project and are reversible during closure of the Project when the expanded portion of the right-of-way is revegetated to support forest communities again.	None.	n/a
265	Wabun Tribal Council	WTC-IR#89: Terrestrial Biology for the Transmission Line, Chapter 9, Section 9.8.2.1 Construction Phase - Species at Risk "Development of the Cross-Country transmission line alignment (TLA) footprint would result in the removal of 549.2 ha of vegetated land including 232.9 ha of deciduous mixed forest, 170.3 ha of coniferous forest and 146 ha of coniferous swamp." (p.9-43) In discussions on the effects to various SAR, it is acknowledge that suitable habitat for SAR is present along the TLA footprint, but that the habitat loss will not have an effect at the regional level. For a number of these species, the ESA regulations only recognize protection of general habitat, and potential habitat is regulated in areas where the species are known to occur. How does the project address adverse effects to habitat with respect to the ESA? Please clarify how ESA regulations will be implemented to address adverse effects.	Field studies along the two potential transimission line alignments did not record species listed as Threatened or Endangered under the Ontario *Endangered Species Act*. Similarly, the effects assessment in Section 11 of the Amended EIS / Final EA Report has determined that Sections 9 and 10 of the *Endangered Species Act* will not be contravened, as no harm to SAR will occur and no habitat loss of protected species will result from Project activities. Detailed mitigation measures are presented in the EA (see Chapter 10) and a monitoring plan (see Chapter 16) will be developed in cooperation with the MNRF and Environment Canada to address potential instances where protected species are encountered within the Project footprint. Resulting actions would thus fulfill protective requirements satisfying both Provincial and Federal regulations. Detailed mitigation measures and a detailed monitoring plan will be outlined in a mitigation / management plan as committed in Appendix Y (EA Commitments Table).	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
266	Wabun Tribal Council	WTC-IR#90: Mitigation Measures – Terrestrial Biology, Chapter 10, Table 10-2: Mitigation Measures – Biological Environment, Terrestrial Biology In general, mitigation measures that are identified for the terrestrial environment are very general in nature and limited. Specific mitigation measures for the various project elements are lacking. For example, rather than simply stating vegetation buffers be maintained along creeks, clarify that 30 m vegetation buffers will be maintained along cold water systems and 15 m buffers along warm water systems. Please provide detailed mitigation measures specific to the effects on the terrestrial environment intended to be mitigated.	With the inclusion of the mitigation measures described in Chapter 10 of the EA, it is concluded that no measurable residual effects to population abundance and distribution are anticipated. Therefore with the exception of the mitigation / management plans below, no additional mitigation is warranted to prevent significant impacts. However, as required, detailed mitigation measures specific to the effects on the terrestrial environment will be developed in cooperation with both Provincial and Federal regulators, as part of the permitting process. Once developed, these mitigations will meet Provincial and Federal requirements. These mitigation measures will be outlined in a mitigation/management plan as committed in Appendix Y (EA Commitments Table).	None.	n/a
267	Wabun Tribal Council	WTC-IR#91: Mitigation Measures – Terrestrial Biology, Chapter 10, Table 10-2 "Mitigation Measures Utilize existing infrastructure for access and minimize construction of new roads and other corridors wherever alternatives exist." (p.10-27) It is agreed that limiting loss of habitat is a primary mitigation measure. However, this mitigation measure appears to have not been appropriately weighted in the comparison of transmission line alignment alternatives, considering that the Cross Country alignment requiring a new corridor was selected as the preferred alternative. Please provide additional rationale for the assessment of the transmission line alignments in relation to effects on the terrestrial environment and on use of existing infrastructure.	The referenced mitigation measure primarily addressed effect mitigation at the Project site. It should be noted that less vegetation will need to be removed for the Cross-Country alignment compared to the Shining Tree alignment. This and other effects on terrestrial vegetation and wildlife are analyzed and considered in Appendix U9.	None.	n/a
268	Wabun Tribal Council	WTC-IR#92: Mitigation Measures – Terrestrial Biology, Chapter 10, Table 10-2 "Mitigation Measures Signs warning drivers of the possibility of wildlife encounters will be posted in areas of high wildlife activity." (p.10-27) Are locations of high wildlife activity known? There is no discussion or mapping of high wildlife activity areas in Chapter 6 or Appendix L. Please more detail regarding high wildlife activity areas.	Provincial highways already include signage identifying areas of high wildlife activity. On-site traffic impacts to wildlife will be mitigated through strict enforcement of site speed limits. Ongoing monitoring of wildlife interactions and daily observations at the Project site will be used to identify wildlife activity areas along roadways and right-of-way. Activity areas will be identified and mitigated through the use of signage. Effectiveness of this mitigation strategy will be evaluated and improved through an adaptive management approach via the monitoring program.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
269	Wabun Tribal Council	WTC-IR#93: Impact Assessment – Terrestrial Biology, Chapter 11, Table 11-3 and Chapter 11, Table 11-4 "Magnitude Level 1 – There is no measurable residual effect to population abundance and distribution" (p.11-25 and p.11-45) For the assessment of impact to ungulates (Moose) and furbearers (Wolves, Bears, Marten) due to the loss of habitat or noise disturbance, the assessment of effect is based on changes to population and distribution. As noted previously, data regarding population numbers or density of these wildlife species are not provided. Therefore, how was the assessment of the magnitude of the effect based on population changes undertaken for the various study areas? Please provide more detail regarding impact assessment based on changes in populations of wildlife species for local and regional study areas.	The number of moose in the Spanish Forest that is presented in the Spanish Forest Management Plan was estimated from aerial surveys in four adjacent wildlife management units and was 0.18 individuals/km^2 (MNR and Domtar 2010). The Spanish Forest is estimated to contain 2% of the total moose population in Ontario (MNR and Domtar 2010). Moose density in the Spanish Forest is not uniform, and densities are lower in the northwest portion of the forest than in the southeast; this distribution was similar over time (i.e., from 1975 to 1979 and from 1990 to 1995; MNR and Domtar 2010). The Project is located in the northwest portion of the Spanish Forest. Although the carrying capacity for moose in the vicinity of the Project, as determined in 2006, was some of the highest estimated for the Spanish Forest, there were no areas of unusually high concentrations of moose identified in the Spanish Forest (MNR and Domtar 2010). Although an estimate of the number of moose in the local and regional study areas would support the analysis it would not change the impact classification or the confidence in the effects predictions. Conservative assumptions were used in the impact assessment so that effects on wildlife from the Project would not be underestimated. The local study area is approximately 32% the size of the regional study area and so the majority (78%) of the moose in the regional study area are not likely to use the local study area and should not be directly affected by the Project. The Project may displace a few individuals in the population, but changes to the carrying capacity of the environment from the Project are not anticipated to be measurable at the population level. The density of black bears in the Spanish Forest was estimated to be 0.2 to 0.4 bears/km^2 (MNR and Domtar 2010). The regional study area was calculated to contain approximately 78% and 73% suitable black bear habitat under the reference and baseline conditions, respectively. The amount of preferred black bear habitat, as defined in the Spanish Forest Management Plan, will decline over time but is expected to always remain within acceptable levels in the Spanish Forest (MNR and Domtar 2010). The Project may change the abundance and distribution of black bears that use the local study area; however, the majority of the bear population in the regional study area is not expected to be directly affected by the Project. As such, changes to black bear abundance and distribution are not anticipated to be measurable at the population level. Moose, bears, and wolves can travel long distances and have high seasonal rates of movement. Therefore, a few aerial or ground surveys in the local study area and regional study area may miss individuals that use these study areas because individuals may be in other parts of their home ranges that are outside the study areas. The determination of the number of individuals and home ranges that overlap the study areas would require using methods that can determine home range size and individual movement patterns (e.g., satellite collars). An estimate of the number of ungulates in the local study area and regional study area would support the assessment, but estimates of the number of individuals in the local study area and regional study area are not likely to change the impact classification or the confidence in the effects predictions. Trapping data for the local and regional study areas was requested from the MNRF but IAMGOLD did not receive this information. As such, estimates of the potential number of furbearers in the local study area and regional study area could not be provided. Although an estimate of the number of furbearers in the study areas would provide support for the analysis, it would not change the impact assessment and confidence in the effects predictions. One beaver lodge was observed in the regional study area during field surveys in 2012 and 2013. Although information on ungulate and furbearer populations in the regional study area is not available, changes to measurement indicators (e.g., survival and reproduction, habitat amount and fragmentation, sensory disturbance) and scientific literature on response of wildlife to human disturbance and information on species life history characteristics are used to estimate effects on wildlife populations. Changes to measurement indicators from the Project are predicted to small (0.4% to 0.6% of potential suitable habitats for moose, black bear, marten, beaver, and eastern wolf). Additionally, these ungulate and furbearer species have life history characteristics (e.g., high reproductive capability, dispersal ability) that provide them with adaptive capability and resilience to absorb changes from human disturbance. Using the information provided above, effects from the Project are anticipated to have no measurable effect on the abundance and distribution of the ungulate and furbearer populations.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
270	Wabun Tribal Council	WTC-IR#94: Ecological Risk Assessment – Terrestrial Biology, Chapter 12, Section 12. 4 Ecological Risk Assessment and Appendix W, Section 3.5 Ecological Heath Risk Assessment Uncertainties When conducting an Ecological Health Risk Assessment that includes a number of chemicals of concern, consideration of potential additive or cumulative effects of exposure to multiple chemicals of concern is required as part of the uncertainty assessment. Provide additive/cumulative effects assessment for the chemicals of concern.	For both human and ecological receptors, additive and synergistic effects resulting from exposure to multiple chemicals is a factor that requires consideration. For compounds that target a specific organ or operate via a common mechanism of action, additivity is often assumed to address the potential for cumulative effects. Addressing cumulative effects from multiple stressors that operate on multiple organ systems is much more difficult and as pointed out is typically dealt with in the uncertainty section where it is acknowledged that owing to simultaneous exposure to multiple chemicals that may operate synergistically, there is the possibility that risks are underestimated. In Appendix W (HEHRA), the toxicity reference values that have been derived are based on different endpoints for different species making it difficult to evaluate cumulative effects with any degree of certainty. Nevertheless, most of the parameters identified as chemicals of concern are essential nutrients and are not expected to be present at concentrations that present a risk. For strontium and arsenic, the hazard quotients are sufficiently low that additivity would have little effect on the outcome of the assessment.	The following text has been added to Appendix W (HEHRA), Section 2.5.3: Several contaminants affect the same organ system (e.g., respiratory irritants, etc.) which means that there is the potential that they could interact resulting in the potential for greater than anticipated health effects. As such, assessing chemicals on an individual basis introduces the possibility that risks are underestimated owing to the fact that the combined effect of chemicals that act by a common mode of action is not taken into account. Under these circumstances they typical practice is to sum hazard quotients for those compounds that act on the same organ system. In the present assessment, the hazard quotients for similarly acting compounds were not summed on the recognition that, with the exception of the criteria air contaminants, the hazard quotients were sufficiently low such that combining all of those that act by a common mechanism of action would have little significant effect on the outcome of the assessment. With respect to criteria air contaminants, while there is recognition that contaminants such as PM, NO_2 and SO_2 interact to potentiate health outcomes, the extent to which these pollutants interact is still the subject of research. The exposure limits used in the assessment for these criteria contaminants are largely based on the results of epidemiological studies that evaluated changes in health outcomes associated with changes in urban air quality. As such, the exposure limits already reflect combined exposure to multiple contaminants. To address the issue of additive and synergistic effects in Appendix W (HEHRA TSD), the following text has been added to Section 3.5: Continued on next page.	Appendix W (HEHRA), Section 2.5.3 and 3.5

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
270 cont	See previous page.	See previous page.	See previous page.	With respect to additive and/or synergistic effects, there is the potential that contaminants that have similar modes of action may interact and result in the potential for greater than anticipated ecological health effects. Therefore, assessing chemicals on an individual basis introduces the possibility that risks are underestimated owing to the fact that the combined effect of chemicals that act by a common mode of action is not taken into account. Under these circumstances the typical practice is to sum hazard quotients for those compounds that act on the same organ system. In the present assessment, the hazard quotients for similarly acting compounds were not summed on the recognition that the hazard quotients were sufficiently low such that combining all of those that act by a common mechanism of action would have little significant effect on the outcome of the assessment.	See previous page.
271	Wabun Tribal Council	WTC-IR#95: Ecological Health Risk Assessment – Terrestrial Biology, Chapter 12, Section 12.4 Ecological Health Risk Assessment and Appendix W The EHRA was conducted on chemicals of concern that are sourced from air emissions from the processing operations. However, the assessment did not assess potential risk of waterbirds or shorebirds being exposed to tailings or surface water associated with the Tailings Management Facility (TMF). Please revise the EHRA to include the potential exposure of terrestrial species, including shorebirds and waterbirds, to the TMF.	Appendix W (HEHRA) assessed terrestrial receptors potentially exposed to contaminants of concern resulting from aerial deposition and aquatic and terrestrial receptors exposed directly or indirectly to contaminants present in discharge effluent. As the TMF is not considered a suitable ecological habitat for ecological receptors, including shorebirds and waterbirds, potential risks to these receptors associated with exposure contaminants present in the TMF was not evaluated.	None.	n/a
272	Wabun Tribal Council	WTC-IR#96: Monitoring Measures – Biological Environment, Chapter 16, Table 16-2 For terrestrial biology, the only recommended monitoring is Wildlife-Project interactions, defined as any wildlife interaction that requires a response from Project personnel (i.e., removal or deterrent actions, injury, and mortality). Though it is noted that waterbird use of the tailings pond will also be monitored. For the project construction and operations phase, including the Cross Country Alignment, the EA has identified that no residual adverse effects on the populations and/or distribution of ungulates and furbearers will occur. Given the importance of these natural resources, a monitoring program should be developed to confirm that the Project is not having an effect. The results of the monitoring program should be provided to regulatory authorities, Aboriginal groups and other stakeholders. In order to provide appropriate monitoring, it will be first necessary to determine current populations as indicated above. Please detail a monitoring program for ungulates and furbearers in Table 16-2.	With the intent to minimize wildlife interactions IAMGOLD is committed to monitoring interactions with wildlife at the Project site (see Chapter 16). IAMGOLD feels confident about the conclusions of the impact assessment with regards to effects on wildlife and sees no need for any additional monitoring programs. Typically monitoring programs are needed when there are identified risks, levels of uncertainties and extensive mitigation measures required to mitigate potential effects. However, this does not apply to this Project.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
273	Wabun Tribal Council	WTC-IR#97: Socio-economic Baseline, Chapter 6, Section 6.5 Human Environment "Primary data collection, including questionnaires sent to stakeholders and Aboriginal community representatives in towns, townships and First Nation reserves, was also used to define land and resource use. " (p.6-114) Information in relation to several indicators was unavailable for potentially affected First Nations. This information may exist and the First Nations may be in a position to provide this information in whole or in part to assist with effects assessment and management. Please provide copies of all questionnaires sent previously to MFN, FPFN or their representatives.	Socio-economic data collection questionnaires were provided to key informant representatives of Mattagami First Nation and Flying Post First Nation in 2013. The data collected was used in the development of the socio-economic baseline and impact assessment. A copy of the Socio-Economic Data Collection Questionnaires was provided directly to Wabun Tribal Council on October 15, 2014. The EA text has been revised to address the nature of the questionnaires.	Section 6.5 has been revised to state the following: "Primary data collection, including key informant questionnaires sent to stakeholders and Aboriginal community representatives in towns, townships and First Nation reserves, was also used to define land and resource use."	Section 6.5, second paragraph
274	Wabun Tribal Council	WTC-IR#98: Socio-economic Baseline, Chapter 6, Section 6.5.6.1 "Not all data from the 2011 National Household Survey portion of the 2011 Census was available at the time of writing." (p.6-132) Please provide any additional relevant information that has since become available from the 2011 National Household Survey.	The 2011 National Household Survey data is now available for the relevant areas, but has been repressed by Statistics Canada owing to the low response rates. This data may be misleading owing to high levels of non-response bias and as such, will not be incorporated into the Amended EIS / Final EA Report. Therefore no new relevant information has become available for inclusion in the Amended EIS / Final EA Report.	None.	n/a
275	Wabun Tribal Council	WTC-IR#99, Socio-economic Baseline, Chapter 6, Section 6.5.6.1 - Methodology The EIS notes a number of limitations to the socio-economic data presented in the EIS: ▪ -limitations inherent in the 2006 and 2011 Census ▪ not all 2011 NHS data was available at time of writing the EIS ▪ implications of Statistics Canada rounding and non-reporting of data for small communities ▪ not all First Nations publicize their information on AANDC community profiles The scope of the socio-economic information presented in the EIS for the MFN and FPFN is limited for the reasons outlined above and for other reasons. In many instances, it is not sufficient for the prediction of potential socio-economic effects of the proposed Project on the First Nations, for identifying mitigation or enhancement measures, or for providing a baseline for socio-economic monitoring programs. Attached, as Appendix "A" to this submission, is an example table summarizing the kinds of socio-economic data that could be relevant to effects prediction, mitigation/enhancement and management. These materials are provided for further discussion between the First Nations, IAM Gold and potentially also government agencies operating First Nation programs. a) Please summarize the measures taken to date to work with the MFN and FPFN to identify or obtain socio-economic baseline information for use in the socio-economic impact assessment of the proposed Project, and what further measures, if any, are contemplated. b) Please indicate what consideration, if any, has been given to date to the collection of primary socio-economic data in the First Nation communities.	a) The limitations listed in the Amended EIS / Final EA Report do exist but are not unique to the area; in fact they are universal for projects being considered in rural areas and in areas which can affect Aboriginal peoples. b) IAMGOLD has taken additional steps to compile socio-economic data for Mattagami and Flying Post First Nations, including hiring members of those First Nations to collect information, the results of which were incorporated into the socio-economic baseline report as appropriate.	None.	n/a
276	Wabun Tribal Council	WTC-IR#100: Education, Chapter 6, Section 6.5.6.2 "At present, 11 Mattagami First Nation members are pursuing a post-secondary education and 27 students from Flying Post First Nation as well. None of these students are pursuing education related to the mining industry (Flying Post First Nation, 2013)." (p.6-150) This information appears to suggest that there is no interest in pursuing mining-related careers among youth from MFN and FPFN. Please confirm whether any of the students attending post-secondary education from MFN or FPFN were interviewed or otherwise surveyed to determine their interest in pursuing mining-related employment.	The Amended EIS / Final EA Report has been updated to state "None of these students have been identified as directly pursing an education related to the mining industry (Flying Post First Nation, 2013)". IAMGOLD did not undertake interviews with students as part of the EA development but expects that the opportunity for employment and support for training associated with the proposed Project may attract interest among young members of Mattagami and Flying Post First Nations.	The following text: "None of these students are pursuing education related to the mining industry (Flying Post First Nation, 2013)." has been replaced with: "None of these students have been identified as directly pursing an education related to the mining industry (Flying Post First Nation, 2013)."	Chapter 6.5.6.2, "Infrastructure and Services" heading, "Education" subheading

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
277	Wabun Tribal Council	WTC-IR#101: Education, Appendix T, Section 3.1.8 "On the Mattagami First Nation reserve the number of new dwellings as a result of direct employment and as a proportion of existing dwellings, is estimated to increase by 11.8%. This results in nearly 10 new households/dwellings. Assuming that the proportion of school aged children matches the Canadian average for First Nation households of 1.6 children per 3.7 person household, there would be approximately 16 additional children (SC, 2012a). The older children would be bussed to Timmins for high school and some will be younger than school aged. Nevertheless, there will be increased enrolment in elementary schools in those communities. Since excess capacity exists for enrolment, this could be considered a positive effect since it may prevent loss of teachers or school closures. " (p.3-21) The number of children returning to the reserve could be higher since younger families are more likely to have one or both parents taking up employment at the mine. Though the increase in enrolment may not exceed the physical capacity of the school, it may require opening of a new classroom, adding a new teacher or educational assistant, purchasing new supplies and equipment, repairing or upgrading parts of the school not currently in use, accessing funding on short notice, etc. Please detail the implications for the Mary Jane Naveau Memorial School of the addition of up to 25 students within a one-year period (i.e. all families arrive in Year -2).	The Statistics Canada definition of a "child" in the cited statistic includes people from 0 to 24 years of age (http://www12.statcan.gc.ca/census-recensement/2011/ref/guides/98-312-x/98-312-x2011005-eng.cfm). As a result, children aged 6 to 13 are expected to make up only a fraction of the estimated number of additional children. As noted by the respondent, the number of household members working at the Project may be greater than one (1) and may in fact include household members classified as children under the definition provided by Statistics Canada, which would further reduce the ratio of school-age children per employee. For these reasons it is unlikely that returning members motivated by employment at the site would increase intake at the school by 25 students in a one-year period. IAMGOLD will work with potentially affected Aboriginal groups to develop a socio-economic / community management plan to address potential Project-related socio-economic / community effects identified through the EA process and/or at later stages of the Project. An unexpected increase in primary school enrollment would be an example of an emergent issue which could be managed by this process. The measures undertaken in response to such a situation would then be developed collaboratively and are outside the scope of this document.	None.	n/a
278	Wabun Tribal Council	WTC-IR#102: Employment, Chapter 6, Section 6.5.6.2 "Flying Post's membership has been severely affected by the loss of forestry-related jobs in the Nipigon area (pers. comm. Flying Post First nation, 2013b)." (p.6-135) "The unemployment rate in that community in 2006 was 8.5%. However, the Flying Post First Nation estimates the unemployment rate of its members to be lower than this, at around 5% (Flying Post First Nation pers. comm., June, 2013a)." (p.6-142) The above quotations appear to contradict one another as an unemployment rate of 5% is basically full employment. Please indicate how the 2013 unemployment rate for Flying Post First Nation was determined.	The estimate of the unemployment rate was provided by the Flying Post First Nation through interviews with First Nation leadership, the content of which was reviewed by the First Nation. The loss of employment opportunities in the forestry industry in Nipigon has spurred the relocation of some families for the purpose of seeking other employment, thereby impacting the community by the loss of residents, but not impacting the overall employment rate of Flying Post First Nation members.	None.	n/a
279	Wabun Tribal Council	WTC-IR#103: Employment, Appendix T, Section 3.1.1 Labour Market "Related to employment, access to and from the Project site was important for Mattagami First Nation members who live on the reserve but don't drive." (p.3-4) While the Proponent may be in a position to arrange for transportation to the mine site, it is likely that education, training and other preparatory activities for employment at the mine will require MFN members to travel frequently to Timmins and/or Sudbury. The lack of vehicles or licences could pose a barrier to employment at the mine. Please provide any statistics concerning the numbers of people on the MFN reserve who do not drive.	The 2011 National Household Survey for Mattagami First Nation found that 69% of employed people living in the community drove to work, but this is misleading because this may be due to close proximity to their place of work rather than due to the lack of a vehicle or the inability to drive. IAMGOLD is committed to the success of training programs and to inclusion of Mattagami First Nation workers in training programs. As part of that commitment, IAMGOLD will work with potentially affected Aboriginal groups to develop a socio-economic / community management plan to address potential Project-related socio-economic / community effects identified through the EA process and/or at later stages of the Project. IAMGOLD is committed to exploring this issue as part of the socio-economic / community management plan to identify options to ensure that access to training and education programs are not dependent on vehicle or licence ownership, as appropriate.	None.	n/a
280	Wabun Tribal Council	WTC-IR#104: Employment, Chapter 6, Section 6.5.6.2 "Mattagami First Nation reports that, as of June 2013, the on-reserve unemployment rate was approximately 20%, and they estimate that about 75% of off-reserve membership would return to the First Nation should employment opportunities become available (Mattagami First Nation, 2013c)." (p.6-142) The correct reference appears to be "Mattagami First Nation. July 2013c. Personal interview." The ability of Mattagami First Nation members to return to the reserve may be limited by the availability of housing, quality of primary education for children, transportation, availability and quality of social, emergency and health services and potentially other factors. Please indicate how the 2013 unemployment rate for Mattagami First Nation was determined.	The error in the citation has been corrected. The estimate of the unemployment rate was provided by the Mattagami First Nation through interviews with First Nation leadership, the content of which was reviewed by the First Nation.	Citation has been updated to the following: "(Mattagami First Nation pers. comm., July, 2013c)"	Section 6.5.6.2 "Regional Economy" heading, "Employment, Labour Force and Income Levels" subheading, second last paragraph

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
281	Wabun Tribal Council	WTC-IR#105: Employment Assistance Programs, Chapter 6, Section 6.5.6.2 "Gezhtoojig Employment and Training in Sudbury offers employment, business, and training services to all Anishnabek people." It is unclear whether this service is relevant to the proposed Project. (p.6-148) Please provide details concerning the Gezhtoojig Employment and Training, including the program objectives, levels of utilization by the affected First Nations, capacity for expansion, responsibilities and funding sources.	Gezhtoojig Employment and Training provides services and programs to seven First Nations and the City of Greater Sudbury. While the seven First Nations currently served by their programs and services are not expected to experience employment and economic benefits and/or social effects either due to their proximity to the Project, or through benefits received through agreements signed with IAMGOLD, it is possible that members of the Aboriginal communities who may experience Project-related benefits or effects may reside in the City of Greater Sudbury, and as such may access services through Gezhtoojig Employment and Training. As employment and training planning advances with mine planning, further discussions will occur between IAMGOLD and various training providers to determine the applicability and suitability of their programs.	None.	n/a
282	Wabun Tribal Council	WTC-IR#106: Employment Training, Chapter 10, Table 10-1 "Labour Market /Population Demographics – further training Identify and implement basic skills and technical training for Aboriginal and local community members to upgrade marketable skills and increase capacity, where possible. Identify and implement basic skills and technical training for Aboriginal and local community members to upgrade marketable skills and increase capacity. " (p.10-44) Detailed information concerning training programs could not be located in the EIS. It is unclear the extent to which training programs have been initiated and whether they will be initiated sufficiently in advance of construction. Please provide further details concerning proposed Aboriginal training programs completed, in progress, or contemplated in the future including: a) the nature and scope of training, retention and advancement programs; b) level of participation or anticipated participation by Aboriginal communities by program, if available; c) timeframes by program; d) expected outcomes or objectives by program; and e) any other pertinent details.	IAMGOLD is committed to building and maintaining a strong relationship with potential affected Aboriginal groups. As part of that commitment, IAMGOLD is negotiating impact benefit agreements with those groups. These agreements are expected to include a number of topics, including the nature and scope of training programs offered. IAMGOLD has made several commitments with response to training as it relates to Project construction, operations and closure (see Appendix Y; EA Commitments Table; Table 3: Mitigation Measures – Human Environment). As Project planning advances and discussions continue with Aboriginal communities, training plans and programs will be developed in support of increasing the capacity of Aboriginal and local community members. This planning process will also be informed by negotiated agreements. It is unknown at present how many Aboriginal community members will choose to engage in training programs. This will likely be determined by individual interest and career goals as identified through a career planning process. IAMGOLD will work in concert with the appropriate community contacts to identify training needs, develop relevant training plans, and identify potential participants. IAMGOLD continues to discuss education and training with Wabun Tribal Council representatives. To date, IAMGOLD has supported the PLAY program which encourages life and leadership skill development in youth ages 4-13 through fun and educational activities (Spring 2013 – ongoing) and continues to support educational scholarships through Wabun Tribal Council. Additionally IAMGOLD, in partnership with Northern College, the Ministry of Training, Colleges and Universities, and Mattagami First Nation is implementing a seven week basic employability skills training program on Mattagami First Nation reserve starting on October 20, 2014.	None.	n/a
283	Wabun Tribal Council	WTC-IR#107: Employment, Appendix T, Section 3.1 "IAMGOLD's hiring policy would determine what percent of these local workers would be Aboriginal, but for the purposes of this analysis it is assumed that the share of the workforce drawn from the local study area that are Aboriginal would be similar to the share seen in the pre-construction workforce." (p.3-1) The basis for this assumption is not provided. Considering the high labour compensation proposed for the project, and the proximity of the MFN reserve, the proportion of First Nation members who choose to work on the Project could be much different. a) Please provide a basis for the assumption that the share of the construction workforce drawn from the local study area that is Aboriginal would be similar to the share pre-construction. b) Please indicate whether or not this assumption was also used to determine the number of MFN members anticipated to relocate to the reserve.	a) The assumption that the construction workforce would be equal to the pre-construction workforce reflects a conservative estimate based on recent experiences with similar Projects in Northern Ontario. IAMGOLD's goal is to maximize the hiring of local workers, specifically local First Nations. It is possible that the proportion of First Nations workers could be higher than predicted, but is unlikely to be lower than predicted. This is based on the availability of skills, and the shared commitment to local employment between IAMGOLD and affected Aboriginal communities. b) Construction employment, being seasonal in nature and non-permanent, is not considered in relocation estimates. Temporary (e.g., seasonal) accommodation is not available within the Mattagami First Nation community and so construction workers are not expected to be housed there. There would be permanent positions available during the construction phase and these are considered in the determination of migration effects as described in Section 9.15 of the EA. For the economic assessment, it has been assumed that construction phase workers would be drawn from Mattagami First Nation in the same proportion as other operations workers.	None.	n/a
284	Wabun Tribal Council	WTC-IR#108: Employment, Appendix T, Section 3.2.1, Graphic 3-2 This graphic illustrates the Project workforce during operations for three categories of employment: general & administrative, process plant and mining. Please provide a similar graph to Figure 3-2 for the duration of the construction, operations and closure and post-closure phases, breaking down the workforce categories as appropriate for the various phases.	Please refer to Section 3.1.1 of Appendix T (Socio-Economic TSD) for the graphic depiction of the workforce in the construction phase. Available information on the expected workforce during the closure phase is presented in Section 3.3.1.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
285	Wabun Tribal Council	WTC-IR#109: Income Levels, Chapter 6, Section 6.5.6.2; Chapter 9, Section 9.15.2.1 "[Income] Data for Aboriginal groups resident in the Project area were not available from published sources." (p.6-142) "Jobs created by the Project will be relatively lucrative; people from the regional study area directly employed in the construction of the Project are expected to earn an average of $148,645 annually in labour compensation, 3.0 times the urban regional study area average median earnings of those working full-time and 5.0 times the average median earnings for all those persons aged 15 and over." (p.9-76) The lack of income data for Aboriginal groups, particularly Mattagami First Nation, limits the predictive value of the EIS with respect to Aboriginal employment, migration, housing and demands on local services, among other indicators. There is also the potential for many current employees working for First Nation organizations to leave their positions to work at the mine. This could have adverse implications for the First Nations. Alternative approaches may need to be considered for obtaining this data in collaboration with the MFN. Detailed income data by mine employment position would assist the First Nations in estimating the likely potential for its members to take work on the proposed Project, including transferring away from their existing positions. a) Please elaborate on the efforts made to date to obtain income data from the Mattagami First Nation and Flying Post First Nation. b) Please provide mine income data by employment position for the construction and operations phases of the proposed Project. c) Please clarify what is included in “labour compensation” for the project.	a) Data on income for Mattagami First Nation in the 2011 National Household Survey was excluded for both data quality and privacy reasons. While socio-economic data was collected with the participation of the potentially affected Aboriginal communities, this data did not include income data because this data is of a private nature and can only be volunteered by members themselves. Surveys of private incomes are methodologically problematic and do not clearly represent a viable alternative to National Household Survey data. b) Mine income data by position is not currently available for Project construction and operations phases. This level of data is not required to understand the benefits of the Project for the purposes of the EA. c) Labour compensation is defined as all of the rewards earned by employees in return for their labour. This includes direct financial compensation consisting of pay received in the form of wages and/or salaries and/or bonuses provided at regular and consistent intervals.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
286	Wabun Tribal Council	WTC-IR#110: Housing, Chapter 6, Section 6.5.6.2 and Appendix T, Section 3.1 "Mattagami First Nation provided a list of housing stock in the community, which consists of seven apartments, 13 townhouses or duplexes and 55 single family homes. There is a waiting list for housing in the community, and a share of housing is band-owned and rented to tenants. (p.6-144) For Mattagami First Nation, the effect on population is to accelerate the trend of population growth, increasing population from 193 in 2011 to 256 by Year -1, a 33% increase." (p.3-11) (underlining added) "Currently, the community has seven apartments, 13 townhouses or duplexes and 55 single family homes for an on-reserve population of 168. Members wishing to build a home in the community can finance construction through a band-guaranteed mortgage. The average amount of an outstanding mortgage on the existing housing stock is $150,000. There is a waiting list for housing, and crowding is an issue in the community (pers. comm., Mattagami First Nation, July 2013; AANDC, 2013)." (p.3-16) (underlining added) "Currently a waiting list exists for band-owned housing. Off-reserve workers wishing to live in the community would be expected to finance construction through a band-guaranteed mortgage or to purchase housing from another member. The former may cause challenges for Mattagami First Nation since each house constructed represents a contingent liability that the band is responsible for if the mortgage goes into arrears. … As a result, the effect of housing demand on First Nation communities is ambiguous and depends on correlated effects on local government revenue." (p.3-18) "On the Mattagami First Nation reserve the number of new dwellings as a result of direct employment and as a proportion of existing dwellings, is estimated to increase by 11.8%. This results in nearly 10 new households/dwellings." (p.3-22) (underlining added) "Potential significant increases in population may occur in the local study area: in Gogama these amount to 7.6% or approximately 21 new residents and on the Mattagami First Nation reserve they amount to 18% or approximately 35 new residents." (p.3.26) (underlining added) It appears that for the MFN there are different estimates of the expected increase in population, the expected increase in households and the percentages of both of these attributable to the proposed Project. Presuming that the apartments are single-family dwellings, there are a total of 75 residential units on the MFN reserve. Based on an on-reserve population of 193 and 75 available residential units, there are at minimum an estimated 2.6 members per household on the MFN reserve. Further information is required concerning the range in the number of members per household, vacancies, unit size and other factors to determine the extent to which overcrowding is an issue for the MFN, and whether this issue could be exacerbated by the proposed Project. a) Please confirm the demographic and housing data for the MFN, both with and without the proposed Project for the construction, operations and closure phases. b) Please indicate the length of the housing waiting list, and whether the length of the list is increasing or decreasing. c) Please indicated whether there are any current plans to develop new housing on the reserve and, if so, how much housing by what date.	a) Changes in population and housing demand for Mattagami First Nation over the life of the Project has been included in a new table included in the Addendum to Appendix T (Socio-Economic TSD). This table illustrates the predicted total population changes and housing demands as a result of the Project. Current demographic and housing data for the Mattagami First Nation is presented in the Socio-Economic Baseline Study Report. Table 3-12 of the Socio-Economic TSD highlights the projected population within the regional study area for years 1 to 15 and is based on the total population growth including the natural increase in population expected in the baseline scenario. b) IAMGOLD understands that the current waiting list for housing at the Mattagami First Nation comprises approximately 12 families and that it has increased in the past year by about nine families (pers. comm., Mattagami First Nation, 2014). c) It is IAMGOLD's understanding that Mattagami First Nation is interested in constructing additional housing units in the community; however, the associated infrastructure required to support the additional units (e.g., transmission lines, roads, septic) are cost prohibitive and the current housing budget is focused on maintaining existing housing stock (pers. comm., Mattagami First Nation, 2014).	Appendix T has been updated to reflect ranges of anticipated effects rather than absolute numbers and four tables have been updated to reflect anticipated Project effects on housing demand and population during Project construction and Project operations. The tables illustrate population effects in comparison to 2011 data and housing effects compared to 2011 housing stock. The updated tables are as follows: Table 3-4 illustrates the predicted total population changes during construction; Table 3-12 illustrates the projected population changes during operations compared to the population figures reported in 2011; Table 3-5 illustrates housing requirements during construction compared to existing housing stock in the regional study area (2011); and, Table 3-13 now compares predicted housing requirements during operations to 2011 housing stock in the regional study area.	Appendix T

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
288	Wabun Tribal Council	WTC-IR#111: Housing, Chapter 9, Section 9.15 "For Mattagami First Nation the effect on population is expected to accelerate the trend of population growth, increasing population from 193 in 2011 to an estimated 256 in Year -1, a 33% increase. This is considered a positive, highly distinguishable effect and may result in the need for investment by the community or government that lasts for the construction phase. Demand for new housing in the first year of the construction phase on the Mattagami First Nation reserve is expected to rise by 12.4%, of which 11.1% would come from the need to house people moving onto the reserve due to Project employment. Currently a waiting list exists for band-owned housing. Off-reserve workers wishing to live in the community would be expected to finance construction through a band-guaranteed mortgage or to purchase housing from another member. This bottleneck may result in a change in the distribution of population effects away from the First Nation. (p.9-77) In the Mattagami First Nation reserve, the Project modestly expands demand for housing until Years 5 and 6, supporting a projected increase for a rising population. After Years 5 and 6 the on-site workforce is expected to decline and with it a projected decline in housing demand to baseline levels. (p.9-80)" The relationship between population increase and increases in demand for housing on the MFN reserve is unclear. a) Please explain how a 33% increase in population results in only a 12.4% increase in demand for housing. b) Please explain how these percentage changes were determined.	a) The discrepancy between population growth and housing demand arises from assumptions about the composition of relocating households, which are expected to be disproportionately composed of families with children. Moreover, it should be clear that the 33% increase in growth cited is not within a single year as stated in the review comments – the percentage increase in Year -1 is expected to be 18% (the community is forecast to have grown after 2011). b) The demographic section as written in the EIS / Draft EA Report makes an implicit assumption as to the year of construction. Therefore percentages were determined with this assumed start year for construction in mind. In order to have a clearer understanding of the estimates presented in the report, changes in population and housing demand for Mattagami First Nation over the life of the Project has been included in a new table included as an Addendum to Appendix T (Socio-Economic TSD), restating the same estimates without comparison to a baseline year, and instead presenting them simply in terms of people and homes over the lifetime of the Project.	None.	n/a
289	Wabun Tribal Council	WTC-IR#112: Population, Chapter 6, Section 6.5.6.2 "The Flying Post First Nation reserve, located west of Timmins recorded 40 people living on-reserve in the 2006 Statistics Canada survey, although the population currently resides in Nipigon." p.6-138 The 2006 Statistics Canada Census appears to be an error in which 8 persons surveyed in the long-form census reported living on the unoccupied reserve lands. Please correct the population information for FPFN.	The 2006 Community Profile for Flying Post First Nation (characterized by Statistics Canada as Flying Post 73), indicates that 40 people were identified as living on reserve. As noted in Section 6.5.6.2 of the EIS / Draft EA Report, this was a Statistics Canada Census error as the Flying Post First Nation reserve is unoccupied. This issue is discussed in greater detail within the Socio-Economic Baseline Study Report (Section 5.2.1 Population Totals).	None.	n/a
290	Wabun Tribal Council	WTC-IR#113: Public Utilities, Chapter 6, Section 6.5.6.2, Appendix T, Section 3.1.6 "The Mattagami First Nation is serviced by a groundwater supply system (two wells with disinfection equipment and distribution system) constructed in 1995, with a capacity of 60 m^3/day. The water plant was upgraded in 2011 to meet current demand, and can support an increase in population to an unknown degree (pers. comm. Mattagami First Nation, 2013b)." (p.6-146) "There are no concerns or capacity issues with provision of public utilities on the Mattagami First Nation reserve. "(p.3-20) Without knowledge of the current demand for water, the potential future demand and the ability to service that future demand, the effects of population growth resulting from the proposed Project and other factors on MFN water supply services cannot be determined. For example, the average per capita water use in Canada is 0.3 m^3/day. So a population of 200 would consume 60 m^3, suggesting that the MFN would be at capacity. It cannot be determined whether the appropriate personnel working at MFN utilities were aware of the potential increase in population and housing on the reserve as a result of the proposed Project, and the consequent effects on public utilities. a) Please report the current average and range of daily water use (in m^3) on the MFN reserve. b) Please confirm that the public utilities in the MFN are capable of providing services in the event of a 33% increase in population in Year -2 (i.e. very quickly over a 12-24 month period)	IAMGOLD is confident that effects due to population growth are adequately considered through the EA. a) The Socio-Economic Data Collection Report prepared by a consultant hired through Mattagami First Nation to collect primary socio-economic data from Mattagami First Nation did not include information about current and range of daily water use on the Mattagami First Nation reserve. b) It should be clear that the 33% increase in growth cited is not within a single year as stated in the review comments – the percentage increase in Year -1 is expected to be 18% (the community is forecast to have grown after 2011). IAMGOLD will work with potentially affected Aboriginal groups to develop a socio-economic / community management plan to address potential socio-economic Project-related effects, including potential effects on public utilities.	None.	n/a

291	Wabun Tribal Council	WTC-IR#114: Solid Waste, Chapter 6, Section 6.5.6.2 "Mattagami First Nation has no solid waste management facility or other waste diversion initiatives. "(p.6-147) Concern that the Project could affect waste management services also used by the MFN. a) Please indicate how MFN solid waste is managed, including the location and size of the landfill used as well as any diversion depots or other facilities. b) Please indicate whether the MFN currently makes use of any solid waste management facilities contemplated for use by the Project.	a) Mattagami First Nation currently manages its own landfill near the community. b) It is IAMGOLD's understanding that Mattagami First Nation is not making use of the solid waste management facilities contemplated for use by the Project.	The following text: "Mattagami First Nation has no solid waste management facility or other waste diversion initiatives." was replaced by: "Mattagami First Nation manages and operates a landfill near the community."	Section 6.5.6.2 "Infrastructure and Services" heading, "Solid Waste" subheading
292	Wabun Tribal Council	WTC-IR#115: Social, Recreational and Community Services and Infrastructure, Chapter 6, Section 6.5.6.2 "Several social support and training programs are also offered [in MFN]. "(p.6-147) Understanding the existing social support and training programs is important to understanding adaptive capacity and potential to implement effects management. Please provide details concerning the social support and training programs offered in the MFN, including the program objectives, levels of utilization, capacity for expansion, responsibilities and funding sources.	Information on social support and training programs is provided in the Socio-Economic Baseline Study Report. IAMGOLD is committed to building and maintaining a strong relationship with affected Aboriginal groups. As part of that commitment, IAMGOLD will work with potentially affected Aboriginal groups to develop a socio-economic /community management plan to address potential Project-related socio-economic/community effects identified through the EA process and/or at later stages of the Project. As Project planning advances and discussions with affected Aboriginal groups continue effects management strategies will be developed in support of optimizing Aboriginal participation in the Project.	None.	n/a
293	Wabun Tribal Council	WTC-IR#116: Health Infrastructure and Services, Chapter 6, Section 6.5.6.2 "The Mattagami First Nation has a nursing station, with average capacity, There are no future plans for further development (Mattagami First Nation, July 2013)." (p.6-150) Further details are required to access adaptive capacity. a) Please explain what is meant by “average capacity”. b) Please indicate what level of increased demand on services would necessitate “further development”. c) Please indicate how general health services are provide to MFN members, including from physicians, dentists and specialists.	a) Average capacity is meant to indicate that the level of service and the level of demand are compatible, in that there is not a mismatch between extremes in demand and service provisions. b) The level of increased demand on services that may warrant further development of emergency or health services within the First Nation were not specified by Mattagami First Nation. With respect to first response capabilities, it was identified through the socio-economic data collection that liability issues would need to be considered as part of any planning initiatives related to first response services (pers. comm. Mattagami First Nation, 2013). c) Mattagami Health provides referrals to other medical services and provides daily medical transportation for members to attend medical appointments outside of the community (pers. comm. Mattagami First Nation, 2013).	None.	n/a
294	Wabun Tribal Council	WTC-IR#117: Health Infrastructure and Services, Chapter 6, Section 6.5.6.2 "The Flying Post First Nation Health Services administers an Aboriginal Healthy Babies Healthy Children program for parenting support and healthy child development (Flying Post First Nation, 2013)." (p.6-150) Please indicate how general health services are provide to FPFN members, including from physicians, dentists and specialists.	All members of Flying Post First Nation have access to the Brighter Futures and Building Healthy Communities programs and the health services offered through Wabun Tribal Council (pers. comm., Flying Post First Nation, 2013a).	None.	n/a
295	Wabun Tribal Council	WTC-IR#118: Emergency and Policing Services, Chapter 6, Section 6.5.6.2 "First Nation communities have seen a rise in the abuse of prescription drugs, mental health problems in NAPS officers, underfunding and recruitment and retention challenges. "(p.6-151) a) Please clarify whether this information concerns the First Nations, the NAPS officers working in the First Nations, or both. b) Please provide the source(s) of this information.	a & b) The source of the information referenced is the 2011-2012 Nishnawbe-Aski Police Service (NAPS) Annual Report. In this Report, the Chief of Police noted key concerns or challenges NAPS is facing, including a rise in the abuse of prescription drugs in the communities served by NAPS, as well as concerns specific to NAPS, namely the mental health of NAPS officers and recruitment and retention of NAPS officers. The EA text has been revised to include the above reference.	The following citation was added to Section 6.5.6.2: "(NAPS, 2012)" The following reference was added to Section 19.6: "Nishnawbe-Aski Police Service (NAPS). 2012. Annual Report 2011-2012. Annual Report"	Section 6.5.6.2 "Infrastructure and Services" heading, Emergency and Policing Services" subheading Section 19.6

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
296	Wabun Tribal Council	WTC-IR#119: Transportation, Chapter 9, Table 9-13 "Project-related traffic volumes are forecasted to increase on Highway 144, by 16 additional vehicle trips per day on average. According to these estimates, at most an increase of just under 3% could occur on Highway 144 in the section between Highway 560 and 661 where vehicles would be turning off Highway 144 at Sultan Industrial Road to access the Project site." (p.9-83) It is likely that there will be times of more extreme traffic on the local roads resulting from project-related activity. What are the ranges? Are there temporary conditions that could lead to high traffic? a) Please provide the range in expected traffic changes, highlighting the periods of highest traffic volume increases. b) Please explain the conditions or activities at the proposed Project during construction, operations or closure, including accidents, which would lead to higher increases in traffic volumes.	As noted in Appendix T (Socio-Economic TSD), traffic volumes presented are estimates averaged throughout the 24 month construction phase and actual traffic volumes will be higher during peak construction periods. The peak construction periods are expected to occur in Spring and Summer of Year -2 and Year -1, with larger volumes occurring in the Spring / Summer of Year -1 when process equipment, trucks, and other equipment will be transported to site. IAMGOLD is committed to managing potential traffic effects through a number of measures outlined in Appendix Y (EA Commitments Table), including scheduling delivery of major equipment and shuttle buses to avoid peak times where practical. During the operations phase, it is expected that the volume of traffic as outlined in Chapter 9 will be consistent. During Year 1 of the closure phase, traffic volumes will likely be higher than the average 16 additional vehicle trips per day as decommissioning and removal of equipment and facilities occurs. A detailed construction plan is not yet established and as such, detailed transportation planning has yet to occur. A detailed construction plan, including a transportation plan will be developed as part of the detailed engineering phase of Project development. The mitigation measures developed as part of this Amended EIS / Final EA Report (Chapter 16) will apply to the transportation planning for all phases of the Project.	None.	n/a
297	Wabun Tribal Council	WTC-IR#120: Visual Aesthetics, Chapter 9, Section 9.14 "This is expected to result in a perceptible change in landscape, but should not affect enjoyment of the viewscape." (p.9-71) Throughout the visual resources assessment the conclusion is reached that the "enjoyment of the viewscape" will not be affected. The basis for this conclusion is unclear and appears to be entirely based on the Proponent's subjective perspective. Please indicate what specific measures were taken to consult with Aboriginal and non-Aboriginal land users concerning the residual effects of the proposed Project on the visual environment and what concerns were raised or what opinions were expressed by those land users concerning the visual landscape, if any.	IAMGOLD presented results of the effects prediction to Aboriginal and public communities during Open Houses. Additionally, Fact Sheets were prepared and distributed to individuals to present results of the baseline studies and effects prediction. The only visual aesthetics-related comment received from Aboriginal communities indicated that Aboriginal communities are interested in understanding the potential effects from land near the Project. As a result of this comment, an additional effect assessment indicator was included and additional mapping was created to show where Project components may be visible from, including lakes and land	None.	n/a
298	Wabun Tribal Council	WTC-IR#121: Visual Aesthetics, Chapter 9, Section 9.14; Appendix S, Executive Summary "the effect of the Project on the visual landscape during the operations phase will be perceptible to six receptor locations (see Figure 9-31) (p.9-73) Modelling results also indicate that the Project components may be partially visible from one or more of the following lakes: Clam Lake, Chester Lake, Three Duck Lakes, Bagsverd Lake, Delaney Lake, Unnamed Lake #1and portions of Unnamed Lake #2, Schist Lake, Dividing Lake and Mesomikenda Lake. This visual effect is likely to be perceptible but will not affect enjoyment of the viewscape." (p.ES-2) All of the receptor locations appear to be on the land, despite the identification of canoe routes within the local study area, and the potential that the lakes are used for snowmobiling in winter. For example, it appears that many of the lakes along the canoe route through the local study area would have a regular (if not almost continual) view of the MRA. Please update the assessment of the effects of the Project on visual aesthetics using visual receptors located on lakes within or adjacent to the study area, including Mesomikenda, Dividing, Bagsverd, Clam, Chester, Moore and Schist lakes.	The prediction of effects for visual aesthetics has been completed for three effects assessment indicators, one being 'change in landscape from non-receptor locations'. Figure 9-32 presents the results of the modelling exercise. The highlighted areas of that Figure indicate that one or more Project components may be seen from various locations around the Project site.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
299	Wabun Tribal Council	WTC-IR#122: Socio-economic Assessment, Chapter 9, Section 9.15 "Effects on social effects assessment indicators were defined by: ▪ understanding the current baseline conditions; ▪ analyzing existing pressures on these indicators; ▪ predicting the expected changes on those indicators due to the Project; and ▪ predicting whether the indicators could handle these changes. "(p.9-76) When socio-economic changes are observed in aboriginal communities during the life of a large development, such as the proposed Project, it is often difficult to determine whether the cause of the changes is directly related to the development, indirectly related to the development, related to another perturbation in the socio-economic environment but exacerbated or enhanced by the development, or unrelated to the development. The extent to which First Nation organizations are prepared for these changes can significantly determine the degree to which adverse effects are minimized and beneficial effects are enhanced. Therefore, the socio-economic baseline studies need to emphasize the collection of relevant information about current conditions, but also about the capacity of First Nation organizations and communities to absorb and respond to the demands and changes related to the Project. This kind of information assists First Nation communities to identify appropriate actions to prepare for the Project. The challenge in this instance is that despite the identification of potentially appropriate indicators for understanding the baseline conditions, limited reliable socio-economic information concerning the potentially affected First Nations appears in the EIS. As such, it is not possible to accurately predict the expected changes to those indicators or the capacity to manage change within the affected First Nation communities. These predictions or impact pathways reflect the ways in which an initial change in the environment resulting from a development or contributed to by a development translates into an effect or effects. Appendix “B-1” provides a hypothetical example of the potential complexity of the impact pathways for Aboriginal communities in relation to a change in water quality, which is particularly relevant in this instance. In general, impact pathways can be mapped using an interaction matrix. Such a matrix identifies potential interactions between project components and valued components and indicators identified by the affected First Nations during issues scoping. This illustrates the importance of thorough issues scoping to the development of impact pathways and ultimately to the appreciation, avoidance, mitigation and management of effects. Attached, as Appendix “B-2” to this submission, is an example of an interaction matrix for a proposed large-scale hydroelectric facility. While the columns reflect the components of that project, and differ considerably from the components of the proposed Côté Gold Project, the rows likely do not differ greatly from the valued components and indicators that the affected First Nations would identify through an issues scoping process. The numbers in the table reflect the specific details concerning numbered impact pathways identified by the affected First Nations in a separate table (not provided). These materials are provided for further discussion between the First Nations, IAM Gold and potentially also government agencies operating First Nation programs. The EIS does provided impact assessment matrices for the construction, operations and closures phases of the proposed Project in Table 11-3, Table 11-4 and 11-5, respectively. However, these matrices are limited in their consideration of potential interactions between Project components and the values of the First Nations. Comment continues on next page.	Socio-economic data collection questionnaires were provided to representatives of Mattagami First Nation and Flying Post First Nation in 2013, which included numerous questions designed to better understand current conditions and the capacity of First Nation organizations and communities to respond to potential Project-related effects. The data collected was used in the development of the socio-economic baseline and impact assessment. IAMGOLD is of the opinion that this EA includes all effects that can be reasonably be anticipated to occur due to implementation and development of this Project. The EA does not screen out any potential effects but it assesses all effects that have been identified, using conservative levels for evaluating these indicators. Therefore the application of a screening or pathways analysis tool would not add value to the EA process and the assessment of significance. For further information on the methodology see Chapters 1 and 9. It is IAMGOLD's opinion that the methodology to identify EA indicators, potential Project effects and mitigation measures is very transparent and accessible. More complicated approaches would not help in communicating the EA findings. The selection of assessment indicators, the method to assess significance and the potential effects described in the EA were also developed in consultation with stakeholders and potentially affected Aboriginal groups (see Appendix D; Record of Consultation; RoC). IAMGOLD; however, recognizes that all effects predictions have an inherent degree of uncertainty and therefore IAMGOLD is committed to developing and implementing a socio-economic / community management plan. IAMGOLD will work with potentially affected Aboriginal groups to develop a socio-economic / community management plan to address potential socio-economic Project-related effects. The interaction matrix referred to in Appendix V (Climate Change Report) is related to potential climate change interactions with the Project and is not related to the overall identification of Project effects. The interaction matrix can be found in Table 5-1 beginning on page 4-3 of Appendix V.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
299 cont	See previous page.	An interaction matrix for the proposed Project is mentioned in Appendix V, but it is unclear what is being referred to: The Project interaction matrix was used as the basis for the high level assessment of Project infrastructure and operational components with the projected climate phenomenon/variables. (p.4-2) Please provide the interaction matrix for the proposed Project referenced in Appendix V	See previous page.	See previous page.	See previous page.
301	Wabun Tribal Council	WTC-IR#123: Criteria for Significance, Chapter 11, Section 11.1.4 Determination of Significance "The decision tree for the Côté Gold Project was developed by a team of professionals, providing technical expertise and experience as to what combination of assessment criteria should result in a significant or not significant effect. The general logic is as follows: ▪ If the magnitude of the effect is comparable to baseline conditions, the effect is not noticeable and the impact is considered not significant. ▪ If the effect is limited to the Project site and it is reversible, the impact is considered not significant. ▪ If the magnitude of the effect is clearly distinguishable but meets guidelines or is within the environment's adaptive capabilities and extends beyond the Project site, the impact is considered not significant, if the effect is reversible. ▪ If the effect extends far beyond the Project site, the effect lasts a long time and is not reversible, the impact is considered significant. ▪ If the magnitude of the effect exceeds guidelines or is beyond the environment's adaptive capability and the effect is such that it is not reversible, the impact is considered significant." (p.11-15) The last two bullets above represent the two situations in which effects are considered to be significant. However, both require that the effects be irreversible. Long-term but reversible effects in the biophysical environmental can still lead to irreversible effects in the socio-economic environment that are significant. As examples: § changes to wildlife populations that prevent hunting for an extensive period of time will undermine the transfer of hunting knowledge to future generations; § nighttime noise levels above baseline lasting a period of two years (or even a much shorter period of time) would be considered highly disruptive by most people even though the effects are fully reversible following construction; or § a large spill of a contaminant into the watershed could be cleaned up and aquatic conditions returned to baseline over time, however the perception of the suitability of water or aquatic life from the water system would likely be affected for a much longer period of time with adverse implications on the consumption of country foods. Please justify and reconsider the requirement of "irreversibility" for making a determination of significance and update the significance determinations, as appropriate, based on this reconsideration.	The CEA Agency guideline for the determination of significance requires the use of reversibility in the assessment of impacts (Canadian Environmental Assessment Agency. 1994. A Reference Guide for the *Canadian Environmental Assessment Act*, Determining Whether A Project is Likely to Cause Significant Adverse Environmental Effects, Prepared by the Federal Environmental Assessment Review Office, November 1994. https://www.ceaa-acee.gc.ca/default.asp?lang=En&n=D213D286-1). Both Wabun Tribal Council and IAMGOLD agree that some impacts could theoretically be significant despite being reversible.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
302	Wabun Tribal Council	WTC-IR#124: Socio-economic Monitoring, Chapter 16, Section 16.4 "In addition to the socio-economic monitoring measures presented in Table 16-3, IAMGOLD will develop monitoring programs in consultation with affected stakeholders for the parameters indicated below. Monitoring parameters, monitoring methods, frequency/timeframe and location will be determined and documented in a Socio-Economic/Community Management Plan. " (p.16-2) The development of a community socio-economic monitoring and effects management plan would be a positive step in supporting the enhancement of benefits and the mitigation of impacts for the affected First Nations in relation to the proposed Project. Attached as Appendix "C-1" is a series of charts illustrating the draft socio-economic monitoring program proposed for implementation in the Attawapiskat First Nation (AttFN) in relation to the Victor Diamond Project. This program was based on the Sustainable Livelihoods Framework (SLF) illustrated and described in detail in Appendix "C-2". The SLF is one example among a variety of frameworks for organization socio-economic monitoring information. The SLF encourages community members to participate in gathering and interpreting data, to identify needs for further research, to set priorities for action and to develop new strategies to achieve community goals such as increased economic development, higher incomes, increased social well-being, improved health services and more sustainable use of natural resources. A unique feature of the SLF is its ability to visually illustrate the First Nation "assets" or positive aspects of life in the community, the changes to those assets, and the things that make those assets vulnerable to change. The SLF was considered to be the most preferable approach to addressing the needs and issues of the AttFN because it: § can be implemented by organizations within the First Nation itself; § results in important benefits to the community in terms of capacity building through training in data collection/research techniques, and data management § focuses on solving community-wide problems and improving community well-being rather than focusing on analysis of data alone; and § can be understood and communicated easily by community members These materials are provided for further discussion between the First Nations, IAM Gold and potentially also government agencies operating First Nation programs. Please provide any examples of socio-economic monitoring programs in Aboriginal communities that the Proponent believes could inform the development of a similar program in the case of the proposed Project.	IAMGOLD will work with potentially affected Aboriginal groups to develop a socio-economic / community management plan to address potential Project-related socio-economic / community effects identified through the EA process and/or at later stages of the Project. IAMGOLD is of the opinion that it would be more appropriate to work in collaboration with potentially affected Aboriginal groups to develop a socio-economic / community management plan that uniquely reflects potential effects or concerns raised by these communities, rather than provide an example of a socio-economic monitoring program that was suitable in a different context.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
303	Wabun Tribal Council	WTC-IR#125: Archaeology, Chapter 6, Section 6.5.4.2 "To date, through the Stage 1 and 2 studies, a total of 37 archaeological site and features have been located and recorded within the Project property (see Table 6-27). The sites include 18 pre-contact archaeological sites, eleven historic archaeological sites and eight ancient trails and portages." (p.6-129) The number of pre-contact sites suggests the need for considerable involvement of the local First Nations. Please summarize the prior and future involvement of First Nations in the archaeological program, including: a) use of historical and contemporary First Nation land use and occupancy to identify potential areas of high potential; b) involvement of First Nation members or representatives in field work to locate, identify or interpret physical heritage resources; c) consultation to date with First Nations concerning pre-contact and historic sites, as well as the archaeological program more generally; d) any other engagement or involvement with First Nations in relation to the archaeological program; and e) anticipated future role for First Nations	a) A Mattagami First Nation contemporary & historical land use and occupancy study was consulted. b) There was extensive and continuous field involvement of Elders and Band members to assist in identifying areas of high archaeological potential and in testing and excavating sites. In 2012 a First Nations summer student was assisting in the work. In 2012 and 2013 approximately half of the field crew was staffed with First Nation band members. In July 2013 IAMGOLD hosted approximately 20 elders and members of Mattagami First Nation at the Côté Gold Project site to review and consult on archaeological findings to date. c) Section 3.4, standard 2, of the Ministry of Tourism, Culture and Sport Standards & Guidelines requires that Aboriginal communities must be engaged when assessing the value or interest of an Aboriginal archaeological site. Also required is input from Aboriginal communities for the types of Aboriginal archaeological sites prescribed in Section 3.5. Among the types of sites prescribed are rare Aboriginal archaeological sites (standard 1a) Woodland Aboriginal sites (standard 1c) and undisturbed Aboriginal sites (standard 1e). None of the sites discussed in the Côté Gold Project report conform to the general definition of rare Aboriginal sites. However, apart from natural disturbances commonly occurring in the forests of northeastern Ontario, Woodland and other pre-contact sites are by definition undisturbed. Therefore a requirement exists to engage and obtain input from Aboriginal communities regarding the recommended Stage 3 mitigation strategies. This was undertaken via a series of meetings, community presentations, field visits, and a community visit to an excavation at a pre-contact archaeological site. d) Please see b) and c). e) If any additional sites with archaeological potential are identified through construction and/or operation of the Côté Gold Project, then IAMGOLD will notify the First Nations and will employ opportunities for First Nations members to participate in investigations. All artifacts will be transferred to the extent allowed (Ministry of Tourism, Culture and Sport protocols) to the First Nation after analysis has been completed along with a community presentation.	None.	n/a
304	Wabun Tribal Council	WTC-IR#126: Archaeological Potential, Section 9.13 Archaeology "The predictive modelling of the Project study area was carried out using landscape variables to preferentially select those areas with low sloping, well-drained terrain located nearby to modern waters. These variables were applied across the referent landscape to find all of those areas that meet the weighted variables. The final map was used to guide fieldwork activities. The Ministry of Tourism Culture and Sports (MTCS) checklist for archaeological potential was consulted, and returned positive results for archaeological potential within the Project area." The “final map” used to guide fieldwork activities cannot be located in the EIS. Please provide the archaeological potential maps used to guide archaeological fieldwork in the local study area.	This map cannot be provided at this point due to Ministry of Tourism, Culture and Sport requirements and *Heritage Act* requirements. The provision of this map is not considered relevant to present and understand effects and impacts on archaeological resources.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
305	Wabun Tribal Council	WTC-IR#127: Archaeology, Appendix R, Section 4.4, p.4-6 "All of the sites located with the exception of Rocky Narrows 1 and Chester 6 display significance as they are the first such sites of this antiquity located in the local area. Given the paucity of comparative information, all sites must be considered worthy of additional assessment work (Stage 3 and 4). As the sites are considered significant in both regional and local archaeological contexts, and several of the sites will be impacted by the proposed Project development, additional archaeological resource assessment work is required. All sites listed below exhibited evidence of significant cultural heritage value or interest making all of them candidates for Stage 3 work. The two exceptions were Rocky Narrows 1 and Chester 6 for which no further work is recommended." Rocky Narrows 1 is depicted in Figure 53 and Figure 54 and Chester 6 in Figure 31. Detailed descriptions of these two sites are not provided that would explain why they are considered for Stage 3 assessment work. Please provide further details as to why these two sites are not candidates for Stage 3 work.	Rocky Narrows 1 and Chester 6 did not exhibit evidence of significant cultural heritage value or interest as they did not meet the minimum conditions set out in the Ministry of Tourism, Culture and Sport (MTCS Standards and Guidelines for Consultant Archaeologists (2011). See §2.2.1.a.ii (S&G 2011), and as such Stage 3 work was not required.	None.	n/a
306	Wabun Tribal Council	WTC-IR#128, Archaeology, Appendix R, Table 5-1 "It is recommended that a Stage 3 assessment be completed at the following eight pre-contact sites that are of further cultural heritage value or interest and will be impacted by the proposed Project design. These excavations must proceed with the engagement of First Nations. ▪ 1. Two Pike Point – CjHl-11 ▪ 2. Côté Lake 1 Site – CjHl-12 ▪ 3. Flat Rock Site – CjHl-2 ▪ 4. Rocky Narrows 2 – CjHl-15 ▪ 5. Chester 1 Site – CjHl-4 ▪ 6. Chester 3 Site – CjHl-5 ▪ 7. Chester 5 Site – CjHl-7 ▪ 8. Bagsverd Creek 1 - CjHl-27" (p.4-6) Based on the information in Table 5-1 and Table 5-2, all but one of excavations listed above have already proceeded. a) Please provide details concerning the engagement of the First Nations in the excavation and any future activities associated with the artefacts, including curation. b) Please indicate where the artefacts are currently being stored and the future plans for these artefacts.	a) A Mattagami First Nation contemporary & historical land use and occupancy study was consulted. There was extensive and continuous field involvement of Elders and Band members to assist in identifying areas of high archaeological potential and in testing and excavating sites. For details on this engagement please refer to Appendix D (RoC). b) Artifacts are currently being stored with the qualified archaeologist who conducted the archaeological studies. All artifacts will be transferred in accordance with Ministry of Tourism, Culture and Sport protocols to the First Nation after analysis has been completed along with a community presentation.	None.	n/a
307	Wabun Tribal Council	WTC-IR#129: Aboriginal Trapping, Chapter 9, Table 9-1 Fishing and hunting are identified as indicators for both non-Aboriginal and Aboriginal harvesting. However, trapping is identified as an indicator only in the case of non-Aboriginal harvesting. Please explain why Aboriginal trapping was not selected as an indicator for the environmental effects assessment.	Traditional trapping (Aboriginal) was not selected as an indicator for the environmental effects assessment because no specific traplines or trap areas were identified by Aboriginal peoples during the study. IAMGOLD is not aware of any Aboriginal trapping within the Project site. As such, trapping could not be carried forward in the effects assessment due to lack of information on trapping for traditional purposes.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
308	Wabun Tribal Council	WTC-IR#130: Traditional Land Use Regional Study Area, Section 9.1.2.3 Regional Study Area; MFN/FPFN TEK/TLUS "Terrestrial Biology for the Site The terrestrial biology regional study area is defined as a 30 km buffer from the boundary of the local study area (see Figure 9-6). This area is large enough to contain all or most individuals that comprise the seasonal and annual populations of American marten, beaver, upland breeding birds, waterbirds and raptors that inhabit the area. The regional study area is expected to be large enough to contain most of the plant populations and communities that may be influenced by the Project and other developments, and to provide confident and ecologically relevant effects predictions on vegetation. At this scale, changes to vegetation and associated wildlife habitat from human development can be also used to predict effects to the abundance and distribution of wildlife populations. Traditional Knowledge and Land Use The traditional knowledge and land use regional study area is defined by potential for effects of the Project on site-specific and nearby traditional land and resource uses such as use or knowledge of culturally important sites. Similar to land use, depending on the type of land or resource use, the study areas for terrestrial or aquatic biology disciplines were used " (see Figures 9-6 to 9-8). The TEK/TLU Study for the MFN and FPFN contains a series of three maps in which a "Regional Study Area" is indicated on the legend that does not appear to be consistent with the terrestrial regional study area illustrated on Figure 9-6 of the EIS. Please reconcile the discrepancies between the regional study areas in the figures in the TLUS and those contained in the EIS.	The TK / TLU study areas were based on Mattagami First Nation and Flying Post First Nation knowledge of the area. The study areas selected for the TLU baseline and effects assessment reflect the area where effects can be predicted. The Mattagami and Flying Post First Nations TLU study was conducted by an independent consultant on behalf of the First Nations. As such, the map of the regional study area which appears in the TLU study report was created as part of that study based on the area(s) identified during the course of study. IAMGOLD used the information provided in the TLU study as well as the EIS study areas in determining the study area definitions. All information contained within the TLU study was carefully considered by IAMGOLD in the identification of potential Project affects and the development of mitigation strategies. IAMGOLD reviewed the sensitive areas provided in the TK / TLU study and, based on the Project Description, determined which of these areas could potentially be affected by the Project. This allowed IAMGOLD to focus the study area of the TK / TLU TSD. It should be noted that study areas generally have the main purpose of focusing baseline data collection, they do not limit the geographic extent of the effects analysis.	None.	n/a
309	Wabun Tribal Council	WTC-IR#131: Traditional Knowledge and Land Use, Section 9.11 "The TK/TLU study identified an eagle's nest in the vicinity of the Project. Due to the nest's location and its potential removal, and considering the importance of the eagle in traditional Ojibwe culture, it is understood that this nest may be a concern for the community. Clearing of the area where the eagle's nest is currently located will take place outside of the breeding season. Upon the eagle's return to the area, it is expected that the eagle will the either find an equally suitable area to build a new nest or will take over a nearby existing eagle's nest. The local population of eagles will not be affected by the loss of the individual nest. With the exception of the eagle's nest, the Project does not overlap with any other known or reported traditional cultural, spiritual or ceremonial sites in the local or regional study area." It is unclear whether the Proponent understands the cultural importance of the eagle's nest. While the local population of eagles will not be extirpated, the loss of the nest and the habitat losses from the proposed Project will reduce the eagle population locally. a) Please elaborate on the Proponent's understanding of the importance of the eagle in traditional Ojibwe culture. b) Please indicate the Proponent's understanding of the acceptability of the proposed mitigation for traditional Ojibwe culture, namely expecting that the eagle will find a suitable nest elsewhere.	IAMGOLD recognizes an inherent limitation in their understanding of the importance of eagles to Ojibwe culture, but remains open to learning more about, and deepening their understanding of the cultural importance of eagles. However, given the importance of the eagle in the Project area to Mattagami and Flying Post First Nation, IAMGOLD has undertaken additional efforts to evaluate the potential effects to the local eagle population. The biologists conducted aerial surveys in the vicinity of the eagle nest and found numerous other empty nests that could be occupied in the future and abundant habitat where new nests could be constructed. Very few eagles were seen in the area and therefore the habitat is not considered to be saturated with competitors. It is therefore believed that empty nests in the area are available and would not result is displacement of other pairs through competitive interactions for a new nest site. IAMGOLD will consult with Mattagami First Nation and Flying Post First Nation during construction planning on how the removal of the eagle nest can be conducted in a culturally sensitive manner, and will be open to hosting a traditional ceremony (ies) on site should one be requested.	None.	n/a

310	Wabun Tribal Council	WTC-IR#132: Transmission Line effects on Traditional Hunting, Chapter 9, Section 9.11 "The new transmission line alignment corridor may attract non-traditional hunters to hunt in the area that is currently principally used for hunting by the Mattagami First Nation. This could in turn negatively affect traditional hunting. The magnitude of this effect is uncertain." (p.9-64) It is unclear why the magnitude of this effect is uncertain or was not determined. a) Please explain why the magnitude of the effect of the proposed new transmission corridor on Aboriginal hunting could not be determined. b) Please indicate (or provide) the additional information necessary to determine the magnitude of the effect of the proposed transmission corridor on Aboriginal hunting.	In accordance with the EIS guidelines, levels of uncertainties are included in the assessment, where applicable. It should, however, be noted that in Chapter 11, a level of magnitude has been assigned for this potential impact. Therefore, no additional information is required to support the effects prediction for this indicator.	The word "principally" has been removed from the bullet list in Section 9.11.2.2 and Appendix P (Traditional Land and Resource Use TSD).	Section 9.11.2.2, fourth bullet. Appendix P
311	Wabun Tribal Council	WTC-IR#133: Traditional Land Use Monitoring, Chapter 16, Section 16.4 "Traditional land uses – monitoring program to be established in collaboration with First Nations and Métis land users as appropriate." (p.16-2) The development and implementation of a program to monitor the effects of the proposed Project on traditional land uses of the affected First Nation would support continued land use in the territory and assist with the implementation of adaptive management measures. Appendix "D" illustrates the traditional land use follow-up program developed collaboratively for the Victor Diamond Project by De Beers Canada, Attawapiskat First Nation and the Government of Canada. These materials are provided for further discussion between the First Nations, IAM Gold and potentially also government agencies operating First Nation programs. Please provide any examples of traditional land use monitoring programs in Aboriginal communities that the Proponent believes could inform the development of a similar program in the case of the proposed Project.	It is IAMGOLD's goal to work collaboratively with the affected Aboriginal communities to identify key aspects of a monitoring program that meets the needs and priorities of the communities and of the Project. Part of that exercise will be to evaluate other monitoring programs and their successes. IAMGOLD will continue to discuss monitoring program with affected Aboriginal communities once the EA has been approved and a decision to construct has been made. If the First Nation communities are interested in exploring collaborative monitoring with regards to the effects of the proposed Project on TLU, IAMGOLD is very much open to pursuing such an activity.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
312	Wabun Tribal Council	WTC-IR#134: Scope of TK/TLUS, Appendix P, Section 3.1 and Appendix P – Appendix I "No specific concerns were raised about wildlife in the TK/TLUS. The study states that the majority of hunting takes place within other sensitive areas." (p.3-3) "No specific comments or concerns were raised with respect to traditional harvesting of fish within the Project area." (p.3-4) "No specific comments or concerns were raised with respect to canoeing." (p.3-5) "The TK/TLUS does not discuss the importance of, or any specific concerns with the eagle's nest." (p.3-5) The scope of work for the Draft Traditional Land Use and Knowledge Background Study Report was as follows: This Traditional Knowledge and Land Use Background Study Report (the report) provides information on Aboriginal (First Nation and Métis) use of land and resources and Aboriginal knowledge of the environment in the region overlapping with the Côté Gold Project (the Project). This includes information on resources used by Aboriginal people and knowledge of cultural sites or environmental information as provided in publicly available secondary sources. Where available, information gathered from traditional knowledge and land use studies, given under consent, through an information sharing agreement, from Aboriginal communities, is included. (p.1-1) The Data Sharing Agreement between the Proponent and the First Nations, appended to the Background Study Report, indicates the following: Traditional Environmental Knowledge (TEK): For the purposes or this study, Traditional Environmental Knowledge will focus on factual knowledge about the environment and knowledge about its past and present use by the community. This will include (but is not limited to) knowledge about fish, animals, or plants in the study area, their abundance, patterns of use, and other observations. Culturally based value statements and belief systems, if appropriate, will also be documented and used in the environmental assessment, if approved by the First Nation. The TEK/TLUS was an information gathering exercise. It was not an issues scoping study, impact pathway analysis or impacts assessment. The references in the EIS to the lack of comments or concerns about the Project are misleading, as the TEK/TLUS was not designed to gather comments, concerns or other information about potential effects. Please remove from the EIS the references to the lack of comments or concerns in the TEK/TLUS about the potential effects of the Project.	The TK / TLU study was intended to determine if traditional resources and land uses will be affected by the Project and identify ways to protect or mitigate the resources or sites. The Study was also intended to provide information about traditional ecological or environmental information to assist in the identification of effects on biophysical resources in the regional study areas. IAMGOLD prepared the Appendix P (Traditional Land and Resource Use TSD) based on the information provided through engagement efforts with affected First Nations as well as the input from the completed TK / TLU studies. The EA accurately describes the information gathered through the TK / TLU study as well as comments and concerns expressed by Aboriginal groups. IAMGOLD will continue to discuss potential Project effects on traditional activities with potentially affected Aboriginal communities throughout the life the Project. Should additional information regarding an Aboriginal community's traditional practices become available, the Proponent will review and consider any potential effects, and develop and implement necessary mitigation measures, as appropriate.	None.	n/a
313	Wabun Tribal Council	WTC-IR#135: Traditional Land and Resource Use, Appendix P, Section 3.1 "The construction of Project components is predicted to overlap with some traditional hunting areas, as described above. It is not expected that this will impede the ability to carry out traditional hunting activities in the area." (p.3-3) "No lakes overprinted by the Project have been identified as popular fishing lakes. Therefore, no traditional fishing area losses will be incurred due to Project construction." (p.3-4) "The Project footprint does not overlap any Sensitive Area lakes identified in the TK/TLUS". (p.3-4) The above conclusions reflect an oversimplified understanding of the interrelationships between the Project components, the biophysical environment and Aboriginal traditional land use. Please explain and justify why a direct overlap between the Project footprint and traditional land use is required in order to conclude that there will be no losses in hunting, trapping or fishing areas.	The Project will result in some displacement of wildlife species from the Project site; however, this displacement is not expected to have long-term effects on wildlife resources available for traditional purposes. The Project will not limit the ability to carry out traditional activities in the area. Appendix L (Wildlife TSD), Appendix M (Terrestrial Biology TSD), and Appendix N (Aquatic Biology TSD) identify the potential effects of the Project on terrestrial and aquatic species. Evaluation of potential effects on traditional activities is based on direct overlap of site components – a quantitative assessment. An evaluation outside of the overlap would be qualitative based on indirect potential effects. Studies conducted as part of the EA process have shown no traditional land and resource uses within the Project footprint. With the implementation of the proposed mitigation measures for wildlife and traditional activities, IAMGOLD does not anticipate any significant impacts outside of the overlap.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
314	Wabun Tribal Council	WTC-IR#136: Traditional Land and Resource Use - Navigation, Appendix P, Section 3.3 "During the operations phase, the Project activities will result in controlled access to the traditional portage route; however, this is not expected to limit the ability to canoe." (p.3-8) In addition to changes to access, the Project will also result in changes to water elevations, annual flows and seasonal flows in many of the neighbouring lakes and creeks. a) Please provide information pertaining to changes in water levels and timing of flows resulting from the Project on all currently navigable watercourses. b) Assess the potential for changes to water elevations or flows that would impede navigation by watercraft, including motorized boats and canoes.	a) Please see Appendix I (Hydrology TSD), in which modelling and prediction of potential effects on surface water flows in relation to the Project are discussed. Project effects are described in Chapter 9 (Section 9.5) b) Effects on navigation are described in detail in Appendix O (Land and Resource Use TSD). The effects are summarized in Section 9.10 of the Amended EIS / Final EA Report. The significance of these effects is assessed in Chapter 11. Effects on TLU are fully described in Appendix P (Traditional Land and Resource Use TSD). The effects are summarized in Section 9.11 of the Amended EIS / Final EA Report. The significance of these effects is assessed in Chapter 11.	None.	n/a
315	Wabun Tribal Council	WTC-IR#137: Traditional Land Use and Resource Use, Appendix P – Appendix II The TLUS makes reference to several additional documents important to understanding the scope of the information requested by the Proponent from the First Nations. These documents are indicated as being attached to the TLUS but were not provided. a) Please provide a copy of the original interview questionnaire provided by AMEC/IAM Gold, indicating how the questionnaire was altered for use in each First Nation community. b) Please provide the outline of deliverables requested by AMEC/IAMGold in relation to the TLUS.	IAMGOLD funded Wabun Tribal Council to hire a consultant to conduct the TK / TLU study. IAMGOLD / AMEC provided interview questions and a list of deliverables to Wabun Tribal Council for use by the selected Study contractor. IAMGOLD and AMEC have not received copies of the final questionnaires that were used in conducting the Study and are not privy to details related to the potential modifications of the questionnaires. The TK / TLU study report was to include information about the study area, background methodology, results and geospatial data.	None.	n/a
316	Wabun Tribal Council	WTC-IR#138: Traditional Land and Resource Use, Appendix P – Appendix II The study indicates that traditional land use information was provided for regions outside the study area. a) Please indicate whether land use information outside the study area was actively sought from participants. If yes, how, and if not, why not? b) Please justify the selection of the study area in terms of First Nation land use across the territory? Why was this particular study area used?	a) IAMGOLD provided funding to the Wabun Tribal Council to hire an experienced consultant who conducted all interviews for the TK / TLU study. Therefore IAMGOLD is not aware of the extent to which land use information outside of the study area was actively sought from participants. b) IAMGOLD provided the regional and local study area (regional study area and local study area) to the consultant selected by Wabun Tribal Council to conduct the TK / TLU study. The regional study area and local study area used for the Appendix P (Traditional Land and Resource Use TSD) are described in Section 2.1, page 2-1. IAMGOLD funded Wabun Tribal Council to hire a consultant to conduct the TK / TLU study. IAMGOLD / AMEC provided interview questions and a list of deliverables to Wabun Tribal Council for use by the selected Study contractor. The TK / TLU study report was to include information about the study area, background methodology, results and geospatial data. However, IAMGOLD did not receive a rationale for the selected study area.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
317	Wabun Tribal Council	WTC-IR#139: Aboriginal Consultation, Chapter 3, Section 3.3 "An important part of the Project permitting and planning process is proactive engagement with Aboriginal communities. This engagement includes ensuring potentially affected Aboriginal communities are informed and engaged in the development of the Project, responding to their interests and concerns, and continuing to build and maintain positive relationships. This has been and is currently being achieved by creating a forum for dialogue and information exchange (verbal and written) and fostering an ongoing relationship between the potentially affected Aboriginal communities and IAMGOLD." (p.3-4) The nature and scope of the consultation delegated to IAMGold by the Crown is not indicated. Please describe the nature and scope of the delegation of any consultation duties to the Proponent by either the Provincial or Federal Crown.	In a letter dated June 7, 2013, the Ministry of Northern Development and Mines directed IAMGOLD to prepare a consultation plan in accordance with subsection 8.1(3)1 of O.Reg. 240/00. The letter identified the Aboriginal communities to be engaged and provided the Draft Guide to Preparing and Implementing a Plan of Consultation. Subsequently, IAMGOLD updated the consultation plan to meet the requirements of the *Mining Act*. IAMGOLD's responsibility is to: ▪ identify and involve interested Aboriginal peoples, throughout the process including those likely to be directly affected and that may be potentially affected; ▪ design and implement an Aboriginal consultation plan as part of the overall EA process; ▪ implement the Crown-delegated procedural aspects of notification and consultation; ▪ initiate meaningful consultation with interested persons to identify information needs and concerns early in the planning process; ▪ provide adequate time and resources for Aboriginal people to review and comment on EA-related materials and documents; ▪ identify issues and concerns received from Aboriginal people; ▪ document that issues and concerns received from Aboriginal people were considered in the preparation of the EA; ▪ address and where possible, resolve concerns raised through the consultation process; and ▪ keep Aboriginal participants informed of decisions made and how IAMGOLD addressed identified concerns or reasons that concerns were not addressed. The Final EIS Guidelines provided to IAMGOLD by the CEA Agency on July 9, 2013 outline Aboriginal consultation requirements in Section 2.3. IAMGOLD is required to ensure that Aboriginal people and groups who may be affected by the Project have access to information required to understand the proposed Project and identify potential impacts on their rights and interests and to "make reasonable efforts" to include traditional Aboriginal knowledge in the assessment of environmental impacts. The Crown assesses the adequacy of consultation with Aboriginal groups, as set out in the Updated Guidelines for Federal Officials to Fulfill the Duty to Consult (2011) and the information gathered throughout the EA process will be used by the Crown to understand potential Project-related impacts on Aboriginal or Treaty rights and related interests (potential or established).	None.	n/a
318	Wabun Tribal Council	WTC-IR#140: IBA Negotiations, Chapter 4, Section 4.3.2.10 "The details of IBA negotiations are confidential, as per the agreement of all parties involved, however, generally, the IBA is expected to address: ▪ the communities' participation in the Project; ▪ the conduct and inclusion of TK/TLU studies; ▪ participation in environmental studies; and ▪ other financial and non-financial benefits such as employment, training and business opportunities. " (p.4-24) The perspective provided in the EIS concerning the scope of the IBA reflects the views of the Proponent and are not necessarily those of Wabun Tribal Council, Mattagami First Nation, or Flying Post First Nation.	The Amended EIS / Final EA Report text has been revised to note that it is IAMGOLD's understanding that the components of the impact benefit agreement described in the document reflect IAMGOLD's expectation of the agreement. It has been further revised to include that the components outlined in the document do not necessarily reflect the full scope of the agreement.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
319	Wabun Tribal Council	WTC-IR#141: Scope of Federal Environmental Assessment for Aboriginal Peoples, Chapter 11, Table 11-3 "Impact assessment results for the construction phase of the Project are presented in Table 11-3. With the application of mitigation measures, all physical, biological and human environment impacts have been assessed to be not significant. Indicators and effects that are shaded indicate a link to Section 5 of CEAA 2012." This misunderstands the meaning of section 5(1)(c) of the CEAA 2012. For example. a change in air quality that affects Aboriginal health or the use of the land is relevant under section 5(1)(c) of CEAA 2012. The shading system used in Table 11-3 implies that this change to air quality is not relevant to CEAA 2012. It would be correct to state that the shaded areas indicate a "link to Section 5(1)(a) of CEAA 2012)". Please update the text or update Table 11-3 to accurately reflect the requirements of CEAA 2012.	In consultation with the CEA Agency it was agreed that the shading would be removed from the impact assessment matrices. The Amended EIS / Final EA Report has been updated accordingly.	Shading has been removed from Tables ES-3, ES-4, ES-5, ES-6, 11-3, 11-4, 11-5 and 11-6. The following note has been removed from Tables ES-3, ES-4, ES-5, ES-6, 11-3, 11-4, 11-5 and 11-6: "Note: Shaded indicators and effects indicate effects that are linked to Section 5 of CEAA 2012." The following text has been deleted from the Executive Summary and Sections 11.2.1, 11.2.2, 11.2.3 and 11.2.4: "Indicators and effects that are shaded indicate a link to Section 5 of CEAA 2012."	Tables ES-3, ES-4, ES-5, ES-6, 11-3, 11-4, 11-5 and11-6 Executive Summary "Summary of Environmental Effects Assessment, Mitigation Measures and Proposed Significance Determination" Section 11.2.1, 11.2.2, 11.2.3 and 11.2.4
320	Wabun Tribal Council	WTC-IR#142: Cumulative Effects Assessment – Historical Context, Chapter 14, Section 14.1 and CEA Agency Cumulative Effects Assessment Practitioners Guide "The cumulative effects analysis presented herein is therefore focussed on an analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that will be carried out; and to those projects of significance within the broader regional context, which may overlap the undertaking and its effects in regards to type of effect, and in time and space. Accidents and malfunctions are not likely to occur and are therefore not considered further in the assessment of cumulative effects." (p.14-2) The EIS moves to a focus on assessing the cumulative effects of the proposed Project on the existing environmental baseline without significant explanation. The CEA Agency guidance provides several options for establishing the appropriate temporal boundary for the environmental assessment: Each of the following options progresses further back in time: ▪ when impacts associated with the proposed action first occurred; ▪ existing conditions; ▪ the time at which a certain land use designation was made (e.g., lease of crown land for the action, establishment of a park); ▪ the point in time at which effects similar to those of concern first occurred; or ▪ a past point in time representative of desired regional land use conditions or pre-disturbance conditions (i.e., the "historical baseline"), especially if the assessment includes determining to what degree later actions have affected the environment. During the recent information session in Mattagami First Nation, members raised concerns about the extent of existing development in the territory and that there are limits to the amount of development that can be tolerated before cumulative effects become too extreme. It is unclear why the Proponent did not consider an earlier baseline (e.g. the start of mining in the territory or a point in time prior to any development in the territory) in conducting the cumulative effects assessment. Please justify the selection of a temporal baseline for cumulative effects assessment based on existing conditions.	No other industrial scale mining has been carried out in the Project area. Therefore there are no known historic effects on the physical and biological environment in this area. The area has a history of forestry and Chapter 14 does consider past and future forestry activities. The cumulative effects analysis for forestry operations focussed on the biological regional study area as this was deemed to be the proper geographic extent for potential cumulative effects resulting from forestry operations. Forestry operations have been commonplace in the region within the recent past and this is reflected by the forest structure as many forest communities within the biological regional study area are second-growth forests. At present logging operations emulate natural disturbance patterns, such that the forest communities have adapted to disturbance from logging and subsequent succession. Given this natural adaptation, forestry operations are not anticipated to result in noticeable cumulative environmental effects with the Project. Considering the information above IAMGOLD feels that the temporal boundaries for the cumulative effects assessment have been appropriately defined for the EA.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
321	Wabun Tribal Council	WTC-IR#143: Aboriginal Comments and Concerns, Appendix B, Appendix B-2, #74, 206 and Sections 4.0; 9._.3; Appendices D and F to T "Indicate to whom these concerns are important and the reasons why, including Aboriginal, social, economic, recreational, and aesthetic considerations. …describe, from the perspective of the proponent, the potential adverse impacts on potential or established Aboriginal and Treaty rights and related interests that have not been fully mitigated as part of the environmental assessment and associated consultations with Aboriginal groups." An Aboriginal issues tracking table cannot be located in the EIS. Please provide an Aboriginal issues tracking table for each potentially affected Aboriginal group, including the issues raised organized by valued component, how the issue has been addressed to date by IAMGold or the Crown, and any outstanding issues.	Chapter 4 and Appendix D (RoC) describe the comments raised throughout the EA process by Aboriginal group and issue raised. The EA concludes that with effects management measures in place, there will be no significant impacts. In addition, each section in Chapter 9 includes detailed responses to key concerns and issues raised during the consultation process. IAMGOLD therefore considers the EA fully compliant with the EIS guideline requirements.	None.	n/a
322	Wabun Tribal Council	WTC-IR#144: Information from Aboriginal Groups, Appendix B, Appendix B-2, #139 "The proponent will hold meetings and facilitate these by making key EA summary documents (baseline studies, EIS and key findings) accessible and making plain language summaries of these documents available to the following groups: ▪ Mattagami First Nation; ▪ Flying Post First Nation; ▪ Brunswick House First Nation; and ▪ Métis Nation of Ontario, Region 3. The proponent will describe all efforts, successful or not, taken to solicit the information required to prepare the EIS." The EIS indicates in several locations isolated instances of efforts it has made to solicit information from Aboriginal groups to prepare the EIS. It is unclear whether these represent all efforts, successful or not. Please confirm that the EIS describes all efforts, successful or not, taken to solicit the information required to prepare the EIS.	The EA documents all efforts to solicit information that was used directly in the preparation of the EA. In addition IAMGOLD has a full-time community relations liaison who actively engages and coordinates with these communities to prepare and establish opportunities for information sharing and consultation on the EA.	None.	n/a

#	Aboriginal Group	Comment	Response	Changes to the EIS / Draft EA Report	Change Location
323	Wabun Tribal Council	WTC-IR#145: Aboriginal Rights and Treaty Rights, Appendix B, Appendix B-2, #143 to #149 "At a minimum, the EIS will summarize available information on the potential or established Aboriginal and Treaty rights and related interests of the named Aboriginal groups that have the potential to be adversely impacted by the project. ▪ Background information and a map of the group's traditional territory; ▪ A summary of engagement activities conducted prior to the submission of the EIS, including the date and means of engagement (e.g., meeting, mail, telephone); ▪ Information on each group's potential or established rights (including geographical extent, nature, frequency, timing), including maps and data sets when this information is provided by a group to the proponent; ▪ An overview of key comments and concerns provided by each group to the proponent; ▪ Responses provided by government and/or the proponent, as appropriate; ▪ Future planned engagement activities; and ▪ Efforts undertaken to engage with Aboriginal groups as part of developing the information identified above." The information provided in the EIS has not addressed the requirements of the EIS Guidelines, particularly in relation to Aboriginal and Treaty Rights and key comments and concerns. To assist the Proponent, a recent example of the expected information concerning these matters for another environmental assessment is provided as Appendix "E-1". Please provide the information required in the EIS Guidelines respecting Aboriginal and Treaty Rights as well as Aboriginal comments and concerns for each Aboriginal group.	Treaty rights are described in Appendix D-1 (RoC). Some of this information has been included in Section 3.3 of the EA. The consultation chapter (Chapter 4) has been revised to more clearly present key comments and concerns.	Revision of Chapter 4 to more clearly present key comments and concerns.	Chapter 4
324	Wabun Tribal Council	WTC-IR#146: Aboriginal Rights and Treaty Rights, Appendix B, Appendix B-2, #175, #177, #189 "The EIS will describe, from the perspective of the proponent, the potential adverse impacts of the project on the ability of Aboriginal peoples to exercise the potential or established Aboriginal and Treaty rights and related interests identified in section 9.2. The assessment of the potential adverse impacts of each of the project components and physical activities, in all phases, will be based on a comparison of the exercise of the identified rights between the predicted future conditions with the project and the predicted future conditions without the project. It is recommended that the impact matrix methodology described in section 10.1.1 be adapted for this purpose. This section will describe, from the perspective of the proponent, the measures identified to mitigate the potential adverse impacts of the project described in section 10.2 on the potential or established Aboriginal and Treaty rights and related interests identified in section 9.2. These measures will be written as specific commitments that clearly describe how the proponent intends to implement them." The information provided in the EIS has not addressed the requirements of the EIS Guidelines, particularly in relation to impacts to Aboriginal and Treaty Rights and key comments and concerns. No impact matrix or mitigation measures specific to each Aboriginal group can be located in the EIS. To assist the Proponent, a recent example of the expected information concerning these matters for another environmental assessment is provided as Appendix "E-2". Please provide the information required in the EIS Guidelines respecting impacts to Aboriginal and Treaty Rights as well as Aboriginal comments and concerns for each Aboriginal group.	The EA is consistent with the EA Guidelines' Section 9-2 in that effects on Aboriginal groups are described and, where appropriate, mitigation measures are identified. Impacts have been assessed inclusive of all potentially affected Aboriginal groups and their treaty rights.	None.	n/a

Table D-9c: Comments and Responses - Brunswick House First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Pre-EA Preparation (prior to January 14, 2014)							
Biophysical Environment							
Water Resources / Quality	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) BHFN representative commented that he would like to see water recycled and reused.	The Project will have water collection facilities for runoff and seepage and water from the TMF will be recycled as much as possible.
Methodology and Process							
Regulatory	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) BHFN asked if IAMGOLD is doing only the minimum government standard testing, or if going above and beyond, and if doing own inspections.	IAMGOLD representative replied that the government standards that will be used for water quality, tailings and construction are very high and that testing will also be done by third party inspections. The provincial regulations were discussed, relating to water release, accountability and transparency.
Stakeholder Engagement	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) Wabun Tribal Council (WTC) showed map of territories with respect to the Côté Gold site and explained that IAMGOLD must consult with BHFN because there is some potential that they may be affected by the Project. 2) BHFN asked if IAMGOLD will be speaking with BHFN should IAMGOLD decide to do something with the section of the site that is in the BHFN area. 3) WTC said that it is their intention to initiate an Impact Benefit Agreement (IBA) on behalf of BHFN if there is a good find in that west block, whereby Mattagami and Flying Post First Nations would have separate IBA's.	IAMGOLD said yes they will consult with BHFN if it is decided to do something in the section that is in the BHFN zone because it wishes to be good neighbours and transparent. IAMGOLD said that updates would be provided at least once a year and that they would receive notification of payment but that it would be at least another 1 to 2 years before IAMGOLD will know if that block's deposit is worth mining.
Mining							
Tailing Impoundment	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) BHFN asked IAMGOLD's intended way of dealing with tailings was a new process, adding that open tailing pits can still be seen elsewhere. 2) BHFN asked why IAMGOLD would not simply use the tailings to fill up the pit when done mining.	IAMGOLD replied that tailings management facilities would be "open" during the mine operation and explained that any of the tailings areas will be closed out and revegetated. IAMGOLD said that it is possible that the pit will be flooded during after closure. Infilling the tailings into the open pit would be too costly.

Table D-9c: Comments and Responses - Brunswick House First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Negotiated Agreements							
Contracts	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) IAMGOLD explained that the Augen Gold Corp. was bought by Trelawney, who was then bought by IAMGOLD, who is still party to the original agreement between Augen and BHFN. IAMGOLD explained that the original Augen Agreement was written based on old maps; it was pointed out on a map that the furthest block west is the piece in the Augen Agreement with BHFN. IAMGOLD added that even though it is not in BHFN's territory, as was later determined by Wabun Tribal Council's (WTC) own mapping process, that IAMGOLD respects the agreement as it is written. IAMGOLD reported that very little money was spent on that west block in 2012 because IAMGOLD focussed on the Côté Lake deposit. However, IAMGOLD feels that the block deserves a proper look and expects renewed interest in that area in 2013-2014, though it is unknown at this time what the expenditures will be. 2) Wabun Tribal Council (WTC) explained that while Augen had not made payments to BHFN as per the agreement, that Trelawney made good on all the payments, which IAMGOLD continued.	IAMGOLD representative said he would forward ballpark figures of payments to BHFN if he could get numbers from the exploration team. It was explained that it is economical to mine the Côté Gold site because while the gold is low grade it is a large deposit; the grade and quantity of gold in that one west block has yet to be determined.
Project Phase							
Closure	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) BHFN asked IAMGOLD's intended way of dealing with tailings was a new process, adding that open tailing pits can still be seen elsewhere. 2) BHFN asked why IAMGOLD would not simply use the tailings to fill up the pit when done mining.	IAMGOLD replied that tailings management facilities would be "open" during the mine operation and explained that any of the tailings areas will be closed out and revegetated. IAMGOLD said that it is possible that the pit will be flooded during after closure. Infilling the tailings into the open pit would be too costly.
During EA Preparation (January 15, 2014 to September 30, 2014)							
Biophysical Environment							
Air Quality	474	E-mail	08/26/2014	Following the 2014-08-19 open house at Brunswick House First, a member of the community provided IAMGOLD with questions they would like answered. IAMGOLD provided responses to the questions in an email on 2014-08-26.	Brunswick House First Nation, IAMGOLD Corporation	1) What is the carbon footprint?	The environmental assessment considered the Project's potential contribution to Ontario, and Canada's Green House Gas (GHG) emissions, respectively. It is expected that the Project will contribute to 0.17% of Ontario's GHG emissions and 0.04% of Canada's GHG emissions.
Climate & Climate Change	474	E-mail	08/26/2014	Following the 2014-08-19 open house at Brunswick House First, a member of the community provided IAMGOLD with questions they would like answered. IAMGOLD provided responses to the questions in an email on 2014-08-26.	Brunswick House First Nation, IAMGOLD Corporation	1) What is the carbon footprint?	The environmental assessment considered the Project's potential contribution to Ontario, and Canada's Green House Gas (GHG) emissions, respectively. It is expected that the Project will contribute to 0.17% of Ontario's GHG emissions and 0.04% of Canada's GHG emissions.

Table D-9c: Comments and Responses - Brunswick House First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Ecological Integrity & Biodiversity	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) Where does Bagsverd Creek Flow to? 2) So will the water continue to flow south then? Will the realignments change the flow of the direction of the water? 3) Will Bagsverd Creek be diverted? 4) What is the rate of flow from Bagsverd? When you dam and reroute, how will the flow change? - I am trying to understand from an ecological perspective - will the realignment hurt, harm or enhance aquatic species in the area?	It flows to Neville Lake and then Neville Lake drains to Mesomikenda Lake. Bagsverd Creek flows north, the Mollie River systems flow south towards Highway 144 and then turn north after that. Yes, Bagsverd Creek will need to be diverted for the tailings facility. It will be realigned to the west and routed into a series of unnamed lakes. From there the river will follow its existing course. There will only be a very small change to the rate of flow from the watercourse realignments. These have been designed in such a way as to maintain, or wherever possible, enhance the integrity of the aquatic ecology of the area.
Fisheries & Aquatic Resources	473	Site Visit	09/03/2014	IAMGOLD hosted Brunswick House First Nation's Environmental Assessment Coordinator for a site visit. The tour included a visit to Chester #1, the proposed open pit area, 2 Pike Point, proposed Tailings Management Facility, and proposed Polishing Pond area.	Brunswick House First Nation, IAMGOLD Corporation	1) Côté Lake is not very big. What kind of fish are in the lake?	Côté Lake is approximately 19 hectares in area with an average depth of 6 feet and 12 feet deep at the deepest location, which is the middle of the lake. It hosts predominantly Northern Pike, but also some Walleye, White Fish and Perch.
Other	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) Where does Bagsverd Creek Flow to? 2) So will the water continue to flow south then? Will the realignments change the flow of the direction of the water? 3) Will Bagsverd Creek be diverted? 4) What is the rate of flow from Bagsverd? When you dam and reroute, how will the flow change? - I am trying to understand from an ecological perspective - will the realignment hurt, harm or enhance aquatic species in the area?	It flows to Neville Lake and then Neville Lake drains to Mesomikenda Lake. Bagsverd Creek flows north, the Mollie River systems flow south towards Highway 144 and then turn north after that. Yes, Bagsverd Creek will need to be diverted for the tailings facility. It will be realigned to the west and routed into a series of unnamed lakes. From there the river will follow its existing course. There will only be a very small change to the rate of flow from the watercourse realignments. These have been designed in such a way as to maintain, or wherever possible, enhance the integrity of the aquatic ecology of the area.
Water Resources / Quality	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) Do you have a diagram in the environmental assessment outlining what waters will be collected and realigned?	Yes, all of that information, including associated diagrams is included in the Environmental Assessment Report.
Water Resources / Quality	473	Site Visit	09/03/2014	IAMGOLD hosted Brunswick House First Nation's Environmental Assessment Coordinator for a site visit. The tour included a visit to Chester #1, the proposed open pit area, 2 Pike Point, proposed Tailings Management Facility, and proposed Polishing Pond area.	Brunswick House First Nation, IAMGOLD Corporation	1) Côté Lake is not very big. What kind of fish are in the lake?	Côté Lake is approximately 19 hectares in area with an average depth of 6 feet and 12 feet deep at the deepest location, which is the middle of the lake. It hosts predominantly Northern Pike, but also some Walleye, White Fish and Perch.

Wetlands	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) What is the proposed width for the realignments? 2) Who are the proposed contractors/engineers being considered to design the watercourse realignments? 3) We would like to understand from an aerial perspective how the watercourse realignments will look. Are there pictures that show this from an aerial perspective in the environmental assessment?	The new valleys will be approximately 50 metres wide with a channel ranging in width similar to the existing watercourse. We have not yet selected any contractors/engineers yet for the construction plans needed for the development of the watercourse realignments. Once we have completed the feasibility study, and are closer to Project construction, we would be happy to accept bids from local contractors for the development of these realignments. Our Project maps show the proposed channel realignments from an aerial perspective.
Wildlife	474	E-mail	08/26/2014	Following the 2014-08-19 open house at Brunswick House First, a member of the community provided IAMGOLD with questions they would like answered. IAMGOLD provided responses to the questions in an email on 2014-08-26.	Brunswick House First Nation, IAMGOLD Corporation	1) How will the Project affect our wildlife in the short term and long term?	IAMGOLD has assessed the impacts on wildlife during all Project phases, including post-closure. This assessment concludes that there will be no measurable residual effects to population abundance or distribution in the region.
Document Reviews							
Work Plans	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) What is the proposed width for the realignments? 2) Who are the proposed contractors/engineers being considered to design the watercourse realignments? 3) We would like to understand from an aerial perspective how the watercourse realignments will look. Are there pictures that show this from an aerial perspective in the environmental assessment?	The new valleys will be approximately 50 metres wide with a channel ranging in width similar to the existing watercourse. We have not yet selected any contractors/engineers yet for the construction plans needed for the development of the watercourse realignments. Our Project maps show the proposed channel realignments from an aerial perspective.
Methodology and Process							
Baseline Studies	473	Site Visit	09/03/2014	IAMGOLD hosted Brunswick House First Nation's Environmental Assessment Coordinator for a site visit. The tour included a visit to Chester #1, the proposed open pit area, 2 Pike Point, proposed Tailings Management Facility, and proposed Polishing Pond area.	Brunswick House First Nation, IAMGOLD Corporation	1) How close are the drill holes?	Most of the drill holes are approximately 50 metres apart but in some locations they are 25 metres apart, where detailed drilling was required. Also, there are over 100 drill holes for geotechnical design and wells have been installed for groundwater quality.
Baseline Studies	473	Site Visit	09/03/2014	IAMGOLD hosted Brunswick House First Nation's Environmental Assessment Coordinator for a site visit. The tour included a visit to Chester #1, the proposed open pit area, 2 Pike Point, proposed Tailings Management Facility, and proposed Polishing Pond area.	Brunswick House First Nation, IAMGOLD Corporation	1) How many locations do you sample?	We sample 24 surface water locations monthly, but recently we started sampling quarterly after we achieved two years of baseline data.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) As part of the environmental assessment, Brunswick House First Nation would like to get IAMGOLD into our community. This discussion should serve as an initial first step. We will forward a proposed date to IAMGOLD for consideration.	IAMGOLD would be pleased to come and meet with Brunswick House First Nation community members. Please let us know a date that works for the community and IAMGOLD will arrange to provide a presentation and provide an opportunity to ask about the Project.
Stakeholder Engagement	474	E-mail	08/26/2014	Following the 2014-08-19 open house at Brunswick House First, a member of the community provided IAMGOLD with questions they would like answered. IAMGOLD provided responses to the questions in an email on 2014-08-26.	Brunswick House First Nation, IAMGOLD Corporation	1) IAMGOLD should consult the elders and the community's people - how do they feel about digging? (work with our respect)	IAMGOLD has organized this meeting to seek input from the community and encourage band members to let IAMGOLD know what their issues and concerns are.
Mining							
Employee Accommodations/Camp	473	Site Visit	09/03/2014	IAMGOLD hosted Brunswick House First Nation's Environmental Assessment Coordinator for a site visit. The tour included a visit to Chester #1, the proposed open pit area, 2 Pike Point, proposed Tailings Management Facility, and proposed Polishing Pond area.	Brunswick House First Nation, IAMGOLD Corporation	1) Where will people be housed?	The accommodations complex will be on site, nearby Clam Lake. The location for the proposed accommodation complex was shown on a map.
Water Sources	473	Site Visit	09/03/2014	IAMGOLD hosted Brunswick House First Nation's Environmental Assessment Coordinator for a site visit. The tour included a visit to Chester #1, the proposed open pit area, 2 Pike Point, proposed Tailings Management Facility, and proposed Polishing Pond area.	Brunswick House First Nation, IAMGOLD Corporation	1) How many dams will there be?	It is proposed that 13 dams will be constructed for the watercourse realignments.
Project Phase							
Construction	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) Brunswick House First Nation has experienced problems with Detour Gold, such as highways being shut down during construction, which has made us realize that with a Project such as this, consideration must be given for the Project footprint, a water footprint and a footprint of externalities. It is important for us to consider the impact of all of these. We are also trying to get an idea of the impact on flow and the tailings ponds. We will get back to you with more questions about this.	Thank you for your comment.

Table D-9c: Comments and Responses - Brunswick House First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Construction	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) Are there any plans to use staging camps during construction?	At this point IAMGOLD has not begun to fully assess the logistics of the Project during the construction phase. If using staging camps would create less of an interruption to local communities during Project construction, it is something that we could consider.
Construction	473	Site Visit	09/03/2014	IAMGOLD hosted Brunswick House First Nation's Environmental Assessment Coordinator for a site visit. The tour included a visit to Chester #1, the proposed open pit area, 2 Pike Point, proposed Tailings Management Facility, and proposed Polishing Pond area.	Brunswick House First Nation, IAMGOLD Corporation	1) How many dams will there be?	It is proposed that 13 dams will be constructed for the watercourse realignments.
Reclamation	474	E-mail	08/26/2014	Following the 2014-08-19 open house at Brunswick House First, a member of the community provided IAMGOLD with questions they would like answered. IAMGOLD provided responses to the questions in an email on 2014-08-26.	Brunswick House First Nation, IAMGOLD Corporation	1) When you dig on our land, will you fix it if there is no gold?	IAMGOLD has a very good understanding of the content and distribution of gold in the deposit. However, if production were to stop earlier than expected, IAMGOLD would have to restore the Project site as per the Closure Plan, which will need to be submitted and approved before the Project can be built and operated.
Risks and Mitigation							
Environmental Management	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) Brunswick House First Nation is concerned about the potential for the tailings pond to leak into Bagsverd Creek.	The tailings ponds have been designed in such a way that the risk of spills to other water bodies is minimal. There have also been safeguards developed in our accidents and malfunctions plan to ensure that there is a plan of action in place for immediate implementation should anything of this nature occur.
Socio-Economic Management	453	Meeting	06/05/2014	IAMGOLD held a meeting at the Project site with Brunswick House First Nation's Chief, Environmental Assessment Coordinator and Technical Reviewer. The purpose of the meeting was to introduce the Team and Project and provide information about the site geology. The meeting included a presentation on the Project Description and an update on the environmental assessment. Follow up and next steps were determined. It was decided that IAMGOLD would go and meet with community members of Brunswick House First Nation later in the summer (meeting held 2014-08-14) to share information about the Project.	Brunswick House First Nation, Independent Environmental Consultant, IAMGOLD Corporation	1) Brunswick House First nation would like to see as many local suppliers used as possible to avoid traffic and shut downs on highways during the Project's construction phase.	It is always IAMGOLD's intention to maximize the use of local suppliers for any phase of Project development - this will not only help to mitigate some of the more potential negative effects of the Project such as traffic, but it will also help to provide benefits to local businesses. However, at this point it is unlikely that there will be a need for any shut downs on the highway during construction. The Project is well supported by local infrastructure.

Pre-EA Preparation (prior to January 14, 2014)							
Biophysical Environment							
Ecological Integrity & Biodiversity	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How successful are man-made channel realignments in creating habitat?	These have been designed and successfully operated in Ontario. IAMGOLD will provide more information about the practice in future meetings.
Ecological Integrity & Biodiversity	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The Project now includes a lot of realignments, which might not work properly. The flow scheme used for the Project Description seems preferable.	Noted, the changes to the realignment plan were developed to accommodate the reduction in MRA areas to one location.
Fisheries & Aquatic Resources	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will the fish be transferred from Côté Lake? 2) When you move the lake and change the water flow, will there be monitoring of the fish?	The fish will be transferred in a staged draw down process. The fish population is comprised of small pike, whitefish, and white sucker. In the first baseline study performed by AMEC in the fall of 2010 pickerel were captured as part of the investigation. A follow up study, performed to identify fish populations in the summer of 2012 by Minnow Environmental, captured no walleye species. This suggests that pickerel use Côté Lake as a travel corridor because the lake is shallow. We will recreate the habitat and transfer breeding populations of fish to the new lake location, which has not yet been determined. The lake is about the same size as the one at Detour Gold. Yes there will be monitoring of the fish to ensure the population survives and there will be monitoring ongoing throughout the life of the project and beyond closure.
Fisheries & Aquatic Resources	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is IAMGOLD investigating the effects of blasting on fish?	Yes, the results of this investigation will be presented in the EA.
Other	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do you plan for high rainfall and snow amounts?	We are building to the 100 year standard. Weather events are becoming more frequent.
Water Resources / Quality	69	Open House	02/13/2013	IAMGOLD hosted an open house session for the Flying Post First Nation (FPFN) community where they presented an overview of the draft Project Description using a PowerPoint presentation and poster boards. The presentation was attended by 33 community members.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will creeks run! From A-B-C if you remove the lake.	Detailed plans are being developed to realign surface waters such that new habitat will be created and creeks will continue to flow.

Table D-9c: Comments and Responses - Flying Post First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Water Resources / Quality	195	Open House	05/28/2013	IAMGOLD held an Open House at Flying Post First Nation on 2013-05-28 to present the Draft Terms of Reference. There were 23 people in attendance.	Flying Post First Nation, IAMGOLD Corporation	1) Main concern would be the disturbance of the lake and everything in it. When the lake and contents are re-located, how does IAMGOLD know if that lake will be able to thrive again? 2) Main concern would be water quality being affected in local communities.	IAMGOLD will assess the effects of the Project (including channel re-alignments) on water bodies, fish and local communities in the EA report.
Water Resources / Quality	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The fact that part of Three Duck Lakes will be drained is new to us.	The only change to the Project is the movement of the dam to the east. Due to the proximity of the pit, the upper west arm of Three Duck Lake has always shown to be dammed and drained.
Water Resources / Quality	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) We don't only care about draining of Côté Lake but also effects on other lakes and streams.	Effects on other surface waters will be assessed in the EA.
Water Resources / Quality	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Would like to know what the key issues are with discharge quality.	Cyanide and ammonia are considered the key issues at the moment. More detail will be provided in the EA report.
Wildlife	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will Project staff be allowed to hunt and fish around the site?	How exactly this will be managed has not been fully decided yet. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed.
Human Environment							
Aesthetics	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Make sure the visual aesthetics assessment also includes locations other than cottages where site infrastructure could be visible.	IAMGOLD will consider if this is required based on the risk of an effect.
Aesthetics	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do visual aesthetics assessment for transmission line, where visible.	IAMGOLD will consider if this is required based on the risk of an effect.

Table D-9c: Comments and Responses - Flying Post First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Indigenous Traditional Knowledge	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to the Detour Gold mine who extracted 23 million ounces.
Land and Resource Use	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The cross-country transmission line alignment will create access for hunting that did not exist before and might therefore bring in more 'external' hunters.	This comment will be addressed in the EA report.
Land and Resource Use	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will Project staff be allowed to hunt and fish around the site?	How exactly this will be managed has not been fully decided yet. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed.
Socio-Economic	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Meeting participants discussed current business and employment of Aboriginal-owned businesses and MFN/FPFN community members at the Project site. WTC requests from IAMGOLD to list business opportunities. WTC also expressed that they want opportunities provided through the IBA that will help First Nation members to be self-sufficient.	IAMGOLD is actively discussing job opportunities and procurement within the IBA negotiations. Discussions are undertaken with the goal of fostering self-sufficiency.
Socio-Economic	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Participants discussed possible job opportunities. WTC indicated that they and MFN are looking for major industry partners for government funding by end of December 2012. 2) IAMGOLD offered support for First Nations jobs within the Côté Gold Project and will send more information about positions needed.	IAMGOLD is engaging in ongoing dialogue regarding information on jobs.
Socio-Economic	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Does IAMGOLD know which groups of the population will benefit and which will be affected negatively by the Project?	These effects will be provided in the EA.

Table D-9c: Comments and Responses - Flying Post First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will pressure on local infrastructure increase or decrease?	It is expected that pressure will increase on some infrastructure. The EA will provide a detailed assessment.
Socio-Economic	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) All mining companies promise preferential hiring of First Nation staff, but after the Impact Benefit Agreement is signed they do not keep their promises. IAMGOLD needs to implement a First Nation hiring system that works.	Thank you for comment. This will be considered in the development of the Project's human resource policies.
Methodology and Process							
Regulatory	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) There has been ammonia in the water from the blasting and the First Nations had to lobby the government to shut the Liberty Mine down. Companies don't live up to the standards. Liberty Mines had management issues. We don't expect IAMGOLD to be like them. We understand that it is an issue for MOE to shut down a mine. There are substantial costs to shutting them down.	Our doors are always open for site tours and inspection. Individual fines are now being levied against company employees when there are environmental violations. We will be processing on site and we will have a camp and locals working at the site.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC mentioned legislation they use to review IBAs.	IAMGOLD acknowledged this tool.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Meeting participants discussed current business and employment of Aboriginal-owned businesses and MFN/FPFN community members at the Project site. WTC requests from IAMGOLD to list business opportunities. WTC also expressed that they want opportunities provided through the IBA that will help First Nation members to be self-sufficient.	IAMGOLD is actively discussing job opportunities and procurement within the IBA negotiations. Discussions are undertaken with the goal of fostering self-sufficiency.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC sees the biggest challenge in implementing the IBA. The Mine Manager will need to know about the spirit and intent of the IBA for the hiring process. 2) WTC will provide a draft IBA to IAMGOLD by end of October 2012. WTC was requested to indicate what financial information will be required. 3) WTC suggests that the IBA negotiation team would present a position on the IBA to the community (without IAMGOLD present), followed by a meeting with IAMGOLD to present the Project and provide an opportunity for questions.	IAMGOLD will follow through on these requests as the Project is developed.

Table D-9c: Comments and Responses - Flying Post First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC stated that the EA would be considered the main trigger for consultation and an agreement. WTC expressed that it was important that an IBA be substantially negotiated, if not completed before the EA process was underway.	Negotiations regarding the IBA are currently well underway in advance of the EA process.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC, MFN, and FPFN request e-mail/notification 2 weeks prior to the PD being released for review. 2) WTC believes that IAMGOLD committed to providing correspondence committing IAMGOLD to the negotiation of an IBA that listed the specific topics. This would be done prior to release of the PD and included in the PD document.	IAMGOLD completed these tasks as requested.
Stakeholder Engagement	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The animation available on the IAMGOLD web site is very interesting and helps you to understand the drilling and the project.	We are in the process of developing an animation showing what the site could look like in the future – from development into production then closure.
Stakeholder Engagement	69	Open House	02/13/2013	IAMGOLD hosted an open house session for the Flying Post First Nation (FPFN) community where they presented an overview of the draft Project Description using a PowerPoint presentation and poster boards. The presentation was attended by 33 community members.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) More open houses with information about job opportunities with contractors would be great.	IAMGOLD will provide more information as it becomes available.
Mining							
Employee Accommodations/Camp	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will Project staff be allowed to hunt and fish around the site?	How exactly this will be managed has not been fully decided yet. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed.
Human Health (workers)	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Does the Environmental Assessment include worker health and safety?	No information related to worker health and safety will be included in the EA report.
Human Health (workers)	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD should start talking to people about what kind of employment opportunities will exist and what health and safety risks will be for workers.	Noted, however this is not an EA related issue, and will be addressed when the Project moves out of the permitting phase.

Table D-9c: Comments and Responses - Flying Post First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Open Pit	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Would the bottom of the open pit lake be saline?	This information will be included in the EA report.
Other	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How do you treat the water that runs off?	There is very little potentially acid generating rock at the site according to initial studies but further studies are ongoing. IAMGOLD will be responsible to monitor and control water. All seepage will be monitored as well and if not of acceptable quality it must be collected and treated. We are unsure how the design will look at this stage (ditching or pumping stations).
Other	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Seepage of water has been a problem with another project they are involved in. 2) Could there be seepage and ground water issues (related to the cyanide destruction plant on-site)?	Times have changed for the mining industry some sites have issues with this because they are not designed properly and have issues adapting to changing regulations. We have the opportunity to design the site properly to take into account what has happened in the past. We will have containment. Water will not be released unless it is of good quality and meets standards. If systems failed there are pumping stations around that will confine the water to the site.
Other	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Flow in Bagsverd must be very low at times. It seems that Mesomikenda Lake would be a more suitable discharge location.	The EA is looking at both discharge options.
Process (Leaching, etc.)	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Are there alternatives to cyanide leaching that could be used for the Project?	There are no alternatives to using cyanide that are available for this Project.
Tailing Impoundment	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) We had an incident at another site. MOE issued an emergency event notice. This was an older tailings management facility.	The ongoing treatment that we are proposing reduces the likelihood that emergencies will occur.
Tailing Impoundment	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will negative impacts from TMF seepage be prevented?	Seepage, if not prevented, will be captured.

Table D-9c: Comments and Responses - Flying Post First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transmission Line	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to the Detour Gold mine who extracted 23 million ounces.
Transmission Line	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How would the Project change if it was to run on the 115kV line only?	This information will be provided in the EA report.
Transmission Line	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The cross-country transmission line alignment will create access for hunting that did not exist before and might therefore bring in more 'external' hunters.	This comment will be addressed in the EA report.
Transmission Line	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do visual aesthetics assessment for transmission line, where visible.	IAMGOLD will consider if this is required based on the risk of an effect.
Transport (Road, Barge, etc.)	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What are the existing roads around the Tailings Management Facility (TMF)? Also show TMF roads during all Project phases.	This information will be provided in the EA report.
Waste Rock Piles	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will the stockpile rehabilitation work? Will it be one pile at a time? 2) Are you continuously rehabilitating them?	Yes it will be one pile at a time. The piles are 100m high. Yes because this give us better containment. We will recycle as much water as possible.

Table D-9c: Comments and Responses - Flying Post First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Waste Rock Piles	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Should the Mine Rock Area be designed in such a way that it would be able to deal with ARD 'just in case'?	ARD is not expected to be an issue. Seepage will be collected and managed according to regulatory requirements.
Waste Rock Piles	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Could the mine rock be used for other purposes?	Yes. However, due to large transport distances, other uses are considered to be unlikely.
Negotiated Agreements							
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA. Project Phase							
Closure	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will the stockpile rehabilitation work? Will it be one pile at a time? 2) Are you continuously rehabilitating them?	Yes it will be one pile at a time. The piles are 100 m high. Yes because this give us better containment. We will recycle as much water as possible.
Closure	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What would be the shortest time possible to fill the open pit after closure?	The EA will assess the longest possible duration, and identify means to reduce the timeline for pit filling. Detailed information about the closure will be included in the closure plan.
Risks and Mitigation							
Cumulative Effects	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Cumulative effects on wildlife considering future expansions and other projects in the area need to be considered.	No future expansions are currently being considered.
Environmental Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The Project now includes a lot of realignments, which might not work properly. The flow scheme used for the Project Description seems preferable.	Noted, the changes to the realignment plan were developed to accommodate the reduction in MRA areas to one location.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Environmental Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Would like to know what the key issues are with discharge quality.	Cyanide and ammonia are considered the key issues at the moment. More detail will be provided in the EA report.
Environmental Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Ammonia is an issue at all mine sites.	Plans will be put in place to manage the ammonia in mine effluent.
Environmental Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will negative impacts from TMF seepage be prevented?	Seepage, if not prevented, will be captured.
Other	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will the Project stop blasting under strong wind conditions?	This is a mitigation that is currently not considered necessary.
Other	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is IAMGOLD investigating the effects of blasting on fish?	Yes, the results of this investigation will be presented in the EA.
Socio-Economic Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Does IAMGOLD know which groups of the population will benefit and which will be affected negatively by the Project?	These effects will be provided in the EA.

Table D-9c: Comments and Responses - Flying Post First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
During EA Preparation (January 15, 2014 to September 30, 2014)							
Biophysical Environment							
Water Resources / Quality	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the intake of water per day for the mine?	Approximately 10% on average of the total ore processing plant water requirements.
Document Reviews							
Final EA/Application	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is there an expiry date on an approved environmental assessment? 2) So once the engineering design and feasibility studies are done - and if any other big changes are made - will another environmental assessment be required?	There is no expiration date on the approval but if certain elements of the Project were to change considerably, the approval would change as well. The environmental assessment will be approved for the Project as is. However, if major change to the design was made - i.e. we changed the location of the Tailings Management Facility, then yes, we would conduct another environmental assessment, or aspects of the permitting would also have to be changed.
Human Environment							
Land and Resource Use	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) To confirm, as one of the mitigations, IAMGOLD will not allow Project staff to hunt or fish on site?	Correct. While on shift, Project staff will not be allowed to hunt or fish on the site property during construction and operations phases.

Mining							
Tailing Impoundment	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Since your last presentation, what in terms of the Project design has changed?	We have changed the design of the Mine Rock Areas. Previously we had planned for three smaller areas, but our current design has placed it in one location. This was done to reflect community feedback, and the thinking that one area would reduce footprint of Project size, and effects to water and noise. Mine discharge to Mesomikenda Lake has now been consolidated to Bagsverd Creek. The environmental assessment revealed that the effect on the environment to Bagsverd Creek is actually smaller - this is generally because of the lack of flow in and out of Mesomikenda Lake could potentially allow mine effluent to settle too much. We have also worked to close the loop on the tailings facility to reduce freshwater intake and mine effluent. The new scenario will segregate any water that has come into contact with cyanide, it will reduce the amount of water collected and used, and it will allow us to ensure that any water that is discharged to the environment will be well below all required standards or limits. We have also selected the 230kv transmission line as the preferred alternative as a power supply to the Project. Additionally, there is now only the tailings pipeline on the west of the Tailings Management Facility, the east option no longer exists.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Pre-EA Preparation (prior to January 14, 2014)							
Biophysical Environment							
Fisheries & Aquatic Resources	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) Is there any spawning (in the Project area)?	There is evidence of some, but not much.
Water Resources / Quality	42	Meeting	11/22/2012	IAMGOLD conducts a meeting and site tour with Wabun Tribal Council (WTC) Mineral Advisor.	Matachewan First Nation, IAMGOLD Corporation	1) Individual inquired if Côté Lake will be removed?	IAMGOLD identified that it will but that IAMGOLD will have to compensate the loss at a different location on a like-for-like basis based on government requirements before the Project can impact the water bodies. The compensation has to be of the same or better quality. This includes habitat, water quality and reproductive habitat.
Human Environment							
Archaeology and Heritage	42	Meeting	11/22/2012	IAMGOLD conducts a meeting and site tour with Wabun Tribal Council (WTC) Mineral Advisor.	Matachewan First Nation, IAMGOLD Corporation	1) Individual inquired as to how much IAMGOLD has spent on archaeology? 2) Individual identified that the community would like field program reports.	IAMGOLD has contracted Woodland Heritage Services to conduct several Stage 1, 2, and 3 field programs. Reports are due in the early 2013. IAMGOLD identified the approximate dollar value of these services. IAMGOLD identified that James Naveau has been provided with reports received to date (i.e. aggregate pit areas).
Land and Resource Use	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) We believe the transmission line is located in Matachewan First Nation's area.	IAMGOLD recognizes that the potential transmission line will fall within Matachewan First Nation traditional territory.
Land and Resource Use	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) How much of the land is forested?	It has been harvested by EACOM.
Methodology and Process							
Baseline Studies	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) We would like to see the baseline for the transmission line.	IAMGOLD will provide it to you as soon as it is available for viewing. We are currently working to complete it.
Stakeholder Engagement	54	Phone Call	11/06/2012	Wabun Tribal Council (WTC) called to set up site visit with IAMGOLD.	Matachewan First Nation, IAMGOLD Corporation	1) WTC is interested in the Côté Gold Project and would like to set up a site tour.	IAMGOLD setup a site meeting for November 22, 2012.
Stakeholder Engagement	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) Is this (the meeting) considered a form of consultation?	Matachewan First Nation is on the list of communities IAMGOLD has been directed to consult with from the Ministry of Northern Development and Mines. IAMGOLD is committed to, and takes consultation with Aboriginal communities very seriously.

Mining							
Transmission Line	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) We believe the transmission line is located in Matachewan First Nation's area.	IAMGOLD recognizes that the potential transmission line will fall within Matachewan First Nation traditional territory.
Transmission Line	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) Is upgrading the current infrastructure not an option?	This would not supply enough power for the Project. The Project requires more power than the current infrastructure could provide.
Transmission Line	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) We have a number of businesses (First Nations) getting partnered with hydro development. Is there any of the communities over in your area supplying power/generation?	At this moment, there are none that we know of.
Project Phase							
Exploration	42	Meeting	11/22/2012	IAMGOLD conducts a meeting and site tour with Wabun Tribal Council (WTC) Mineral Advisor.	Matachewan First Nation, IAMGOLD Corporation	1) Individual inquired how much money has IAMGOLD spent on drilling?	IAMGOLD representative did not know the costs associated with completed drilling as they were not involved in exploration drilling program.
Exploration	381	Meeting	10/30/2013	IAMGOLD met with some Matachewan First Nation Councillors and their Lands and Resources Coordinator to present an overview of the Project, discuss the transmission line alignment alternatives and to provide an opportunity for representatives to ask questions about the Project.	Matachewan First Nation, IAMGOLD Corporation	1) Have you done a bulk sample?	IAMGOLD had planned to do a bulk sample this year, but later decided it was not necessary at this point in time.
During EA Preparation (January 15, 2014 to September 30, 2014)							
No comments were received during this period.							

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Pre-EA Preparation (prior to January 14, 2014)							
Biophysical Environment							
Ecological Integrity & Biodiversity	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the success rate of realignments?	These have been designed and successfully established in Southern Ontario and throughout the north. One example is the large realignments required for the Victor diamond mine.
Fisheries & Aquatic Resources	71	Meeting	02/20/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual asked what kind of fish are in Côté Lake.	IAMGOLD answered White fish, Sucker and Pike.
Fisheries & Aquatic Resources	196	Open House	05/22/2013	IAMGOLD held an Open House in Mattagami First Nation on 2013-05-22 to present the Draft Terms of Reference. There were 20 people in attendance.	Mattagami First Nation, IAMGOLD Corporation	1) Water - concerned about the removal of lakes - fish, eagles nest - disturb nesting time. Displacement of wildlife.	Thank you for your comment. These concerns will be addressed in the Environmental Assessment.
Fisheries & Aquatic Resources	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) When you rescue fish, won't they just take space from other fish?	Lakes typically have the capacity to accommodate additional fish.
Fisheries & Aquatic Resources	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Why not just fish and consume the fish from Côté Lake, rather than relocate?	The common mitigation measure to reduce the impact on fisheries is to capture and relocate them within the system. IAMGOLD will gladly discuss alternative options.
Fisheries & Aquatic Resources	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Moving fish from Côté Lake may bring diseases to other lakes.	IAMGOLD will consider this concern. Note that the plan is to relocate fish within the same watershed.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Hydrogeology	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will Unnamed Lakes fill with sediments from the Bagsverd Creek realignment?	This concern will be addressed in the EA.
Noise & Vibration	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Can you provide ground vibration isopleths?	Vibrations are predicted using a straight forward equation. Presenting isopleths may not be a suitable measure to present the results.
Water Resources / Quality	71	Meeting	02/20/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Which way does the water flow from the site?	Water flows to the north.
Water Resources / Quality	72	Open House	02/20/2013	IAMGOLD held an open house in Mattagami First Nation (MFN) to present an overview of the IAMGOLD draft Project Description (PD). 39 individuals were in attendance.	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual identified that they had concerns about the water ways and tailings.	Effects of the Project on waterbodies from the TMF will be addressed in the EA Report.
Water Resources / Quality	72	Open House	02/20/2013	IAMGOLD held an open house in Mattagami First Nation (MFN) to present an overview of the IAMGOLD draft Project Description (PD). 39 individuals were in attendance.	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual identified that their greatest concern was the environment and non-contaminated waters.	IAMGOLD is committed to minimizing effects on surface waters. Effects of the Proejct on water bodies from the TMF will be addressed in the EA Report.
Wildlife	196	Open House	05/22/2013	IAMGOLD held an Open House in Mattagami First Nation on 2013-05-22 to present the Draft Terms of Reference. There were 20 people in attendance.	Mattagami First Nation, IAMGOLD Corporation	1) Creates migration problems for birds, fish, moose, beaver. The whole area will be affected. Spawning beds will be ruined. Bird migration will be altered.	Thank you for your comment. These impacts will be assessed in the Environmental Assessment.
Wildlife	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do you know where all the beavers and muskrats are?	Intensive wildlife biological baseline data has been collected. The baseline reports will be released shortly.

Human Environment							
Aesthetics	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Disagree that there will not be impacts on the visual aesthetics of Aboriginal communities.	Noted, this should have clearly indicated that the effects would not be seen on the reserve.
Archaeology and Heritage	119	Meeting	08/22/2012	IAMGOLD and Woodland Heritage Services Limited met with Mattagami First Nation (MFN) representatives to discuss hiring of field crew from MFN for archaeology field work. Information was provided to MFN on Stage 3 site excavation and a map and description of sites located to date.	Mattagami First Nation, IAMGOLD Corporation, Woodland Heritage Services Ltd	1) MFN representatives discussed the hiring of First Nations as field crew members.	Subsequently a field crew member was hired to undertake the initial stage 3 excavations in the fall of 2012.
Indigenous Rights and Title	196	Open House	05/22/2013	IAMGOLD held an Open House in Mattagami First Nation on 2013-05-22 to present the Draft Terms of Reference. There were 20 people in attendance.	Mattagami First Nation, IAMGOLD Corporation	1) It would stop people from enjoying the land, such as fishing, camping, hunting, etc.	Thank you for your comments. These impacts will be addressed in the Environmental Assessment.
Indigenous Rights and Title	196	Open House	05/22/2013	IAMGOLD held an Open House in Mattagami First Nation on 2013-05-22 to present the Draft Terms of Reference. There were 20 people in attendance.	Mattagami First Nation, IAMGOLD Corporation	1) Traplines and the effects on harvesting our quotas, my sister's trapline G035.	Thank you for your comments. These impacts will be addressed in the Environmental Assessment.
Indigenous Traditional Knowledge	2	Meeting	09/24/2012	Reviewed Traditional Knowledge (TK)/Traditional Land Use (TLU) package that was delivered to James Naveau in August by Cheryl Naveau and John Pollock including: TLU power point presentation outlined possible study approach; proposed TLU/TK Questions; and proposed TLU/TK Data Sharing Agreement	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation, Woodland Heritage Services Ltd	1) MFN indicated that the TK/TLU agreement would need to be reviewed by Council before they could sign. Concern was raised about some of the questions as presented. MFN indicated that they had revised the questionnaire and would send revised version to IAMGOLD/AMEC. There was concern that by answering the questions this would be considered 'consultation' about the Project. MFN indicated that the questions were biased toward current use of the IAMGOLD properties. They stated that there has been no current use of the properties because of the exploration activities occurring on site. MFN indicated that the Council will consider whether an Impact Benefit Agreement (IBA) should be put in place before they participate in the TK/TLU studies.	IAMGOLD/AMEC agreed that the study should not proceed until the agreement had been reviewed and understood. IAMGOLD/AMEC indicated that the questions were provided to give an example of the types of topics that could be covered in a questionnaire and the range of questions asked. AMEC indicated that the questions could be reviewed with a TK/TLU Working Group comprised of Mattagami First Nation and IAMGOLD representatives. Other decisions about the study would also be decided jointly by this Working Group.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Indigenous Traditional Knowledge	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to the Detour Gold mine who extracted 23 million ounces.
Land and Resource Use	196	Open House	05/22/2013	IAMGOLD held an Open House in Mattagami First Nation on 2013-05-22 to present the Draft Terms of Reference. There were 20 people in attendance.	Mattagami First Nation, IAMGOLD Corporation	1) It would stop people from enjoying the land, such as fishing, camping, hunting, etc.	Thank you for your comments. These impacts will be addressed in the Environmental Assessment.
Land and Resource Use	196	Open House	05/22/2013	IAMGOLD held an Open House in Mattagami First Nation on 2013-05-22 to present the Draft Terms of Reference. There were 20 people in attendance.	Mattagami First Nation, IAMGOLD Corporation	1) Traplines and the effects on harvesting our quotas, my sister's trapline G035.	Thank you for your comments. These impacts will be addressed in the Environmental Assessment.
Land and Resource Use	329	E-mail	08/22/2013	On 2013-08-22, IAMGOLD contacted McKay Consulting Services requesting information about whether or not Mattagami First Nation had any land use policies in place. The same day, on behalf of Mattagami First Nation (MFN), McKay Consulting Services confirmed to IAMGOLD that there are no current land use policies for MFN.	W.C. McKay Consulting Services, IAMGOLD Corporation	1) IAMGOLD inquired about existing land use policies for MFN. 2) Response: McKay Consulting, on behalf of MFN, confirmed that there are no current land use policies for MFN.	N/A
Land and Resource Use	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will mine staff be allowed to go fishing and hunting? How will that be managed?	How exactly this will be managed is not fully decided. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed in consultation with the community and agencies.
Land and Resource Use	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will IAMGOLD control access to the lakes around the site?	A plan will be developed to maintain access to the extent possible. There are safety issues that will need to be considered.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Other	278	Report	07/11/2013	On 2013-07-11, IAMGOLD's locally hired Mattagami First Nation researcher sent AMEC a socio-economic data collection report. The information will be used in the socio-economic baseline report found in the Environmental Assessment.	Mattagami First Nation, AMEC Environment & Infrastructure	1) Transportation is an issue and a concern. Many people have to hire local rides to the nearest urban centre for groceries and entertainment. The average cost varies depending on the hired ride, costs range from $40-$80. There are no plans to develop or upgrade any transportation systems in the area.	Thank you for your comment. The information collected will be used to support the Socio-Economic Baseline Study.
Socio-Economic	37	Meeting	06/18/2012	IAMGOLD met with Mattagami First Nation (MFN) at the Côté Gold Project Site. Each group gave their vision for the Project.	Mattagami First Nation, IAMGOLD Corporation	1) MFN identified their desire to balance economic development with the environmental impacts.	IAMGOLD acknowledges this feedback, and will consider it during the planning and development of the Cote Gold Project and during the IBA negotiations.
Socio-Economic	38	Site Visit	07/23/2012	IAMGOLD conducted a site visit with Mattagami First Nation (MFN). The visit of the site included the proposed pit area.	Mattagami First Nation, IAMGOLD Corporation	1) IAMGOLD and MFN spoke of their vision for the Project and the need to balance of economic development with the environmental impacts.	IAMGOLD acknowledges this feedback, and will consider it during the planning and development of the Cote Gold Project and during the IBA negotiations.
Socio-Economic	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Meeting participants discussed current business and employment of Aboriginal-owned businesses and MFN/FPFN community members at the Project site. WTC requests from IAMGOLD to list business opportunities. WTC also expressed that they want opportunities provided through the IBA that will help First Nation members to be self-sufficient.	IAMGOLD is actively discussing job opportunities and procurement within the IBA negotiations. Discussions are undertaken with the goal of fostering self-sufficiency.
Socio-Economic	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Participants discussed possible job opportunities. WTC indicated that they and MFN are looking for major industry partners for government funding by end of December 2012. 2) IAMGOLD offered support for First Nations jobs within the Côté Gold Project and will send more information about positions needed.	IAMGOLD is engaging in ongoing dialogue regarding information on jobs.
Socio-Economic	278	Report	07/11/2013	On 2013-07-11, IAMGOLD's locally hired Mattagami First Nation researcher sent AMEC a socio-economic data collection report. The information will be used in the socio-economic baseline report found in the Environmental Assessment.	Mattagami First Nation, AMEC Environment & Infrastructure	1) There is a waiting list for housing. Crowding is an issue, as families live together due to lack of housing.	Thank you for your comment. The information collected will be used to support the Socio-Economic Baseline Study.
Socio-Economic	278	Report	07/11/2013	On 2013-07-11, IAMGOLD's locally hired Mattagami First Nation researcher sent AMEC a socio-economic data collection report. The information will be used in the socio-economic baseline report found in the Environmental Assessment.	Mattagami First Nation, AMEC Environment & Infrastructure	1) Current members who are pursuing a post-secondary education: 11; Number of high school graduates: approximately 80; Registered apprenticeship or other trades: approximately 40; University graduates: approximately 20	Thank you for your comment. The information collected will be used to support the Socio-Economic Baseline Study.
Socio-Economic	278	Report	07/11/2013	On 2013-07-11, IAMGOLD's locally hired Mattagami First Nation researcher sent AMEC a socio-economic data collection report. The information will be used in the socio-economic baseline report found in the Environmental Assessment.	Mattagami First Nation, AMEC Environment & Infrastructure	1) Ambulance Services are provided by Gogama Ambulance. Emergency & Health Services accessed from outside First Nations: 1) Gogama Ambulance Service, 2) Air Orange, 3) Emergency Management Ontario Police Service: Nishnaabe-Aski Police Service; Fire Service: Provided locally within the First Nation, community volunteers.	Thank you for your comment. The information collected will be used to support the Socio-Economic Baseline Study.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	278	Report	07/11/2013	On 2013-07-11, IAMGOLD's locally hired Mattagami First Nation researcher sent AMEC a socio-economic data collection report. The information will be used in the socio-economic baseline report found in the Environmental Assessment.	Mattagami First Nation, AMEC Environment & Infrastructure	1) There are currently no child care services provided in the community. Child care service is something that is a huge barrier to families and single parents who are workforce ready or who are training ready. Childcare would be an excellent support for families within the community.	Thank you for your comment. The information collected will be used to support the Socio-Economic Baseline Study.
Socio-Economic	300	E-mail	07/29/2013	On 2013-07-29, AMEC contacted a representative from Mattagami First Nation to request information related to cultural and recreational infrastructure on the First Nation reserve. The representative provided the information on 2013-07-29.	Mattagami First Nation, AMEC Environment & Infrastructure	1) Q: What are the recreation facilities on the First Nation? 2) Response: There is a multi-use facility such as the First Nation gymnasium that is used for events, bingo, children/youth activities and programs. We have a baseball diamond and covered outdoor rink that is used seasonally. There is one place for religious services that hosts several groups throughout the year, mainly full gospel/christian church services offered to all members. There are no future plans as of now for other church groups/services.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	300	E-mail	07/29/2013	On 2013-07-29, AMEC contacted a representative from Mattagami First Nation to request information related to cultural and recreational infrastructure on the First Nation reserve. The representative provided the information on 2013-07-29.	Mattagami First Nation, AMEC Environment & Infrastructure	1) Q: What are the First Nation's ambulance services? And what is the capacity and future plans? 2) Response: Ambulance service comes from Gogama. There is one ambulance on call 24/7. There are no future plans at this time for Mattagami First Nation to acquire their own service due to liability issues that need to be explored. (Conversed with Eileen Boissoneau at time of interview)	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	300	E-mail	07/29/2013	On 2013-07-29, AMEC contacted a representative from Mattagami First Nation to request information related to cultural and recreational infrastructure on the First Nation reserve. The representative provided the information on 2013-07-29.	Mattagami First Nation, AMEC Environment & Infrastructure	1) Q: Are there religious services and what kind? Are there future plans regarding religious services? 2) Response: There is one place for religious services that hosts several groups throughout the year, mainly full gospel/christian church services offered to all members. There are no future plans as of now for other church groups/services.	All comments received were considered in preparation of the baseline study reports and the EIS / EA as appropriate.
Socio-Economic	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How much will traffic levels change on Highway 144?	The EA includes an assessment of the changes in traffic levels.

Socio-Economic	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Make sure that the Project really hires First Nation staff. We never see First Nation people sitting in management positions.	Hiring practices and training objectives will be considered within the IBA.
Methodology and Process							
Baseline Studies	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do you know where all the beavers and muskrats are?	Intensive wildlife biological baseline data has been collected. The baseline reports will be released shortly.
Baseline Studies	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How many water samples have been taken to date?	Water sampling has been carried out for several years on a regular basis and at a multitude of locations. All baseline data will be released shortly.
Baseline Studies	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Why is phosphorus elevated in baseline water quality?	IAMGOLD does not have that information right now. This will be provided as part of the EA.
Environmental Assessment	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will there be an issues tracking table included in the Environmental Assessment (EA)?	The EA report will include an issues tracking table.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Indigenous Traditional Knowledge	12	Meeting	10/02/2012	IAMGOLD met with Mattagami First Nation (MFN) and Woodland Heritage Services Ltd (WHS) to discuss the Traditional Knowledge/Traditional Land Use (TK/TLU) agreement and questionnaire, the consultation process, current property use, and Impact Benefit Agreement (IBA).	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation, Woodland Heritage Services Ltd	1) IAMGOLD met with MFN and WHS to discuss the TK/TLU agreement and questionnaire. MFN indicated that the TK/TLU agreement would need to be reviewed by their Council before they could sign. MFN expressed concern about some of the questions as presented indicated in the questionnaire and indicated that they had revised the questionnaire and would send revised version to IAMGOLD. MFN were concerned that by answering the questionnaire it would be interpreted as consultation. MFN indicated that they felt the questions were biased toward current use of the IAMGOLD properties. MFN stated that there has been no current use of the properties because of the exploration activities occurring on site.	IAMGOLD agreed that the TK/TLU study should not proceed until the agreement had been reviewed and understood by MFN. IAMGOLD/AMEC indicated that the questions in the questionnaire were provided to give an example of the types of topics that could be covered in a questionnaire and the range of questions asked. AMEC indicated that the questions could be reviewed with a TK/TLU Working Group comprised of MFN and IAMGOLD representatives. Other decisions about the study would also be decided jointly by this Working Group. IAMGOLD explained that the Crown will most likely delegate the procedural aspects of consultation to IAMGOLD and therefore a record of all contacts and discussions with the MFN about the Côté Gold Project would be reviewed by the Crown to determine if adequate consultation had occurred. AMEC and WHS indicated that the TK/TLU studies typically try and determine use of the site within 'living memory' of MFN community members. These uses may have been displaced by the recent exploration activities undertaken on the property and would continue to be displaced or impacted with future mining activities. These uses or sites of cultural importance that could be affected by the Project are what should be documented in the Environmental Assessment. The level of detail provided would be at the discretion of the MFN.
Indigenous Traditional Knowledge	12	Meeting	10/02/2012	IAMGOLD met with Mattagami First Nation (MFN) and Woodland Heritage Services Ltd (WHS) to discuss the Traditional Knowledge/Traditional Land Use (TK/TLU) agreement and questionnaire, the consultation process, current property use, and Impact Benefit Agreement (IBA).	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation, Woodland Heritage Services Ltd	1) MFN indicated that the MFN Council will consider whether an IBA should be put in place before they participate in the TK/TLU studies. 2) IAMGOLD indicated that without the information that could be provided through the TK/TLU study, the level of effect on uses would not be known. This would be helpful information for the IBA. 3) AMEC indicated that on other projects, TK/TLU studies proceed in parallel to negotiations on Agreements. This way, the TK/TLU work proceeds in time to be considered in the Environmental Assessment.	IAMGOLD is continuing to participate in dialogue with MFN around TK/TLU studies.
Regulatory	71	Meeting	02/20/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) If there is a major change to the mine plan does IAMGOLD need to go through another environmental assessment (EA) process?	If there are major changes yes, but there are certain conditions that trigger the need for a full EA. For example the pit design is based on the use of haul trucks, but if an In-Pit Crushing and Conveyance (IPCC) system is used, the dimensions of the pit may change, but will not likely result in a major change that would need a new EA.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	12	Meeting	10/02/2012	IAMGOLD met with Mattagami First Nation (MFN) and Woodland Heritage Services Ltd (WHS) to discuss the Traditional Knowledge/Traditional Land Use (TK/TLU) agreement and questionnaire, the consultation process, current property use, and Impact Benefit Agreement (IBA).	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation, Woodland Heritage Services Ltd	1) MFN indicated that the MFN Council will consider whether an IBA should be put in place before they participate in the TK/TLU studies. 2) IAMGOLD indicated that without the information that could be provided through the TK/TLU study, the level of effect on uses would not be known. This would be helpful information for the IBA. 3) AMEC indicated that on other projects, TK/TLU studies proceed in parallel to negotiations on Agreements. This way, the TK/TLU work proceeds in time to be considered in the Environmental Assessment.	IAMGOLD is continuing to participate in dialogue with MFN around TK/TLU studies.
Stakeholder Engagement	16	Letter	10/30/2012	IAMGOLD received Mattagami First Nation (MFN) letter of formal support and authorization for Wabun Tribal Council's (WTC) Mineral Development Advisor to conduct site visits on Mattagami traditional lands. IAMGOLD sent confirmation of receipt of letter.	Mattagami First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) IAMGOLD received MFN letter of formal support and authorization for WTC's Mineral Development Advisor to conduct site visits on Mattagami traditional lands.	IAMGOLD sent confirmation of receipt of letter.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC mentioned legislation they use to review IBAs.	IAMGOLD acknowledged this tool.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Meeting participants discussed current business and employment of Aboriginal-owned businesses and MFN/FPFN community members at the Project site. WTC requests from IAMGOLD to list business opportunities. WTC also expressed that they want opportunities provided through the IBA that will help First Nation members to be self-sufficient.	IAMGOLD is actively discussing job opportunities and procurement within the IBA negotiations. Discussions are undertaken with the goal of fostering self-sufficiency.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC sees the biggest challenge in implementing the IBA. The Mine Manager will need to know about the spirit and intent of the IBA for the hiring process. 2) WTC will provide a draft IBA to IAMGOLD by end of October 2012. WTC was requested to indicate what financial information will be required. 3) WTC suggests that the IBA negotiation team would present a position on the IBA to the community (without IAMGOLD present), followed by a meeting with IAMGOLD to present the Project and provide an opportunity for questions.	IAMGOLD will follow through on these requests as the Project is developed.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC stated that the EA would be considered the main trigger for consultation and an agreement. WTC expressed that it was important that an IBA be substantially negotiated, if not completed before the EA process was underway.	Negotiations regarding the IBA are currently well underway in advance of the EA process.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC, MFN, and FPFN request e-mail/ notification 2 weeks prior to the PD being released for review. 2) WTC believes that IAMGOLD committed to providing correspondence committing IAMGOLD to the negotiation of an IBA that listed the specific topics. This would be done prior to release of the PD and included in the PD document.	IAMGOLD completed these tasks as requested.
Stakeholder Engagement	72	Open House	02/20/2013	IAMGOLD held an open house in Mattagami First Nation (MFN) to present an overview of the IAMGOLD draft Project Description (PD). 39 individuals were in attendance.	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual wrote in a feedback form that they would like to better understand any agreements for environment, Draft Impact Benefit Agreement. Individual would also like business numbers/extensions and position. The individual also identified that they would like more information packages related to discussion. Individual also identified that more senior management should be at these sessions.	Impact and Benefit Agreement (IBA) negotiations are currently ongoing between IAMGOLD and the communities of Mattagami First Nation and Flying Post First Nation. The Executive Director of Wabun Tribal Council, and Chief and Council from these communities serve as representation on behalf of these communities during IBA negotiations. IAMGOLD respects this process, and as such recommends that all comments and/or concerns about the IBA should be directed to the individual community members, Chief and Council, as appropriate. IAMGOLD has provided contact details for Project personnel on various fact sheets, newsletters, and other Project information sharing tools. Contact details of Project personnel can also be retrieved during open house and/or community meetings. The staff from IAMGOLD that attend community meetings/open houses are the most knowledgeable personnel about the Project, and represent senior management from IAMGOLD.
Stakeholder Engagement	147	Open House	04/25/2013	IAMGOLD held a community information session and provided an overview of archaeology work conducted at Côté Gold and introduced the Traditional Knowledge/Traditional Land Use study.	Mattagami First Nation, W.C. McKay Consulting Services, IAMGOLD Corporation, Woodland Heritage Services Ltd	1) Will IAMGOLD be presenting again, keeping community up-to-date? 2) Will IAMGOLD be hosting sessions for off-reserve members?	Yes we will. We also want to utilize staff members as much as possible (cultural days, presentations, site visits). Yes, we want to inform as many members as possible; we also hold information sessions in Timmins. This process is required as part of the Environmental Assessment; the community decides what information it wants to share.
Stakeholder Engagement	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Not all our concerns have been captured and addressed. IAMGOLD has to listen to what we say and address our concerns.	IAMGOLD is interested in understanding how to integrate comments on changes to Aboriginal culture and their relationship with the land into the environmental assessment.

Mining							
Employee Accommodations/Camp	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will mine staff be allowed to go fishing and hunting? How will that be managed?	How exactly this will be managed is not fully decided. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed in consultation with the community and agencies.
Other	72	Open House	02/20/2013	IAMGOLD held an open house in Mattagami First Nation (MFN) to present an overview of the IAMGOLD draft Project Description (PD). 39 individuals were in attendance.	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) For people that don't drive, would maybe a shuttle bus be available for workers to travel, of course depending on how many employees would come from Mattagami First Nation	Shuttle busing will be considered as part of Project planning.
Tailing Impoundment	72	Open House	02/20/2013	IAMGOLD held an open house in Mattagami First Nation (MFN) to present an overview of the IAMGOLD draft Project Description (PD). 39 individuals were in attendance.	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual identified that they had concerns about the water ways and tailings.	Effects of the Project on waterbodies from the TMF will be addressed in the EA Report.
Tailing Impoundment	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How full will the TMF be at closure?	The TMF is expected to be filled to capacity, with additional freeboard for safety.
Tailing Impoundment	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will methyl mercury be an issue with TMF seepage?	Methyl mercury is currently not considered to be an issue. However, the geochemistry reports in the EA will provide further details.
Transmission Line	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to the Detour Gold mine who extracted 23 million ounces.

Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will transmission line maintenance be subcontracted to third parties?	This has not been decided yet.
Transmission Line	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) HydroOne may want to keep the 230 kV line and decommission the 115 kV line.	HydroOne has not indicated that they are interested at this point in time.
Transport (Road, Barge, etc.)	196	Open House	05/22/2013	IAMGOLD held an Open House in Mattagami First Nation on 2013-05-22 to present the Draft Terms of Reference. There were 20 people in attendance.	Mattagami First Nation, IAMGOLD Corporation	1) Concerned about the effect on our highway (144) pavement.	Thank you for your comment. This potential effect will be addressed in the Environmental Assessment.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Negotiated Agreements							
Contracts	72	Open House	02/20/2013	IAMGOLD held an open house in Mattagami First Nation (MFN) to present an overview of the IAMGOLD draft Project Description (PD). 39 individuals were in attendance.	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual wanted to know why previous road contracts were not put out to tender when Exploration Agreement states First Nation ventures will be posted. Individual feels that specific contractors are favoured. It is the individual's opinion that all contracts should be posted in both First Nation communities so that all First Nation people have a chance.	IAMGOLD said that it was a small contract and three First Nation bids were hosted. IAMGOLD said that no one is favoured and the Exploration Agreement does not state all First Nation ventures will be hired; it depends on areas of expertise. Côté Gold is just starting policies on structured hiring of Aboriginal ventures. IAMGOLD commented that the individual's concerns would be documented.
Impact Benefit Agreements	38	Site Visit	07/23/2012	IAMGOLD conducted a site visit with Mattagami First Nation (MFN). The visit of the site included the proposed pit area.	Mattagami First Nation, IAMGOLD Corporation	1) Individuals identified the importance of an Impact Benefit Agreement (IBA) and discussed.	
Impact Benefit Agreements	2	Meeting	09/24/2012	Reviewed Traditional Knowledge (TK)/Traditional Land Use (TLU) package that was delivered to James Naveau in August by Cheryl Naveau and John Pollock including: TLU power point presentation outlined possible study approach; proposed TLU/TK Questions; and proposed TLU/TK Data Sharing Agreement	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation, Woodland Heritage Services Ltd	1) MFN indicated that the TK/TLU agreement would need to be reviewed by Council before they could sign. Concern was raised about some of the questions as presented. MFN indicated that they had revised the questionnaire and would send revised version to IAMGOLD/AMEC. There was concern that by answering the questions this would be considered 'consultation' about the Project. MFN indicated that the questions were biased toward current use of the IAMGOLD properties. They stated that there has been no current use of the properties because of the exploration activities occurring on site. MFN indicated that the Council will consider whether an Impact Benefit Agreement (IBA) should be put in place before they participate in the TK/TLU studies.	IAMGOLD/AMEC agreed that the study should not proceed until the agreement had been reviewed and understood. IAMGOLD/AMEC indicated that the questions were provided to give an example of the types of topics that could be covered in a questionnaire and the range of questions asked. AMEC indicated that the questions could be reviewed with a TK/TLU Working Group comprised of Mattagami First Nation and IAMGOLD representatives. Other decisions about the study would also be decided jointly by this Working Group.
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to the Detour Gold mine who extracted 23 million ounces.
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC mentioned legislation they use to review IBAs.	IAMGOLD acknowledged this tool.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Meeting participants discussed current business and employment of Aboriginal-owned businesses and MFN/FPFN community members at the Project site. WTC requests from IAMGOLD to list business opportunities. WTC also expressed that they want opportunities provided through the IBA that will help First Nation members to be self-sufficient.	IAMGOLD is actively discussing job opportunities and procurement within the IBA negotiations. Discussions are undertaken with the goal of fostering self-sufficiency.
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC sees the biggest challenge in implementing the IBA. The Mine Manager will need to know about the spirit and intent of the IBA for the hiring process. 2) WTC will provide a draft IBA to IAMGOLD by end of October 2012. WTC was requested to indicate what financial information will be required. 3) WTC suggests that the IBA negotiation team would present a position on the IBA to the community (without IAMGOLD present), followed by a meeting with IAMGOLD to present the Project and provide an opportunity for questions.	IAMGOLD will follow through on these requests as the Project is developed.
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC stated that the EA would be considered the main trigger for consultation and an agreement.WTC expressed that it was important that an IBA be substantially negotiated, if not completed before the EA process was underway.	Negotiations regarding the IBA are currently well underway in advance of the EA process.
Impact Benefit Agreements	71	Meeting	02/20/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Council member asked how long for finalized Impact Benefit Agreement (IBA)? It was identified that the Draft Impact Benefit Agreement to be completed by fall of 2013. There will be 2 to 3 community meetings on the IBA.	IAMGOLD is working towards finalizing the Draft IBA in 2013.

Table D-9c: Comments and Responses - Mattagami First Nation

Impact Benefit Agreements	72	Open House	02/20/2013	IAMGOLD held an open house in Mattagami First Nation (MFN) to present an overview of the IAMGOLD draft Project Description (PD). 39 individuals were in attendance.	Mattagami First Nation, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual wrote in a feedback form that they would like to better understand any agreements for environment, Draft Impact Benefit Agreement. Individual would also like business numbers/extensions and position. The individual also identified that they would like more information packages related to discussion. Individual also identified that more senior management should be at these sessions.	Impact and Benefit Agreement (IBA) negotiations are currently ongoing between IAMGOLD and the communities of Mattagami First Nation and Flying Post First Nation. The Executive Director of Wabun Tribal Council, and Chief and Council from these communities serve as representation on behalf of these communities during IBA negotiations. IAMGOLD respects this process, and as such recommends that all comments and/or concerns about the IBA should be directed to the individual community members, Chief and Council, as appropriate. IAMGOLD has provided contact details for Project personnel on various fact sheets, newsletters, and other Project information sharing tools. Contact details of Project personnel can also be retrieved during open house and/or community meetings. The staff from IAMGOLD that attend community meetings/open houses are the most knowledgeable personnel about the Project, and represent senior management from IAMGOLD.
Project Phase							
Closure	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How full will the TMF be at closure?	The TMF is expected to be filled to capacity, with additional freeboard for safety.
Closure	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is there enough water in the TMF to aid fill the pit at closure?	At closure the amounts of water in the TMF will not be large enough to aid the flooding of the open pit.
Closure	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) If the Project goes ahead, we will lose some areas that we will never get back.	It is noted that Project has a large footprint, the site will be reclaimed to a productive state at closure. IAMGOLD is interested in First Nation communities providing insight into the management objectives of our closure plan.

Operations	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will transmission line maintenance be subcontracted to third parties?	This has not been decided yet.
Risks and Mitigation							
Environmental Management	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will pesticides be used for transmission line clearing and maintenance?	The current understanding is that brushing and clearing would be carried out without the use of pesticides.
Environmental Management	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Moving fish from Côté Lake may bring diseases to other lakes.	IAMGOLD will consider this concern. Note that the plan is to relocate fish within the same watershed.
Socio-Economic Management	278	Report	07/11/2013	On 2013-07-11, IAMGOLD's locally hired Mattagami First Nation researcher sent AMEC a socio-economic data collection report. The information will be used in the socio-economic baseline report found in the Environmental Assessment.	Mattagami First Nation, AMEC Environment & Infrastructure	1) First Nation membership working within the following industries are: Construction: total 3; Mining: total 24; Transportation: total 1; Administration: total 2; Health and Social Service: total 7; Education: total 10. 2) Unemployment rate of off-reserve membership is unknown due to not enough available information. It is estimated that about 75% of off-reserve membership would return to the First Nation should employment opportunities become available. Approximately 20% unemployment rate on-reserve - Women 15%, Men 5%. Local entrepreneurs are interested in providing services to the mine. Programs to encourage entrepreneurship in the community including: Mattagami Trust Company, Nishnaawbe-Aski Development Fund, Lakeshore Gold.	Thank you for your comment. The information collected will be used to support the Socio-Economic Baseline Study.

Socio-Economic Management	278	Report	07/11/2013	On 2013-07-11, IAMGOLD's locally hired Mattagami First Nation researcher sent AMEC a socio-economic data collection report. The information will be used in the socio-economic baseline report found in the Environmental Assessment.	Mattagami First Nation, AMEC Environment & Infrastructure	1) There are currently no child care services provided in the community. Child care service is something that is a huge barrier to families and single parents who are workforce ready or who are training ready. Childcare would be an excellent support for families within the community.	Thank you for your comment. The information collected will be used to support the Socio-Economic Baseline Study.
During EA Preparation (January 15, 2014 to September 30, 2014)							
Biophysical Environment							
Ecological Integrity & Biodiversity	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is there a biodiversity report on Côté Lake? Has Chief and Council seen this Report?	As per the presentation to the community, IAMGOLD has completed substantial reports on wildlife and vegetation communities in the Project area. Notice of public review of the Draft Report was provided to the community prior to this meeting.
Water Resources / Quality	451	Meeting	05/07/2014	IAMGOLD held a meeting at Mattagami First Nation to bring together Youth and Elder perspectives about the Project. This session provided an opportunity for these groups to share their thoughts, concerns and issues about the Project in a more intimate setting and provided them with a chance to get to know IAMGOLD employees on a more personal basis.	Mattagami First Nation, IAMGOLD Corporation	1) Will the water be flowing North or South? We are concerned about seepage. That is one thing on site that will need to be very carefully monitored. 2) We are also concerned about the watershed being so close by. What measures will IAMGOLD take to minimize risks of pollution to the watershed. 3) Some of our wildlife and birds are a concern - we need to be very careful not to disturb them. 4) How many dams will you have to build? 5) Our biggest concern is environmental impact: The best way we can mitigate this is by building strong Aboriginal partnerships and filtering employment opportunities to the community. The best way IAMGOLD can compensate the community is by teaching local Aboriginal youth about the land through training them for environmental employment positions. 6) We have noticed a strong revival of youth engaging in traditional practices in the land. We should capitalize on this by creating Aboriginal partnerships and developing the knowledge youth have so that they are ready for employment in the environmental department when the mine is up and running.	One of the most critical parts of engineering design for the Project is the water management around the entire site. This has taken a fair amount of time in order to best manage water. Water will be recycled as much as possible from the tailings in a closed loop system. IAMGOLDs design will help us to collect as much water as possible around the mine site and mine rock area through a series of seepage collection ponds which will limit freshwater intake. The engineering team will keep environmental protection as their top priority to ensure that we select the least environmentally invasive alternatives during planning, and will design closure plans with the intent of restoring the environment to as close to its natural state as possible. We are planning right now on building around 8-10 dams that will be designed to realign the existing watercourses.
Wildlife	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is IAMGOLD going to do about the Eagle's nest? Is the Ministry of Natural Resources aware of this nest?	As per the presentation provided to the community, IAMGOLD will remove the Eagle's nest. However, the environmental assessment studies have identified that the local Eagle population as a whole will not be impacted, as there is sufficient suitable habitat in the region to support the whole population. The Ministry has been provided this Report, and are invited during the comment period to make comments on it.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Human Environment							
Archaeology and Heritage	451	Meeting	05/07/2014	IAMGOLD held a meeting at Mattagami First Nation to bring together Youth and Elder perspectives about the Project. This session provided an opportunity for these groups to share their thoughts, concerns and issues about the Project in a more intimate setting and provided them with a chance to get to know IAMGOLD employees on a more personal basis.	Mattagami First Nation, IAMGOLD Corporation	1) We have specific concerns around First Nation burial grounds and artifacts. If anything is found, it is critical that we put up a buffer zone immediately. Back in the 1800s that area was one of the roads we used for trapping. If IAMGOLD finds anything we will want to know about it immediately so that we can deal with it properly.	IAMGOLD is committed to protecting all First Nations burial sites and artifacts. IAMGOLD has undertaken a number of archaeology field programs within the proposed project area. Although we have found 18 pre-contact archaeological sites in the area, we have not found any burial sites. Burial sites fall under different regulations. Proper authorities will be notified and activities will cease in the immediate area. Ministry of Tourism, Culture and Sport policy is to establish buffer zones around the areas that have been identified by the archaeology study, and so these areas will not be affected by the Project.
Indigenous Traditional Knowledge	451	Meeting	05/07/2014	IAMGOLD held a meeting at Mattagami First Nation to bring together Youth and Elder perspectives about the Project. This session provided an opportunity for these groups to share their thoughts, concerns and issues about the Project in a more intimate setting and provided them with a chance to get to know IAMGOLD employees on a more personal basis.	Mattagami First Nation, IAMGOLD Corporation	1) Will IAMGOLD host a traditional ceremony on site? It is very important that we have a traditional ceremony on our land - it will anger our ancestors if we do not properly bless the land	Hosting a traditional ceremony on site is also very important to IAMGOLD .We are currently planning on hosting a traditional ceremony on-site sometime in the month of June (2014). We would also be open to hosting another one prior to the approved start-up of the Cote Gold Project.
Indigenous Traditional Knowledge	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The individual noted that as a mother and woman, that we have a responsibility to the water. Without water we would not survive, it is very sacred. Subsequently, the individual requested that a full ceremony take place at Côté Lake immediately and would be happy to coordinate the ceremony.	IAMGOLD is happy to host and/or help to coordinate a pipe ceremony on-site, at any time that is agreeable among leadership and the community.
Indigenous Traditional Knowledge	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Women need to stand together to provide a dialogue to men with our input in the Project. Our female elders, and other women of the community want to give more guidance and direction on the Project. Traditionally water ceremonies are led by women - that is the way the process is to be done. IAMGOLD needs the input of our women on the Project; IAMGOLD needs to talk with women in the community.	IAMGOLD is definitely interested in and willing to commit to hosting a women's session in the community. We are also committed to incorporating women's input or helping them to facilitate the traditional pipe ceremony on-site. IAMGOLD held a women's session on 2014-07-15, as follow-up to this request.
Indigenous Traditional Knowledge	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How is the knowledge of our elders being incorporated into the environmental assessment? For what purpose are you using our elders' knowledge?	Generally, the reason IAMGOLD sought to incorporate traditional knowledge into the environmental assessment was to ensure that there is a balance of more than just scientific effects being presented. We want to ensure that the Aboriginal community understanding of the effects is captured in the Report.

Project Phase							
Closure	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The individual identified that they do not think it is possible to operate a mine for 15 years and have the land return to the same way it was before. It is going to take a very long time for this land to be healed. The individual wants the land to be protected for their grandchildren and their concern is for the health of the land. How much rehabilitation can really be done?	Advances in mining over the past couple of decades have made it a much safer industrial activity. This means that there will be no arsenic or mercury involved that could pose a risk to humans or to the land. We will use cyanide but it will be destroyed. It is our job and our commitment to ensure that we minimize our impact to the land. We will also be required to submit permit applications and demonstrate financial assurance for closure before we can proceed any further with development of the Project. Closure permits require us to demonstrate that we have the capacity to rehabilitate the land to a productive state. In spite of closure activities, there will be an effect on the land but IAMGOLD has committed in the environmental assessment to revegetate as much as possible and to bring the land back to as natural a state as possible. It should be noted however, that this process will take 50-80 years for the pit to fill and for the land to be revegetated. The environmental assessment process is a way of working to prevent issues and minimize the impact on the land as much as possible - we are considering how we can best manage the land now, in 15 years, and 80 years from now.
Risks and Mitigation							
Environmental Management	451	Meeting	05/07/2014	IAMGOLD held a meeting at Mattagami First Nation to bring together Youth and Elder perspectives about the Project. This session provided an opportunity for these groups to share their thoughts, concerns and issues about the Project in a more intimate setting and provided them with a chance to get to know IAMGOLD employees on a more personal basis.	Mattagami First Nation, IAMGOLD Corporation	1) Will the water be flowing North or South? We are concerned about seepage. That is one thing on site that will need to be very carefully monitored. 2) We are also concerned about the watershed being so close by. What measures will IAMGOLD take to minimize risks of pollution to the watershed. 3) Some of our wildlife and birds are a concern - we need to be very careful not to disturb them. 4) How many dams will you have to build? 5) Our biggest concern is environmental impact: The best way we can mitigate this is by building strong Aboriginal partnerships and filtering employment opportunities to the community. The best way IAMGOLD can compensate the community is by teaching local Aboriginal youth about the land through training them for environmental employment positions. 6) We have noticed a strong revival of youth engaging in traditional practices in the land. We should capitalize on this by creating Aboriginal partnerships and developing the knowledge youth have so that they are ready for employment in the environmental department when the mine is up and running.	One of the most critical parts of engineering design for the Project is the water management around the entire site. This has taken a fair amount of time in order to best manage water. Water will be recycled as much as possible from the tailings in a closed loop system. IAMGOLDs design will help us to collect as much water as possible around the mine site and mine rock area through a series of seepage collection ponds which will limit freshwater intake. The engineering team will keep environmental protection as their top priority to ensure that we select the least environmentally invasive alternatives during planning, and will design closure plans with the intent of restoring the environment to as close to its natural state as possible. We are planning right now on building around 8-10 dams that will be designed to realign the existing watercourses.

Table D-9c: Comments and Responses - Mattagami First Nation

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Environmental Management	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do we have a 100% guarantee that our water will not be affected? If not, then what? What about seepage?	During the presentation, IAMGOLD explained that all mitigations and components of Project design will be implemented to ensure that water quality remains well below criteria and guideline limits.
Socio-Economic Management	451	Meeting	05/07/2014	IAMGOLD held a meeting at Mattagami First Nation to bring together Youth and Elder perspectives about the Project. This session provided an opportunity for these groups to share their thoughts, concerns and issues about the Project in a more intimate setting and provided them with a chance to get to know IAMGOLD employees on a more personal basis.	Mattagami First Nation, IAMGOLD Corporation	1) I would like to see training for our Aboriginal youth that is very hands on. I have noticed that Aboriginal peoples tend to learn better through practical experiences versus in academic settings. 2) Can you make a list of what kinds of jobs will be available to people, and outline what the minimum requirements will be for these jobs? 3) We have concerns about the government cutting back on funding for post-secondary education of Aboriginal youth - this may be an area that we look to support for IAMGOLD for. We would also suggest on-reserve training - this will be particularly important because we have a lot of single mothers in our community and going up to Timmins for training will not work for them.	An education and training schedule will be an important component of the Impact Benefit Agreement. IAMGOLD will work with Mattagami First Nation to create an education and training program that best develops the skill sets and capacity, and served the interests of Mattagami youth, while providing IAMGOLD with a work-ready Aboriginal labour pool once construction begins. We are definitely interested in supporting Aboriginal education in the trades, however it is also important to use to support youth to develop their full potential and to have the skill sets required to eventually excel in management positions in our company as well. When the time is appropriate, we will provide Mattagami with a list of employment opportunities that will become available and the associated minimum requirements for those roles.
Socio-Economic Management	451	Meeting	05/07/2014	IAMGOLD held a meeting at Mattagami First Nation to bring together Youth and Elder perspectives about the Project. This session provided an opportunity for these groups to share their thoughts, concerns and issues about the Project in a more intimate setting and provided them with a chance to get to know IAMGOLD employees on a more personal basis.	Mattagami First Nation, IAMGOLD Corporation	1) We would recommend that when IAMGOLD is ready to begin recruiting that you have your Human Resources staff do some cross-cultural training. This is because working with, recruiting and retaining Aboriginal employees in general is different than working with other local populations. Moreover, it is important to us that cross-cultural training is a component of employment orientation for staff at Cote.	IAMGOLD Team leads have taken part in cross-cultural training and also IAMGOLD has retained two Mattagami members to present all current Cote Gold personnel onsite with cross-cultural training which has been well received.
Socio-Economic Management	451	Meeting	05/07/2014	IAMGOLD held a meeting at Mattagami First Nation to bring together Youth and Elder perspectives about the Project. This session provided an opportunity for these groups to share their thoughts, concerns and issues about the Project in a more intimate setting and provided them with a chance to get to know IAMGOLD employees on a more personal basis.	Mattagami First Nation, IAMGOLD Corporation	1) We are particularly interested in potential business opportunities that the Project can provide. We want to be able to act as suppliers for the mine. We want support to develop the capacity of our local businesses so that we are ready when the mine gets built.	The Impact and Benefit agreement will set out the framework for procurement with local businesses. It is likely that preference will be given to local Aboriginal businesses in the bidding process. In addition, IAMGOLD will consider other ways that we can support local businesses from Mattagami and Flying Post First Nation to develop their capacity to effectively secure bids, and increase their ability to take advantage of business opportunities that arise from the Project.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Pre-EA Preparation (prior to January 14, 2014)							
Human Environment							
Land and Resource Use	281	Meeting	08/14/2013	On 2013-03-05, the M'Chigeeng First Nation informed IAMGOLD of concerns related to potential Project impacts on hunting and fishing rights under the Robinson Huron Treaty. On 2013-03-13, IAMGOLD invited the M'Chigeeng First Nation to discuss concerns and to share if any members are exercising harvesting rights in the Project area to discuss mitigation measures. Between 2013-03-13 and 2013-08-00 a series of emails discussed meeting logistics. On 2013-08-14 a meeting was held.	M'Chigeeng First Nation , IAMGOLD Corporation	1) On 2013-03-15 an individual indicated that there are several members of the M'chigeeng First Nation (MFN) that utilize the territory close to the location of the Côté Gold Project and that it is felt that a project of this magnitude will have an impact on the hunting and fishing rights identified under the Robinson Huron Treaty. The so-called treaty border between Robinson-Huron and Treaty 9 is the "height of land" which is watershed road. Even though the mine is not going to exactly be in the M'chigeeng First Nation.	Thank you for your comment. IAMGOLD has discussed the impact of the Project with the Lake Huron Regional Chief.

Pre-EA Preparation (prior to January 14, 2014)							
Negotiated Agreements							
Impact Benefit Agreements	137	Phone Call	04/22/2013	Chief of the Serpent River First Nation (SRFN) contacted IAMGOLD to discuss SRFN's harvesting rights regarding the Côté Gold Project.	Serpent River First Nation, IAMGOLD Corporation	1) SRFN does not expect an Impact Benefit Agreement for the Côté Gold Project. However, SRFN would like to hear what "collective" agreements would be available for their community. SRFN commented that beyond what the government lists for consultation, there should be some mutual understanding between First Nations and mining projects.	IAMGOLD is transparent and wants to inform people of what is going on with the Côté Gold Project. An IAMGOLD representative will consult with IAMGOLD corporate division.

Table D-9c: Comments and Responses - Métis Nation of Ontario

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Pre-EA Preparation (prior to January 14, 2014)							
Biophysical Environment							
Air Quality	210	Meeting	05/30/2013	IAMGOLD presented the Draft Terms of Reference (ToR) to Métis Nation of Ontario (MNO) and discussed next steps, timelines and MNO review to the Consultation Committee. IAMGOLD reminded the MNO that the window of opportunity to the Traditional Knowledge and Land Use Study incorporated into the Draft Environmental Assessment / Environmental Impact Statement was closing. The MNO assured IAMGOLD that they would pass along a draft copy of their proposed Memorandum of Understanding as soon as possible.	Chapleau Métis Council, Métis Nation of Ontario, Northern Lights Métis Council, Temiskaming Métis Council, IAMGOLD Corporation	1) Individual asked if IAMGOLD is looking at dust and exhaust levels.	IAMGOLD said that they are looking at levels of dust, exhaust, as well as metals, and added that they have to meet the Ministry of the Environment thresholds.
Fisheries & Aquatic Resources	210	Meeting	05/30/2013	IAMGOLD presented the Draft Terms of Reference (ToR) to Métis Nation of Ontario (MNO) and discussed next steps, timelines and MNO review to the Consultation Committee. IAMGOLD reminded the MNO that the window of opportunity to the Traditional Knowledge and Land Use Study incorporated into the Draft Environmental Assessment / Environmental Impact Statement was closing. The MNO assured IAMGOLD that they would pass along a draft copy of their proposed Memorandum of Understanding as soon as possible.	Chapleau Métis Council, Métis Nation of Ontario, Northern Lights Métis Council, Temiskaming Métis Council, IAMGOLD Corporation	1) Individual asked how much information the Ministry of Natural Resources (MNR) has on turtles. 2) Individual asked if these turtles are an “At Risk” species and if there are other "At Risk" species at the site.	IAMGOLD said that the MNR has very little information on the turtles and that yes, they are an "At Risk" species, along with the Water Willow which exists in the Shining Tree corridor.
Methodology and Process							
Environmental Assessment	85	Meeting	02/22/2013	IAMGOLD met with the Consultation Committee from the Métis Nation of Ontario (MNO) to present the draft Project Description (PD) and gather their feedback. IAMGOLD expressed that they would provide support to the MNO to conduct a Traditional Knowledge and Land Use Study as soon as possible to ensure that the information obtained in the Study would be considered in the Draft Environmental Assessment / Environmental Impact Statement. The MNO stated that they were not interested in beginning work on a Traditional Knowledge and Land Use Study until IAMGOLD signed a Memorandum of Understanding with the Committee.	Chapleau Métis Council, Métis Nation of Ontario, Northern Lights Métis Council, IAMGOLD Corporation	1) Métis Nation of Ontario explained that there has to be a trigger to mining operation, a notice to the Métis, and then the Métis do an internal assessment and that they are given notice to assess every municipal plan, every culvert, every stretch of highway that is repaved. 2) Northern Lights Métis Council asked when IAMGOLD will be processing ore.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to The DeTour mine who extracted 23 million ounces.
Regulatory	210	Meeting	05/30/2013	IAMGOLD presented the Draft Terms of Reference (ToR) to Métis Nation of Ontario (MNO) and discussed next steps, timelines and MNO review to the Consultation Committee. IAMGOLD reminded the MNO that the window of opportunity to the Traditional Knowledge and Land Use Study incorporated into the Draft Environmental Assessment / Environmental Impact Statement was closing. The MNO assured IAMGOLD that they would pass along a draft copy of their proposed Memorandum of Understanding as soon as possible.	Chapleau Métis Council, Métis Nation of Ontario, Northern Lights Métis Council, Temiskaming Métis Council, IAMGOLD Corporation	1) Individual asked if the provincial government receives the same information that is sent to the federal government.	IAMGOLD said that both levels of government receive the same information, in a general fashion, but that they both ask for different information as well.

Table D-9c: Comments and Responses - Métis Nation of Ontario

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	20	Meeting	07/05/2012	Meeting between IAMGOLD and Consultation and Community Relations Coordinator of Métis Nation of Ontario (MNO). IAMGOLD discussed generalities about the Project (location) and timelines for the Project Description (PD).	Métis Nation of Ontario, IAMGOLD Corporation	1) IAMGOLD discussed generalities about the Project (location) and timelines for the PD with the Community Relations Coordinator of MNO. 2) MNO asked for a list of any permits that IAMGOLD would be requiring in 2013.	IAMGOLD will continue to provide details and timelines as they become available. IAMGOLD indicated that there would be no major permits in 2013.
Mining							
Process (Leaching, etc.)	210	Meeting	05/30/2013	IAMGOLD presented the Draft Terms of Reference (ToR) to Métis Nation of Ontario (MNO) and discussed next steps, timelines and MNO review to the Consultation Committee. IAMGOLD reminded the MNO that the window of opportunity to the Traditional Knowledge and Land Use Study incorporated into the Draft Environmental Assessment / Environmental Impact Statement was closing. The MNO assured IAMGOLD that they would pass along a draft copy of their proposed Memorandum of Understanding as soon as possible.	Chapleau Métis Council, Métis Nation of Ontario, Northern Lights Métis Council, Temiskaming Métis Council, IAMGOLD Corporation	1) Individual asked what percentage of cyanide IAMGOLD is looking to reuse.	IAMGOLD said that they are not sure at this point what percentage of cyanide will be reused but that there is a formula used to reuse it because it is very expensive to buy.
Waste Rock Piles	210	Meeting	05/30/2013	IAMGOLD presented the Draft Terms of Reference (ToR) to Métis Nation of Ontario (MNO) and discussed next steps, timelines and MNO review to the Consultation Committee. IAMGOLD reminded the MNO that the window of opportunity to the Traditional Knowledge and Land Use Study incorporated into the Draft Environmental Assessment / Environmental Impact Statement was closing. The MNO assured IAMGOLD that they would pass along a draft copy of their proposed Memorandum of Understanding as soon as possible.	Chapleau Métis Council, Métis Nation of Ontario, Northern Lights Métis Council, Temiskaming Métis Council, IAMGOLD Corporation	1) Individual asked if cottagers located upstream and downstream from Mesomikenda Lake have concerns regarding the location of the rock piles.	IAMGOLD said yes and that IAMGOLD is reconsidering the location of the rock piles.
Negotiated Agreements							
Traditional Knowledge	210	Meeting	05/30/2013	IAMGOLD presented the Draft Terms of Reference (ToR) to Métis Nation of Ontario (MNO) and discussed next steps, timelines and MNO review to the Consultation Committee. IAMGOLD reminded the MNO that the window of opportunity to the Traditional Knowledge and Land Use Study incorporated into the Draft Environmental Assessment / Environmental Impact Statement was closing. The MNO assured IAMGOLD that they would pass along a draft copy of their proposed Memorandum of Understanding as soon as possible.	Chapleau Métis Council, Métis Nation of Ontario, Northern Lights Métis Council, Temiskaming Métis Council, IAMGOLD Corporation	1) Individual commented that in order to move the Traditional Knowledge / Traditional Land Use agreement forward the MNO will use an in-house team.	IAMGOLD said that support will be provided.
During EA Preparation (January 15, 2014 to September 30, 2014)							
Biophysical Environment							
Air Quality	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What are the absolute numbers for greenhouse gas (GHG) emissions that will come from the Project? 2) What is the percentage of GHG emissions that will come from the Project for the region in which we harvest?	The absolute numbers are all provided in the Air Quality Report and associated Appendix. IAMGOLD followed up with the Ministry of the Environment who informed IAMGOLD that GHG numbers at that level are not available. Therefore IAMGOLD cannot quantify the information to see the GHG emission percentage for the MNO's harvesting region.

Table D-9c: Comments and Responses - Métis Nation of Ontario

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Fisheries & Aquatic Resources	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What are you referring to when you use the term 'risk-based' reference value?	This is a way of measuring the potential risks for each species around the Project.
Terrain / Soils / Geology	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How many kilometres of new channel realignment will be developed? 2) How will you know if you build the channel realignments in an area where the rock is high in sulphur?	There will be about 6 km of new channel realignments. As part of the Project design, we have determined where the channel realignments will go. Subsequently, we have an ongoing testing and sampling program to ensure that our realignments will only bring water into contact with rock that is also non-acid generating.
Terrain / Soils / Geology	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Why are there a handful of samples (from the geochemistry study) that show low levels of sulphur?	For the most part the geology is consistent. Especially in comparison to other mines, there is very low levels of sulphur in the rock. Additionally, there is a fair amount of carbonate, so we are very positive about how little acid has the potential to be generated.
Vegetation & Plant Communities	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) We anticipate our Traditional Knowledge information will be able to provide some information about where exactly specific vegetation communities grow.	Thank you for comment.
Water Resources / Quality	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How many kilometres of new channel realignment will be developed? 2) How will you know if you build the channel realignments in an area where the rock is high in sulphur?	There will be about 6 km of new channel realignments. As part of the Project design, we have determined where the channel realignments will go. Subsequently, we have an ongoing testing and sampling program to ensure that our realignments will only bring water into contact with rock that is also non-acid generating.
Water Resources / Quality	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) It is IAMGOLD's understanding that all elevated levels of elements in the water are a result of purely natural sources.	Yes, based on our assessment, this is our understanding.

Table D-9c: Comments and Responses - Métis Nation of Ontario

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Wildlife	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) In the forestry industry there is a requirement to leave a buffer zone around any raptors nests. Do those same requirements apply to the mining industry? 2) What policies will be in place, if any, when or if, animals invade the Project site? 3) When you refer to 'suitable habitat' what are describing, quality or quantity?	Given the Project design, we will be required to remove the eagles nest. However, there is plenty of other suitable habitat for raptor nesting in the Project area. There will be policies in place to either avoid/stop work in the area. We will also provide mandatory staff training to ensure that they are aware of the Project's policies and procedures around wildlife. We will also follow MNR reporting requirements. Further, we have set a policy that none of our staff will be allowed to hunt or fish on-site. We would also stop blasting if any large animals were around. We assess for 'suitable habitat' by assessing the cumulative effects – we look to see after the Project effects, if there is still enough habitat for population maintenance and growth.
Wildlife	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What are you referring to when you use the term 'risk-based' reference value?	This is a way of measuring the potential risks for each species around the Project.
Human Environment							
Archaeology and Heritage	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) In the archaeological assessment, was there any distinction made between Métis and First Nation pre-contact archaeological sites?	We can ask the consultant who conducted the study for further details on this.
Indigenous Rights and Title	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The duty to consult is primarily required in the environmental process - whereas once a company moves into the permitting phase, it is much more about monitoring impacts to Métis rights - so that is why the Métis are so concerned about identifying our rights.	IAMGOLD understands consultation as an ongoing process, both within the timeline of the process, as well as outside of the (pending) approval of the environmental assessment.
Indigenous Traditional Knowledge	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the timeline to provide Traditional Knowledge into the environmental assessment (EA)? The MNO needs to make sure that traditional knowledge is incorporated into the EA.	Since IAMGOLD has been engaging with the MNO, we have offered support and recommended the immediate development of a Traditional Knowledge and Landuse Study (TKLS) so that the information could be captured in the EA. Following this meeting, IAMGOLD provided a final cut-off date of 2014-09-02 for the MNO to submit their final TKLS to IAMGOLD for incorporation into the final EA report. IAMGOLD has also noted that they will consider the importance of the MNO knowledge both inside and outside of the EA process.

Table D-9c: Comments and Responses - Métis Nation of Ontario

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Indigenous Traditional Knowledge	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) We anticipate our Traditional Knowledge information will be able to provide some information about where exactly specific vegetation communities grow.	Thank you for comment.
Indigenous Traditional Knowledge	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Currently your Environmental Impact Study is void of descriptions of any impact to the Métis and suggest there are no residual effects, but IAMGOLD does not know the impacts to the Métis. Until we can identify impacts, we need to assume that these impacts are significant.	We are keen to incorporate the Métis Traditional Knowledge information into the environmental assessment if the information is received in a timely manner. As we have mentioned over the past year or so, the sooner we can receive this information from you, the better we will have an idea of potential effects to Métis members moving forward. IAMGOLD does not agree that without Métis TK information, that we can conclude that the effects on Métis people as significant is a valid assumption. We have considered impacts on Aboriginal peoples (First Nation and Métis) within our EA. Certainly if the TK study provides information about the use of the Project area that we are not aware of it will be given the appropriate level of consideration.
Methodology and Process							
Environmental Assessment	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Can you please explain where IAMGOLD is at in terms of final approvals for the environmental assessment? When will you submit the final Environmental Impact Statement (EIS)?	The EIS was accepted by the Canadian Environmental Assessment Agency (following a conformity review by the Agency) on 2014-05-13. Provincially, the same document is referred to as the Environmental Assessment Report.
Regulatory	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the role of other Federal authorities in the environmental assessment process? 2) We would like to see a list of potential permits that will need to be obtained by IAMGOLD in the future and what government authorities are involved in the decision-making around those permits.	Outside of the Canadian Environmental Assessment Agency, other agencies will advise on environmental assessment (EA) decisions throughout the Environmental Impact Statement comment period, and then later will work on permits with IAMGOLD. During the EA process, the Agency will act as the lead regulatory agency. IAMGOLD will provide a list of potential permits and the associated regulatory agencies who issue these permits. The list of other environmental permits for the Project can be found in Chapter 2, Tables 2-1 and 2-2.

Table D-9c: Comments and Responses - Métis Nation of Ontario

Risks and Mitigation							
Other	464	Meeting	06/27/2014	IAMGOLD met with the Métis Nation of Ontario (MNO) - Region 3 Consultation Committee to provide them with an overview of the Project, an update on the status of the Project within the environmental assessment process and a summary of the findings.	Canadian Environmental Assessment Agency, Environment Canada, Métis Nation of Ontario, Northern Lights Métis Council, Ontario Ministry of the Environment, Temiskaming Métis Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) In the forestry industry there is a requirement to leave a buffer zone around any raptors nests. Do those same requirements apply to the mining industry? 2) What policies will be in place, if any, when or if, animals invade the Project site? 3) When you refer to 'suitable habitat' what are describing, quality or quantity?	Given the Project design, we will be required to remove the eagles nest. However, there is plenty of other suitable habitat for raptor nesting in the Project area. There will be policies in place to either avoid/stop work in the area. We will also provide mandatory staff training to ensure that they are aware of the Project's policies and procedures around wildlife. We will also follow MNR reporting requirements. Further, we have set a policy that none of our staff will be allowed to hunt or fish on-site. We would also stop blasting if any large animals were around. We assess for 'suitable habitat' by assessing the cumulative effects – we look to see after the Project effects, if there is still enough habitat for population maintenance and growth.

Table D-9c: Comments and Responses - Algonquin Anishinabeg Nation Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Pre-EA Preparation (prior to January 14, 2014)							
Human Environment							
Indigenous Rights and Title	6	Letter	09/13/2012	The Algonquin Anishinabeg Nation Tribal Council (AANTC) sent IAMGOLD a letter indicated that the Côté Gold Project operates in territory belonging to the people of Algonquin Anishinabeg Nation and that IAMGOLD has an obligation to consult and accommodate Aboriginals. AANTC invited IAMGOLD to contact them to arrange to meet and discuss how to work closely and to set up a protocol agreement.	Algonquin Anishinabeg Nation Tribal Council, IAMGOLD Corporation	1) AANTC sent IAMGOLD a letter indicated that the CGP operates in territory belonging to the people of Algonquin and that IAMGOLD has an obligation to consult and accommodate Aboriginals. AANTC invited IAMGOLD to contact them to arrange to meet and discuss how to work closely and to set up a protocol agreement. 2) IAMGOLD has attempted to contact AANTC on October 18, 2012 (left contact details EA, requested call back), October 19, 2012 (requested call back), October 24, 2012 (found out she is in another community all this week, got email and cell phone number), and October 24, 2012 (out of service area) by phone. After no response IAMGOLD sent an email and is awaiting a response.	IAMGOLD continued to attempt to contact AANTC until they were successful. IAMGOLD has now engaged the AANTC in dialogue.
Indigenous Rights and Title	127	Phone Call	04/10/2013	IAMGOLD spoke with the Algonquin Anishinabeg Nation Tribal Council (AANTC) who stated that there was agreement amongst the 7 community Chiefs' of AANTC that they were not going to make an assertion on the Côté Gold Project. AANTC provided IAMGOLD with the Wahgoshig First Nation and Abitibiwinni Band Council contact information to follow up and confirm their non-participation status. IAMGOLD committed to following up with AANTC with a letter confirming the details of the conversation.	Algonquin Anishinabeg Nation Tribal Council, IAMGOLD Corporation	1) AANTC identified that there was agreement amongst the 7 community Chiefs' of AANTC that they were not going to make an assertion on the Côté Gold Project. AANTC provided IAMGOLD with the Wahgoshig First Nation and Abitibiwinni Band Council contact information to follow up and confirm their non-participation status.	IAMGOLD committed to following up with AANTC with a letter confirming the details of the conversation.
Methodology and Process							
Stakeholder Engagement	6	Letter	09/13/2012	The Algonquin Anishinabeg Nation Tribal Council (AANTC) sent IAMGOLD a letter indicated that the Côté Gold Project operates in territory belonging to the people of Algonquin Anishinabeg Nation and that IAMGOLD has an obligation to consult and accommodate Aboriginals. AANTC invited IAMGOLD to contact them to arrange to meet and discuss how to work closely and to set up a protocol agreement.	Algonquin Anishinabeg Nation Tribal Council, IAMGOLD Corporation	1) AANTC sent IAMGOLD a letter indicated that the CGP operates in territory belonging to the people of Algonquin and that IAMGOLD has an obligation to consult and accommodate Aboriginals. AANTC invited IAMGOLD to contact them to arrange to meet and discuss how to work closely and to set up a protocol agreement. 2) IAMGOLD has attempted to contact AANTC on October 18, 2012 (left contact details EA, requested call back), October 19, 2012 (requested call back), October 24, 2012 (found out she is in another community all this week, got email and cell phone number), and October 24, 2012 (out of service area) by phone. After no response IAMGOLD sent an email and is awaiting a response.	IAMGOLD continued to attempt to contact AANTC until they were successful. IAMGOLD has now engaged the AANTC in dialogue.
During EA Preparation (January 15, 2014 to September 30, 2014)							
No comments were received during this period.							

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Pre-EA Preparation (prior to January 14, 2014)							
Biophysical Environment							
Ecological Integrity & Biodiversity	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How successful are man-made channel realignments in creating habitat?	These have been designed and successfully operated in Ontario. IAMGOLD will provide more information about the practice in future meetings.
Ecological Integrity & Biodiversity	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The Project now includes a lot of realignments, which might not work properly. The flow scheme used for the Project Description seems preferable.	Noted, the changes to the realignment plan were developed to accommodate the reduction in MRA areas to one location.
Ecological Integrity & Biodiversity	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the success rate of realignments?	These have been designed and successfully established in Southern Ontario and throughout the north. One example is the large realignments required for the Victor diamond mine.
Fisheries & Aquatic Resources	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will the fish be transferred from Côté Lake? 2) When you move the lake and change the water flow, will there be monitoring of the fish?	The fish will be transferred in a staged draw down process. The fish population is comprised of small pike, whitefish, and white sucker. In the first baseline study performed by AMEC in the fall of 2010 pickerel were captured as part of the investigation. A follow up study, performed to identify fish populations in the summer of 2012 by Minnow Environmental, captured no walleye species. This suggests that pickerel use Côté Lake as a travel corridor because the lake is shallow. We will recreate the habitat and transfer breeding populations of fish to the new lake location, which has not yet been determined. The lake is about the same size as the one at Detour Gold. Yes there will be monitoring of the fish to ensure the population survives and there will be monitoring ongoing throughout the life of the project and beyond closure.
Fisheries & Aquatic Resources	71	Meeting	02/20/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Individual asked what kind of fish are in Côté Lake.	IAMGOLD answered White fish, Sucker and Pike.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Fisheries & Aquatic Resources	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is IAMGOLD investigating the effects of blasting on fish?	Yes, the results of this investigation will be presented in the EA.
Fisheries & Aquatic Resources	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) When you rescue fish, won't they just take space from other fish?	Lakes typically have the capacity to accommodate additional fish.
Fisheries & Aquatic Resources	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Why not just fish and consume the fish from Côté Lake, rather than relocate?	The common mitigation measure to reduce the impact on fisheries is to capture and relocate them within the system. IAMGOLD will gladly discuss alternative options.
Fisheries & Aquatic Resources	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Moving fish from Côté Lake may bring diseases to other lakes.	IAMGOLD will consider this concern. Note that the plan is to relocate fish within the same watershed.
Hydrogeology	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will Unnamed Lakes fill with sediments from the Bagsverd Creek realignment?	This concern will be addressed in the EA.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Noise & Vibration	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Can you provide ground vibration isopleths?	Vibrations are predicted using a straight forward equation. Presenting isopleths may not be a suitable measure to present the results.
Other	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do you plan for high rainfall and snow amounts?	We are building to the 100 year standard. Weather events are becoming more frequent.
Water Resources / Quality	69	Open House	02/13/2013	IAMGOLD hosted an open house session for the Flying Post First Nation (FPFN) community where they presented an overview of the draft Project Description using a PowerPoint presentation and poster boards. The presentation was attended by 33 community members.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will creeks run! From A-B-C if you remove the lake.	Detailed plans are being developed to realign surface waters such that new habitat will be created and creeks will continue to flow.
Water Resources / Quality	71	Meeting	02/20/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Which way does the water flow from the site?	Water flows to the north.
Water Resources / Quality	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) BHFN representative commented that he would like to see water recycled and reused.	The Project will have water collection facilities for runoff and seepage and water from the TMF will be recycled as much as possible.
Water Resources / Quality	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The fact that part of Three Duck Lakes will be drained is new to us.	The only change to the Project is the movement of the dam to the east. Due to the proximity of the pit, the upper west arm of Three Duck Lake has always shown to be dammed and drained.
Water Resources / Quality	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) We don't only care about draining of Côté Lake but also effects on other lakes and streams.	Effects on other surface waters will be assessed in the EA.
Water Resources / Quality	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Would like to know what the key issues are with discharge quality.	Cyanide and ammonia are considered the key issues at the moment. More detail will be provided in the EA report.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Wildlife	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will Project staff be allowed to hunt and fish around the site?	How exactly this will be managed has not been fully decided yet. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed.
Wildlife	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do you know where all the beavers and muskrats are?	Intensive wildlife biological baseline data has been collected. The baseline reports will be released shortly.
Document Reviews							
Official Information Requests	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) IAMGOLD has committed to provide further information to Wabun Tribal Council in order to better assess power supply and routing. See additional comments above in relation to 4. Financial Thresholds and 6. Mine Production Rates. No changes to the Proposed ToR are requested.	Thank you for your comment. IAMGOLD will provide information to Wabun Tribal Council related to power supply and routing, as requested.
Technical Comments	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Code of Practice indicates that "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected." We have reviewed the terms of reference from that perspective.In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario Environmental Assessment Act" It is our understanding, therefore, that a "focussed EA" as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows: Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment.	Thank you for your comment. Additional, to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16). Table 5-7 of the Proposed ToR outlines the rationale for excluding some of the alternatives. Additionally, text to support this is provided in Section 5.0. It should be noted that the assessment of alternatives process presented in the Proposed ToR, in addition to be compliant with the Code of Practice for the Preparation of the Terms of Reference, has been largely proposed, adjusted and vetted for this Project by the MOE and other provincial ministries. This methodology, including the screening criteria and process employed, has been used in other mining EAs in Ontario.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Technical Comments	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) Screening criteria must be developed and the screening process must be logical and traceable. And later in the Code of Practice: The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in the terms of reference for limiting the examination of alternatives. [our underlining] Our general concern is that the screening criteria and process employed in the proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.	Thank you for your comment. Additional, to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16). Table 5-7 of the Proposed ToR outlines the rationale for excluding some of the alternatives. Additionally, text to support this is provided in Section 5.0. It should be noted that the assessment of alternatives process presented in the Proposed ToR, in addition to be compliant with the Code of Practice for the Preparation of the Terms of Reference, has been largely proposed, adjusted and vetted for this Project by the MOE and other provincial ministries. This methodology, including the screening criteria and process employed, has been used in other mining EAs in Ontario.
Terms of Reference	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) Wabun Tribal Council recently received a copy of the Notice of Submission from the Ontario Ministry of the Environment (the MOE) in relation to the following document: "Côté Gold Project Provincial Individual Environmental Assessment Proposed Terms of Reference, July 2013" (the Proposed ToR). The review of the Proposed ToR was undertaken by Rick Hendriks of Camerado Energy Consulting at the request of and in consultation with Wabun Tribal Council. For brevity, comments provided below focus mainly on concerns and requests for clarification in relation to the Proposed ToR. The MOE Code of Practice (Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario) was consulted in preparing this review.	Thank you for your comment. No action is required.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return of investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself". In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily on the basis of cost-effectiveness: Mining - open pit and underground; Mine Rock and Overburden Management - Establish a temporary stockpile location...returned to put at closure; Non-hazardous waste - Incineration; Power Supply and Routing - On-site diesel generation. A review of section 5.3. Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives.	Thank you for your comment. Additional to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the Proponent's ability to implement. It should be determined by the significance of the potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice - page 16). The Code of Practice does not specifically require information of financial thresholds to be provided in the Terms of Reference. Additional explanation for screening out the identified alternatives is provided below: Mining- a combination of open pit and underground mining was screened out primarily due to the fact that developing a smaller pit combined with an underground operation is not technically suitable as the gold is finely disseminated in the ore body.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Terms of Reference	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR. We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment, or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alternative in dollars as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.	(cont'd) Additionally, it is not anticipated that the combination of open pit and underground mining would be economically feasible. This last rationale is not the primary or sole reason for its exclusion. Mine Rock and Overburden Management - Establishing a temporary stockpile location and returning the mine rock to the mined pit at closure is not a practice commonly used in Ontario. This is mainly due to the fact that moving a large amount of mine rock, in this case more than 800Mt, is uneconomical. The cost of backfilling the open pit with mine rock would be in the order of several billion dollars. Non-hazardous waste - Incineration in itself is not a costly endeavour. This practice is not acceptable from an air quality perspective, which requires costly mitigation measures to be implemented. These measures are what cause this alternative to become economically unviable. Power Supply - On-site diesel generators to support operations will result in the release of greater amount of CO2, NOx and particulate emissions than other alternatives. Additionally, it is not considered cost-effective due to the large amount of fuel required for its operation.
Terms of Reference	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has clarified that: "...if the IAMGOLD EA team rated Effects on Aboriginal and Treaty Rights as being "Unacceptable" for a particular alternative, that alternative would automatically be rated "Unacceptable" and rejected by the Company. Therefore, presenting Aboriginal and Treaty Rights as a standalone criterion will not give it more weight than if presented as an indicator." This clarification addressed the concern raised in our initial comments. No changes to the Proposed ToR are requested.	Thank you for your comment. No further action is required.
Human Environment							
Aesthetics	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Make sure the visual aesthetics assessment also includes locations other than cottages where site infrastructure could be visible.	IAMGOLD will consider if this is required based on the risk of an effect.
Aesthetics	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do visual aesthetics assessment for transmission line, where visible.	IAMGOLD will consider if this is required based on the risk of an effect.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Aesthetics	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Disagree that there will not be impacts on the visual aesthetics of Aboriginal communities.	Noted, this should have clearly indicated that the effects would not be seen on the reserve.
Indigenous Rights and Title	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use." We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the considerations of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (ie. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is one of only six broad criteria.	Thank you for your comment. IAMGOLD recognizes the importance of consultation with Aboriginal people as an integral aspect of the Project. Participation in consultation ensures an open and fair process, and strengthens the quality and credibility of the results. In a coordinated effort with the Provincial and Federal government agencies, IAMGOLD intends to prepare one knowledge base about the current environment and the potential effects of the Project on various aspects of the environment. This knowledge base will be used to populate the required environmental assessments (EAs), including the Assessment of Alternatives. The method that will be used in the EA to assess alternatives looks at a range of Performance Objectives/Criteria. Under each of these objectives/criteria there are a number of relevant indicators which must be evaluated - Effects on Aboriginal and Treaty Rights is one such indicator. As part of the EA, the IAMGOLD EA team will evaluate each indicator, including Effects on Aboriginal and Treaty Rights, and give each of them one of three ratings: Preferred, Acceptable or Unacceptable. If any objective/criterion is rated as 'Unacceptable', as determined by the IAMGOLD EA team, the the alternative as a whole is automatically rated 'Unacceptable' and therefore rejected.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Indigenous Rights and Title	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) As the Proponent and Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up large areas of lands and waters, and would involve lasting, and in some instances, permanent changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accommodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of the First Nations. Thus the Proposed Terms of Reference should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.	(cont'd) For clarity, and by way of example, if the IAMGOLD EA team rated Effects on Aboriginal and Treaty Rights as being 'Unacceptable' for a particular alternative, that alternative would automatically be rated 'Unacceptable' and rejected by the Company. Therefore presenting Aboriginal and Treaty Rights as a standalone criterion will not give it more weight than if presented as an indicator. This methodology of assessing impacts has been provided by the Ontario Ministry of Environment and is used in several other EAs for mining projects. Note also that 5 of the 15 human environment criteria are directly related to Aboriginal peoples, their lands, rights, culture and other interests. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the alternatives assessment.
Indigenous Traditional Knowledge	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to the Detour Gold mine who extracted 23 million ounces.
Indigenous Traditional Knowledge	120	E-mail	03/19/2013	On 2013-03-18, Wabun Tribal Council (WTC) replied to AMEC concerning the TK/TLU questionnaire. WTC shared that it will conduct their own study and ensure it meets IAMGOLD/AMEC's needs for the Environmental Assessment. AMEC responded to WTC on 2013-03-19 supporting the approach and suggested a meeting take place to discuss the questionnaire and other study parameters.	Wabun Tribal Council, AMEC Environment & Infrastructure	1) WTC has reviewed the document and would like to use it as a template to formulate their own. WTC would also like to use their own consultant to both formulate and conduct the study.	IAMGOLD would like WTC to return the agreement so that AMEC can review it and get it finalized. AMEC fully supports the approach the WTC have suggested. AMEC would like to set up a meeting in the next few weeks to discuss the questionnaire and other study parameters.
Land and Resource Use	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The cross-country transmission line alignment will create access for hunting that did not exist before and might therefore bring in more 'external' hunters.	This comment will be addressed in the EA report.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Land and Resource Use	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will Project staff be allowed to hunt and fish around the site?	How exactly this will be managed has not been fully decided yet. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed.
Land and Resource Use	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will mine staff be allowed to go fishing and hunting? How will that be managed?	How exactly this will be managed is not fully decided. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed in consultation with the community and agencies.
Land and Resource Use	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will IAMGOLD control access to the lakes around the site?	A plan will be developed to maintain access to the extent possible. There are safety issues that will need to be considered.
Socio-Economic	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Meeting participants discussed current business and employment of Aboriginal-owned businesses and MFN/FPFN community members at the Project site. WTC requests from IAMGOLD to list business opportunities. WTC also expressed that they want opportunities provided through the IBA that will help First Nation members to be self-sufficient.	IAMGOLD is actively discussing job opportunities and procurement within the IBA negotiations. Discussions are undertaken with the goal of fostering self-sufficiency.
Socio-Economic	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Participants discussed possible job opportunities. WTC indicated that they and MFN are looking for major industry partners for government funding by end of December 2012. 2) IAMGOLD offered support for First Nations jobs within the Côté Gold Project and will send more information about positions needed.	IAMGOLD is engaging in ongoing dialogue regarding information on jobs.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) Of the alternatives listed for consideration, we note that the mine production rates (in other words the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternatives analyses, potentially including alternatives related to water management and power supply and routing.	Thank you for your comment. The Pre-Feasibility Study currently underway takes into account the financial aspects of the Project. IAMGOLD understands that a longer operations phase leads to longer periods of employment. If the Project's operation phase is extended, this would lead to a reduction in the workforce required for operation. This would change the circumstances applicable to the socio-economic benefits, but not make them better. The duration of the mine life is determined by multiple factors which include the global market, the return on investment, the availability and cost of the workforce and the proponent's operational and economic targets. For this low-grade Project the throughput rate was benchmarked against other low grade projects such as Canadian Malartic and Detour Gold, which have comparable production rates. Benchmarking is a method commonly used to compare the feasibility of future projects with projects that are already in production or that are more advanced from an engineering standpoint.
Socio-Economic	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	(see above)	(cont'd) The Project, as currently defined in the Proposed ToR, has been optimized for economic viability. Significant Project life extensions would render the Project uneconomical. Therefore, an extension in mine life is not a viable alternative to be assessed in the EA. Note that this issue is related to the chosen transmission line alternative (i.e. 115kV vs 230kV). As such this issue will be addressed in more detail in the response to comment #9 below. IAMGOLD will sign a non-disclosure agreement relating to the disclosure of detailed Project information, which is intended to support the parties' decision on an Impact Benefit Agreement.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) Typically, mining operations in this region of Ontario draw employees from a variety of populations, including both men and women, Aboriginal and non-Aboriginals, and local, regional, provincial, national and foreign workers. Rates of unemployment continue to remain relatively high in the region and Province compared to historic levels, suggesting the need for consideration of pro-active approaches to employment at the Proposed Project. While the ultimate make-up of the proposed Project labour force is the product of a variety of factors, including market conditions and skills requirements, proponents have the ability to significantly influence the make-up of the labour force through bid evaluation criteria in requests for proposal and investments in training programs for specific populations, among other means. We believe that it is in the interest of the Proponent to transparently assess its options for the Project labour supply during the environmental assessment, particularly in relation to the locational source of its labour force (i.e. local, provincial or foreign). We recommend that labour supply be assessed as an alternative in the environmental assessment. We are currently in discussion with IAMGOLD about the labour supply issue and see value in bringing the work and discussions we are undertaking into the EA process, to avoid duplication of efforts.	Thank you for your comment. IAMGOLD's goal for labour supply is to use equal opportunity employment practices. The Project will require a certain amount of skilled workforce, which may need to be obtained from Timmins or Sudbury. Labour effects will be assessed as part of the socio-economic effects assessments for the Project. Once the effects are understood, the most appropriate options for addressing labour shortages (if any) will be determined. Information from the labour and training strategy that IAMGOLD and Wabun Tribal Council are working on together will inform these options. It should be noted that labour supply is part of the ongoing IBA discussions.
Socio-Economic	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) Of the alternatives listed for consideration, we note that the mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).	Thank you for your comment. The Pre-Feasibility Study currently underway takes into account the financial aspects of the Project. IAMGOLD understands that a longer operations phase leads to longer periods of employment. If the Project's operation phase is extended, this would lead to a reduction in the workforce required for operationThis would change the circumstances applicable to the socio-economic benefits, but may not make them better. The duration of the mine life is determined by multiple factors which include the global market, the return on investment, the availability and cost of workforce and the proponent's operational and economic targets. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	(see above)	(cont'd) The Project, as currently defined in the Proposed ToR, has been optimized for economic viability. Significant Project life extensions would render the Project uneconomical. Therefore, an extension in mine life is not a viable alternative to be assessed in the EA. Note that this issue is related to the chosen transmission line alternative (i.e. 115 kV vs 230 kV). As such this issue will be addressed in more detail in the reponse to comment #9 below. IAMGOLD will sign a non-disclosure agreement relating to the disclosure of detailed Project information, which is intended to support the parties' discussions on an Impact Benefit Agreement.
Socio-Economic	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has indicated that labour effects will be assessed as part of the socio-economic effects assessment for the Project and that, once the effects are understood, the most appropriate options for addressing labour shortages (if any) will be determined. No changes to the Proposed ToR are requested.	Thank you for your comment. No further action is required.
Socio-Economic	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has clarified that only Highway 144 will be used for Project-related transportation and that an assessment of the effects on Highway 144 will be presented in the EA. No changes to the Proposed ToR are requested.	Thank you for your comment. No further action is required.
Socio-Economic	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Does IAMGOLD know which groups of the population will benefit and which will be affected negatively by the Project?	These effects will be provided in the EA.
Socio-Economic	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will pressure on local infrastructure increase or decrease?	It is expected that pressure will increase on some infrastructure. The EA will provide a detailed assessment.
Socio-Economic	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) All mining companies promise preferential hiring of First Nation staff, but after the Impact Benefit Agreement is signed they do not keep their promises. IAMGOLD needs to implement a First Nation hiring system that works.	Thank you for comment. This will be considered in the development of the Project's human resource policies.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Socio-Economic	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How much will traffic levels change on Highway 144?	The EA includes an assessment of the changes in traffic levels.
Socio-Economic	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Make sure that the Project really hires First Nation staff. We never see First Nation people sitting in management positions.	Hiring practices and training objectives will be considered within the IBA.
Methodology and Process							
Baseline Studies	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The proposed ToR indicates the following: The cumulative effects analysis presented in the EA will therefore be restricted to the analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that "will be carried out"; and to those projects of significance within the broader regional context, which may overlap the undertaking in regards to type of effect, time and space. In proposing this approach, the Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law. The recently published CEA Operational Policy Statement states that: Information on the environmental effects of past or existing physical activities may be helpful: If the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project; If information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or If an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.	Thank you for your comment. The cumulative effects assessment is not a MOE requirement under the Code of Practice for the Preparation of an Environmental Assessment. Cumulative effects assessment has been included as it is a requirement under the Federal EA Process. There is no requirement by the MOE with regards to "pre-development baseline".The CEA Operational Policy Statement issued in May 2013 states the following with regards to the cumulative effects assessment and the need for "pre-development baseline". Present-day environmental conditions reflect the cumulative environmental effects of many past or existing physical activities may be helpful: f the effects of past or existing physical activities on a specific VC will help predictf information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; orif an existing physical activity will be decommissioned in the future and thisdecommissioning would affect the future condition of a specific VC.The baseline studies carried out for the Project reflect the cumulative environmental effects of past and ongoing physical activities.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Baseline Studies	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) The "gold standard" in cumulative environmental effects assessment involves the determination of a pre-development baseline. Such a baseline often provides the most "help" in predicting the environmental effects of a designated project and 'assistance in identifying appropriate mitigation measures. While there are sometimes challenges to creating a pre-developed baseline in terms of the availability of suitable pre-development data, this is not the case. While there will likely be some uncertainty associated with pre-development conditions the same can be said for the existing project baseline due to the inherent limitations in data gathering. The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations.The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. However, a pre-development baseline allows the characterization of what has been lost or gained as a result of the effects of prior projects and activities. This is fundamental, for example, to determine the remaining potential for a region to support the exercise of Aboriginal land-based rights protected in Treaty 9.	(cont'd) This baseline was carried out over various years. It is not believed that a description of past environmental conditions will help in the understanding of cumulative environmental effects, as identified in the CEA Operational Policy Statement. The intent of the cumulative environmental assessment is consider the overall effect of the planned projects on the environment based on the existing baseline conditions. It should be noted that historic use of the area will be documented in the archaeology baseline. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use Information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the cumulative effects assessment. IAMGOLD understands the importance that Aboriginal people give to the land and resources inthe vicinity of the Project and will work with Aboriginal communities to determine what mitigation and monitoring measures are preferred. After Project closure is completed, the area occupied by the Project will be rehabilitated.The cumulative effects assessment will be presented in the EA.
Baseline Studies	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) By providing insight into what has been lost, a pre-development baseline sheds light on the importance of what remains intact (e.g. in terms of ecosystem functions, habitat, preferred species populations, biodiversity, cultural landscapes, etc.) and what still remains possible (e.g. hunting, fishing, gathering, quiet enjoyment of the land, etc.). The loss of fish and wildlife habitat and harvesting opportunities associated with the proposed Project take on greater importance as a result of what has already been lost or taken up by other projects and activates.The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects for the potential and established Aboriginal and treaty rights and related interest of Aboriginal groups. Further, the Proponent must be required to consult with Aboriginal groups on the available information and seek to augment this information with available traditional knowledge concerning the historical context.	(cont'd) As part of this assessment IAMGOLD will look at the combined footprint of this Project and other reasonable foreseeable projects within the local and/or regional study area.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Baseline Studies	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) Additionally, in describing the "existing project baseline", the Proposed ToR must give consideration not only to a snapshot of current conditions, but must also include trend or comparative analysis, as appropriate to the available data, to provide insight into whether conditions are becoming more or less favourable in relation to the environmental components or indicators under study (e.g. are species populations rising, stable or falling?)	(see above)
Baseline Studies	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do you know where all the beavers and muskrats are?	Intensive wildlife biological baseline data has been collected. The baseline reports will be released shortly.
Baseline Studies	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How many water samples have been taken to date?	Water sampling has been carried out for several years on a regular basis and at a multitude of locations. All baseline data will be released shortly.
Baseline Studies	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Why is phosphorus elevated in baseline water quality?	IAMGOLD does not have that information right now. This will be provided as part of the EA.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Effects Assessment	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return of investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself". In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily on the basis of cost-effectiveness: Mining - open pit and underground; Mine Rock and Overburden Management - Establish a temporary stockpile location...returned to put at closure; Non-hazardous waste - Incineration; Power Supply and Routing - On-site diesel generation. A review of section 5.3. Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives.	Thank you for your comment. Additional to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the Proponent's ability to implement. It should be determined by the significance of the potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice - page 16). The Code of Practice does not specifically require information of financial thresholds to be provided in the Terms of Reference. Additional explanation for screening out the identified alternatives is provided below: Mining- a combination of open pit and underground mining was screened out primarily due to the fact that developing a smaller pit combined with an underground operation is not technically suitable as the gold is finely disseminated in the ore body. Additionally, it is not anticipated that the combination of open pit and underground mining would be economically feasible. This last rationale is not the primary or sole reason for its exclusion. Mine Rock and Overburden Management - Establishing a temporary stockpile location and returning the mine rock to the mined pit at closure is not a practice commonly used in Ontario.
Effects Assessment	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR. We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment, or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alternative in dollars as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.	(cont'd) This is mainly due to the fact that moving a large amount of mine rock, in this case more than 800Mt, is uneconomical. The cost of backfilling the open pit with mine rock would be in the order of several billion dollars. Non-hazardous waste - Incineration in itself is not a costly endeavour. This practice is not acceptable from an air quality perspective, which requires costly mitigation measures to be implemented. These measures are what cause this alternative to become economically unviable. Power Supply - On-site diesel generators to support operations will result in the release of greater amount of CO2, NOx and particulate emissions than other alternatives. Additionally, it is not considered cost-effective due to the large amount of fuel required for its operation.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Effects Assessment	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1. indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. We recommend that an assessment of the off-site road transportation route alternatives, including the location of key staging areas (e.g. whether in Sudbury, Timmins or elsewhere) be conducted as part of the environmental assessment.	Thank you for your comment. Highway 144 will be used to transport material to the site. An assessment of the effects of the Project on Highway traffic will be presented in the EA. At the present time no highway modifications are planned or expected to be required to accommodate Project traffic.
Effects Assessment	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) Of the alternatives listed for consideration, we note that the mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).	Thank you for your comment. The Pre-Feasibility Study currently underway takes into account the financial aspects of the Project. IAMGOLD understands that a longer operations phase leads to longer periods of employment. If the Project's operation phase is extended, this would lead to a reduction in the workforce required for operationThis would change the circumstances applicable to the socio-economic benefits, but may not make them better. The duration of the mine life is determined by multiple factors which include the global market, the return on investment, the availability and cost of workforce and the proponent's operational and economic targets. For this low-grade Project the throughput rate was benchmarked against other low grade projects such as Canadian Malartic and Detour Gold, which have comparable production rates. Benchmarking is a method commonly used to compare the feasibility of future projects with projects that are already in production or that are more advanced from an engineering standpoint.
Effects Assessment	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	(see above)	(cont'd) The Project, as currently defined in the Proposed ToR, has been optimized for economic viability. Significant Project life extensions would render the Project uneconomical. Therefore, an extension in mine life is not a viable alternative to be assessed in the EA. Note that this issue is related to the chosen transmission line alternative (i.e. 115 kV vs 230 kV). As such this issue will be addressed in more detail in the reponse to comment #9 below. IAMGOLD will sign a non-disclosure agreement relating to the disclosure of detailed Project information, which is intended to support the parties' discussions on an Impact Benefit Agreement.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Effects Assessment	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has indicated that labour effects will be assessed as part of the socio-economic effects assessment for the Project and that, once the effects are understood, the most appropriate options for addressing labour shortages (if any) will be determined. No changes to the Proposed ToR are requested.	Thank you for your comment. No further action is required.
Effects Assessment	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has clarified that only Highway 144 will be used for Project-related transportation and that an assessment of the effects on Highway 144 will be presented in the EA. No changes to the Proposed ToR are requested.	Thank you for your comment. No further action is required.
Effects Assessment	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has indicated that a cumulative effects assessment is not a MOE requirement under the Code of Practice for the Environmental Assessment. Consideration of cumulative effects is a requirement of CEAA 2012, and is addressed in section 12.1.2 of the EIS Guidelines issued by the Canadian Environmental Assessment Agency for the Proposed Project. Wabun Tribal Council does not share the Proponent's perspective that a cumulative effects assessment can be limited to a consideration of the residual effects of the proposed Project in combination with only reasonably foreseeable future projects. Past projects and activities must also be considered as part of the federal environmental assessment pursuant to CEAA 2012 and the EIS Guidelines. No changes to the Proposed ToR are required.	Thank you for your comment. No further action is required.
Environmental Assessment	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Code of Practice indicates that "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected". We have reviewed the ToR from that perspective. In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario Environmental Assessment Act". It is our understanding, therefore, that a focused EA as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows: Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment. Screening criteria must be logical and traceable.	Thank you for your comment. Additional, to the sections of the Code of Practice identified, the following guidance must be taken into consideration. "The range of alternatives that should be considered should address the problem or opportunity and be within the scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16). Table 5-7 of the Proposed ToR outlines the rationale for excluding some of the alternatives. Additionally, text to support this is provided in Section 5.0. It should be noted that the assessment of alternatives process presented in the Proposed ToR, in addition to be compliant with the Code of Practice for the Preparation of the Terms of Reference, has largely been proposed, adjusted and vetted for this Project by the MOE and other provincial ministries. This methodology, including the screening criteria and process employed, has been used in other mining EAs in Ontario.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Environmental Assessment	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) And later in the Code of Practice: The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in terms of reference for limiting the examination of alternatives. Our general concern is that the screening criteria and process employed in the proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.	(see above)
Environmental Assessment	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use." We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the considerations of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (i.e. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is only one of six broad criteria.	Thank you for your comment. IAMGOLD recognizes the importance of consultation with Aboriginal people as an integral apsect of the Project. Participation in consultation ensures an open and fair process, and strengthens the quality and credibility of the results. In a coordinated effort with the Provincial and Federal government agencies, IAMGOLD intends to prepare one knowledge base about the current environment and potential effects of the Project on various aspects of the environment. This knowledge base will be used to populate the required environmental assessments (EAs), including the Assessment of Alternatives. The method that will be used in the EA to assess the alternatives looks at a range of Performance Objectives/Criteria. Under each of these objectives/criteria there are a number of relevant indicators which must be evaluated - Effects on Aboriginal and Treaty Rights is one such indicator. As part of the EA, the IAMGOLD EA team will evaluate each indicator, including Effects on Aboriginal and Treaty rights, and give each of them one of three ratings: Preferred, Acceptable, Unacceptable.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Environmental Assessment	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) As the Proponent and Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up of large areas of land and waters, and would involve lasting, and in some instances, permanant changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accomodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of First Nations. Thus the Proposed ToR should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.	(cont'd) If any objective/criterion is rated 'unacceptable' as determined by the IAMGOLD EA team, then the alternative as a whole is automatically rated 'Unacceptable' for a particular alternative, that alternative would be rated 'Unacceptable' and rejected by the Company. Therefore presenting Aboriginal and Treaty Rights as standalone criterion will not give it more weight than if presented as an indicator. This methodology of assessing impacts has been provided by the Ontario Ministry of the Environment and is used in several other EAs for mining projects. Note also that 5 of the 15 human environment criteria are directly related to Aboriginal peoples, their lands, rights, culture and other interests. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the alternatives assessment.
Environmental Assessment	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proposed ToR suggests that the Proponent is considering options for worker accomodations in an on-site construction camp or in an off-site residence. Under either option, work schedule alternatives will need to be considered, including the length of shifts and the length of rotations. We recommend that the Proposed ToR include criteria for an assessment of work schedules during the environmental assessment.	Thank you for your comment. The length of shifts and the length of work rotations will not be influenced by the worker's accomodation alternatives. These factors are considered in the Project planning phase and are not aspects covered under the environmental assessment process. Work rotations will be factored into the environmental assessment in terms of its potential effect on social conditions, and the ability to exercise traditional or cultural activities. Appropriate work schedules will be determined further in the Project planning, however, feedback at this early stage is welcomed. It should be noted that work schedules are part of the ongoing IBA discussions.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Environmental Assessment	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Code of Practice indicates that "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected." We have reviewed the terms of reference from that perspective. In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario Environmental Assessment Act" It is our understanding, therefore, that a "focussed EA" as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows: Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment. Screening criteria must be developed and the screening process must be logical and traceable.	Thank you for your comment. Additional, to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16). Table 5-7 of the Proposed ToR outlines the rationale for excluding some of the alternatives. Additionally, text to support this is provided in Section 5.0. It should be noted that the assessment of alternatives process presented in the Proposed ToR, in addition to be compliant with the Code of Practice for the Preparation of the Terms of Reference, has been largely proposed, adjusted and vetted for this Project by the MOE and other provincial ministries. This methodology, including the screening criteria and process employed, has been used in other mining EAs in Ontario.
Environmental Assessment	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) And later in the Code of Practice: The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in the terms of reference for limiting the examination of alternatives. [our underlining] Our general concern is that the screening criteria and process employed in the proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.	(see above)
Environmental Assessment	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has clarified that: "...if the IAMGOLD EA team rated Effects on Aboriginal and Treaty Rights as being "Unacceptable" for a particular alternative, that alternative would automatically be rated "Unacceptable" and rejected by the Company. Therefore, presenting Aboriginal and Treaty Rights as a standalone criterion will not give it more weight than if presented as an indicator." This clarification addressed the concern raised in our initial comments. No changes to the Proposed ToR are requested.	Thank you for your comment. No further action is required.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Environmental Assessment	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has indicated that work schedules will be addressed during the planning phase of the environmental assessment. No changes to the Proposed ToR are requested.	Thank you for your comment. No further action is required.
Environmental Assessment	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will there be an issues tracking table included in the Environmental Assessment (EA)?	The EA report will include an issues tracking table.
Regulatory	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) There has been ammonia in the water from the blasting and the First Nations had to lobby the government to shut the Liberty Mine down. Companies don't live up to the standards. Liberty Mines had management issues. We don't expect IAMGOLD to be like them. We understand that it is an issue for MOE to shut down a mine. There are substantial costs to shutting them down.	Our doors are always open for site tours and inspection. Individual fines are now being levied against company employees when there are environmental violations. We will be processing on site and we will have a camp and locals working at the site.
Regulatory	71	Meeting	02/20/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) If there is a major change to the mine plan does IAMGOLD need to go through another environmental assessment (EA) process?	If there are major changes yes, but there are certain conditions that trigger the need for a full EA. For example the pit design is based on the use of haul trucks, but if an In-Pit Crushing and Conveyance (IPCC) system is used, the dimensions of the pit may change, but will not likely result in a major change that would need a new EA.
Regulatory	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) BHFN asked if IAMGOLD is doing only the minimum government standard testing, or if going above and beyond, and if doing own inspections.	IAMGOLD representative replied that the government standards that will be used for water quality, tailings and construction are very high and that testing will also be done by third party inspections. The provincial regulations were discussed, relating to water release, accountability and transparency.
Stakeholder Engagement	16	Letter	10/30/2012	IAMGOLD received Mattagami First Nation (MFN) letter of formal support and authorization for Wabun Tribal Council's (WTC) Mineral Development Advisor to conduct site visits on Mattagami traditional lands. IAMGOLD sent confirmation of receipt of letter.	Mattagami First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) IAMGOLD received MFN letter of formal support and authorization for WTC's Mineral Development Advisor to conduct site visits on Mattagami traditional lands.	IAMGOLD sent confirmation of receipt of letter.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC mentioned legislation they use to review IBAs.	IAMGOLD acknowledged this tool.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Meeting participants discussed current business and employment of Aboriginal-owned businesses and MFN/FPFN community members at the Project site. WTC requests from IAMGOLD to list business opportunities. WTC also expressed that they want opportunities provided through the IBA that will help First Nation members to be self-sufficient.	IAMGOLD is actively discussing job opportunities and procurement within the IBA negotiations. Discussions are undertaken with the goal of fostering self-sufficiency.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC sees the biggest challenge in implementing the IBA. The Mine Manager will need to know about the spirit and intent of the IBA for the hiring process. 2) WTC will provide a draft IBA to IAMGOLD by end of October 2012. WTC was requested to indicate what financial information will be required. 3) WTC suggests that the IBA negotiation team would present a position on the IBA to the community (without IAMGOLD present), followed by a meeting with IAMGOLD to present the Project and provide an opportunity for questions.	IAMGOLD will follow through on these requests as the Project is developed.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC stated that the EA would be considered the main trigger for consultation and an agreement.WTC expressed that it was important that an IBA be substantially negotiated, if not completed before the EA process was underway.	Negotiations regarding the IBA are currently well underway in advance of the EA process.
Stakeholder Engagement	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC, MFN, and FPFN request e-mail/notification 2 weeks prior to the PD being released for review. 2) WTC believes that IAMGOLD committed to providing correspondence committing IAMGOLD to the negotiation of an IBA that listed the specific topics. This would be done prior to release of the PD and included in the PD document.	IAMGOLD completed these tasks as requested.
Stakeholder Engagement	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The animation available on the IAMGOLD web site is very interesting and helps you to understand the drilling and the project.	We are in the process of developing an animation showing what the site could look like in the future – from development into production then closure.
Stakeholder Engagement	69	Open House	02/13/2013	IAMGOLD hosted an open house session for the Flying Post First Nation (FPFN) community where they presented an overview of the draft Project Description using a PowerPoint presentation and poster boards. The presentation was attended by 33 community members.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) More open houses with information about job opportunities with contractors would be great.	IAMGOLD will provide more information as it becomes available.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) Wabun Tribal Council (WTC) showed map of territories with respect to the Côté Gold site and explained that IAMGOLD must consult with BHFN because there is some potential that they may be affected by the Project. 2) BHFN asked if IAMGOLD will be speaking with BHFN should IAMGOLD decide to do something with the section of the site that is in the BHFN area. 3) WTC said that it is their intention to initiate an Impact Benefit Agreement (IBA) on behalf of BHFN if there is a good find in that west block, whereby Mattagami and Flying Post First Nations would have separate IBA's.	IAMGOLD said yes they will consult with BHFN if it is decided to do something in the section that is in the BHFN zone because it wishes to be good neighbours and transparent. IAMGOLD said that updates would be provided at least once a year and that they would receive notification of payment but that it would be at least another 1 to 2 years before IAMGOLD will know if that block's deposit is worth mining.
Stakeholder Engagement	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use." We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the considerations of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (ie. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is one of only six broad criteria.	Thank you for your comment. IAMGOLD recognizes the importance of consultation with Aboriginal people as an integral aspect of the Project. Participation in consultation ensures an open and fair process, and strengthens the quality and credibility of the results. In a coordinated effort with the Provincial and Federal government agencies, IAMGOLD intends to prepare one knowledge base about the current environment and the potential effects of the Project on various aspects of the environment. This knowledge base will be used to populate the required environmental assessments (EAs), including the Assessment of Alternatives. The method that will be used in the EA to assess alternatives looks at a range of Performance Objectives/Criteria. Under each of these objectives/criteria there are a number of relevant indicators which must be evaluated - Effects on Aboriginal and Treaty Rights is one such indicator. As part of the EA, the IAMGOLD EA team will evaluate each indicator, including Effects on Aboriginal and Treaty Rights, and give each of them one of three ratings: Preferred, Acceptable or Unacceptable.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Stakeholder Engagement	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) As the Proponent and Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up large areas of lands and waters, and would involve lasting, and in some instances, permanent changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accommodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of the First Nations. Thus the Proposed Terms of Reference should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.	(cont'd) If any objective/criterion is rated as 'Unacceptable', as determined by the IAMGOLD EA team, the the alternative as a whole is automatically rated 'Unacceptable' and therefore rejected. For clarity, and by way of example, if the IAMGOLD EA team rated Effects on Aboriginal and Treaty Rights as being 'Unacceptable' for a particular alternative, that alternative would automatically be rated 'Unacceptable' and rejected by the Company. Therefore presenting Aboriginal and Treaty Rights as a standalone criterion will not give it more weight than if presented as an indicator. This methodology of assessing impacts has been provided by the Ontario Ministry of Environment and is used in several other EAs for mining projects. Note also that 5 of the 15 human environment criteria are directly related to Aboriginal peoples, their lands, rights, culture and other interests. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the alternatives assessment.
Stakeholder Engagement	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Not all our concerns have been captured and addressed. IAMGOLD has to listen to what we say and address our concerns.	IAMGOLD is interested in understanding how to integrate comments on changes to Aboriginal culture and their relationship with the land into the environmental assessment.
Mining							
Employee Accommodations/Camp	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will Project staff be allowed to hunt and fish around the site?	How exactly this will be managed has not been fully decided yet. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed.
Employee Accommodations/Camp	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will mine staff be allowed to go fishing and hunting? How will that be managed?	How exactly this will be managed is not fully decided. There will likely be a hunting ban for staff, and fishing, if any, will be carefully managed in consultation with the community and agencies.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Human Health (workers)	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Does the Environmental Assessment include worker health and safety?	No information related to worker health and safety will be included in the EA report.
Human Health (workers)	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD should start talking to people about what kind of employment opportunities will exist and what health and safety risks will be for workers.	Noted, however this is not an EA related issue, and will be addressed when the Project moves out of the permitting phase.
Open Pit	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return of investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself". In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily based on cost effectiveness: Mining - open pit and underground mining; Mine Rock and Overburden Management - Establish a temporary stockpile location ... returned to the pit at closure; Non-hazardous waste – Incineration; and Power Supply and Routing - On-site diesel generation.	Thank you for your comment. Additional to the sections of the Code of Practice identified, the following guidance must be taken into consideration:"The range of alternatives that will be considered should address the problem or opportunity and be withinthe scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16). The Code of Practice does not specifically require information on financial thresholds to be provided in the Terms of Reference. Additional explanation for screening out the identified alternatives is provided below:Mining - a combination of open pit and underground mining was screened out primarily due to the fact that developing a smaller pit combined with an underground operation is not technically suitable as the gold is finely disseminated in the ore body. Additionally, it is not anticipated that the combination of open pit and underground mining be economically feasible.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Open Pit	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	A review of section 5.3 Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives. No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR. We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alternative in dollars as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.	(cont'd) This last rationale is not the primary or sole reason for its exclusion. Mine Rock and Overburden Management - Establishing a temporary stockpile location and returning the mine rock to the mined pit at closure is not a practice commonly used in Ontario. This is mainly due to the fact that moving a large amount of mine rock, in this case more than 800 Mt, is uneconomical. The cost of backfilling the open pit with mine rock would be in the order of several billion dollars.Non-hazardous waste - Incineration in itself is not a costly endeavour. This practice is not acceptable from an air quality perspective, which requires costly mitigation measures to be implemented. These measures are what causes this alternative to become economically unviable. Power Supply - On-site diesel generators to support operations will result in the release of greater amounts of CO2, NOx and particulate emissions than other alternatives. Additionally, it is not considered to be cost effective due to the large amount of fuel required for its operation.
Open Pit	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Would the bottom of the open pit lake be saline?	This information will be included in the EA report.
Other	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How do you treat the water that runs off?	There is very little potentially acid generating rock at the site according to initial studies but further studies are ongoing. IAMGOLD will be responsible to monitor and control water. All seepage will be monitored as well and if not of acceptable quality it must be collected and treated. We are unsure how the design will look at this stage (ditching or pumping stations).
Other	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Seepage of water has been a problem with another project they are involved in. 2) Could there be seepage and ground water issues (related to the cyanide destruction plant on-site)?	Times have changed for the mining industry some sites have issues with this because they are not designed properly and have issues adapting to changing regulations. We have the opportunity to design the site properly to take into account what has happened in the past. We will have containment. Water will not be released unless it is of good quality and meets standards. If systems failed there are pumping stations around that will confine the water to the site.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Other	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Flow in Bagsverd must be very low at times. It seems that Mesomikenda Lake would be a more suitable discharge location.	The EA is looking at both discharge options.
Process (Leaching, etc.)	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Are there alternatives to cyanide leaching that could be used for the Project?	There are no alternatives to using cyanide that are available for this Project.
Process (Leaching, etc.)	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) When is the decision made if IPCC will be used?	Information about the use of IPCC will be outlined within the prefeasibility report.
Tailing Impoundment	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) We had an incident at another site. MOE issued an emergency event notice. This was an older tailings management facility.	The ongoing treatment that we are proposing reduces the likelihood that emergencies will occur.
Tailing Impoundment	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) BHFN asked IAMGOLD's intended way of dealing with tailings was a new process, adding that open tailing pits can still be seen elsewhere. 2) BHFN asked why IAMGOLD would not simply use the tailings to fill up the pit when done mining.	IAMGOLD replied that tailings management facilities would be "open" during the mine operation and explained that any of the tailings areas will be closed out and revegetated. IAMGOLD said that it is possible that the pit will be flooded during after closure. Infilling the tailings into the open pit would be too costly.
Tailing Impoundment	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will negative impacts from TMF seepage be prevented?	Seepage, if not prevented, will be captured.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Tailing Impoundment	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How full will the TMF be at closure?	The TMF is expected to be filled to capacity, with additional freeboard for safety.
Tailing Impoundment	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will methyl mercury be an issue with TMF seepage?	Methyl mercury is currently not considered to be an issue. However, the geochemistry reports in the EA will provide further details.
Transmission Line	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to the Detour Gold mine who extracted 23 million ounces.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transmission Line	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proposed ToR indicates (onp.5-24) that a "review of transmission infrastructure that could serve the Project operations has been carried out". The review is not attached to the Proposed ToR and so the scope of the review is unclear to reviewers. The Proposed ToR indicates that: "there is a 115kV transmission line located approximately 50 km east of the Project, however a 115kV will not be sufficient for the Project". It is not stated whether the "insufficiency" is the result of the electrical capacity or energy shortfalls or both. Presuming it is capacity, was consideration given to reducing the mine production capacity of the facilities (i.e. lengthening the production phase) as a means of lowering power demand? We recommend that the proposed ToR carry forwards to the environmental assessment stage a consideration of alternatives that do not involve the construction of a 230kV transmission line as well as the alternative of constructing the 230kV transmission line.	Thank you for your comment. The Côté Gold Project is a low-grade Project. To be economically viable, low-grade projects require a high mining rate. A 230kV line is preferred for capacity reasons but also to prevent energy shortfalls. IAMGOLD has thoroughly reviewed whether it is viable or not to run the Project with a 115kV line. Based on the infrastructure requirements for the Project, a 230kV transmission line has been deemed necessary, and a 115kV line is not considered a technically and financially realistic and economically viable solution for IAMGOLD. A 115kV line could provide a maximum of 70-80 MW. The current project design requires 120 MW. In addition the capacity of the 115 kV line would be at its limits at 70-80 MW and the stability of the system would be questionable, meaning the ability of the 115kV line to deliver consistent power for a facility needing 70-80 MW would be severely stretched.
Transmission Line	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	(see above)	(cont'd) Also, from an efficiency standpoint, smaller lines have greater line loss rates, as such, use of a 115kV line would waste power and increase power costs. Moreover, with greater power capacity available through a 230 kV line, IAMGOLD will assess the potential to a more power-intensive mining method (in-pit crushing and conveying, IPCC). IPCC use if deemed appropriate can significantly reduce the GHG emissions typically emmitted from the truck fleet. The 120 MW estimate does not include the power which would be required to operate IPCC, as IPCC is still being evaluated by the Project team. Also, with the 230 kV line, IAMGOLD would have capacity in the power system to support potential future expansions of the mine and/or local needs, whereas with a 115kV line, expansion options would be significantly entirely eliminated or extremely limited.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transmission Line	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The current project configuration envisions the construction of a 230 kV transmission line of approximately 160 km in length originating in Timmins. This transmission line adds considerably to the capital costs of the proposed Project and substantially expands the Project footprint. Considering also that this 230 kV line would currently have no useful purpose following construction, we see the importance of considering carefully options for avoiding construction of the transmission line, and the need to justify the preferred alternatives during the environmental assessment. The Proposed ToR indicate (at p.5-24) that a "review of transmission infrastructure that could serve the Project operations has been carried out". The review is not attached to the Proposed ToR and so the scope of the review is unclear to reviewers. The Proposed ToR indicates that: "there is a 115 kV transmission line located approximately 50 km east of the Project, however, 115 kV will not be sufficient for the Project." It is not stated whether the "insufficiency" is the result of electrical capacity or energy shortfalls or both. Presuming it is capacity, was consideration given to reducing the mine production capacity of the facilities (i.e. lengthening the production phase) as a means of lowering power demand?	Thank you for your comment. The Cote Gold Project is a low-grade Project. To be economically viable, low-grade projects require a high mining rate.A 230 kV line is preferred for capacity reasons but also to prevent energy shortfalls. IAMGOLD has thoroughly reviewed whether it is viable or not to run the Project with a 115 kV line. Based on the infrastructurerequirements for the Project, a 230 kV transmission line has been deemed necessary, and a 115 kV line is not considered a technically, financially realistic and economically viable solution for IAMGOLD. A 115 kV line could provide a maximum of 70-80 MW. The current project design requires 120 MW. In addition the capacity of the 115 kV line would be at its limit at 70-80 MW and the stability of the system would be questionable, meaning the ability of the 115 kV line to deliver consistent power for a facility needing 70-80 MW was severely stretched. Also, from an efficiency standpoint, smaller lines have greater line loss rates, as such, use of a 115kV line would waste power and increase power costs.
Transmission Line	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) We note that diesel power has been considered for "periodic use during the operations phase (and potentially during the closure phase) as needed when power grid is unavailable" but it does not appear that diesel power has been considered as a supplement to grid power to lessen capacity or energy requirements from the grid in order to avoid construction of the 230 kV transmission lines. Other options may also be available to lower the requirements for grid power but it is unclear whether they were considered. In summary, the dismissal of alternatives that do not require the construction of a 230 kV transmission line is not traceable in the Proposed ToR.	(cont'd) Moreover, with greater power capacity available through a 230 kV line, IAMGOLD will assess the potential to a more power-intensive mining method (in-pit crushing and conveying, IPCC) IPCC use if deemed appropriate can significantly reduce the GHG emissions typically emmitted from the truck fleet. The 120 MW estimate does not include the power which would be required to operate IPCC, as IPCC is still being evaluated by the Project team. Also, with the 230 kV line, IAMGOLD would have capacity in the power system to support potential future expansions of the mine and/or local needs, whereas with a 115kV line, expansion options would be significantly entirely eliminated or extremely limited.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transmission Line	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) While dismissing these alternatives may be justified, this cannot be determined from the information provided in the Proposed ToR. If the referenced "review of transmission alternatives" evaluated alternatives that adequately considered changes to the mine design, then we recommend that it be appended to the Proposed ToR. This would meet the requirement of the Code of Practice to "provide justification in the terms of reference for limiting the examination of alternatives." However, we do not know if the review of the proponent has completed has considered changes to the mine production rate or other design aspects that would lower the electricity demand of the proposed Project in order to avoid construction of the 230 kV transmission line. In this case, we recommend that the proposed ToR carry forwards to the environmental assessment stage a consideration of alternatives that do not involve the construction of the 230 kV transmission line as well as the alternative of constructing the 230 kV transmission line.	(see above)
Transmission Line	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent has provided adequate clarification as to why the following were screened out of the environmental assessment solely or primarily based on cost-effectiveness: Mining - Open pit and underground mining; Mine Rock and Overburden Management - Establish a temporary stockpile location...returned to the pit at closure; Non-hazardous - Incineration. With respect to the power supply alternatives, IAMGOLD has committed to provide further information to Wabun Tribal Council in order to better assess these alternatives. No changes to the Proposed ToR are requested.	Thank you for your comment. IAMGOLD will provide Wabun Tribal Council with further information related to power supply alternatives, as requested.
Transmission Line	363	E-mail	10/04/2013	The Ministry of the Environment (MOE) provided IAMGOLD with a letter sent from the Executive Director of Wabun Tribal Council which outlines a revised response to Wabun Tribal Council's initial submission of comments on IAMGOLD's Proposed Terms of Reference.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) IAMGOLD has committed to provide further information to Wabun Tribal Council in order to better assess power supply and routing. See additional comments above in relation to 4. Financial Thresholds and 6. Mine Production Rates. No changes to the Proposed ToR are requested.	Thank you for your comment. IAMGOLD will provide information to Wabun Tribal Council related to power supply and routing, as requested.
Transmission Line	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How would the Project change if it was to run on the 115kV line only?	This information will be provided in the EA report.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transmission Line	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The cross-country transmission line alignment will create access for hunting that did not exist before and might therefore bring in more 'external' hunters.	This comment will be addressed in the EA report.
Transmission Line	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do visual aesthetics assessment for transmission line, where visible.	IAMGOLD will consider if this is required based on the risk of an effect.
Transmission Line	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the transmission line capacity?	This information will be provided in the EA reports.
Transmission Line	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will pesticides be used for transmission line clearing and maintenance?	The current understanding is that brushing and clearing would be carried out without the use of pesticides.
Transmission Line	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will transmission line maintenance be subcontracted to third parties?	This has not been decided yet.

Transmission Line	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) HydroOne may want to keep the 230 kV line and decommission the 115 kV line.	HydroOne has not indicated that they are interested at this point in time.
Transmission Line	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Cross-country transmission line will provide hunting access to areas currently not accessible (to people not from the area).	This issue will be assessed in the EA. However, it should be noted that it is likely that both alignments will open access to habitat.
Transmission Line	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The impacts will be the same for both transmission line alignments.	Thank you for your comment. No further action is required.
Transport (Road, Barge, etc.)	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1. indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. We recommend that an assessment of the off-site road transportation route alternatives, including the location of key staging areas (e.g. whether in Sudbury, Timmins or elsewhere) be conducted as part of the environmental assessment.	Thank you for your comment. Highway 144 will be used to transport material to the site. An assessment of the effects of the Project on Highway traffic will be presented in the EA. At the present time no highway modifications are planned or expected to be required to accommodate Project traffic.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Transport (Road, Barge, etc.)	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1 indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. Transport (Road, Barge, etc.)	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What are the existing roads around the Tailings Management Facility (TMF)? Also show TMF roads during all Project phases.	This information will be provided in the EA report.
Waste Rock Piles	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will the stockpile rehabilitation work? Will it be one pile at a time? 2) Are you continuously rehabilitating them?	Yes it will be one pile at a time. The piles are 100 m high. Yes because this give us better containment. We will recycle as much water as possible.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Waste Rock Piles	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return of investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself". In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily on the basis of cost-effectiveness: Mining - open pit and underground; Mine Rock and Overburden Management - Establish a temporary stockpile location...returned to put at closure; Non-hazardous waste - Incineration; Power Supply and Routing - On-site diesel generation. A review of section 5.3. Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives.	Thank you for your comment. Additional to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the Proponent's ability to implement. It should be determined by the significance of the potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice - page 16). The Code of Practice does not specifically require information of financial thresholds to be provided in the Terms of Reference. Additional explanation for screening out the identified alternatives is provided below: Mining- a combination of open pit and underground mining was screened out primarily due to the fact that developing a smaller pit combined with an underground operation is not technically suitable as the gold is finely disseminated in the ore body. Additionally, it is not anticipated that the combination of open pit and underground mining would be economically feasible. This last rationale is not the primary or sole reason for its exclusion. Mine Rock and Overburden Management - Establishing a temporary stockpile location and returning the mine rock to the mined pit at closure is not a practice commonly used in Ontario.
Waste Rock Piles	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR. We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment, or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alternative in dollars as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.	(cont'd) This is mainly due to the fact that moving a large amount of mine rock, in this case more than 800Mt, is uneconomical. The cost of backfilling the open pit with mine rock would be in the order of several billion dollars. Non-hazardous waste - Incineration in itself is not a costly endeavour. This practice is not acceptable from an air quality perspective, which requires costly mitigation measures to be implemented. These measures are what cause this alternative to become economically unviable. Power Supply - On-site diesel generators to support operations will result in the release of greater amount of CO2, NOx and particulate emissions than other alternatives. Additionally, it is not considered cost-effective due to the large amount of fuel required for its operation.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Waste Rock Piles	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Should the Mine Rock Area be designed in such a way that it would be able to deal with ARD 'just in case'?	ARD is not expected to be an issue. Seepage will be collected and managed according to regulatory requirements.
Waste Rock Piles	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Could the mine rock be used for other purposes?	Yes. However, due to large transport distances, other uses are considered to be unlikely.
Negotiated Agreements							
Contracts	120	E-mail	03/19/2013	On 2013-03-18, Wabun Tribal Council (WTC) replied to AMEC concerning the TK/TLU questionnaire. WTC shared that it will conduct their own study and ensure it meets IAMGOLD/AMEC's needs for the Environmental Assessment. AMEC responded to WTC on 2013-03-19 supporting the approach and suggested a meeting take place to discuss the questionnaire and other study parameters.	Wabun Tribal Council, AMEC Environment & Infrastructure	1) WTC has reviewed the document and would like to use it as a template to formulate their own. WTC would also like to use their own consultant to both formulate and conduct the study.	IAMGOLD would like WTC to return the agreement so that AMEC can review it and get it finalized. AMEC fully supports the approach the WTC have suggested. AMEC would like to set up a meeting in the next few weeks to discuss the questionnaire and other study parameters.
Contracts	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) IAMGOLD explained that the Augen Gold Corp. was bought by Trelawney, who was then bought by IAMGOLD, who is still party to the original agreement between Augen and BHFN. IAMGOLD explained that the original Augen Agreement was written based on old maps; it was pointed out on a map that the furthest block west is the piece in the Augen Agreement with BHFN. IAMGOLD added that even though it is not in BHFN's territory, as was later determined by Wabun Tibal Council's (WTC) own mapping process, that IAMGOLD respects the agreement as it is written. IAMGOLD reported that very little money was spent on that west block in 2012 because IAMGOLD focussed on the Côté Lake deposit. However, IAMGOLD feels that the block deserves a proper look and expects renewed interest in that area in 2013-2014, though it is unknown at this time what the expenditures will be. 2) Wabun Tribal Council (WTC) explained that while Augen had not made payments to BHFN as per the agreement, that Trelawney made good on all the payments, which IAMGOLD continued.	IAMGOLD representative said he would forward ballpark figures of payments to BHFN if he could get numbers from the exploration team. It was explained that it is economical to mine the Côté Gold site because while the gold is low grade it is a large deposit; the grade and quantity of gold in that one west block has yet to be determined.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) IAMGOLD delivered a presentation to lead a conversation with WTC about the Côté Gold Project that covered an update of the Exploration Agreement, status of drilling and EA baseline assessment work at the Côté Gold Project site, the decisions still to be made about the PD, an update of the transmission line requirements, the preliminary EA schedule, stakeholders IAMGOLD will be consulting, CEAA guidelines, a definition of consultation, the IBA process, the purpose for (TEK/TLU) studies, and Project-specific support. 2) WTC, MFN and FPFN agreed to meet with IAMGOLD on 2012-11-08 to have further discussions about an IBA.	IAMGOLD explained that it will be a few years before they are processing ore. The volume is expected to be similar to the Detour Gold mine who extracted 23 million ounces.
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC mentioned legislation they use to review IBAs.	IAMGOLD acknowledged this tool.
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Meeting participants discussed current business and employment of Aboriginal-owned businesses and MFN/FPFN community members at the Project site. WTC requests from IAMGOLD to list business opportunities. WTC also expressed that they want opportunities provided through the IBA that will help First Nation members to be self-sufficient.	IAMGOLD is actively discussing job opportunities and procurement within the IBA negotiations. Discussions are undertaken with the goal of fostering self-sufficiency.
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC sees the biggest challenge in implementing the IBA. The Mine Manager will need to know about the spirit and intent of the IBA for the hiring process. 2) WTC will provide a draft IBA to IAMGOLD by end of October 2012. WTC was requested to indicate what financial information will be required. 3) WTC suggests that the IBA negotiation team would present a position on the IBA to the community (without IAMGOLD present), followed by a meeting with IAMGOLD to present the Project and provide an opportunity for questions.	IAMGOLD will follow through on these requests as the Project is developed.
Impact Benefit Agreements	11	Meeting	11/01/2012	IAMGOLD met with Wabun Tribal Council (WTC), Mattagami First Nation (MFN) and Flying Post First Nation (FPFN) to discuss the status of the Côté Gold Project, the Exploration Agreement, federal Project Description (PD), involving communities in the Environmental Assessment (EA) process, and to schedule time to negotiate an Impact Benefit Agreement (IBA).	Flying Post First Nation, Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) WTC stated that the EA would be considered the main trigger for consultation and an agreement. WTC expressed that it was important that an IBA be substantially negotiated, if not completed before the EA process was underway.	Negotiations regarding the IBA are currently well underway in advance of the EA process.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Impact Benefit Agreements	71	Meeting	02/20/2013	IAMGOLD met with Mattagami First Nation Chief and Council to provide an overview of the IAMGOLD draft Project Description.	Mattagami First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Council member asked how long for finalized Impact Benefit Agreement (IBA)? It was identified that the Draft Impact Benefit Agreement to be completed by fall of 2013. There will be 2 to 3 community meetings on the IBA.	IAMGOLD is working towards finalizing the Draft IBA in 2013.
Project Phase							
Closure	68	Meeting	02/13/2013	IAMGOLD met with Flying Post First Nation (FPFN) Chief and Council, and Wabun representative to provide an overview of the Côté Gold Project and the draft Project Description (PD).	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will the stockpile rehabilitation work? Will it be one pile at a time? 2) Are you continuously rehabilitating them?	Yes it will be one pile at a time. The piles are 100 m high. Yes because this give us better containment. We will recycle as much water as possible.
Closure	99	Meeting	03/27/2013	IAMGOLD presented and requested input on the draft Project Description (PD) for Côté Gold Project to Chief and Council of the Brunswick House First Nation (BHFN).	Brunswick House First Nation, Wabun Tribal Council, IAMGOLD Corporation	1) BHFN asked IAMGOLD's intended way of dealing with tailings was a new process, adding that open tailing pits can still be seen elsewhere. 2) BHFN asked why IAMGOLD would not simply use the tailings to fill up the pit when done mining.	IAMGOLD replied that tailings management facilities would be "open" during the mine operation and explained that any of the tailings areas will be closed out and revegetated. IAMGOLD said that it is possible that the pit will be flooded during after closure. Infilling the tailings into the open pit would be too costly.
Closure	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What would be the shortest time possible to fill the open pit after closure?	The EA will assess the longest possible duration, and identify means to reduce the timeline for pit filling. Detailed information about the closure will be included in the closure plan.
Closure	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How full will the TMF be at closure?	The TMF is expected to be filled to capacity, with additional freeboard for safety.
Closure	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is there enough water in the TMF to aid fill the pit at closure?	At closure the amounts of water in the TMF will not be large enough to aid the flooding of the open pit.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Closure	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) If the Project goes ahead, we will lose some areas that we will never get back.	It is noted that Project has a large footprint, the site will be reclaimed to a productive state at closure. IAMGOLD is interested in First Nation communities providing insight into the management objectives of our closure plan.
Operations	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) Of the alternatives listed for consideration, we note that the mine production rates (in other words the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternatives analyses, potentially including alternatives related to water management and power supply and routing.	Thank you for your comment. The Pre-Feasibility Study currently underway takes into account the financial aspects of the Project. IAMGOLD understands that a longer operations phase leads to longer periods of employment. If the Project's operation phase is extended, this would lead to a reduction in the workforce required for operation. This would change the circumstances applicable to the socio-economic benefits, but not make them better. The duration of the mine life is determined by multiple factors which include the global market, the return on investment, the availability and cost of the workforce and the proponent's operational and economic targets.
Operations	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	(see above)	(cont'd) For this low-grade Project the throughput rate was benchmarked against other low grade projects such as Canadian Malartic and Detour Gold, which have comparable production rates. Benchmarking is a method commonly used to compare the feasibility of future projects with projects that are already in production or that are more advanced from an engineering standpoint. The Project, as currently defined in the Proposed ToR, has been optimized for economic viability. Significant Project life extensions would render the Project uneconomical. Therefore, an extension in mine life is not a viable alternative to be assessed in the EA. Note that this issue is related to the chosen transmission line alternative (i.e. 115kV vs 230kV). As such this issue will be addressed in more detail in the response to comment #9 below. IAMGOLD will sign a non-disclosure agreement relating to the disclosure of detailed Project information, which is intended to support the parties' decision on an Impact Benefit Agreement.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Operations	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will transmission line maintenance be subcontracted to third parties?	This has not been decided yet.
Risks and Mitigation							
Cumulative Effects	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use." We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the considerations of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (i.e. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is only one of six broad criteria.	Thank you for your comment. IAMGOLD recognizes the importance of consultation with Aboriginal people as an integral apsect of the Project. Participation in consultation ensures an open and fair process, and strengthens the quality and credibility of the results. In a coordinated effort with the Provincial and Federal government agencies, IAMGOLD intends to prepare one knowledge base about the current environment and potential effects of the Project on various aspects of the environment. This knowledge base will be used to populate the required environmental assessments (EAs), including the Assessment of Alternatives. The method that will be used in the EA to assess the alternatives looks at a range of Performance Objectives/Criteria. Under each of these objectives/criteria there are a number of relevant indicators which must be evaluated - Effects on Aboriginal and Treaty Rights is one such indicator. As part of the EA, the IAMGOLD EA team will evaluate each indicator, including Effects on Aboriginal and Treaty rights, and give each of them one of three ratings: Preferred, Acceptable, Unacceptable.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Cumulative Effects	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) As the Proponent and Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up of large areas of land and waters, and would involve lasting, and in some instances, permanant changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accomodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of First Nations. Thus the Proposed ToR should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.	(cont'd) If any objective/criterion is rated 'unacceptable' as determined by the IAMGOLD EA team, then the alternative as a whole is automatically rated 'Unacceptable' for a particular alternative, that alternative would be rated 'Unacceptable' and rejected by the Company. Therefore presenting Aboriginal and Treaty Rights as standalone criterion will not give it more weight than if presented as an indicator. This methodology of assessing impacts has been provided by the Ontario Ministry of the Environment and is used in several other EAs for mining projects. Note also that 5 of the 15 human environment criteria are directly related to Aboriginal peoples, their lands, rights, culture and other interests. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the alternatives assessment.
Cumulative Effects	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law. The recently published CEA Operational Policy Statement states that: Information on the environmental effects of past or existing physical activities may be helpful: - The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations. The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects for the potential and established Aboriginal and treaty rights and related interest of Aboriginal groups.	Thank you for your comment. Present-day environmental conditions reflect the cumulative environmental effects of many past and ongoing physical activities. A description of past environmental conditions can at times improve the understanding of cumulative environmental effects for a specific VC. The baseline studies carried out for the Project reflect the cumulative environmental effects of past and ongoing physical activities. This baseline was carried out over various years. It is not believed that a description of past environmental conditions will help in the understanding of cumulative environmental effects, as identified in the CEA Operational Policy Statement. It should be noted that historic use of the area will be documented in the archaeology baseline. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use Information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the cumulative effects assessment. IAMGOLD understands the importance that Aboriginal people give to the land and resources in the vicinity of the Project and will work with Aboriginal communities to determine what mitigation and monitoring measures are preferred.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Cumulative Effects	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The proposed ToR indicates the following: The cumulative effects analysis presented in the EA will therefore be restricted to the analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that "will be carried out"; and to those projects of significance within the broader regional context, which may overlap the undertaking in regards to type of effect, time and space. In proposing this approach, the Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law. The recently published CEA Operational Policy Statement states that: Information on the environmental effects of past or existing physical activities may be helpful: If the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project; If information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or If an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.	Thank you for your comment. The cumulative effects assessment is not a MOE requirement under the Code of Practice for the Preparation of an Environmental Assessment. Cumulative effects assessment has been included as it is a requirement under the Federal EA Process. There is no requirement by the MOE with regards to "pre-development baseline".The CEA Operational Policy Statement issued in May 2013 states the following with regards to the cumulative effects assessment and the need for "pre-development baseline". Present-day environmental conditions reflect the cumulative environmental effects of many past or existing physical activities may be helpful: f the effects of past or existing physical activities on a specific VC will help predictf information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; orif an existing physical activity will be decommissioned in the future and thisdecommissioning would affect the future condition of a specific VC.The baseline studies carried out for the Project reflect the cumulative environmental effects of past and ongoing physical activities.

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Cumulative Effects	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) The "gold standard" in cumulative environmental effects assessment involves the determination of a pre-development baseline. Such a baseline often provides the most "help" in predicting the environmental effects of a designated project and 'assistance in identifying appropriate mitigation measures. While there are sometimes challenges to creating a pre-developed baseline in terms of the availability of suitable pre-development data, this is not the case. While there will likely be some uncertainty associated with pre-development conditions the same can be said for the existing project baseline due to the inherent limitations in data gathering. The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations.The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. However, a pre-development baseline allows the characterization of what has been lost or gained as a result of the effects of prior projects and activities. This is fundamental, for example, to determine the remaining potential for a region to support the exercise of Aboriginal land-based rights protected in Treaty 9.	(cont'd) This baseline was carried out over various years. It is not believed that a description of past environmental conditions will help in the understanding of cumulative environmental effects, as identified in the CEA Operational Policy Statement. The intent of the cumulative environmental assessment is consider the overall effect of the planned projects on the environment based on the existing baseline conditions. It should be noted that historic use of the area will be documented in the archaeology baseline. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use Information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the cumulative effects assessment. IAMGOLD understands the importance that Aboriginal people give to the land and resources inthe vicinity of the Project and will work with Aboriginal communities to determine what mitigation and monitoring measures are preferred. After Project closure is completed, the area occupied by the Project will be rehabilitated.The cumulative effects assessment will be presented in the EA.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Cumulative Effects	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) By providing insight into what has been lost, a pre-development baseline sheds light on the importance of what remains intact (e.g. in terms of ecosystem functions, habitat, preferred species populations, biodiversity, cultural landscapes, etc.) and what still remains possible (e.g. hunting, fishing, gathering, quiet enjoyment of the land, etc.). The loss of fish and wildlife habitat and harvesting opportunities associated with the proposed Project take on greater importance as a result of what has already been lost or taken up by other projects and activates.The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects for the potential and established Aboriginal and treaty rights and related interest of Aboriginal groups. Further, the Proponent must be required to consult with Aboriginal groups on the available information and seek to augment this information with available traditional knowledge concerning the historical context.	(cont'd) As part of this assessment IAMGOLD will look at the combined footprint of this Project and other reasonable foreseeable projects within the local and/or regional study area.
Cumulative Effects	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) (cont'd) Additionally, in describing the "existing project baseline", the Proposed ToR must give consideration not only to a snapshot of current conditions, but must also include trend or comparative analysis, as appropriate to the available data, to provide insight into whether conditions are becoming more or less favourable in relation to the environmental components or indicators under study (e.g. are species populations rising, stable or falling?)	(see above)
Cumulative Effects	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Cumulative effects on wildlife considering future expansions and other projects in the area need to be considered.	No future expansions are currently being considered.
Environmental Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The Project now includes a lot of realignments, which might not work properly. The flow scheme used for the Project Description seems preferable.	Noted, the changes to the realignment plan were developed to accommodate the reduction in MRA areas to one location.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Environmental Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Would like to know what the key issues are with discharge quality.	Cyanide and ammonia are considered the key issues at the moment. More detail will be provided in the EA report.
Environmental Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Ammonia is an issue at all mine sites.	Plans will be put in place to manage the ammonia in mine effluent.
Environmental Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) How will negative impacts from TMF seepage be prevented?	Seepage, if not prevented, will be captured.
Environmental Management	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will pesticides be used for transmission line clearing and maintenance?	The current understanding is that brushing and clearing would be carried out without the use of pesticides.
Environmental Management	370	Meeting	10/15/2013	On 2013-10-15, IAMGOLD met with Chief and Council from Mattagami First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about the Tailings Management Facility (TMF), the methodology and data collected for the baseline studies, transmission line alternatives, channel realignments and the impact of the Project on traditional land uses.	Mattagami First Nation, W.C. McKay Consulting Services, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Moving fish from Côté Lake may bring diseases to other lakes.	IAMGOLD will consider this concern. Note that the plan is to relocate fish within the same watershed.
Other	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Will the Project stop blasting under strong wind conditions?	This is a mitigation that is currently not considered necessary.

Other	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is IAMGOLD investigating the effects of blasting on fish?	Yes, the results of this investigation will be presented in the EA.
Socio-Economic Management	359	E-mail	08/22/2013	The Ministry of the Environment provided comments on the IAMGOLD Proposed Terms of Reference (ToR) on behalf of the Wabun Tribal Council.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) The Proposed ToR suggests that the Proponent is considering options for worker accomodations in an on-site construction camp or in an off-site residence. Under either option, work schedule alternatives will need to be considered, including the length of shifts and the length of rotations. We recommend that the Proposed ToR include criteria for an assessment of work schedules during the environmental assessment.	Thank you for your comment. The length of shifts and the length of work rotations will not be influenced by the worker's accomodation alternatives. These factors are considered in the Project planning phase and are not aspects covered under the environmental assessment process. Work rotations will be factored into the environmental assessment in terms of its potential effect on social conditions, and the ability to exercise traditional or cultural activities. Appropriate work schedules will be determined further in the Project planning, however, feedback at this early stage is welcomed. It should be noted that work schedules are part of the ongoing IBA discussions.
Socio-Economic Management	369	Meeting	10/09/2013	On 2013-10-09, IAMGOLD met with Chief and Council from Flying Post First Nation and Wabun Tribal Council to provide a presentation on, and answer questions regarding the effects prediction and mitigation strategies for the Project. Issues raised related to questions about transmission line alternatives, water channel realignments and the impact of the Project on traditional land uses.	Flying Post First Nation, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Does IAMGOLD know which groups of the population will benefit and which will be affected negatively by the Project?	These effects will be provided in the EA.
Sustainability	362	E-mail	10/04/2013	IAMGOLD emailed the Ministry of the Environment (MOE) to provide all of the official responses to Wabun Tribal Council's comments on the Proposed Terms of Reference. In addition, IAMGOLD requested that the MOE proceeds with obtaining approval of the Proposed Terms of Reference for the Project.	Ontario Ministry of the Environment, Wabun Tribal Council, IAMGOLD Corporation	1) Of the alternatives listed for consideration, we note that the mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).	Thank you for your comment. The Pre-Feasibility Study currently underway takes into account the financial aspects of the Project. IAMGOLD understands that a longer operations phase leads to longer periods of employment. If the Project's operation phase is extended, this would lead to a reduction in the workforce required for operationThis would change the circumstances applicable to the socio-economic benefits, but may not make them better. The duration of the mine life is determined by multiple factors which include the global market, the return on investment, the availability and cost of workforce and the proponent's operational and economic targets.

During EA Preparation (January 15, 2014 to September 30, 2014)							
Biophysical Environment							
Ecological Integrity & Biodiversity	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is there a biodiversity report on Côté Lake? Has Chief and Council seen this Report?	As per the presentation to the community, IAMGOLD has completed substantial reports on wildlife and vegetation communities in the Project area. Notice of public review of the Draft Report was provided to the community prior to this meeting.
Water Resources / Quality	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is the intake of water per day for the mine?	Approximately 10% on average of the total ore processing plant water requirements.

Table D-9c: Comments and Responses - Wabun Tribal Council

Topic	ROC	Event Type	Date	Event Summary	Participating Organizations	Comments	Official Response
Wildlife	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is IAMGOLD going to do about the Eagle's nest? Is the Ministry of Natural Resources aware of this nest?	As per the presentation provided to the community, IAMGOLD will remove the Eagle's nest. However, the environmental assessment studies have identified that the local Eagle population as a whole will not be impacted, as there is sufficient suitable habitat in the region to support the whole population. The Ministry has been provided this Report, and are invited during the comment period to make comments on it.
Document Reviews							
Final EA/Application	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is there an expiry date on an approved environmental assessment? 2) So once the engineering design and feasibility studies are done - and if any other big changes are made - will another environmental assessment be required?	There is no expiration date on the approval but if certain elements of the Project were to change considerably, the approval would change as well. The environmental assessment will be approved for the Project as is. However, if major change to the design was made - i.e. we changed the location of the Tailings Management Facility, then yes, we would conduct another environmental assessment, or aspects of the permitting would also have to be changed.
Human Environment							
Indigenous Traditional Knowledge	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The individual noted that as a mother and woman, that we have a responsibility to the water. Without water we would not survive, it is very sacred. Subsequently, the individual requested that a full ceremony take place at Côté Lake immediately and would be happy to coordinate the ceremony.	IAMGOLD is happy to host and/or help to coordinate a pipe ceremony on-site, at any time that is agreeable among leadership and the community.
Indigenous Traditional Knowledge	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Women need to stand together to provide a dialogue to men with our input in the Project. Our female elders, and other women of the community want to give more guidance and direction on the Project. Traditionally water ceremonies are led by women - that is the way the process is to be done. IAMGOLD needs the input of our women on the Project; IAMGOLD needs to talk with women in the community.	IAMGOLD is definitely interested in and willing to commit to hosting a women's session in the community. We are also committed to incorporating women's input or helping them to facilitate the traditional pipe ceremony on-site. IAMGOLD held a women's session on 2014-07-15, as follow-up to this request.

Other groups and individuals use the land and have learned traditional practices from Elders that can be shared.	IAMGOLD has always been, and remains committed to consultation at any point throughout this process with interested stakeholders. We are open to feedback from everyone. In addition, IAMGOLD has hosted a Youth and Elders session in May 2014 and a preliminary discussion with women from Mattagami First Nation in July 2014.
Land and Resource Use	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) To confirm, as one of the mitigations, IAMGOLD will not allow Project staff to hunt or fish on site?	Correct. While on shift, Project staff will not be allowed to hunt or fish on the site property during construction and operations phases.
Methodology and Process							
Indigenous Traditional Knowledge	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) There was a poster put up in the community today requesting input from people who wanted to participate in a Traditional Knowledge/Traditional Land Use (TK/TLU) study. The poster requested that our information about the land and our uses be specific to the IAMGOLD Project area. The individual informed IAMGOLD that they cannot provide information in the format requested because land is used beyond the perimeter of the IAMGOLD property.	The TK/TLU study interviews conducted today were not being conducted by IAMGOLD. The information was being retrieved for internal Wabun Tribal Council purposes. IAMGOLD is not privy to the information collected, or the reason the information is being collected.
Stakeholder Engagement	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. Mining							
Tailing Impoundment	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Since your last presentation, what in terms of the Project design has changed?	We have changed the design of the Mine Rock Areas. Previously we had planned for three smaller areas, but our current design has placed it in one location. This was done to reflect community feedback, and the thinking that one area would reduce footprint of Project size, and effects to water and noise. Mine discharge to Mesomikenda Lake has now been consolidated to Bagsverd Creek. The environmental assessment revealed that the effect on the environment to Bagsverd Creek is actually smaller - this is generally because of the lack of flow in and out of Mesomikenda Lake could potentially allow mine effluent to settle too much. We have also worked to close the loop on the tailings facility to reduce freshwater intake and mine effluent. The new scenario will segregate any water that has come into contact with cyanide, it will reduce the amount of water collected and used, and it will allow us to ensure that any water that is discharged to the environment will be well below all required standards or limits. We have also selected the 230kv transmission line as the preferred alternative as a power supply to the Project. Additionally, there is now only the tailings pipeline on the west of the Tailings Management Facility, the east option no longer exists.

Project Phase							
Closure	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) The individual identified that they do not think it is possible to operate a mine for 15 years and have the land return to the same way it was before. It is going to take a very long time for this land to be healed. The individual wants the land to be protected for their grandchildren and their concern is for the health of the land. How much rehabilitation can really be done?	Advances in mining over the past couple of decades have made it a much safer industrial activity. This means that there will be no arsenic or mercury involved that could pose a risk to humans or to the land. We will use cyanide but it will be destroyed. It is our job and our commitment to ensure that we minimize our impact to the land. We will also be required to submit permit applications and demonstrate financial assurance for closure before we can proceed any further with development of the Project. Closure permits require us to demonstrate that we have the capacity to rehabilitate the land to a productive state. In spite of closure activities, there will be an effect on the land but IAMGOLD has committed in the environmental assessment to revegetate as much as possible and to bring the land back to as natural a state as possible. It should be noted however, that this process will take 50-80 years for the pit to fill and for the land to be revegetated. The environmental assessment process is a way of working to prevent issues and minimize the impact on the land as much as possible - we are considering how we can best manage the land now, in 15 years, and 80 years from now.
Risks and Mitigation							
Environmental Management	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do we have a 100% guarantee that our water will not be affected? If not, then what? What about seepage?	During the presentation, IAMGOLD explained that all mitigations and components of Project design will be implemented to ensure that water quality remains well below criteria and guideline limits.
Socio-Economic Management	463	Open House	06/18/2014	IAMGOLD hosted a community open house in Flying Post First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 25 attendees. Comments received were generally focused on Project environmental mitigations, Project design and the environmental assessment process.	Canadian Environmental Assessment Agency, Canadian Environmental Assessment Agency (CEAA), Flying Post First Nation, Ministry of the Environment, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) To confirm, as one of the mitigations, IAMGOLD will not allow Project staff to hunt or fish on site?	Correct. While on shift, Project staff will not be allowed to hunt or fish on the site property during construction and operations phases.

Biophysical Environment							
Ecological Integrity & Biodiversity	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Is there a biodiversity report on Côté Lake? Has Chief and Council seen this Report?	As per the presentation to the community, IAMGOLD has completed substantial reports on wildlife and vegetation communities in the Project area. Notice of public review of the Draft Report was provided to the community prior to this meeting.
Wildlife	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) What is IAMGOLD going to do about the Eagle's nest? Is the Ministry of Natural Resources aware of this nest?	As per the presentation provided to the community, IAMGOLD will remove the Eagle's nest. However, the environmental assessment studies have identified that the local Eagle population as a whole will not be impacted, as there is sufficient suitable habitat in the region to support the whole population. The Ministry has been provided this Report, and are invited during the comment period to make comments on it.
Human Environment							
Indigenous Traditional Knowledge	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation. We will also be required to submit permit applications and demonstrate financial assurance for closure before we can proceed any further with development of the Project. Closure permits require us to demonstrate that we have the capacity to rehabilitate the land to a productive state. In spite of closure activities, there will be an effect on the land but IAMGOLD has committed in the environmental assessment to revegetate as much as possible and to bring the land back to as natural a state as possible. It should be noted however, that this process will take 50-80 years for the pit to fill and for the land to be revegetated. The environmental assessment process is a way of working to prevent issues and minimize the impact on the land as much as possible - we are considering how we can best manage the land now, in 15 years, and 80 years from now.
Risks and Mitigation							
Environmental Management	466	Open House	06/26/2014	IAMGOLD held an open house in Mattagami First Nation to provide an update on the Project and where it was in the environmental assessment process as well as a summary of the findings. The session provided members of the community with an opportunity to ask questions about the Project. There were 30 attendees. Comments generally focussed on potential environmental effects, closure concepts and IAMGOLD's approach to stakeholder consultation.	Canadian Environmental Assessment Agency, Environment Canada, Individual - Gogama, Individual - GP, Kunuwanimano Child and Family Services, Mattagami First Nation, Ontario Ministry of Northern Development and Mines, Ontario Ministry of the Environment, Unknown Individual, Wabun Tribal Council, AMEC Environment & Infrastructure, IAMGOLD Corporation	1) Do we have a 100% guarantee that our water will not be affected? If not, then what? What about seepage?	During the presentation, IAMGOLD explained that all mitigations and components of Project design will be implemented to ensure that water quality remains well below criteria and guideline limits.

Subject: Businesses operating within Algonquin territory

Sir,

This is to inform you that your business operates in a territory belonging to the people of the Algonquin Anishinabeg Nation.

As you may already know, the Supreme Court of Canada has recognized indigenous title on lands that were never ceded by treaty. In fact, the Algonquin people never surrendered, abandoned or waived their rights by treaty on any of its traditional territory. This means that the area in which your business currently resides and where you are collecting natural resources has aboriginal title that still exists.

Under the decisions of the Supreme Court, once a project or a company enters the territory to exploit its natural resources there is an obligation to consult and accommodate Aboriginal peoples concerned, namely the Algonquin nation. This consultation process is well defined and is much more elaborate than just a notice of intent on your behalf. It must include a detailed description of your field operations and, if necessary, measures to compensate for the inconvenience caused to members of our communities concerned.

In this context and in order to maintain good relations between your company and the Algonquin Nation, we invite you to contact us to set up an initial meeting. The purpose of this meeting will be to discuss how we can work closely together to establish a protocol agreement in order to assure your company and investors that you respect the rights of the Algonquin people.

81 Kichi Mikan • Maniwaki, Quebec J9E 3C3
Tel.: (819) 449-1225 • Fax: (819) 449-8064 • Email: info@anishinabenation.ca

We hope that this is the beginning of a positive relationship for both your business and the Algonquin Nation.

Sincerely,

Alice Jerome

Alice Jerome
Grand Chief
Algonquin Anishinabeg Nation Tribal Council

Summary of judgments and laws affecting the rights of indigenous peoples

Main laws

1763 - Royal Proclamation

The Royal Proclamation of 1763 guarantees the possession of indigenous peoples to their ancestral lands. It prohibits the sale of these lands.

1982 - Constitutional Law of Canada, section 35

Article 35 of the Constitution Act confirms the provisions of the Royal Proclamation which recognizes and affirms existing - ancestral or treaty – for the aboriginal peoples of Canada.

2007-Declaration of the United Nations Declaration on the Rights of Indigenous Peoples

Article 26

2. Indigenous peoples have the right to own, use, develop and control the lands, territories and resources that they possess by reason of traditional ownership or other traditional occupation or use, as well as those which they have otherwise acquired.

Significant judgments

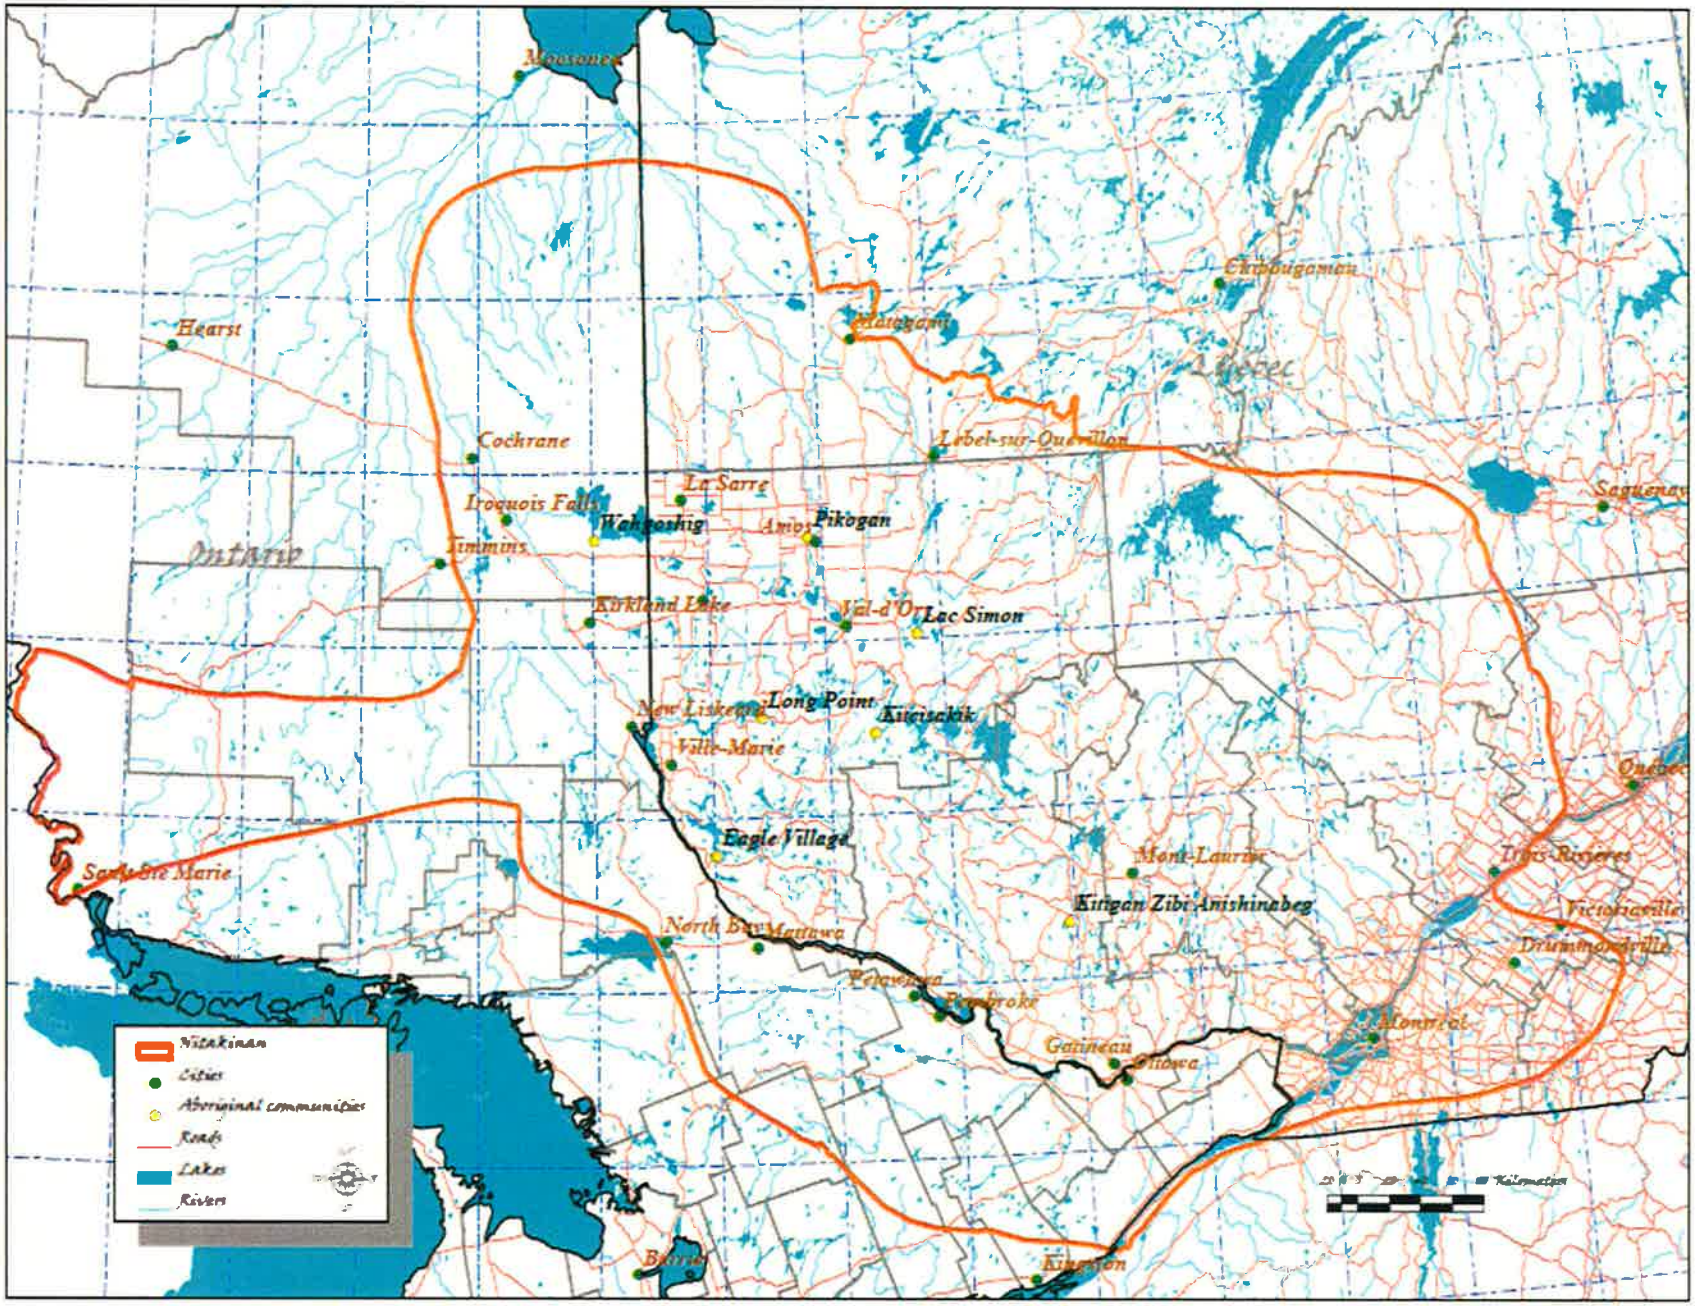
1973 - Calder judgment

The Supreme Court of Canada confirmed the existence of Aboriginal rights in a territory that they occupied and used it before the Europeans.

1973 - Malouf judgment

The Quebec Superior Court recognized the rights of the Cree and Inuit and ordered the suspension of work on hydroelectric sites, thus paving the way for negotiations and the conclusion in 1975 of the James Bay and Northern Quebec Agreement.

1997 – Delgamuukw judgment



Under this judgment, nations may hold an aboriginal title, a sub-category of ancestral rights. This title is defined as a collective right to land which confers a right of exclusive use and occupation of the territory and can be used in various activities that are not limited to hunting, fishing and trapping.

1998 - Nisga'a Treaty

For the first time since the James Bay and Northern Quebec and the Northeastern Quebec Agreement, it is established in a treaty signed in a province that Aboriginal Nisga'a become landowners of an area of 1992 km2 including underground resources.

2002 - Judgments Taku River Tlingit First Nation and Haida Nation

The British Columbia Court of Appeal decided that the province must consult Aboriginal people when a project of exploitation of natural resources is likely to affect aboriginal rights they formally claimed. In the Haida and Taku River judgment in 2004, the Supreme Court pushes further this idea of consultation. Aboriginal people must be consulted even if their rights have not been legally established or recognized by the Crown. Aboriginals only need to assert a serious intention or claim to begin the consultation process.

MEETING NOTES

Meeting Date: October 12, 2012
Time: 10 a.m. – 12:30 p.m.
Location: Wabun Tribal Council Offices, Timmins, ON

Project:	Côté Gold Project
Purpose:	To introduce project team members, provide a project update (including status of exploration agreement amendments), and determine path forward on agreements and consultation.
Attendees:	Aaron Steeghs, IMG (AS) Cheryl Naveau, IMG (CN) Dave Brown, IMG (DB) Caroline Burgess, AMEC (CB) Chief Walter Naveau, Mattagami FN (WN) Chief Murray Ray, Flying Post FN (MR) Shawn Batise, Wabun Tribal Council (WTC)/IBA Negotiator (SB)

DISCUSSION TOPICS

Topic	Action By	Due Date
Project Update and General Discussion		
• SB mentioned that they use Olthuis, Kleer, Townshend Law for drafting and review of Impact Benefit Agreements (IBAs); but not for negotiations.	Info	--
• AS indicated that they had Fasken Martineau for drafting the Exploration Agreement. SB mentioned that they also use Fasken's energy lawyer, so AS to check that there would be no conflict of interest.	AS	Nov 8
Business Opportunities, Training and Other Interests		
• There was discussion of current business and employment of Aboriginal owned businesses and Mattagami/Flying Post community members at the Côté Gold site. • AS indicated that since the site is currently an exploration site, there aren't large contracting opportunities. • SB would like the IBA to list business opportunities. • SB would like the opportunities provided through IBA to be tangible and moves the First Nation members to by self-sufficient. This could be better paying jobs, which will require more training. • WN indicated that the Project will change their lives forever and the importance of preserving their culture and heritage while benefiting from the Project.	Info	
• IMG mentioned that training needs would be determined with a number of their departments including human resources, purchasing team as well as the First Nations. • SB stated that the Matachewan Aboriginal Access to Mine Jobs Training Strategy (MAATS) was a successful training model previously used to train First Nations for employment in the mining sector. All believed there could be an opportunity to resurrect this initiative for IMG. • SB stated that Kim Naveau was the Employment Manager at WTC. Currently WTC and MFN are looking for a major industry	AS, SB	Nov 8

partner to access $1.7million in government funding by end of December 2012.		
• AS indicated that support for James Naveau and Ryan Ray would also be possible to increase capacity to address project needs.	Info	
• WTC has a mineral development officer that may wish to have more information about the Côté Gold Project.	Info	
• Two other positions that could be needed in future include: an environmental monitor and IBA coordinator. All recognized the need to ensure roles/responsibilities are clearly stated and do not overlap (or take away from) CN's current position.	Info	
• SB indicated that when there are hires, the Mine Manager has to know the spirit and intent of the IBA discussions. SB stated that IBA implementation is the biggest challenge.	Info	
• AS stated that he would send more information about positions needed to support the work being created by the Côté Gold Project. SB indicated AS should deal directly with WN and MR for this.	AS	Nov 8
• FPFN will need to see the Exploration Agreement.	AS to provide to MR	Nov 8
• FPFN has a number of members who would be potential employees including 23 people going to post secondary school.	Info	
• SB indicated that emails/correspondence with MFN and FPFN should be cc'ed to him.	Info	
Consultation Protocols		
• AS/CB asked how consultation about the project should occur. • SB stated that the Closure Plan is a typical trigger for consultation. However, in this case the Environmental Assessment (EA) would be considered the main trigger for consultation and an agreement. • SB felt that it was important that an IBA be substantially negotiated, if not completed before the EA process was underway.	Info	
• SB stated that there needs to be substantial work on the IBA before community consultation could occur. • SB suggested that the IBA negotiation team would present a position on the IBA to the community (without IMG present). • This meeting would be followed by a meeting with IMG to present the project and provide an opportunity for questions.	Info	
• WN, MR and SB would like an e-mail/notification 2 weeks prior to the PD being released for review. • AS committed to providing correspondence committing IAG to the negotiation of an IBA that listed the specific topics. This would be done prior to the PD release and included in the PD document.	Info	
IBA and Next Steps		
• SB to provide draft of IBA to AS before end of October	SB	**Oct 31**

• SB to indicate what financial information is required; AS indicated much of it is available through SEDAR.	Info
• All agreed that an interim agreement could be possible.	Info
• Next meeting set for November 8 in Timmins, WTC offices.	Info

Dear Chief Jerome,

I wanted to reach out to you and let you know that we have received your letter, Dated September 13. Thanks for reaching out to us and I'd really like the chance to chat by phone and (soon hopefully) in person. I tried calling at the end of last week, but you were not around and I understand that you are also away this week. I am traveling for work as well this week, however, I'm always available by cell phone, if you can find some time in the coming days.

As a brief update on our project, we are hoping to have a draft Project Description in the coming month, which we would be happy to send to you and get your feedback on.

Looking forward to speaking with you.

Best Regards,

AARON STEEGHS

Shawn Batise
Executive Director
Wabun Tribal Council
313 Railway Street
Timmins, ON P4N 2P4

Dear Shawn Batise,

Please regard this letter as our First Nation's formal directional letter to support and authorize to have Wabun Tribal Council's Mineral Development Advisor to conduct site visits on the traditional territory of our First Nation where our First Nation has signed a current exploration agreement.

We understand that the Mineral Development Advisor will coordinate such site visits first directly with the mining exploration company. These site visits will be, in as much as possible, jointly attended to by both the Mineral Development Advisor and one of our First Nations staff whether that be a lands resources personnel and or economic development officer

However, having said that, if circumstances cannot permit the accompaniment of one of our relevant staff, we nonetheless, support the conduct of site visits by Wabun's Mineral Development Advisor to our traditional territory where we have signed exploration agreements with any mining exploration company

Thus, we further authorize Wabun to direct this correspondence to the mining exploration companies who are conducting mineral exploration on our traditional territory to immediately commence the conduct of such site visits.

Yours truly,

Chief Walter Naveau,
Mattagami First Nation

Cc: Stephen Crozier
Subject: Draft Amendment to Exploration Agreement

Gentlemen,

Attached is a draft of the amendment to the Exploration Agreement – to include Flying Post. The first page is essentially a replica of the initial agreement (just with FPFN added to it) and the second page highlights the specific changes. You'll notice that it still says Trelawney in most places instead of IAMGOLD. That's because Trelawney still exists as a subsidiary company under IAMGOLD.

As per our discussions in the last workshop, we added in a new point (#5) that highlights IAMGOLD's commitment to negotiating an IBA. If desired, we can put this in a separate MOU…or take it out all together, whatever you prefer.

We hope this is fairly straight forward, but we're happy to chat about any changes that you see necessary.

Don't hesitate to write or call if you have any comments or questions, but FYI I'll be away tomorrow (Friday) and Monday of next week.

All the Best

Sent: November 6, 2012 12:26 PM
To: Andy Lefebvre; Mark Bowler
Subject: Location of the Cote Gold Site

Andy, Mark,

Thanks to both of you for the great conversations last week. As I mentioned, we are hoping to have the first draft project description completed within a month or so. I'll be sure to get you a copy as soon as possible.

In the meantime, in respecting your protocol, I wanted to provide you with the location of our site. What I'm giving you is the center point of the proposed pit. If you need the full parameters of our conecession, that will take a bit more time to get, but we can certainly get them to you.

So, this is what the guys provided me…let me know if you have any questions:

1) **LONG/LAT** NAD83 : -81.9349 deg, 47.5502 deg

2) **UTM Zone** 17 NAD 83 : 429656mE, 5,266,735mN, 400mASL (make sure the datum NAD83 is

correct as the difference between NAD27 and NAD83 is 200m north-south)

All the best.

November 26, 2012

Brunswick House First Nation
Chief Andrew Neshawabin
P.O. Box 1178
Chapleau, ON P0M 1K0

Re: The Côté Gold Project

Dear Chief Neshawabin

We are writing you to introduce our company and our newest mining asset in Ontario - the Côté Gold Project. The previous owners of the Côté Gold properties, Trelawney Mining, received guidance from the Federal Crown that your community may have an interest in learning more about the Côté Gold Project and what, if any, changes it may have on your traditional territories.

Introduction to IAMGOLD

IAMGOLD is a leading mid-tier gold mining company with head offices in Toronto, Ontario. IAMGOLD acquired the Côté Gold Project located about midway between Timmins and Sudbury, Ontario, just west of Highway 144. The Côté Gold Project is IAMGOLD's first Ontario mining asset. IAMGOLD also operates gold mines in Quebec, South America and Africa.

All of IAMGOLDs operations and actions are governed by a 'Zero Harm' policy. The Zero Harm policy means that all of IAMGOLD's operations meet the highest standards in health and safety; work to minimize their environmental footprint; and partners with their host communities to share benefits and build capacity.

Côté Gold Project

IAMGOLD purchased the Côté Gold Project in June 2012. The Côté Gold Project is located in the Chester Township in Ontario: 25 km southwest of Gogama, 130 km south of Timmins and 170 km north of Sudbury (see map attached). This region of Ontario is an historic mining area; prospecting and exploration around the Côté Gold Project lands has occurred since 1900.

Since June 2012, we have continued exploration drilling, engineering and environmental baseline studies to learn more about the gold deposit and to determine the best way to construct, operate and close a mine in this location. At this early stage, we believe the mine site would include an open pit, mill, mine rock, overburden and low-grade ore stockpiles, tailings storage facility, power transmission line, work camp and office buildings. We are currently preparing a "Pre-feasibility Study" which will provide a high level development plan for the Côté Gold Project. It is estimated that the open pit gold mine could:

- Operate for 15 years
- Produce 400,000 - 500,000 ounces of gold annually
- Process 50,000 - 55,000 tons of rock per day

IAMGOLD CORPORATION

W www.iamgold.com **E** info@iamgold.com

Due to the size of the Côté Gold Project, we are also required by the Canadian government to prepare a Project Description to conform to the Canadian Environmental Assessment Act (2012). This Project Description will help the Canadian Environmental Assessment Agency (CEAA) determine if a federal environmental assessment is required for the Côté Gold Project. We also anticipate that an environmental assessment will also be required under the Ontario Environmental Assessment Act. IAMGOLD will also be preparing a Closure Plan to meet requirements under the Ontario Mining Act.

Consultation with Aboriginal People

IAMGOLD is committed to involving Aboriginal people, governments, local communities and other stakeholders in the Côté Gold Project. IAMGOLD has met regularly with their nearest First Nation and Métis neighbours to discuss and actively involve them in the Côté Gold Project. These communities include:

- Mattagami First Nation
- Flying Post First Nation
- Métis Nation of Ontario (Region 3)

In a letter dated February 23, 2012 from Aboriginal Affairs and Northern Development Canada (AANDC) to the Canadian Environmental Assessment Agency (CEAA) regarding Aboriginal consultation related to the Cote Gold properties, AANDC indicated that your community may have an interest in the Côté Gold Project. This information was forwarded by CEAA to the previous property owner, Trelawney Mining. We are interested to know if your community currently uses the project area for exercising your Aboriginal or Treaty Rights or if there are areas of cultural importance to your community in the project area. If so, we would like to meet with you in early January 2013 to provide more information about the company and the Project and to discuss these interests.

We will contact you by telephone in the near future to determine your interest in a meeting and, if there is interest, a mutually agreeable time and location to meet. Our preference would be to meet you in your own community, however, if travel is necessary, we are willing to provide compensation for any travel costs you and one other representative from your community may incur to participate in the meeting and an honorarium for your time of $50 each.

At any time, if you have any questions or concerns, please do not hesitate to contact me or Cheryl Naveau, First Nation Liaison & Public Relations at Cheryl_naveau@iamgold.com or 705-269-0010 x 205.

Sincerely,

Aaron Steeghs, Manager, Corporate Social Responsibility

Matachewan First Nation
P.O. Box 160
Matachewan, ON P0K 1M0

Attention: Chief Sonny Batisse

Re: The Côté Gold Project

Dear Chief Batisse,

It was great to meet you this week at the Canadian Aboriginal Minerals Association (CAMA) conference in Toronto. We look forward to discussing the Côté Gold Project with you in person, but thought you would appreciate a letter with some background information as a start. This letter provides some information about IAMGOLD and our newest mining asset in Ontario - the Côté Gold Project.

Introduction to IAMGOLD

IAMGOLD is a leading mid-tier gold mining company with head offices in Toronto, Ontario. IAMGOLD acquired the Côté Gold Project located about midway between Timmins and Sudbury, Ontario, just west of Highway 144. The Côté Gold Project is IAMGOLD's first Ontario mining asset. IAMGOLD also operates gold mines in Quebec, South America and Africa.

All of IAMGOLDs operations and actions are governed by a 'Zero Harm' policy. The Zero Harm policy means that all of IAMGOLD's operations meet the highest standards in health and safety; work to minimize their environmental footprint; and partners with their host communities to share benefits and build capacity.

Côté Gold Project

IAMGOLD purchased the Côté Gold Project in June 2012. The Côté Gold Project is located in the Chester Township in Ontario: 25 km southwest of Gogama, 130 km south of Timmins and 170 km north of Sudbury (see map attached). This region of Ontario is an historic mining area; prospecting and exploration around the Côté Gold Project lands has occurred since 1900.

Since June 2012, we have continued exploration drilling, engineering and environmental baseline studies to learn more about the gold deposit and to determine the best way to construct, operate and close a mine in this location. At this early stage, we believe the mine site would include an open pit, mill, mine rock, overburden and low-grade ore stockpiles, tailings storage facility, power transmission line, work camp and office buildings. We are currently preparing a "Pre-feasibility Study" which will provide a high level development plan for the Côté Gold Project. It is estimated that the open pit gold mine could:

- Operate for 15 years

IAMGOLD CORPORATION

- Produce 400,000 - 500,000 ounces of gold annually
- Process 50,000 - 55,000 tons of rock per day

Due to the size of the Côté Gold Project, we are also required by the Canadian government to prepare a Project Description to conform to the Canadian Environmental Assessment Act (2012). This Project Description will help the Canadian Environmental Assessment Agency determine if a federal environmental assessment is required for the Côté Gold Project. We also anticipate that an environmental assessment will also be required under the Ontario Environmental Assessment Act. IAMGOLD will also be preparing a Closure Plan to meet requirements under the Ontario Mining Act.

Consultation with Aboriginal People

IAMGOLD is committed to involving Aboriginal people, governments, local communities and other stakeholders in the Côté Gold Project. IAMGOLD has met regularly with their nearest First Nation and Métis neighbours to discuss and actively involve them in the Côté Gold Project. These communities include:

- Mattagami First Nation
- Flying Post First Nation
- Métis Nation of Ontario (Region 3)

Although we have not yet submitted our Project Description to the Canadian Environmental Assessment Agency, we anticipate that the federal government may ask us to carry out the procedural aspects of consultation with your community about the Côté Gold Project. If your community currently uses the project area for exercising your Aboriginal or Treaty Rights or if there are areas of cultural importance to your community in the project area, we would like to meet with you in early January 2013 to provide more information about the company and the Project and to discuss these interests.

As mentioned to you earlier this week, we will contact you in the near future to set up a mutually agreeable time and location to meet. Our preference would be to meet you in your own community, however, if travel is necessary, we are willing to provide compensation for any travel costs you and one other representative from your community may incur to participate in the meeting and an honorarium for your time of $50 each.

At any time, if you have any questions or concerns, please do not hesitate to contact me or Cheryl Naveau, First Nation Liaison & Public Relations at Cheryl_naveau@iamgold.com or 705-269-0010 x 205.

Sincerely,

Missanabie Cree First Nation
Chief Kim Rainville
174B, Highway 17 East
Garden River, ON P6A 6Z1

Re: The Côté Gold Project

Dear Chief Rainville,

We are writing you to introduce our company and our newest mining asset in Ontario - the Côté Gold Project. The previous owners of the Côté Gold properties, Trelawney Mining, received guidance from the Federal Crown that your community may have an interest in learning more about the Côté Gold Project and what, if any, changes it may have on your traditional territories.

Introduction to IAMGOLD

IAMGOLD is a leading mid-tier gold mining company with head offices in Toronto, Ontario. IAMGOLD acquired the Côté Gold Project located about midway between Timmins and Sudbury, Ontario, just west of Highway 144. The Côté Gold Project is IAMGOLD's first Ontario mining asset. IAMGOLD also operates gold mines in Quebec, South America and Africa.

All of IAMGOLDs operations and actions are governed by a 'Zero Harm' policy. The Zero Harm policy means that all of IAMGOLD's operations meet the highest standards in health and safety; work to minimize their environmental footprint; and partners with their host communities to share benefits and build capacity.

Côté Gold Project

IAMGOLD purchased the Côté Gold Project in June 2012. The Côté Gold Project is located in the Chester Township in Ontario: 25 km southwest of Gogama, 130 km south of Timmins and 170 km north of Sudbury (see map attached). This region of Ontario is an historic mining area; prospecting and exploration around the Côté Gold Project lands has occurred since 1900.

Since June 2012, we have continued exploration drilling, engineering and environmental baseline studies to learn more about the gold deposit and to determine the best way to construct, operate and close a mine in this location. At this early stage, we believe the mine site would include an open pit, mill, mine rock, overburden and low-grade ore stockpiles, tailings storage facility, power transmission line, work camp and office buildings. We are currently preparing a "Pre-feasibility Study" which will provide a high level development plan for the Côté Gold Project. It is estimated that the open pit gold mine could:

- Operate for 15 years
- Produce 400,000 - 500,000 ounces of gold annually
- Process 50,000 - 55,000 tons of rock per day

W www.iamgold.com **E** info@iamgold.com

Due to the size of the Côté Gold Project, we are also required by the Canadian government to prepare a Project Description to conform to the Canadian Environmental Assessment Act (2012). This Project Description will help the Canadian Environmental Assessment Agency (CEAA) determine if a federal environmental assessment is required for the Côté Gold Project. We also anticipate that an environmental assessment will also be required under the Ontario Environmental Assessment Act. IAMGOLD will also be preparing a Closure Plan to meet requirements under the Ontario Mining Act.

Consultation with Aboriginal People

IAMGOLD is committed to involving Aboriginal people, governments, local communities and other stakeholders in the Côté Gold Project. IAMGOLD has met regularly with their nearest First Nation and Métis neighbours to discuss and actively involve them in the Côté Gold Project. These communities include:

- Mattagami First Nation
- Flying Post First Nation
- Métis Nation of Ontario (Region 3)

In a letter dated February 23, 2012 from Aboriginal Affairs and Northern Development Canada (AANDC) to the Canadian Environmental Assessment Agency (CEAA) regarding Aboriginal consultation related to the Cote Gold properties, AANDC indicated that your community may have an interest in the Côté Gold Project. This information was forwarded by CEAA to the previous property owner, Trelawney Mining. We are interested to know if your community currently uses the project area for exercising your Aboriginal or Treaty Rights or if there are areas of cultural importance to your community in the project area. If so, we would like to meet with you in early January 2013 to provide more information about the company and the Project and to discuss these interests.

We will contact you by telephone in the near future to determine your interest in a meeting and, if there is interest, a mutually agreeable time and location to meet. Our preference would be to meet you in your own community, however, if travel is necessary, we are willing to provide compensation for any travel costs you and one other representative from your community may incur to participate in the meeting and an honorarium for your time of $50 each.

At any time, if you have any questions or concerns, please do not hesitate to contact me or Cheryl Naveau, First Nation Liaison & Public Relations at Cheryl_naveau@iamgold.com or 705-269-0010 x 205.

Sincerely,

Matachewan, ON P0K 1M0

Attention: Chief Sonny Batisse

Re: The Côté Gold Project

Dear Chief Batisse,

It was great to meet you this week at the Canadian Aboriginal Minerals Association (CAMA) conference in Toronto. We look forward to discussing the Côté Gold Project with you in person, but thought you would appreciate a letter with some background information as a start. This letter provides some information about IAMGOLD and our newest mining asset in Ontario - the Côté Gold Project.

Introduction to IAMGOLD

IAMGOLD is a leading mid-tier gold mining company with head offices in Toronto, Ontario. IAMGOLD acquired the Côté Gold Project located about midway between Timmins and Sudbury, Ontario, just west of Highway 144. The Côté Gold Project is IAMGOLD's first Ontario mining asset. IAMGOLD also operates gold mines in Quebec, South America and Africa.

All of IAMGOLDs operations and actions are governed by a 'Zero Harm' policy. The Zero Harm policy means that all of IAMGOLD's operations meet the highest standards in health and safety; work to minimize their environmental footprint; and partners with their host communities to share benefits and build capacity.

Côté Gold Project

IAMGOLD purchased the Côté Gold Project in June 2012. The Côté Gold Project is located in the Chester Township in Ontario: 25 km southwest of Gogama, 130 km south of Timmins and 170 km north of Sudbury (see map attached). This region of Ontario is an historic mining area; prospecting and exploration around the Côté Gold Project lands has occurred since 1900.

Since June 2012, we have continued exploration drilling, engineering and environmental baseline studies to learn more about the gold deposit and to determine the best way to construct, operate and close a mine in this location. At this early stage, we believe the mine site would include an open pit, mill, mine rock, overburden and low-grade ore stockpiles, tailings storage facility, power transmission line, work camp and office buildings. We are currently preparing a "Pre-feasibility Study" which will provide a high level development plan for the Côté Gold Project. It is estimated that the open pit gold mine could:

- Operate for 15 years

IAMGOLD CORPORATION

W www.iamgold.com **E** info@iamgold.com

- Produce 400,000 - 500,000 ounces of gold annually
- Process 50,000 - 55,000 tons of rock per day

Due to the size of the Côté Gold Project, we are also required by the Canadian government to prepare a Project Description to conform to the Canadian Environmental Assessment Act (2012). This Project Description will help the Canadian Environmental Assessment Agency determine if a federal environmental assessment is required for the Côté Gold Project. We also anticipate that an environmental assessment will also be required under the Ontario Environmental Assessment Act. IAMGOLD will also be preparing a Closure Plan to meet requirements under the Ontario Mining Act.

Consultation with Aboriginal People

IAMGOLD is committed to involving Aboriginal people, governments, local communities and other stakeholders in the Côté Gold Project. IAMGOLD has met regularly with their nearest First Nation and Métis neighbours to discuss and actively involve them in the Côté Gold Project. These communities include:

- Mattagami First Nation
- Flying Post First Nation
- Métis Nation of Ontario (Region 3)

Although we have not yet submitted our Project Description to the Canadian Environmental Assessment Agency, we anticipate that the federal government may ask us to carry out the procedural aspects of consultation with your community about the Côté Gold Project. If your community currently uses the project area for exercising your Aboriginal or Treaty Rights or if there are areas of cultural importance to your community in the project area, we would like to meet with you in early January 2013 to provide more information about the company and the Project and to discuss these interests.

As mentioned to you earlier this week, we will contact you in the near future to set up a mutually agreeable time and location to meet. Our preference would be to meet you in your own community, however, if travel is necessary, we are willing to provide compensation for any travel costs you and one other representative from your community may incur to participate in the meeting and an honorarium for your time of $50 each.

At any time, if you have any questions or concerns, please do not hesitate to contact me or Cheryl Naveau, First Nation Liaison & Public Relations at Cheryl_naveau@iamgold.com or 705-269-0010 x 205.

Sincerely,

Aaron Steeghs, Manager, Corporate Social Responsibility

Shawn Batise
Executive Director
Wabun Tribal Council
313 Railway Street
Timmins, ON P4N 2P4

Dear Mr. Batise:

Re: Côté Gold Draft Project Description Report

The Canadian Environmental Assessment Agency (the Agency) under the *Canadian Environmental Assessment Act* (2012) requires that a Project Description be submitted in order to determine whether a federal environmental assessment is required for a designated project. The Project Description is intended to inform the Agency of the possibility of any potential adverse effects on the environment.

IAMGOLD has prepared a Draft Project Description that describes the proposed project and the environmental effects that may be of concern. We have enclosed an electronic copy for your review. We are seeking the Wabun Tribal Council's input on this document prior to submission to the Agency. As you know we are holding open houses for both the Flying Post and Mattagami First Nations to receive their comments on February 13th and 20th respectively. We would be happy to discuss the Draft at either of these functions or at another mutually convenient time.

We look forward to seeing you on February 20th. Please let me know if you have any immediate questions or concerns.

Sincerely,

Aaron Steeghs, Manager, Corporate Social Responsibility
IAMGOLD Corporation

Subject: FW: Next Steps on Cote Project

From: Andy Lefebvre [mailto:AndyL@metisnation.org]
Sent: February-12-13 10:19 AM
To: Aaron Steeghs
Cc: Mark Bowler; MarcelLafrance; Witt, Sandra
Subject: RE: Next Steps on Cote Project

Good morning Aaron,

Thanks for suggesting some dates.

The only date that work for me is February 22nd.
I will try to confirm the availability of the consultation committee for that date.

I may be attending PDAC in early March.
I am uncertain who from the regional consultation committee is going to PDAC but I will find out.

At this time I think that it would be more productive to have the Consultation committee involved in the project description presentation.

Thanks for getting back to me Andy.

I'd really like to get that meeting together where I can present our draft Project Description. Here are some possible openings that I have, let me know if there is something here that works for you:

Feb. 19
Feb. 22
Feb. 26
Mar. 4
Mar 5

Looking forward to hearing from you..

Cheers.

Good afternoon Aaron,

I look forward to receiving your project description. Unfortunately I have commitments on the 13th that I can't reschedule.
As you may remember from our chat just before the Christmas break, the MNO has established regional consultation committees that
are the decision makers on consultation activities.

If you want, I can coordinate a meeting with the entire committee so that you can present the project to them.

I would need a few weeks to coordinate such a meeting.

In the meantime, if you have any additional questions, please feel free to contact me at the numbers that appear below. You will notice that I have added Marcel Lafrance to the email string. Marcel is the consultation committee chair and should be included in all communications.

Best Regards,

Andy Lefebvre

Gentlemen,

First of all, Happy New year. I hope that you both had a wonderful break. Seems like a lifetime ago now….

Anyway, we should have the draft Project Description sometime next week (finally!) and I was wondering if I could arrange a first meeting to hand it over and have a quick chat about next steps.

Would Wednesday, Feb. 13th work for you?

Please let me know if there are other people I should be cc:ing on this email.

Best.

Métis Consultation Unit
Métis Nation of Ontario Head Office
500 Old St. Patrick Street, Unit D
Ottawa, Ontario, K1N 9G4

Dear Sir/Madam:

Re: Côté Gold Project Description Report for Review and Input

The Canadian Environmental Assessment Agency (the Agency) under the *Canadian Environmental Assessment Act* (2012) requires that a Project Description be submitted in order to determine whether a federal environmental assessment is required for a designated project. The Project Description is intended to inform the Agency of the possibility that the carrying out of the designated project may cause adverse environmental effects.

IAMGOLD has prepared a Draft Project Description that describes the project and the environmental effects that may be of concern. IAMGOLD has provided a copy of this document in hard copy and electronic form for your review. IAMGOLD is seeking the Métis Nation's input on the Draft prior to submission to the Agency. We would like to meet with you to discuss the Draft Project Description, provide any additional clarification required, and receive any comments that you may have on the report.

IAMGOLD is also seeking direction from the Métis Nation on consultation with Community Councils. IAMGOLD would be pleased to hold an open house based around the Draft Project Description for Métis citizens and/or community councils to seek feedback on the report.

Additionally, we will be holding a series of public open houses in the Project region to seek comments and input. We would be pleased if Métis citizens attended these events to better inform themselves about the Project and provide comment on the Draft Project Description. We will provide a list of these locations and dates when they are finalized so that you can notify community members. We would be pleased to publish notifications in the Métis Voyageur as well.

IAMGOLD looks forward to your response and further direction on consultation with Métis citizens.

Sincerely,

Aaron Steeghs, Manager, Corporate Social Responsibility, IAMGOLD Corporation

Dear Sirs:

Re: Côté Gold Project Environmental Document Review Capacity

As part of the required environmental assessments by both the federal and provincial governments, IAMGOLD will be preparing a series of reports that describe the Côté Gold Project, the potential environmental effects, and studies required to assess them. As part of the consultation process for these environmental assessment reports, IAMGOLD will be seeking input from the Wabun Tribal Council and its member communities; the Flying Post and the Mattagami First Nations.

While we endeavor to use plain language in the reports, IAMGOLD recognizes that they are highly technical in nature and may require additional explanation in order for the communities to meaningfully comment. IAMGOLD would like to offer support to assist you to review and understand the reports and studies.

IAMGOLD would be pleased to arrange for meetings and/or sessions with our technical experts on specific subjects within the reports to enable your representatives to better understand the contents, answer any questions they may have, and receive their feedback, which may be incorporated into studies and future versions of the documents.

Alternatively, IAMGOLD would like to offer capacity funding to the Wabun Tribal Council and the member communities to have their selected experts review and comment on the documents. If this is your preferred option, we would be pleased to discuss budget expectations, deliverables, and timelines to accomplish the reviews with you at your earliest convenience.

Sincerely,

Aaron Steeghs, Manager, Corporate Social Responsibility

Good morning Shawn,

Thanks for the note. If you can send the agreement back to us, we can review and get it finalized. Perhaps you have already sent to Aaron?
We fully support the approach you have suggested. I think Chris will do a wonderful job. We have heard good things about him.

We would like to set up a meeting between Chris, Sandra Witt and John Pollock in the next few weeks to discuss the questionnaire, and other study parameters such as consent forms, mapping, field visits (in conjunction with John's archaeology work), schedule, etc. to ensure that it is coordinated with the documents required for the environmental assessments.

Sandra and I will connect with Chris (thank you for his email) in the next few days.

Let us know if you have any concerns,
Caroline

Hi Caroline,
Sorry for not getting back to you sooner on this. Our legal counsel has reviewed the document and made some changes to reflect discussions at the negotiation table.

Essentially what we want to do is take AMEC's questionnaire and use it as a template to formulate our own. We would also like to use our own consultant - WC McKay Consulting - to both formulate the questionnaire and conduct the study. He may end training a couple of individuals to help with the survey.

We would of course ensure the questionnaire meets IAMGold/AMEC's needs for the EA. However, we want to ensure to the maximum extent possible that we control the information and we believe this process will achieve that.

You can follow up with Aaron and Steve to confirm this. I will forward you Chris McKay's information in a separate email so that we can begin the process.

Regards,
Shawn

Dear Chief Jerome,

The Canadian Environmental Assessment Agency (the Agency) must decide whether a federal environmental assessment is required for the proposed Côté Gold Mine located 20 kilometres southwest of the community of Gogama.

To assist it in making its decision, the Agency is seeking input from the Algonquin Anishinabeg Tribal Council on the proposed mine development and its potential effects on the environment. We are asking for your input by Monday, April 15th.

Please see the attached letter seeking your input, and the link to the summary of the project description (below). Both the letter and a summary of the project description have been mailed to you. A link to the complete project description is included below.

Link to the summary of the project description:
http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=87329

Link to the Côté Gold project page on the Canadian Environmental Assessment Registry:

Chief Alice Jerome
Algonquin Anishinabeg Tribal Council
81 Kichi Mikan,
Maniwaki,QC
J9E 3C3
info@anishinabenation.ca

Dear Chief Jerome,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on Algonquin Anishinabeg Tribal Council (AATC) member communities' rights or interest.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

Canada

The Agency is currently seeking the initial views of the Algonquin Anishinabeg Tribal Council on the following matters based on the information set out in the project description:

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your member communities. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your member communities':
  - health and socio-economic conditions,
  - physical and cultural heritage,
  - current use of lands and resources for traditional purposes, or
  - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your member communities' potential or established Aboriginal or Treaty rights.

Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Algonquin Anishinabeg Tribal Council.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review
The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it could have on your member communities' potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Yours sincerely,

Anjala Puvananathan
Regional Director
OntarioRegion

Dear Chief Neshawabin,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on your community.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

The Agency is currently seeking the initial views of the Brunswick House First Nation on the following matters based on the information set out in the project description:

Canada

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your community. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your community's:
    - health and socio-economic conditions,
    - physical and cultural heritage,
    - current use of lands and resources for traditional purposes, or
    - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your potential or established Aboriginal or Treaty rights.

Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Brunswick House First Nation.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review

The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any proposed impacts it could have on your potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Yours sincerely,

Dear Chief Ray,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on your community.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

The Agency is currently seeking the initial views of the Flying Post First Nation on the following matters based on the information set out in the project description:

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your community. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your community's:
    - health and socio-economic conditions,
    - physical and cultural heritage,
    - current use of lands and resources for traditional purposes, or
    - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your potential or established Aboriginal or Treaty rights.

Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Flying Post First Nation.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review

The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any proposed impacts it could have on your potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Yours sincerely,

Anjala Puvananathan
Regional Director
OntarioRegion

Dear Chief Naveau,

The Canadian Environmental Assessment Agency (the Agency) must decide whether a federal environmental assessment is required for the proposed Côté Gold Mine located 20 kilometres southwest of the community of Gogama.

To assist it in making its decision, the Agency is seeking input from Mattagami First Nation on the proposed mine development and its potential effects on the environment. We are asking for your input by Monday, April 15th.

Please see the attached letter seeking your input, and the link to the summary of the project description (below). Both the letter and a summary of the project description have been mailed to you. A link to the complete project description is included below.

Link to the summary of the project description:
http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=87329

Link to the Côté Gold project page on the Canadian Environmental Assessment Registry:
http://www.ceaa-acee.gc.ca/050/details-eng.cfm?evaluation=80036

If you have any questions or comments please contact me at ellen.campbell@ceaa-acee.gc.ca or by phone at (416) 952-7006.

Thank you,

Ellen Campbell

Dear Chief Naveau,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on your community.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

The Agency is currently seeking the initial views of the Mattagami First Nation on the following matters based on the information set out in the project description:

Canada

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your community. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your community's:
    - health and socio-economic conditions,
    - physical and cultural heritage,
    - current use of lands and resources for traditional purposes, or
    - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your potential or established Aboriginal or Treaty rights.

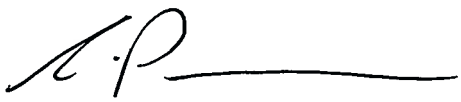
Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Mattagami First Nation.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More Information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review



The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any proposed impacts it could have on your potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Yours sincerely,

Dear Mr. Lefebre,

SUBJECT: Determination of the Requirement for an Environmental Assessment of the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 15, 2013, the Canadian Environmental Assessment Agency (the Agency), received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). This letter invites you to provide your views on the potential impacts of the Project on your community.

The Project

The proponent proposes to develop, construct, operate, and remediate an open pit gold mine and associated infrastructure. The proposed mine site, located 20 km southwest of the community of Gogama in northeastern Ontario, would process 60,000 tonnes per day of ore, with a mine life of approximately 15 years. Ore would be processed on site to produce a final doré bar that would be shipped off site for sale. Please see the attached summary of the project description for additional information.

Determination of Need for a Federal EA

In accordance with section 10 of CEAA 2012, the Agency is currently determining whether an environmental assessment (EA) of the Project is required. This determination will be made by considering the characteristics of the Project, the possible adverse environmental effects of the Project on the environment, and any public and Aboriginal comments received during a 20-day consultation period.

The Agency is currently seeking the initial views of the Métis Nation of Ontario, Region 3, on the following matters based on the information set out in the project description:

Canada

- Please identify if there are possible adverse environmental effects of the Project that are of importance to your community. Do you anticipate any potential adverse environmental effects that are not reflected in the project description?

- Please identify if there are potential changes to the environment that may be caused by the Project that would result in changes to your community's:
    - health and socio-economic conditions,
    - physical and cultural heritage,
    - current use of lands and resources for traditional purposes, or
    - structures, sites or things of historical, archaeological, paleontological or architectural significance.

- Please identify any potential impacts of the Project on your potential or established Aboriginal or Treaty rights.

Please provide your comments by **April 15, 2013** to ensure your comments will be considered in the Agency's decision of whether an EA of the Project is required. I have attached a form addressing these items for your convenience; however, you may choose to respond in another format. You will be informed of the decision on whether an EA of the Project will be commenced and any further consultation steps.

Coordination of Federal Crown Consultation

Should the Agency determine that a federal EA is required for the Project, then we will also be the federal Crown Consultation Coordinator for the Project. Accordingly, the Agency would coordinate federal-Aboriginal consultations related to potential and established Aboriginal and Treaty rights that could be adversely impacted by the proposed Project. Please provide us with contact information for staff or other representatives who are authorized to coordinate consultation activities and information-sharing on behalf of the Métis Nation of Ontario, Region 3.

Should a federal EA be required, then federal funding would be made available to support the participation of some Aboriginal groups during certain phases of an EA. More information on the federal EA process, including the Agency's Participant Funding Program, is available at: www.ceaa-acee.gc.ca.

Provincial review

The Project may also be subject to provincial review. Please contact Dawn-Ann Metsaranta at the Ministry of Northern Development and Mines for additional information. Dawn-Ann Metsaranta may be reached at 705-235-1643 or dawn-ann.metsaranta@ontario.ca.

Contacting the Agency
Ellen Campbell will be managing, on behalf of the Agency, the initial EA determination process for the Project, and will be contacting you as a follow-up to this letter.

In the meantime, please do not hesitate to contact Ellen at 416-952-7006 or ellen.campbell@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any proposed impacts it could have on your potential or established Aboriginal or Treaty rights.

IMPORTANT NOTE: Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you provide them to us.

Grand Chief Alice Jerome
The Algonquin Anishinabeg Nation Tribal Council
81 Kichi Mikan
Maniwaki, QC J9E 3C3

Dear Chief Jerome:

Re: The Côté Gold Project

Thank you for your letter of September 12, 2012 regarding businesses operating within the Algonquin territory. Further to our phone call in the fall of last year, and in response to your letter, IAMGOLD would like to provide you with some information on our newest mining asset in Ontario - the Côté Gold Project. The Côté Gold Project (currently an exploration site) is located 25 km south of Gogama, 125 km south of Timmins and 170 km north of Sudbury (see attached map) This region of Ontario is an historic mining area; prospecting and exploration around the Côté Gold Project lands has occurred since 1900.

IAMGOLD acquired the project in June 2012, and has continued exploration drilling, engineering and environmental baseline studies to learn more about the gold deposit and to determine the best way to construct, operate and close a mine in this location. At this early stage, we believe the mine site would include an open pit, mill, mine rock, overburden and low-grade ore stockpiles, tailings storage facility, power transmission line, work camp and office buildings. We are currently preparing a "Pre-feasibility Study" which will provide a high level development plan for the Côté Gold Project. It is estimated that the open pit gold mine could:

- Operate for 15 years
- Produce 400,000 - 500,000 ounces of gold annually
- Process 50,000 - 55,000 tons of rock per day

Due to the size of the Côté Gold Project, we are also required by the Canadian government to prepare a Project Description to conform to the *Canadian Environmental Assessment Act* (2012). This Project Description will help the Canadian Environmental Assessment Agency (the Agency) determine if a federal environmental assessment is required for the Côté Gold Project. The Project Description has been submitted and the public comment period for the screening phase of this document began on March 26, 2013 and extends through April 15, 2013. We understand that the Agency has notified you directly and will provide an opportunity for you to comment on the document.

IAMGOLD will also be required to prepare an individual environmental assessment in accordance with the Ontario *Environmental Assessment Act.* A Terms of Reference (ToR) will be submitted as a first step. The ToR will set out the work plan for addressing the legislated

IAMGOLD CORPORATION

401 Bay Street, Suite 3200, PO Box 153

W www.iamgold.com E info@iamgold.com

requirements of the *Environmental Assessment Act* for the preparation and content of the individual environmental assessment.

IAMGOLD is preparing a Draft ToR that describes the project and the assessment of environmental effects. This document will be sent to you for input in mid to late April.

Furthermore, IAMGOLD will be preparing a Closure Plan to meet requirements under the *Ontario Mining Act*.

All of IAMGOLD's operations and actions are governed by a 'Zero Harm' policy. The Zero Harm policy means that all of IAMGOLD's operations meet the highest standards in health and safety; work to minimize their environmental footprint; and partners with their host communities to share benefits and build capacity.

Based on your letter, you have expressed an interest in the Côté Gold Project. We trust that the information enclosed as to the location and scope of the Project will help you assess whether the Project will have an impact on your traditional activities. We would be happy to discuss with you any concerns you may have and how we may address them.

At your earliest convenience, we would welcome the opportunity to meet with you to discuss any questions you may have and to help us understand the nature and use of the Project area by your community members in order to determine whether there are any potential impacts on your Aboriginal rights caused by the Project.

We will be following up with you in the near future to set a mutually acceptable time and place for this meeting.

Sincerely,

Aaron Steeghs, Manager, Corporate Social Responsibility
IAMGOLD Corporation

Marcel, Andy

Hoppe you are both doing well.

After our last meeting, I said that I would get back to you with the list of permits that we'll be needing this year. Well, after asking both our site environment guys as well as our project team, it turns out that we won't be applying for any permits this year (perhaps with the exception of our exploration team that may expand the drilling). The long and the short of it is that we can't really build anything on site as we are into the permitting phase.

On another note, you should be receiving a letter shortly, which is essentially a "heads up" about our EA Terms of Reference [a Provincial gov't process]. You probably have more experience with ToRs than I do, but in case you're wondering, it's a document that outlines 'what's in' for the Environmental Assessment process.

We'd like to find some time to sit down with you (the two of you and/or the full consultation committee) to review the document. Cheryl will be in touch to arrange a meeting with either myself of Steve Woolfenden.

All the best….hope it's as sunny up there as it is down here today!

March 27, 2013

Chief Andrew Neshawabin
Brunswick House First Nation
P.O. Box 1178
Chapleau, ON P0M 1K0

Dear Chief Neshawabin:

Re: Advance Notice of Côté Gold Project Draft Terms of Reference

The Ontario *Environmental Assessment Act* requires a Terms of Reference (ToR) be submitted as a first step in a class environmental assessment. The ToR will set out the work plan for addressing the legislated requirements of the *Environmental Assessment Act* for the preparation and content of the class environmental assessment.

IAMGOLD is preparing a Draft ToR that describes the project and the environmental effects that may be of concern and it is expected that this document will be sent to you for input April 19, 2013.

IAMGOLD will be seeking the Brunswick House First Nation's input on the Draft prior to submission to the Ministry of Environment for review. We would like to meet with the Brunswick House First Nation to discuss the Draft ToR, provide any additional clarification required, and receive any comments that you may have on the report.

While we endeavor to use plain language in the reports, IAMGOLD recognizes that they are highly technical in nature and may require additional explanation in order for the communities to meaningfully comment. IAMGOLD has offered support to the other Wabun Tribal Council members and would like to extend this offer of support to assist you to review and understand the reports and studies.

IAMGOLD would be pleased to arrange for meetings and/or sessions with our technical experts on specific subjects within the reports to enable your representatives to better understand the contents, answer any questions you may have, and receive their feedback, which may be incorporated into studies and future versions of the documents.

Alternatively, IAMGOLD would like to offer capacity funding to the Wabun Tribal Council and the member communities to have their selected experts review and comment on the documents. If this is your preferred option, we would be pleased to discuss budget expectations, deliverables, and timelines to accomplish the reviews with you at your earliest convenience.

We will be in touch in the near future to discuss your preferences in providing input on Draft ToR.

Chief Murray Ray
Flying Post First Nation
33 First Street
Box 1027
Nipigon, ON P0T 2J0

Dear Chief Ray:

Re: Advance Notice of Côté Gold Project Draft Terms of Reference

The Ontario *Environmental Assessment Act* requires a Terms of Reference (ToR) be submitted as a first step in a class environmental assessment. The ToR will set out the work plan for addressing the legislated requirements of the *Environmental Assessment Act* for the preparation and content of the class environmental assessment.

IAMGOLD is preparing a Draft ToR that describes the project and the environmental effects that may be of concern and it is expected that this document will be sent to you for input on April 19, 2013.

IAMGOLD will be seeking the Flying Post First Nation's input on the Draft prior to submission to the Ministry of Environment for review. We would like to meet with the Flying Post First Nation to discuss the Draft ToR, provide any additional clarification required, and receive any comments that you may have on the report.

As discussed in our letter dated February 26, 2013, IAMGOLD would be pleased to offer capacity support to review this document through meetings with technical experts or review by external consultants.

We will be in touch in the near future to discuss your preferences in providing input on the Draft ToR.

Sincerely,

Aaron Steeghs,
Manager, Corporate Social Responsibility,
IAMGOLD Corporation

Subject: Checking In

Marcel, Andy

Hoppe you are both doing well.

After our last meeting, I said that I would get back to you with the list of permits that we'll be needing this year. Well, after asking both our site environment guys as well as our project team, it turns out that we won't be applying for any permits this year (perhaps with the exception of our exploration team that may expand the drilling). The long and the short of it is that we can't really build anything on site as we are into the permitting phase.

On another note, you should be receiving a letter shortly, which is essentially a "heads up" about our EA Terms of Reference [a Provincial gov't process]. You probably have more experience with ToRs than I do, but in case you're wondering, it's a document that outlines 'what's in' for the Environmental Assessment process.

We'd like to find some time to sit down with you (the two of you and/or the full consultation committee) to review the document. Cheryl will be in touch to arrange a meeting with either myself of Steve Woolfenden.

All the best….hope it’s as sunny up there as it is down here today!

Grand Chief Alice Jerome
Algonquin Anishinabeg Nation Tribal Council
81 Kichi Mikan
Maniwaki, QC J9E 3C3

Dear Grand Chief Jerome:

Re: IAMGOLD Consultation on the Côté Gold Project

This letter is to confirm our telephone conversation on April 10, 2013 regarding the Algonquin Anishinabeg Nation Tribal Council's interest in the Côté Gold Project. As you indicated to me on this call, the Tribal Council Chiefs have determined they have no interest in the Project area or the Project and do not require ongoing engagement and consultation efforts from IAMGOLD.

As you have recommended, IAMGOLD will contact Chief Babin of the Wahgoshig First Nation to confirm their interest (if any) in the Côté Gold Project.

IAMGOLD is committed to engaging all communities that may have an interest in the Côté Gold Project. We will continue to notify you about the progress of the environmental studies and the Project. Should any concerns arise, please do not hesitate to contact us.

It was a pleasure speaking with you and thank you for clarifying the Tribal Council's position.

Sincerely,

Aaron Steeghs,
Manager, Corporate Social Responsibility,
IAMGOLD Corporation

Dear Chief Jerome,

On May 10, 2013, the Canadian Environmental Assessment Agency determined that a standard environmental assessment will be required for the proposed Côté Gold Mine Project.

We now invite your community to review and provide comments on the draft Environmental Impact Statement Guidelines, which will identify to IAMGOLD Corporation the requirements for preparing their Environmental Impact Statement for the project. The attached letter contains additional information on how your community can participate in this next stage of the environmental assessment process. Both the letter and the attached Draft Environmental Impact Statement Guidelines have been mailed to you.

If you have any questions or comments please contact me at minecotemine@ceaa-acee.gc.ca or by phone at (416) 952-7006.

Thank you,

Ellen Campbell

info@anishinabenation.ca

Dear Chief Jerome,

SUBJECT: Comments requested on the draft Environmental Impact Statement Guidelines and Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 26, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to the Algonquin Anishinabeg Tribal Council of a 20 day public comment period of the project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project).

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

The Agency invites the Algonquin Anishinabeg Tribal Council to review and comment on the draft Environmental Impact Statement (EIS) guidelines (attached). Information is also being provided to further explain the next phase in the EA process and how Crown consultation will be integrated into the EA process.

The purpose of the EIS guidelines is to identify for the proponent the information requirements for their preparation of an Environmental Impact Statement (EIS) for a designated project[1].The EIS guidelines specify the nature, scope and extent of the information required. Please note that the deadline for submitting comments for consideration in the finalization of this document is **June 12, 2013.**

---

[1] In this document "project" has the same meaning as "designated project" as defined in the *Canadian Environmental Assessment Act, 2012.*

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Crown consultation will be integrated into the EA process to the greatest extent possible. The Agency will be responsible for coordinating federal-Aboriginal consultations related to potential or established Aboriginal or Treaty rights that could be adversely impacted by the proposed Project.

Federal funding may be made available to support the participation of some Aboriginal groups during later phases of an EA (EIS Review and EA Report Review). The Agency will advise you of any opportunities to apply for funding. Information on the Agency's Participant Funding Program, including the *Guide to the Participant Funding Program*, is available at: www.ceaa-acee.gc.ca.

Provincial Review

The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca. Consultation activities associated with the federal and provincial reviews will be coordinated to the extent possible in order to ensure effective consultation takes place with the Algonquin Anishinabeg Tribal Council.

Ellen Campbell will be managing the EA and conducting Crown Consultation for this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it may have on your potential or established Aboriginal or Treaty rights.

Information that you provide to the Agency is considered public and may be subject to public access to information requests. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you send them in.

Sincerely,

Anjala Puvananathan
Regional Director
Ontario Region

bhfn@ntl.sympatico.ca

Dear Chief Martel,

SUBJECT: Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 28, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to Beaverhouse First Nation that the Agency had received a project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project and was determining whether an environmental assessment (EA) would be required.

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

Information about the project can be accessed on the Canadian Environmental Assessment Registry (CEAR) site: http://www.ceaa-acee.gc.ca/050/details-eng.cfm?evaluation=80036

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Canada

Provincial Review
The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca.

Ellen Campbell will be managing the EA on this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions.

Sincerely,

Anjala Puvananathan

Dear Chief Neshawabin,

On May 10, 2013, the Canadian Environmental Assessment Agency determined that a standard environmental assessment will be required for the proposed Côté Gold Mine Project.

We now invite your community to review and provide comments on the draft Environmental Impact Statement Guidelines, which will identify to IAMGOLD Corporation the requirements for preparing their Environmental Impact Statement for the project. The attached letter contains additional information on how your community can participate in this next stage of the environmental assessment process. Both the letter and the attached Draft Environmental Impact Statement Guidelines have been mailed to you.

If you have any questions or comments please contact me at minecotemine@ceaa-acee.gc.ca or by phone at (416) 952-7006.

Thank you,

Ellen Campbell

bhfn.reception@hotmail.com

Dear Chief Neshawabin,

SUBJECT: Comments requested on the draft Environmental Impact Statement Guidelines and Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 26, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to Brunswick House First Nation of a 20 day public comment period of the project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project).

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

The Agency invites Brunswick House First Nation to review and comment on the draft Environmental Impact Statement (EIS) guidelines (attached). Information is also being provided to further explain the next phase in the EA process and how Crown consultation will be integrated into the EA process.

The purpose of the EIS guidelines is to identify for the proponent the information requirements for their preparation of an Environmental Impact Statement (EIS) for a designated project[1].The EIS guidelines specify the nature, scope and extent of the information required. Please note that the deadline for submitting comments for consideration in the finalization of this document is **June 12, 2013.**

---

[1] In this document "project" has the same meaning as "designated project" as defined in the *Canadian Environmental Assessment Act, 2012.*

Canada

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Crown consultation will be integrated into the EA process to the greatest extent possible. The Agency will be responsible for coordinating federal-Aboriginal consultations related to potential or established Aboriginal or Treaty rights that could be adversely impacted by the proposed Project.

Federal funding may be made available to support the participation of some Aboriginal groups during later phases of an EA (EIS Review and EA Report Review). The Agency will advise you of any opportunities to apply for funding. Information on the Agency's Participant Funding Program, including the *Guide to the Participant Funding Program*, is available at: www.ceaa-acee.gc.ca.

Provincial Review

The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca. Consultation activities associated with the federal and provincial reviews will be coordinated to the extent possible in order to ensure effective consultation takes place with Brunswick House First Nation.

Ellen Campbell will be managing the EA and conducting Crown Consultation for this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it may have on your potential or established Aboriginal or Treaty rights.

Information that you provide to the Agency is considered public and may be subject to public access to information requests. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you send them in.

Sincerely,

Anjala Puvananathan

Hi Steve, Regent,

As part of the 'Good Governance' approach for Aboriginal groups associated with the Côté Gold project, CEAA sent a letter to Matachewan First Nation, Beaverhouse First Nation, and Chapleau-Ojibwe First Nation informing these communities of the decision that an EA is commencing for the project. We were unable to source an e-mail address for the Chapleau-Ojibwe First Nation so their letter was sent by Canada Post only. Attached is your cc.

Thanks,

Ellen

Dear Chief Ray,

SUBJECT: Comments requested on the draft Environmental Impact Statement Guidelines and Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 26, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to Flying Post First Nation of a 20 day public comment period of the project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). The Agency received your comments from Flying Post First Nation regarding the potential for loss of physical and cultural heritage and associated traditional ecological knowledge, potential impacts to the shared traditional territory of Flying Post First Nation and Mattagami First Nation, and potential long-term effects.

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

The Agency invites Flying Post First Nation to review and comment on the draft Environmental Impact Statement (EIS) guidelines (attached). Information is also being provided to further explain the next phase in the EA process and how Crown consultation will be integrated into the EA process.

The purpose of the EIS guidelines is to identify for the proponent the information requirements for their preparation of an Environmental Impact Statement (EIS) for a

Canada

designated project[1].The EIS guidelines specify the nature, scope and extent of the information required. Please note that the deadline for submitting comments for consideration in the finalization of this document is **June 12, 2013.**

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Crown consultation will be integrated into the EA process to the greatest extent possible. The Agency will be responsible for coordinating federal-Aboriginal consultations related to potential or established Aboriginal or Treaty rights that could be adversely impacted by the proposed Project.

Federal funding may be made available to support the participation of some Aboriginal groups during later phases of an EA (EIS Review and EA Report Review). The Agency will advise you of any opportunities to apply for funding. Dear Mr. Lefebre,

SUBJECT: Comments requested on the draft Environmental Impact Statement Guidelines and Notification of Determination that an Environmental Assessment is Required for the Proposed Côté Gold Mine Project, located 20 km from Gogama, Ontario

On March 26, 2013 the Canadian Environmental Assessment Agency (the Agency) provided notice to the Métis Nation of Ontario, Region 3 Consultation Committee of a 20 day public comment period of the project description from IAMGOLD Corporation (the proponent) for the Côté Gold Mine Project (the Project). The Agency received your comments from the Métis Nation of Ontario, Region 3 Consultation Committee regarding the potential for effects on health and socio-economic conditions, physical and cultural heritage, and current use of lands and resources

Based on a review of the project description, and comments received, including the possibility that the Project may cause adverse environmental effects on areas of federal jurisdiction, the Agency has determined that a federal environmental assessment (EA) will be required under the *Canadian Environmental Assessment Act*, 2012 (CEAA 2012).

The Agency invites the Métis Nation of Ontario, Region 3 Consultation Committee to review and comment on the draft Environmental Impact Statement (EIS) guidelines (attached). Information is also being provided to further explain the next phase in the EA process and how Crown consultation will be integrated into the EA process.

The purpose of the EIS guidelines is to identify for the proponent the information requirements for their preparation of an Environmental Impact Statement (EIS) for a

Canada

designated project[1].The EIS guidelines specify the nature, scope and extent of the information required. Please note that the deadline for submitting comments for consideration in the finalization of this document is **June 12, 2013.**

At this time, the Minister of the Environment may decide to refer the project to a review panel, if it is likely to cause significant adverse environmental effects, or Aboriginal groups and/or the public have raised concerns related to the potential for significant adverse environmental effects.

Crown consultation will be integrated into the EA process to the greatest extent possible. The Agency will be responsible for coordinating federal-Aboriginal consultations related to potential or established Aboriginal or Treaty rights that could be adversely impacted by the proposed Project.

Federal funding may be made available to support the participation of some Aboriginal groups during later phases of an EA (EIS Review and EA Report Review). The Agency will advise you of any opportunities to apply for funding. Information on the Agency's Participant Funding Program, including the *Guide to the Participant Funding Program*, is available at: www.ceaa-acee.gc.ca.

Provincial Review

The Project is also subject to provincial review. I refer you to Wesley Wright at the Ministry of the Environment for additional information. Wesley may be reached at 416-325-5500 or wesley.wright@ontario.ca. Consultation activities associated with the federal and provincial reviews will be coordinated to the extent possible in order to ensure effective consultation takes place with the Métis Nation of Ontario, Region 3 Consultation Committee.

[1] In this document "project" has the same meaning as "designated project" as defined in the *Canadian Environmental Assessment Act, 2012.*

Ellen Campbell will be managing the EA and conducting Crown Consultation for this Project on behalf of the Agency. Please do not hesitate to contact Ellen at 416-952-7006 or minecotemine@ceaa-acee.gc.ca if you have any questions or wish to provide the Agency with information relating to the Project and any potential impacts it may have on your potential or established Aboriginal or Treaty rights.

Information that you provide to the Agency is considered public and may be subject to public access to information requests. Should you have any documents that contain confidential or sensitive information that you believe should be protected from release to the public, please contact Ellen Campbell before you send them in.

Sincerely,

Anjala Puvananathan
Regional Director
Ontario Region

Hello Chief Day,

I left a phone message for you at your office earlier because I was hoping to schedule a conference call with you either tomorrow (May 1/13) or Thursday (May 2/13) at 4pm if you are available. I also have cc'd my manager Aaron Steeghs who deals with all First Nation's and he would be more than happy to answer any questions or concerns you may have about the Cote Gold Project

Let me know if your available and I will forward the conference number. We look forward to hearing from you.

Chief Marcia Brown Martel
Beaverhouse First Nation
26 Station Road
P.O. Box 1022
North Kirkland Lake, ON P2N 3L1

Dear Chief Marcia Brown Martel:

Re: Côté Gold Project Consultation and Engagement Response

We received your consultation and engagement package, which was sent following a conversation on May 30, 2013, with Jimi Maurer your Lands and Resources Coordinator. In that discussion, we both determined that the Côté Gold Project is located outside your asserted traditional territory and unlikely to affect your rights and interests.

The Côté Gold Project site is located in Chester and Neville Townships, District of Sudbury approximately 20 km southwest of Gogama, west of Highway 144, and more than 100 km from the boundaries of Beaverhouse First Nation asserted traditional territory as outlined in your consultation package (please see enclosed map). We are therefore able to confirm that we will not need to proceed with Beaverhouse First Nation's consultation process provided in the package.

However, we will continue to keep you notified about the progress of our project and if you have any questions or concerns, please feel free to contact us. We would be pleased to meet with you should you wish to discuss the project further.

Respectfully,

Aaron Steeghs,
Manager, Corporate Social Responsibility,

Chief Andrew Neshawabin
Brunswick House First Nation
P.O. Box 1178
Chapleau, ON P0M 1K0

Dear Chief Neshawabin:

Re: Côté Gold Project and Augen Claims

Further to IAMGOLDs recent discussions with Kevin Tangie on July 3, 2013 about the Côté Gold Project and the associated provincial and federal environmental assessments, we are writing to confirm that the Côté Gold Project (the Project) is not located within Brunswick House First Nation traditional territory and impacts to your Aboriginal and treaty rights are not anticipated based on the current proposed design. We understand that the community does not wish to be further engaged with respect to the Project and the ongoing environmental assessments at this time.

Although the Project is not within Brunswick House First Nations traditional territory, we will continue to keep you informed about the progress of the environmental assessments and the Project. Your feedback is welcomed. Should your community wish to be engaged further with respect to the Project at any time, we would be pleased to meet with Chief and Council or hold a community open house to share information and discuss concerns.

IAMGOLD also recognizes that they have signed an Exploration Agreement with Brunswick House First Nation for the Augen claims. IAMGOLD will continue to respect and uphold this Agreement and provide financial compensation for exploration on the property as agreed. In the event that there is any contemplated expansion of the proposed Project into the Augen claims, IAMGOLD will initiate further consultation.

Should you have any concerns, please do not hesitate to contact me.

Sincerely,

Aaron Steeghs,

Subject: Matachewan

Hi Shawn,

After many attempts, I was finally able to connect with Chief Hendrix yesterday. We tentatively set up a meeting with Chief and council on Monday, Aug. 12. As Matachewan is one of the communities that the government has identified to be consulted on the EA, we feel that we need to increase our communication with them a bit.

I know you have spoken with them, but this is just to give you an FYI, should you wish to connect with Elenor. We will be discussing the powerline, which looks like it could touch (or at the least, come close to) their territory, just around the Timmins/Porqupine area, but…you guys are the masters of your terriortial maps, not us. So that is an internal Wabun matter.

I'll try to get you a clear map(s) of the proposed powerline option.

Thanks

Hi Cheryl,

My apologies, I was assigned to follow up with you and I've been swamped with our summer operations.

Just to give you a quick update, at a meeting at the Chiefs of Ontario Conference, the Robinson Hurons Chiefs in attendance further discussed and established the 'Coordinating Committee on Resource Development and Benefits' to address issues such as the one raised with the Cote Gold Project. At that same meeting they identified me as the Interim Chair of this committee.

In regards to a preliminary meeting, are you available to meet August 14th or 15th?

Please advise,

Kevin Eshkawkogan

Hi Cheryl,

It's still on the agenda as an item to discuss, but due to my travel, we haven't discussed because of my absence at the council meeting.

However, I believe a committee was formed from the Robison Huron Chiefs meetings which includes Chief Joe Hare of Mchigeeng. This committee, from what I understand, is meant to engage IAMGOLD on this project.

He informed me he would like me to sit on this committee but I have not heard anything formal from him or the committee on this.

I will follow up and will get back to you on this.

Hi Aaron,

Sorry, but my day booked up with a funeral and a meeting with my staff and I'm going to be in BC working next week and will be pretty tied up with meetings there all week.

This topic is on our Mchigeeng Chief and Council Agenda to be discussed upon my return and at our meeting on April 16th. I will follow up with you upon my return from BC.

Kevin

Subject: Re: Cote Gold Project

HI Aaron,

Thank you for your response.

I'm sure IAMGOLD has conducted the necessary environmental studies and I'm sure the studies do not predict any adverse affects that would exited to the Robinson Huron Treaty communities. It would be debatable I believe that the project would not affect the traditional hunting territories so close to the Robinson Huron Treaty area.

I'm aware of where the site is located and although it is 200 KM northwest of Sudbury, it is less than 15KM to the Robinson Huron Treaty area and to the traditional hunting grounds protected under s. 35 of the Constitution Act, 1982. I'm sure IAMGOLD is committed to developing the project in the appropriate way that is respectful of all parties to be affected.

To simply answer your question regarding community members exercising their rights in the project area, the answer is yes, and not just from Mchigeeng, but also Wikwemikong and Aundeck Omni Kaning. These are at least three communities that have members that I know of for sure that are hunting and harvesting medicines in that area.

Anyhow, I'd be glad to meet with you to discuss this further and learn more about the project.

Best regards,

Kevin

Subject: RE: Cote Gold Project

Hi Kevin,

Thank you for your email and alerting us to your concerns with respect to potential effects of the Cote Gold Project on the M'chigeeng First Nation and the Robinson Huron Treaty signatories.

The Cote Gold Project is located 200 kilometres northwest of Sudbury and based on our environmental studies to date we do not predict any adverse effects that would extend to the Robinson Huron Treaty communities. As you have stated in your email, the treaty boundary is the height of land that divides the Arctic watershed from the Great Lakes watershed. Therefore, the potential effects from the project do not extend into the Great Lakes watershed or the Robinson Huron Treaty area.

However, IAMGOLD would be pleased to meet to discuss any additional concerns your community may have with respect to potential impacts or the Project. In particular, we would be interested in knowing whether there are community members that may be exercising harvesting rights in the project area so that we may discuss measures to avoid or mitigate any potential impacts. IAMGOLD is committed to developing the Project in an environmentally sound manner and in a manner which is respectful of aboriginal and treaty rights protected under s. 35 of the Constitution Act, 1982.

Thanks Kevin. I look forward to hearing from you.

IAMGOLD

From: Kevin Eshkawkogan [mailto:keshkawkogan@circletrail.com]

Sent: March-05-13 8:54 PM
To: Cheryl Naveau
Subject: Cote Gold Project

Hi Cheryl,

My name is Kevin Eshkawkogan and I am a Band Councillor for the Mchigeeng First Nation. We have several of our members that utilize the territory close to the location of the Cote Gold Project and we feel that a project of this magnitude will have an impact on our hunting and fishing rights identified under the Robinson Huron Treaty.

The so-called treaty border between Robinson-Huron and Treaty 9 is the "height of land" which is watershed road. Even though the mine is not going to exactly be in our treaty area, it is so close to watershed road, it will have adverse environmental impacts that would interfere with our hunting and fishing rights under our Treaty.

It would be prudent that IAMGOLD engage in consultations with those Robinson Huron Treaty FN's that will be affected. I'm not sure if IAMGOLD has even checked to see if any Robinson-Huron band members hunt in the area and whether their proposed mine has the potential to interfere with the exercise of our hunting and fishing rights.

As this is moving forward, I know our First Nation and others from our area will be formally approaching IAMGOLD in the near future.

If you wish to discuss this further, I would be willing to share my thoughts with you and help you and IAMGOLD navigate through this. You can reach me through email at keshkawkogan@circletrail.com or by phone at 705-348-0179.

Hope to hear from you soon.

Best regards,

Kevin Eshkawkogan

Re: Environmental Assessment Terms of Reference – IAMGOLD Côté Gold Project

Dear Mr. Wright,

Wabun Tribal Council has reviewed the Notice of Submission by IAMGOLD of Proposed Terms of Reference for an environmental assessment under the Ontario *Environmental Assessment Act* of its proposed Côté Gold Project located in the traditional territories of Mattagami First Nation and Flying Post First Nation southwest of Gogama. Wabun Tribal Council has been authorized by the First Nations to coordinate their participation in both the Provincial and Federal environmental assessments of the proposed Project. As such, we are providing preliminary comments on the Proposed Terms of Reference as an attachment to this letter.

We anticipate further discussion with IAMGOLD and the Ministry respecting our proposed changes to Proposed Terms of Reference. Given vacation schedules, we have not yet had a chance to discuss our comments with IAMGOLD and so we are providing a copy of these comments to IAMGOLD as well. Please contact me at my office (705-268-9066) or by email (sbatise@wabun.on.ca) to arrange this discussion.

Sincerely,

Linda Keay

Provincial Individual EA

Proposed Terms of Reference for the Côté Gold Project

Wabun Tribal Council Comments

GENERAL COMMENTS

Background. Wabun Tribal Council recently received a copy of the Notice of Submission from the Ontario Ministry of the Environment (the "MoE") in relation to the following document:

> Côté Gold Project Provincial Individual Environmental Assessment Proposed Terms of Reference, July 2013
>
> (the "Proposed ToR").

The review of the Proposed ToR was undertaken by Rick Hendriks of Camerado Energy Consulting at the request of and in consultation with Wabun Tribal Council. For brevity, comments provided below focus mainly on concerns and requests for clarification in relation to the Proposed ToR. The MoE Code of Practice (Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario) was consulted in preparing this review.

Scope of Alternatives Considered. The Code of Practice indicates that: "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected." We have reviewed the terms of reference from that perspective.

In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario *Environmental Assessment Act*". It is our understanding, therefore, that a "focussed EA" as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows:

> *Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment. Screening criteria must be developed and the screening process must be logical and traceable*. [our underlining]

And later in the Code of Practice:

> *The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in the terms of reference for limiting the examination of alternatives*. [our underlining]

Our general concern is that the screening criteria and process employed in the Proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.

Consideration of Aboriginal and Treaty Rights. In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use."

We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the consideration of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (i.e. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is one of only six broad criteria.

As the Proponent and the Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up large areas of lands and waters, and would involve lasting and, in some instances, permanent changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accommodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of the First Nations. Thus the Proposed Terms of Reference should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.

SPECIFIC COMMENTS

S.5.2.2.1 Cost-effectiveness – Financial Thresholds. The Proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return on investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself".

In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily based on cost-effectiveness:

Mining – Open pit and underground mining

Mine Rock and Overburden Management – Establish a temporary stockpile location...returned to the pit at closure

Non-hazardous waste – Incineration

Power Supply and Routing – On-site diesel generation

A review of section 5.3 Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives. No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR.

We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alternative in dollars and as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take a position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.

S.5.3.1 Identification of Alternatives – Work Schedules. The Proposed ToR suggest that the Proponent is considering options for worker accommodation in an on-site construction camp or in an off-site residence. Under either option, work schedule alternatives will need to be considered, including the length of shifts and the length of work rotations. We recommend that the Proposed ToR include criteria for an assessment of work schedules during the environmental assessment.

S.5.3.1 Identification of Alternatives – Mine Production Rates. Of the alternatives listed for consideration, we note that mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed Project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).

S.5.3.1 Identification of Alternatives – Labour Supply. Typically, mining operations in this region of Ontario draw employees from a variety of populations, including both

men and women, Aboriginals and non-Aboriginals, and local, regional, Provincial, national and foreign workers. Rates of unemployment continue to remain relatively high in the region and Province compared to historic levels, suggesting the need for consideration of pro-active approaches to employment at the proposed Project. While the ultimate make-up of the proposed Project labour force is the product of a variety of factors, including market conditions and skill requirements, proponents have the ability to significantly influence the make-up of the labour force through bid evaluation criteria in requests for proposals and investments in training programs for specific populations, among other means. We believe that it is in the interests of the Proponent to transparently assess its options for the Project labour supply during the environmental assessment, particularly in relation to the locational source of its labour force (i.e. local, Provincial or foreign). We recommend that labour supply be assessed as an alternative in the environmental assessment. We are currently in discussions with IAMGOLD about the labour supply issue and we see value in bringing the work and discussions we are undertaking into the EA process, to avoid duplication of efforts.

S.5.3.2 Identification of Alternatives – Road Transportation. The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1 indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. We recommend that an assessment of the off-site road transportation route alternatives, including the location of key staging areas (e.g. whether in Sudbury, Timmins or elsewhere) be conducted as part of the environmental assessment.

S.5.3.14 Power Supply and Routing. The current project configuration envisions the construction of a 230 kV transmission line of approximately 160 km in length originating in Timmins. This transmission line adds considerably to the capital costs of the proposed Project and substantially expands the Project footprint. Considering also that this 230 kV line would currently have no useful purpose following construction, we see the importance of considering carefully options for avoiding construction of the transmission line, and the need to justify the preferred alternatives during the environmental assessment. The Proposed ToR indicate (at p.5-24) that a "review of transmission infrastructure that could serve the Project during operations has been carried out" the review is not attached to the Proposed ToR and so the scope of the review is unclear to reviewers.

The Proposed ToR indicates that: "there is a 115 kV transmission line located approximately 50 km east of the Project, however, 115 kV will not be sufficient for the Project." It is not stated whether the "insufficiency" is the result of electrical capacity or energy shortfalls or both. Presuming it is capacity, was consideration given to reducing the mine production capacity of the facilities (i.e. lengthening the production phase) as a means of lowering power demand? We note that diesel power has been considered for "periodic use during the operations phase (and

potentially during the closure phase) as needed when grid power is unavailable" but it does not appear that diesel power has been considered as a supplement to grid power to lessen capacity or energy requirements from the grid in order to avoid construction of the 230 kV transmission lines. Other options may also be available to lower the requirements for grid power but it is unclear whether they were considered.

In summary, the dismissal of alternatives that do not require the construction of a 230 kV transmission line is not traceable in the Proposed ToR. While dismissing these alternatives may be justified, this cannot be determined from the information provided in the Proposed ToR. If the referenced "review of transmission alternatives" evaluated alternatives that adequately considered changes to the mine design, then we recommend that it be appended to the Proposed ToR. This would meet the requirement of the Code of Practice to "provide justification in the terms of reference for limiting the examination of alternatives." However, we do not know if the review the proponent has completed has considered changes to the mine production rate or other design aspects that would lower the electricity demand of the proposed Project in order to avoid construction of the 230 kV transmission line. In this case, we recommend that the Proposed ToR carry forward to the environmental assessment stage a consideration of alternatives that do not involve the construction of the 230 kV transmission line as well as the alternative of constructing the 230 kV transmission line.

7.2.3 Definition and Approach to Cumulative Effects. The Proposed ToR indicates the following:

> *The cumulative effects analysis presented in the EA will therefore be restricted to the analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that "will be carried out"; and to those projects of significance within the broader regional context, which may overlap the undertaking in regards to type of effect, time and space.*

In proposing this approach, the Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law.

The recently published CEA Operational Policy Statement[1] states that:

> *Information on the environmental effects of past or existing physical activities may be helpful:*
>
> *If the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project;*
>
> *if information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or*

[1] CEA Agency. May 2013. Assessing Cumulative Environmental Effects under the *Canadian Environmental Assessment Act, 2012* (www.ceaa-acee.gc.ca/default.asp?lang=En&n=1DA9E048-1)

if an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.

The "gold standard" in cumulative environmental effects assessment involves the determination of a pre-development baseline. Such a baseline often provides the most "help" in predicting the environmental effects of a designated project and "assistance" in identifying appropriate mitigation measures. While there are sometimes challenges to creating a pre-development baseline in terms of the availability of suitable pre-development data, this is not always the case. While there will likely be some uncertainty associated with pre-development conditions, the same can be said for the existing project baseline due to the inherent limitations in data gathering. The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations.

The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. However, a pre-development baseline allows the characterization of what has been lost or gained as a result of the effects of prior projects and activities. This is fundamental, for example, to determining the remaining potential for a region to support the exercise of Aboriginal land-based rights protected in Treaty 9.

By providing insight into what has been lost, a pre-development baseline sheds light on the importance of what remains intact (e.g. in terms of ecosystem functions, habitat, preferred species populations, biodiversity, cultural landscapes, etc.) and what still remains possible (e.g. hunting, fishing, gathering, quiet enjoyment of the land, etc.). The loss of fish and wildlife habitat and harvesting opportunities associated with the proposed Project take on greater importance as a result of what has already been lost or taken up by other projects and activities.

The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects for the potential and established Aboriginal and treaty rights and related interests of Aboriginal groups. Further, the Proponent must be required to consult with Aboriginal groups on the available information and seek to augment this information with available traditional knowledge concerning the historical context.

Additionally, in describing the "existing project baseline", the Proposed ToR must give consideration not only to a snapshot of current conditions, but must also include trend or comparative analysis, as appropriate to the available data, to provide insight into whether conditions are becoming more or less favourable in relation to the environmental components or indicators under study (e.g. are species populations rising, stable or falling?)

Hi All,

Please let us know when you will be available for a conference call. In the meantime, as per your request, we have put together an information package with the following:

1) **Project Introduction Presentation:** this is the first attached document, which provides an overview the project and where we are in the permitting process. Apologies – the file is quite large.

2) **Site Location Map:** As we know that it is of particular interest to you as to where the site is located in relation to watershed divide, we have included a map which specifically highlights this information for you, so you don't have to go browsing through hundred page documents.

3) **Relevant Links:**

   a. **Côté Gold main webpage**: http://www.iamgold.com/English/Operations/Development-Projects/Cote-Lake-Ontario/Overview/default.aspx
   b. **The Terms of Reference for the Environmental Assessment process**: http://www.iamgold.com/files/operations/CoteGold/IAMGOLD_Cote%20Gold_Proposed%20Terms%20of%20Reference_July2013.pdf
   c. **All other public documents:** http://www.iamgold.com/English/Operations/Development-Projects/Cote-Lake-Ontario/Documents/default.aspx

I hope this provides you with us with a solid starting point. Please don't hesitate to ask, should you need any further information prior to our meeting.

Best regards,

Good Morning

It will be better if we can meet the schedule of those that wanted to attend. We can have a proposed date by the end of the day.

For preparation purposes, can you send an info package forward prior to the meeting? This would help prepare questions and input.

Hi Cheryl,

It's still on the agenda as an item to discuss, but due to my travel, we haven't discussed because of my absence at the council meeting.

However, I believe a committee was formed from the Robison Huron Chiefs meetings which includes Chief Joe Hare of Mchigeeng. This committee, from what I understand, is meant to engage IAMGOLD on this project.

He informed me he would like me to sit on this committee but I have not heard anything formal from him or the committee on this.

I will follow up and will get back to you on this.

Subject: Re: Cote Gold Project

Hi Cheryl,

We didn't get to it on our MFN agenda at our last meeting, however, it will be discussed at our next meeting date. In addition to MFN addressing this, I believe MFN Chief Joe Hare will be addressing this at the Robinson Huron Treaty Area Regional meeting this week. Chief Isadore Day is the Robinson Huron Regional Chief and is also aware of this project.

In relation to specific dates to meet, I will get back to you as I wish to discuss this further at our C&C meetings.

Best regards,

Kevin Eshkawkogan

Hi Aaron,

Sorry, but my day booked up with a funeral and a meeting with my staff and I'm going to be in BC working next week and will be pretty tied up with meetings there all week.

This topic is on our Mchigeeng Chief and Council Agenda to be discussed upon my return and at our meeting on April 16th. I will follow up with you upon my return from BC.

Kevin

Subject: Re: Cote Gold Project

HI Aaron,

Thank you for your response.

I'm sure IAMGOLD has conducted the necessary environmental studies and I'm sure the studies do not predict any adverse affects that would exited to the Robinson Huron Treaty communities. It would be debatable I believe that the project would not affect the traditional hunting territories so close to the Robinson Huron Treaty area.

I'm aware of where the site is located and although it is 200 KM northwest of Sudbury, it is less than 15KM to the Robinson Huron Treaty area and to the traditional hunting grounds protected under s. 35 of the Constitution Act, 1982. I'm sure IAMGOLD is committed to developing the project in the appropriate way that is respectful of all parties to be affected.

To simply answer your question regarding community members exercising their rights in the project area, the answer is yes, and not just from Mchigeeng, but also Wikwemikong and Aundeck Omni Kaning. These are at least three communities that have members that I know of for sure that are hunting and harvesting medicines in that area.

Anyhow, I'd be glad to meet with you to discuss this further and learn more about the project.

Best regards,

Kevin

Subject: RE: Cote Gold Project

Hi Kevin,

Thank you for your email and alerting us to your concerns with respect to potential effects of the Cote Gold Project on the M'chigeeng First Nation and the Robinson Huron Treaty signatories.

The Cote Gold Project is located 200 kilometres northwest of Sudbury and based on our environmental studies to date we do not predict any adverse effects that would extend to the Robinson Huron Treaty communities. As you have stated in your email, the treaty boundary is the height of land that divides the Arctic watershed from the Great Lakes watershed. Therefore, the potential effects from the project do not extend into the Great Lakes watershed or the Robinson Huron Treaty area.

However, IAMGOLD would be pleased to meet to discuss any additional concerns your community may have with respect to potential impacts or the Project. In particular, we would be interested in knowing whether there are community members that may be exercising harvesting rights in the project area so that we may discuss measures to avoid or mitigate any potential impacts. IAMGOLD is committed to developing the Project in an environmentally sound manner and in a manner which is respectful of aboriginal and treaty rights protected under s. 35 of the Constitution Act, 1982.

Thanks Kevin. I look forward to hearing from you.

IAMGOLD

From: Kevin Eshkawkogan [mailto:keshkawkogan@circletrail.com]
Sent: March-05-13 8:54 PM
To: Cheryl Naveau
Subject: Cote Gold Project

Hi Cheryl,

My name is Kevin Eshkawkogan and I am a Band Councillor for the Mchigeeng First Nation. We have several of our members that utilize the territory close to the location of the Cote Gold Project and we feel that a project of this magnitude will have an impact on our hunting and fishing rights identified under the Robinson Huron Treaty.

The so-called treaty border between Robinson-Huron and Treaty 9 is the "height of land" which is watershed road. Even though the mine is not going to exactly be in our treaty area, it is so close to watershed road, it will have adverse environmental impacts that would interfere with our hunting and fishing rights under our Treaty.

It would be prudent that IAMGOLD engage in consultations with those Robinson Huron Treaty FN's that will be affected. I'm not sure if IAMGOLD has even checked to see if any Robinson-Huron band members hunt in the area and whether their proposed mine has the potential to interfere with the exercise of our hunting and fishing rights.

As this is moving forward, I know our First Nation and others from our area will be formally approaching IAMGOLD in the near future.

If you wish to discuss this further, I would be willing to share my thoughts with you and help you and IAMGOLD navigate through this. You can reach me through email at keshkawkogan@circletrail.com or by phone at 705-348-0179.

Hope to hear from you soon.

Best regards,

Kevin Eshkawkogan

Good afternoon Steve,

The Metis Nation of Ontario is pleased to provide IAMGOLD with a draft Memorandum of Understanding that serves as a starting point in formalizing our relationship as it applies to the Cote Lake Project. The document was created to clarify items applicable to both parties in the areas of communications, identifying impacts and serves to provide a means of commenting on the project from a unique Metis perspective.

We look forward to receiving your impression and comments with regards to the document.

On behalf of the Regional Consultation Committee and the Lands and Resources Branch, I thank you for considering the opportunity to build a long and mutually beneficial relationship.

Best Regards,

Andy Lefebvre

Good afternoon Aaron,

Please see below some of the questions surrounding the MNO TKLUS study planned for the Cote Lake area.
As you can see our Way Of Life Framework Manager, has a few questions that may offer clearer direction.
Can you give me an indication of your timelines?

Andy

Hi Andy,

The timeframe would be about 5-6 months for delivery of a final third party report.

If there is something absolutely critical, we can potentially provide input to the proponent (i.e., a TK summary listing land use patterns and species of importance) on a shorter timeframe (within 2-3 months).

What timeframes are you working with? What month would we have to provide something to the proponent?

Subject: Cote Gold - WTC responses to comments on proposed ToR

Afternoon Wesley,

As I noted this week, IAMGOLD is now able to provide you with our official responses to the comments sent in by Wabun Tribal Council. It is our understanding that WTC will be writing you directly to indicate that IAMGOLD has adequately accommodated their concerns.

In regards to the selection of the 230kV transmission line, please see the response to comment #9 which provides more detail on the existing capacity of the 115kV versus projected power needs of the project.

It is our opinion that based on our previous commitments, the responses provided here, along with the support of Wabun Tribal Council, we have demonstrated that the proposed ToR thoroughly outlines the EA requirements of the project. Further, we request that MOE proceeds with obtaining Ministerial approval of the proposed ToR for the Cote Gold project.

If you have any further questions please do not hesitate to contact me.

Steve

Côté Gold Project - Proposed ToR Comments and Response

#	Comment	IAMGOLD Response
1	General Comments on Background: Wabun Tribal Council recently received a copy of the Notice of Submission from the Ontario Ministry of the Environment (the "MoE") in relation to the following document: "Cote Gold Project Provincial Individual Environmental Assessment Proposed Terms of Reference, July 2013" (the "Proposed ToR"). The review of the Proposed ToR was undertaken by Rick Hendriks of Camerado Energy Consulting at the request of and in consultation with Wabun Tribal Council. For brevity, comments provided below focus mainly on concerns and requests for clarification in relation to the Proposed ToR. The MoE Code of Practice (Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario) was consulted in preparing this review.	Thank you for your comment. No action is required.
2	General Comments on Scope of Alternatives Considered: The Code of Practice indicates that "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected." We have reviewed the terms of reference from that perspective. In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario *Environmental Assessment Act*" It is our understanding, therefore, that a "focussed EA" as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows: *Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment. Screening criteria must be developed and the screening process must be logical and traceable.* [our underlining] And later in the Code of Practice: *The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in the terms of reference for limiting the examination of alternatives.* [our underlining] Our general concern is that the screening criteria and process employed in the proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.	Thank you for your comment. Additional, to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16) [our underlining]. Table 5-7 of the Proposed ToR outlines the rationale for excluding some of the alternatives. Additionally, text to support this is provided in Section 5.0. It should be noted that the assessment of alternatives process presented in the Proposed ToR, in addition to be compliant with the Code of Practice for the Preparation of the Terms of Reference, has been largely proposed, adjusted and vetted for this Project by the MOE and other provincial ministries. This methodology, including the screening criteria and process employed, has been used in other mining EAs in Ontario.

Côté Gold Project - Proposed ToR Comments and Response

#	Comment	IAMGOLD Response
3	General Comments on Consideration of Aboriginal and Treaty Rights. In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use." We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the considerations of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (ie. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is one of only six broad criteria. As the Proponent and Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up large areas of lands and waters, and would involve lasting, and in some instances, permanent changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accommodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of the First Nations. Thus the Proposed Terms of Reference should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.	Thank you for your comment. IAMGOLD recognizes the importance of consultation with Aboriginal people as an integral aspect of the Project. Participation in consultation ensures an open and fair process, and strengthens the quality and credibility of the results. In a coordinated effort with the Provincial and Federal government agencies, IAMGOLD intends to prepare one knowledge base about the current environment and the potential effects of the Project on various aspects of the environment. This knowledge base will be used to populate the required environmental assessments (EAs), including the Assessment of Alternatives. The method that will be used in the EA to assess alternatives looks at a range of Performance Objectives/Criteria. Under each of these objectives/criteria there are a number of relevant indicators which must be evaluated- Effects on Aboriginal and Treaty Rights is one such indicator. As part of the EA, the IAMGOLD EA team will evaluate each indicator, including Effects on Aboriginal and Treaty Rights, and give each of them one of three ratings: Preferred, Acceptable, Unacceptable. If any objective/criterion is rated 'unacceptable', as determined by the IAMGOLD EA team, then the alternative as a whole is automatically rated 'Unacceptable' and therefore rejected. For clarity and by way of example, if the IAMGOLD EA team rated Effects on Aboriginal and Treaty Rights as being "Unacceptable" for a particular alternative, that alternative would automatically be rated "Unacceptable" and rejected by the Company. Therefore presenting Aboriginal and Treaty Rights as a standalone criterion will not give it more weight than if presented as an indicator. This methodology of assessing impacts has been provided by the Ontario Ministry of the Environment and is used in several other EAs for mining projects. Note also that 5 of the 15 human environment criteria are directly related to Aboriginal peoples, their lands, rights, culture and other interests. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use Information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the alternatives assessment.

#	Comment	IAMGOLD Response
4	Specific Comments on S.5.2.2.1 Cost-effectiveness - Financial Thresholds. The proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return of investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself". In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily based on cost effectiveness: Mining - open pit and underground mining Mine Rock and Overburden Management - Establish a temporary stockpile location ... returned to the pit at closure Non-hazardous waste - Incineration Power Supply and Routing - On-site diesel generation A review of section 5.3 Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives. No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR. We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alterative in dollars as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.	Thank you for your comment. Additional to the sections of the Code of Practice identified, the following guidance must be taken into consideration: "The range of alternatives that will be considered should address the problem or opportunity and be within the scope of the proponent's ability to implement. It should be determined by the significance of potential environmental effects of the proposed undertaking, and the circumstances specific to the proposal (for example, the proponent's situation, timing, financing)" (Code of Practice, page 16) [our underlining]. The Code of Practice does not specifically require information on financial thresholds to be provided in the Terms of Reference. Additional explanation for screening out the identified alternatives is provided below: Mining - a combination of open pit and underground mining was screened out primarily due to the fact that developing a smaller pit combined with an underground operation is not technically suitable as the gold is finely disseminated in the ore body. Additionally, it is not anticipated that the combination of open pit and underground mining be economically feasible. This last rationale is not the primary or sole reason for its exclusion. Mine Rock and Overburden Management - Establishing a temporary stockpile location and returning the mine rock to the mined pit at closure is not a practice commonly used in Ontario. This is mainly due to the fact that moving a large amount of mine rock, in this case more than 800 Mt, is uneconomical. The cost of backfilling the open pit with mine rock would be in the order of several billion dollars. Non-hazardous waste - Incineration in itself is not a costly endeavour. This practice is not acceptable from an air quality perspective, which requires costly mitigation measures to be implemented. These measures are what causes this alternative to become economically unviable. Power Supply - On-site diesel generators to support operations will result in the release of greater amounts of CO2, NOx and particulate emissions than other alternatives. Additionally, it is not considered to be cost effective due to the large amount of fuel required for its operation.
5	Specific Comments on S.5.3.1 Identification of Alternatives - Work Schedules. The Proposed ToR suggests that the Proponent is considering options for worker accommodation in an on-site construction camp or in an off-site residence. Under either option, work schedule alternatives will need to be considered, including the length of shifts and the length of work rotations. We recommend that the Proposed ToR include criteria for an assessment of work schedules during the environmental assessment.	Thank you for your comment. The length of shifts and the length of work rotations will not be influenced by the worker's accommodation alternatives. These factors are considered in the Project planning phase and are not aspects covered under the environmental assessment process. Work rotations will be factored into the environmental assessment in terms of its potential effect on social conditions, and the ability to exercise traditional or cultural activities. Appropriate work schedules will be determined further in the Project planning, however, feedback at this early stage is welcomed. It should be noted that work schedules are part of the on going IBA discussions.

#	Comment	IAMGOLD Response
6	Specific Comments on S.5.3.1 Identification of Alternatives - Mine Production Rates. Of the alternatives listed for consideration, we note that the mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).	Thank you for your comment. The Pre-Feasibility Study currently underway takes into account the financial aspects of the Project. IAMGOLD understands that a longer operations phase leads to longer periods of employment. If the Project's operation phase is extended, this would lead to a reduction in the workforce required for operation. This would change the circumstances applicable to the socio-economic benefits, but may not make them better. The duration of the mine life is determined by multiple factors which include the global market, the return on investment, the availability and cost of workforce and the proponent's operational and economic targets. For this low-grade Project the throughput rate was benchmarked against other low grade projects such as Canadian Malartic and Detour Gold, which have comparable production rates. Benchmarking is a method commonly used to compare the feasibility of future projects with projects that are already in production or that are more advanced from an engineering standpoint. The Project, as currently defined in the Proposed ToR, has been optimized for economic viability. Significant Project life extensions would render the Project uneconomical. Therefore, an extension in mine life is not a viable alternative to be assessed in the EA. Note that this issue is related to the chosen transmission line alternative (i.e. 115 kV vs 230 kV). As such this issue will be addressed in more detail in the reponse to comment #9 below. IAMGOLD will sign a non-disclosure agreement relating to the disclosure of detailed Project information, which is intended to support the parties' discussions on an Impact Benefit Agreement.
7	Specific Comments on S.5.3.1 Identification of Alternatives - Labour Supply. Typically, mining operations in this region of Ontario draw employees from a variety of populations, including both men and women, Aboriginals and non-Aboriginals, and local, regional, provincial, national and foreign workers. Rates of unemployment continue to remain relatively high in the region and Province compared to historic levels, suggesting the need for consideration of pro-active approaches to employment at the proposed Project. While the ultimate make-up of the proposed Project labour force is the product of a variety of factors, including market conditions and skill requirements, proponents have the ability to significantly influence the make-up of the labour force through bid evaluation criteria in requests for proposal and investments in training programs for specific populations, among other means. We believe that it is in the interests of the Proponent to transparently assess its options for the Project labour supply during the environmental assessment, particularly in relation to the locational source of its labour force (i.e. local, provincial, or foreign). We recommend that labour supply be assessed as an alternative in the environmental assessment. We are currently in discussion with IAMGOLD about the labour supply issue and we see value in bringing the work and discussions we are undertaking into the EA process, to avoid duplication of efforts.	Thank you for your comment. IAMGOLD's goals for labour supply is to use equal opportunity employment practices. The Project will require a certain amount of skilled workforce, which may need to be obtained from Timmins or Sudbury. Labour effects will be assessed as part of the socio-economic effects assessment for the Project. Once the effects are understood, the most appropriate options for addressing labour shortages (if any) will be determined. Information from the labour and training strategy that IAMGOLD and Wabun Tribal Council are working on together will inform these options. It should be noted that labour supply is part of the on going IBA discussions.
8	Specific Comments on S.5.3.2 Identification of Alternatives - Road Transportation. The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1 indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. We recommend that an assessment of the off-site road transportation route alternatives, including the location of key staging areas (e.g. whether in Sudbury, Timmins or elsewhere) be conducted as part of the environmental assessment.	Thank you for your comment. Highway 144 will be used to transport material to the site. An assessment of the effects of the Project on Highway traffic will be presented in the EA. At the present time no highway modifications are planned or expected to be required to accommodate Project traffic.

#	Comment	IAMGOLD Response
9	Specific Comments on S.5.14 Power Supply and Routing. The current project configuration envisions the construction of a 230 kV transmission line of approximately 160 km in length originating in Timmins. This transmission line adds considerably to the capital costs of the proposed Project and substantially expands the Project footprint. Considering also that this 230 kV line would currently have no useful purpose following construction, we see the importance of considering carefully options for avoiding construction of the transmission line, and the need to justify the preferred alternatives during the environmental assessment. The Proposed ToR indicate (at p.5-24) that a "review of transmission infrastructure that could serve the Project operations has been carried out". The review is not attached to the Proposed ToR and so the scope of the review is unclear to reviewers. The Proposed ToR indicates that: "there is a 115 kV transmission line located approximately 50 km east of the Project, however, 115 kV will not be sufficient for the Project." It is not stated whether the "insufficiency" is the result of electrical capacity or energy shortfalls or both. Presuming it is capacity, was consideration given to reducing the mine production capacity of the facilities (i.e. lengthening the production phase) as a means of lowering power demand? We note that diesel power has been considered for "periodic use during the operations phase (and potentially during the closure phase) as needed when power grid is unavailable" but it does not appear that diesel power has been considered as a supplement to grid power to lessen capacity or energy requirements from the grid in order to avoid construction of the 230 kV transmission lines. Other options may also be available to lower the requirements for grid power but it is unclear whether they were considered. In summary, the dismissal of alternatives that do not require the construction of a 230 kV transmission line is not traceable in the Proposed ToR. While dismissing these alternatives may be justified, this cannot be determined from the information provided in the Proposed ToR. If the referenced "review of transmission alternatives" evaluated alternatives that adequately considered changes to the mine design, then we recommend that it be appended to the Proposed ToR. This would meet the requirement of the Code of Practice to "provide justification in the terms of reference for limiting the examination of alternatives." However, we do not know if the review of the proponent has completed has considered changes to the mine production rate or other design aspects that would lower the electricity demand of the proposed Project in order to avoid construction of the 230 kV transmission line. In this case, we recommend that the proposed ToR carry forwards to the environmental assessment stage a consideration of alternatives that do not involve the construction of the 230 kV transmission line as well as the alternative of constructing the 230 kV transmission line.	Thank you for your comment. The Cote Gold Project is a low-grade Project. To be economically viable, low-grade projects require a high mining rate. A 230 kV line is preferred for capacity reasons but also to prevent energy shortfalls. IAMGOLD has thoroughly reviewed whether it is viable or not to run the Project with a 115 kV line. Based on the infrastructure requirements for the Project, a 230 kV transmission line has been deemed necessary, and a 115 kV line is not considered a technically, financially realistic and economically viable solution for IAMGOLD. A 115 kV line could provide a maximum of 70-80 MW. The current project design requires 120 MW. In addition the capacity of the 115 kV line would be at its limit at 70-80 MW and the stability of the system would be questionable, meaning the ability of the 115 kV line to deliver consistent power for a facility needing 70-80 MW was severely stretched. Also, from an efficiency standpoint, smaller lines have greater line loss rates, as such, use of a 115kV line would waste power and increase power costs. Moreover, with greater power capacity available through a 230 kV line, IAMGOLD will assess the potential to a more power-intensive mining method (in-pit crushing and conveying, IPCC) IPCC use if deemed appropriate can significantly reduce the GHG emissions typically emmitted from the truck fleet. The 120 MW estimate does not include the power which would be required to operate IPCC, as IPCC is still being evaluated by the Project team. Also, with the 230 kV line, IAMGOLD would have capacity in the power system to support potential future expansions of the mine and/or local needs, whereas with a 115kV line, expansion options would be significantly entirely eliminated or extremely limited.

#	Comment	IAMGOLD Response
10	Specific Commends on 7.2.3 Definition and Approach to Cumulative Effects. The proposed ToR indicates the following: *The cumulative effects analysis presented in the EA will therefore be restricted to the analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that "will be carried out"; and to those projects of significance within the broader regional context, which may overlap the undertaking in regards to type of effect, time and space.* In proposing this approach, the Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law. The recently published CEA Operational Policy Statement states that: *Information on the environmental effects of past or existing physical activities may be helpful:* *- If the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project;* *- If information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or* *- If an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.* The "gold standard" in cumulative environmental effects assessment involves the determination of a pre-development baseline. Such a baseline often provides the most "help" in predicting the environmental effects of a designated project and 'assistance in identifying appropriate mitigation measures. While there are sometimes challenges to creating a pre-developed baseline in terms of the availability of suitable pre-development data, this is not the case. While there will likely be some uncertainty associated with pre-development conditions the same can be said for the existing project baseline due to the inherent limitations in data gathering. The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations. The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. However, a pre-development baseline allows the characterization of what has been lost or gained as a result of the effects of prior projects and activities. This is fundamental, for example, to determine the remaining potential for a region to support the exercise of Aboriginal land-based rights protected in Treaty 9. By providing insight into what has been lost, a pre-development baseline sheds light on the importance of what remains intact	Thank you for your comment. The cumulative effects assessment is not a MOE requirement under the Code of Practice for the Preparation of an Environmental Assessment. Cumulative effects assessment has been included as it is a requirement under the Federal EA Process. There is no requirement by the MOE with regards to "pre-development baseline". The CEA Operational Policy Statement issued in May 2013 states the following with regards to the cumulative effects assessment and the need for "pre-development baseline". *Present-day environmental conditions reflect the cumulative environmental effects of many past and ongoing physical activities. A description of past environmental conditions can at times improve the understanding of cumulative environmental effects for a specific VC.* *Information on the environmental effects of past or existing physical activities may be helpful:* *• if the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project;* *• if information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or* *• if an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.* [our underlining] The baseline studies carried out for the Project reflect the cumulative environmental effects of past and ongoing physical activities. This baseline was carried out over various years. It is not believed that a description of past environmental conditions will help in the understanding of cumulative environmental effects, as identified in the CEA Operational Policy Statement. The intent of the cumulative environmental assessment is consider the overall effect of the planned projects on the environment based on the existing baseline conditions. It should be noted that historic use of the area will be documented in the archaeology baseline. Additionally, IAMGOLD is actively working with Aboriginal people to gather Traditional Knowledge and Traditional Land Use Information to complement the existing baseline studies done to date. Should this information be available upon submission of the EA, it will be considered in the cumulative effects assessment. IAMGOLD understands the importance that Aboriginal people give to the land and

#	Comment	IAMGOLD Response
	(e.g. in terms of ecosystem functions, habitat, preferred species populations, biodiversity, cultural landscapes, etc.) and what still remains possible (e.g. hunting, fishing, gathering, quiet enjoyment of the land, etc.). The loss of fish and wildlife habitat and harvesting opportunities associated with the proposed Project take on greater importance as a result of what has already been lost or taken up by other projects and activates. The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects for the potential and established Aboriginal and treaty rights and related interest of Aboriginal groups. Further, the Proponent must be required to consult with Aboriginal groups on the available information and seek to augment this information with available traditional knowledge concerning the historical context. Additionally, in describing the "existing project baseline", the Proposed ToR must give consideration not only to a snapshot of current conditions, but must also include trend or comparative analysis, as appropriate to the available data, to provide insight into whether conditions are becoming more or less favourable in relation to the environmental components or indicators under study (e.g. are species populations rising, stable or falling?)	resources in the vicinity of the Project and will work with Aboriginal communities to determine what mitigation and monitoring measures are preferred. After Project closure is completed, the area occupied by the Project will be rehabilitated. The cumulative effects assessment will be presented in the EA. As part of this assessment IAMGOLD will look at the combined footprint of this Project and other reasonable foreseeable projects within the local and/or regional study area.

Re: EA Terms of Reference – IAMGOLD Côté Gold Project

Dear Mr. Wright,

On August 19, 2013, Wabun Tribal Council on behalf of Mattagami First Nation and Flying Post First Nation submitted comments concerning the Proposed Terms of Reference for an environmental assessment under the Ontario *Environmental Assessment Act* of IAMGOLD's proposed Côté Gold Project located in the traditional territories of Mattagami First Nation and Flying Post First Nation southwest of Gogama.

Since that time, Wabun has had further discussions with IAMGOLD and we are providing revised comments on the Proposed Terms of Reference as an attachment to this letter. As indicated, we have resolved our remaining outstanding issues and no further changes are requested or required of the Proposed Terms of Reference.

Please contact me at my office (705-268-9066) or by email (sbatise@wabun.on.ca) with any further questions or concerns.

Sincerely,

Shawn Batise
Executive Director

Provincial Individual EA

Proposed Terms of Reference for the Côté Gold Project

Wabun Tribal Council Revised Comments

1. GENERAL COMMENTS

1. **Background**. Wabun Tribal Council recently received a copy of the Notice of Submission from the Ontario Ministry of the Environment (the "MoE") in relation to the following document:

    - Côté Gold Project Provincial Individual Environmental Assessment Proposed Terms of Reference, July 2013

    (the "Proposed ToR").

    The review of the Proposed ToR was undertaken by Rick Hendriks of Camerado Energy Consulting at the request of and in consultation with Wabun Tribal Council. For brevity, comments provided below focus mainly on concerns and requests for clarification in relation to the Proposed ToR. The MoE Code of Practice (Preparing and Reviewing Terms of Reference for Environmental Assessments in Ontario) was consulted in preparing this review.

2. **Scope of Alternatives Considered**. The Code of Practice indicates that: "the purpose of this requirement [to consider alternatives] is to ensure that the most appropriate means of addressing the identified problem or opportunity is selected." We have reviewed the terms of reference from that perspective.

    In the Proposed ToR, the Proponent indicates that: "the EA will be completed in accordance with Section 6.1(2) of the Ontario *Environmental Assessment Act*". It is our understanding, therefore, that a "focussed EA" as this term is used in the Code of Practice is not being proposed by the Proponent since the development and consideration of the proposed Project is at a stage where a broad consideration of alternatives is both necessary and desirable. With that in mind, the Code of Practice provides further guidance to proponents as follows:

    > *Where appropriate, proponents may undertake an initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment. Screening criteria must be developed and the screening process must be logical and traceable.* [our underlining]

    And later in the Code of Practice:

    > *The ministry recognizes that there may be restrictions on some proponents that will limit the range of alternatives examined. The proponent must provide justification in the terms of reference for limiting the examination of alternatives.* [our underlining]

Our general concern is that the screening criteria and process employed in the Proposed ToR are not always sufficiently justified or traceable, and that amendments to the Proposed ToR are required to ensure that these matters are addressed, and that the EA is not precluded from properly assessing the alternatives by an overly restrictive ToR. We have provided some examples in our specific comments below.

3. **Consideration of Aboriginal and Treaty Rights**. In section 5.2.1 of the Proposed ToR, the Proponent identifies six performance objectives for use in the evaluation of the alternatives, including "effects to the human environment, including Aboriginal and treaty rights, cultural heritage resources (including archaeological, built heritage and cultural heritage landscape resources) and traditional use."

   We are pleased to see the inclusion of Aboriginal and treaty rights amongst the performance objectives, as well as a distinction between traditional land use and Aboriginal and treaty rights since land use forms only a part of the nature and scope of these rights. We propose that Aboriginal and treaty rights should also be proposed as a standalone criterion for the consideration of alternatives. Table 5-5 illustrates that Aboriginal and Treaty rights and related interests (i.e. effects on traditional land use, effects on cultural heritage, etc.) form a relatively small part of the broad human environment evaluation criterion, which is one of only six broad criteria.

   As the Proponent and the Provincial Crown are aware, the proposed Project would be located in an area of considerable importance for the affected First Nations, would require the taking up large areas of lands and waters, and would involve lasting and, in some instances, permanent changes to the territory. Deep consultation with the potentially affected First Nations is required in order to provide the opportunity for the avoidance and mitigation of environmental effects that are part of the accommodation necessary to reconciling the rights of the Crown to take up land with the Aboriginal and treaty rights of the First Nations. Thus the Proposed Terms of Reference should provide that the consideration of Aboriginal and treaty rights be accorded a high priority for the decision making process respecting alternatives. Amendments to the Proposed ToR are necessary in order to promote appropriate consideration of Aboriginal and treaty rights in the assessment of the proposed Project.

Additional Comments

The Proponent has clarified that:

> *"...if the IAMGOLD EA team rated Effects on Aboriginal and Treaty Rights as being "Unacceptable" for a particular alternative, that alternative would automatically be rated "Unacceptable" and rejected by the Company.*
>
> *Therefore presenting Aboriginal and Treaty Rights as a standalone criterion will not give it more weight than if presented as an indicator."*

This clarification addresses the concern raised in our initial comments. No changes to the Proposed ToR are requested.

2. SPECIFIC COMMENTS

4. **S.5.2.2.1 Cost-effectiveness – Financial Thresholds**. The Proposed ToR identify three criteria and associated indicators for evaluating the cost-effectiveness of alternatives. The evaluation is then carried out based on whether the alternative in question facilitates a competitive, acceptable or unacceptable return on investment. The Code of Practice allows for an "initial screening of alternatives before or at the terms of reference stage to determine the range of alternatives which will be examined in the environmental assessment", but the Code also indicates that: "the detailed screening results should be included in the supporting documentation rather than in the terms of reference itself".

   In terms of cost-effectiveness, a review of Table 5-7: Preliminary Screening of Alternative Methods (see p.5-26) indicates that the following alternatives have been screened out of the environmental assessment solely or primarily based on cost-effectiveness:

   - Mining – Open pit and underground mining
   - Mine Rock and Overburden Management – Establish a temporary stockpile location…returned to the pit at closure
   - Non-hazardous waste – Incineration
   - Power Supply and Routing – On-site diesel generation

   A review of section 5.3 Alternative Methods for the Project and the Appendices to the Proposed ToR indicates that supporting documentation is not provided to indicate the financial thresholds used to screen out these alternatives. No information concerning the cost implications of these excluded alternatives is provided in the Proposed ToR.

   We recommend that the Proposed ToR either provide the financial thresholds used to determine a competitive, acceptable or unacceptable return on investment or, if this information is considered proprietary, indicate how much more expensive a rejected alternative would need to be compared to the preferred alternative in dollars and as a percentage of the preferred alternative, indicating potential ranges in the estimates as appropriate. This information would improve the traceability of the assessment and provide justification for the exclusion of these alternatives from further consideration. To be clear, the intention of Wabun Tribal Council is not to take a position on one alternative over another; our intention here is to allow for the Crown and the First Nations to understand and assess the basis for the proponent's choice of alternatives.

   Additional Information

   The Proponent has provided adequate clarification as to why the following were screened out of the environmental assessment solely or primarily based on cost-effectiveness:

   - Mining – Open pit and underground mining
   - Mine Rock and Overburden Management – Establish a temporary stockpile location…returned to the pit at closure

- Non-hazardous waste – Incineration

With respect to the power supply alternatives, IAMGOLD has committed to provide further information to Wabun in order to better assess these alternatives. See additional comments below in relation to 6. Mine Production Rates and 9. Power Supply and Routing.

No changes to the Proposed ToR are requested.

5. **S.5.3.1 Identification of Alternatives – Work Schedules**. The Proposed ToR suggest that the Proponent is considering options for worker accommodation in an on-site construction camp or in an off-site residence. Under either option, work schedule alternatives will need to be considered, including the length of shifts and the length of work rotations. We recommend that the Proposed ToR include criteria for an assessment of work schedules during the environmental assessment.

   Additional Comments

   The Proponent has indicated that work schedules will be addressed during the planning phase following the environmental assessment.

   No changes to the Proposed ToR are requested.

6. **S.5.3.1 Identification of Alternatives – Mine Production Rates**. Of the alternatives listed for consideration, we note that mine production rates (in other words, the length of the mine operations phase) have not been considered. The length of the mine operations phase is a key consideration in assessing the sustainability of the socio-economic benefits of the proposed Project for local communities, including potentially affected First Nations, particularly in terms of employment and business opportunities. We recommend that the length of the mine operations be assessed in the environmental assessment, including the interactions of the mine life with other alternative analyses, potentially including alternatives related to water management and power supply and routing (see "Power Supply and Routing" below).

   Additional Comments

   IAMGOLD has committed to provide further information to Wabun in order to better assess mine production rates. See additional comments below in relation to 9. Power Supply and Routing.

   No changes to the Proposed ToR are requested.

7. **S.5.3.1 Identification of Alternatives – Labour Supply**. Typically, mining operations in this region of Ontario draw employees from a variety of populations, including both men and women, Aboriginals and non-Aboriginals, and local, regional, Provincial, national and foreign workers. Rates of unemployment continue to remain relatively high in the region and Province compared to historic levels, suggesting the need for consideration of pro-active approaches to employment at the proposed Project. While the ultimate make-up of the proposed Project labour force is the product of a variety of factors, including market conditions and skill requirements, proponents have the ability to significantly influence the make-up of the labour force through bid evaluation criteria in requests for proposals and investments in training

programs for specific populations, among other means. We believe that it is in the interests of the Proponent to transparently assess its options for the Project labour supply during the environmental assessment, particularly in relation to the locational source of its labour force (i.e. local, Provincial or foreign). We recommend that labour supply be assessed as an alternative in the environmental assessment. We are currently in discussions with IAMGOLD about the labour supply issue and we see value in bringing the work and discussions we are undertaking into the EA process, to avoid duplication of efforts.

Additional Comments

The Proponent has indicated that labour effects will be assessed as part of the socio-economic effects assessment for the Project and that, once the effects are understood, the most appropriate options for addressing labour shortages (if any) will be determined.

No changes to the Proposed ToR are requested.

8. **S.5.3.2 Identification of Alternatives – Road Transportation**. The proposed Project is of considerable size in terms of the volume of materials and equipment that will be moved to and from the mine site, particularly during construction. Section 4.2.1 indicates that: "construction materials will be brought to site using existing roads". This raises questions about the suitability of the existing road transportation system, the capacity of the system to handle higher traffic volumes and heavier loads, implications of fuel transport, impacts on wildlife in terms of noise and mortality, and safety and other considerations for other road users. We recommend that an assessment of the off-site road transportation route alternatives, including the location of key staging areas (e.g. whether in Sudbury, Timmins or elsewhere) be conducted as part of the environmental assessment.

Additional Comments

The Proponent has clarified that only Highway 144 will be used for project-related transportation and that an assessment of the effects on Highway 144 will be presented in the EA.

No changes to the Proposed ToR are required.

9. **S.5.3.14 Power Supply and Routing**. The current project configuration envisions the construction of a 230 kV transmission line of approximately 160 km in length originating in Timmins. This transmission line adds considerably to the capital costs of the proposed Project and substantially expands the Project footprint. Considering also that this 230 kV line would currently have no useful purpose following construction, we see the importance of considering carefully options for avoiding construction of the transmission line, and the need to justify the preferred alternatives during the environmental assessment. The Proposed ToR indicate (at p.5-24) that a "review of transmission infrastructure that could serve the Project during operations has been carried out" the review is not attached to the Proposed ToR and so the scope of the review is unclear to reviewers.

The Proposed ToR indicates that: "there is a 115 kV transmission line located approximately 50 km east of the Project, however, 115 kV will not be sufficient for

the Project." It is not stated whether the "insufficiency" is the result of electrical capacity or energy shortfalls or both. Presuming it is capacity, was consideration given to reducing the mine production capacity of the facilities (i.e. lengthening the production phase) as a means of lowering power demand? We note that diesel power has been considered for "periodic use during the operations phase (and potentially during the closure phase) as needed when grid power is unavailable" but it does not appear that diesel power has been considered as a supplement to grid power to lessen capacity or energy requirements from the grid in order to avoid construction of the 230 kV transmission lines. Other options may also be available to lower the requirements for grid power but it is unclear whether they were considered.

In summary, the dismissal of alternatives that do not require the construction of a 230 kV transmission line is not traceable in the Proposed ToR. While dismissing these alternatives may be justified, this cannot be determined from the information provided in the Proposed ToR. If the referenced "review of transmission alternatives" evaluated alternatives that adequately considered changes to the mine design, then we recommend that it be appended to the Proposed ToR. This would meet the requirement of the Code of Practice to "provide justification in the terms of reference for limiting the examination of alternatives." However, we do not know if the review the proponent has completed has considered changes to the mine production rate or other design aspects that would lower the electricity demand of the proposed Project in order to avoid construction of the 230 kV transmission line. In this case, we recommend that the Proposed ToR carry forward to the environmental assessment stage a consideration of alternatives that do not involve the construction of the 230 kV transmission line as well as the alternative of constructing the 230 kV transmission line.

Additional Comments

IAMGOLD has committed to provide further information to Wabun in order to better assess power supply and routing. See additional comments above in relation to 4. Financial Thresholds and 6. Mine Production Rates.

No changes to the Proposed ToR are requested.

10. **7.2.3 Definition and Approach to Cumulative Effects**. The Proposed ToR indicates the following:

> *The cumulative effects analysis presented in the EA will therefore be restricted to the analysis of cumulative effects on the existing environmental baseline related to identified projects and activities that "will be carried out"; and to those projects of significance within the broader regional context, which may overlap the undertaking in regards to type of effect, time and space.*

In proposing this approach, the Proponent is relying on the "existing project baseline" to adequately characterize the effects of past projects and activities. We are concerned that this approach is inconsistent with the intentions of CEAA 2012, CEA Agency guidance, and recent case law.

The recently published CEA Operational Policy Statement[1] states that:

> *Information on the environmental effects of past or existing physical activities may be helpful:*
>
> - *if the effects of past or existing physical activities on a specific VC will help predict the environmental effects of a designated project;*
> - *if information on past or existing physical activities will assist in the identification of appropriate mitigation measures for the designated project; or*
> - *if an existing physical activity will be decommissioned in the future and this decommissioning would affect the future condition of a specific VC.*

The "gold standard" in cumulative environmental effects assessment involves the determination of a pre-development baseline. Such a baseline often provides the most "help" in predicting the environmental effects of a designated project and "assistance" in identifying appropriate mitigation measures. While there are sometimes challenges to creating a pre-development baseline in terms of the availability of suitable pre-development data, this is not always the case. While there will likely be some uncertainty associated with pre-development conditions, the same can be said for the existing project baseline due to the inherent limitations in data gathering. The Proposed ToR do not indicate why a pre-development baseline is not being proposed or what efforts have been taken to determine a pre-development baseline or to determine its limitations.

The use of an existing project baseline provides information related to what remains in the environment as a result of the effects of prior projects and activities. However, a pre-development baseline allows the characterization of what has been lost or gained as a result of the effects of prior projects and activities. This is fundamental, for example, to determining the remaining potential for a region to support the exercise of Aboriginal land-based rights protected in Treaty 9.

By providing insight into what has been lost, a pre-development baseline sheds light on the importance of what remains intact (e.g. in terms of ecosystem functions, habitat, preferred species populations, biodiversity, cultural landscapes, etc.) and what still remains possible (e.g. hunting, fishing, gathering, quiet enjoyment of the land, etc.). The loss of fish and wildlife habitat and harvesting opportunities associated with the proposed Project take on greater importance as a result of what has already been lost or taken up by other projects and activities.

The Proposed ToR should require presentation of available information concerning the historical circumstances prior to the development of projects and activities in the regional study areas for each environmental component, the residual effects of these projects and activities on the environment, and the implications of these residual effects

---

[1] CEA Agency. May 2013. Assessing Cumulative Environmental Effects under the *Canadian Environmental Assessment Act, 2012* (www.ceaa-acee.gc.ca/default.asp?lang=En&n=1DA9E048-1)

for the potential and established Aboriginal and treaty rights and related interests of Aboriginal groups. Further, the Proponent must be required to consult with Aboriginal groups on the available information and seek to augment this information with available traditional knowledge concerning the historical context.

Additionally, in describing the "existing project baseline", the Proposed ToR must give consideration not only to a snapshot of current conditions, but must also include trend or comparative analysis, as appropriate to the available data, to provide insight into whether conditions are becoming more or less favourable in relation to the environmental components or indicators under study (e.g. are species populations rising, stable or falling?)

Additional Comments

The Proponent has indicated that a cumulative effects assessment is not a MOE requirement under the Code of Practice for the Preparation of an Environmental Assessment.

Consideration of cumulative effects is a requirement of CEAA 2012, and is addressed in section 12.1.2 of the EIS Guidelines issued by the Canadian Environmental Assessment Agency for the proposed Project.

Wabun does not share the Proponent's perspective that a cumulative effects assessment can be limited to a consideration of the residual effects of the proposed Project in combination with only reasonably foreseeable future projects. Past projects and activities must also be considered as part of the federal environmental assessment pursuant to CEAA 2012 and the EIS Guidelines.

No changes to the Proposed ToR are required.

MINUTES OF MEETING

Date/Time:	October 9, 2013; 9 am	**File No.:**	
Location:	Thunder Bay	**Written By:**	S. Theben
Project Title:	Côté Gold Project	**Project No.:**	TC121522
Subject:	Effects Prediction Presentation to Flying Post FN	**Issue Date:**	October 10, 2013

Attendees:	S. Woolfenden (IAMGOLD)	Y	S. Theben (AMEC)	Y
	Cheryl Naveau(IAMGOLD)	Y	Murray Ray (FP)	Y
	S. Morissette(IAMGOLD)	Y	Richard Ray (FP)	Y
	Shawn Batise (WTC)	Y	Bob McLeod (FP)	Y
	Rick Hendricks (WTC consultant)	Y	Susan Baril (FP)	Y
			Lynn Ray (FP)	Y

ACTION ITEMS

NO.	COMMENT/STATEMENT	RAISED BY
1	The fact that part of Three Duck Lakes will be drained is new to us	S. Batise
2	How successful are man-made channel realignments in creating habitat?	S. Batise
3	The Project now includes a lot of realignments, which might not work properly. The flow scheme used for the Project Description seems preferable.	M. Ray
4	How would the Project change if it was to run on the 115 kV line only?	R. Ray
5	The cross-country transmission line alignment will create access for hunting that did not exist before and might therefore bring in more ‘external’ hunters	S. Batise
7	Should the MRA be designed such that it would be able to deal with ARD ‘just in case’?	R. Ray
8	What would be the shortest time possible to fill the open pit after closure?	R. Hendricks
9	Would the bottom of the open pit lake be saline?	R. Hendricks
10	We don’t only care about draining of Côté Lake but also effects on other lakes and streams.	S. Batise

NO.	COMMENT/STATEMENT	RAISED BY
11	What are the existing roads around the TMF? Also show TMF roads during all Project phases.	R. Hendricks
12	Flow in Bagsverd must be very low at times. It seems that Mesomikenda Lake would be more suitable discharge location.	R. Hendricks
13	Would like to know what the key issues are with discharge quality	R. Hendricks
14	Will the Project stop blasting under strong wind conditions?	R. Hendricks
15	Does the EA include worker health and safety?	R. Hendricks
16	IAMGOLD should start talking to people about what kind of employment opportunities will exist and what the health and safety risks will be for workers.	R. Hendricks
17	Ammonia is an issue at all mine sites.	S. Batise
18	How will negative impacts from TMF seepage be prevented?	R. Ray
19	Are there alternatives to cyanide leaching that could be used for this Project.	S. Batise
20	Cumulative effects on wildlife considering future expansions and other projects in the area need to be considered	S. Batise
21	Could the mine rock be used for other purposes?	R. Hendricks
22	Is IAMGOLD investigating effects of blasting on fish?	R. Ray
23	Will Project staff be allowed to hunt and fish around the site?	R. Hendricks
24	Does IAMGOLD know which groups of the population will benefit and which will be affected negatively by the Project?	R. Hendricks
25	Will pressure on local infrastructure increase or decrease?	R. Hendricks
26	All mining companies promise preferential hiring of FN staff, but after the IBA is signed they do not keep their promises. IAMGOLD needs to implement a FN hiring system that works.	S. Batise
27	Make sure the visual aesthetics assessment also includes locations other than cottages where site infrastructure could be visible.	R. Hendricks
28	Do visual aesthetics assessment for transmission line, where visible.	R. Hendricks

MINUTES OF MEETING
